Mr. McCLELLAN. While the Supreme Court has placed the burdensome millstone of the Benanti case upon our law-enforcement agencies and courts of justice, it is now the responsibility of Congress to act to remedy this deplorable situation that favors the hoodlums, thugs, criminals, and underworld elements in our society, to the hurt and irreparable injury of law and order and human decency.

I shall, at the next meeting of the Senate Judiciary Committee, join with the distinguished author of the bill to which I have referred, S. 3340, in insisting that the committee report that bill favorably, in the hope that we can get it passed before this Congress adjourns. So long as we do nothing about this situation we are providing a virtual haven of protection for criminals which was never intended by the law the Congress passed.

Mr. President, if it is not a violation of the Constitution to go before a court of law and to make a showing that a crime has been committed and that the fruits of the crime, the stolen property, are in concealment in a home or in a place of business, in order to secure a search warrant to find the stolen and concealed property—if that is constitutional and is an essential instrumentality in our laws for the enforcement of law and order, against larceny and other crimes—then, Mr. President, it is my thought that comparable procedures should be established and made legal for the interception of telephone messages and communications which are made in pursuance of criminal activity. Unless we take such action, in line with the bill introduced by the distinguished Senator from New York, the enforcement of law in this country will seriously be impaired, and a burden will be placed upon law-enforcement agencies and upon the courts, which will simply be unable to discharge their responsibilities.

The only profit which will flow from the whole procedure will flow to the underworld characters and to those elements which have no respect for law and order and for decent society.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. McCLELLAN. I am happy to yield to my distinguished friend from New York.

Mr. KEATING. Mr. President, I am very grateful that the distinguished Senator from Arkansas has again brought to the attention of the Senate, as he did a short time ago, the imperative need for legislation along the lines of the bill which I have introduced. It is a very limited bill. It provides that when a State requires a court order in order to obtain a wiretap, after the court order has been obtained the evidence shall be admissible in the court despite the provisions of the Federal Communications Act.

The district attorneys of New York State are greatly exercised over this problem. Mr. Hogan, of New York County; Mr. Silver, of Kings County; Mr. Kennedy, the police commissioner; and the district attorneys of several of the other counties, as well as a number of other law enforcement officials of the State of New York, came to Washington, D.C., to talk with the New York congressional delegation about this matter.

The New York law permitting wiretapping by the district attorneys requires four things. First, they must sign an affidavit in which it is stated under oath that they have reason to believe they can get evidence of a crime. Second, they must set forth sufficient facts to justify the conclusion. Third, in applying for a court order they must subject themselves to examination by the court. Fourth, they must submit proof of reasonable cause if they wish an extension of the order, which is limited to 60 days.

The court, in the decision to which the distinguished Senator has referred, in the opinion of one or two of the judges, virtually invited the U.S. attorney to bring a criminal prosecution against the State district attorney if any effort were made to introduce wiretap evidence in court. There are literally hundreds of cases which it will not be possible to have prosecuted, some of them involving very serious crimes, unless some relief is obtained in this field, because, in the light of the decision rendered, the district attorneys are naturally very reluctant to proceed further. If the Congress adjourns without taking any action in this field we shall be directly responsible for jeopardizing several hundred criminal prosecutions in the State of New York alone. I do not know how many are involved in other States. We also shall succeed in exposing to criminal prosecution under the Federal law a number of State district attorneys who have done nothing more than to carry out the provisions of the New York State wiretapping statute.

Mr. President, the modern criminal has at his disposal means of communication and transportation which were completely unknown in an earlier period. The telephone, for example, provides him with an avenue of communication which is swift and comprehensive. Under present Federal law, as it has been interpreted, telephone communications are, in effect, privileged. One can go into court and obtain a court order to search a man's home or, indeed, to search his pants pocket. There seems to be no reason for saying that one should not be able to obtain a court order to tap a wire and to place the evidence taken before the court.

Mr. President, the Department of Justice in very strong language—in unusual language—has not only approved of the proposed legislation but states, "For these reasons the Department of Justice strongly recommends its enactment."

As my friend the Senator from Arkansas knows, it is not very frequent that one gets a letter from the Attorney General with the wording "strongly recommends" in it.

I am very grateful that the powerful support of the distinguished Senator from Arkansas has been brought to bear upon this problem. In behalf of all the district attorneys of the State of New York, who, as I say, are greatly exercised over this problem, I express to the Senator my gratitude for the interest he has taken in this problem. I shall certainly join the Senator at the next meeting of the Committee on the Judiciary in an effort to have reported this very limited bill.

It is probable that a more comprehensive bill should be enacted into law. I have introduced bills for many years on this subject. I introduced one in the House, to do two things: First, to tighten up on the "snoopers" who use wiretapping for improper purposes—business snooping upon labor, labor snooping upon business, husbands snooping upon wives, wives snooping upon husbands, and that sort of thing; and second, to permit law-enforcement officials operating under the provisions of State law to use this weapon, and to prevent the telephone from being a privileged sanctuary for the criminal.

I realize that the broader proposal probably requires more debate. It is a controversial subject. The very narrow bill, which the Attorney General has so vigorously supported, which is so strongly supported by the distinguished Senator from Arkansas, I hope will become law before the present session of Congress is over.

SUPPLEMENTAL DEPARTMENT OF LABOR APPROPRIATION, 1960

Mr. HAYDEN. Mr. President, as in legislative session, I ask unanimous consent that the Presiding Officer lay before the Senate, House Joint Resolution 765, making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes, just received from the House of Representatives.

The PRESIDING OFFICER laid before the Senate the joint resolution (H.J. Res. 765) making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes, which was read twice by its title.

Mr. HAYDEN. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of House Joint Resolution 765.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arizona?

There being no objection, the Senate proceeded to consider the joint resolution.

Mr. HAYDEN. Mr. President, this joint resolution passed the House of Representatives today. It appropriates $6 million for unemployment compensation for veterans and Federal employees. The $6 million recommended in the resolution represents a more recent and accurate estimate of actual requirements. These funds are required to prevent the stoppage of payments to unemployed workers the latter part of this month.

This is a statutory obligation of the United States and these payments must be made.

I have conferred with members of the Committee on Appropriations on this matter and we are all agreed that the joint resolution should be passed.

Mr. President, I move that the joint resolution be passed.

Mr. DIRKSEN. Mr. President, will the distinguished chairman of the Committee on Appropriations yield?

Mr. HAYDEN. I yield.

Mr. DIRKSEN. I presume these items are lifted out of the supplemental bill because of their urgent nature and brought in as separate items in a special supplemental appropriation bill.

Mr. HAYDEN. That is undoubtedly why the House took the action it did.

Mr. President, I ask unanimous consent to have printed in the RECORD the justification submitted by the Department of Labor, as well as a memorandum prepared in the committee and the House report.

There being no objection, the justification and memorandum were ordered to be printed in the RECORD, as follows:

SUPPLEMENTAL DEPARTMENT OF LABOR APPROPRIATION, 1960 (REPT. NO. 1919)

The Committee on Appropriations to which was referred the House Joint Resolution No. 765, making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes, reports the same to the House without amendment and with the recommendation that the joint resolution be passed.

The President submitted a supplemental budget estimate of $8 million for unemployment compensation for veterans and Federal employees for the fiscal year 1960 in House Document No. 384. The $6 million recommended in the resolution is based on more recent and accurate estimates of actual requirements.

This appropriation item finances payments to unemployed veterans and Federal employees which are made through State agencies as authorized by title XV of the Social Security Act. When the departmental witnesses testified on the 1961 budget in January it was expected that $5 million of the $125 million appropriation for the current fiscal year would not be needed. The situation has recently changed drastically for the surplus has been used and this special enactment is required to prevent the stoppage of payments to unemployed workers the latter part of this month.

MEMORANDUM ON HOUSE JOINT RESOLUTION 765, MAKING A SUPPLEMENTAL APPROPRIATION FOR THE DEPARTMENT OF LABOR FOR FISCAL YEAR ENDING JUNE 30, 1960

The budget estimate for this item "unemployment compensation for veterans and Federal employees" was $8 million. The House has allowed $6 million, a reduction of $2 million, suggested by the Department of Labor.

The Department advises that this allowance will be adequate, and furnish the attached table, based on more recent data than that furnished the House committee. It will be noted that they anticipate an actual need for benefit payment of $2,906,499, and contemplate a need for $1 million in the "pipeline," or $3,906,499. The House allowance is then some $2 million more than actually required, but the funds will remain available for fiscal year 1961, the appropriation for which in the regular bill is $5 million under the estimate.

SCHEDULE ON SUPPLEMENTAL APPROPRIATIONS AND REVISED ESTIMATES

Appropriation title: Unemployment Compensation for Veterans and Federal Employees.

Agency: Department of Labor, Bureau of Employment Security, date, Apr. 27, 1960.

1. Present appropriation or estimate	$125,000,000
2. Additional amounts available: Recovery of prior year obligations	+6,530,246
3. Total amount available for obligation 1960	131,530,246
4. Obligations:	
1st 10 months	113,193,415
Estimate for May	10,543,330
Estimate for June	10,700,000
Pipeline	1,000,000
5. Total actual and estimated obligations	135,436,745
6. Less total amount available	131,530,246
7. Revised estimated supplemental required	[1] 3,906,499

[1] It is urgently suggested that the amount of the supplemental be not less than $6 million due to difficulty in being precise and due to fact that any unused balance will carry over to 1961.

The PRESIDING OFFICER. The joint resolution is open to amendment. If there be no amendment to be proposed, the question is on the third reading and passage of the joint resolution.

The joint resolution (H.J. Res. 765) was ordered to a third reading, read the third time, and passed.

MEDICAL CARE FOR THE AGED

Mr. HUMPHREY. Mr. President, the Governor of Minnesota, the Honorable Orville L. Freeman, recently delivered the keynote address at the second annual Institute on Aging at Gustavus Adolphus College in St. Peter, Minn.

In this outstanding speech, Governor Freeman discussed the urgent problem of financing medical care for our older citizens and called for a program using our tested social security system to provide medical care as a matter of right, and not as a result of a means test with its degrading effects on the self-respect and self-reliance of our senior citizens.

Mr. President, I ask unanimous consent that excerpts from Governor Freeman's speech relating to medical care for the aged be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

FINANCING MEDICAL CARE—AN IMMEDIATE PROBLEM

There is one major problem in the field of aging that is today the subject of much discussion and controversy. Representatives of the Department of Health, Education, and Welfare have stated that the most important issue that will be before the White House Conference in Washington is that of financing medical care for the aging. This is an issue to which I have given long and careful study, and on which you will consider making recommendations.

You will, of course, make those recommendations as a result of careful study. But because I regard this issue as so important, because of its human and social significance, and because it is controversial, I am asking that you consider my recommendations on this subject as a part of your study. I present them to you in the hope that you will give them the same kind of serious consideration that I intend to give to your recommendations in the entire field.

The problem of financing health services for the aging has been an urgent problem for many years. Its urgency is increasing with each passing year because of several factors. (1) The numbers of people over 65 years of age are constantly increasing. (2) As medical science progresses the potential benefits from preventive measures, from medical care, from rehabilitation services—in fact, from all kinds of health services—are constantly increasing. (3) The costs of these services constantly increase because of the shift to chronic illnesses of long duration, the increase in disabling aftereffects, the need for steady use of costly drugs and medicine, and because of the value of long-term rehabilitation care and for medical social services. (4) These increases have not been matched by anywhere near a comparable increase in the financial ability of the aged. Census estimates indicate that 60 percent of aged individuals have annual incomes of less than $1,000, and that half of the families with aged heads have annual incomes of less than $2,600.

But you are all familiar with the general picture of the problem. At the time of life when incomes are substantially lowered, the costs of adequate health care and the need for that care are substantially increased.

No one with a sense of social responsibility denies that in this problem lies an urgent need that society must meet. Yet the subject is regarded as an extremely controversial one because of disagreement as to how it should be done.

I believe that this is the kind of controversy that must be faced. The human values involved demand that we take a stand. The health and happiness of millions of senior citizens preclude any further continuation of a wait-and-see, trial-and-error experimentation. In the interest of humanity, we ought to take a stand for action now.

A year and a half ago, I presented this problem to the House of Delegates of the A.M.A. when it met in Minnesota. At that time I appealed for the help of that organization in working out an adequate program.

The A.M.A. continues to express the hope that the so-called voluntary approach with some form of insurance could meet the need. Yet the highest current estimate of how many aged now have hospital insurance of all kinds is about 6 million, or 40 percent. And even this insurance does not begin to fulfill the health needs of those who are insured.

The most reliable projection, by the Department of Health, Education, and Welfare, of how many aged persons will be protected by any kind of voluntary insurance by 1965 indicates that by that date: 9 million can be expected to have some kind of insurance; 6 or 7 million will have no insurance protection; about 2 million will be on public assistance, and thus be eligible for some medical care through a means test.

The projections indicate that millions of older people will have no coverage or inadequate coverage, and that very few will have coverage that is sufficiently comprehensive to provide the health care they really need.

In considering this projection, it seems to me that two conclusions are inevitable.

First, that private insurance programs, through no fault of their own but rather because of the inherent nature of insurance, cannot meet the need. Premiums sufficient to pay for really adequate coverage for the aged, as a separate group, would be prohibitively high. Yet the principle of insurance is sound, and the actuarial burden can be carried if it can be applied universally and the costs paid over each person's years of employment.

The second conclusion follows: Such a program of universal application, to be paid over a long period, can be carried out most effectively through the OASDI system of the Federal Government.

A program thus developed under our social security system would provide our senior citizens with medical care as a matter of right, and not as the result of a means test, with its especially cruel effect on older people who particularly need a feeling of self-respect and self-reliance. It should further be extended to cover, as nearly as possible, all retired people. It should include preventive medicine and rehabilitation programs, hospital care and nursing home care, home health services, some assistance in paying for expensive drugs, and some provisions for continuous research and experimentation.

Such a program would make use of a social security system that has already proved its value in the field of retirement pensions. It would operate at administrative costs much lower than those of private insurance plans—the OASDI program now operated at less than 2 percent of its premium income. It would enable those covered to pay for their protection as they earn. And it would be no more compulsory than the national administration's present proposal, since the only compulsory part of either proposal is the taxation required to pay for them, and it is no more compulsory to tax payrolls than to tax incomes and other sources that make up the general revenue.

Before making a decision in favor of the financing of medical care for the aging through our social security system, it is essential to consider objections to such a proposal.

One objection I have heard is that, in Minnesota, the needy aged now have adequate medical care, paid for under our old-age assistance program. I believe that Minnesota does have one of the best programs for the care of the needy aged in the Nation. But this program is available only to those on old-age assistance, only to those who pass a means test, only to 1 out of 6 Minnesotans who are over 65 years of age.

What about the other five-sixths? What about those who are retired on very moderate pensions, for whom a serious illness is a major economic catastrophe? What about those increasing numbers of Minnesotans who are retired on pensions sufficient

to meet their needs only as long as they stay well? Let's note these Minnesota figures: In 1948 we had 53,000 people receiving old-age assistance, of whom 5,000 received it for medical care only; in 1959 we had 47,000 on old-age assistance, of whom 25,000 received it for medical care only; in 1948 this medical care cost us $3,300,000; in 1959 it cost us $18,-738,000.

What about those countless, and uncounted, senior citizens, retired on limited incomes, clinging to their self-respect and their feeling of independence, who fail to seek medical care early in the game when it might help them most, because they know their incomes will not cover such care? I know there are many of these, for many of them write to the Governor.

I believe that the facts and figures overrule the objection that people in Minnesota do not need the kind of financing of medical care for the aged that I have described.

Another objection I have heard is that, under such a social security program the very wealthy aged, who could well afford to pay, would also be covered. This objection is not hard to answer. In the first place, there aren't very many aged people who are that rich. In the second place, they would probably seek and get care far beyond the minimum that a program under social security would provide. And in the third place, this objection goes contrary to well-established American principles. The very rich can, and frequently do, send their children to our public schools, even though they could well afford to pay for private schools. They use our parks and playgrounds. It is the American way to provide and make available to all those services that are regarded as essential.

Now let's turn to an objection that seems to be the most fearful of all—the objection that such a program might be socialized medicine. What about this objection?

Well, what is socialized medicine? This term apparently means different things to different people.

One answer might be that socialized medicine is the providing of medical care through some branch of government. Yet that definition is inadequate for our purpose, because we all take it for granted that government should provide medical care in certain cases, as, for example, in tuberculosis and mental hospitals. We in the United States have asked for and have thoroughly accepted this principle for so long that I feel sure that the most ardent opponents of socialized medicine, by whatever definition, would not ask that government cease that function.

This confusion about the meaning of the term "socialized medicine" is most unfortunate. The term in itself often arouses violent and sometimes emotional disagreement among some who do not agree on what they are disagreeing about. Semantics then becomes almost as important as substance. We can lose sight of real problems and real issues in our confusion about the meaning of words. I often wonder whether a misunderstanding about the meanings of terms does not often create as much conflict and disagreement as is created by an actual difference in opinion and judgment. It would be tragic to permit such misunderstandings to delay our progress toward meeting real human need.

In the United States we have traditionally decided questions relating to what services government ought to provide on a pragmatic basis rather than on the basis of an ideology or an "ism." We ask, "Is it needed?" and "How can it be done best?" Let me illustrate briefly.

When Americans, more than a century ago, decided that education should be free, universal, and compulsory they made this decision without considering any "ism" or asking whether they should adopt socialized education. Government provided schools simply because that was the only way they could be made available to all.

When government provided hospital and medical care for the victims of long, expensive, chronic ailments, such as tuberculosis and mental illness, it did so for similar reasons. It was socially desirable that the people suffering from such ailments be given care and treatment. Very few could afford such long and expensive care. The people asked government to provide it, because that was the only way it could be made available.

The same principles hold true, I believe, in all other areas where government performs functions relating to medicine. Government provides a substantial share of the cost of educating doctors because it is socially desirable and necessary. Government carries out those public health functions that could be performed adequately in no other way.

In other words, government is not some outside power seeking to aggrandize itself by taking over more and more functions. On the contrary, government in a democracy, by the very definition of the term, is the institution through which the people seek to make sure certain needs are met that are not adequately met by other means.

It is this attitude toward government meeting the needs of the people that I believe has impelled such varying—and unsocialistic—sources as a lead article in the Harvard Business Review, an editorial in Business Week, and an editorial in Life magazine to support the principle of financing medical care for the aging through our social security system by means of payroll taxes.

It is with this attitude toward government that I hope that you will consider my recommendation of this same principle.

Certainly a society with the great resources we have in both material goods and scientific talent cannot leave the health and happiness of our senior citizens to chance. Certainly we must do all we can to make most effective use of the public expenditures that are necessary to insure that our older citizens will receive health care and services of the highest quality.

I believe that by financing such programs through social security, we can achieve not only the highest degree of fiscal responsibility but, even more important, the highest degree of social and moral responsibility.

PUBLIC DEBT AND TAX RATE EXTENSION ACT OF 1960—SENATOR HUMPHREY'S VOTE ON H.R. 12381

Mr. HUMPHREY. Mr. President, yesterday I was necessarily absent from the Senate when action was taken on H.R. 12381. I wish the RECORD to show that had I been present when the committee amendment to eliminate the 10-percent tax on local telephone service was considered and voted upon, I would have voted "yea." My position on the amendment was inadvertently not included in yesterday's RECORD.

I also wish to have the RECORD show that had I been present and voting I would have voted "yea" on the amendment offered by the junior Senator from Wisconsin [Mr. PROXMIRE] to provide for withholding income tax on dividends and interest.

I wish to add that the Treasury has estimated that some $5 billion of income in the form of dividends and interest goes unreported in this country. Surely, since we have withholding of taxes on wages and salaries, the Government can design a program to withhold taxes on dividends and interest.

I believe this is the most flagrant loophole in the tax laws and ought to be closed and closed quickly. In so doing, the Federal can retrieve or collect substantial sums of income tax for the necessary activities of the Government without having to run the risk of deficit financing or to add additional excise taxes on consumer items, which taxes are within themselves regressive and, I believe, unfortunate for the economy.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. LONG of Louisiana. I regret, too, that the Senator was not present because in years gone by the Senator has voted for amendments to increase Federal funds for the needy.

Mr. HUMPHREY. Yes, indeed.

Mr. LONG of Louisiana. Those votes have oftentimes been close. I recall that one was decided on a tie vote. Unfortunately, the Vice President could not be present at the time to register his position, but because it was a tie vote the amendment failed to prevail. The Senator from Minnesota [Mr. HUMPHREY] was present on that occasion to vote in favor of that measure. Last night his vote would not have made too much difference because I believe the proposed amendment lost by a few votes more than one. However, I think the Senator would have voted to increase welfare payments for the 5-million-and-some-odd-thousand people in the land who are classified as needy.

Mr. HUMPHREY. As the Senator from Louisiana knows, I have been in favor of such an amendment and feel it is one that is really needed. I have always supported the Senator's activity in behalf of the amendment of which he speaks. It is one of the finest parts of his legislative record and I wish to compliment him for it.

TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN

The Senate resumed the consideration of Executive E, 86th Congress, 2d session, the Treaty of Mutual Cooperation and Security Between the United States of America and Japan, signed at Washington on January 19, 1960.

Mr. HUMPHREY. Mr. President, there has been a long debate today on the Treaty of Mutual Cooperation and Security with Japan. I offer a few remarks relating to that treaty, expressing my concern about it, and at the same time attempting to point out what I believe to be some of the more rewarding aspects of the treaty.

First, we have gone through a rather difficult period in American-Japanese relations. I was one of the Senators who had grave doubts as to the wisdom of the President's proposed visit to Japan. I had these doubts because I felt that with riots taking place, the conditions of violence, in the streets of Tokyo indicated that a visit by the President could well result not only in embarrassment to the President as a person but also embarrassment and humiliation to the office of

the Presidency, even leading to a grave international incident.

I expressed those doubts and said that the President should not go to Japan unless the Japanese Government could give positive, absolute guarantees of security and safety. Then I said that I doubted that it could do so.

It was my view that the mobs or the crowds of people that were rioting and carrying on in the streets were larger than our Government had estimated. It was my view that the Kishi government either was not able or was not willing to take the measures that were necessary to control these riots; and, therefore, for the President of the United States to visit the capital of Japan under those circumstances would be unwise.

Also, as has been pointed out in the Senate, the proposed visit of the President was tied in with the stability of the current regime in Japan, the so-called Kishi administration. I doubted very much whether the President of the United States ought to become identified with any particular regime, but rather a visit by the head of state should be one to all the people of Japan and not to a current parliamentary majority.

As we found out later, the Government of Japan withdrew the invitation, and it did so for the reason that it was felt that the President's safety could not be guaranteed and that a visit might result in very embarrassing circumstances.

I might add that the State Department indicated at all times that the visit should take place. It was, apparently, poorly informed as to the conditions in Tokyo.

Today the headline in the Washington Evening Star is "Error on Japan Treaty Conceded by Herter." The story goes on to say that the Secretary of State admits that the State Department and the officials of our Government underestimated the attitude of the Japanese people, underestimated the size of the demonstrating groups, underestimated the degree of violence and turmoil that existed in Tokyo and other parts of Japan.

Many of us in the Senate receive letters from friends in Japan who are acknowledged students of Japanese affairs, and the letters I have reecived, almost without exception, told me that these were very perilous days in Japan and that a visit by the President could result only in further aggravation of the problems. That is all past now.

The next point that came up was whether we should ratify, and, if so when, the Treaty of Mutual Cooperation and Security with Japan which was negotiated this fall. The senior Senator from Minnesota was one of those who cautioned that we should proceed slowly and carefully. I said so in the committee and also said so over the television and radio and in public statements. I felt that the insistence of the State Department last week that we should proceed at once with the ratification of this treaty could result in very serious international problems. I believed that were we to ratify it immediately, as we were requested to do, the Government of the United States would be accused of having forced something upon the Japanese people prior to the final act of ratification by the Japanese Government.

Of course, as we know, that final act of ratification was the fact that the Japanese Diet was not dissolved, and the treaty went into effect on a date certain by the fact that the Government was still in power. So we have delayed.

I commend the majority leader and those responsible in the Senate for our leadership in having delayed the act of ratification. It was a wise decision and one that I supported and encouraged.

It would be unwise for the greatest power on the face of the earth, the United States of America, to act as if we had to take hasty action, by ratifying a treaty with a government that was unable to maintain law and order in its own country. The plea was made to us that ratification at once was important to stabilize the political situation of Japan. To me, this had no merit, since the treaty itself was a bone of contention in Japan.

I do not believe that ratification last week would have stabilized the situation. I believe it would have aggravated it. I am not at all sure that even now ratification of the treaty will tend to stabilize the political situation in Japan. In fact, there is reason to believe a further delay in ratification until after the Japanese elections would be advisable. The Senate would be well advised to act on this treaty in terms of what is in our best interest, not in terms of what the political interest is in Japan. We have a great many second guessers around here, Monday morning quarterbacks, who seem to be figuring out what is going to happen in Japanese politics.

The truth is that the demonstrations in Tokyo were not all anti-American nor were they just Communist demonstrations. The American President became involved in Japanese politics by the fact that the trip was being made at a time when the Kishi government was in serious trouble. This trouble was due in part to the manner in which it had gained ratification of the treaty in the lower house. The treaty was ratified at a time when certain deputies in the lower house of the Japanese Diet had walked out. This was considered to be a sort of tricky and slick way of getting ratification of an important document such as a treaty between two great countries. Then, too, the Kishi administration was under attack from the Socialists and others over fiscal, labor, and defense policies. The projected visit of President Eisenhower and the treaty were but added fuel to an already smoldering fire.

So we became involved in domestic Japanese politics. That is something we ought to get out of right away. The political situation in Japan is an uncertain one. I do not believe that the United States Government ought to aline itself with one poltical party or another. I believe that we should direct our efforts toward trying to have a treaty between the Japanese nation and the United States regardless of the kind of elected government is in power in Japan. I emphasize elected government, because I do not believe that the Communists are going to elect any government in Japan. If the Communists take over the government in Japan, it will not be through the process of election, but through the process of force and violence. The best we can do is encourage the strengthening of parliamentary institutions.

But, the proposed treaty is better than the current situation. The pending treaty is the result of the desire on the part of responsible persons in Japan to get away from the occupation status and get away from an earlier treaty that was consummated some years ago, when Japan was looked upon, in a sense, as a conquered nation. Japan today is one of the great nations of the world. She is without doubt one of the largest industrial nations of the world. We would therefore be very foolish if we did not take into consideration that, while Japan may not have a big army or military establishment, because it was limited by her Constitution, that Japan is a strong nation industrially. The strength of a nation is not in the power of its armed forces alone. The strength of a nation lies in its economy. Japan's economy is a vital sector in the economic life of the free world.

Therefore, when we look upon Japan as an ally, we should not see her merely in terms of her military forces. We must recognize her for the economic and social system she has developed. It has been said that Japan has no troops and no navy and no air force. This, in a sense, is true. It has what we might call police units. There has been a good deal of stretching of that provision in her Constitution prohibiting any military establishment. She is denied military forces but permitted to have substantial police or security forces.

But Japan today has one of the largest merchant marines in the world. Japan has one of the largest industrial complexes in the world. She has one of the largest and most able and skilled labor forces in the world. She has great managerial talent, and vast productive skill and capacity. This makes her a good ally—a strong nation.

I would hope that the treaty, not merely its military aspects, but those parts which encourage economic cooperation and economic consultation, will tend to strengthen the relationships between our two great countries.

In the discussion of this treaty, we have pointed to the minority in Japan, which caused the violence and the riots. We should also point to the majority in Japan, which has been hard at work doing its job of rebuilding the country and expanding the markets of the country with the rest of the nations of the world, and competing with other nations and, indeed, with our own country, and, making for Japan a solvent and productive economy.

After all, the Japanese people are an exceedingly capable and energetic people. It is to the advantage of the free world that the Japanese economy be a vital, viable, and productive economy.

If this treaty contributes to such a development then it makes a contribution to mutual security.

Mr. HUMPHREY. Mr. President, I call to the Senate's attention, while this is essentially a treaty of a military nature, it also provides for other forms of cooperation. It is my view that the cooperation which is underlined in the treaty does much to cement the relationships between Japan and the United States.

I should like to make one or two other observations, as we consider the articles in the treaty. I hope that the legislative history will be perfectly clear that there is considerable emphasis in the treaty on the Charter of the United Nations.

Take, for example, article I:

> The parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security and justice are not endangered and to refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations.

Then the article goes on to state:

> The parties will endeavor in concert with other peace-loving countries to strengthen the United Nations so that its mission of maintaining international peace and security may be discharged more effectively.

Also, I call attention to article VII of the treaty:

> This treaty does not affect and shall not be interpreted as affecting in any way the rights and obligations of the parties under the Charter of the United Nations or the responsibility of the United Nations for the maintenance of international peace and security.

The treaty also provides, in article V, relating to the possibilities of armed attack:

> Each party recognizes that an armed attack against either party in the territories under the administration of Japan would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional provisions and processes.
>
> Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations in accordance with the provisions of article 51 of the Charter. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

Article V coupled with article IV has special relevance to the possibility of trouble that may lie ahead. Article IV reads:

> The parties will consult together from time to time regarding the implementation of this treaty, and, at the request of either party, whenever the security of Japan or international peace and security in the Far East is threatened.

Mr. President, I have read these portions of the treaty because I want the record to be clear that the treaty is not written to bypass the Charter of the United Nations, but rather to implement it, and that our obligation is to the Charter of the United Nations, and so is that of Japan.

The purpose of the treaty is to strengthen the security articles of the Charter, those provisions of the Charter of the United Nations which provide for international peace and security, particularly in the Far East, and, indeed, all around the world. Article IV calls upon the parties to consult from time to time regarding the implementation of the treaty. I hope this article might also be interpreted to call upon the parties to consult from time to time as to what, if any, modifications may be needed in the treaty.

I am of the opinion that in the long run the treaty will require rather substantial modification, particularly as it relates to the presence of American nationals in Japan, and as to the presence of American bases in Japan, and the rights with respect to those bases.

Finally, it seems to me that the whole concept of our foreign policy in the Far East requires a very careful reexamination and, I should say, reorientation. There has been a tendency of late to build a foreign policy in the Far East upon the uncertain foundation of military alliances. Too little has been done in terms of regional economic development and of regional, cultural, and economic cooperation. All too little has been done in terms of consultation with our partners in the Far East.

I feel that the sentiments expressed by the Senator from Oregon [Mr. MORSE] relating to the use of the facilities of the United Nations, as well as consultation by the United States with our allies relating to the treaty in the Far East, is a very pertinent observation. The United States has sought to conduct foreign policy in the Far East as if it were a bilateral arrangement, with the exception, I should say, of the SEATO countries; and even in the Southeast Asia Treaty Organization, we emphasize the military over and above that of the economic, cultural, scientific, and educational.

I feel that military power in the Far East is only one of the many factors which must be considered for an effective foreign policy in that area of the world. I know that we must have close working relationships with Japan, which is a major industrial nation. I also know that if we are to have relationships with Japan, we must be willing to make concessions.

As was pointed out today by the chairman of the Committee on Foreign Relations [Mr. FULBRIGHT] and by the distinguished Senator from Montana [Mr. MANSFIELD], the assistant majority leader, the area of Japan is smaller than the State of Montana but, as was said by the Senator from Montana, it has a population of almost 90 million, and a population increase of from 1 to 2 million every year. Japan has limited natural resources. About 60 percent of its land is tillable or usable for agricultural purposes.

Yet Japan as a nation must survive. Its possibilities to survive lie in trade and production. They lie in the development of education, of skills, and of science. It is in these categories that the strength of Japan will be found. It seems to me that we in this country should recognize that in our foreign policy.

I do not want Japan to fall into the orbit of the Communist powers. If Japan were to be communized, to be taken over, or in any way to become what might be called effectively neutralized toward the Communist orbit, such a development would have a decided effect upon the power relationships in the world.

Japan is a vital link in the security system of the free world, if we look upon the security system as one which relates not only to military power, but also to economic, cultural, scientific, and political power. It is in that spirit that I believe this treaty performs a valuable service.

This treaty is a better one than the treaty which now is in force. This treaty provides opportunity for revision. It is of 10 years' duration—a limited period permitting changes.

If the Government of the United States will implement this treaty by regarding Japan as an equal and by giving Japan, as well as other countries, qualitative recognition, not just quantitative recognition, then, indeed, this treaty can serve a very useful purpose.

I believe it would be wrong to ignore the arguments made today by some of our colleagues who have said this treaty would have no effect if an unfriendly government were to develop in Japan. Accordingly, it is in our national interest to take such action as we can to encourage, at least, a responsible and friendly government in Japan. I believe one of the ways we can do so is to look upon Japan as a partner, not as a faraway place. We need to look upon Japan in the way that we look upon the Philippines or any other friendly country—as a friend and as a partner in fact. When I say a partner, I mean a partner in consultation and in economic, cultural, scientific, military, and political cooperation, a partner which at times will disagree with us, but at other times will agree with us.

I hope we shall use the treaty to strengthen the participation by the United States and by Japan in the United Nations, because I believe the United Nations to be peculiarly well adapted to dealing with some of the problems of the Far East; and I hope we shall look upon the United Nations and its related agencies as very significant parts of our foreign-policy machinery as well as our foreign-policy program, in dealing with the nations of the Far East and their problems.

I urge that we call upon Japan to take a responsible role in terms of foreign aid in the Far East. It seems to me the time has come for the United States to stop thinking it, alone, can pay all of the bills. We should call upon a prosperous Japan to make her contributions to economic recovery in the friendly and free nations of Asia, Africa, and the Middle East. We should also be calling upon Western Germany to be doing the same—both former enemies, both today our allies and friends. Both of them have made phenomenal economic recov-

ery. Both have received liberal economic aid from the United States. Now the time is at hand for the Western European nations and the nations of Asia which have the means to do so to take on their share of the responsibility and to do their part in giving economic assistance and technical assistance to the other nations of the world.

Therefore, Mr. President, this treaty can be a forward step in closer cooperation between the United States and Japan on matters even more significant than military matters. This treaty can be an indication, at least, to the people of Japan that we in the United States want a working relationship with them on many items on the international agenda.

I am of the opinion that Japan can offer us much guidance in the field of disarmament, for example; and we should be calling upon Japan to take the lead in the Far East in encouraging disarmament. We can call upon her to provide a good deal of active participation in giving technical assistance to the so-called emerging countries of Asia, Africa, and the Middle East; and we can call upon Japan to render aid in the field of science and education. Certainly we should do so. I believe it can best be done through the multilateral agencies we have developed thus far in the United Nations.

Today, one or more Senators have expressed concern over the fact that this treaty requires the United States to come to the defense of Japan, in the event she is attacked, but does not require corresponding action by Japan in the event the United States is attacked. Of course, the treaty simply faces one of the facts of life—namely, that if Japan is attacked, such an attack will vitally affect the security of the United States. If that would not be the case, we have no business having military commitments in the Far East. We have military commitments, for instance, with the Philippines, and within the week those commitments have been reaffirmed by the President of the United States; and we have military commitments by treaty with Nationalist China, on the Island of Formosa; and we have military commitments with South Korea. So it goes without saying that an attack upon Japan would be an attack upon the United States and her allies in Europe and in Asia.

Therefore, Mr. President, although the treaty does not, in a sense, require the Government of Japan to come to our aid immediately, in the event of an attack upon the United States—although, it does require immediate consultation and the following of the constitutional processes—the treaty does require assistance by the United States in the event of attack upon Japan. The reason for that is quite obvious. The Japanese Constitution contains a prohibition against large military establishments. That constitutional provision was established with our insistence and the desire of the people of Japan.

I repeat that I believe that Japan's best contributions to freedom and security in the world today can be made in areas equally significant to the military.

However, I feel that the United States of America, by reason of her long-term commitments in one country after another around the world, particularly in the Far East, has a unique responsibility as regards Japan.

Mr. President, although there may be weaknesses in the treaty—and some of them have been referred to this afternoon—and although the treaty has limitations, and although the treaty might never become operative if an unfriendly government were to take over in Japan, certainly this treaty is at least an expression by the Government of the United States that it would like to normalize the relationships between the United States and Japan; and the treaty provides means for further discussions and further modifications of the diplomatic and political and economic and other relationships between the United States and Japan. The treaty also provides for economic and diplomatic consultations and for activities within the framework of the United Nations; and the treaty brings Japan in as a partner in the system of alliances and security arrangements on the part of the United States and her allies.

Therefore, Mr. President, I shall vote for ratification of the treaty, even though I was one of those who counseled against hasty action. I counseled against hasty action because I thought it would inject the United States, at that moment in Japanese history, into Japanese domestic politics, to the detriment of stable government in Japan.

I hope that now the people of Japan will look upon the treaty as a further opportunity to have more friendly relationships with the United States of America; and I hope that both the Government of Japan and the Government of the United States will look upon the treaty as a means of strengthening the cooperation of these two great nations within the framework of the United Nations.

If that is the spirit in which the treaty is ratified, and if the President of the United States—whoever he may be—will look upon the treaty as a further step in the normalization of relationships between these two great powers, then, indeed, this treaty will have contributed to peace and security in the world.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield to me?

Mr. HUMPHREY. I yield.

Mr. JOHNSON of Texas. I wonder if we could enter into a unanimous-consent agreement that after the morning hour tomorrow we have not to exceed 30 minutes of debate, to be divided equally and controlled by the majority and minority leaders, and then proceed to a yea-and-nay vote on the treaty. If we have 30 minutes of debate I will yield to the Senator from Louisiana [Mr. LONG] the time that he desires to speak on the treaty, and if anyone else desires time on either side of the question we will yield to him also.

Mr. HUMPHREY. Mr. President, I shall have to object, because tomorrow I intend to have a few words to say about Mr. NIXON's farm speech in North Dakota. We were here late last night.

Mr. LONG of Louisiana. Mr. President, will the Senator withhold his objection?

Mr. JOHNSON of Texas. Does the Senator wish to make another speech?

Mr. HUMPHREY. I am going to have something to say tomorrow about Mr. NIXON's farm speech in North Dakota. I believe we can finish consideration of the treaty tonight. The Senator from Minnesota will be through in a few minutes.

Mr. JOHNSON of Texas. My request would not bar the Senator from Minnesota from making a speech about Mr. NIXON. It would provide an opportunity for us to vote on the treaty after 30 minutes of debate. In that way Senators would know when we would vote. Several of them wish to leave. We could set the time when we would vote on the treaty. If the Senator wishes to set a specific time when he wishes to make his speech, we can arrange that. If he wishes to make his speech before consideration of the treaty tomorrow, we will hold up the treaty. If he wants to make it after the treaty, we will do that. All we are trying to do is to set a specific time for a yea-and-nay vote on the treaty.

Mr. LONG of Louisiana. I hope the Senator from Minnesota will agree to some arrangement of that sort, because I, for example, wish to make a speech against the treaty. I do not know whether that will provoke further debate. However, if the Senator wishes to make his speech tomorrow, I suggest that he make it either before or after the vote on the treaty. My suggestion would be that the vote on the treaty come first and then that the Senator from Minnesota be recognized to make his speech. In that way he will have a good attendance in the Senate.

Mr. HUMPHREY. That is agreeable to me.

Mr. JOHNSON of Texas. He may speak before or after action on the treaty.

Mr. HUMPHREY. Immediately after the treaty is disposed of will be the best arrangement.

Mr. JOHNSON of Texas. Mr. President, I renew my unanimous consent request.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

Mr. HUMPHREY. What is the request?

Mr. JOHNSON of Texas. That there be 30 minutes of debate, 15 minutes on each side, after the morning hour, and then that the Senate proceed to vote on the treaty.

Mr. HUMPHREY. And that immediately after the treaty the Senator from Minnesota will be recognized.

Mr. JOHNSON of Texas. If the Senator so desires.

Mr. HUMPHREY. Yes.

Mr. JOHNSON of Texas. Very well.

Mr. HUMPHREY. I thank the Senator from Texas.

The PRESIDING OFFICER. Is there objection to the request? The Chair hears none, and it is so ordered.

Mr. JAVITS. Mr. President, will the Senator yield, to permit me to ask the distinguished majority leader a question concerning the appropriation bills which were supposed to be scheduled for action today?

Mr. HUMPHREY. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, may we hear from the Senator from Texas concerning his plans for the consideration of the appropriation bills which were due to be taken up tonight?

Mr. JOHNSON of Texas. That will depend entirely on the speeches to be made by Senators. It is not planned to transact any business following the speeches. There will be nothing but speeches this evening. We will get down to voting tomorrow; and after we vote on the treaty, it is proposed to take up either the Independent Offices or the General Government Matters Appropriation bill.

Mr. JAVITS. I thank the Senator from Minnesota and the Senator from Texas.

Mr. JOHNSON of Texas. So far as the leadership is aware, there will be no votes this evening. The Senate will convene at 12 o'clock noon tomorrow. There will be a morning hour. Following the morning hour there will be 15 minutes to a side on the treaty. Then the vote on the treaty will take place.

Following the vote on the treaty, the Senator from Minnesota will be recognized. How much time will the Senator from Minnesota desire?

Mr. HUMPHREY. I have not the slightest idea.

Mr. DIRKSEN. Mr. President, put my name on the list, too. I do not have the slightest idea of how much time I may use, when I follow the Senator from Minnesota.

Mr. HUMPHREY. What the Senator from Illinois will probably say afterward is "Amen."

Mr. DIRKSEN. That is what the Senator from Minnesota thinks.

Mr. JOHNSON of Texas. Mr. President, we will have for consideration two appropriation bills which must also go to conference.

Mr. HUMPHREY. My speech will not be too long; it will take about a half hour.

Mr. JOHNSON of Texas. Mr. President, I modify my request to include one-half hour for the Senator from Minnesota [Mr. HUMPHREY], following the vote on the treaty.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The unanimous-consent agreement, subsequently reduced to writing, is as follows:

Ordered, That, effective on Wednesday, June, 22, 1960, at the conclusion of the routine morning business, during the further consideration of the Treaty of Mutual Cooperation and Security Between the United States of America and Japan (Ex. E of 86th Cong., 2d sess.), all debate shall be limited to 30 minutes to be equally divided and controlled by the majority and minority leaders: *Provided further*, That after the vote on the treaty, the Senator from Minnesota [Mr. HUMPHREY] shall be recognized for 30 minutes to address the Senate.

Mr. JOHNSON of Texas. Mr. President, I desire to inform the Senate that immediately following the speech by the Senator from Minnesota an appropriation bill will be taken up.

Mr. DIRKSEN. Mr. President, I shall offer an amendment in order to secure time for my speech.

LEGISLATIVE SESSION

Mr. McCARTHY. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

TRANSACTION OF ADDITIONAL ROUTINE BUSINESS

By unanimous consent, the following routine business was transacted:

PETITION OF MINNEAPOLIS LODGE 260, BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a letter which I have received from Minneapolis Lodge 260 of the Brotherhood of Railway and Steamship Clerks in opposition to Senate bill 3548 relating to union bargaining, be printed at this point in the RECORD and appropriately referred.

There being no objection, the letter was referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

JUNE 6, 1960.

HUBERT H. HUMPHREY,
Washington, D.C.

DEAR SENATOR: Senator Dirksen, of Illinois, on May 13, 1960, introduced S. 3548 which would amend the Railway Labor Act, the Norris-La Guardia Act, and National Labor Relations Act, making it impossible for labor unions to lawfully bargain or strike over demands involving the stabilization of employment.

The members of Minneapolis Lodge 260, urge you to oppose this bill, S. 3548.

Yours truly,

H. E. DURAND,
Secretary Treasurer.

ADDITIONAL REPORTS OF COMMITTEES

The following additional reports of committees were submitted:

By Mr. MURRAY, from the Committee on Interior and Insular Affairs, with amendments:

S. 77. A bill to establish the Chesapeake & Ohio Canal National Historical Park and to provide for the administration and maintenance of a parkway, in the State of Maryland, and for other purposes (Rept. No. 1632).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, without amendment:

S. 2709. A bill directing the Secretary of the Interior to convey to the city of Flandreau, S. Dak., any interest remaining in the United States to certain property which it conveyed to such city by the act of August 21, 1916 (39 Stat. 524) (Rept. No. 1633);

S. 2914. A bill to authorize the purchase and exchange of land and interests therein on the Blue Ridge and Natchez Trace Parkways (Rept. No. 1634);

S. 3264. A bill to abolish the Arlington Memorial Amphitheater Commission (Rept. No. 1635);

S. 3399. A bill to authorize the exchange of certain property within Shenandoah National Park, in the State of Virginia, and for other purposes (Rept. No. 1636); and

H.R. 8740. An act to provide for the leasing of oil and gas interests in certain lands owned by the United States in the State of Texas (Rept. No. 1637).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, with amendments:

H.R. 8226. An act to add certain lands to Castillo de San Marcos National Monument in the State of Florida (Rept. No. 1638).

By Mr. MOSS, from the Committee on Interior and Insular Affairs, with amendments:

S. 2757. A bill to supplement the act of June 14, 1926, as amended, to permit any State to acquire certain public lands for recreational use (Rept. No. 1630); and

H.R. 6597. An act to revise the boundaries of Dinosaur National Monument and provide an entrance road or roads thereto, and for other purposes (Rept. No. 1629).

By Mr. O'MAHONEY, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 3122. An act directing the Secretary of the Interior to issue a homestead patent to the heirs of Frank L. Wilhelm (Rept. No. 1627).

By Mr. GRUENING, from the Committee on Interior and Insular Affairs, without amendment:

S. 3267. A bill to amend the act of October 17, 1940, relating to the disposition of certain public lands in Alaska (Rept. No. 1628).

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, with amendments:

H.R. 11953. An act to provide for the assessing of Indian trust lands and restricted fee patent Indian lands within the Lummi Indian diking project on the Lummi Indian Reservation in the State of Washington, through drainage and diking district formed under the laws of the State of Washington (Rept. No. 1640).

By Mr. KUCHEL, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 9142. An act to provide for payment for lands heretofore conveyed to the United States as a basis for lieu selections from the public domain, and for other purposes (Rept. No. 1639).

By Mr. BIBLE, from the Committee on the District of Columbia, with amendments:

S. 3193. A bill to aid in the development of a unified and integrated system of transportation for the National Capital region; to create a temporary National Capital Transportation Agency; to authorize creation of a National Capital Transportation Corporation; to authorize negotiation to create an interstate transportation agency; and for other purposes (Rept. No. 1631).

By Mr. FREAR, from the Committee on the District of Columbia, without amendment:

S. 3415. A bill to exempt from taxation certain property of the American Association of University Women, Educational Foundation, Inc., in the District of Columbia (Rept. No. 1641).

By Mr. FREAR, from the Committee on the District of Columbia, with an amendment:

S. 3258. A bill to amend the District of Columbia Alcoholic Beverage Control Act (Rept. No. 1643).

By Mr. FREAR, from the Committee on the District of Columbia, with amendments:

S. 3195. A bill to exempt from taxation certain property of the Army Distaff Foundation (Rept. No. 1642).

ADDITIONAL BILL INTRODUCED

Mr. KENNEDY, by unanimous consent, introduced a bill (S. 3712) relating to the effective date of the qualification of the Pipe and Refrigeration Fitters Local 537 pension fund as a qualified trust under section 401(a) of the Internal Revenue Code of 1954, which was read twice by its title and referred to the Committee on Finance.

PROPOSED AMENDMENTS OR NEW AGREEMENTS, FOR COOPERATION WITH OTHER NATIONS IN THE PEACEFUL USES OF ATOMIC ENERGY

Mr. PASTORE. Mr. President, pursuant to the requirements of section 123c of the Atomic Energy Act of 1954, as amended, the Atomic Energy Commission has recently forwarded to the Joint Committee on Atomic Energy a number of proposed amendments, or new agreements, for cooperation with other nations in the peaceful uses of atomic energy.

As chairman of the Subcommittee on Agreements for Cooperation of the Joint Committee on Atomic Energy, and in accordance with past practices, I request unanimous consent to have printed in the CONGRESSIONAL RECORD, at a conclusion of my brief remarks, copies of representative amendments, and new agreements, preceded by a brief summary prepared by the Atomic Energy Commission, for the purpose of informing all Members of the Senate, the Congress, and the public, of the provisions of these amendments and agreements.

The Subcommittee on Agreements for Cooperation of the Joint Committee on Atomic Energy has scheduled a hearing for tomorrow, June 22, 1960, at 10 a.m., to consider the provisions of these amendments and agreements, as well as certain other matters. The subcommittee, and the full Joint Committee, may subsequently consider the possibility of waiving the remainder of the 30-day review period by the Joint Committee, pursuant to section 123c of the Atomic Energy Act of 1954, as amended.

All of these amendments or agreements, Mr. President, are for the peaceful uses of atomic energy. Seven of the amendments are primarily to extend for 2 or 3 years the bilateral agreement, and to provide an opportunity for transfer of the administration of safeguards to the International Atomic Energy Agency, and for future cooperation through the Agency.

Two other amendments authorize transfer of highly enriched materials for use in research or test reactors. The agreement with Canada provides for a cooperative program in the development of heavy water moderated reactors, for the mutual benefit of both nations.

The new agreement with Euratom authorizes supply of certain nuclear materials for the Euratom research program.

Mr. President, all of these amendments and agreements are demonstrations of U.S. leadership and dedication to the development of the peaceful uses of atomic energy in close cooperation with other nations of the world. They contain the usual guarantees and safeguards against diversion of the materials from peaceful to military purposes.

I send to the desk, Mr. President, the following, and request unanimous consent that they be reprinted in the CONGRESSIONAL RECORD at this point for the information of all Members of the Senate, the Congress, and the public:

First, a letter dated June 20, 1960, to James T. Ramey, executive director, Joint Committee on Atomic Energy, from Mr. John A. Hall, for the General Manager of AEC, with appendixes A and B, summarizing the amendments to the agreements with various countries, and with Euratom;

Second, a copy of amendment to agreement for cooperation with Argentina—similar to that with Brazil, China, Greece, Israel, and Portugal—together with supporting correspondence;

Third, an amendment to agreement with New Zealand—similar to that with Thailand—and supporting correspondence;

Fourth, an amendment to cooperation with Canada, and supporting correspondence;

Fifth, an amendment to agreement for cooperation with Switzerland, and supporting correspondence; and

Sixth, an additional agreement for cooperation with Euratom, and supporting correspondence.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

U.S. ATOMIC ENERGY COMMISSION,
June 20, 1960.

Mr. JAMES T. RAMEY,
Executive Director, Joint Committee on Atomic Energy, Congress of the United States, Washington, D.C.

DEAR MR. RAMEY: In response to your request of June 13, 1960, there is attached as appendix A brief summaries of the amendments to the Agreements for Cooperation with Argentina, Brazil, Canada, China, Greece, Israel, New Zealand, the Philippines, Portugal, Switzerland, and Thailand, and of the agreement with Indonesia. Attached as appendix B is a detailed discussion of the provisions of the additional agreement for cooperation with Euratom, supplementing that information provided in Chairman McCone's letter of June 11, 1960, to Senator ANDERSON.

If there is any further information you require, we should be glad to hear from you.

Sincerely yours,

JOHN A. HALL
(For General Manager).

APPENDIX A

SUMMARY OF AMENDMENTS TO THE AGREEMENTS FOR COOPERATION WITH ARGENTINA, BRAZIL, CANADA, CHINA, GREECE, ISRAEL, NEW ZEALAND, THE PHILIPPINES, SWITZERLAND, AND THAILAND

ARGENTINA, BRAZIL, CHINA, GREECE, ISRAEL, AND PORTUGAL

Each of these amendments provides for a 2-year extension of the agreement with the respective country. The purpose of entering into 2-year extensions is to provide continuity in the bilateral arrangements in connection with fuel and equipment that has been or is expected shortly to be transferred, and, at the same time, provide an opportunity for the development of arrangements for the administration of safeguards by the International Atomic Energy Agency and for future cooperation through the Agency. The following standard articles are also being incorporated into those agreements which do not presently contain such provisions, as indicated:

(1) IAEA article: Affirmation of the parties to avail themselves, as soon as practicable, of the facilities and services of the IAEA (Argentina, Brazil, China, Greece, and Portugal).

(2) Disclaimer article: Provides for a disclaimer of responsibility under which neither party warrants the accuracy, completeness, or suitability of information or data exchanged for any particular use or application (Argentina and Greece).

(3) Hold harmless article: Provides for a hold harmless provision indemnifying and saving harmless the United States from any and all liability arising from the lease of source material, special nuclear material or other reactor materials (Argentina and Greece).

NEW ZEALAND AND THAILAND

The existing agreements provide for the lease of six kilograms of material enriched up to 20 percent in the isotope U^{235}, plus pipeline quantities, for fueling research reactors.

The amendments change the above provisions by providing for the sale or lease, as may be agreed, of a net amount of 10 kilograms of material enriched up to 20 percent in the isotope U^{235} for use in research reactors, materials testing reactors, and reactor experiments. At its discretion, the Commission may make all or a portion of this material available as material enriched up to 90 percent for use in the foregoing facilities, each capable of operating with a fuel load not to exceed 8 kilograms of contained U^{235}. New Zealand and Thailand requested this provision in connection with research reactors they are planning to construct. The amendments also add a provision permitting the transfer of special nuclear materials, on an "as may be agreed" basis, for use in defined research projects other than fueling reactors or reactor experiments. In view of these provisions, there have been included in the amendments standard comprehensive controls and safeguards and a comprehensive IAEA article in which the parties affirm their common interest in the IAEA and agree to consult with each other to determine in what respects, if any, they desire to modify the provisions of the agreement. The amendment with Thailand also extends that agreement for a 2-year period.

PHILIPPINES

This amendment provides, at the request of the Philippines, for a 3, rather than 2 years, extension, to cover, if possible, the life of the first-core loading of their research reactor, and its return to the United States. The amendment also adds a standard provision to permit the tranfer of specified gram quantities of special nuclear materials for research purposes, and contains "hold harmless" and "disclaimer" provisions as well as an IAEA article.

INDONESIA

The agreement with Indonesia is, in all but one respect, the standard type of research bilateral providing for the lease of 6 kilograms of uranium enriched up to 20 percent in the isotope U^{235}, plus pipeline quantities, for use as fuel in research reactors. It differs from the standard research agreement only in that it is limited, at Indonesia's request, to cooperation with respect to a single specified project; namely, a research and training project for nuclear science and engineering at the Bandung Institute of Technology.

CANADA

The Joint Committee is aware of the cooperative program entered into with Canada on heavy water moderated reactors. The

main purpose of the amendment is to permit full implementation of this program.

The existing agreement would expire on July 31, 1965. The amendment extends the agreement for a period of 20 years from the date the amendment enters into force. This period is in line with the terms of our power agreements with Italy and Japan and the joint program under our agreement with Euratom.

The amendment also permits enriched uranium and heavy water for power reactor programs to be provided by lease, or, subject to required governmental authorizations, loan. The present agreement permits sale only of these items.

Certain changes are also made in the patent provisions to permit wider freedom of governmental action with regard to licensing. The existing agreement provides that, as to inventions based on information communicated under the agreement, the licenses are for "governmental purposes and for purposes of mutual defense" and that the license shall be "for its governmental purposes." The amendment removes the above restrictions and provides instead for licenses, with the right to sublicense, for all purposes. The amendment also provides that additional patent arrangements may be made with respect to inventions or discoveries made or conceived in circumstances other than those specifically provided for in the agreement.

SWITZERLAND

Under the terms of the existing agreement, reactor fuel is available to Switzerland on a sale basis only and highly enriched uranium fuel is limited to use in a materials testing reactor capable of operating with a fuel load not to exceed six kilograms of contained U^{235} in uranium. The amendment will permit the Commission also to lease reactor fuel to Switzerland and to supply highly enriched uranium for use in research reactors and reactor experiments, as well as materials testing reactors, each capable of operating with a fuel load not to exceed eight kilograms of contained U^{235} in uranium. The amendment also provides that our usual language relieving the Government of the United States of liability arising out of or in connection with special nuclear material, source material, or other reactor material leased to Switzerland shall be contained in all contracts for the lease of such materials. This minor deviation from the usual practice of making the "hold harmless" provision directly operative within the agreement itself was requested by the Swiss in order to avoid submittal of the amendment to the Swiss Parliament, with consequent delay.

APPENDIX B

DISCUSSION OF THE PROVISIONS OF THE ADDITIONAL AGREEMENT FOR COOPERATION BETWEEN THE UNITED STATES AND EURATOM

The additional agreement for cooperation between the United States and Euratom is designed to meet the urgent need on the part of Euratom and one of its member states for assurances, required before the next session of Congress, of the supply of certain nuclear materials for their research programs. If the assurances that are provided by the additional agreement are not forthcoming during this period, it is possible that some of the research projects for which the materials are designated may have to be deferred. It should also be noted that the principal need is that of a member state, Italy, which has chosen to seek these materials through Euratom as an indication of support for this organization.

Only materials for which assurances are urgently needed are provided for in the additional agreement. The specific quantities of materials to be made available by sale or lease, as may be agreed, and the research projects for which they are intended are:

1. One hundred kilograms of uranium, enriched up to 90 percent in the isotope U^{235} for use in an Italian organic reactor experiment: The Italian National Committee for Nuclear Research (CNRN) is anxious to proceed with the design and construction of this experiment, which is to be completed by 1962. It wishes to use highly enriched U^{235} in the first core (similar to that of the OMRE) of this facility so as to accelerate the attainment of meaningful data for the organic system.

2. Two hundred kilograms of uranium, enriched up to 90 percent in the isotope U^{235}, and 30 kilograms of U^{233} contained in unseparated, irradiated, uranium-thorium fuel elements for use in an experimental reprocessing plant and associated fuel fabrication facility. The CNRN plans to start up an experimental plant for reprocessing irradiated uranium-thorium fuel elements from the Elk River reactor during the first half of 1964. Allis-Chalmers will participate in this project, which the Commission's Division of Reactor Development has strongly endorsed.

3. Forty kilograms of uranium, enriched up to 90 percent in the isotope U^{235} for critical experiments related to Euratoms' heavy-water moderated, organic-cooled reactor prototype, ORGEL. This project is the principal element in Euratom's joint research program with Canada on heavy water reactors. Although critical experiments have been performed in a French reactor, with fuel configurations already available, it is desired to further experiment with elements which more closely approximate those planned for the ORGEL project. The material requested would be used to fabricate these special critical assembly test elements.

The additional agreement also contains a research materials article (article II) under which limited quantities of special nuclear material may be supplied for small-scale research uses, as may be agreed. Pertinent articles of the existing Joint Program Agreement, including those on safeguards, have been incorporated in the Additional Agreement by reference.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C.

HON CLINTON P. ANDERSON,
Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR SENATOR ANDERSON: Pursuant to section 123c of the Atomic Energy Act of 1954, as amended, there is submitted with this letter:

1. An executed amendment to the agreement for cooperation between the Government of the United States of America and the Government of the Argentine Republic concerning civil uses of atomic energy;

2. A letter from the Commission to the President recommending approval of the amendment; and

3. A letter from the President to the Commission containing his determination that its performance will promote and will not constitute an unreasonable risk to the common defense and security, approving the amendment, and authorizing its execution.

Article IV of the proposed amendment provides for a two-year extension of the present agreement. It is hoped that the proposed two-year extension will permit the Government of the United States of America and the Government of the Argentine Republic sufficient time in which to reach agreement with the International Atomic Energy Agency for Agency administration of safeguards for the reactor and fuel transferred, or to be transferred, and to arrange for further cooperation through the Agency.

Article I of the amendment contains a disclaimer of responsibility clause under which neither party warrants the accuracy, completeness or suitability of information or data exchanged for any particular use or application.

Article II of the amendment contains a hold harmless clause indemnifying and saving harmless the United States from any and all liability arising from the lease of the fuel to the Government of the Argentine Republic.

In article III of the amendment the parties affirm their common interest in the International Atomic Energy Agency and agree to consult with each other to determine in what respects, if any, they desire to modify the provisions of the Agreement for Cooperation in view of the establishment of the Agency.

The amendment will enter into force when the two Governments have exchanged notifications that their respective statutory and constitutional requirements have been fulfilled.

Sincerely yours,

_____, _____,
Chairman.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 4, 1960.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: The Atomic Energy Commission recommends that you approve the enclosed proposed "amendment to Agreement for Cooperation Between the Government of the United States of America and the Government of the Argentine Republic Concerning Civil Uses of Atomic Energy," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The Department of State supports the Commission's recommendations.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would extend and modify the Agreement for Cooperation signed by the Government of the United States of America and the Government of the Argentine Republic on July 29, 1955. That agreement will expire on July 28, 1960, unless extended by amendment. Major features of the amendment are summarized below.

Article IV of the proposed amendment provides for a 2-year extension of the present agreement. It is hoped that the proposed 2-year extension will permit the Government of the United States of America and the Government of the Argentine Republic sufficient time in which to reach agreement with the International Atomic Energy Agency for Agency administration of safeguards for the reactor and fuel transferred, or to be transferred, and to arrange for further cooperation through the Agency.

Article I of the amendment contains a disclaimer of responsibility clause under which neither party warrants the accuracy, completeness or suitability of information or data exchanged for any particular use or application.

Article II of the amendment contains a hold-harmless clause indemnifying and saving harmless the United States from any and all liability arising from the lease of the fuel to the Government of the Argentine Republic.

In article III of the amendment the parties affirm their common interest in the International Atomic Energy Agency and agree to consult with each other to determine in what respects, if any, they desire to modify the provisions of the agreement for cooperation in view of the establishment of the Agency.

Following your determination, approval, and authorization, the amendment will be

formally executed by the appropriate authorities of the Government of the United States of America and the Government of the Argentine Republic. In compliance with section 123c of the Atomic Energy Act of 1954, as amended, the amendment will then be placed before the Joint Committee on Atomic Energy.

Respectfully,

JOHN A. MCCONE, *Chairman.*

THE WHITE HOUSE,
Washington, June 9, 1960.

The Honorable JOHN A. MCCONE,
Chairman, Atomic Energy Commission,
Washington, D.C.

DEAR MR. MCCONE: Under the date of June 4, 1960, the Atomic Energy Commission recommended that I approve the proposed amendment to agreement for cooperation between the Government of the United States of America and the Government of the Argentine Republic concerning civil uses of atomic energy, determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would extend and modify the agreement for cooperation signed by the Government of the United States of America and the Government of the Argentine Republic on July 29, 1955. The agreement will expire on July 28, 1960, unless extended by amendment.

Article IV of the proposed amendment provides for a 2-year extension of the present agreement. It is hoped that the proposed 2-year extension will permit the Government of the United States of America and the Government of the Argentine Republic sufficient time in which to reach agreement with the International Atomic Energy Agency for Agency administration of safeguards for the reactor and fuel transferred, or to be transferred, and to arrange for further cooperation through the Agency.

Article I of the amendment contains a disclaimer of responsibility clause under which neither party warrants the accuracy, completeness or suitability of information or data exchanged for any particular use or application.

Article II of the amendment contains a hold harmless clause indemnifying and saving harmless the United States from any and all liability arising from the lease of the fuel to the Government of the Argentine Republic.

In article III of the amendment the parties affirm their common interest in the International Atomic Energy Agency and agree to consult with each other to determine in what respects, if any, they desire to modify the provisions of the agreement for cooperation in view of the establishment of the Agency.

Pursuant to the provisions of section 123 of the Atomic Energy Act of 1954, as amended, and upon the recommendation of the Atomic Energy Commission, I hereby:

1. Determine that the performance of the proposed amendment will promote and will not constitute an unreasonable risk to the common defense and security of the United States, and

2. Approve the proposed amendment to the Agreement for Cooperation Between the Government of the United States of America and the Government of the Argentine Republic enclosed with your letter of June 4, 1960, and

3. Authorize the execution of the proposed amendment for the Government of the United States of America by appropriate authorities of the United States Atomic Energy Commission and the Department of State.

Sincerely,

DWIGHT D. EISENHOWER.

AMENDMENT TO AGREEMENT FOR COOPERATION BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND THE GOVERNMENT OF THE ARGENTINE REPUBLIC CONCERNING CIVIL USES OF ATOMIC ENERGY

The Government of the United States of America and the Government of the Argentine Republic,

Desiring to amend the Agreement for Cooperation Between the Government of the United States of America and the Government of the Argentine Republic Concerning Civil Uses of Atomic Energy signed at Washington July 29, 1955 (hereinafter referred to as the "Agreement for Cooperation"),

Agree as follows:

ARTICLE I

Article I of the Agreement for Cooperation is amended to read as follows:

"A. Subject to the limitations of Article V, the Parties hereto will exchange information in the following fields:

"1. Design, construction and operation of research reactors and their use as research, development, and engineering tools and in medical therapy.

"2. Health and safety problems related to the operation and use of research reactors.

"3. The use of radioactive isotopes in physical and biological research, medical therapy, agriculture, and industry.

"B. The application or use of any information or data or any kind whatsoever, including design drawings and specifications, exchanged under this Agreement shall be the responsibility of the Party which receives and uses such information or data, and it is understood that the other cooperating Party does not warrant the accuracy, completeness, or suitability of such information or data for any particular use or application."

ARTICLE II

The following new paragraph is added to Article VI of the Agreement for Cooperation:

"D. Some atomic energy materials which the Commission may provide in accordance with this Agreement are harmful to persons and property unless handled and used carefully. After delivery of such materials to the Government of the Argentine Republic the Government of the Argentine Republic shall bear all responsibility, insofar as the Government of the United States of America is concerned, for the safe handling and use of such materials. With respect to any source or special nuclear materials or other reactor materials which the Commission may, pursuant to this Agreement, lease to the Government of the Argentine Republic or to any private individual or private organization under its jurisdiction, the Government of the Argentine Republic shall indemnify and save harmless the Government of the United States of America against any and all liability (including third party liability) for any cause whatsoever arising out of the production or fabrication, the ownership, the lease, and the possession and use of such source or special nuclear materials or other reactor materials after delivery by the Commission to the Government of the Argentine Republic or to any authorized private individual or private organization under its jurisdiction."

ARTICLE III

The following new article is added directly after Article VII of the Agreement for Cooperation:

"ARTICLE VII BIS

"The Government of the United States of America and the Government of the Argentine Republic affirm their common interest in making mutually satisfactory arrangements to avail themselves, as soon as practicable, of the facilities and services of the International Atomic Energy Agency and to this end the Parties will consult with each other from time to time to determine in what respects, if any, they desire to modify the provisions of this Agreement for Cooperation."

ARTICLE IV

Article VIII of the Agreement for Cooperation is amended by deleting the date "July 28, 1960" and substituting in lieu thereof the date "July 28, 1962".

ARTICLE V

This Amendment shall enter into force on the date on which each Government shall have received from the other Government written notification that it has complied with all statutory and constitutional requirements for the entry into force of such Amendment and shall remain in force for the period of the Agreement for Cooperation, as hereby amended.

In witness whereof, the undersigned, duly authorized, have signed this Amendment.

Done at Washington, in duplicate, this 11th day of June 1960.

For the Government of the United States of America:

R.R.R.—ROY R. RUBOTTOM, Jr.,
Assistant Secretary, Inter-American Affairs, Department of State.

J.A.M.—JOHN A. MCCONE,
Chairman, Atomic Energy Commission.

For the Government of the Argentine Republic:

E.D.C.—EMILIO DONATO DEL CARREL,
Ambassador of Argentina, Washington, D.C.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C.

Hon. CLINTON P. ANDERSON,
Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR SENATOR ANDERSON: Pursuant to section 123c of the Atomic Energy Act of 1954, as amended, there are submitted with this letter:

1. An executed amendment to the Agreement for Cooperation Between the Government of the United States of America and the Government of New Zealand Concerning Civil Uses of Atomic Energy;

2. A letter from the Commission to the President recommending approval of the amendment; and

3. A letter from the President to the Commission containing his determination that it will promote and will not constitute an unreasonable risk to the common defense and security, approving the amendment, and authorizing its execution.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State, pursuant to the Atomic Energy Act of 1954, as amended, would modify the agreement for cooperation signed by the Government of the United States and the Government of New Zealand on June 13, 1956. Major features of the amendment are summarized below.

The existing agreement provides that the Commission will lease to the Government of New Zealand, as fuel for research reactors, up to six kilograms of contained U^{235} in uranium enriched up to a maximum of 20 percent U^{235}, plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous use of the reactor involved. Article I of the amendment provides that the Commission may sell or lease, as may be agreed, a net amount of 10 kilograms of uranium enriched up to 20 percent in the isotope U^{235}, except as noted below, for use in research reactors, materials testing reactors, and reactor experiments. The Commission, at its discretion, may make all or a portion of the 10 kilograms available as material enriched up to 90 percent for use in the foregoing facilities, each capable of operating with a fuel load not to exceed 8 kilograms of contained U^{235} in uranium. In addition, article I provides that when any source or special nuclear material received from the

United States requires reprocessing, such reprocessing will be performed either in Commission facilities, or in facilities acceptable to the Commission.

The quantity of uranium enriched in the istotope U^{235} transferred to the Government of New Zealand for use as fuel in reactors will not at any time be in excess of the amount of material necessary for the full loading of each defined reactor project plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous operation of the reactor or reactors while replaced fuel is radioactively cooling or in transit, or, subject to Commission approval, is being reprocessed in New Zealand.

Article II of the amendment permits the transfer of quantities of special nuclear materials, including U^{235}, U^{233}, and plutonium, on an as may be agreed basis, for defined research projects related to the peaceful uses of atomic energy other than fueling reactors and reactor experiments.

Article III of the amendment incorporates several provisions which are designed to minimize the possibility that material or equipment transferred under the agreement will be diverted to nonpeaceful purposes.

In article IV of the amendment the parties affirm their common interest in the International Atomic Energy Agency and agree to consult with each other to determine in what respects, if any, they desire to modify the provisions of the agreement for cooperation in view of the establishment of the agency.

The amendment will enter into force when the two Governments have exchanged written notifications that their respective statutory and constitutional requirements have been fulfilled.

Sincerely,

———— ————,
Chairman.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 4, 1960.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: The Atomic Energy Commission recommends that you approve the enclosed proposed "Amendment to the Agreement for Cooperation Between the Government of the United States of America and the Government of New Zealand Concerning Civil Uses of Atomic Energy," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The Department of State supports the Commission's recommendation.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would modify the Agreement for Cooperation signed by the Government of the United States and the Government of New Zealand on June 13, 1956. Major features of the amendment are summarized below.

The existing agreement provides that the Commission will lease to the Government of New Zealand, as fuel for research reactors, up to 6 kilograms of contained U^{235} in uranium enriched up to a maximum of 20 percent U^{235}, plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous use of the reactor involved. Article I of the amendment provides that the Commission may sell or lease, as may be agreed, a net amount of 10 kilograms of uranium enriched up to 20 percent in the isotope U^{235}, except as noted below, for use in research reactors, materials, testing reactors, and reactor experiments. The Commission, at its discretion, may make all or a portion of the 10 kilograms available as material enriched up to 90 percent for use in the foregoing facilities, each capable of operating with a fuel load not to exceed 8 kilograms of contained U^{235} in uranium. In addition, article I provides that when any source or special nuclear material received from the United States requires reprocessing, such reprocessing will be performed either in Commission facilities or in facilities acceptable to the Commission.

The quantity of uranium enriched in the isotope U^{235} transferred to the Government of New Zealand for use as fuel in reactors will not at any time be in excess of the amount of material necessary for the full loading of each defined reactor project plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous operation of the reactor or reactors while replaced fuel is radioactively cooling or in transit, or, subject to Commission approval, is being reprocessed in New Zealand.

Article II of the amendment permits the transfer of quantities of special nuclear materials, including U^{235}, U^{233}, and plutonium, on an as-may-be-agreed basis, for defined research projects related to the peaceful uses of atomic energy other than fueling reactors and reactor experiments.

Article III of the amendment incorporates several provisions which are designed to minimize the possibility that material or equipment transferred under the agreement will be diverted to nonpeaceful purposes.

In article IV of the amendment the parties affirm their common interest in the International Atomic Energy Agency and agree to consult with each other to determine in what respects, if any, they desire to modify the provision of the agreements for cooperation in view of the establishment of the Agency.

Following your approval and subject to the authorization requested, the amendment will be formally executed by the appropriate authorities of the Government of the United States of America and the Government of New Zealand and placed before the Joint Committee on Atomic Energy in compliance with section 123c of the Atomic Energy Act of 1954, as amended.

Respectfully,

JOHN A. MCCONE,
Chairman.

THE WHITE HOUSE,
Washington, D.C., June 9, 1960.

Hon. JOHN A. MCCONE,
Chairman, Atomic Energy Commission,
Washington, D.C.

DEAR MR. MCCONE: Under date of June 4, 1960, you informed me that the Atomic Energy Commission has recommended that I approve the proposed "Amendment to the Agreement for Cooperation Between the Government of the United States of America and the Government of New Zealand Concerning Civil Uses of Atomic Energy," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The amendment would modify the agreement for cooperation signed by the Government of the United States and the Government of New Zealand on June 13, 1956.

Among other things, the amendment provides that the Commission may sell or lease, as may be agreed, a net amount of 10 kilograms of uranium enriched up to 20 percent in the isotope U^{235}, except as noted below, for use in research reactors, materials-testing reactors, and reactor experiments. The Commission, at its discretion, may make all or a portion of the 10 kilograms available as material enriched up to 90 percent for use in the foregoing facilities, each capable of operating with a fuel load not to exceed 8 kilograms of contained U^{235} in uranium. It is also provided that when any source or special nuclear material received from the United States requires reprocessing, such reprocessing will be performed either in Commission facilities or in facilities acceptable to the Commission.

The quantity of uranium enriched in the isotope U^{235} transferred to the Government of New Zealand for use as fuel in reactors will not at any time be in excess of the amount of material necessary for the full loading of each defined reactor project plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous operation of the reactor or reactors while replaced fuel is radioactively cooling or in transit, or, subject to Commission approval, is being reprocessed in New Zealand.

The amendment further permits the transfer of quantities of special nuclear materials, including U^{235}, U^{233}, and plutonium, on and as-may-be-agreed basis, for defined research projects related to the peaceful uses of atomic energy other than fueling reactors and reactor experiments.

The amendment also contains several provisions which are designed to minimize the possibility that material or equipment transferred under the agreement will be diverted to nonpeaceful purposes. Finally, the amendment contains a provision whereby the parties affirm their common interest in the International Atomic Energy Agency and agree to consult with each other to determine in what respects, if any, they desire to modify the provisions of the agreement for cooperation in view of the establishment of the Agency.

Pursuant to the provisions of section 123 of the Atomic Energy Act of 1954, as amended, and upon the recommendation of the Atomic Energy Commission, I hereby

1. Determine that the performance of the proposed amendment will promote and will not constitute an unreasonable risk to the common defense and security of the United States,

2. Approve the proposed Amendment to the Agreement for Cooperation Between the Government of the United States of America and the Government of New Zealand enclosed with your letter of June 4, 1960, and

3. Authorize the execution of the proposed agreement for the Government of the United States of America by appropriate authorities of the U.S. Atomic Energy Commission and the Department of State.

Sincerely,

DWIGHT D. EISENHOWER.

AMENDMENT TO THE AGREEMENT FOR COOPERATION BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND THE GOVERNMENT OF NEW ZEALAND CONCERNING CIVIL USES OF ATOMIC ENERGY

The Government of the United States of America and the Government of New Zealand,

Desiring to amend the Agreement for Cooperation between the Government of the United States of America and the Government of New Zealand Concerning Civil Uses of Atomic Energy, signed at Washington on June 13, 1956 (hereafter referred to as the "Agreement for Cooperation"),

Agree as follows:

ARTICLE I

Article IV of the Agreement for Cooperation is amended to read as follows:

"1. The Commission will sell or lease, as may be agreed, to the Government of New Zealand, uranium enriched up to twenty per cent (20 percent) in the isotope U–235, except as otherwise provided in paragraph 3 of this Article, in such quantities as may be agreed, in accordance with the terms, conditions, and delivery schedules set forth in contracts, for fueling defined research reactors, materials testing reactors, and reactor experiments which the Government of New Zealand, in consultation with the Commis-

sion, decides to construct or authorize private organizations to construct and which are constructed in New Zealand and as required in experiments related thereto; provided, however, that the net amount of any uranium sold or leased under this Article during the period of this Agreement shall not at any time exceed ten (10) kilograms of the isotope U–235 contained in such uranium. This net amount shall be the gross quantity of such contained U–235 in uranium sold or leased to the Government of New Zealand during the period of this Agreement less the quantity of such contained U–235 in recoverable uranium which has been resold or otherwise returned to the Government of the United States of America during the period of this Agreement or transferred to any other nation or international organization with the approval of the Government of the United States of America.

"2. Within the limitations contained in paragraph 1 of this Article, the quantity of uranium enriched in the isotope U–235 transferred by the Commission under this Article and in the custody of the Government of New Zealand shall not at any time be in excess of the quantity necessary for the full loading of each defined reactor project which the Government of New Zealand or persons under its jurisdiction construct and fuel with uranium received from the United States of America, as provided herein, plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous operation of such reactors or reactor experiments while replaced fuel is radioactively cooling, is in transit, or, subject to the provisions of paragraph 5 of this Article, is being reprocessed in New Zealand, it being the intent of the Commission to make possible the maximum usefulness of the material so transferred.

"3. The Commission may, upon request and in its discretion, make all or a portion of the foregoing special nuclear material available as uranium enriched up to ninety per cent (90%) in the isotope U–235 for use in research reactors, materials testing reactors, and reactor experiments, each capable of operating with a fuel load not to exceed eight (8) kilograms of the isotope U–235 contained in such uranium.

"4. It is understood and agreed that although the Government of New Zealand may distribute uranium enriched in the isotope U–235 to authorized users in New Zealand, the Government of New Zealand will retain title to any uranium enriched in the isotope U–235 which is purchased from the Commission at least until such time as private users in the United States of America are permitted to acquire title in the United States of America to uranium enriched in the isotope U–235.

"5. It is agreed that when any source or special nuclear material received from the United States of America requires reprocessing, such reprocessing shall be performed at the discretion of the Commission in either Commission facilities or facilities acceptable to the Commission, on terms and conditions to be later agreed; and it is understood, except as may be otherwise agreed, that the form and content of any irradiated fuel shall not be altered after its removal from the reactor and prior to delivery to the Commission or the facilities acceptable to the Commission for reprocessing.

"6. Special nuclear material produced in any part of fuel leased hereunder as a result of irradiation processes shall be for the account of the Government of New Zealand and after reprocessing as provided in paragraph 5 of this Article, shall be returned to the Government of New Zealand, at which time title to such material shall be transferred to that Government, unless the Government of the United States of America shall exercise the option, which is hereby granted, to retain, with appropriate credit to the Government of New Zealand, any such special nuclear material which is in excess of the needs of New Zealand for such material in its program for the peaceful uses of atomic energy.

"7. With respect to any special nuclear material not subject to the option referred to in paragraph 6 of this Article and produced in reactors fueled with material obtained from the United States of America which is in excess of the need of New Zealand for such material in its program for the peaceful uses of atomic energy, the Government of the United States of America shall have and is hereby granted (a) a first option to purchase such material at prices then prevailing in the United States of America for special nuclear material produced in reactors which are fueled pursuant to the terms of an agreement for cooperation with the Government of the United States of America, and (b) the right to approve the transfer of such material to any other nation or international organization in the event the option to purchase is not exercised.

"8. Some atomic energy materials which the Commission may provide in accordance with this agreement are harmful to persons and property unless handled and used carefully. After delivery of such materials to the Government of New Zealand the Government of New Zealand shall bear all responsibility, insofar as the Government of the United States of America is concerned, for the safe handling and use of such materials. With respect to any source or special nuclear material or other reactor material which the Commission may, pursuant to this agreement, lease to the Government of New Zealand or to any private individual or private organization under its jurisdiction, the Government of New Zealand shall indemnify and save harmless the Government of the United States of America against any and all liability (including third party liability) for any cause whatsoever arising out of the production or fabrication, the ownership, the lease, and the possession and use of such source or special nuclear material or other reactor material after delivery by the Commission to the Government of New Zealand or to any authorized private individual or private organization under its jurisdiction."

ARTICLE II

Article V of the Agreement for Cooperation is amended to read as follows:

"Materials of interest in connection with defined research projects related to the peaceful uses of atomic energy and under the limitations set forth in Article II, including source materials, special nuclear materials, byproduct materials, other radioisotopes, and stable isotopes, will be sold or otherwise transferred to the Government of New Zealand by the Commission for research purposes other than fueling reactors and reactor experiments in such quantities and under such terms and conditions as may be agreed when such materials are not available commercially."

ARTICLE III

Article VIII of the Agreement for Cooperation is amended to read as follows:

"1. The Government of the United States of America and the Government of New Zealand emphasize their common interest in assuring that any material, equipment, or device made available to the Government of New Zealand pursuant to this Agreement shall be used solely for civil purposes.

"2. Except to the extent that the safeguards provided for in this Agreement are supplanted, as provided in Article X bis, by safeguards of the International Atomic Energy Agency, the Government of the United States of America, notwithstanding any other provisions of this Agreement, shall have the following rights:

"A. With the objective of assuring design and operation for civil purposes and permitting effective application of safeguards, to review the design of any—

(i) reactor and

(ii) other equipment and devices the design of which the Commission determines to be relevant to the effective application of safeguards,

which are to be made available to the Government of New Zealand or persons under its jurisdiction by the Government of the United States of America or any person under its jurisdiction, or which are to use, fabricate, or process any of the following materials so made available: source material, special nuclear material, moderator material, or other material designated by the Commission;

"B. With respect to any source or special nuclear material made available to the Government of New Zealand or any person under its jurisdiction by the Government of the United States of America or any person under its jurisdiction and any source or special nuclear material utilized in, recovered from, or produced as a result of the use of any of the following materials, equipment, or devices so made available:

(i) source material, special nuclear material, moderator material, or other material designated by the Commission,

(ii) reactors,

(iii) any other equipment or device designated by the Commission as an item to be made available on the condition that the provision of this subparagraph 2B will apply, (a) to require the maintenance and production of operating records and to request and receive reports for the purpose of assisting in ensuring accountability for such material; and (b) to require that any such material in the custody of the Government of New Zealand or any person under its jurisdiction be subject to all of the safeguards provided for in this Article and the guaranties set forth in Article IX;

"C. To require the deposit in storage facilities designated by the Commission of any of the special nuclear material referred to in subparagraph 2B of this Article which is not currently utilized for civil purposes in New Zealand and which is not purchased or retained by the Government of the United States of America pursuant to Article IV, paragraph 6 and paragraph 7(a) of this Agreement, transferred pursuant to Article IV, paragraph 7(b) of this Agreement, or otherwise disposed of pursuant to an arrangement mutually acceptable to the Parties;

"D. To designate, after consultation with the Government of New Zealand, personnel who, accompanied, if either Party so requests, by personnel designated by the Government of New Zealand, shall have access in New Zealand to all places and data necessary to account for the source and special nuclear materials which are subject to subparagraph 2B of this Article to determine whether there is compliance with this Agreement and to make such independent measurements as may be deemed necessary;

"E. In the event of non-compliance with the provisions of this Article, or the guaranties set forth in Article IX, and the failure of the Government of New Zealand to carry out the provisions of this Article within a reasonable time, to suspend or terminate this Agreement and require the return of any materials, equipment, and devices referred to in subparagraph 2B of this Article;

"F. To consult with the Government of New Zealand in the matter of health and safety.

"3. The Government of New Zealand undertakes to facilitate the application of the safeguards provided for in this Article."

ARTICLE IV

The following new Article is added directly after Article X of the Agreement for Cooperation:

"ARTICLE X bis

"The Government of the United States of America and the Government of New Zealand affirm their common interest in the International Atomic Energy Agency and to this end:

"(a) The Parties will consult with each other, upon the request of either Party, to determine in what respects, if any, they desire to modify the provisions of this Agreement. In particular, the Parties will consult with each other to determine in what respects and to what extent they desire to arrange for the administration by the Agency of those conditions, controls, and safeguards, including those relating to health and safety standards, required by the Agency in connection with similar assistance rendered to a cooperating nation under the aegis of the Agency.

"(b) In the event the Parties do not reach a mutually satisfactory agreement following the consultation provided for in subparagraph (a) of this Article, either Party may by notification terminate this Agreement. In the event this Agreement is so terminated, the Government of New Zealand shall return to the Commission all source and special nuclear materials received pursuant to this Agreement and in its possession or in the possession of persons under its jurisdiction."

ARTICLE V

This Amendment shall enter into force on the day on which each Government shall have received from the other Government written notification that it has complied with all statutory and constitutional requirements for the entry into force of such Amendment and shall remain in force for the period of the Agreement for Cooperation.

In Witness whereof, the undersigned, duly authorized, have signed this Amendment.

Done at Washington, in duplicate, this eleventh day of June, 1960.

For the Government of the United States of America:

JOHN M. STEEVES,
Deputy Assistant Secretary, Far Eastern Affairs, Department of State.

JOHN A. McCONE,
Chairman, Atomic Energy Commission.

For the Government of New Zealand:

G. D. L. WHITE,
Charge d'Affaires ad interim, Embassy of New Zealand, Washington, D.C.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C.

Hon. CLINTON P. ANDERSON,
Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR SENATOR ANDERSON: Pursuant to section 123c of the Atomic Energy Act of 1954, as amended, there is submitted with this letter:

1. An executed amendment to the Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Canada;

2. A letter from the Commission to the President recommending approval of the amendment; and

3. A letter from the President to the Commission containing his determination that its performance will promote and will not constitute an unreasonable risk to the common defense and security, approving the amendment, and authorizing its execution.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would revise in certain respects the agreement for cooperation between the United States and Canada signed at Washington on June 15, 1955, as amended by the agreement signed at Washington on June 26, 1956, and as modified by the agreement signed at Washington on May 22, 1959. The proposed revisions are required in order to permit full implementation of an expanded program of cooperation with Canada in the development of heavy-water-moderated power reactors. The desirability of amending the agreement for cooperation accordingly was previously brought to the attention of the joint committee in my letter of April 4, 1960, with which there was transmitted a proposed memorandum of understanding on the heavy water reactor program.

Article I of the amendment provides that the agreement for cooperation, as amended, shall remain in force for a period of 20 years from the date the amendment enters into force.

Under the existing agreement (article VI A) it is possible for the United States to supply enriched uranium for use as fuel in Canada's power reactor program on a sale basis only. Article II of the amendment modifies article VI A of the agreement in order to permit enriched uranium to be supplied also by lease or loan. Corollary changes are made elsewhere in article VI A as appropriate.

Similarly, article III of the amendment modifies article VI C of the agreement to provide that heavy water may henceforth be supplied to Canada on a lease or loan basis instead of sale only.

When required to permit the loan of enriched uranium or heavy water, appropriate congressional authorization will, of course, be sought.

Article IV of the amendment makes certain revisions in the patent provisions of the agreement. The existing agreement provides that as to inventions based on information communicated under the agreement the licenses are for "governmental purposes and for purposes of mutual defense" (paragraph A(1) of article IX) and that the license shall be "for its governmental purposes" (paragraph A(2) of article IX). To permit complete freedom of governmental action in this area, however, article IV of the amendment removes the above restrictions and provides instead for licenses, with the right to sublicense, for all purposes. At present, the agreement (paragraph A of article IX) refers only to "invention or discovery employing information which has been communicated" and does not, therefore, cover inventions made by exchanged personnel. In view thereof, a new provision (article IV, paragraph C, of the amendment) is added to the agreement.

The amendment will enter into force when the Government of the United States has notified the Government of Canada that the statutory and constitutional requirements of the United States for entry into force of the amendment have been fulfilled.

Sincerely yours,

———,
Chairman.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: The Atomic Energy Commission recommends that you approve the enclosed proposed "Amendment to Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Canada," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The Department of State supports the Commission's recommendation.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would revise in certain respects the agreement for cooperation between the United States and Canada signed at Washington on June 15, 1955, as amended by the agreement signed at Washington on June 26, 1956, and as modified by the agreement signed at Washington on May 22, 1959. The proposed revisions are required in order to permit full implementation of an expanded program of cooperation with Canada in the development of heavy water moderated power reactors.

Article I of the amendment provides that the agreement for cooperation, as amended, shall remain in force for a period of 20 years from the date the amendment enters into force.

Under the existing agreement (art. VI A) it is possible for the United States to supply enriched uranium for use as fuel in Canada's power reactor program on a sale basis only. Article II of the amendment modifies article VI A of the agreement in order to permit enriched uranium to be supplied also by lease or loan. Corollary changes are made elsewhere in article VI A as appropriate.

Similarly, article III of the amendment modifies article VI C of the agreement to provide that heavy water may henceforth be supplied to Canada on a lease or loan basis instead of sale only.

Article IV of the amendment makes certain revisions in the patent provisions of the agreement. The existing agreement provides that as to inventions based on information communicated under the agreement the licenses are for "governmental purposes and for purposes of mutual defense" (par. A(1) of art. IX) and that the license shall be for "its governmental purposes" (par. A(2) of art. IX). To permit complete freedom of governmental action in this area, however, article IV of the amendment removes the above restrictions and provides instead for licenses, with the right to sublicense, for all purposes. At present, the agreement (par. A of art. IX) refers only to "invention or discovery employing information which has been communicated" and does not, therefore, cover inventions made by exchanged personnel. In view thereof, a new provision (art. IV, par. C, of the amendment) is added to the agreement.

Following your determination, approval, and authorization, the amendment will be formally executed by the appropriate authorities of the Government of the United States of America and the Government of Canada. In compliance with section 123c of the Atomic Energy Act of 1954, as amended, the amendment will then be placed before the Joint Committee on Atomic Energy.

Respectfully,

JOHN A. McCONE,
Chairman.

THE WHITE HOUSE,
Washington, June 11, 1960.

The Honorable JOHN A. McCONE,
Chairman, Atomic Energy Commission, Washington, D.C.

DEAR MR. McCONE: Under date of June 4, 1960, the Atomic Energy Commission recommended that I approve the proposed "Amendment to the Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Canada," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The amendment would modify the Agreement for Cooperation between the United States and Canada signed at Washington on June 15, 1955, as amended by the agreement signed at Washington on June 26, 1956, and as modified by the agreement signed at Washington on May 22, 1959.

The amendment has as its purpose the modification of the Agreement for Cooperation in order to permit full implementation of an expanded program of cooperation with Canada in the development of heavy-water-moderated power reactors.

Article I of the amendment provides that the Agreement for Cooperation, as amended, shall remain in force for a period of 20 years from the effective date of the amendment.

Under article II of the amendment, the Agreement for Cooperation is modified to permit the United States to provide enriched uranium for use as fuel in Canada's power reactor program on a lease or loan basis, in addition to sale as at present. Similarly, article III of the amendment makes it possible to supply heavy water to Canada by lease or loan in addition to sale.

Article IV of the amendment makes certain revisions in the patent provisions of the agreement. The existing agreement provides that as to inventions based on information communicated under the agreement the licenses are for "governmental purposes and for purposes of mutual defense" (par. A(1) of art. IX) and that the license shall be "for its governmental purposes" (par. A(2) of art. IX).

To permit complete freedom of governmental action in this area, however, article IV of the amendment removes the above restrictions and provides instead for licenses, with the right to sublicense, for all purposes. At present, the agreement (par. A of art. IX) refers only to "invention or discovery employing information which has been communicated" and does not, therefore, cover inventions made by exchanged personnel. In view thereof, a new provision (art. IV, par. C, of the amendment) is added to the agreement.

Pursuant to the provisions of section 123 of the Atomic Energy Act of 1954, as amended, and upon the recommendation of the Atomic Energy Commission, I hereby:

1. Determine that the performance of the proposed amendment will promote and will not constitute an unreasonable risk to the common defense and security of the United States; and

2. Approve the proposed amendment to the Agreement for Cooperation Between the Government of the United States of America and the Government of Canada enclosed with your letter of June 4, 1960; and

3. Authorize the execution of the proposed amendment for the Government of the United States of America by appropriate authorities of the U.S. Atomic Energy Commission and the Department of State.

Sincerely,

DWIGHT D. EISENHOWER.

AMENDMENT TO AGREEMENT FOR COOPERATION CONCERNING CIVIL USES OF ATOMIC ENERGY BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND THE GOVERNMENT OF CANADA

The Government of the United States of America and the Government of Canada,

Desiring to amend the Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Canada signed at Washington on June 15, 1955 (hereinafter referred to as the "Agreement for Cooperation"), as amended by the Agreement signed at Washington on June 26, 1956, and as modified by the Agreement signed at Washington on May 22, 1959,

Agree as follows:

ARTICLE I

Notwithstanding the provisions of Article I of the Agreement for Cooperation, that Agreement, as amended, shall remain in force for a period of twenty years from the date this Amendment enters into force.

ARTICLE II

Article VI A of the Agreement for Cooperation is amended as follows:

1. In the first sentence a comma is inserted after the word "sell" and the phrase "lease, or, subject to required governmental authorizations, loan" is inserted directly thereafter.

2. In the second sentence a comma is inserted after the word "sell" and the phrase "lease, or loan" is inserted directly thereafter.

3. In the second paragraph the word "purchased" is deleted and the word "received" is substituted in lieu thereof.

ARTICLE III

The second sentence of Article VI C of the Agreement for Cooperation is amended by deleting the phrase "sell to Atomic Energy of Canada Limited," and substituting in lieu thereof the phrase "transfer to Atomic Energy of Canada Limited, by sale, lease, or, subject to required governmental authorizations, loan,".

ARTICLE IV

1. Subparagraph (1) of Article IX A of the Agreement for Cooperation is amended by inserting a comma after the word "license" and by deleting the phrase "for its own governmental purposes and for purposes of mutual defense" and substituting in lieu thereof the phrase "with the right to grant sublicenses, for all purposes".

2. The first sentence of subparagraph (2) of Article IX A of the Agreement for Cooperation is amended to read as follows:

"(2) As to its right, title, and interest in and to any such invention, discovery, patent application, or patent in its own or third countries will, upon request of the other party, grant to the other party a royalty-free, nonexclusive, irrevocable license, with the right to grant sublicenses, for all purposes in all such countries."

3. The following new paragraph is added to Article IX:

"C. With respect to inventions or discoveries made or conceived in circumstances other than those provided for in paragraph A of this Article, it is agreed that additional mutual specific patent arrangements may be made."

ARTICLE V

This Amendment shall enter into force on the date of receipt by the Government of Canada of a notification from the Government of the United States of America that all statutory and constitutional requirements of the Government of the United States of America for the entry into force of such amendments have been complied with, and it shall remain in force for the period of the Agreement for Cooperation, as amended.

In witness whereof, the undersigned, duly authorized, have signed this Amendment.

Done at Washington, in duplicate, this eleventh day of June 1960.

For the Government of the United States of America:

FOY D. KOHLER,
Assistant Secretary, European Affairs, Department of State.

JOHN A. MCCONE,
Chairman, Atomic Energy Commission.

For the Government of Canada:

A. D. P. HEENEY,
Ambassador of Canada, Washington, D.C.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C.

Hon. CLINTON P. ANDERSON,
Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR SENATOR ANDERSON: Pursuant to section 123c of the Atomic Energy Act of 1954, as amended, there is submitted with this letter:

1. An executed amendment to the Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Switzerland;

2. A letter from the Commission to the President recommending approval of the amendment; and

3. A letter from the President to the Commission containing his determination that its performance will promote and will not constitute an unreasonable risk to the common defense and security, approving the amendment, and authorizing its execution.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would modify the Agreement for Cooperation Between the United States and Switzerland signed at Washington on June 21, 1956, as amended by the agreement signed at Washington on April 24, 1959.

Under the terms of the existing agreement, reactor fuel is available to Switzerland on a sale basis only and highly enriched fuel is limited to use in a materials testing reactor. The objectives of the amendment are to modify the agreement so as to permit lease, as well as sale, of reactor fuel, as may be agreed, and in addition to permit the transfer of uranium enriched up to 90 percent U^{235} for use in research reactors. These changes will make it possible for the Swiss to effect certain bilateral transactions with the United States for which the time requirements are too pressing to make feasible the utilization of the services of the International Atomic Energy Agency.

Because the supply of fuel for reactor experiments is provided for under the revised fuel article of the agreement (art. II of the amendment), article I of the amendment excludes fuel for reactor experiments from being supplied under the terms of the research materials article of the agreement (art. IV A of the agreement as previously amended).

Article II of the amendment substitutes for the existing fuel article of the agreement, a revised fuel article incorporating current standard provisions. The substantive effects of that change are that (1) fuel for reactors and reactor experiments may be supplied by lease as well as sale, as may be agreed, and (2) uranium enriched up to 90 percent U^{235} may be supplied for use in research reactors and reactor experiments, in addition to materials testing reactors, each capable of operating with a fuel load not to exceed 8 kilograms of contained U^{235}.

Article II also provides that all contracts for the lease of special nuclear material, source material or reactor material pursuant to the agreement shall include a provision that the Government of Switzerland shall indemnify and save harmless the Government of the United States of America against any and all liability (including third party liability) for any cause whatsoever rising out of the production or fabrication, the ownership, the lease, and the possession and use of such source or special nuclear material or other reactor material after delivery by the Commission to the Government of Switzerland or to any authorized private individual or private organization under its jurisdiction. This differs slightly from the usual practice of making the "hold harmless" provision directly operative in the Agreement for Cooperation itself. This minor deviation was requested by the Swiss in order to avoid submittal of the amendment to the Swiss Parliament, with consequent delay.

To reflect the fact that special nuclear material may, under the proposed amendment, be transferred to Switzerland by lease as well as sale article III of the amendment modifies accordingly to provision in the agreement (art. XII, subpar. A(3)) concerning the right of the United States to require the deposit in storage facilities designated by the Atomic Energy Commission of

any special nuclear material not utilized or otherwise disposed of pursuant to the terms of the agreement.

The amendment will enter into force when the two governments have exchanged notifications that their respective statutory and constitutional requirements have been fulfilled.

Sincerely yours,

———— ————,
Chairman.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 8, 1960.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: The Atomic Energy Commission recommends that you approve the enclosed proposed "Amendment to Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Switzerland," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The Department of State supports the Commission's recommendation.

The amendment, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would modify the Agreement for Cooperation between the United States and Switzerland signed at Washington on June 21, 1956, as amended by the agreement signed at Washington, April 24, 1959.

Under the terms of the existing agreement, reactor fuel is available to Switzerland on a sale basis only and highly enriched fuel is limited to use in a materials testing reactor. The objectives of the amendment are to modify the agreement so as to permit lease, as well as sale, of reactor fuel, as may be agreed, and in addition to permit the transfer of uranium enriched up to 90 percent U^{235} for use in research reactors. These changes will make it possible for the Swiss to effect certain bilateral transactions with the United States for which the time requirements are too pressing to make feasible the utilization of the services of the International Atomic Energy Agency.

Because the supply of fuel for reactor experiments is provided for under the revised fuel article of the agreement (art. II of the amendment), article I of the amendment excludes fuel for reactor experiments from being supplied under the terms of the research materials article of the agreement (art. IV A of the agreement as previously amended).

Article II of the amendment substitutes for the existing fuel article of the agreement a revised fuel article incorporating current standard provisions. The substantive effects of that change are that (1) fuel for reactors and reactor experiments may be supplied by lease as well as sale, as may be agreed, and (2) uranium enriched up to 90 percent U^{235} may be supplied for use in research reactors and reactor experiments, in addition to materials testing reactors, each capable of operating with a fuel load not to exceed eight (8) kilograms of contained U^{235}. Article II also provides that all contracts for the lease of special nuclear material, source material or reactor material pursuant to the agreement shall include a provision relieving the Government of the United States of liability arising out of or in connection with the material after delivery.

To reflect the fact that special nuclear material may, under the proposed amendment, be transferred to Switzerland by lease as well as sale article III of the amendment modifies accordingly the provision in the agreement (art. XII, subpar. A(3)) concerning the right of the United States to require the deposit in storage facilities designated by the Atomic Energy Commission of any special nuclear material not utilized or otherwise disposed of pursuant to the terms of the agreement.

Following your determination, approval, and authorization, the amendment will be formally executed by the appropriate authorities of the Government of the United States of America and the Government of Switzerland. In compliance with section 123c of the Atomic Energy Act of 1954, as amended, the amendment will then be placed before the Joint Committee on Atomic Energy.

Respectfully,

JOHN A. MCCONE,
Chairman.

THE WHITE HOUSE,
Washington, June 11, 1960.

The Honorable JOHN A. MCCONE,
Chairman, Atomic Energy Commission,
Washington, D.C.

DEAR MR. MCCONE: Under the date of June 8, 1960, the Atomic Energy Commission recommended that I approve the proposed "Amendment to the Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Switzerland," determine that its performance will promote and will not constitute an unreasonable risk to the common defense and security, and authorize its execution. The amendment would modify the Agreement for Cooperation between the United States and Switzerland signed at Washington on June 21, 1956, as amended by the agreement signed at Washington on April 24, 1959.

The objectives of the amendment are to modify the agreement so as to permit lease, as well as sale, of reactor fuel, as may be agreed, and in addition to permit the transfer of uranium enriched up to 90 percent U^{235} for use in research reactors.

Because the supply of fuel for reactor experiments is provided for under the revised fuel article of the agreement (art. II of the amendment), article I of the amendment excludes fuel for reactor experiments from being supplied under the terms of the research materials article of the agreement (art. IV A of the agreement as previously amended).

Article II of the amendment substitutes for the existing fuel article of the agreement a revised fuel article incorporating current standard provisions. The substantive effects of that change are that (1) fuel for reactors and reactor experiments may be supplied by lease as well as sale, as may be agreed, and (2) uranium enriched up to 90 percent U^{235} may be supplied for use in research reactors and reactor experiments, in addition to materials testing reactors, each capable of operating with a fuel load not to exceed 8 kilograms of contained U^{235}. Article II also provides that all contracts for the lease of special nuclear material, source material, or reactor material pursuant to the agreement shall include a provision relieving the U.S. Government of liability arising out of or in connection with the material after delivery.

To reflect the fact that special nuclear material may, under the proposed amendment, be transferred to Switzerland by lease as well as sale article III of the amendment modified accordingly the provision in the agreement (art. XII, subpar. A(3)) concerning the right of the United States to require the deposit in storage facilities designated by the Atomic Energy Commission of any special nuclear material not utilized or otherwise disposed of pursuant to the terms of the agreement.

Pursuant to the provisions of section 123 of the Atomic Energy Act of 1954, as amended, and upon the recommendation of the Atomic Energy Commission, I hereby:

1. Determine that the performance of the proposed amendment will promote and will not constitute an unreasonable risk to the common defense and security of the United States;

2. Approve the proposed amendment to the Agreement for Cooperation Between the Government of the United States of America and the Government of Switzerland enclosed with your letter of June 8, 1960, and

3. Authorize the execution of the proposed amendment for the Government of the United States of America by appropriate authorities of the U.S. Atomic Energy Commission and the Department of State.

Sincerely,

DWIGHT D. EISENHOWER.

AMENDMENT TO AGREEMENT FOR COOPERATION CONCERNING CIVIL USES OF ATOMIC ENERGY BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND THE GOVERNMENT OF SWITZERLAND

The Government of the United States of America and the Government of Switzerland;

Desiring to amend the Agreement for Cooperation Concerning Civil Uses of Atomic Energy Between the Government of the United States of America and the Government of Switzerland signed at Washington on June 21, 1956 (hereinafter referred to as the "Agreement for Cooperation"), as amended by the Agreement signed at Washington on April 24, 1959;

Agree as follows:

ARTICLE I

Article IV, paragraph A, of the Agreement for Cooperation, as amended, is amended by inserting after the phrase "other than fueling reactors" the phrase "and reactor experiments".

ARTICLE II

Article VII of the Agreement for Cooperation is amended to read as follows:

"A. The Commission will sell or lease, as may be agreed, to the Government of Switzerland, uranium enriched up to twenty percent (20%) in the isotope U–235, except as otherwise provided in paragraph C of this Article, in such quantities as may be agreed, in accordance with the terms, conditions, and delivery schedules set forth in contracts, for fueling defined research, experimental power, demonstration power and power reactors, materials testing reactors, and reactor experiments which the Government of Switzerland, in consultation with the Commission, decides to construct or authorize private organizations to construct and which are constructed in Switzerland and as required in experiments related thereto; provided, however, that the net amount of any uranium sold or leased under this Article during the period of this Agreement shall not at any time exceed five hundred (500) kilograms of the isotope U–235 contained in such uranium. This net amount shall be the gross quantity of such contained U–235 in uranium sold or leased to the Government of Switzerland during the period of this Agreement less the quantity of such contained U–235 in recoverable uranium which has been resold or otherwise returned to the Government of the United States of America during the period of this Agreement or transferred to any other nation or international organization with the approval of the Government of the United States of America.

"B. Within the limitations contained in paragraph A of this Article, the quantity of uranium enriched in the isotope U–235 transferred by the Commission under this Article and in the custody of the Government of Switzerland shall not at any time be in excess of the quantity necessary for the full loading of each defined reactor project which the Government of Switzerland or persons under its jurisdiction construct and fuel with uranium received from the United States of America, as provided here-

in, plus such additional quantity as, in the opinion of the Commission, is necessary to permit the efficient and continuous operation of such reactors or reactor experiments while replaced fuel is radioactively cooling, as in transit, or, subject to the provisions of paragraph E of this Article, is being reprocessed in Switzerland, it being the intent of the Commission to make possible the maximum usefulness of the material so transferred.

"C. The Commission may, upon request and in its discretion, make all or a portion of the foregoing special nuclear material available as uranium enriched up to ninety per cent (90%) in the isotope U–235 for use in research reactors, materials testing reactors, and reactor experiments, each capable of operating with a fuel load not to exceed eight (8) kilograms of the isotope U–235 contained in such uranium.

"D. It is understood and agreed that although the Government of Switzerland may distribute uranium enriched in the isotope U–235 to authorized users in Switzerland, the Government of Switzerland will retain title to any uranium enriched in the isotope U–235 which is purchased from the Commission at least until such time as private users in the United States of America are permitted to acquire title in the United States of America to uranium enriched in the isotope U–235.

"E. It is agreed that when any source or special nuclear material received from the United States of America requires reprocessing, such reprocessing shall be performed at the discretion of the Commission in either Commission facilities or facilites acceptable to the Commission, on terms and conditions to be later agreed; and it is understood, except as may be otherwise agreed, that the form and content of any irradiated fuel shall not be altered after its removal from the reactor and prior to delivery to the Commission or the facilities acceptable to the Commission for reprocessing.

"F. Special nuclear material produced in any part of fuel leased hereunder as a result of irradiation processes shall be for the account of the Government of Switzerland and after reprocessing as provided in paragraph E of this Article, shall be returned to the Government of Switzerland, at which time title to such material shall be transferred to that Government, unless the Government of the United States of America shall exercise the option, which is hereby granted, to retain, with appropriate credit to the Government of Switzerland, any such special nuclear material which is in excess of the needs of Switzerland for such material in its program for the peaceful uses of atomic energy.

"G. With respect to any special nuclear material not subject to the option referred to in paragraph F of this Article and produced in reactors fueled with material obtained from the United States of America which is in excess of the need of Switzerland for such material in its program for the peaceful uses of atomic energy, the Government of the United States of America shall have and is hereby granted (a) a first option to purchase such material at prices then prevailing in the United States of America for special nuclear material produced in reactors which are fueled pursuant to the terms of an agrement for cooperation with the Government of the United States of America, and (b) the right to approve the transfer of such material to any other nation or international organization in the event the option to purchase is not exercised.

"H. Some atomic energy materials which the Commission may provide in accordance with this Agreement are harmful to persons and property unless handled and used carefully. After delivery of such materials to the Government of Switzerland, the Government of Switzerland shall bear all responsibility, insofar as the Government of the United States of America is concerned, for the safe handling and use of such materials. All contracts whereby the Commission may, pursuant to this Agreement, lease source or special nuclear material or other reactor material to the Government of Switzerland, or to any private individual or private organization under its jurisdiction, shall contain a provision that the Government of Switzerland shall indemnify and save harmless the Government of the United States of America against any and all liability (including third party liability) for any cause whatsoever arising out of the production or fabrication, the ownership, the lease, and the possession and use of such source or special nuclear material or other reactor material after delivery by the Commission to the Government of Switzerland or to any authorized private individual or private organization under its jurisdiction."

ARTICLE III

Article XII, subparagraph A(3), of the Agreement for Cooperation is amended to read as follows:

"(3) To require the deposit in storage facilities designated by the Commission of any of the special nuclear material referred to in subparagraph A(2) of this Article which is not currently utilized for civil purposes in Switzerland and which is not purchased or retained by the Government of the United States of America pursuant to Article VII, paragraph F and paragraph G (a) of this Agreement, transferred pursuant to Article VII, paragraph G(b) of this Agreement, or otherwise disposed of pursuant to an arrangement mutually acceptable to the Parties;"

ARTICLE IV

This Amendment shall enter into force on the date on which each Government shall have received from the other Government written notification that it has complied with all statutory and constitutional requirements for the entry into force of such Amendment and shall remain in force for the period of the Agreement for Cooperation.

In witness whereof, the undersigned, duly authorized, have signed this Amendment.

Done at Washington, in duplicate, in the English and French languages, this eleventh day of June, 1960.

For the Government of the United States of America:

FOY D. KOHLER,
Assistant Secretary, European Affairs, Department of State.

JOHN A. McCONE,
Chairman, Atomic Energy Commission.

For the Government of Switzerland:

ERNESTO THALMANN,
Minister, Embassy of Switzerland, Washington, D.C.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 11, 1960.

Hon. CLINTON P. ANDERSON,
Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR SENATOR ANDERSON: Pursuant to section 123c of the Atomic Energy Act of 1954, as amended, there is submitted with this letter:

(a) An Additional Agreement for Cooperation Between the Government of the United States of America and the European Atomic Energy Community (Euratom) Concerning Civil Uses of Atomic Energy;

(b) A letter from the Commission to the President recommending approval of the additional agreement; and

(c) A letter from the President to the Commission containing his determination that its performance will promote and will not constitute an unreasonable risk to the common defense and security, approving the additional agreement, and authorizing its execution.

The proposed additional agreement, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would permit Euratom to receive uranium–235, uranium–233 (in irradiated fuel elements) and plutonium for uses outside our present joint program. This agreement is required to provide assurances of material availability to Euratom, which must be obtained before the next session of Congress if certain projects are to proceed in the Community without undue delay. The undertakings under the agreement are subject to appropriate statutory steps. It will be necessary, pursuant to the requirements of section 54 of the Atomic Energy Act of 1954, as amended, to obtain statutory authorization to distribute special nuclear material under this proposed agreement. Such authorization is now being sought through a requested amendment to section 5 of the Euratom Cooperation Act of 1958.

The additional agreement permits the transfer of the following:

(a) 100 kilograms of enriched uranium up to 90 percent in the isotope uranium 235 for an organic-moderated reactor experiment to be built by the Italian Government;

(b) 40 kilograms of enriched uranium up to 90 percent in the isotope uranium 235 for an organic-cooled, heavy water-moderated reactor experiment to be built by Euratom;

(c) 200 kilograms of enriched uranium up to 90 percent in the isotope uranium 235 and 30 kilograms of uranium 233 contained in irradiated fuel elements (from a reactor constructed in the United States under the Commission's power demonstration program) for feed material to a uranium-thorium processing plant to be built by the Italian Government;

(d) Limited quantities of special nuclear material to be supplied for small-scale research uses as may be agreed.

The additional agreement will enter into force when the two Governments have exchanged notifications that their respective statutory and constitutional requirements have been fulfilled.

Sincerely yours,

JOHN A. McCONE,
Chairman.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 10, 1960.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: The Atomic Energy Commission recommends that you approve the enclosed proposed "Additional Agreement for Cooperation Between the Government of the United States of America and the European Atomic Energy Community Concerning Civil Uses of Atomic Energy," determine that it will not constitute an unreasonable risk to the common defense and security and authorize its execution. The Department of State supports the Commission's recommendations.

The proposed additional agreement, which has been negotiated by the Atomic Energy Commission and the Department of State pursuant to the Atomic Energy Act of 1954, as amended, would permit Euratom to receive uranium 235, uranium 233 (in irradiated fuel elements) and plutonium, for uses outside our present joint program. The undertakings under the agreement are subject to appropriate statutory steps. This agreement is required to provide assurances of material availability to Euratom, which must be obtained before the next session of Congress if certain projects are to proceed in the Community without undue delay.

The additional agreement permits the transfer of the following:

(a) 100 kilograms of highly enriched uranium for an organic-moderated reactor

experiment to be built by the Italian Government;

(b) 40 kilograms of highly enriched uranium for an organic-cooled, heavy water-moderated reactor experiment to be built by Euratom;

(c) 200 kilograms of highly enriched uranium and 30 kilograms of uranium 233 contained in irradiated fuel elements (from a reactor constructed in the United States under the Commission's power demonstration program) for feed material to uranium-thorium processing plants to be built by the Italian Government;

(d) Limited quantities of special nuclear material to be supplied for small-scale research uses as may be agreed.

Following your determination, approval and authorization, the additional agreement will be formally executed by the appropriate authorities of the Government of the United States of America and the European Atomic Energy Community (Euratom). In compliance with section 123c of the Atomic Energy Act of 1954 as amended, the proposed agreement will then be placed before the Joint Committee on Atomic Energy.

Respectfully,

JOHN F. FLOBERG,
Acting Chairman.

THE WHITE HOUSE,
Washington, D.C., June 11, 1960.

Hon. JOHN A. MCCONE,
Chairman, Atomic Energy Commission,
Washington, D.C.

DEAR MR. MCCONE: Under date of June 10, 1960, you informed me that the Atomic Energy Commission and the Department of State had recommended that I approve the proposed "Additional Agreement for Cooperation Between the Government of the United States of America and the European Atomic Energy Community (Euratom) Concerning Civil Uses of Atomic Energy," and authorize its execution.

The proposed agreement will provide assurances of material availability to Euratom, which must be obtained before the next session of Congress if certain projects are to proceed in the Community without undue delay. The undertakings under the agreement are subject to appropriate statutory steps.

The additional agreement permits the transfer of the following:

(a) One hundred kilograms of highly enriched uranium for an organic-moderated reactor experiment to be built by the Italian Government;

(b) Forty kilograms of highly enriched uranium for an organic-cooled, heavy water-moderated reactor experiment to be built by Euratom;

(c) Two hundred kilograms of highly enriched uranium and 30 kilograms of uranium–233 contained in irradiated fuel elements (from a reactor constructed in the United States under the Commission's power demonstration program) for feed material to uranium-thorium processing plants to be built by the Italian Government;

(d) Limited quantities of special nuclear material to be supplied for small-scale research uses as may be agreed.

Pursuant to the provisions of section 123 of the Atomic Energy Act of 1954, as amended, and upon the recommendation of the Atomic Energy Commission, I hereby:

(a) Determine that the performance of the proposed additional agreement will promote and will not constitute an unreasonable risk to the common defense and security of the United States;

(b) Approve the proposed additional agreement for cooperation between the Government of the United States and the European Atomic Energy Community (Euratom), enclosed with your letter of June 10, 1960;

(c) Authorize the execution of the proposed additional agreement for the Government of the United States by appropriate authorities of the Atomic Energy Commission and the Department of State.

Sincerely,

DWIGHT D. EISENHOWER.

ADDITIONAL AGREEMENT FOR COOPERATION BETWEEN THE UNITED STATES OF AMERICA AND THE EUROPEAN ATOMIC ENERGY COMMUNITY (EURATOM) CONCERNING PEACEFUL USES OF ATOMIC ENERGY

Whereas the Government of the United States of America and the European Atomic Energy Community (Euratom) signed an Agreement for Cooperation on November 8, 1958, Concerning Peaceful Uses of Atomic Energy, as a basis for cooperation in programs for the advancement of peaceful applications of atomic energy,

Whereas such Agreement contemplates that from time to time the Parties may enter into further Agreements for Cooperation in the peaceful aspects of atomic energy,

Whereas current programs within the Community require additional quantities of special nuclear material that are not provided for by existing Agreements for Cooperation,

Whereas the Government of the United States of America has indicated its readiness to supply these supplementary requirements for special nuclear materials,

The Parties have agreed as follows:

ARTICLE I

A. 1. The United States will sell or lease, as the Parties may agree, to the Community for use in an organic-moderated reactor experiment, an organic-cooled, heavy water-moderated reactor experiment, and an experimental plant for the chemical processing or fabrication of special nuclear materials:

(a) up to a net amount of 140 kilograms of U–235 contained in uranium;

(b) up to a net amount of 30 kilograms of the isotope U–233 and 200 kilograms of the isotope U–235 contained in unseparated, irradiated, fuel elements, the transfer of such U–233 and U–235 being subject to the availability of appropriate elements.

2. The net amount of each of the types of special nuclear materials specified above shall be its gross quantity, sold or leased to the Community, less the recoverable quantity thereof which has been resold or otherwise returned to the Government of the United States of America or transferred to any other nation or international organization with the approval of the Government of the United States of America. The net amount of uranium 235 transferred under this Article will be charged against the net amount of 30,000 kilograms of uranium 235 to be delivered under Article III of the Agreement for Cooperation signed on November 8, 1958 between the Parties.

B. The uranium supplied hereunder may be enriched up to ninety per cent (90%) by weight in the isotope U–235.

C. Contracts for the sale or lease of special nuclear material by the United States Commission to the Community will specify the maximum quantities to be supplied, composition of material, charges for material, delivery schedules and other necessary terms and conditions. It is understood and agreed that title to leased special nuclear material shall remain in the United States of America as Lessor of such materials, it being represented by the Community that retention of such title by the United States of America is not inconsistent with the Treaty establishing the European Atomic Energy Community. It is further understood and agreed that subject to the retention of such title by the United States of America, and not in derogation of it, the Community shall have power and authority, pursuant to the Treaty establishing the European Atomic Energy Community, over special nuclear material leased by the United States Commission to the Community while such material is in the Community, and that the Community may exercise and enforce rights, powers, and authority conferred upon the Community by the Treaty, and particularly Chapter VIII thereof, against Member States, enterprises and persons within the Community, provided, however, that such rights, powers, and authority of the Community shall not be asserted against or in any way infringe upon the right, title and interest of the Government of the United States of America or of the United States Commission as Lessor of such materials.

D. It is agreed that the Community may distribute to authorized users in the Community special nuclear material which it purchases hereunder; the Community will retain, pursuant to the Treaty establishing the European Atomic Energy Community, title to any special nuclear material which is purchased from the United States Commission. Title to special nuclear materials produced in any part of fuel sold or leased hereunder to the Community shall be in the Community.

E. 1. The United States Commission agrees to accept from the Community irradiated fuel elements containing special nuclear material sold or leased to the Community by the Commission hereunder and will either process such material or will make financial and material settlements therefor, on terms and conditions to be agreed. The provision of such chemical processing services to the Community will be at the same charges as are provided by the United States Commission to its domestic licensees at the time of delivery of such material to the United States Commission.

2. At such time as the United States Commission determines that chemical processing services for fuels from the Community are commercially available, it may, upon no less than twelve months' notice to the Community, discontinue furnishing such services.

F. With respect to any special nuclear material produced in any part of fuel sold or leased hereunder which is in excess of the need of the Community for such material for the peaceful uses of atomic energy, the International Atomic Energy Agency is granted the right of first option to purchase such material at the United States announced fuel value price in effect at the time of purchase. However, if the Agency's option is not exercised within a reasonable period of time, the United States shall have and is hereby granted an option to purchase such material at the United States announced fuel value price in effect at the time of purchase.

G. With respect to special nuclear materials produced in any part of fuel sold or leased hereunder which is sent to the United States for reprocessing or other treatment, the United States shall acquire title without compensation and shall after such processing or treatment return equal quantities of materials to the Community, less process losses, at which time title to such materials shall be reinvested in the Community without compensation, unless the Government of the United States of America exercises the option provided for in paragraph F of this Article.

H. 1. Some atomic energy materials which the Community may request the Commission to provide in accordance with the Agreement are harmful to persons and property unless handled and used carefully. After delivery of such materials to the Community, the Community shall bear all responsibility, insofar as the Government of the United States of America is concerned, for the safe handling and use of such materials. With respect to any special nuclear materials which the United States Commission may, pursuant to this Agreement, lease to the Community, the Community shall indem-

nify and save harmless the Government of the United States of America against any and all liability (including third party liability) for any cause whatsoever arising out of the production, fabrication, ownership, lease, possession and use of such special nuclear materials after delivery by the Commission to the Community.

2. The Parties recognize that certain nuclear liability which could arise out of the implementation of this Agreement is expected to be covered by the proposed Convention of the Organization for European Economic Cooperation on Liability in the Nuclear Field and a proposed supplementary Convention, to which the Member States of the Community would be Parties, as well as by corresponding legislation existing in the Member States.

ARTICLE II

Materials of interest in connection with defined research uses other than those concerned with the fueling of reactors and reactor experiments, including source materials, special nuclear materials, by-product material, other radioisotopes, and stable isotopes, will be sold or otherwise transferred in such quantities and under such terms and conditions as may be agreed when such materials are not available commercially.

ARTICLE III

A. Subject to the provisions of this Agreement, the availability of personnel and material, and the applicable laws, regulations, and license requirements in force in the United States and in the Member States of the Community, the Parties shall assist each other in the achievement of the use of atomic energy for peaceful purposes.

B. Unclassified information will be exchanged between the Parties with respect to the application of atomic energy to peaceful uses.

C. Restricted Data shall not be communicated under this Agreement, and no materials or equipment and devices shall be transferred, and no services shall be furnished, under this Agreement, if the transfer of any such material or equipment and devices or the furnishing of any such service involves the communication of Restricted Data.

D. The communication of information received from any third party under terms preventing such communication shall be excluded from the scope of this Agreement.

ARTICLE IV

The Government of the United States of America and the Community reaffirm their common interest in fostering the peaceful applications of atomic energy through the International Atomic Energy Agency and intend that the results of the cooperation envisaged by this Agreement will benefit the Agency and the nations participating in it.

ARTICLE V

The provisions of Articles IV, V, VI D, XI, XII, XV and Annex B of the Agreement for Cooperation Between the Government of the United States of America and the European Atomic Energy Community signed at Brussels on November 8, 1958 also shall apply to this Agreement and are hereby incorporated in this Agreement by reference with the same force and effect as if set forth herein verbatim.

ARTICLE VI

A. This Agreement shall enter into force on the first day on which each Party shall have received from the other Party written notification that it has complied with all statutory and constitutional requirements for the entry into force of such Agreement and shall remain in force for a period of ten (10) years.

B. The Parties agree that their undertakings under this Agreement are subject to appropriate statutory steps, including authorization by competent bodies of the Government of the United States of America and the Community, and the provisions of applicable laws, regulations and license requirements in effect in the United States, in the Community and within the Member States.

In witness whereof, the undersigned representatives duly authorized have signed this Agreement.

Done at Washington and New York in duplicate, this eleventh day of June, 1960.

For the Government of the United States of America:

FOY D. KOHLER,
Assistant Secretary for European Affairs, Department of State.
JOHN A. MCCONE,
Chairman, Atomic Energy Commission.

For the European Atomic Energy Community (EURATOM):

HEINZ L. KREKLER,
Euratom Commissioner.
EMANUEL M. J. A. SASSEN,
Euratom Commissioner.

ADJOURNMENT

Mr. McCARTHY. Mr. President, I move that the Senate now adjourn until tomorrow, at 12 o'clock noon.

The motion was agreed to; and (at 9 o'clock and 10 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, June 22, 1960, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate June 21, 1960:

POSTMASTERS

ALABAMA

Elizabeth R. Bosarge, Bellamy.
C. Burley Finch, Detroit.

ALASKA

Roberta L. Chronister, Whittier.

ARIZONA

Billie Jean Irwin, Superior.

ARKANSAS

Herman A. Tuck, Fayetteville.
Gus L. Sanders, Springdale.

CALIFORNIA

Ava V. Page, Atwood.
Laurence D. King, Del Mar.
Hazel L. Gill, Seven Oaks.

COLORADO

Ertis D. Shelton, Pritchett.
Joe Snepenger, U.S. Air Force Academy.

FLORIDA

Edythe C. Smith, Canal Point.
John B. Dixon, Center Hill.

GEORGIA

Larree Johnston, Cartersville.
Henry R. Bennett, Darien.
Melvin L. Burke, Millen.

IDAHO

Levin H. Benson, Cobalt.
Jesse L. Dobbs, Kuna.

ILLINOIS

Edna M. Parker, Cedarville.
Harry R. Johnson, Madison.

IOWA

Russell R. McLarty, Kingsley.
Lewis F. Paisley, Sherrill.

KANSAS

Ted W. Kyle, Erie.
William C. Rice, Larned.
Donald L. Long, Sylvia.

KENTUCKY

Fletcher F. James, Mammoth Cave.
Manie B. Greene, Park City.

LOUISIANA

Ruth F. Cuevas, Belle Chasse.
Louis H. Turner III, Watson.

MAINE

Pauline L. Sawyer, Cambridge.
Eugene P. Duran, East Corinth.

MARYLAND

G. Carlton Powell, Berlin.
Charles D. Biser, Cascade.

MASSACHUSETTS

John A. Champ, Rockland.
Arthur F. King, Sharon.

MICHIGAN

Charles H. Hill, Ontonagon.
Irene J. Awrey, Oxford.

MINNESOTA

Harry E. Maki, Menahga.
Henry J. Maertens, Wabasso.

MISSISSIPPI

Ellen G. Feigler, Dublin.
Robert E. Payne, Lauderdale.

MONTANA

Lavina I. Powell, Richland.

WEST VIRGINIA

Ernest M. Townsend, Madison.

WISCONSIN

James M. Rumpf, Cambridge.
Elmer E. Lidicker, Jefferson.

U.S. ARMY

The following-named officer, under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066 in rank as follows:

To be lieutenant general

Maj. Gen. Lionel Charles McGarr, O17225, U.S. Army.

U.S. NAVY

Adm. Herbert G. Hopwood, U.S. Navy, to have the grade of admiral on the retired list pursuant to title 10, United States Code, section 5233.

Vice Adm. Ralph E. Wilson, U.S. Navy, to have the grade of vice admiral on the retired list pursuant to title 10, United States Code, section 5223.

Vice Adm. William L. Rees, U.S. Navy, to have the grade of vice admiral on the retired list pursuant to title 10, United States Code, section 5233.

Having designated, under the provisions of title 10, United States Code, section 5231, the following-named officers for commands and other duties determined by the President to be within the contemplation of said section, I nominate them for appointment to the grade indicated while so serving:

To be admiral

Vice Adm. John H. Sides, U.S. Navy.

To be vice admirals

Rear Adm. Frank O'Bierne, U.S. Navy.
Rear Adm. Laurence H. Frost, U.S. Navy.
Rear Adm. Howard A. Yeager, U.S. Navy.

APPOINTMENTS IN THE REGULAR ARMY

The following-named officers for appointment in the Regular Army of the United States to the grades indicated, under the provisions of title 10, United States Code, sections 3284, 3306, and 3307.

To be major generals

Maj. Gen. Edwin Hugh John Carns O17560, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. John Elliot Theimer O17566, Army of the United States (brigadier general, U.S. Army).

Lt. Gen. Paul Lamar Freeman, Jr., O17704, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. David Haytor Buchanan O17746, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Robert William Porter, Jr., O18048, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Andrew Pick O'Meara O18062, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Alva Revista Fitch O18113, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Sidney Clay Wooten O18126, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Ned Dalton Moore O18212, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Thomas Alphonsus Lane O17075, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Lyle Edward Seeman O17082, Army of the United States (brigadier general U.S. Army).

Maj. Gen. Nelson Marquis Lynde, Jr. O17730, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. William Arnold Carter O18023, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Philip Campbell Wehle O18067, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. John Knight Waters O18481, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Edwin John Messinger O18503, Army of the United States (brigadier general, U.S. Army).

To be brigadier generals

Maj. Gen. Roy Tripp Evans, Jr., O19140, Army of the United States (colonel, U.S. Army).

Maj. Gen. Harold Keith Johnson O19187, Army of the United States (colonel, U.S. Army).

Brig. Gen. Jean Evans Engler O19198, Army of the United States (colonel, U.S. Army).

Maj. Gen. Frederick William Gibb O19222, Army of the United States (colonel, U.S. Army).

Maj. Gen. Ben Harrell O19276, Army of the United States (colonel, U.S. Army).

Maj. Gen. William Wilson Quinn O19283, Army of the United States (colonel, U.S. Army).

To be brigadier general, Medical Corps

Brig. Gen. Joseph Hamilton McNinch O18645, Medical Corps (colonel, Medical Corps, U.S. Army).

IN THE REGULAR ARMY

The nominations of Lester W. Abrams et al. for promotion in the Regular Army, said nominations having been received on May 27, 1960.

IN THE REGULAR ARMY

The nomination of Sarah Evelyn Perkins for promotion in the Regular Army, said nomination having been received on June 6, 1960.

IN THE REGULAR AIR FORCE

The nominations of Johnny M. Barton et al. for promotion in the Regular Air Force, said nomination having been received on June 3, 1960.

HOUSE OF REPRESENTATIVES

TUESDAY, JUNE 21, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Luke 18: 8: *When the Son of Man cometh, shall He find faith on the earth?*

Eternal and ever-blessed God who art always drawing us to Thyself and seeking to show us what life really means, when touched by the wonder and glory of Thy presence, may there be no reluctance in our response and obedience to Thy divine love.

Inspire us daily to manifest the strength and blessedness of our faith to all who are sorely troubled and wistfully searching for the right and satisfying answer to mankind's many problems with their tragic social, racial, and economic setting.

Grant that in a time when men and nations are being brought so near to one another, as neighbors, by the findings of science and invention, we may all be more docile and determined to learn the fine art of living together in a neighborly and brotherly spirit.

Hear us in the name of the Prince of Peace. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed the following resolution:

SENATE RESOLUTION 339

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. Douglas H. Elliott, late a Representative from the State of Pennsylvania.

Resolved, That a committee of two Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That, as a further mark of respect to the memory of the deceased, the Senate do now adjourn.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 12232. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes.

The message also announced that the Senate insists on its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. STENNIS, Mr. CHAVEZ, Mr. HAYDEN, Mr. JOHNSON of Texas, Mr. BRIDGES, Mr. SALTONSTALL, and Mr. ALLOTT to be the conferees on the part of the Senate.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 12381. An act to increase for one-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for one year the existing corporate normal tax rate and certain excise-tax rates.

The message also announced that the Senate insists on its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. BYRD of Virginia, Mr. KERR, Mr. FREAR, Mr. LONG of Louisiana, Mr. WILLIAMS of Delaware, and Mr. CARLSON to be the conferees on the part of the Senate.

DEPARTMENT OF LABOR SUPPLEMENTAL APPROPRIATION BILL

Mr. THOMAS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the joint resolution (H.J. Res. 765) making a supplemental ap-

propriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes.

The Clerk read the title of the bill.

Mr. THOMAS. Mr. Speaker, there is no objection to this resolution on either side. It simply authorizes an appropriation of $6 million deficiency for the remainder of the year to take care of unemployed veterans and Federal workers.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the joint resolution, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sum is appropriated, out of any money in the Treasury not otherwise appropriated, for the Department of Labor for the fiscal year ending June 30, 1960, namely:

DEPARTMENT OF LABOR

Bureau of Employment Security

Unemployment Compensation for Veterans and Federal Employees

For an additional amount for "Unemployment compensation for veterans and Federal employees", $6,000,000.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A MOST APPROPRIATE AND TIMELY APPOINTMENT

Mr. PORTER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, last Thursday the White House announced the appointment of my widely known and very active fellow townsman, the senior Senator from Oregon, WAYNE MORSE, as a member of the American delegation to the General Assembly of the United Nations.

This is a most appropriate and timely appointment. It is appropriate because the senior Senator from Oregon has long been a vigorous supporter of the United Nations and because his outstanding forensic and legal abilities will now be put directly to use in the interests of world peace in this most vital of all assemblies.

It is a timely appointment because, in this day of incredibly powerful weapons and in the wake of the abortive summit meeting and our disappointments in Japan, the United Nations increasingly is recognized by men of good will in every nation as the institution on which our survival depends.

Senator MORSE has often stated that he agreed with the late Senator Arthur Vandenberg, of Michigan, that the only hope of permanent peace in the world depends upon all nations of the world setting up a system of international justice through law for the settlement of any dispute that threatens the peace.

The reputation of the senior Senator from Oregon as a fighting and resourceful liberal is known around the world. His colleagues in the General Assembly this fall in New York will greet him with interest and respect.

CONTRACT AWARD TO FOOD MACHINERY & CHEMICAL CORP.

Mr. GUBSER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. GUBSER. Mr. Speaker, several days ago the gentleman from Ohio [Mr. VANIK] charged on this floor that the bidding procedure for the procurement of the M–113 armored personnel carrier was rigged so as to insure that this award went to the Food Machinery & Chemical Corp., in San Jose. We argued this point for several hours on this floor. This morning the award was made to Food Machinery & Chemical Corp. About 15 minutes ago I called Assistant Secretary of the Army, Courtney Johnson, who authorized me to quote him as follows:

If all applicable evaluation factors had been applied against the Food Machinery & Chemical bid and none had been applied against the lowest bidder in the Cleveland Arsenal, Food Machinery's bid would still have been low.

In other words, if no charge or Government-owned facilities were assessed against a bidder using the Cleveland Arsenal, if they used the facilities absolutely free of charge, and if Food Machinery had been forced to pay these charges then they still would have had the lowest bid.

Thus Mr. VANIK's charges and his request for an investigation by the Hébert subcommittee have been knocked into a cocked hat.

RELIEF OF CERTAIN ALIENS

Mr. WALTER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the joint resolution (H.J. Res. 688) for the relief of certain aliens, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the joint resolution.

The Clerk read the Senate amendments, as follows:

Page 3, after line 24, insert:

"SEC. 13. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Ernest Lee (Lee Ming-Sing) shall be held and considered to be the minor natural-born alien child of Watson G. Thoms, a citizen of the United States."

Page 3, line 25, strike out "13" and insert "14".

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

PUBLIC WORKS AUTHORIZATION BILL

Mr. DAVIS of Tennessee. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 7634) authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee? [After a pause.] The Chair hears none, and appoints the following conferees: Messrs. DAVIS of Tennessee, BLATNIK, JONES of Alabama, BALDWIN, and CRAMER.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first bill on the Private Calendar.

F. P. TOWER AND OTHERS

The Clerk called the bill (H.R. 1526) for the relief of F. P. Tower, Lillie B. Lewis, Manuel Branco, John Santos Carinhas, Joaquin Gomez Carinhas, and Manuel Jesus Carinhas.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to F. P. Tower, Port Isabel, Texas, the sum of $3,180.10; Lillie B. Lewis, Brunswick, Georgia, the sum of $3,691.24; Manuel Branco, Port Isabel, Texas, the sum of $4,958.53; John Santos Carinhas, Patterson, Louisiana, the sum of $5,168.06; and Joaquin Gomez Carinhas and Manuel Jesus Carinhas, doing business as Independent Fish Company, Brownsville, Texas, the sum of $3,992.93. The payment of such sums shall be in full settlement of all claims against the United States for the failure of the Government of the United States to recover from the Government of the United Mexican States compensation for seizing outside the territorial waters of the United Mexican States, as recognized by the United States, five American shrimp trawlers owned by F. P. Tower, Lillie B. Lewis, Manuel Branco, John Santos Carinhas, Joaquin Gomez Carinhas, and Manuel Jesus Carinhas, detaining such trawlers, fining such owners, and confiscating the cargoes, and for loss of probable catches because of such seizure and detention: *Provided,* That no part of the amount appropriated in this Act for the payment of any one claim in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with such claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provision of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 1, line 6, strike "$3,180.10" and insert "$578.35".

Page 1, line 7, strike "$3,691.24;" and insert "$578.35; the Estate of".

Page 1, line 8, strike "$4,958.53" and insert "$578.35".

Page 2, line 1, strike "$5,168.06" and insert "$578.35".

Page 2, lines 3 and 4, strike "$3,992.93. The payment of such sums shall be" and insert "$578.35".

Page 2, line 7, strike "seizing" and insert "fines imposed on the individuals and the decedent named in this Act by the Government of the United Mexican States and paid by them as the owners of five American shrimp trawlers seized by Mexican authorities."

Page 2, lines 9 through 14, strike ", five American shrimp trawlers owned by F. P. Tower, Lillie B. Lewis, Manuel Branco, John Santos Carinhas, Joaquin Gomez Carinhas, and Manuel Jesus Carinhas, detaining such trawlers, fining such owners, and confiscating the cargoes, and for loss of probable catches because of such seizure and detention."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of F. P. Tower, Lillie B. Lewis, the Estate of Manuel Branco, John Santos Carinhas, Joaquin Gomez Carinhas, and Manuel Jesus Carinhas."

A motion to reconsider was laid on the table.

HEDWIG DORA

The Clerk called the bill (H.R. 6338) for the relief of Miss Hedwig Dora.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Alien Property Custodian be, and is hereby, authorized and directed to return all funds vested by the Office of Alien Property through order numbered 9325, July 8, 1947, belonging to Miss Hedwig Dora, who suffered greviously at the hands of the enemy while she was supporting the cause of the United States: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TOMMY TADAYOSHI SHUTO (TADAYOSHI TAKEDA)

The Clerk called the bill (S. 2384) for the relief of Tommy Tadayoshi Shuto (Tadayoshi Takeda).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Tommy Tadayoshi Shuto (Tadayoshi Takeda) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available: *Provided,* That the natural father of Tommy Tadayoshi Shuto (Tadayoshi Takeda), by virtue of such parentage, shall not be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause in sert the following: "That, the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Tommy Tadayoshi Shuto (Tadayoshi Takeda). From and after the date of the enactment of this Act, the said Tommy Tadayoshi Shuto (Tadayoshi Takeda) shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ALESSANDRO MARAESSA

The Clerk called the bill (H.R. 1422) for the relief of Alessandro Maraessa.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(9) of the Immigration and Nationality Act, Alessandro Maraessa may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FRANCESCO CAROZZA

The Clerk called the bill (H.R. 1643) for the relief of Francesco Carozza.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(9) of the Immigration and Nationality Act, Francesco Carozza may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HUBERT O. BECKLES

The Clerk called the bill (H.R. 7551) for the relief of Hubert O. Beckles.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Hubert O. Beckles shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

STATUS OF CERTAIN ALIENS

The Clerk called the concurrent resolution (H. Con. Res. 660) relating to the status of certain aliens.

There being no objection, the Clerk read the concurrent resolution, as follows:

Resolved by the House of Representatives (the Senate concurring), That the Congress favors the granting of the status of permanent residence in the case of each alien hereinafter named, in which case the Attorney General has determined that such alien is qualified under the provisions of section 4 of the Displaced Persons Act of 1948, as amended (62 Stat. 101; 64 Stat. 219):

A-6236179 Sciama, Alberto, also known as Alberto Vita Sciama.

A-7210380 Wei, Edith Hou.

SEC. 2. The Congress approves the granting of the status of permanent residence in the case of each alien hereinafter named, in which case the Attorney General has determined that such alien is qualified under the provisions of section 6 of the Refugee Relief Act of 1953, as amended (67 Stat. 403; 68 Stat. 1044):

A-8117815 Assing, Carlton also known as Yin Ket Wong.

A-10145339 Chang, Chin also known as Chang, Gene.

A-10491831 Cheng, Chan also known as Quan Hong.

A-8031577 Kuldkepp, Oscar.

A-9547460 Lee, Fou Yuch.

A-7274366 Lee, Irving Tack-Shing or Tack Shing Lee.

A-7274430 Lee, Vivien Wei-Ning or Wei-Ning Lee.

A-10237562 Linker, Jonas Beno.

A-10237561 Linker, Estera Idesa.

A-10136001 Podlacki, Jozef.

A-9771465 Wing, Koon.

With the following committee amendment:

On page 1, after line 10, add four new lines to read as follows:

"A-6355520, Charia, Steven J.

"A-6355517, Charia, Nevenka.

"A-6348962, Charia, Tania Mira.

"A-6384962, Charia, Igor Ivan."

The committee amendment was agreed to.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

MILTON S. KOBLITZ

The Clerk called the bill (H.R. 4835) for the relief of Milton S. Koblitz.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Milton S. Koblitz, Los Angeles, California, the sum of $500. The payment of such sum shall be in full settlement of all claims of Milton S. Koblitz against the United States for refund of the amount a departure bond deposited by him on behalf of the alien Moisha Alzara. Such bond was declared breached, and the amount thereof forfeited, because of the failure of the alien Moisha Alzara to depart from the United States on December 1, 1955: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

VLADISLAV FOTICH

The Clerk called the bill (H.R. 7877) for the relief of Vladislav Fotich.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the limitations of time contained in section 33 of the Trading With the Enemy Act with respect to the filing of claims and the institution of suits for the return of property or interests therein pursuant to that section, Vladislav Fotich, a citizen of Yugoslavia who was precluded by illness and absence from the United States from making timely assertion of claim, may, within six months after the date of enactment of this Act, file a claim or institute suit for the return, pursuant to section 32 of such Act, of (a) twelve shares of securities of the International Nickel Company of Canada, Limited (certificate numbered MB 289246, registered in the name of Egger and Company) which in 1951 were vested in the Alien Property Custodian for the benefit of the United States by vesting order numbered 17940, or (in the event of their liquidation) the proceeds thereof, and (b) all revenue received by the Attorney General from such securities. Any claim filed or suit instituted pursuant to this Act shall be received, considered and determined as if such claim or suit had been filed within the time prescribed in section 33 of such Act. Any return made pursuant to authority conferred by this Act shall be subject to the provisions of section 20 of the Trading With the Enemy Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RALPH W. ANDERSON

The Clerk called the bill (H.R. 8989) for the relief of Ralph W. Anderson.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Ralph W. Anderson, lieutenant colonel, United States Army, is hereby relieved of all liability for repayment to the United States of the sum of $1,550.25, representing overpayments of longevity pay paid to him as the result of his claiming membership in the Enlisted Reserve Corps of the Army for the period July 16, 1938, to August 1, 1940, which period was disallowed by the Army after the said Ralph W. Anderson had been paid on the basis of such period for over fifteen years, the said Ralph W. Anderson having believed such period was a matter of record in the official files of the United States Army.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Ralph W. Anderson, the sum of any amount received or withheld from him on account of the overpayment referred to in the first section of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAJ. EDMUND T. COPPINGER

The Clerk called the bill (H.R. 9432) for the relief of Maj. Edmund T. Coppinger.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provisions of the Act entitled "An Act providing for the barring of claims against the United States", approved October 9, 1940 (31 U.S.C. 71a), are hereby waived in favor of Major Edmund T. Coppinger, of Harrisburg, Pennsylvania, with respect to his claim for lump sum payment under section 2 of the Act of June 16, 1936, as amended (10 U.S.C., 1952 edition, sec. 300a), if such claim is filed with the General Accounting Office within the one-year period which begins on the date of enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BROOKLYN STEEL WAREHOUSE CO.

The Clerk called the bill (H.R. 9958) for the relief of Brooklyn Steel Warehouse Co.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $3,458.19 to the Brooklyn Steel Warehouse Company of Brooklyn, New York, in full settlement of all claims against the United States. Such sum represents storage charges on certain equipment owned by the United States and leased to the Premier Textile Machinery Company of Brooklyn, New York, in July 1952: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ISAMI NOZUKA

The Clerk called the bill (H.R. 10431) for the relief of Isami Nozuka (also known as Isami Notsuka).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the limitations of time contained in section 33 of the Trading With the Enemy Act, as amended, with respect to the filing of claims and the institution of suits for the return of property or any interest therein pursuant to section 9 or section 32 of such Act, Isami Nozuka (also known as Isami Notsuka), a citizen of the United States, may file a claim or institute a suit for the return of his property vested by the Attorney General under Vesting Order Numbered 16184, dated December 5, 1950, which order described such property as follows:

"That certain debt or other obligation of Bank of America National Trust and Savings Association, 300 Montgomery Street, San Francisco, California, arising out of a savings account, account numbered 2199, entitled 'Isami Nozuka', maintained at the branch office of the aforesaid bank located at 147 North Wilson Way, Stockton, California, and any and all rights to demand, enforce, and collect the same".

Any such claim or suit for the return of such property shall be received, considered, and determined as if such claim or suit had been filed within the time limitations prescribed in section 33 of such Act, if such claim or suit is filed within the six-month period beginning on the date of enactment of this Act: *Provided,* That any return made under authority of this Act shall be subject to the provisions of section 20 of the Trading With the Enemy Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RAY C. THOMPSON

The Clerk called the bill (H.R. 10793) for the relief of Ray C. Thompson.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Ray C. Thompson, Greensboro, North Carolina, the sum of $1,139.75. Payment of such sum shall be in reimbursement to the said Ray C. Thompson for the payment by him of an equal amount to one Edward L. Gardner in connection with the compromise settlement of the claim of the said Edward L. Gardner for personal injuries sustained as a result of being hit by a mail truck operated by the said Ray C. Thompson in the course of his duties as a parcel post mail carrier in the postal field service on December 17, 1955, at Greensboro, North Carolina. The said Edward L. Gardner was unable to recover

damages from the Government of the United States under the tort claims procedure of title 28 of the United States Code by reason of lapse of time under the applicable time limitations provisions of such title. The said Edward L. Gardner subsequently filed suit on such claim against the said Ray C. Thompson personally and settlement was made in the above-specified amount. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CLARK L. SIMPSON

The Clerk called the bill (H.R. 10801) for the relief of Clark L. Simpson.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Clark L. Simpson, of College Park, Maryland, is hereby relieved of liability to the United States in the amount of $912.55, the amount by which he was overpaid during the period from December 5, 1954, through October 3, 1959, as a result of an administrative error in the determination of his longevity step increases. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for any amount for which liability is relieved by this Act.

With the following committee amendments:

Page 1, lines 4 and 5, strike "in the amount of $912.55, the amount by which he was overpaid during the" and insert "for excess salary payments received by him, covering the".

Page 1, line 6, strike "from".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EDWARD S. ANDERSON

The Clerk called the bill (H.R. 11188) for the relief of Edward S. Anderson.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the law firm of Power, Griffith, and Jones, of Columbus, Ohio, on behalf of the Lake Shore Insurance Exchange, the sum of $154.70. The payment of such sum (1) shall be in full settlement of all claims of said firm and exchange against the United States and against Edward S. Anderson, a post office carrier of Columbus, Ohio, arising out of a collision on October 27, 1956, between a private vehicle and postal vehicle numbered 52737, driven by the said Edward S. Anderson while acting in the scope of his employment, and (2) shall be made only upon satisfactory assurances being furnished to the Secretary of the Treasury that there will be refunded by said firm or exchange to the said Edward S. Anderson the difference between (A) all amounts paid by the said Edward S. Anderson to the said firm pursuant to a compromise settlement between the said Edward S. Anderson and the said firm, dated November 13, 1959, and (B) interest at the rate of 6 per centum per annum on the unpaid amounts due under such settlement from November 13, 1959.

Suit on such claim may not be instituted under the tort claims procedure as provided under title 28, United States Code.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ANNUITY FUND OF THE ELECTRICAL SWITCHBOARD AND PANELBOARD MANUFACTURING INDUSTRY OF NEW YORK CITY

The Clerk called the bill (H.R. 7854) to provide tax relief to the annuity fund of the electrical switchboard and panelboard manufacturing industry of New York City and the contributors thereto.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the annuity fund of the electrical switchboard and panelboard manufacturing industry of New York City, created May 23, 1957, as a result of an agreement between Local Union Numbered 3, International Brotherhood of Electrical Workers, American Federation of Labor and Congress of Industrial Organizations, and the Electrical Manufacturers of New York, Inc., which fund has never been operated in a manner which would jeopardize the interests of its beneficiaries, shall be deemed to have met the requirements of section 401(a) of the Internal Revenue Code of 1954 and shall be deemed to be exempt from tax under section 501(a) of the Internal Revenue Code of 1954 and section 165(a) of the Internal Revenue Code of 1939 for the period beginning April 1, 1956, and ending May 29, 1957.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. ELIZABETH FOWLER

The Clerk called the bill (H.R. 9648) for the relief of Mrs. Elizabeth Fowler.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 15 to 20, inclusive, of the Act entitled "An Act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, as amended (5 U.S.C. 765–770), are hereby waived in favor of Mrs. Elizabeth Fowler so as to enable her to file a claim for compensation based upon the death of her late husband, Thomas John Fowler, which was alleged to have resulted from an injury which he incurred while on active duty at Wendover Field, Utah, as an Army Reservist, on January 31, 1946, and her claim is authorized and directed to be considered and acted upon under the remaining provisions of such Act, as amended, if she files such claim with the Department of Labor (Bureau of Employees' Compensation) not later than six months after the date of enactment of this Act. No benefits shall accrue by reason of the enactment of this Act for any period prior to the date of its enactment.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SENDING BILL (H.R. 4426) ENTITLED "A BILL FOR RELIEF OF CHARLES G. G. GROUP," WITH ACCOMPANYING PAPERS, TO COURT OF CLAIMS

The Clerk called the resolution (H. Res. 538) providing for sending the bill H.R. 4426, with accompanying papers, to the Court of Claims.

There being no objection, the Clerk read the resolution, as follows:

Resolved, That the bill (H.R. 4426) entitled "A bill for the relief of Charles G. G. Group", together with all accompanying papers, is hereby referred to the Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code; and the court shall proceed expeditiously with the same and report to the House, at the earliest practicable date, such findings of fact, including facts relating to delay or laches, facts bearing upon the question whether the bar of any statute of limitation should be removed, or facts claimed to excuse the claimant for not having resorted to any established legal remedy, and conclusions based on such facts as shall be sufficient to inform Congress whether the demand is a legal or equitable claim or a gratuity, and the amount, if any, legally or equitably due from the United States to the claimant.

The resolution was agreed to.

A motion to reconsider was laid on the table.

GUADALUPE VILLARREAL

The Clerk called the bill (H.R. 3536) for the relief of Guadalupe Villarreal, Sr. (in behalf of his minor son, Guadalupe Villarreal, Jr.).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated to Guadalupe Villarreal, Senior, Elgin, Texas, in behalf of his minor son Guadalupe Villarreal, Junior, the sum of $50,000. The payment of such sum shall be in full settlement of all claims of the said Guadalupe Villarreal, Senior, and his said minor son, Guadalupe Villarreal, Junior, against the United States, arising out of the personal injuries sustained by the said Guadalupe Villarreal, Junior, on July 20, 1955, at the Elgin Butler Brickyard, Elgin, Texas, as a result of the explosion of a 37 millimeter high explosive shell. This claim is not cognizable under the Federal Tort Claims Act: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 1, lines 5 and 6, strike "to Guadalupe Villarreal, Senior, Elgin, Texas, in behalf of his minor son," and insert "the sum of $10,000 to the legal guardian of".

Page 1, line 7, strike "sum of $50,000. The payment of such sum shall be" and insert "minor son of Guadalupe Villarreal, Senior, of Elgin, Texas,".

Page 1, lines 8 and 9, strike "Guadalupe Villarreal, Senior, and his said minor son,".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Guadalupe Villarreal, Jr."

A motion to reconsider was laid on the table.

WILLIAM EDGAR WEAVER

The Clerk called the bill (H.R. 8054) for the relief of William Edgar Weaver.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the expiration of the period prescribed by Public Law 744, Eighty-third Congress, approved August 31, 1954 (68 Stat. 1934), for the filing of claims under section 16 of the War Claims Act of 1948, as amended (62 Stat. 1240), the Foreign Claims Settlement Commission of the United States is directed to determine the validity and amount, in accordance with the provisions of that Act and the Commission's regulations previously in force with respect to claims under that section, of a claim for civilian detention benefits filed within ninety days after the enactment of this Act by or in behalf of William Edgar Weaver. The Commission shall certify to the Secretary of the Treasury for payment out of the War Claims Fund any award made by the Commission in accordance with applicable provisions of the War Claims Act of 1948, as amended, in favor of William Edward Weaver.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOHN CALVIN TAYLOR

The Clerk called the bill (H.R. 8882) for the relief of John Calvin Taylor.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Navy is authorized and directed to settle and pay in accordance with the Armed Forces Leave Act of 1946, the claim of John Calvin Taylor, of Salisbury, Maryland, for unused leave accrued incident to his service in the United States Navy from April 2, 1943, to November 17, 1945, notwithstanding the time limitation of June 30, 1951, for applications for such payments contained in section 5 of such Act of 1946, if an application for such settlement and payment is made by John Calvin Taylor not later than six months after the date of enactment of this Act. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LT. MATTHEW A. WOJDAK, U.S. NAVY (RETIRED)

The Clerk called the bill (H.R. 9913) for the relief of Lt. Matthew A. Wojdak, U.S. Navy (retired).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Lieutenant Matthew A. Wojdak, United States Navy (retired) is hereby relieved of liability to the United States in the amount of $13,014.24, the gross amount of civilian compensation paid him in the period from August 3, 1956, through March 18, 1959, for the services he rendered in a civilian capacity at the United States Naval Air Station, North Island, San Diego, California, which payments were ruled to have been made in violation of the provisions of the Act of July 31, 1894 (5 U.S.C. 62), but without knowledge on his part of any violation of law. In the audit and settlement of the accounts of any certifying or disbursing officer to the United States, credit shall be given for any amount for which liability is relieved by this Act.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Lieutenant Matthew A. Wojdak, United States Navy (retired) an amount equal to the aggregate of the amounts paid by him, or withheld from sums otherwise due him and applied in satisfaction of the liability to the United States referred to in section 1 of this Act: *Provided,* That no part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ROBERT J. REEVES

The Clerk called the bill (H.R. 11165) for the relief of Robert J. Reeves.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Robert J. Reeves is hereby relieved of all liability to the United States to refund the amount of $868.16 resulting from an overpayment of compensation he received, through administrative error, as an employee of Wright Air Development Division, Wright-Patterson Air Force Base, Ohio, in the period between August 24, 1958, and January 23, 1960.

With the following committee amendment:

Page 1, line 4: Strike "$868.16" and insert "$935.20, but not in excess thereof,".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARION JOHN NAGURSKI

The Clerk called the bill (H.R. 12350) for the relief of Marion John Nagurski.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Marion John Nagurski (serial number 9610124), International Falls, Minnesota, the sum of $182.84. The payment of such sum shall be in full settlement of all claims of Marion John Nagurski against the United States for amounts due him as payment for unused leave accrued by him as an enlisted member of the United States Navy during the period beginning May 2, 1944, and ending January 10, 1946, both dates inclusive: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 2, line 3, strike "in excess of 10 per centum thereof".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. MAUD A. PROVOOST

The Clerk called the bill (H.R. 3800) for the relief of Mrs. Maud A. Provoost.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in lieu of any annuity which she is receiving under any other law, Mrs. Maud A. Provoost, Port Chester, New York, shall be entitled to receive an annuity payable, from and after March 1, 1948, out of the civil service retirement and disability fund, as the surviving widow of William B. Provoost, late an employee in the United States post office, Port Chester, New York, as if the death of the said William B. Provoost had occurred on February 29, 1948.

With the following committee amendments:

Line 5, after the word "annuity" insert "authorized by the Civil Service Commission."

Line 6, strike out "March 1, 1948," and insert "the date of enactment of this legislation".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

COL. JOSEPH A. NICHOLS

The Clerk called the bill (H.R. 11322) for the relief of Col. Joseph A. Nichols.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 212 of the Act of June 30, 1932 (5 U.S.C. 59a), is waived for the period beginning January 1, 1951, and ending November 30, 1953, both dates inclusive, insofar as it applied to Colonel Joseph A. Nichols, retired (Army serial number O9699), and he is relieved of liability to repay to the United States the sum of $13,590.65, which was erroneously paid to him as civilian salary during such period while he was employed by the officers' open mess, Fort Benning, Georgia. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, full credit shall be given for all amounts for which liability is relieved by this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GOURGEN H. ASSATURIAN

The Clerk called the bill (H.R. 2584) for the relief of Gourgen H. Assaturian.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purpose of the Immigration and Nationality Act, Gourgen H. Assaturian shall be held and considered to have been lawfully admitted to the United States for permanent residence as of September 21, 1948, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider, was laid on the table.

AUTHORIZING THE AWARD POSTHUMOUSLY OF APPROPRIATE MEDALS AND CERTIFICATES TO CHAPLAIN GEORGE L. FOX, ET AL.

The Clerk called the bill (S. 2969) to authorize the award posthumously of appropriate medals to Chaplain George L. Fox, Chaplain Alexander D. Goode, Chaplain Clark V. Poling, and Chaplain John P. Washington.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized to award posthumously appropriate medals and certificates to Chaplain George L. Fox of Cambridge, Vermont; Chaplain Alexander D. Goode of Washington, District of Columbia; Chaplain Clark V. Poling of Schenectady, New York; and Chaplain John P. Washington of Arlington, New Jersey, in recognition of the extraordinary heroism displayed by them when they sacrificed their lives in the sinking of the troop transport Dorchester in the North Atlantic in 1943 by giving up their life preservers to other men aboard such transport.

SEC. 2. The medals and certificates authorized by this Act shall be in such form and of such design as shall be prescribed by the President, and shall be awarded to such representatives of the aforementioned chaplains as the President may designate.

SEC. 3. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

With the following committee amendment:

On page 1, line 5, strike "Cambridge" and insert "Gilman".

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. RODINO. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. RODINO. Mr. Speaker, the passage today of S. 2969, to award appropriate medals to the four chaplains, marks the culmination of several years of effort to grant proper recognition to four of the greatest men in American history.

Over 17 years have passed since February 3, 1943, when the troopship *Dorchester* was torpedoed off the coast of Greenland. The *Dorchester,* en route to Europe, carried on board four chaplains: Rev. George L. Fox, of Gilman, Vt.; Rabbi Alexander Goode, of Washington, D.C.; Rev. Clark V. Poling, of Schenectady, N.Y.; and Father John P. Washington, of Arlington, N.J. As the ship sank the four chaplains, having given away their lifejackets so that four others might live, linked arms in prayer and slowly went down to their death. Two Protestants, a Jew, and a Catholic went valiantly to their deaths under circumstances of the highest human drama, leaving behind them an object lesson in self-sacrifice and tolerance for all mankind.

In order that this eternal message of the unity and brotherhood of man and his identity with God be memorialized, I called upon the 84th Congress to dedicate a special day for this purpose. In due course my resolution was adopted, and February 3, 1957, was officially dedicated as Dorchester Day.

Since that time, I have determined to press for personal recognition for the courage of these four chaplains. It was my feeling, and that of several other Congressmen, that the valor exhibited by these men merited nothing less than the award of the Congressional Medal of Honor.

I therefore introduced a bill for this purpose in the 85th and again in this Congress. Unfortunately, technical objections against the award of the Congressional Medal of Honor prevented the adoption of this bill.

The substitution of what is now before us as S. 2969, to award the four chaplains a special medal to be designed by the Department of Defense, is, in my opinion, a proper alternative and a fitting tribute to heroic service far above and beyond the call of duty.

A slight change added to the bill which passed the House today will require S. 2969 to go back to the Senate for approval. I am confident, however, that this approval will be speedily given and that the President's signature will promptly enact this most meritorious measure into law.

I should like to add that one of these great men whom we have honored today, Chaplain John P. Washington, was born in Newark, N.J., and was one of my constituents. Father Washington served in Kearny, N.J., before enlisting in the Army at the outbreak of the war. At a recent memorial mass in his honor, Msgr. Vincent Corbin, of St. Bridget's Church, said of him:

> Many things have been written about him, and many things have been said about him. Some think of him, not as a hero, but as a martyr. But that is not for us to judge. That's for someone greater than ourselves. We know Father Washington as a good boy from a good family who became a good priest. What more can one ask of a man?

HANS E. T. HANSEN

The Clerk called the bill (H.R. 1671) for the relief of Hans E. T. Hansen.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provision of section 212(a)(9) of the Immigration and Nationality Act, Hans E. T. Hansen may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

IRENEO D. BRODIT AND ANTONIO D. BRODIT

The Clerk called the bill (H.R. 2117) for the relief of Ireneo D. Brodit and Antonio D. Brodit.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Ireneo D. Brodit and Antonio D. Brodit shall be held and considered to be the natural-born minor alien children of Vicente Brodit, a citizen of the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. TERUKO TERI MIYAMOTO (NEE IKEDA)

The Clerk called the bill (H.R. 2124) for the relief of Mrs. Teruko Teri Miyamoto (nee Ikeda).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mrs. Teruko Teri Miyamoto (nee Ikeda) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Page 1, line 8, after the word "fee." strike out the remainder of the bill.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BERNARDO PATERNOSTRO

The Clerk called the bill (H.R. 2705) for the relief of Bernardo Paternostro.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212 (a)(6) of the Immigration and Nationality Act, Bernardo Paternostro may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of said Act, under such conditions and controls which the Attorney General, after consultation with the Surgeon General of the United States Public Health Service, Department of Health, Education, and Welfare, may deem necessary to impose: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act: *Provided further,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MISS ELISABETH HOLLANDER

The Clerk called the bill (H.R. 2716) for the relief of Miss Elisabeth Hollander.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Miss Elisabeth Hollander shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LUCIANO DI FRANCO

The Clerk called the bill (H.R. 2944) for the relief of Luciano Di Franco.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212 (a)(9) of the Immigration and Nationality Act, Luciano Di Franco may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EPIFANIO TRUPIANO

The Clerk called the bill (H.R. 3534) for the relief of Epifanio Trupiano.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(3) of the Immigration and Nationality Act, Epifanio Trupiano may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act: *Provided further,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ROSOLINA CIUFERRI

The Clerk called the bill (H.R. 3804) for the relief of Rosolina Ciuferri.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Rosolina Ciuferri, who lost United States citizenship under the provisions of section 401(c) of the Nationality Act of 1940, as amended, may be naturalized by taking, prior to one year after the effective date of this Act, before any court referred to in subsection (a) of section 310 of the Immigration and Nationality Act or before any diplomatic or consular officer of the United States abroad, the oaths prescribed by section 337 of the said Act. From and after naturalization under this Act, the said Rosolina Ciuferri shall have the same citizenship status as that which existed immediately prior to its loss.

With the following committee amendment:

Page 1, line 4, after the word "of" strike out "section 401(c)" and insert "section 401(e)".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAH QUOCK

The Clerk called the bill (H.R. 4236) for the relief of Woo Bow Land.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Woo Bow Land shall be deemed to be a nonquota immigrant.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, for the purposes of the Immigration and Nationality Act, Mah Quock shall be held and considered to have been lawfully admitted to the United States for permanent residence as of July 8, 1935."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Mah Quock."

A motion to reconsider was laid on the table.

ANATOLIJS JANITIS

The Clerk called the bill (H.R. 4555) for the relief of Anatolijs Janitis.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(6) of the Immigration and Nationality Act, Anatolijs Janitis may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of such Act, under such conditions and controls which the Attorney General, after consultation with the Surgeon General of the United States Public Health Service, Department of Health, Education, and Welfare, may deem necessary to impose: *Provided,* That unless the beneficiary is entitled to care under the Dependents' Medical Care Act (70 Stat. 250), a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the Immigration and Nationality Act: *Provided, further,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

With the following committee amendment:

Page 2, line 1, after the word "under" strike out "the Dependents' Medical Care Act (70

Stat. 250)" and insert "chapter 55, title 10, United States Code."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HARALAMBOS GROUTAS

The Clerk called the bill (H.R. 4970) for the relief of Haralambos Groutas.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Haralambos Groutas shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

On page 1, line 5, after the words "have been" strike out the remainder of the bill and substitute in lieu thereof the following: "born in Great Britain."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

WONG GEE SING

The Clerk called the bill (H.R. 5647) for the relief of Wong Gee Sing.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Wong Gee Sing shall be held and considered to be the minor alien child of Wong Len Chong, citizen of the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARY ELIZABETH TIGHE CRESPO

The Clerk called the bill (H.R. 6804) for the relief of Mary Elizabeth Tighe Crespo.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(4) of the Immigration and Nationality Act, Mary Elizabeth Tighe Crespo may be issued a visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of the Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

With the following committee amendment:

On page 1, line 11, after the word "Act" strike out the period and add the following: ": *Provided further,* That, unless the beneficiary is entitled to care under chapter 55, title 10, United States Code, a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. HUMIKO ROSS

The Clerk called the bill (H.R. 7425) for the relief of Mrs. Humiko Ross.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Mrs. Humiko Ross, the widow of a United States citizen, shall be deemed to be within the purview of section 101(a)(27)(A) of the Immigration and Nationality Act, and the provisions of section 205 of that Act shall not be applicable in this case.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PIERRE R. DeBROUX

The Clerk called the bill (H.R. 8253) for the relief of Pierre R. DeBroux.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provisions of section 316(a) of the Immigration and Nationality Act as they relate to residence and physical presence requirements for naturalization, shall be inapplicable in the case of Pierre R. DeBroux.

With the following committee amendment:

Page 1, line 6, after "DeBroux" insert ": *Provided,* That nothing in this Act shall be held to waive the six-month residence requirement within the State in which the petition for naturalization is filed."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

OTTO SMALL

The Clerk called the bill (H.R. 8384) for the relief of Otto Small.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Otto Small, who lost United States citizenship under the provisions of section 352(a)(2) of the Immigration and Nationality Act, may be naturalized by taking prior to one year after the effective date of this Act, before any court referred to in subsection (a) of section 310 of the Immigration and Nationality Act or before any diplomatic or consular officer of the United States abroad, the oaths prescribed by section 337 of the said Act. From and after naturalization under this Act, the said Otto Small shall have the same citizenship status as that which existed immediately prior to its loss.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SISTER FRANCES CABRINI (VIRGINIA BILBAO)

The Clerk called the bill (H.R. 9610) for the relief of Sister Frances Cabrini (Virginia Bilbao).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the immigration and naturalization laws, Sister Frances Cabrini (Virginia Bilbao) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence as provided in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Sister Frances Cabrini (Virginia Bilbao). From and after the date of the enactment of this Act, the said Sister Frances Cabrini (Virginia Bilbao) shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

IDA EXLE (NEE IDA STERIO)

The Clerk called the bill (H.R. 10002) for the relief of Ida Exle (nee Ida Sterio).

There being no objection the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 203(a)(2) and 205 of the Immigration and Nationality Act, Ida Exle (nee Ida Sterio) shall be held and considered to be the natural mother of Charles Klippel, a citizen of the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DOCUMENTATION AS A VESSEL OF THE UNITED STATES WITH LIMITED COASTWISE PRIVILEGES OF THE VESSEL "EDITH Q."

The Clerk called the bill (S. 1765) to authorize and direct the Treasury to cause the vessel *Edith Q.*, owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States with full coastwise privileges.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 4132 of the Revised Statutes of the United States, as amended (46 U.S.C. 11), and section 27 of the Merchant Marine Act, 1920, as amended (46 U.S.C. 883), the Secretary of the Treasury is authorized and directed to cause that certain vessel now known as the Edith Q., (formerly the Miss Paul), built in 1950 in Nova Scotia, and now owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States with full coastwise privileges, upon compliance with the usual requirements, so long as the vessel is owned and shall continue to be owned by a citizen of the United States.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, notwithstanding the provisions of section 4132 of the Revised Statutes of the United States, as amended (46 U.S.C. 11), the Secretary of the Treasury is authorized and directed to cause that certain vessel now known as the Edith Q. (formerly the Miss Paul), built in 1950 in Nova Scotia, and now owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States, upon compliance with the usual requirements, with the privilege of engaging in the coastwise trade to the extent necessary to permit the carriage of passengers and merchandise, whether for hire or otherwise, between Camden, Great Spruce Head Island, and other points in Maine, located on the Penobscot River and Penobscot Bay, and the tributaries and approaches thereto, during the period from May 15 through September 15 annually, so long as the vessel shall continue to be owned by a citizen of the United States."

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed.

The title of the bill was amended to read: "An act to authorize and direct the Treasury to cause the vessel *Edith Q.*, owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States with limited coastwise privileges."

A motion to reconsider was laid on the table.

MANUEL ALVES DE CARVALHO

The Clerk called the bill (S. 762) for the relief of Manuel Alves de Carvalho.

There being no objection the Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Manuel Alves de Carvalho shall be held and considered to have been lawfully admitted to the United States for permanent residence as of March 13, 1957.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HENRY K. LEE (HYUN KUI)

The Clerk called the bill (S. 2089) for the relief of Henry K. Lee (Hyun Kui).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Henry K. Lee (Hyun Kui) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EMIKO NAGAMINE

The Clerk called the bill (S. 2106) for the relief of Emiko Nagamine.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Emiko Nagamine shall be deemed to be within the purview of section 101(a)(27)(B) of that Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOHN LIPSET

The Clerk called the bill (S. 2528) for the relief of John Lipset.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, John Lipset shall be deemed to have retained the status conferred upon him under Private Law 844 of the Eighty-fourth Congress, and the provisions of section 205 of the Immigration and Nationality Act shall not be applicable in this case.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MO TONG LUI

The Clerk called the bill (S. 2639) for the relief of Mo Tong Lui.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 101(a)(27)(A) of the Immigration and Nationality Act, Mo Tong Lui shall be held and considered to be under 21 years of age: *Provided,* That a petition is filed in his behalf under section 205 of the said Act within one year from the date of enactment of this Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LLOYD C. KIMM

The Clerk called the bill (S. 2646) for the relief of Lloyd C. Kimm.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Lloyd C. Kimm shall be held and considered to have been lawfully admitted to the United States for permanent residence as of July 21, 1925.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

YI YOUNG AN

The Clerk called the bill (S. 2681) for the relief of Yi Young An.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Yi Young An, shall be held and considered to be the natural-born alien child of Staff Sergeant and Mrs. John L. Brown, citizens of the United States: *Provided,* That the natural parents of the said Yi Young An shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FREDERICK T. C. YU AND HIS WIFE ALICE SIAO-FEN CHEN YU

The Clerk called the bill (S. 2768) for the relief of Frederick T. C. Yu and his wife, Alice Siao-Fen Chen Yu.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Frederick T. C. Yu and his wife, Alice Siao-Fen Chen Yu, may be naturalized upon compliance with all of the requirements of title III of the Immigration and Nationality Act, except that—

(a) no period of residence or physical presence within the United States or any State shall be required in addition to their residence and physical presence within the United States since October 31, 1947; and

(b) their petitions for naturalization may be filed with any court having naturalization jurisdiction.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NIKOLIJA LAZIC

The Clerk called the bill (S. 2886) for the relief of Nikolija Lazic.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 4 of the Act entitled "An Act to provide for the entry of certain relatives of United States citizens and lawfully resident aliens", approved September 22 1959 (73 Stat. 644), Nikolija Lazic shall be held and considered to be eligible for a quota imigrant status under the provisions of section 203(a)(4) of the Immigration and Nationality Act on the basis of a petition approved by the Attorney General prior to January 1, 1959.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BORIS PRIESTLEY

The Clerk called the bill (S. 2918) for the relief of Boris Priestley.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Boris Priestley shall be deemed to have been born in Great Britain.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EUGENE STORME

The Clerk called the bill (S. 2942) for the relief of Eugene Storme.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Eugene Storme, shall be held and considered to be the natural-born alien child of Stanley Storme and Adele Storme, citizens of the United States: *Provided,* That the natural parents of the said Eugene Storme shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

KANG SUN OK

The Clerk called the bill (S. 2964) for the relief of Kang Sun Ok.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Kang Sun Ok, the fiance of Sergeant Norman W. Lade, a citizen of the United States, shall be eligible for a visa as a nonimmigrant temporary visitor for a period of three months, if the administrative authorities find (1) that the said Kang Sun Ok is coming to the United States with a bona fide intention of being married to the said Sergeant Norman W. Lade and (2) that she is otherwise admissible under the Immigration and Nationality Act. In the event the marriage between the above-named persons does not occur within three months after the entry of the said Kang Sun Ok, she shall be required to depart from the United States and upon failure to do so shall be deported in accordance with the provisions of sections 242 and 243 of the Immigration and Nationality Act. In the event that the marriage between the above-named persons shall occur within three months after the entry of the said Kang Sun Ok, the Attorney General is authorized and directed to record the lawful admission for permanent residence of the said Kang Sun Ok as of the date of the payment by her of the required visa fee.

The bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

AH SEE LEE CHIN

The Clerk called the bill (S. 2991) for the relief of Ah See Lee Chin.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Ah See Lee Chin shall be held and considered to be within the purview of the first proviso to section 312 (1) of that Act and may be naturalized upon compliance with all of the other requirements of title III of that Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JULIUS F. STEINHOFF

The Clerk called the bill (H.R. 1588) for the relief of Julius F. Steinhoff.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 101(a)(27)(c) of the Immigration and Nationality Act, Julius F. Steinhoff shall be held and considered to be a native of Canada.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, for the purposes of the Immigration and Nationality Act, Julius F. Steinhoff shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAURICE DEVLIN

The Clerk called the bill (H.R. 1681) for the relief of Maurice Devlin.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(9) and (17) of the Immigration and Nationality Act, Maurice Devlin, may be admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground, for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

With the following committee amendment.

On page 1, line 3, after "section 212(a)(9)" insert a comma.

On page 1, strike out all of lines 4, 5, 6, 7, and the language "apply only to a ground" on line 8, and substitute the following: "(17) and (19) of the Immigration and Nationality Act, Maurice Devlin, may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that act: *Provided,* That these exemptions shall apply only to grounds".

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

WALTER F. BEECROFT

The Clerk called the bill (S. 3016) for the relief of Walter F. Beecroft.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Walter F. Beecroft may be naturalized upon compliance with all of the requirements of title III of the Immigration and Nationality Act, except that—

(a) no period of residence or physical presence within the United States or any State shall be required in addition to his residence and physical presence within the United States since July 31, 1952; and

(b) the petition for naturalization may be filed with any court having naturalization jurisdiction.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JUNG HI PAK

The Clerk called the bill (S. 3038) for the relief of Jung Hi Pak.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Jung Hi Pak, shall be held and considered to be the natural-born alien child of Captain and Mrs. William S. Herrington, citizens of the United States: *Provided,* That no natural parent of Jung Hi Pak, by virtue of such parentage, shall be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

OH CHUN SOON

The Clerk called the bill (S. 3049) for the relief of Oh Chun Soon.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Oh Chun Soon, shall be held and considered to be the natural-born alien child of Mr. and Mrs. Alvin L. May, citizens of the United States: *Provided,* That the natural parents of the said Oh Chun Soon shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PASQUALE MIRA

The Clerk called the bill (S. 3091) for the relief of Pasquale Mira.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(9) of the Immigration and Nationality Act, Pasquale Mira may be issued a visa and be admitted to the United States for permanent residence if otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ANNE-MARIE STEHLIN

The Clerk called the bill (S. 3130) for the relief of Anne-Marie Stehlin.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Anne-Marie Stehlin, a naturalized citizen of the United States, shall be permitted to reside in France until May 31, 1964, without losing her United States citizenship under section 352(a) of such Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CECILIA RUBIO

The Clerk called the bill (S. 3235) for the relief of Cecilia Rubio.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Cecilia Rubio shall be deemed to have been born in Spain, and the provisions of sections 201(a), 202(a)(5) and 202(b)(2) of that Act shall not be applicable in this case.

The bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

JULIA SUKKAR

The Clerk called the bill (S. 2740) for the relief of Julia Sukkar.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Julia Sukkar shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Julia Sukkar. From and after the date of the enactment of this Act, the said Julia Sukkar shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MING-CHEN HSU

The Clerk called the bill (S. 2941) for the relief of Mrs. Ming-Chen Hsu (nee Nai-Fu Mo).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of section 6 of the Act entitled "An Act to provide for the entry of certain relatives of United States citizens and lawfully resident aliens", approved September 22, 1959 (73 Stat. 644), Mrs. Ming-Chen Hsu (nee Nai-Fu Mo) shall be held and considered to be the beneficiary of a visa petition approved by the Attorney General pursuant to section 203(a)(3) and section 205 of the Immigration and Nationality Act prior to January 1, 1959.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, for the purposes of the Immigration and Nationality Act, Ming-Chen Hsu shall be held and considered to have been lawfully admitted to the United States for permanent residence as of September 12, 1948."

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time and passed.

The title of the bill was amended so as to read: "A bill for the relief of Ming-Chen Hsu."

A motion to reconsider was laid on the table.

HUAN-PIN TSO

The Clerk called the bill (S. 2967) for the relief of Huan-pin Tso.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 203(a)(3) and 205 of the Immigration and Nationality Act, Huan-pin Tso shall be held and considered to be the natural-born son of Mr. and Mrs. Ting Hsien Wang, aliens lawfully admitted to the United States for permanent residence: *Provided,* That the natural parents of the said Huan-pin Tso shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendments:

On page 1, line 3, strike out "sections 203(a)(3) and 205" and substitute in lieu thereof "sections 101(a)(27)(A) and 205".

On page 1, lines 6 and 7, strike out the language "aliens lawfully admitted to the United States for permanent residence" and substitute "citizens of the United States".

The committee amendments were agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

WILLIAM RADKOVICH CO., INC.

The Clerk called the bill (H.R. 9079) for the relief of William Radkovich Co., Inc.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That jurisdiction be, and the same is hereby, conferred upon the United States Court of Claims to hear, determine, and render judgment upon the claims of William Radkovich Company, Incorporated, arising under contracts with the United States for the construction of various structures, said contracts being numbered W-04-353-eng-2036 and W-04-353-eng-2050, against the United States for the difference between the reasonable value of said structures as of the time of the completion of such contracts and the amount paid to said company for such structures, said recovery to be permitted only in the event that it shall be established that the actual cost of the said William Radkovich Company, Incorporated, of erecting such structures exceeded the reasonable value of such structures, such judgment to be entered notwithstanding any limitations imposed by law upon Government representatives whose responsibility it was to let the aforementioned contracts and notwithstanding the technical provisions of said contracts with respect to payment thereunder: *Provided,* That the suit herein authorized shall be instituted within six months from the date of the approval of this Act.

With the following committee amendment:

Strike out all after the enacting clause and insert: "That jurisdiction is hereby conferred upon the United States Court of

Claims to hear, determine, and render judgment upon the claims of William Radkovich Company, Incorporated, arising out of contracts numbered W-04-353-eng-2036 and W-04-353-eng-2050, against the United States for the reasonable value, computed as of the time when made, of any reasonable and necessary changes and increases beyond the terms of said contracts made at the direction of the contracting officer, for which the said William Radkovich Company, Incorporated, was not compensated because of the provisions of section 12 of the Military Appropriation Act, 1947 (60 Stat. 565), which precluded payment of more than $7,500 per unit for the construction of temporary family quarters: *Provided,* That the suit herein authorized shall be instituted within six months from the date of the approval of this Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RICHARD J. POWER

The Clerk called the bill (H.R. 11486) for the relief of Richard J. Power

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Richard J. Power is hereby relieved of all liability to the United States to refund the amount of $660.80, resulting from an overpayment of compensation he received, through administrative error, as an employee of Air Materiel Command, Wright-Patterson Air Force Base, Ohio, in the period between June 25, 1958, to June 6, 1959.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MINA AND HENEK SZNAIDER

The Clerk called the bill (H.R. 4981) for the relief of Mina and Henek Sznaider.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(19) of the Immigration and Nationality Act, Mina and Henek Sznaider may be issued a visa and admitted to the United States for permanent residence if they are found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

With the following committee amendments:

On page 1, line 3, strike out "provision of section 212(a)(19)" and substitute in lieu thereof "provisions of section 212(a)(9) and (19)".

On page 1, line 5, strike out the words "a visa" and substitute "visas".

On page 1, line 8, strike out the words "this exemption" and substitute "these exemptions".

On page 1, line 8, strike out the words "a ground" and substitute "grounds".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DR. TZE I. CHIANG

The Clerk called the bill (H.R. 9960) for the relief of Dr. Tze I. Chiang.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Tze I. Chiang shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of January 9, 1954.

With the following committee amendment:

Page 1, line 6, after "1954," insert the following: "upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ADOLF B. JOCHNICK

The Clerk called the bill (H.R. 10376) for the relief of Adolf B. Jochnick.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purposes of the Immigration and Nationality Act, Adolf B. Jochnick shall be held and considered to have been lawfully admitted to the United States for permanent residence as of August 1, 1953.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SUSPENSION OF DEPORTATION IN THE CASES OF CERTAIN ALIENS

The Clerk called Senate Concurrent Resolution 103.

There being no objection, the Clerk read the Senate concurrent resolution, as follows:

Resolved by the Senate (the House of Representatives concurring), That the Congress favors the suspension of deportation in the case of each alien hereinafter named, in which case the Attorney General has suspended deportation for more than six months:

A-7197635, Apsis, Crysostome Alexander.
A-7415400, Apsis, Diane Helen.
A-7351220, Donze, Peter.
A-4031108, Farfan, Domingo.
A-3544790, Fatovic, Sime.
A-7137472, Rodriguez-Guzman, Guillermo.
A-10255185, Santos, Manuel.
A-9678132, Tsakiridis, Anastassios.
A-8960659, Young, Richard Kai.
A-2088508, Gomez, Salvador.
A-7083633, Lyras, Sozon.
A-6799270, Ojeda, Miguel Carrizales.
A-11134483, Ojeda, Simona Hernandez.
A-5962211, Schoendfeldt, Rudolph Herman.
A-10088698, Yew, Lai Wo.
A-10073984, Sirakof, Mehmadale Ibrahim.
A-3848598, Ying, Shih Tseng.
A-3354528, Ying, Agnes S.
A-4314277, Hochstaedt, Amalie.
A-3870732, Hochstaedt, Samuel.
A-9799578, Wong, How Tung.
A-9734746, Wai Young.
A-5631916, Cooper, Morris.

With the following committee amendments:

On page 1, strike out lines 6, 7, and 9.

On page 2, strike out lines 4, 8, 10, 11, 14, 15, and 16.

The committee amendments were agreed to.

The Senate concurrent resolution was agreed to, and a motion to reconsider was laid on the table.

ANNA SEMECHOLE MARCOLINA

The Clerk called the bill (H.R. 9042) for the relief of Anna Semecnole Marcolina.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, Anna Semechole Marcolina, who lost United States citizenship under the provisions of section 401(e) of the Nationality Act of 1940, may be naturalized by taking, prior to one year after the date of the enactment of this Act, before any court referred to in subsection (a) of section 310 of the Immigration and Nationality Act or before any diplomatic or consular officer of the United States abroad, an oath as prescribed by section 337 of such Act. From and after naturalization under this Act, the said Anna Semechole Marcolina shall have the same citizenship status as that which existed immediately prior to its loss.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LOW WING QUEY (KWAI)

The Clerk called the bill (S. 2822) for the relief of Low Wing Quey (Kwai).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Low Wing Quey (Kwai) shall be held and considered to be the natural-born minor alien child of Low Shiu Hong, a citizen of the United States.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that further call of bills on the Private Calendar be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

M. SGT. EMERY C. JONES

Mr. LANE. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 6081) for the relief of M. Sgt. Emery C. Jones, with Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 1, line 6, strike out "$1,421.43" and insert "$1,436.40".

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

MRS. ETHEL B. MORGAN

Mr. LANE. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 9443) for the relief of Mrs. Ethel B. Morgan, with Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Strike out line 6 and insert "have been the wife and subsequently the widow (as those terms are defined in section 216 of that Act)".

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

INCREASING FOR 1 YEAR THE PUBLIC DEBT LIMIT SET FORTH IN SECTION 21 OF THE SECOND LIBERTY BOND ACT

Mr. MILLS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 12381) to increase for 1-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for 1 year the existing corporate normal-tax rate and certain excise-tax rates, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference requested by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas? [After a pause.] The Chair hears none and appoints the following conferees: Messrs. MILLS, FORAND, KING of California, O'BRIEN of Illinois, MASON, BYRNES of Wisconsin and BAKER.

FARM SURPLUS REDUCTION ACT OF 1960

Mr. THORNBERRY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 564 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Agriculture, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

CALL OF THE HOUSE

Mr. ANDERSEN of Minnesota. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 139]

Alford	Diggs	May
Anfuso	Donohue	Meader
Auchincloss	Dooley	Michel
Baker	Durham	Miller, N.Y.
Barden	Evins	Mitchell
Barr	Fisher	Moorhead
Blitch	Frazier	Morris, Okla.
Boykin	Gallagher	Norrell
Brademas	Hardy	Philbin
Brooks, La.	Hogan	Powell
Brooks, Tex.	Jackson	Roush
Buckley	Kasem	Shelley
Burdick	Kastenmeier	Steed
Cahill	Kilday	Taylor
Carnahan	McCormack	Teller
Celler	McSween	Wampler
Coffin	Macdonald	Wharton
Curtis, Mo.	Madden	Willis
Denton	Magnuson	

The SPEAKER pro tempore (Mr. ALBERT). On this rollcall 374 Members have answered to their names, a quorum is present.

By unanimous consent, further proceedings under the call were dispensed with.

NATIONAL DEFENSE

Mr. CANNON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

AMERICA'S RECESSIONAL

Mr. CANNON. Mr. Speaker, the release of Kipling's "Recessional" at England's greatest hour struck the world with the heaviest immediate impact of any epode ever published.

It was received with tolerance. No one accepted it at face value. England was mistress of the seas. Britania ruled the waves. Her morning drumbeat encircled the globe. The Ambassador from the Court of St. James was accorded preeminence in every chancellery in the world. British statesmen had maintained world peace for a hundred years.

But overnight her empire crumbled. Her armies shrank. Her navies rotted. One by one her colonial possessions were abandoned. She withdrew her troops from strategic outposts. Briefly and inexoribly her overlordship vanished.

The United States took over the burden. American troops supplanted British regulars in Greece. American might policed the world's trouble spots. And American philanthropy established a new international policy which refused to accept colonial dependencies and spent billions of dollars in fostering independent democracies in the Philippines and Cuba and in the rehabilitation of defeated enemies.

At the conclusion of the Second World War we stood alone—the greatest military power the world had ever seen. We had the greatest army, more planes, more tanks, more ships than any other nation, and in our teeming cities more wealth and a greater productive capacity than all the rest of the world combined.

And once more—overnight—the wheel turns and we are a second-rate power. Our position in the world is dramatically weaker. We have given billions of dollars, and in every quarter of the globe we are the most hated nation. Our representatives cannot leave the borders of our country—north, south, east, or west—without being subjected to the most degrading and insulting personal abuse and actual physical violence.

We are bound to the enlightened nations of the world by treaties of mutual assistance. In the days of our military supremacy they were glad to join us in nonaggression compacts of mutual defense and to accord us military bases for our Strategic Air Command. But recently the Icelandic Althing has insisted on the removal of our base, France has notified us that she will no longer permit us to maintain nuclear weapons or warheads on French soil and England has insisted that we enter into negotiations with Russia at summit meetings.

Why this sudden change? Why this remarkable reversal in attitude of our allies? It is very simple. Here in the House we have blindly followed the admirals and wasted our time, money, and resources on useless carriers while the Russians have concentrated on missiles and submarines. They have never been foolish enough to build a carrier but they are 2 to 4 years ahead of us in missiles and submarines—and to that extent they are in control of the world situation. They are taking full advantage of it and their leaders daily insult and abuse and deride us until the attitude of the world is one of pity and contempt instead of the esteem and regard in which we were held a short decade ago.

The administration and our congressional leaders tell us that we are still supreme and able to lick any nation in the world with one hand tied behind. What else could they say? But it is well known on the most competent authority that we are in vital respects as much as 3 or 4 years behind Russia in modern military armament, and that the Russian lead is increasing instead of diminishing.

The responsibility is right here on this floor where we have failed to take the initiative and keep abreast of the times. If we had expended on submarines and missiles the emphasis we have wasted on carriers we would not today find ourselves in this humiliating and dangerous situation.

We have ignored the history of undersea warfare. But Russia and Red China have been alert to its significance.

This is why today Russia is operating a submarine fleet three times the size of our own, why Russia years ago abandoned large surface naval vessels and instead embarked on the construction of 100 submarines a year, and why Russia today is concentrating on the development and construction of nuclear submarines. This is also why the Chinese Communist navy now has a fleet of about 20 submarines, why Red China is currently constructing more attack submarines per year on the average than is the United States, and why Premier Chou En-Lai recently stated that Red China will have nuclear submarines within 5 years.

Submarine warfare came close to bringing the Western Allies to their knees, and to possible defeat, by World War I and World War II. The German Navy failed only because Germany, ironically, failed to provide the German Navy with a sufficient number of submarines. This was particularly ironic for the reason that, historically, Germany had been the foremost exponent of submarine warfare. The United States today must understand this mistake of Germany in two world wars, and benefit from the lesson by providing our own Navy with the number of nuclear submarines needed to cope with present defense requirements.

In August 1914 Germany had 28 submarines of which only 10 were fit for use beyond her own harbors and only 2 were really seagoing boats. Notwithstanding, German submarines, during World War I, sank 5,708 merchant ships with a combined gross tonnage of 11,018,865 tons, and practically paralyzed the supply lanes from the United States to Western Europe. Our convoys were repeatedly decimated with terrible loss of life. Final victory over the U–boats came only because the blockade of attrition mounted and maintained against Germany made it impossible for Germany to replace the U–boats lost in action. The submarine warfare of World War I was a bitter pill for the Allies.

In the span of 21 years between the end of World War I in 1918, and the outbreak of World War II in 1939, neither Germany on the one hand, nor the Allied nations, on the other, profited from the brutal lesson taught by the U–boats. During the pre-World War II era, the Germany Naval High Command moved rapidly to rebuild the German Navy. However, submarines were not given sufficient priority and, as a result, at the outbreak of World War II, Germany had only 57 submarines of which but 22 were oceangoing. In this Germany made a serious mistake. During the same time period, the Allied Nations gave grossly inadequate attention to the problems of undersea warfare.

The horrors of the grim, deadly Battle of the Atlantic are still recent enough to be remembered, and the United States must profit from its lesson. The German submarines blockaded our Atlantic seaboard. Oil tankers were sunk with sickening regularity. Oil supplies to our industrial complexes in the East and Northeast dwindled to a trickle. Troopships and supply ships were under constant attack. The convoy system was only partially successful against the German submarine wolfpacks. Their effectiveness is strikingly demonstrated—they sank 14,547,463 tons of Allied shipping, more than half of the total tonnage sunk—24,246,489—by submarines, aircraft, surface craft, mines, collisions, and other enemy action.

If the German Naval High Command had only had the foresight to provide a larger submarine fleet, the Allies' losses would have been much more crippling. And, on the other hand, if the Allied navies had devoted themselves in the 1930's to the perfection of antisubmarine warfare weapons and tactics, World War II would have unquestionably been shortened and victory won sooner with less losses and suffering.

The World War II story in the Pacific, from the Allied standpoint, was exactly the reverse of the story in the Atlantic. In the Atlantic the German submarines had the initiative and the Allies were constantly on the defensive, down to the bitter end of the war. In the Pacific, however, our small submarine fleet of 51 took the initiative and wrought havoc on the Japanese Navy and Japanese supply and troop ships. Before Pearl Harbor, the popular concept was that submarines would play a minor role in war, acting principally as scouting and attack agents for the surface fleet. This explains the name "fleet boats" given to our World War II type submarines. But our submarines proved to be much more devastating and effective than was foreseen.

The following extracts from "United States Submarine Operations in World War II," by Theodore Roscoe, illustrates the far-reaching effects of American submarine depredations against the Japanese—effects which were in fact decisive:

> The part played by U.S. submarines in Japan's maritime demise is depicted with reasonable accuracy in the figures compiled after the war by the Joint Army-Navy Assessment Committee.
>
> U.S. submarines scored as below:
>
> Number of merchant ships sunk, 1,178.
>
> Merchant tonnage sunk, 5,053,491 tons.
>
> Number of Japanese naval vessels sunk, 214.
>
> Japanese naval tonnage sunk, 577,626 tons.
>
> About 55 percent of all Japanese shipping (merchant and naval) downed in World War II was sunk by U.S. submarines—an achievement accomplished by a force that consisted of less than 2 percent of the U.S. Navy's personnel.

A more or less impartial observer, German Vice Admiral Weneker, who was stationed in Japan during the war, when asked what he considered the cause for Japan's loss of the war, stated that, in his opinion, Japanese overconfidence, underestimation of the enemy and overextended supply lines which could not be protected were basic causes. He further stated:

> After that I would say the reasons for their disaster could be classed about as follows in order of importance: First, and by far the worst, were the attacks of the highly efficient American submarine.

In retrospect, submarine warfare played a decisive role in the Atlantic in both World Wars and in the Pacific in World War II, even though the submarines in both these wars were not true submarines, but in effect surface vessels which could submerge for limited periods of time during which their speed and mobility were sharply restricted. The nuclear submarine has proven itself to be a real submarine, capable of operating for more than 2 months fully submerged, completely divorced from the earth's atmosphere. It constitutes a revolutionary third dimension to warfare, made possible by atomic energy. And the application of atomic energy has drastically changed still another concept of naval warfare and supply. The convoy system of the two World Wars is as outmoded and archaic as a Roman chariot on a superhighway. The nuclear warhead in today's missile or torpedo packs such a devastating punch that a single megaton detonation anywhere near a convoy will wipe out every ship in the convoy. With convoy operation no longer a protection but a trap, troop and supply vessels will once more have to travel alone and be picked off by submarines one by one like ducks in a barrel.

Soviet Russia has read history well. Just as Russia has concentrated on the development of missiles to the subordination of manned aircraft, Russia has applied its resources intensively to the buildup of a large submarine fleet at the total expense of large surface naval vessels. The latest edition of "Jane's Fighting Ships"—1959–60—reports on Russian submarine strength and plans as follows:

> One atomic powered submarine is nearing completion, another is in an advanced stage of construction, and a third is being assembled. * * * There are now about 500 submarines. Over half are of the large or intermediate oceangoing type. Another large type is reported to be armed with guided missiles. * * * Some 50 submarines are under construction in Soviet dockyards. These include five different types:
>
> 1. Large nuclear-powered type with a very long range.
>
> 2. Large guided missile type with a high speed.
>
> 3. Oceangoing patrol type with a long range.
>
> 4. Minelaying type with a high speed.

5. Antisubmarine patrol type with a long range.

The Russian potential in the matter of building a large fleet of nuclear submarines was considered in the Report of the Underseas Warfare Advisory Panel to the Subcommittee on Military Applications of the Joint Committee on Atomic Energy which stated in August 1958:

We regard it as likely that the Soviets can soon have the capability of building many more nuclear submarines than we now plan to construct. The record of Soviet performance, both in building conventional submarines and in other military-scientific-industrial endeavors, leaves little room for doubt on this score. In fact, assuming a continuation of our present and planned construction program, we regard it as probable that the Soviets will have it within their capability to build a larger nuclear submarine fleet than our own by the mid-1960's.

Today Russia has a fleet of conventionally powered submarines nearly 10 times as large as was the German submarine force at the outbreak of World War II, and will be adding nuclear submarines in substantial numbers just as soon as they reach a degree of development approaching the *Nautilus* and her sister ships. Why is Russia concentrating on underseas warfare? The answer is elementary.

Today there are about 2,000 ships under way at sea in the Atlantic Ocean alone. Over 99 percent of all goods in the world market is transported at sea. All of our alliances are dependent on keeping open the sea lanes. If these arteries of trade were to be cut, the collapse of the West would soon follow. The control and use of the sea are the keystones of free world power. The most serious threat to the ability of our Navy to control the seas is the large Soviet submarine fleet already in being.

On this past May 26, Adm. Arleigh A. Burke, Chief of Naval Operations, in a speech said:

God has been most generous to this country. In addition to all other resources, He has given us two-ocean geography. These two oceans provided the road for America's development, and long served as barriers to foreign aggression. Now again, they can contribute to our Nation's security. All we must do is exploit them.

Exploit them we have; and exploit them we will. The seas have never been more important, or more militarily useful to this country, than they are today, as we move into the ballistic missile era.

For a century and a half, until the outbreak of World War II, the two vast oceans were a bulwark of defense for this country. World War II and subsequent history has proven that this bulwark can be for this country a Maginot line, unless these oceans are exploited in their third dimension — undersea warfare. They provide almost unlimited concealment to our nuclear submarine fleet, but they will do as much for the enemy.

The Russian submarine fleet is designed to cut off sea communications between the United States and its allies. The Red Chinese submarine fleet is designed for the same purpose. It is in this area that the thousands of miles of width of the two oceans become for this country a serious handicap. The Russian submarines on patrol for the purpose of raiding shipping have to do no more than leave the North Sea and lurk off the coast of western Europe. American submarines, in order to engage in antisubmarine warfare against the Russian raiding submarines will have to travel more than 2,000 miles from home port. The situation is even more acute in Asia where Red Chinese submarines need not venture more than 500 miles from home ports, and our American submarines will have to travel thousands of miles to defend our shipping against the Red Chinese raiders.

The combat strength of our American submarines, contrary to popular misconception, is far less than the number of submarines we have in commission. Actually, experience has shown that only one-third of the submarines of our Navy can be on patrol and that one-third must be at base being refitted. The vast distances from our home ports to patrol station, across the Atlantic and across the Pacific, tie up the final one-third of our submarines en route to and from patrol stations. Nuclear-powered submarines, due to their greater endurance and higher speeds, can increase the ratio of time spent on patrol, particularly when two crews are used for each ship. It is doubtful, however, that we could count on keeping more than an average of 50 to 60 percent of our nuclear submarines on patrol.

Just as the United States was forced into carrying out sea warfare against German submarines for many months prior to entering World War II, it is entirely conceivable that Russia and Red China might, during a period of missile or deterrent gap, attempt to destroy us the humane way by opening up a wholesale submarine war at sea. Our cities would not be attacked. We would not attack the cities of Russia or Red China. But the victory that the Communists could win, if we are not prepared to cope with their submarines, would be just as much the death of our way of life as leveling American cities and towns to rubble.

The Spanish Civil War brings memories of mystery submarines constantly reported in the Mediterranean and the Atlantic coast of Spain. If there should develop a period of international tensions, mystery submarines in the far Pacific off the Asiatic coast and in the farflung island archipelagoes would unquestionably cause great concern to our Asiatic friends.

Just as the vast widths of the two oceans constitute a real liability to our undersea fleet in reaching the area of operation off the coasts of West Europe and Asia, the degree of concealment afforded to Russian submarines operating off the Atlantic coast of the United States constitutes an equal liability. Russia has at least 200 submarines capable of laying mines in U.S. coastal waters. This is a force adequate to bottle up, at least temporarily, almost every commercial seaport and coastal naval base in the United States. On a single skillfully executed mission, the Russians could in a few hours leave close to 8,000 mines in the sea approaches to our harbors.

Again, a few of these Soviet submarines equipped to fire missiles can place our cities in danger of being destroyed in the event of war. The Russians are clearly capable of effecting their own unique marriage of the IRBM to the nuclear-powered submarine, as we are doing with the Polaris-type submarine. They are advanced in the missile field; they are known to be building nuclear-powered submarines; and they have long pointed out the vulnerability of the United States to such attacks.

What is our defense against the Russian submarine threat to our homeland? Is it our highly touted ASW—antisubmarine warfare—force? The public has been deluged with the dramatic stories and photographs of the ASW force in action, but has not been told how relatively ineffective the ASW force is against the enemy submarine threat. In ASW maneuvers a nuclear submarine of our Navy is sent out to sea as the target, or enemy, submarine. Because the nuclear submarine is practically impossible to locate, or even detect, the submarine commander is severely restricted. He is told to operate in a fixed area, at limited speed, within certain prescribed depths, and to restrict his maneuvering. This makes the hunt a sporting proposition for the surface naval forces. It gives the ASW personnel the opportunity to practice with sonar and radar, and eventually find the submarine, only after 2 to 5 days of intensive searching. The maneuver would be a frustrating failure for all concerned, except the submarine crew, if the submarine were not eventually tracked down and destroyed.

Several years ago one of our nuclear submarines participated in NATO maneuvers off the western coast of Europe. The submarine crew had a fine time. The submarine planted itself directly under the flagship of the combined NATO fleet and there remained in a perfect position to pick off the surface naval vessels, one by one, until the commanding admiral radioed London to get the blighter out from under him.

Not long thereafter, maneuvers were held in the Pacific off the western coast of Canada. A terrible storm came up and the entire surface fleet had to batten down the hatches and heave to to ride out the elements. One of our submarines radioed to the flagship of the surface fleet that everything was warm and comfortable down below, and please advise when the game would resume.

Fortunately we have in our arsenal a weapon, if produced in sufficient numbers, that can defeat the large Russian submarine fleet. This weapon is the nuclear-powered attack submarine. The majority of scientists and tacticians agree that the best way to hunt down and kill a submarine is with another submarine. When dealing with the threat of Soviet submarines with nuclear power, this naval fact becomes intensely significant. An atomic submarine is an extremely durable, elusive craft and is immune to many of the search and attack techniques effective against conventional submarines.

The nuclear submarine is an ideal offensive and defensive weapon because it (a) can operate near Russian bases where other ASW forces cannot; (b) has the inherent advantages of concealment and surprise; (c) gives the best possible mobile sonar platform for detecting submarines—this because nuclear submarines can carry their sonar to the most effective search depth; (d) has exceptional mobility—this due to the ability to steam at high speeds almost indefinitely without refueling and without being impeded by bad weather; (e) can operation on station for periods of 60 days or longer without logistic support; and (f) can remain in action in the face of strong opposition except when matched against better nuclear-powered submarines.

Let us now turn our attention to the condition of our submarine fleet, in terms of the present and of the future. Most of our present submarine fleet was built during World War II. Ordinarily these submarines would be expected to have a maximum useful life of about 14 years, later extended by the Navy by administrative fiat to 17 years. This is due to two factors:

(a) Hull deterioration becomes so pronounced that the ships become unsafe to operate. At this point hull repairs are so expensive as to be prohibitive.

(b) Space and arrangement limitations make it impossible to install the later types of equipment needed to keep the submarine militarily effective.

The Navy now talks of extending the effective life of a World War II submarine, once more by administrative fiat, to 20 years. I wonder whether the Navy has taken into account the increased risks to our American sailors who will be called to take these submarines into the ocean depths after 14 years, and after 17 years, in patched-up hulls to confirm the administrative objectives of the Navy in stretching the useful submarine lifespan to 20 years. The Navy conceals the true status of our submarine fleet by continuing to invest the taxpayers' dollars in these old ships. A new aircraft carrier will cost, according to present estimates, $293 million, and this same figure will build six modern nuclear attack submarines. So long as the submarine fleet is kept at least six nuclear attack submarines below present day requirements, on the basis of six "oldgoat" World War II patched-up hulls, the Navy can scrounge around and find the $293 million for a supercarrier, this year and next year, and the year after.

The era of the battleships was tragically ended the day after Pearl Harbor in 1941 when the Japanese bombers obliterated Britain's proudest battleship off the Malayan coast in less than 2 hours, and they took with them to death at the bottom of the sea 5,000 brave and courageous sailors.

Today in America the decisive years are at hand and already passing. We are faced with a submarine gap, no less serious than the missile gap about which the American public has been told.

The Navy has put out a lot of propaganda on the effectiveness of our surface antisubmarine forces. However, it is evident that the only ASW weapon that we can count on is the nuclear-powered submarine. Unfortunately we only have a handful of these ships. How can we expect less than a dozen nuclear submarines to protect us in both oceans against the overwhelming number of several hundred modern Soviet submarines?

The average rate of production in this country of nuclear submarines since the *Nautilus* first went to sea in January 1955 has been two per year. At the present rate of authorization and appropriation by the Congress, this country will have a nuclear submarine fleet in ensuing years, as shown in the following table:

ATTACK TYPE LESS THAN 20 YEARS OLD

	Now	Late 1960	1961	1962	1963	1964	1965	1966
Nuclear	7	13	16	23	27	30	33	36
Conventional	87	87	87	87	84	59	23	19
Total	94	100	103	110	111	89	56	55

MISSILE TYPES LESS THAN 20 YEARS OLD

Nuclear, Polaris	2	5	7	9	12	15	18	21
Nuclear, Regulus	1	1	1	1	1	1	1	1
Conventional, Regulus	4	4	4	4	4	3	2	2
Total	7	10	12	14	17	19	21	24

At this point the Polaris-firing nuclear submarine should be reevaluated, It is supposedly invulnerable to detection, discovery, and destruction. But this is gaged solely on the theory that a potential enemy will not look for our Polaris subs with nuclear attack submarines. A time will inevitably come when the undersea is an open book, just as the sea surface is today. With the imminent advent of this day, the Polaris submarine will need protection and shielding, in the exact same sense that was true of the obsolete battleship and the more recently decadent aircraft carrier. Just as armies require pickets and scouts, and aircraft carriers require a ring of protective destroyers and cruisers, the Polaris submarines, as the new capital ships of our Navy, require undersea scouts to control the undersea areas in which the Polaris submarines must operate. The picket and scout ships of the Polaris submarines are attack submarines—hunter-killer submarines—and we have hesitated to provide enough of them. The ratio of support attack nuclear submarines to nuclear Polaris submarines must be maintained at an approximate ratio of 2 to 1. We must have a minimum of 100 attack nuclear submarines by 1967 to support a minimum of 45 Polaris nuclear submarines, in no less than the following program:

	Previously authorized	Fiscal year							Total
		1961	1962	1963	1964	1965	1966	1967	
Attack	28	6	10	10	10	12	12	12	100
Polaris	9	6	6	6	6	4	4	4	45

This program from fiscal year 1961 through fiscal year 1967 will cost an average of a little over $1 billion a year. This approximates the overall cost of the super carrier which the Navy insists upon in the present bill. But it is not just this year about which we must focus our concern. The Navy high command seems determined to force upon the country a new superaircraft carrier not just this year, but next year, and the year after, to the detriment of an adequate nuclear submarine program.

During the past 5 years we have constructed an average of only two nuclear submarines a year. Our current construction rate is increasing, but is still utilizing only about 50 percent of the existing submarine building facilities. This is most appalling when we consider the magnitude of the submarine threat facing us.

Although we have constructed an average of only two nuclear submarines a year during the past 5 years, our current construction is at the rate of eight nuclear subs, utilizing about 50 percent of the existing submarine building facilities, with the advantage to the taxpayers of practically 100 percent competitive bid. There is a most appalling factor in this whole picture. The United States, the most industrialized and mechanized Nation in the world today, is permitting the dispersal of qualified personnel from the shipyards that can build nuclear submarines. Our largest submarine shipyard has laid off 800 people since the first of this year, and the present lack of a firm long-range program of nuclear submarine construction disrupts both shipyard planning and employment. Our submarine shipyard production potential is vital to our defense. It is essential that we establish now an orderly build-up of our nuclear submarine fleet and avoid the exorbitant waste of inadequate planning.

Aircraft carriers have had their day. They have won their proper place in history. However, we are only starting to exploit the nuclear submarine. It has given our Navy undreamed-of potential. The Soviets see this clearly—why not we? It is our only hope to maintain freedom of the seas and protect our shores from hordes of missile-firing enemy submarines.

History unfortunately teaches us that the military have seldom recognized the potentialities of new weapons. The countless examples of this blindness are too well known to need enumeration here.

But too often their fallacies go unanswered. For example, Senator ENGLE recently asked a number of pertinent questions relative to the effectiveness of the submarine.

Here are some of the answers:

1. Question. Have we as yet solved the technical problems involved in accurately firing a submerged missile? I understand that gravity information is required concerning the land mass from which a missile is fired and that this gravity information must be coordinated with information as to where the missile is going. I have not been able to figure out how we will get this information with reference to particular points under the sea when the Polaris submarine is traveling from place to place.

Answer. In the design of the Polaris weapon system, we have considered all possible errors which would affect missile accuracy at the target. These errors include naviga-

tional, fire control, guidance, ballistics (free flight), and reentry. Allowances have been made for these errors in arriving at the overall system circular error, probable (CEP). One of the objectives of the test and development program has been to evaluate the various subsystem errors and determine whether or not they fall within allowed tolerances. In each case the errors have been demonstrated to be less than or equal to that needed to achieve the required CEP.

Errors which could result from gravity anomalies have been analyzed in detail. At ranges up to 2,500 nautical miles, errors which could be caused by gravity are insignificantly small—in the order of a few hundred feet. The total weapon system error is determined by taking the square root of the sum of the squares of all contributing errors. The contribution, therefore, of a few hundred feet clearly is small. With longer range, land-based missiles, gravity induced errors will be of greater concern because of the longer time of flight and the fact that they could be sited on a gravity anomaly.

2. Question. Have we been able to solve navigational problems which will make it possible for a submarine traveling under water to know precisely where it is at all times? For instance, what happens to the navigational problems where there are underwater currents exceeding 5 knots? I have been informed that in launching a missile the launch platform must be on the same datum plane as that of the target. Have we solved these problems?

Answer. The SINS (ships inertial navigation system) contained in the fleet ballistic missile (FBM) submarines, in this instance a precision device, continually measures and records the submarine's geographical coordinates with respect to the earth's surface. Thus all movements of the submarine over the earth's surface, whether due to waves, currents, tides, or other influence, are sensed and recorded by SINS. Periodic checks on the performance of the SINS can be made using the navigation methods referred to in the answer to question 5, below.

In order to aline a ballistic missile, the launch position must be directly and accurately relatable to the same geodetic datum as the one by which the target's position on earth is identified. In calculating the missile trajectory, the datum plane need not be the same as that of the target, at least in the Polaris system, because altitude differences between the launch platform and the target are compensated through the fire control system.

3. Question. Am I correct in the information I have that a gyrocompass navigational system degrades substantially when the submarine is deployed in areas above 70° latitude? If this is true, the North Atlantic does not constitute an ideal launching area not only because of ice but because of guidance problems.

Answer. The performance of any and all inertial navigation and guidance systems is degraded somewhat when operated in the polar areas. This applies to inertially guided missiles launched from, or in powered flight in, polar areas as well as to inertial navigation systems operated in the vicinity of the poles. The sea areas above 70° north latitude are the Arctic Ocean and the Greenland and Barents Seas. The North Atlantic Ocean and the Norwegian Sea are excellent areas for launching Polaris.

In the Polaris navigation system, the degradation in performance of inertial components at the poles is compensated for by a combination of methods. These include altering the mode of operations of the SINS and placing greater reliance on other means of navigation.

4. Question. If these questions have not all been solved, or if they have been solved and have not been tested under operational conditions, do you believe it is wise to build a great number of these submarines until those problems are solved and their solutions tested under operational conditions?

Answer. There has never been any question of whether the technical problems in the FBM system development could be solved. The only question outstanding over 2 years ago, when sputnik was launched, was when could they be solved. At that time, this calculated risk was accepted and the system development was accelerated. Exhaustive test results over 2 years' intensive development give full confidence of meeting the goal of achieving an operational capability this fall, and justifying the decision of 2 years ago. With the technical status in such good shape today, there can be no question as to the technical validity of authorizing construction of ships which would become operational 3 years hence.

The recent underwater launch and ignition of the missile and two successful tests of the fully integrated weapon system in an "at sea" environment from the test ship U.S.S. *Observation Island* are further evidence of the continuing progress of the Polaris program under operational conditions. The decision as to the ultimate number of Polaris submarines, or other missile weapon systems currently being developed, has not been made. The final force levels will depend on many factors. The factor of survivability will be one of great importance. Weapon systems which are characterized by unfettered mobility and concealment will be receiving more emphasis in the development of our future weapon systems.

5. Question. If the Polaris submarine must utilize a fixed predesignated, presurveyed underwater point as a part of its initial positioning process, will it not be possible for the Soviets to locate those underwater positions and destroy our submarines either by mining the locations or by using antisubmarine submarines?

Answer. The SSB(N) is not constrained to used a fixed, predesignated underwater point for ascertaining its position. They will be continuously on the move in the vast operating area mentioned above. Moving quietly at low speed, in random fashion, at depths and in areas unfavorable for sonar search, their operations, coordinated with other naval forces by men with years of experience in operating ships, SSB(N)'s will present to a potential enemy a dynamic situation wherein a surprise attack by any means on the great majority of these forces is virtually impossible.

As mentioned above, the precise position of a Polaris submarine is provided by the ships inertial navigation system (Sins). In addition, accurate navigational fixes can be obtained by optical observation of celestial bodies, by radio observation of sun and moon, by electromagnetic navigation systems and, ultimately, by navigational satellites. As the oceanographic community develops charts of the ocean floor, SSB(N)'s will use such information in the same fashion as all ships have used fathometers for many years as a tool to assist the navigator.

In answer to the question that the Polaris operating areas might be mined by the Soviets, there is little reason for concern since the depths of water in these areas make mining infeasible.

6. Question. If we assume that the Soviets have the same technical competence in underwater detection that we have, will it not be possible for the Soviets to locate our Polaris submarines and destroy them?

Answer. In order to give you an appreciation of the ASW problem with which the Soviets will be faced, all one need do is select a target situated in the Moscow, Riga, or Leningrad area and swing a 1,500-mile arc. It will then be seen that, in the Norwegian Sea alone, the submarines have a vast three dimensional area of over 300,000 square miles in which to operate.

There are good indications that the Soviet ASW capability is far less than our own. Therefore, comparisons made on the basis of an equal capability are misleading. In any case, such a comparison would have to include the facts of geography. The Soviets lack a friendly coastline contiguous to the SSB(N) operating areas. This denies them access to shore controlled devices and severely degrades their capability to mount an effective air search without over-flying neutral territory. They would therefore be forced to rely upon surface ships or submarines. The surface ship, with active sonar, searching the extent of a vast ocean area is easily avoided by an SSB(N) who can hear from the active sonar many times farther than its effective range. The SSB(N) proceeding quietly at depths and in areas unfavorable for sonar search, is nearly an impossible target for other submarines to find.

7. Question. Inasmuch as the Polaris is programed for a range of 1,500 miles, does not that limit the areas from which our submarines can launch a useful attack against the Soviet mainland to the Norwegian and mediterranean areas?

My concern here is that during peacetime the Soviets can isolate the areas from which the Polaris can effectively operate, can thoroughly explore those areas for the purpose of determining our possible launch points, and keep those areas under complete surveillance with every type of detection system with which our own scientists are familiar. The present size of the Soviet underwater fleet suggests that the Soviets could practically saturate the limited areas from which the Polaris can operate with antisubmarine submarines and with the attendant detection systems on the sea, under the sea, and in the air. This is what leads me to raise the question as to whether or not the Polaris has the invulnerable characteristic which has been credited to it in information given to the general public. This also raises the question of what will be our response if some of our subs are destroyed and whether it is prudent to expose ourselves in this manner.

Apparently my concern about Soviet tactics in destroying our submarines one by one during so-called peacetime is shared by Admiral Burke because he recently indicated in the Holifield Subcommittee on Military Operations that the Soviet ASW capability could force him to withdraw his submarines to more friendly waters. What bothers me here is that by doing so, they would be deprived of timely response of our strategic systems.

Answer. An SSB(N) armed with a 1,500-mile missile can launch a useful attack on targets in the Soviet mainland anywhere from more than three-fourths million square miles of the North Atlantic (including the Norwegian and other seas), and from virtually anywhere in the Mediterranean. In addition many hundreds of thousands of square miles in the Indian Ocean and Pacific sea areas can also be used to launch attacks against Soviet targets. The destruction of quiet SSB(N)'s in such vast ocean expanses with other submarines is a nearly impossible task. To maintain the well recognized clear lead the United States has in the area of submarine-launched missiles, and to maintain the inherent survivability advantages of this system in the face of any threat, the Navy plans to have by 1965 a Polaris missile, usable in the submarines now under construction, whose maximum range will be about 2,500 nautical miles. So equipped, our Polaris submarines will be able to attack, if required, all known Soviet targets from almost anywhere in some 60 percent of the sea areas of the Northern Hemisphere.

A review of the verbatim testimony before the Holifield committee on March 31, 1960, reveals that the concern which you have expressed over the so-called peacetime operations of the Polaris submarine is not shared

by Admiral Burke. Admiral Burke's statements on possible methods of SSB(N) operation that could be undertaken were in answer to Congressman KILGORE's question which was directed to limited war rather than peacetime operations. Admiral Burke was merely indicating the range of choices available to the operational commander because of the mobility of the Polaris submarines. In a limited war, the overall international situation, the geographical area involved, the general strategic and operational situations would dictate the deployment of all of our forces, including Polaris submarines. It is safe to say, however, that in a limited war the potential threat of deployed Polaris submarines is one factor which is likely to keep the war from becoming general.

In addition to the foregoing enumerated questions you requested information with regard to the comparative costs of Polaris and Minuteman. In comparing the costs of Polaris and Minuteman, it must be borne in mind that the Minuteman missile is roughly a Polaris with a third stage added and with certain additional refinements to enable it to travel a greater distance. From an overall system point of view, a meaningful cost comparison is valid only when the total amortized life of the system is considered in relation to the changing threat over the expected life of the system. Additionally, in computing cost it must be remembered that in systems with high survivability rates the total number of missiles required in our national inventory is less than with more vulnerable systems in order to insure that the requisite number survive.

However, in order to make valid direct cost comparisons between these two systems, detailed total weapon system costs for Polaris and both the fixed and movable Minuteman applications are required. This information is presently being compiled in response to a request from Congressman HOLIFIELD for the use of himself and his committee in comparing the costs of the two systems.

FARM SURPLUS REDUCTION ACT OF 1960

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas [Mr. THORNBERRY].

Mr. THORNBERRY. Mr. Speaker, I yield myself such time as I may consume, after which I will yield 30 minutes to the gentlemen from Illinois [Mr. ALLEN].

Mr. Speaker, as a reading of House Resolution 564 has shown, it provides for consideration of H.R. 12261, a bill to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price-support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes.

The resolution provides for an open rule, with 2 hours general debate. I think it fair to say to the Members of the House that the bill is a controversial one and one which should be considered by the Committee of the Whole very carefully, if the rule is granted.

The bill consists of three titles. The first deals exclusively with wheat and will offer wheat producers a choice between two entirely different wheat programs. Program A entails tight production controls, a reduction of 25 percent in wheat acreage, price supports at 85 percent of parity, and payment in kind for retired cropland.

This bill is similar to a bill which was passed in the House and in the other body and which was vetoed by the President.

Program B involves unrestricted wheat production with price supports at approximately the feed grain level, and a 3-year extension of the soil bank conservation reserve. This is the program presented by the American Farm Bureau.

Title II deals solely with feed grain. This title is enabling legislation which will authorize and provide the machinery and the guideposts for feed grain producers to work out their own production and price stabilization program and present it for ratification by the Congress.

Title III is designed to increase substantially the quantity of dairy, poultry, and meat products distributed to the needy, to institutions, and through the school lunch program. It would be carried out under the direction of the Secretary of Health, Education, and Welfare through the facilities of the Commodity Credit Corporation and in such manner as to assist the price support and stabilization programs authorized in the first two titles of the bill.

The cost of administration would be charged to the Department of Health, Education, and Welfare rather than to the Department of Agriculture.

As I stated at the outset, wheat legislation is always controversial. There will be those who will say that no bill at all should be passed. There will be others who will say that they would prefer some other program. What I feel the people of the country are insisting on is that the Congress act in time to reduce the tremendous cost for the storage of wheat, to somehow or other reduce this great surplus we have. The only way I know for the House to act in time is to adopt the rule, to consider whatever amendments are offered to the bill in the hope that we can bring out a fair and satisfactory program for the support of wheat and the other commodities which are contained in this bill, and which will afford the farmers of America their fair share of the economy with a minimum of restrictions and without imposing a burden on the taxpayers of the Nation.

Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The gentleman from Texas has consumed 4 minutes.

The gentleman from Illinois is recognized.

Mr. ALLEN. Mr. Speaker, I yield myself such time as I may require.

Mr. ALLEN. Mr. Speaker, the other body has passed a wheat bill. This legislation being called up under an open rule, permits the Senate bill to be offered as an amendment in lieu of this bill. As far as I have been able to understand, the Senate bill follows the general guidelines suggested by the President of the United States. Why under these conditions and circumstances we should be considering this most complicated and controversial bill at this time when we are so near adjournment instead of accepting the Senate bill I really cannot understand.

The Senate bill takes care of the little wheat farmer where this bill is designed and intended to take care of those who raise hundreds and hundreds of acres of wheat. I hope therefore that when the Senate bill is offered as a substitute for the House bill it will receive the approval of this body.

Mr. Speaker, I cannot understand who is for this bill that is before us. The American Farm Bureau, the greatest, the largest farm organization in the United States, wrote me the following letter:

WASHINGTON, D.C., *June 20, 1960.*

Hon. LEO E. ALLEN,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ALLEN: We recognize that you are very busy during these closing days of the 86th Congress; however, we hope you will take time to read the attached statement regarding the Poage bill, H.R. 12261.

There can be little question about the need for corrective legislation to deal effectively with the wheat problem. However, the Poage bill moves in a direction that will further aggravate the situation.

The provisions of this legislation are unsound. It not only fails to solve the wheat problem but also threatens to create new problems for the producers of feed grains, livestock, dairy, and poultry products.

We urge (1) that you vote aganist the rule for consideration of this measure; (2) should the House vote to consider this bill, we recommend the elimination of all provisions except subtitle B. (See last paragraph of attached memorandum.)

No plan will solve the basic problem or serve the long-run interests of farmers, including wheat and feed grain farmers, unless it encourages market expansion, reduces incentives for the production of unneeded supplies, minimizes economic hardships on wheat growers, and avoids shifting the burden of adjustment to other farmers.

Sincerely yours,

CHARLES B. SHUMAN,
President.

There is no question as to the need for constructive action to deal with the wheat surplus problem. Instead of providing a long overdue solution to this problem, H.R. 12261 is the sort of "political poultice" to which President Eisenhower made reference in his farm message to the Congress earlier this year.

No more revealing point can be made in this regard than the metamorphosis of this bill itself. At first it was titled the "Family Farm Income Act of 1960." In the first major revision of it the word "Income" significantly was deleted. In the second major revision the phrase "Family Farm" was dropped from the title and it now is known as the "Farm Surplus Reduction Act of 1960." First the "Income" was dropped out of it and then the "Family Farm" was dropped out.

If what remains would in fact reduce farm surpluses in a workable manner, it would be worthy of consideration by this body; however, it does not even do that.

This bill would not deal effectively with the wheat surplus problem. It is a political dodge of the first order. Instead of dealing responsibly with the problem it provides for a loaded referendum. I say "loaded" because an effort is made to bribe producers into choosing the high support and control

program by means of a 55-percent payment-in-kind provision.

Furthermore, so far as the proposed referendum is concerned, most of the wheat growers would be disenfranchised. The Revolutionary War was fought over the question of taxation without representation. It is difficult to comprehend how a voting procedure that disenfranchises 60 percent of the wheat growers can be defended.

This bill would allow the whole future of the conservation reserve program which affects all farmers—and nonfarmers as well—to be decided by a minority of the producers of one commodity.

The proposed payment-in-kind rates are at least twice as high as the rates paid under the conservation reserve program to farmers throughout the country. It is difficult to comprehend how this kind of discrimination among farmers can be defended. I would not want to try to defend it in my district.

The increase in support level provided under alternative A is unsound. On the basis of the present parity price an increase in the support level from 75 percent to 85 percent of parity would increase export program costs 24 cents for every bushel exported. With exports currently running around 475 million bushels per year, this would mean an increase of $114 million in the cost of export programs.

Alternative B in title I has some real merit; however, as the bill is drafted it is doubtful if it could become operative.

Not only does H.R. 12261 not solve the wheat problem, it creates new problems for producers of other commodities.

The authorization provided in title II is sort of a hybrid between the infamous Brannan plan and the old Blue Eagle—NRA.

The prohibition against use of commodity loans and the express authorization to use alternative income stabilization methods means to me they are trying to grease the skids for a Brannan plan type program.

You will recall what the Supreme Court said about this sort of delegation of congressional authority. The Court held as follows:

> Congress cannot constitutionally delegate its legislative authority to trade or industrial associations or groups so as to empower them to enact laws they deem to be wise and beneficent for the rehabilitation and expansion of their trade or industries, and such delegation cannot be validated by a legislative preface of generalities as to permissible aims. (*A. L. A. Schechter Poultry Corporation* v. *U.S.* (N.Y. 1935, 55 S. Ct. 837, 295 U.S. 495, 79 L. ed. 1570, 97 A. L. R. 947).)

Legislation authorizing marketing quotas for corn was in effect from 1938 to 1958. In this 20-year period five different Secretaries of Agriculture consistently avoided proclaiming marketing quotas for corn even though this occasionally required the use of a sharp pencil in figuring supplies and disappearances.

Also the food distribution plan provided by title III is unnecessary and unsound.

H.R. 12261 does not provide a satisfactory basis for House consideration of wheat legislation. As that old, old story goes, "You can't get there from here."

What is needed is for the House Agriculture Committee to come up with a constructive solution to the wheat problem—one which is designed to find an economic solution to this problem—one that has a chance of being enacted into law.

This bill should be opposed because:

First. It calls for a system of doles and controls.

Second. It is even more costly than the present program.

Third. It destroys the influence of the family farm in American agriculture.

Fourth. No hearings were held on the bill. It is substantially different from two previous versions which failed to get committee support.

Fifth. It provides for unsound and unnecessary alterations in the present successful surplus food distribution plan for needy people.

The bill consists of three titles—"Wheat," "Feed Grains," and "Food Distribution."

TITLE I—WHEAT

The wheat title is unacceptable because:

First. It does not let the small wheatgrower vote in the first referendum.

Second. It would increase the already high cost of the wheat program by $100 million or more a year.

Third. It goes contrary to the President's recommendations by both increasing export subsidy and the financial incentive to maximize yields per acre.

Fourth. Diverted acres tend to increase production of nonsupported crops and cause new problems to growers of vegetables and many other crops.

Fifth. Relatively few wheat farmers would determine the fate of the conservation reserve program for all farmers. The payments for the conservation reserve are excessive.

TITLE II—FEED GRAINS

The feed grain provisions of this bill are unsound because:

First. Congress would abdicate its responsibility to a nongovernmental committee which would have authority to impose controls and withdraw from the U.S. Treasury up to $600 million for a feed grain program. In the absence of congressional disapproval within 30 days, such a program would become law.

Second. This unprecedented scheme of lawmaking might encourage Treasury-raiding opportunities for other groups in and out of agriculture.

Third. The costly referendum plan would discriminate against the small farmer by limiting the voting to growers of $500 or more annually.

Fourth. Provision is made to adopt the discredited direct payment Brannan plan.

Fifth. Funds for this plan would not be subject to the regular appropriation process. No limitation is placed on the amount any one individual could receive.

Sixth. The high price of the grain would cause export problems, increase export subsidies, and undermine current efforts to liberalize trade.

TITLE III—FOOD DISTRIBUTION

The section pertaining to the distribution of protein food is unworkable because:

First. It would put HEW in the agriculture business for which it has no experience, and would duplicate and complicate the functions of USDA.

Second. Having made it difficult for low-income people to buy food, the Government would then donate these foods free to the needy.

Third. It takes responsibility for caring for the needy from local and State authorities where it belongs and recklessly expands welfare assistance in the hands of Federal authorities.

In conclusion, Mr. Speaker, may I say that personally I am not going to fight the rule or ask for a rollcall. There are Members who know more about agriculture than I do, and they should be heard. After you hear them I am convinced that the majority of you will vote to substitute the Senate bill. While that bill is far from being a sound and practical bill it is far superior to the one being considered today.

Mr. CHIPERFIELD. Mr. Speaker, will the gentleman yield?

Mr. ALLEN. I yield to the gentleman from Illinois.

Mr. CHIPERFIELD. Mr. Speaker, farm production has been running from 4 to 8 percent above the volume that can be moved into domestic consumption and export under existing programs.

The resulting accumulation of surplus stocks has depressed market prices for current production and imposed a heavy cost on the public Treasury.

This situation must be corrected if farmers are to have the opportunity to earn and get high per family net incomes.

The fundamental thing that must be done to bring farm production into balance with market needs, is to stop supporting prices at levels that encourage unneeded production. Enactment of the Agricultural Act of 1958 was a significant step toward more realistic price support levels for cotton, rice, corn, and other coarse grains.

Experience with past programs clearly indicates the difficulty of controlling production by taking acreage out of production in the face of price guarantees that provide an incentive for increased production. The chief lesson to be learned from past experience with acreage retirement and control programs, is that the provisions of all programs affecting production must be consistent with our production objectives—if such objectives are to be achieved.

A properly administered conservation reserve, of adequate size, could greatly facilitate the adjustments that are needed to bring production into balance with market needs—but only if the effects of withdrawing land from production are not offset by price support levels that provide an incentive for increased production.

As a temporary measure to help farmers in adjusting production to current needs, I favor a properly designed and

administered conservation reserve program which, first, retires land that otherwise would be devoted to crops; second, keeps land out of production for a long term of years; third, prohibits harvesting or grazing of land under the program; fourth, encourages farmers to put entire farms in the reserve; and fifth, secures sufficient participation to reduce production substantially, bringing total agricultural production into balance with domestic and foreign market demand.

Land is only one of several factors that affect agricultural production, but it is a very important factor.

The 1954 Census of Agriculture indicates that we have a total of 459.6 million acres of cropland. In 1959, 22.4 million acres, or 4.9 percent of our total cropland, were held out of production under the conservation reserve program. The 1960 conservation reserve program will withhold 28 million acres, or 6.1 percent of total cropland. Because of the relatively low rental rates paid under the conservation reserve program, much of the land currently in the reserve is marginal land with a low level of productivity. As better land is retired through the progressive expansion of the program, the effects on production will be materially increased.

I recommend extension of the USDA's authority to enter into new conservation reserve contracts for 3 years with adequate funds to increase the reserve acreage at a rate of 5 million acres per year to a total of 43 million acres in 1963.

I estimate that these recommendations for expansion of the regular conservation reserve would require that the appropriation for rental payments be increased at a rate of $65 million per year for 3 years—that is, from $335 million for 1960 to $400 million for 1961, $465 million for 1962, and $530 million for 1963.

In addition, as an integral part of the legislation for wheat, subtitle B of title I would raise the total amount of land in the conservation reserve from the 43 million acres proposed above to 60 million acres at the end of 3 years. At least half of this proposed additional authorization of 17 million acres signed up the first year to cushion the adjustment to the proposed new wheat program.

The net effect of these recommendations on the size of the conservation reserve program would be about as follows:

[In millions]

Year	Proposed acres in regular program	Additional acres under wheat bill	Total acres in reserve
1960	28	----------	28
1961	33	9	42
1962	38	13	51
1963	43	17	60

By dividing the recommendations for expansion of the conservation reserve, I recognize that, first, the present conservation reserve is performing a valuable function in helping individuals make needed adjustments—particularly where whole farms are being placed in the reserve, and where marginal land is being diverted from crops to grass or trees; and second, the conservation reserve cannot make a maximum contribution to the solution of the wheat problem unless accompanied by a major overhaul of the existing wheat program.

Mr. THORNBERRY. Mr. Speaker, I yield 5 minutes to the gentleman from Missouri [Mr. JONES].

Mr. JONES of Missouri. Mr. Speaker, I was happy to learn that the minority member of the Rules Committee did not advocate defeating this rule. We have heard some rumors this morning that there was a move on to defeat the rule. I am not going to speak about the bill itself today but I am going to address myself to the adoption of the rule to consider a farm bill which many of us feel would make a great contribution toward solving the farm problem.

Those who might want to evade their responsibility and take the easy way out would probably vote against adopting this rule in an effort to try to wash their hands of any responsibility for dealing with what is unquestionably the greatest domestic problem we have today, one that is affecting our economy the most.

In my opinion, it would be impossible for our committee or any group consisting of even three people to sit down and agree on a farm bill that met every objective they would like to see met. We had considerable difficulty in our committee but I will say that during the almost 10 years I have been a member of the Committee on Agriculture I have never seen a more dedicated effort to try to arrive at a solution of this problem than was exerted by the members of the committee in reference to this bill.

Again I am not going to tell you that this is the perfect answer to the farm problem. It is not. It does attack some of the problems.

I do want to mention one thing, however. The gentleman from Illinois spoke about the Senate bill and suggested that it be adopted as it pertains to wheat.

Now, Mr. Speaker, that is one of the very reasons why I think this rule should be adopted. Only by adopting the rule here today do we have any assurance that the Senate bill, which deals with wheat, can even be considered here in the House. I think that I know something of the ideas and the opinions and the feelings of the members of the House Committee on Agriculture, and I think I am correct in saying that the Senate bill, if it is considered by our committee, will not be reported out. So, if you want to act on this Senate bill, you should adopt this rule here today.

Now, the gentleman from Illinois made another statement that I do not agree with. He mentioned the fact that all three of the large farm organizations were opposed to the bill. I do not agree with that, and I do not think the record will bear it out. The Farm Bureau is against the bill. Our committee—at least the majority of us—has found that they have been opposed to any of the solutions which the majority party has advocated. I think everyone understands that. Furthermore, I think some of the people on my left do not agree with the Farm Bureau's stand. When the gentleman mentioned that the Grange was opposed to this bill, I would question that. My information is that the Grange has said that they have taken a neutral attitude. As regards the Farmers Union, I think I can state correctly that the authorized representatives of that great organization have told the members of our committee that they favored this bill as it is written.

But, again, what I am trying to bring to the attention of the Members here today, my friends, is this: If you are interested in doing something for the farm problem, you will vote for this rule. It is an open rule. It will give an opportunity for you to strike from the bill anything that you do not like. It will give an opportunity for the gentleman from Minnesota, the gentleman from Kansas, or Representatives from every other area of the country an opportunity to offer any solutions that they have, and let the House work its will. The thing I want to impress upon you today, especially those who might be inclined to vote against this rule, is this: It is the only chance that you are going to have before the Congress adjourns to do something for the farmer, and if you vote against this rule, you are going to say in effect that you do not want to do anything for the farmer.

Mr. ALLEN. Mr. Speaker, I yield such time as he may desire to the gentleman from Ohio [Mr. BROWN].

Mr. BROWN of Ohio. Mr. Speaker, when this bill was originally before the Committee on Rules, I was very much in hopes that we might be able to report some other measure relating to the national farm problem that would be more satisfactory to the House, to the Congress, and to the administration. But, now we have only this particular bill before us.

As has been said by the previous speakers, there is no question but that we do have a great and real farm problem confronting us here in the United States. We have great farm surpluses, primarily in wheat.

This bill, of course, was presented to the Committee on Rules with the agreement by its proponents that it was a solution for our present farm problem, and especially so, as far as the great wheat surplus we have with us here in this country.

Mr. Speaker, as I studied this bill in the Committee on Rules and heard the arguments for and against it, I became convinced in my own mind this piece of legislation, as it will be presented under this rule, is not the answer to the agricultural or farm problems which confront us. I realize fully we have to do something; that we should do something here and now to meet the costly and great wheat surplus that is plaguing the Nation, and has plagued the American people for so many years. However, this may be the only opportunity we will have to consider amendments and changes in the present farm laws. In my opinion, this bill does not, in itself, solve any of the problems or answer any of the questions which trouble the Nation. It will not reduce costs to the Government.

It will not reduce, in any substantial degree, the production of wheat. Instead it will work to the benefit of the large wheat farmer, and to the detriment of the small family-owned farm, and the little wheat producer of the country.

I am especially interested in the fact that this bill will do nothing for the Midwest producer of wheat, except injure him, and especially so as to farmers in the States east of the Mississippi where we produce only soft winter wheat which is not in surplus, never has been in surplus, and should not come under any Government controls.

I feel also that the small grain section of this bill would be of great detriment to the farmer on the family-sized farm of the Midwest. After all, if you look at this bill carefully, I feel you will agree with me that we must amend it greatly if we are going to have any kind of workable farm legislation come out of this Congress.

In my opinion, while it is not perfect by any means, the farm bill passed recently by the Senate would be less costly, more workable, and a better measure than the one that was presented to us here by the House Committee on Agriculture.

Mr. AVERY. Mr. Speaker, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman.

Mr. AVERY. In view of the gentleman's long experience as a member of the Committee on Rules, I wonder if he can enlighten us on this point. The gentleman from Missouri [Mr. JONES] who preceded the gentleman from Ohio [Mr. BROWN] made the statement, I believe, that this would be the last chance the House would have to work its will on farm legislation during this session. That does not necessarily follow, does it?

Mr. BROWN of Ohio. No. I cannot speak for other members of the Committee on Rules, but my judgment of the membership of that committee is this; that the committee would quickly report to the floor of the House any legislation the committee believes would be of any help in solving these important farm problems.

Mr. AVERY. Mr. Speaker, will the gentleman yield further?

Mr. BROWN of Ohio. I yield.

Mr. AVERY. It is my recollection that in 1958 we had a labor bill that came over from the other body, lay on the Speaker's desk, and was taken up under suspension of the rules. Would it not be possible for this Senate bill to which the gentleman referred to be taken up later on under that procedure?

Mr. BROWN of Ohio. Certainly; it could be called up at any time under that procedure.

Mr. Speaker, in conclusion let me say this. If you will study the pending bill, which this rule makes in order, you will find about 70 percent of the small wheat producers of this country will have nothing whatsoever to say as to what sort of program or plan they will come under. Instead, the control of wheat planting will rest with the large wheat producers of the country. A great many Members of this House come from States, like my own State of Ohio, where wheat is grown not as a money crop, but primarily as a rotation crop, or as a cover crop, and where our soft winter wheat is not in surplus supply. Instead of permitting these little farmers to do as they have been doing, even under a bad law, they will be crucified, under this bill, by the big wheat operator of the far West, and the small grain producers of the same areas.

Mr. Speaker, I certainly hope this bill will be considered carefully, and that the much needed amendments that will be offered to it will be given every proper consideration.

Mr. THORNBERRY. Mr. Speaker, I yield such time as he may desire to the gentleman from Nebraska [Mr. MCGINLEY].

Mr. McGINLEY. Mr. Speaker, I rise in support of adopting the rule on H.R. 12261.

I am privileged to represent a district which includes some of the finest wheatlands in America. Despite the ingenuity of our applied science in attaining such a high degree of efficiency in farm production—and, ironically because of the impact of such advances—the American farmer, and particularly the wheat farmer of the Western Plains States is faced with a very dismal economic picture, both presently and in the future.

H.R. 12261, very likely, has some defects, and there are parts of it that are not completely favored by me. However, I think that it must be passed in order to indicate our sense of responsibility to the farmers of the Nation. At best, however, it should be considered as only a temporary measure, to try to maintain the income of the farmer at the present level—which is admittedly low—for at least 1 year, or possibly a little longer until we can formulate more comprehensive legislation for the long term ahead. The 85–25–55 combination in the House committee bill would do just about that—to maintain the present level on prices. But on this portion of the measure there is no room for compromise. It is the limit to which we can fairly ask the farmer to go in cutting production and price.

It is important, too, in the fact that it presents to the wheat farmers of the country a clear choice of alternatives in a type of program for them to live under for the next few years. It presents a much clearer and more meaningful choice, both in effects and in principle, than was available in the corn referendum 2 years ago. They will have a choice of a higher support and more strictly controlled program, with the purpose of eliminating our huge surplus stores—and a program offering wide-open production and lower and lower price supports, with no hope of cutting down the damaging surplus effectively for the relief of the taxpayer, who is now rightfully screaming about the high cost of our farm programs with the large storage costs that are being carried.

Although it is within the province of Congress to legislate a definite program, without a referendum, I recognize that in such a controversial subject where the farm groups themselves are not united completely in a single approach, it is difficult for Congress to pass a definite farm program. Therefore, since it is unlikely that the matter can quickly be decided by the politicians—and I use the term respectfully—I think we should offer some determination to the farmers themselves.

May I say that I do not believe that H.R. 12261 represents the best proposal that has been submitted to Congress. I still look for the day when the proposal embodied in H.R. 11018 which I have introduced along with many other of my colleagues from both political parties, will be accepted. It is a refinement of the so-called domestic parity plan which has been presented to Congress before. In fact, it has sound roots in principle back to the 1920's in the McNary-Haugen bill that was presented then, offering a two-price system, one level for domestic purposes, and another level for foreign export trade in the world market. It also offers the benefit of a marketing quota of bushels of wheat as the method of allotting a share of marketable wheat to the farmer. This system would be in lieu of the present system of trying to control production by means of acreage allotments. Everyone must admit that with the advances of science and improvements in fertilizing and cultivating methods, that the acreage-allotment control system has not effectively controlled our production. The result is that the present farm program has been marked as the "cause" of the agricultural crisis we now have with us.

H.R. 11018 and companion bills would allow the farmer the freedom to plant all the wheat he wanted to raise and to use it in any manner he wanted and sell it as he wanted—except that portion of his bushel allotment which would go for primary use. Yankus could come home.

This bill, sponsored by the National Wheatgrowers Association, The National Farmers Union, and the National Grange was listened to with interest in the Committee on Agriculture. The proponents were praised for their industry in presenting a fair measure. I understand, however, that it was not considered by the committee as a vehicle for current floor consideration, first because the essentials of it have previously been approved by the Congress and subsequently vetoed by the President, and secondly because some said it was too complicated.

The latter I disagree with. I express my regrets that this measure has not been reported to us as the Wheat Act of 1960.

Having said that, and having the highest respect for the members of the Committee on Agriculture and understanding somewhat their problems in this field of lawmaking, I am ready to accept the House committee bill.

Next it is most important that we do not give our approval to any amendments to the committee bill which would substitute the unfortunate Senate bill, embodying a 75–20–50 formula. This would be ruinous to the income potential of our wheat farmers, and an adequate reduction of surplus would still not be

accomplished. I urge my colleagues to vote for the rule and to support the committee bill as the best offering that can be presented to the American public in the last days of the 86th session of Congress, and one that will mark a substantial advance in our overall agricultural situation.

Mr. THORNBERRY. Mr. Speaker, I yield 5 minutes to the gentleman from Colorado [Mr. JOHNSON].

Mr. JOHNSON of Colorado. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. JOHNSON of Colorado. Mr. Speaker, I rise in support of H.R. 12261. I would like to take this time to reduce the issues involved in the debate over wheat policy to terms which can be understood immediately by every citizen, and especially by every housewife. When we talk in terms of parity and dollars and cents per bushel we are talking of what are essentially abstract sums.

I hold in my hand a plastic bag containing the amount of wheat needed to make the flour that goes into a loaf of bread. This sack contains 14.3 ounces of wheat. The farmer who grew this wheat—which, incidentally, was contributed by the National Association of Wheat Growers, and is prize-winning Nebraska wheat—got 2.3 cents for the flour value of this wheat. Yet this loaf of bread which I purchased at a nearby store sells typically for 20 or 21 cents. The wheat flour is the major component of the loaf of bread.

There was a time, in 1947, when the farmer would have gotten 2.7 cents for this wheat flour, and you could have bought a loaf of bread for 14 cents, in any store. While the price of wheat has gone down, the price of bread has gone up. If H.R. 12261 is enacted, the farmer next year might hope, depending on which option the farmers choose, to receive 2.6 cents, or an additional 3 mills for the flour that goes into a loaf of bread.

He also gets an extra 3 mills from the mill feed value left, after the flour is extracted from the wheat, and contained in the bran and wheat germ. It is obvious that the housewife is paying enough for food to give the farmer a fair price for it. What is not so obvious is that this price is not fair.

I placed in the CONGRESSIONAL RECORD on March 19 last year an analysis showing that a competent Colorado wheat farmer, with an investment of $175,000, is lucky to make a modest wage for his labor, and he gets nothing from his investment. Or if you could assume that his labor is for free, he is getting only 3 percent on his investment. The farmer is entitled to a fair return on both his labor and on his capital just as is any other worker or businessman, and the farmer is both. It is also alleged that if we would simply cut support prices the farmer would stop producing surpluses. This ignores the practical fact of the farmer's life. He has high fixed costs in taxes and insurance, for support for himself and his family, for seed, fuel, and maintenance of his equipment, all of which must be met regardless of the price. Every time the price per unit is reduced the farmer is driven to increase his output so as to try to maintain his gross income and keep from bankruptcy.

It is also argued that there are too many farmers and too many acres in production, and the theory seems to be that if the Nation would force farmers out of farming this would reduce surpluses. But the wheat is produced on acres, and as farm sales occur—and the number of farm sales is rising—this acreage is taken over by other farmers seeking to use their equipment more efficiently and to increase their wheat base acreage, and the result is that the land is farmed at least as efficiently by the next operator as by the present one. Reducing the number of farmers will do nothing to take acreage out of production.

Fortunately the passage of H.R. 12261 will greatly cut into the surpluses because it will reduce acreage by 25 percent. Reducing acreage does not reduce the farmer's costs proportionately. His fixed costs continue. He has only a modest saving on feed and fuel. Consequently it is essential if our wheat farmers are not to be driven into bankruptcy to raise the parity support level, as H.R. 12261 proposes to do, so that the farmer maintains the same gross income. This will still be a saving to the taxpayers because the 25-percent cut in acreage will have an almost proportional cut in output. It will bring next year's crop below our current utilization, and then draw down the surplus.

I am sending every Member of the House a detailed analysis of a typical wheat farm investment, income, and expense sheet, and an explanation of the relationship between urban and rural economics, together with an explanation of the bill. Before we vote on this bill tomorrow I urge every Member to review these materials. I include them at this point in the RECORD:

COST AND PROFIT ANALYSIS FOR A TYPICAL COLORADO DRYLAND WHEAT FARMER

Here is an example of actual income and actual costs. It is based upon experience of a farm, consisting of 960 acres of good farmland, in the hard-wheat section of northeastern Colorado. This is an owner operated unit, using modern equipment.

The operator is in compliance with the ASC program, planting his allotted acres to wheat and his excess acres to barley.

The operator combines all of his grain, but hires barley windrowed. He hires extra trucks during harvest. He does all of his own work, except that he hires one extra man during harvest.

He does nearly all of his own repair work and utilizes some work of children during summer. He does his own tax and accounting work.

Of the 960 acres, 480 acres are in summer fallow, and 480 acres are in cropland. He has a 300 acre wheat allotment and has 180 acres in barley. He is currently earning 75 percent of parity (or some $1.60 per bushel—farm stored). He is getting 20 bushels to the acre.

On his 300-acre allotment, at 20 bushels per acre, he is producing 6,000 bushels of wheat a year. At $1.60 a bushel, his gross sales in wheat amount to $9,600.

The farmer also has 180 acres available for other crops. He is getting 30 bushels of barley per acre. He is producing 5,400 bushels and selling them at 80 cents per bushel, so his barley earnings amount to $4,320.

Total gross earnings, $13,920.

As with any businessman, this farmer has a heavy investment and is faced with operating costs.

INVESTMENT IN REAL ESTATE AND EQUIPMENT	
960 acres land at $150 per acre	$144,000.00
Tractor	5,300.00
Combine	8,300.00
One-way	1,000.00
2 rod weeders	600.00
1 chisel	1,000.00
2 grain drills	1,600.00
1 truck with hoist	4,000.00
1 pickup truck (used)	1,000.00
Shop equipment	1,000.00
Shop and storage building	9,000.00
One-half of automobile ($3,000)	1,500.00
Total investment	178,300.00
(6 percent interest on investment, $10,698.)	
OPERATING EXPENSES	
Taxes	1,518.00
Labor	200.00
Seed	700.00
Supplies purchased	200.00
Repairs and maintenance	750.00
Gas, diesel fuel, oil and grease	1,212.80
Insurance	159.85
Electricity and telephone	150.00
Trucking	456.00
Automobile upkeep (farm share)	100.00
Repairs to wells and buildings	50.00
Miscellaneous	25.00
Total operating expense	5,521.65
DEPRECIATION	
Farm equipment, $25,300 at 10-year life	2,530.00
Shop and storage building $9,000, 30 years	300.00
Total depreciation	2,830.00
Total operating expense	5,521.65
Total operating expense and depreciation	8,351.65
Total gross income	13,920.00
Total operating expense and depreciation	8,351.65
Net operating income	5,568.35

NOTE.—This is the amount the operator has for his management and labor, for his living for himself and family, to pay income tax, personal tax, car expense, etc., and for interest on his investment.

If you allow nothing for his labor, and the costs of subsistence, his return is only 3.12 percent on his investment, $5,568.35, divided by his investment of $178,300, equals 3.12 percent.

Assuming the labor of the owner is worth $5,500 to manage and operate the farm, he has no return on his investment. (For the detailed analysis, see the CONGRESSIONAL RECORD for Mar. 19, 1959.

WE NEED EACH OTHER

The welfare of the urbanite is intimately linked with the welfare of the farmer—we need each other. The farmer produces 65 percent of the raw materials used in industry in addition to producing the Nation's food and fiber. It is obvious that urbanites as well as farmers have a vital interest in the outcome of proposed farm legislation.

Herein is a quick review of how the farmer affects his city brother, a look at the current farm situation, and a short analysis of H.R. 12261.

FARMERS AS CONSUMERS

There are twice as many jobs in industry serving farmers as there are farmers. These farmers are yearly buying $14 billion worth of farm supplies. For example, each year farmers buy 6½ tons of steel, consume 17½ billion gallons of crude petroleum, and use 285 billion pounds of raw rubber. It takes $6 billion worth of containers and packing materials alone to pack the food that U.S. farmers raise in 1 year. And farmers are steadily purchasing more products from nonfarmers—between 1951 and 1960 farm purchases of motor supplies and vehicles were up 40 percent and purchases of building materials were up 7 percent. In short, 16 million Americans in manufacturing, processing, and distribution are dependent upon the farmer for their jobs.

FARMERS AS PRODUCERS

American farmers make up less than 1 percent of the world's population, but they provide 20 percent of the world's meat, 30 percent of the milk, and 40 percent of the corn; one farmer feeds himself and some 20 others in this Nation alone. A farmer's output (per man-hour) is up 65 percent since 1950—this must be regarded as a blessing, not a curse, for the United States will never lose power due to a food shortage.

FOOD COSTS

Farmers are now receiving only 38 cents of the housewife's food dollar. If the wheat farmer in Colorado gave away his wheat, you'd still pay 18 cents for a 20-cent loaf of bread. In the 10-year period 1948 to 1956, the annual food costs for the average American family rose by $260—marketers and processors received $253 more, food importers got $15 more, and farmers received $8 less.

FARM SITUATION

In 1958, total farm production was 29 percent higher than in 1947, yet the net income of farmers (including Government payments) was down 25 percent. At the same time factory wage rates rose 33 percent, the cost of living increased 23 percent, and corporate profits rose 20 percent, farm income dropped 16 percent. These figures mean that the average farm income is around $2,547 while the average nonfarm income is some $6,470. They mean that there are 18 percent fewer farms since 1951 and that the toll of distress sales is rising throughout the Nation (the Wall Street Journal recently found a 50 percent increase in farm sales in 15 major farm States). They mean that the farmer's buying power is the lowest it has been in 20 years.

FARM SUBSIDIES

The total cost of farm price supports have really been only about 10 percent of the cost of financial aids to industry. From 1946 to 1956 mail subsidies amounting to $6 billion were paid to newspapers and magazines, business reconversion payments amounted to $43 billion, subsidies to maritime companies from 1938 through 1957 totaled $3.5 billion, and subsidies to the airlines amounted to $614 million during the same period. And furthermore, only about half of the $6 billion farm subsidy figure actually went to farmers. The rest was used to provide services for the entire population. These services included scientific research and education, grading of food products, forest services, soil conservation, and food inspection. They provided school lunch programs and fed hungry people throughout the world. We should also not forget that a large part of the budget used for commodity loans and purchases is being paid back to the Government.

SIMPLE FARM ECONOMICS

A farmer receives his income from units of products marketed; these units may be represented by such measurements as bushels, bales, gallons or pounds. When the farmer receives a lower price per unit, he naturally increases his number of units to try and maintain a steady gross income. Lower prices per unit do not mean that the farmer will lower production and reduce his number of units (as is often the case in manufacturing), because the farmer must continue to meet the mortgage payments, to buy tractors and other equipment, and to take care of insurance payments and family living expenses. The farmer has high fixed costs and low variable costs. In the short run, prices only need to cover variable costs. For manufacturers, the low fixed cost and high variable cost means that a sharp drop in price will reduce output. Furthermore, you can shut down a factory, you can't really shut down a farm, or a cow.

Therefore, even depression prices do not substantially decrease production under the so-called sliding scale of parity. We must never forget that in the past, depressions have often been farm-led and farm-fed. This is one basic reason why the administration's policies of lowering prices to the farmer in an effort to lower production and reduce surpluses have not and cannot work. Adequate farm legislation is a must.

H.R. 12261

The House Agriculture Committee's farm bill, H.R. 12261—The Farm Surplus Reduction Act of 1960—differs from the Senate wheat bill in three major ways. The House bill uses a different formula for acreage allotments, contains a special provision for feed grain producers, and incorporates a provision for distribution of high protein foods to the needy.

TITLE I—WHEAT

The wheat farmers would have a choice by referendum between two different wheat plans. Plan A provides for a 25 percent reduction in wheat acreage and provides for 85 percent parity of allotted acres and calls for payments-in-kind from surplus stocks equal to 55 percent of the average yield on the acres taken out of production. Plan B provides for unrestricted wheat production with price supports at around 50 percent of parity. It also calls for a 3-year extension of the soil bank to establish a reserve of 60 million acres. In giving wheat producers a choice between Plan A and Plan B, the Congress would be following the President's message of last January in which he indicated he would pass a bill which allows "the farmers themselves to choose between realistic alternatives."

The Senate wheat bill provides for 75 percent parity with a reduction of 20 percent in acreage with payments-in-kind equal to 50 percent of the reduced acreage. The House bill will do a better job of cutting surpluses and maintaining a reasonable farm income—yet, it won't raise the price of bread.

TITLE II—FEED GRAIN PRODUCERS

This authorizes feed grain producers (corn, grain sorghum, barley, oats, and rye) to work out their own production and price stabilization program which would then be ratified by Congress. The program would then go into operation when approved by two-thirds of the feed grain producers.

TITLE III—DISTRIBUTION OF PROTEIN FOOD

The Secretary of Health, Education, and Welfare is authorized to distribute dairy, poultry, and meat products to needy persons, to eligible institutions, and through the school lunch program. The size of the program would be established by annual appropriations and surplus stocks would be utilized when available.

Mr. ALLEN. Mr. Speaker, I yield 3 minutes to the gentleman from Minnesota [Mr. ANDERSEN].

Mr. ANDERSEN of Minnesota. Mr. Speaker, I commend the Committee on Rules for its action in bringing a farm bill before us with an open rule in order that our farmers may have their full day in court. We have had a long wait and should make the most of this opportunity to do something constructive and worth while for agriculture.

If I spoke harshly of the committee in recent weeks regarding the delay in granting a rule, I beg the indulgence of the distinguished members of the Rules Committee and their understanding of my concern. The committee has rendered great service to the Congress and to the Nation and I would be the last person on earth to categorically condemn the Members for their caution and deliberation when it comes to granting rules.

But the rural business and agricultural communities of our Nation are in serious economic straits, and businessmen as well as farmers are entitled to full and fair consideration of their problems.

In my judgment, the farm problem is the number 1 domestic problem facing us today. The economic slump in the Midwest is not localized. It reaches into all corners of our land. The lack of purchasing power in rural areas has its impact upon the automobile plants in Detroit and the steel mills in Pittsburgh, and industrial interests all over the Nation are feeling the effects. If this decline in our rural economy is not promptly reversed, our entire Nation and probably the whole free world will suffer the consequences of a depressed American economy.

Some of our colleagues may argue in good conscience that we should reject this rule because we do not like all of the provisions of the bill, but let me remind you that few bills come before us that are entirely to our liking and that is why we have these open rules to give everyone an equal opportunity to stand or fall on the merits of his or her proposal.

We must have a vehicle before us if we are to do anything constructive about this number 1 domestic problem, and that is why I urge adoption of the rule with the clear understanding that I will at the proper time offer for consideration my own amendment to make the bill more to my liking. This, of course, will be the privilege of every Member concerned with the farm problem and all its implications.

Mr. THORNBERRY. Mr. Speaker, I yield to the gentleman from Kansas [Mr. BREEDING].

Mr. BREEDING. Mr. Speaker, I rise at this time to urge the House to adopt the rule on H.R. 12261.

It is my understanding that opponents of this legislation are serious in their intentions to defeat the rule and deny to the House an opportunity to debate new wheat legislation.

I plead with you not to kill all the hopes for wheat legislation at this session through such a back door parliamentary maneuver. If you do kill the rule, let me remind those of you who vote

against the rule that you will have to take the responsibility for continuing unchanged for another year the present program. And may I further remind you that this is the program denounced by President Eisenhower and the metropolitan press as being responsible for the present difficult situation in which wheat finds itself.

If you want to continue the present program—and I might say wheat farmers are not too unhappy with this law—vote against the rule. Kill the rule. Refuse to allow the House to debate this grave and serious national issue.

The House Committee on Agriculture reported H.R. 12261 after months of careful and painful deliberation. It is not a perfect bill. But I accept it in preference to any other measure offered at this time. H.R. 12261 does have the virtue of protecting the income of farmers while it reduces production and surplus stocks.

The bill is controversial. Some Members believe the two alternatives offered in the bill is not the right approach. Others may feel the plans are not the right answer.

But I plead with you to vote for a rule so the legislation can be debated. Permit the bill to go to the floor in the usual manner so the matter can be debated and the House will have an opportunity to work its will.

Let us debate for the next 2 hours the type of wheat legislation that is needed in the public interest. The House is capable of making its own decision once the debate is concluded.

Mr. THORNBERRY. Mr. Speaker, I yield 3 minutes to the gentleman from Iowa [Mr. WOLF].

Mr. WOLF. Mr. Speaker, I wish to congratulate the Committee on Rules for reporting out this rule. I regret that some other features were not included in the bill. But I intend to suport the rule and I hope to be able to support the bill.

Mr. Speaker, I was amused to read in the morning press—Washington Post—that from the wheatfields of North Dakota comes the word that Mr. NIXON and the Republican administration favor the "creation of a United Nations unit to give surplus food to needy countries and that the United States should ask other surplus producing nations to join in the undertaking."

I am amused because this is a proposal for which I have consistently struggled for the past 18 months to get the Congress to accept and authorize. On April 27, 1959, I introduced a bill in the House—H.R. 6681—which was immediately cosponsored by 26 other Congressmen, and made several trips at my own expense to discuss the implementation of this proposal with United Nations officials.

Being unable to secure committee action on my bill, I offered it as an amendment to the Mutual Security Act both last year and this year. On two occasions, this belated national leader and his Republican colleagues had an opportunity to support this proposal, but we received only three Republican votes—only three Republican votes—in its behalf, and these were not of record.

Sincerity of purpose is hard to believe in the face of the above record. When work on this proposal was being done in the Congress last year and again this year, neither Mr. NIXON nor his party representatives were there. If they are serious about this proposal, they should have been on hand to support it when there was a chance for its enactment.

I am sorry that Mr. NIXON did not speak out for this proposal in the Halls of Congress when his support might have counted—instead of in the fields of North Dakota just before an election in an effort to bring another Bensonite to the Congress. His desire is apparently for progress at the ballot boxes, not for progress in filling empty stomachs and in economic returns to the struggling farmers of America.

Mr. Speaker, I submit that the Vice President is apparently engaging in mere election year rattlings to impress the farmers of the Nation.

This is reminiscent of the 1952 campaign and the pledges of early 1953. Mr. Benson was in Denver, Colo., in April 1953, at the Stock Pavilion, and he said it was his intention to move food out of storage and into stomachs. In 7½ years since then, we have moved food into storage and we have neglected the empty stomachs. But now it is time to pick a new administration, and once more we hear the old familiar pledge. What we need is deeds—not words.

To show that this is consistent NIXON strategy, I quote from an article by William M. Blair, which appeared in the Des Moines Register on September 24, 1956:

COLORADO SPRINGS, COLO.—Vice President RICHARD M. NIXON will rcommend that the White House act to make sure that hog prices remain stable in the farm belt from now until the presidential election.

What action NIXON has in mind remains to be seen, but he has indicated to midwestern party leaders that he wanted to make certain that hog prices did not slip below $15 a hundred pounds.

The food for peace program is still a good program, Mr. Speaker. I was convinced it was one very effective solution to our farm problem—as well as a step toward the solution of other world problems—when I made it. I am still convinced. Now that we have Republican support for it—now that they are on record in support of it—perhaps when we get a new administration next year, this very worthwhile proposal can be imimplemented.

I regret that I cannot offer my United Nations Food for Peace amendment on this bill, but I have been advised there is no way to make it germane, because I would like to know whether Mr. NIXON stands alone or whether this great Republican group would like to support his position now.

The SPEAKER. The time of the gentleman has expired.

Mr. ALLEN. Mr. Speaker, I yield 2 minutes to the gentleman from Pennsylvania [Mr. CORBETT].

Mr. CORBETT. Mr. Speaker, I am going to ignore the political tirade that just happened wherein the sincerity of one of the great leaders of America has been questioned, and return to the subject before us.

I had originally been opposed to this rule, but I have recognized from the remarks that have been made here that there is no opportunity whatsoever, or very little opportunity, to do anything to improve the surplus wheat and grain products situation unless this rule is adopted and unless amendments are agreed to.

Mr. Speaker, the Members of this House and the Members of the other body ought to know that the consumer-taxpayers of the United States are getting mighty sick of this farm program. They are getting mighty sick of the nonsense of surplus on top of surplus, enormous storage costs and the like. I think unless something is done in a reasonable time to correct this economic nonsense, the consumers and taxpayers of the United States are going to throw this whole program out of the window and they are going back to some normal solution through supply and demand.

Mr. Speaker, I hope this rule is adopted and I hope the House in its wisdom does something practical to help the taxpayers and consumers and farmers of America.

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

Mr. ALLEN. Mr. Speaker, I yield 2 minutes to the gentleman from Illinois [Mr. MICHEL].

Mr. MICHEL. Mr. Speaker, I intend to support the rule, but it by no means should be construed as an intention on my part to vote for the bill in its present form. It is a montrosity and, since under the open rule we will have an opportunity to work our will, I intend to support the move to strike all but subtitle B when we read the bill under the 5-minute rule.

Mr. Speaker, H.R. 12261 should be opposed because:

First. It calls for a system of doles and controls.

Second. It is even more costly than the present program.

Third. It destroys the influence of the family farm in American agriculture.

Fourth. No hearings were held on the bill. It is substantially different from two previous versions which failed to get committee support.

Fifth. It provides for unsound and unnecessary alterations in the present successful surplus food distribution plan for needy people.

The bill consists of three titles—wheat, feed grains, and food distribution.

TITLE I—WHEAT

The wheat title is unacceptable because:

First. It does not let the small wheatgrower vote in the first referendum.

Second. It would increase the already high cost of the wheat program by $100 million or more a year.

Third. It goes contrary to the President's recommendations by both increasing export subsidy and the financial incentive to maximize yields per acre.

Fourth. Diverted acres tend to increase production of nonsupported crops and cause new problems to growers of vegetables and many other crops.

Fifth. Relatively few wheat farmers would determine the fate of the conser-

vation reserve program for all farmers. The payments for the conservation reserve are excessive.

TITLE II—FEED GRAINS

The feed grain provisions of this bill are unsound because:

First. Congress would abdicate its responsibility to a nongovernmental committee which would have authority to impose controls and withdraw from the U.S. Treasury up to $600 million for a feed grain program. In the absence of congressional disapproval within 30 days, such a program would become law.

Second. This unprecedented scheme of lawmaking might encourage Treasury-raiding opportunities for other groups in and out of agriculture.

Third. The costly referendum plan would discriminate against the small farmer by limiting the voting to growers of $500 or more annually.

Fourth. Provision is made to adopt the discredited direct payment Brannan plan.

Fifth. Funds for this plan would not be subject to the regular appropriation process. No limitation is placed on the amount any one individual could receive.

Sixth. The high price of the grain would cause export problems, increase export subsidies, and undermine current efforts to liberalize trade.

TITLE III—FOOD DISTRIBUTION

The section pertaining to the distribution of protein food is unworkable because:

First. It would put HEW in the agriculture business for which it has no experience, and would duplicate and complicate the functions of USDA.

Second. Having made it difficult for low-income people to buy food, the Government would then donate these foods free to the needy.

Third. It takes responsibility for caring for the needy from local and State authorities where it belongs and recklessly expands welfare assistance in the hands of Federal authorities.

Mr. ALLEN. Mr. Speaker, I yield the remainder of my time to the gentleman from Wyoming [Mr. THOMSON].

Mr. THOMSON of Wyoming. Mr. Speaker, I agree, and I think everyone in this House does, that the wheat situation, is one which demands attention.

As the gentleman from Pennsylvania, [Mr. CORBETT], who just preceded me, pointed out, unless something realistic is done to solve this problem in the reasonably near future, we must rightfully expect the taxpayers to insist upon discarding the entire program. Therefore, I think that we are approaching a critical period with regard to finding a solution to the wheat problem.

I cannot support the bill, as reported by the committee for the reasons already pointed out and other reasons. I do not think it could ever become law. Therefore, at the proper time I expect to either support or to offer an amendment to strike out all of the bill except title B. The provisions of title B are almost identical to a bill which I introduced last February. It has the support of the American Farm Bureau Federation. It has the approval of the Department.

This does offer a sound solution based on sound economic principles. It will restore wheat production on the basis of sound economics to those parts of our country that are best able to produce it and are the historic producing areas. In addition to that, it will provide for the expansion of wheat markets and reduction of artificial production incentives. It would result in minimum economic hardships on growers. It provides protection against shifting the burden of adjustment to producers of other farm commodities. It would result in a reduction in costs to the taxpayers. The provisions of this bill are as follows:

It eliminates all acreage allotments and marketing quotas effective with the 1961 crop of wheat. This would permit each wheat grower to determine for himself the acreage of wheat on his farm which would make the most efficient use of his land, labor, and machinery.

It provides for a price support on wheat that is a realistic one and would be a floor instead of a ceiling. Beginning with the 1961 crop, the price support of wheat would be related to the support level of corn with a proper adjustment to reflect differences in wheat, in weight, nutritive value, and buyer preference. However, for the 1961 crop of wheat the price support would be not less than 120 percent of the price support for corn. This would make a minimum price support of $1.27 a bushel.

This provides assurances to the producers of corn and other feed grains that prices of such commodities will not be demoralized by the entry of additional wheat into the feed market. It also assures wheat producers of a 1961 price support somewhat above the feeding value of wheat.

This price support policy would restore the pricing of wheat to supply and demand conditions as reflected in the marketplace. This does not mean that market prices of wheat would fall into the exact relationship indicated by differences in feeding value. The relative market values of corn and wheat are affected by domestic and foreign demand for milling wheat which normally price wheat higher than corn, and by the fact that a great deal of wheat is produced in areas where corn prices reflect substantial transportation costs. There is every reason to believe that good milling wheat would bring a substantial premium over its feed value.

It would greatly reduce the incentive for producers to increase yields through the heavy use of fertilizer and other yield-increasing practices in the humid areas.

It would permit growers in traditional wheat areas to return to production practices that offer possibilities of greater efficiency and thus lower production costs.

It would provide a basis for greatly reducing the cost of maintaining wheat exports and thereby strengthen the basis for a continued United States participation in world wheat markets.

It would reduce the basis for criticism of United States export policies by other countries which compete with the United States for world wheat markets.

The bill would provide adequate protection for all farmers from the competition of Commodity Corporation sales from accumulated wheat stocks.

It would provide for an extension of the conservation program in the soil bank to 60 million acres at the end of 3 years. The expansion of the conservation reserve would cushion the adjustments faced by two types of wheatgrowers: The farmer who is farming marginal land in traditional wheat areas, and the grower who has become a wheat producer under the 15-acre exemption and who may choose not to grow wheat under the new program.

I point out, that the wheatgrower in the historic producing area has had his opportunity to produce taken away from him by Government action. As long as a program continues with an artificial stimulus and acreage controls there is no chance for him to get that market back. He is being put out of business at the taxpayers' expense. Give the wheatgrower in the historic producing area a chance to compete on a sound economic basis and his costs of production are sufficiently low that he can furnish the wheat and make a profit and gain back these extreme cuts in acreage that have been imposed upon him. He will be better off, the country will be better off, and the taxpayer will be better off. I think the wheatgrowers in the historic area have awakened to that fact.

Mr. HAGEN. Mr. Speaker, will the gentleman yield?

Mr. THOMSON of Wyoming. I yield to the gentleman from California.

Mr. HAGEN. Is it not true that the major commodity problem right now is wheat, and that this body would be extremely derelict in its duty unless it passed a wheat bill exclusively which has a reasonable chance of becoming law? We cannot afford as taxpayers another year of delay in passing wheat legislation that will lift some of the burden off the taxpayers.

Mr. THOMSON of Wyoming. I agree with the gentleman, and that would be accomplished by the proposal I am suggesting. The provisions of title A, of the committee bill according to the minority committee report, would increase the cost of the program we now have, which is around $600 million, by $104 million a year. I am satisfied that the proposal I am suggesting taking into account the cost of the conservation reserve would reduce the expenditures under the wheat program by as much as $300 million.

I urgently suggest that this should be supported in the best interest of the wheatgrower, in the best interest of agriculture generally, and in the best interest of the taxpayers of the Nation.

Mr. THORNBERRY. Mr. Speaker, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. CLARK].

Mr. CLARK. Mr. Speaker, today the House of Representatives has before them the question of whether they will consider the so-called Farm Surplus Reduction Act of 1960. There is no question that the Congress has much work yet to be done before its adjournment.

I have studied closely H.R. 12261 and I strongly urge that the rule be rejected and that the House refer this matter back to the Committee on Agriculture with instructions to bring legislation to the floor that will provide a sound solution to some of our agricultural ills.

There is no question that the wheat situation is critical and without corrective legislation it will get worse. However, the proposal that has been reported by the committee is not a sound solution to the wheat problem. In fact, it not only fails to solve the critical wheat situation, but would pose new problems for other agricultural producers.

Earlier this year I, along with my colleague, the gentleman from California, HARLAN HAGEN, introduced wheat legislation that would provide a sound solution to this problem. My bill, H.R. 11699, would do four things:

First. Eliminate all Government controls by terminating wheat acreage allotments and marketing quotas effective with the 1961 crop.

Second. Base the price support for wheat on the support level for corn, but at not less than 120 percent of corn supports in 1961.

Third. Provide adequate protection for farmers from the competition of sales of wheat stocks acquired by the Federal Commodity Credit Corporation.

Fourth. Expand the soil bank conservation reserve program substantially to provide a cushion for the producers of wheat and feed grains against the effects of reducing the support level and eliminating controls on wheat production.

This is the kind of a wheat program that I believe must be enacted. I am greatly disappointed that the House Committee on Agriculture did not see fit to favorably report this particular proposal. I would hope that the rule on H.R. 12261 would be defeated and that the committee would report legislation as I have outlined. My proposed wheat legislation would be of benefit to farmers, but it would also benefit all taxpayers.

Some of my colleagues have suggested that in an election year the way to assure the farm vote for our party is to have a bill that provides higher price supports and greater subsidies to farmers. I would urge my colleagues who come from districts like my own that have more nonfarm people than farm people that they reexamine this conclusion. There is no question in my mind that the consumers of agricultural commodities are rapidly growing tired of the great public costs involved in our farm program.

As a matter of fact, the proposed legislation would provide for increased cost to the Government. Under this bill there is a payment-in-kind program. The payment rates in this program are about twice as high per acre as under the conservation reserve program. It is estimated that the average payment-in-kind would be worth approximatly $25 per acre. This compares with the national average rate of $2.90 per acre under the conservation reserve program. There is no question that this program will be more costly than an expanded conservation research approach might be.

The second and unsound provision involves an increase in the support level for wheat. The support level would be increased from 75 to 85 percent of parity. This would mean an incerase of $114 million in the cost of our wheat export products alone. The higher price would add to the problems of our domestic feed market and increase the cost to the Goverment of this program.

The bill also provides a third provision dealing with feed grains which is completely unnecessary. Under this particular section there would be additional costs to the Government as a result of the responsibility for storing larger quantities of our feed grain supplies. Currently the present feed grain situation is good and if left alone will prove more sound as time goes on.

As I have indicated there is no question that the provision of this legislation will increase the cost to the Government. This is not the road that I feel we should be traveling.

From my own point of view, it is important that we have a sound farm program that protects the commercial farmers, but at the same time greatly reduces some of the Government costs that are borne by all taxpayers. I believe that my wheat proposal is sound even in an election year because it meets this test.

I strongly urge that the rule be rejected for I feel that if this is done the House Committee on Agriculture will understand more clearly that this Congress is in no mood to spend its time trying to improve a completely unsound farm bill. We have neither the time nor is the floor of the House of Representatives the place to try to draft constructive agricultural legislation.

Mr. THORNBERRY. Mr. Speaker, I yield such time as he may desire to the gentleman from Ohio [Mr. LEVERING].

Mr. LEVERING. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. LEVERING. Mr. Speaker, I am sure that the Members of this body are aware of the fact that our agricultural economy is in serious trouble and that it is imperative upon this Congress to approve a sensible program in the interest of our farmers, consumers, and taxpayers alike. Leaders on both sides of the aisle recognize that the downward trend of farm prices is endangering the overall welfare of the Nation's economy and that the unworkable programs now in effect must be eliminated.

Mr. Speaker, in view of the situation which prevails in agriculture today, this House would be derelict in its duty to vote down the resolution we are now considering and thus deprive this body of the right to work its will on farm legislation in this session of Congress.

Mr. Speaker, I recognize that the bill, H.R. 12261, is not a perfect bill and I intend to offer a number of amendments, if this resolution is adopted, to improve this legislation, particularly in the interests of family farmers. For one thing, I intend to offer an amendment which will give the family farmers of this Nation a real voice in determining the kind of a farm program to be adopted.

H.R. 12261 offers to the farmers of this country a choice between two alternative plans covering wheat, but would permit less than half of the producers who grew wheat for harvest in 1960 to vote in the referendum. This is undemocratic and un-American. Under the bill as now written producers of less than 15 acres could not vote on the question of which plan they prefer. My amendment would make them eligible to vote.

Mr. Speaker, in the democratic processes under which our Government operates, we deplore the idea of rule by a minority, and yet if the amendment which I propose to offer is not adopted, we will be putting our stamp of approval on just such a practice.

Mr. Speaker, I also propose to offer amendments in opposition to the reduction of the 15-acre exemption for wheat quotas, because any provision which impairs the 15-acre exemption will in my opinion affect adversely the interests of a great multitude of our smaller farmers, particularly those who grow Soft Red Winter wheat such as that which is produced in my State of Ohio. The reduction in small farm wheat acreage would be disastrous for the Soft Red wheatgrowers in the eastern half of the United States where we have never had a surplus of this type of high quality wheat.

It would also endanger the cookie and biscuit industry which relies on soft wheat flour for the making of its products. Any restriction in the production of this type of wheat would work a severe hardship on this industry by imposing on them the necessity of changing their milling operations drastically. Of course, the farmers who traditionally produce this kind of wheat would ultimately suffer from a substantial loss of this cookie and biscuit market.

Mr. Speaker, these amendments which I propose to offer are designed to do what I believe the majority of this House thinks is proper to do, namely, protect the interests of the family farmer in America.

Mr. Speaker, it seems to me that any legislation that attempts to achieve this desired objective should at least permit the family farmer to participate in the formation of such a program.

Perhaps the most practical reason for maintaining the family farm, is that it is still the most efficient type of operation in the farming industry. I am referring to the kind of farm, regardless of the number of acres involved, where the family that lives on it furnishes the greater portion of the labor required to operate it.

The Voice of America, in regular broadcasts in many languages to other nations, emphasizes one central point which we in this country frequently seem to forget.

This is the fact that, dollar for dollar and item for ite, the groceries we buy at the store are cheaper in the United States than in any other nation on

earth. When the Queen of England came to Washington 3 years ago, she commented on the variety of goods in a supermarket she visited. Even Russian leaders visiting our food stores gasped at the quality and the quantity of the food available to shoppers.

The average American worker has to work fewer hours each week to feed himself and his family, than the workers of any other country on earth. In 1958, 1 hour of factory work paid for 11 loaves of bread, 2.9 pounds of butter. In 1929, an hour of factory work bought only 6.4 loaves of bread and 1 pound of butter.

Mr. Speaker, as I indicated, the one big reason why American housewives are able to buy food cheaper than shoppers anywhere else in the world, is the efficiency of those who operate the family farms in this country. I feel dutybound to do everything I can to promote their welfare.

Mr. THORNBERRY. Mr. Speaker, I yield such time as he may desire to the gentleman from Texas [Mr. POAGE].

Mr. POAGE. Mr. Speaker, at this stage of the discussion the question is not whether you agree with this bill or whether you do not. The question presently before us is whether we should consider farm legislation this year or whether we should tell the people that we really did not mean it when we said that we wanted to revise an antiquated and discredited farm program—and both parties have said in effect that a revision of the existing program was of paramount importance. Now, the only way to get a revision is to vote for this rule. It is an open rule. I hope you will like the bill the committee has brought in, but if you do not like it, this rule gives you every opportunity to alter or strike out sections with which you disagree. The Agriculture Committee has tried hard to bring you a democratic measure. One on which you can work your will, and one which, if adopted, will in fact give to farmers that opportunity for self-expression which Vice President NIXON has so eloquently pleaded when he said last night that—

> A method must be developed whereby the farmers themselves have a greater opportunity to choose the kind of farm program they want.

There is not a thing in this bill which forces any program on anybody until it has been approved by two-thirds of the producers of the commodity affected. On wheat, this bill gives a clear-cut choice between substantial supports and controls on the one hand and no controls and very low supports on the other hand. On feed grains it allows farmer selected committees to work out programs which must then be submitted first to this Congress and then to feed grain producers—and two-thirds of the producers must vote in the affirmative before any controls can be enforced. What could be more democratic?

One of the great farm organizations says they are for the bill as it is written. One says they neither support nor oppose. The third which sent you a letter on this subject last night says that they are opposed to everything in the bill except their own wheat plan which is presented word for word as option (b) in part 1. They suggest that rather than submit the choice to producers that this Congress decide the issue in favor of their proposal. But even so they recommend action on the bill. For fear that you did not follow the communication to its conclusion, let me read from page 5 of the statement.

> In view of the foregoing, we recommend the adoption of the amendments necessary to strike out everything in H.R. 12261 except the enacting clause and subtitle B of title I, and that the amended bill be passed.

Of course, I would not agree with the desirability of such drastic surgery on the bill, but I cannot emphasize too strongly the fact that almost everyone agrees we need farm legislation and that the only practicable way to get any kind of farm legislation is to pass this rule.

Mr. METCALF. Mr. Speaker, I ask unanimous consent to extend my remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. METCALF. Mr. Speaker, as far as Montana's biggest cash farm crop, wheat, is concerned, this bill as reported is an improvement over the existing program and over the measure passed by the other body.

It is built upon the principle that any successful farm program must be equally fair to farmers and consumers alike. As a pattern for the future, it includes faith in the ability of farmers themselves to develop or select programs based on this principle.

As reported, the measure has three major parts, dealing with wheat, feed grains, and surplus food.

Title I would give farmers a choice between a program based on strict production controls—75 percent of present allotments—with price supports at 85 percent of parity—about $2.03 per bushel, compared with $1.77 under existing law—and payment in kind for retiring cropland at 55 percent of normal production and a program of no production controls with the support price of wheat at approximately the feed grain levels—$1.27 in 1961, $1.15 in 1962.

My H.R. 11919 would have provided for price supports at 100 percent of parity, a 30-percent reduction in planted acreage and payments in kind based on 60 percent of the average yield of the retired acres.

Title II of H.R. 12261 authorizes election of a farmer committee to develop for feed grains—corn, grain sorghum, oats, barley, and rye—a program which would bring production into line with demand, return feed grain producers between 85 and 100 percent of parity, and authorize retirement of up to 50 percent of cropland on the farm in return for payment in kind in feed grains.

Title III authorizes an increased program of distribution of dairy, poultry, and meat products to the needy, charitable institutions and the school lunch program.

As our committee pointed out, the conditions in agriculture demand action. The net income of farmers in 1959 dropped to the lowest level—in relation to the volume of their sales—of any year since the Agriculture Department started keeping books in 1910. A further decline is predicted for 1960.

Average farm prices in December 1959 hit bottom, in terms of parity with other prices, for any December since 1933.

The per capita annual income of people living on farms in 1959, including Government payments and for off-farm work—dropped again to less than half that of nonfarm workers. The per capita income of farm people was $960, compared to $2,202 for nonfarm people.

Net farm income in 1959 was 24 percent below 1952, although the national income increased by 35 percent in this same period.

Last year, farmworkers—operators and labor—received an average 71½ cents an hour, 13 percent less than in 1952. In contrast, hourly earnings of industrial workers in 1959 averaged $2.22, up 33 percent from 1952, and 1959 corporation dividend payments exceeded those in 1952 by 47 percent. The net income of farmers in the past 7 years has been $20 billion less than in the previous 7 years.

The administration's policy of unlimited production at low prices has returned many farm families to depression levels at a time when many other Americans are prospering as never before.

During the past 7 years, the President has sent many messages to Congress urging abandonment of the parity principle for agriculture, the removal of production controls, and the reduction of price supports. His reference to delivering our taxpayers from the "mounting failures and staggering excesses of the mandatory farm price support and production control program" reminds us that the program for the major crops operated for 20 years prior to 1953 at a profit to the Government of $13 million, that during 11 of these years the average price level of all of agriculture was at or above 100 percent of parity each year, and that at the end of 1952 the Government investment in farm commodities amounted to some $2.5 million.

With "the change" voted in 1952, came the departure from a program which had been a success. During the past 7 years, farm prices and income have fallen, farmers have been caught in a cost-price squeeze, surplus has piled upon surplus, Federal investment in farm commodities has almost quadrupled, and farm program costs have multiplied manyfold.

A study by the Library of Congress discloses that appropriations or expenditures of the Department of Agriculture since January 1, 1953, have exceeded the combined total of such expenditures or appropriations during the 90 previous years of the history of the Department. The total for the period 1862 through 1952 is $35.8 million, compared with $37 million for the period 1953 through July 1, 1960.

The present administration has had more authority to deal with the farm problem than any of its predecessors. It has had more money to do so than all of its predecessors combined. It has had

more employees in the Department than ever before.

As it comes from committee, this bill is not the sole answer to all the problems of our farmers. But it does seek to reduce Government holdings of farm commodities, bring down the cost of farm programs while adhering to the principle that farm income must be protected while surpluses and costs are reduced.

Mr. THORNBERRY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. COOLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 12261, with Mr. IKARD in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. COOLEY. Mr. Chairman, I yield 15 minutes to the gentleman from Texas [Mr. POAGE].

Mr. POAGE. Mr. Chairman, that we need farm legislation is known to everyone. The farmer points to his dwindling income and his greatly increased costs. The taxpayer points to the enormous expenditure that this program is imposing on the Government, while giving the farmer less and less.

Just a few years ago, with a program of relatively high, rigid supports on all our basic commodities, the Commodity Credit Corporation books showed a modest profit. That was on all of the price-support programs on the six basic commodities; that is, controlled commodities. I would not at this time try to say what might have happened had we continued the program which was working so successfully. The fact is that we did not continue it; instead we embraced the so-called sliding scale or variable supports. And supports since that time have varied but in one direction, and prices have varied in that same direction—down, down, always down.

This is not the time nor the place to try to fix the responsibility. When a man is abandoned by his own candidate for the Presidency I am not going to add my condemnation. I just want to make it very clear that neither I nor the majority of my colleagues on the Agriculture Committee ever approved this flexible program of low and still lower supports and prices.

Surely I need not dwell on the ruin which this program has brought to farmers across all this broad land. Surely I need not describe the decline of the small towns of this Nation—the bankruptcy along Main Street. No; the 1960 census figures can describe these tragedies better than I.

Surely I need not call the attention of the Members of this House to the cost this program has placed on the backs of our taxpayers.

In the 7 years just passed the Department of Agriculture spent $1,174,414,704 more than had been spent by that Department during all its previous existence from its founding 91 years before.

Maybe these stupendous expenditures would be justified if they had brought prosperity to our farmers. But we know that they have not done so. Maybe they would be justified if they had brought comparable benefits to our people as consumers. But let us look at the record.

Under "rigid" supports—and I want my city friends to listen to me—under "rigid" supports the American farmer received $2.40 or more for a bushel of wheat and the American housewife paid 13 cents a pound for bread.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman.

Mr. ANDERSEN of Minnesota. I know the gentleman wants to be fair. Last year I made a speech on the floor of the House blaming both parties for the situation we are in in agriculture today; the Republicans because of keeping a man like Ezra Benson in power as Secretary of Agriculture, and the Democrats because they have had control of both Houses of Congress more than 8 years. They should have done something. But we are both to blame.

Mr. POAGE. I am not placing blame. I said a moment ago I was not going to kick a man when his own candidate for President went to North Dakota to kick him. I am not blaming anybody. I am just reciting the facts.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to my chairman, of course.

Mr. COOLEY. Mr. Chairman, I want to call the attention of the House to the fact that we did try to deal with the wheat problem during the last session. Both Houses of Congress passed a very good wheat bill and sent it to the White House, only to have it vetoed by a Republican President.

Mr. POAGE. And there have been four other vetoes of farm bills I can recall in the last few years.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman.

Mr. HALLECK. That wheat bill was passed in the House and went to the other body. They enacted it in different form. It came back here in a conference report and the House of Representatives defeated the conference report.

Mr. POAGE. And we later passed the House bill and sent it to the President, who vetoed it. We sent a bill to the President, enacted by this Congress, and he saw fit to turn it down.

Mr. HALLECK. Mr. Chairman, will the gentleman yield further?

Mr. POAGE. I yield.

Mr. HALLECK. The fact of the matter still is that after the conference acted on that wheat bill, the House of Representatives, with an almost 2-to-1 Democratic majority, turned down the conference report.

Mr. POAGE. And passed a much better bill. I cannot see the relevancy of the gentleman's observations, unless it is to divert attention from the fact that the President did veto the wheat bill which we passed.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman.

Mr. COOLEY. Certainly the distinguished gentleman from Indiana has not forgotten the fact that President Eisenhower vetoed the wheat bill. I am sure he does not want to leave the impression that the President did not veto the wheat bill, along with a tobacco bill and other bills, during the last session of Congress.

Mr. POAGE. He has, I believe, vetoed five farm bills in the last few years. But let me go back to what I was saying.

Just a few years ago under rigid supports wheat brought $2.40 a bushel or more, and the housewife at the same time purchased bread for 13 cents a pound or less. Today, with wheat selling at $1.80 a bushel or less, the housewife is paying 20 cents or more for a one-pound loaf of bread.

Before any of my friends from the big cities see fit to let some country slicker soft-soap them into opposing this bill, let them ask him to explain that phenomenon. Unless he can give a good explanation, then I suggest that it would be well to stay with the Committee on Agriculture and try to give a fair price to the farmer and establish fair prices for the consumer.

Mr. BELCHER. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Oklahoma.

Mr. BELCHER. We can all agree that President Eisenhower did veto that wheat bill, but as a member of the committee from the wheat area I thank God for that, because if he had not we would take 25 percent more from our production and send it down to Louisiana to be raised in the bayous and further raise the surpluses to be stored. If it had not been for the President we would have had a greater cut made.

Mr. POAGE. I am sorry Members feel they must take my time in trying to place the blame or to explain actions of other branches of government. I have not been trying to blame anybody. I have just tried to explain the facts, just tell the facts. I have not tried to explain the blame. I had not mentioned a veto when Members began to apologize for it. I am sorry others feel they must excuse somebody for what has been done. I hope no one has a guilty conscience in connection with this matter.

I should like to proceed with the discussion of the bill.

Of course, I know many of you are asking yourselves, "If low supports are costing us so heavily, how could higher supports possibly cost us less?" I think that is a fair question, and I think you are entitled to a fair answer. I think I should point out that most of us who have championed higher supports have

at all times firmly insisted that those higher supports be coupled with effective controls. Were it not for the fact that I am not trying to fix any blame I could tell you why we do not have effective controls. I never did subscribe to the idea that the Congress should repeal or could repeal the law of supply and demand. On the contrary, I have always recognized, and so has a majority of the Committee on Agriculture, that Congress cannot repeal or even amend economic laws. Instead, we have tried to make those laws work for the benefit of our people rather than work against them. We have sought to make those fundamental laws help farmers just as those same laws have been used to help labor and help industry and help business. We have sought the same help from our Government to control the excess of unneeded production which has so long been extended by Government to oil producers through our proration laws.

Time and again we have sought more effective controls of production only to meet with positive opposition from both influential governmental as well as farm sources.

We can all remember the support of noncompliance corn. That was the straw that broke the cornstalk and overflowed the storage bins. You remember what happened. Those who produced corn in plain violation of their allotment were supported at a price almost as high as those who complied. This was not done at the request of Congress. How could you expect to have a program function under that kind of administration? Well, it did not function, of course. But let us get to the question.

I am convinced we can control farm production to equal market demand just as we control the production of crude oil or just as the automobile industry controls the production of automobiles. We have failed in the past for three basic reasons. I do not want to pass the buck. I accept my share of the responsibility, at least for the first of these reasons, which has been our failure to bring the overall acreage floor low enough. In the case of wheat that floor is 55 million acres. While this is a cut of 30 million acres from the former plantings of 85 million, it is not enough. This bill allows an additional cut of 25 percent from the present floor, and it requires it if producers are to enjoy the 85 percent supports provided in part A.

In the feed and grain section of this bill, it is required that any support program adopted by producers shall bring supply down to demand. It does not give supports without any cooperation from the producers.

The second reason why our present control program has not functioned adequately has been the fact that we have tried to give unworkable exceptions in behalf of certain small growers.

In the case of wheat, we have allowed anyone to grow up to 15 acres with no control. This has resulted in the production of surplus wheat. Whether that wheat was good or bad quality was beyond the question. It has produced more wheat than we have needed.

If the committee's plan is adopted, these small growers will be given allotments just exactly as everybody else, allotments figured from a base of the highest they have grown in the last 3 years. These bases will be subject to exactly the same cuts which are imposed on the allotments of other growers, and those small growers will be given the same voice in the program that is given to other growers, in other words, we treat them all alike under this bill except that we do not require these small growers to take the 30 to 40 percent cut which present allotment holders have already taken.

The third weakness in our present wheat program, at least, has been the failure to enforce sufficient stringent penalties. Cotton and tobacco have always had far more severe penalties and they come a whole lot nearer keeping a balance between supply and demand.

This bill, if producers accept supports under part A, will approximately double the penalties for overplanting.

In short, I think we are offering you a bill which will allow wheat producers to actually balance supply and demand. If they vote for part A, they will get 85 percent support for their wheat. They will be privileged to receive payments in kind; that is, in wheat out of the Commodity Credit Corporation surplus stocks equal to 55 percent of the wheat they could expect to grow on the acres they retire from wheat. But, they would be required to cut their total wheat acreage by at least 25 percent.

Now to you laboring men that means only a 6-hour working day for which the farmer will be paid. That is equivalent to working 6 hours a day and being paid about 85 percent of a fair wage for those 6 hours. And in addition they will receive unemployment compensation at the rate of 46¾ percent of a fair wage for the 2 days they are unemployed. Actually, that illustration is not quite accurate because they will not be unemployed. They must work the retired acres so as to conserve the soil in order to get the 46¾ percent of a wage. But, there will be no soil bank taking whole farms out of production and destroying whole towns nor will there be any opportunity for any city man to buy up several farms and let the Government pay for them through soil bank payments, that is, not if the producers adopt plan A.

Of course, if they adopt plan B, which is the program sponsored by one of the great farm organizations, the soil bank will continue to take whole farms out of production. There will be unlimited production of wheat. The Government will still provide storage and the farmers will, after next year, receive no more for wheat than for corn, adjusted to food value.

I do not recommend this program, but like the Vice President said in North Dakota last night, I believe in letting the farmers make their own decisions. I do not believe the farmers will select any such program, but if a majority of our farmers are actually willing to give up effective supports in order to have the privilege of growing unneeded and unusable surpluses, then it is time we knew it. I know of no way of finding out except to let the farmers themselves vote, and that is what this bill does. It allows a clear-cut choice, but I have been astounded to find the very organization which has so long claimed that most all farmers wanted freedom is now opposed to this referendum. Frankly, I am not for their low price program, but I have enough confidence in democracy to submit the question to the farmers and to abide by their decision.

I have but one request. If you agree that we should have a clear-cut test, by all means help us keep it just that; a clear-cut test, between high rigid supports on the one hand with strict controls, and low supports and no controls on the other hand. Please do not amend this to the point where the choice will be some controls and low supports or no controls and low supports, like we had in the corn referendum. That is not a meaningful choice. We ought to have a clear-cut choice between the two ideas, and this bill gives you just that.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Minnesota.

Mr. ANDERSEN of Minnesota. In the referendum of 1958 the farmers had no choice. The base was so low that they could not get along on it, and they went all out. In regard to this 25 percent under this proposal, that is going to be taken out of the allotment nationwide? I understand the producers can get payment in kind for that?

Mr. POAGE. If he sees fit.

Mr. ANDERSEN of Minnesota. If he sees fit?

Mr. POAGE. Yes.

Mr. ANDERSEN of Minnesota. Then, if he does not see fit, can he put in corn and compete with my corn products?

Mr. POAGE. I think he can, but the economics of the thing would generally induce him to take the payment in kind.

Mr. ANDERSEN of Minnesota. Would it not be better if we made it mandatory that he should take payment in kind?

Mr. POAGE. I see the gentleman from Oklahoma is questioning my answer.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Oklahoma.

Mr. ALBERT. The gentleman is correct in part. There is no penalty, but he loses the price support. He loses price support on allotted acreage and payment in kind.

Mr. ANDERSEN of Minnesota. If a farmer has a 100-acre allotment and cuts it down to 25, he can put it in corn if he sees fit?

Mr. ALBERT. Yes; but he loses price support.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. At the present time, if he wants to, he can reduce to 25 acres, but he would still get price support. Under this bill he would not do so.

Mr. POAGE. Yes. This bill makes it more difficult to engage in that kind of practice.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Kansas.

Mr. AVERY. The gentleman is discussing the option that the farmers have. He would have a clear choice of high support and controls, opposed to no acreage control and no price supports. Is there anything in this bill that would make controls on a lower average than in the present law?

Mr. POAGE. Yes.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. ALBERT. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. AVERY. I did not understand the gentleman's reply. What is the difference in this bill?

Mr. POAGE. The penalties for overplanting are nearly doubled.

Mr. ALBERT. Mr. Chairman, will the gentleman yield further?

Mr. POAGE. I yield to the gentleman from Oklahoma.

Mr. ALBERT. But the farmer has to prove his actual production. In addition to that, the penalty rate is raised from 45 to 65 percent on the excess.

Mr. POAGE. There is a very substantial increase in the penalties.

There are two other sections of the bill deserving of attention. Title 2 simply allows feed grain farmers to develop their own program to balance supply and demand. It says:

> Such a program shall not cost more than 10 percent of the value of the crop—

Far less than at the present time. I think we owe the taxpayers a break.

This feed grain producers program must cover all feed grains; not simply corn, and must not result in any further Government acquisition of additional surpluses. It stops the increases of surpluses in Government storage, and I believe most Members of this House as well as most citizens of this country want to bring a stop to that. Again, we are trying to protect the taxpayer. I do not have time to go into the feed grain situation further than to point out that the present buildup of corn and other feed grains poses a continuing threat to the livestock industry in all of its forms—including chickens and dairying. Everyone knows that cheap corn makes cheap hogs and cheap feed makes cheap beef—and cheap red meat will destroy the chicken business. I can see nothing but disaster to livestock producers in unlimited production of cheap feed. I know an effort will be made to take this section out of the bill. Before you vote for it, I would suggest that you ask yourself how you propose to deal with the livestock industry.

We have maintained the livestock market right well in recent years, really because we have had a feed grain program. Now, if you should abandon your feed grain program, if you fail to use these vast surpluses of feed grain you are going to affect the livestock market just as you have seen other markets affected. If we want to maintain a sound rural economy we must have the feed grain program.

The third and last title of this bill provides machinery whereby the Secretary of Health, Education, and Welfare may distribute protein foods, meats, milk, eggs, and such, to needy people, to the same people who are presently eligible to receive cornmeal and flour from the Secretary of Agriculture. But since we know that you cannot produce these protein products without there being substantial consumption by animals of these feed grains which are presently in surplus, does it not make sense to allow the Secretary to distribute to these needy people the foods that are more palatable, that will give them greater health than to simply give them cornmeal? Is it not better, from the standpoint of the needy, to get some bacon instead of cornmeal? From the farm standpoint does not the production of the bacon involve the use of the corn which otherwise might have gone into meal? So we provide that the Secretary of Agriculture may sell in the open market a bushel of feed grains for each $2 worth of protein feed that the Secretary of Health, Education, and Welfare distributes.

To my mind we have here a sound and reasonable use of our agricultural surpluses for the needy people of America, and we do it without doing any harm to any farmer in America. I cannot see why you should seek to strike this out, why you should want to deny to the people of America who cannot buy even cornmeal, the opportunity to use protein foods. But there will be efforts to take this section out of the bill. I hope these efforts will be turned back. I want this bill to help every living person it can. This title does not open any doors to raids on the Treasury. It requires a congressional appropriation approved by the Appropriations Committee of this House before any funds can be used for protein food.

I think we have been able to bring the House a well-rounded bill. It is not exactly what I would have preferred. I do not think it is perfect. It is not all-inclusive, but if approved by producers, it could deal with 85 percent of all of our surplus crop, and with well over half of all the tilled acres in the United States. It imposes no program of itself. It is democratic. It does protect taxpayers and consumers as well as farmers—and it is in truth a farm bill—a farmers' bill—a bill which can be used to raise farm income.

Mr. HOEVEN. Mr. Chairman, I yield myself 5 minutes.

Mr. HOEVEN. Mr. Chairman, it is quite apparent that we are following the same old pattern, in involving the farm problem in politics. I am one of those who has tried desperately hard to keep the agricultural problem out of politics.

The farm problem has no business in politics. This idea of getting up on the floor of the House and castigating somebody, calling names and finding fault, will never solve the farm problem. Let us be realistic in facing a most perplexing problem. The American people expect us to do exactly that. It is quite apparent to me also that some on the majority side apparently prefer an issue rather than a solution.

My efforts have been directed during the past several months in trying to pass a wheat bill which can actually be enacted into law. Anything less is simply shadowboxing. The President of the United States in his farm message to the Congress said he did not want a political poultice. The bill under consideration is in that category.

Agriculture is the Nation's basic industry. Every segment of our economy is dependent upon the welfare of the American farmer. We stand pretty well together when it comes to foreign affairs. We stand united for the defense of our country; but when we consider the Nation's basic industry, to wit, the farm problem, it seems as if it has to be dragged into politics. The American farmer is getting sick and tired of being kicked around in this political arena.

I want a wheat bill. I think it is incumbent upon us to send a wheat bill to the White House which can be enacted into law. If we do not do that we are not true to our obligations to the American people.

The committee vote on this bill was 20 to 13, the Rules Committee reported the bill by a vote of 5 to 4, which certainly indicates it is very controversial, to say the least. In this connection, I hope you will carefully study the minority report on the bill.

I find no demand for this legislation. Representatives in the Congress from the wheat sections of this country, as far as I can determine, are not for the bill. I have not had a single letter from my feed grain people urging me to vote for the feed grain section or the bill.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. For a question.

Mr. ALBERT. Will the gentleman support the proposal of the wheat farmers of this country as made through the National Wheat Growers' Association as offered to the Congress?

Mr. HOEVEN. That proposal was fully explored in the Committee on Agriculture and was turned down.

Mr. ALBERT. The gentleman knows no other proposal has been supported by it.

Mr. HOEVEN. Let me call the gentleman's attention to the fact that his own Party having control of the other body passed a wheat bill which was referred to the House Committee on Agriculture. It should be given some attention by the House Committee on Agriculture. The committee then could work its will and present a bill to the House which I hope could be enacted into law.

Mr. Chairman, I find no clamor for the bill. The Farm Bureau is opposed to the bill, the National Grange is opposed to the bill and, up until today, at least, I understood the Farmers Union was opposed to this bill. I doubt that they are very much enthused about it.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. HOEVEN. Mr. Chairman, I yield myself 5 additional minutes.

Mr. Chairman, even some of the sponsors of the original Poage bill have run out on it. The first version of the bill was a grandiose proposition. It took in every agricultural commodity. It was the answer to the maiden's prayer. It was supposed to solve the farm problem. Then it was suddenly discovered the bill would not do the things being claimed for it. Even the sponsors were unhappy, and different commodity groups affected started to "get out from under." The cotton people said, "We don't want to be covered." The tobacco people said, "We don't want any part of this." And other commodities disclaimed ownership. So those commodities were finally eliminated, with the exception of wheat and corn and other feed grains.

But when the representatives on the committee from the Corn Belt and the feed grain sections of this country attempted to eliminate the feed grain section they were outvoted. The third and last version of the bill now before us has gotten to be a face-saving operation.

The original bill was called the Family Farm Income Act of 1960. In the second version they cut it down to size and made it the Family Farm Act of 1960. They forgot about the income. Then in the third version, which is before us now, they forgot all about the farm family, all about the farm income, and it is now the Farm Surplus Reduction Act of 1960. So we have gotten down now to a face-saving operation.

Mr. Chairman, this bill is more costly than the program under which we are now operating. Title I will cost approximately $104 million more. Title II, the feed grain section, as closely as I can estimate, will cost $250 million more. Title III, relating to the distribution of protein food, will cost $500 million more, making a total of about $850 million increase. Certainly this should be of concern to the taxpayers.

The passage of the bill will mean placing more employees on the Federal payroll. Many more people will be needed to police the referendum and control provisions of the bill. The most glaring defect in this bill is the abdication of legislative authority by the Congress. For the first time in the history of the Congress, I believe the bill will permit nine men from different sections of the country to write a farm bill. Eight of them can outvote the representative from the Corn Belt, for instance. They can operate in secret if they choose. They would have the authority to formulate a farm bill which might well encompass the Brannan plan of production payments. It might well be something else. Who knows? Whenever a plan is formulated by this committee of nine, the proposal is sent to the Secretary of Agriculture who then sends it to the Congress. If the Congress does not take affirmative action in disapproving the proposal, within 30 days, it is submitted in a referendum. I wonder what would happen if such a proposal, in the closing days of this session and within the 30-day period, had come to our attention. The Congress would have no voice in the matter whatsoever.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I yield to the gentleman from Illinois.

Mr. ARENDS. I am very pleased that the gentleman has called attention to this particular bill and to prove how absurd some of the provisions in this legislation are. It is a complete abdication of power on the part of the Congress.

Mr. HOEVEN. I thank the gentleman.

Authorizing nine people to formulate a farm program would set a very bad precedent. If we start on this kind of an operation of delegating legislative authority, why not permit nine individuals to formulate a program for Federal employees; why not permit nine members of labor organizations, or nine members of a teachers' organization to enact legislation in this same fashion? Furthermore, I seriously question the constitutionality of that kind of a provision. How can the Congress legally surrender its legislative authority in this field?

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I should like to finish my statement.

Mr. POAGE. Does the gentleman refuse to yield?

Mr. HOEVEN. I hope the gentleman will not press me as I would like to complete my statement.

Mr. POAGE. I merely wanted to get it clear; I do not understand.

Mr. HOEVEN. I did not interrupt the gentleman and would like to proceed.

Mr. POAGE. If the gentleman refuses to yield, I shall not ask him to.

Mr. HOEVEN. Not at this point. Going back to the delegation of legislative authority, why should not you people from the industrial centers of this country, the big cities, have something to say about farm legislation? Are you willing to delegate your authority to a group of nine people and have nothing to say about the format of it, or anything else?

Furthermore, the bill is going to mean higher export subsidies in the amount of about $150 million.

The bill also provides for "back-door spending," if you please. Section 207, in the feed grain section, provides that funds can be made available out of Commodity Credit Corporation funds. Of course, the Congress must reimburse Commodity Credit Corporation so we wind up with "back-door spending" which, if I sense the temper of the Congress, is something that most Members of Congress are very much opposed to.

In summary the bill before us simply cannot be enacted into law. That is my frank opinion.

I assume several amendments will be proposed and Members are going to have the opportunity to vote on the bill that passed the Senate the other day. After the House has worked its will, if the bill has not been perfected to make it at least reasonably palatable, I propose to strike section 2 and section 3 so that we can go to conference with the Senate and work out a wheat bill. In my humble judgment, that is about all we can expect at this late date in this session of Congress.

Other members of the committee on our side will discuss the different provisions of the bill. I did want to point out some of the practical difficulties which confront us. May I express the hope that we now get down to brass tacks. Let us enact a wheat bill which can become law. If that can be accomplished, I think the country will applaud us for having tried to accomplish something for agriculture.

Mr. Chairman, I yield 5 minutes to the gentleman from Oklahoma [Mr. BELCHER].

Mr. BELCHER. Mr. Chairman, Members who serve on other committees have no idea what a problem we have on the Committee on Agriculture. In the first place, we have several different commodities to consider and we have several different types of farmers within any one commodity. That is what makes it so difficult to write a wheat bill. In the first place wheat is the only commodity, the production of which we did not actually control from the beginning. The history of price supports and the control program for agricultural commodities is that you try to balance production with consumption. As far as wheat is concerned, we have not had control of production. Although 30 million acres have been retired from the traditional wheat areas of this country we are going to produce more wheat this year than we ever have produced in the history of America.

This is due to the fact that under the wheat program a farmer in a traditional wheat area that used to farm 100 acres of wheat is now reduced about 45 acres, but that 45 acres does not go out of production. It is split up into three 15-acre patches and spread out in other States of the Union where they never have raised wheat before. On these 15-acre patches more wheat is raised than was raised in the original wheat producing area. So as we reduced acres in the traditional wheat areas we transplanted them to Louisiana and various other States and they produce more wheat than was produced in the beginning.

This Congress and the Committee on Agriculture have never had the courage to face that situation. The day is coming when we will either face that situation or we are not going to have a wheat program.

I know a lot of Members of this House would like to see the agricultural programs eliminated and the cost of the agricultural programs saved. If that is what you would like to do, all you need to do is to continue to cut the wheat acreage in the wheat areas, instead of eliminating the 15-acre exemption and preventing the spread of wheat. This bill merely brings the 15-acre farms in as traditional wheat acres. Now instead of permitting them to raise 15 acres and sell the wheat without penalty, which they used to do, whereas the traditional wheat farmer if he raises a bushel of wheat over his allotment pays a $1.07 penalty before he can market that bushel, whereas a farmer who has never raised wheat can sell the entire production without paying a single cent of penalty.

This bill not only does not prevent that, it brings the new farmers into the wheat program and gives them a price support just the same as is given the traditional wheat farmers. Over the

past number of years at the very time we have had too much wheat, and members of the committee have continuously come to the floor and talked about the high storage costs and the huge surplus, we were puting 100,000 new farmers into the production of wheat each single year until up to the present time there are 1,200,000 of those new farmers producing wheat against the 600,000 farmers that used to depend and still depend on wheat for their entire source of income.

If you want to split up the wheat area and spread the acreage all over the United States, all you need do is just completely break the wheat areas and take them over, but just bear in mind that when we go out of wheat production we might produce something your area has to produce.

It has always been my theory, in view of the fact that we can raise wheat more cheaply than you folks can, the traditional wheat area ought to be permitted to raise the wheat and the other areas permitted to raise the crops they can raise best on their farms, but that is not what we have done. We have permitted you to keep your acreages of cotton, tobacco, rice, sugarcane, and all the others, and at the very same time take our wheat acreage. We have not taken any of the sugarcane from Louisiana or taken any of the tobacco acreage from the chairman's home district. I think it is just a practical proposition that we ought to raise wheat where wheat is a profitable crop and you ought to raise tobacco where tobacco should be raised, and cattle where cattle should be raised, and dairying the same. But that is not the program we have been following. If you continue to split this up and spread it out all over the country, we will not have any wheat area but we will have to compete with your tobacco, cotton, rice, or some other product in order for our farmers to stay in business at all. I think until this Congress faces up to the proposition and eliminates the 15-acre exemption and put the wheat acreage back in the traditional wheat area, we are not going to solve any wheat problem ever with any kind of program that continues to cut acreage in the traditional wheat area. I realize the problem that some of you ladies and gentlemen of this committee face when you have a group of these 15-acre farmers in your districts. I recognize how hard it is to vote to eliminate that. But just keep one thing in mind. If you do not vote to eliminate that, you are going to some day have to vote to eliminate the entire agricultural program. It might be bad and it might hurt your areas.

One more thing. The 15-acre farmer is not a small farmer. He is a corn farmer or a cotton farmer or a farmer engaged in some other activity for his source of income. He merely plants the 15 acres for a little cash crop in the summertime. He is not the little farmer. He is another farmer who has horned in on the wheat farmer.

I recognize how tough it is for some of you folks to vote for that kind of a program, but until you are ready to do it, you might just as well vote to repeal all agricultural programs.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOLEY. Mr. Chairman, I yield 5 minutes to the gentleman from South Dakota [Mr. McGOVERN].

Mr. McGOVERN. Mr. Chairman, a few minutes ago, one of the most distinguished members of our committee warned that the committee should not deal with this problem before us in a political vein and that we should not devote our time this afternoon attempting to fix responsibility for the difficulties in which we find ourselves today. Having made what I thought was a very commendable opening statement, he then proceeded to spend most of the next 15 minutes ridiculing those some two dozen Members of the Congress who are sponsors of the Family-Farm Income Act of 1960. This was a piece of legislation which was introduced in good faith by a number of Democratic Members of the House to accomplish three basic purposes: To give the producers of any farm commodity an opportunity, if they wanted to use it, to establish a market stabilization program, but only after two-thirds of them had agreed that that was the kind of program they wanted. I cannot see anything undemocratic about that, and I cannot see any regimentation or anything objectionable about giving the producers an opportunity to establish the kind of program that two-thirds of them want. We further provided that the program would have to be reviewed by the Congress and the Department of Agriculture, and that it could not go into effect if there were action by the Congress to disapprove it. The gentleman made a great point about the fact that we removed a number of commodities from the bill during the course of discussion in the committee. That is true, but it must also be recognized we did that because of the storm of criticism and propaganda that was set up by the Department of Agriculture and organizations such as the American Farm Bureau that really want no program at all. The only concrete suggestion we have had from the Farm Bureau and Secretary Benson to date is that we increase the amount of acreage in the soil bank from 28 million acres to 60 million acres by throwing whole farms into the soil bank and taking them out of production. If we were to do that, we would be destroying most of the communities in rural America and we would undermine agriculture itself. It was our further purpose in this legislation to reduce the costs of the program and to reduce the accumulation of surpluses. Those who have really been playing politics with American agriculture are not to be found here in the Congress of the United States—those who are really playing politics with American agriculture reside in the White House and in the Department of Agriculture. These are the gentlemen who came out to South Dakota and to other parts of rural America and promised the farmers in 1952 that they would work not for 90 percent of parity but for 100 percent of parity.

After 7½ years of this administration, farm commodities are down to about 75 percent of parity. What is at stake in this legislation before us at this time is this fundamental question: Do we want the wheat farmers of America to produce 55 million acres of wheat per year in the coming 5-year period or do we want them to produce 41 million acres while protecting their net income? That is the basic question.

If we kill this bill before us the farmer will again plant 55 million acres of wheat at a time when we already have 1.3 billion bushels in Government hands. If we pass this bill we enable our farmers to participate in a referendum that will enable them to cut back their production to about 41 million acres, but at the same time protect them against disastrous drops in income.

Mr. SHORT. Mr. Chairman, will the gentleman yield?

Mr. McGOVERN. I yield to the gentleman from North Dakota.

Mr. SHORT. Would the gentleman state for the benefit of the Members whether or not he believes a 25-percent cut in acreage and a 10-percent increase in the price-support levels, plus 55 percent payment in kind, will maintain the wheat farmers' income at the present level?

Mr. McGOVERN. I think it will result in a very slight increase. I have no way of knowing for certain what the income level would be, but the best information I have is that it would result in a slight increase. In any event, we are giving the farmers a choice to take no controls at all or to take the route suggested by the committee.

The CHAIRMAN. The time of the gentleman from South Dakota has again expired.

Mr. BELCHER. Mr. Chairman, I yield 5 minutes to the gentleman from Maine [Mr. McINTIRE].

Mr. McINTIRE. Mr. Chairman, I want to call attention to title II of this bill, which deals with the program designated as the "national stabilization program for feed grain." These are areas of agriculture that are interested in this legislation aside from those that are just producers of feed grain.

I realize the importance of price stability in feed grains, as well as the importance of price stability in other lines of American agriculture, but so that the members of the committee will understand what we are dealing with in these areas of the country that are deficit feed grain areas, I would like to bring to your attention a few facts.

First, let me say that the items we are dealing with, with the exception of corn—the other items of barley, grain sorghums, oats, and rye, are already operating within the framework of price stability under title III of the Agricultural Adjustment Act of 1949, as amended. In order that you would get the proper perspective, the price support on these items are as follows:

Barley 61 percent of parity; corn 65 percent; grain sorghums at 61; oats at 60, and rye at 60 percent of parity.

In the very first part of this title, section 201 of this bill, it states that the objective is to raise the price support level of those commodities to 85 percent. This is roughly a 20 or 25 percent increase in price.

Let me call attention to a few of the feed grain deficit States. While I appreciate these figures are generalities, nevertheless they are approximately correct.

The State of California has an annual feed cost of $412 million. The cost of this stabilization program to California will be approximately $100 million per year.

Let us turn to the State of Florida. The increased cost is about $18 million. For the State of Georgia it is about $35 million. For the State of Mississippi, $20 million; for the State of Virginia approximately $15 million. For Pennsylvania there is approximately a $50-million increase in the cost to the producers of dairy and poultry products of that State on their food grain costs. For the State of New York the increase will be about $40 million; for the State of Massachusetts $10 million.

In my own State, Maine, which of course is a deficit feed grain area, there will be an increased cost of $10 million; for Vermont $9 million, for West Virginia $6 million.

Feed costs represents 30 to 40 percent of the cost of production of milk and poultry products. This legislation, if it is effective, will increase the cost of feed grains in these feed deficit States.

I think in order to be fair, those of us in feed deficit States must recognize the problem in the feed surplus States; however, I think we need to give this legislation very careful consideration, and I certainly do not think we should support this measure which increases feed grain cost in feed deficit States.

Mr. COOLEY. Mr. Chairman, I yield 5 minutes to the gentlewoman from Idaho [Mrs. PFOST].

Mrs. PFOST. Mr. Chairman, I am one of the score of Democratic Members of Congress who are sponsoring this Farm Surplus Reduction Act of 1960. It is the kind of comprehensive program that has been needed by American agriculture for a long time.

I think it is unfortunate that opponents of the bill are trying to make it appear as an election-year football. It emphatically is not. A small, representative group of Democratic House Members—and I was one of them—first got to work on this legislation last August, after it became clear that we could expect nothing concrete in the way of action from Agriculture Secretary Benson to help the family size farmer. We worked diligently on it and had the bill ready for introduction the day after the President delivered his farm message to Congress last February 9.

That legislation has since been under study by the House Agriculture Committee. Lengthy hearings were held on the measure during which numerous experts on farming along with representatives from farm organizations testified.

Some 11 Governors appeared either in person or sent in statements supporting the measure. The committee then combed through the hundreds of pages of testimony and made changes accordingly in the original structure of the bill. The legislation before us today is the result of the weeks of study by the committee. I wish to take this opportunity to commend the members of that great committee for their tireless efforts in perfecting a bill that would benefit the family size farmer.

In the President's farm message, as I recall, he referred to the plight of the family farmer as a most vexing domestic problem, and he invited the Congress to come forward with a solution.

Let us not forget that the President was not the only one who was throwing out a life preserver when it comes to the farm situation. It is a fact that the Nation's 4.5 million family farmers, who make up the backbone of our great Nation, have been throwing out life preservers for almost 8 years now. It is also a fact that no help has been forthcoming to them in all that time. The record shows that the President has vetoed five major farm bills so far. And Secretary of Agriculture Benson is operating a policy that has the clear-cut aim of driving the family farmer off the land, which is his heritage, and into the overcrowded job scrambles now taking place in our major cities.

This is hardly the way to treat such a large and important segment of our citizenry—a citizenry that has made the American breadbasket into the largest and richest in the world.

A brief look at the plight of the family farmer today explain readily enough why this legislation was prepared. The net income of farmers has dropped from $15.3 billion in 1952 to less than $10.3 billion today, and the trend is continuing downward. The parity ratio has gone down from 100 percent to about 77 percent during that period. Farm indebtedness at $14 billion in 1952, is now above $20.8 billion today. Interest rates paid by farmers have increased sharply during these same years. The farmers share of the food dollar has dropped from 47 to 37 cents. Farm population, moreover, has declined from 24.3 million to under 20 million today. And the number of farm units has gone down from 5.4 million to under 4 million today.

Net income to the farmer as a whole, is at a 19-year low at the present time. And, as everyone in this body knows, we have the weird situation of the Nation's farmers literally drowning in the plenty they are producing.

After this brief look—and I could have cited even more unhappy statistics—it is reason enough to explain the need for a new attack on the farm problem.

The Family Farm Income Act of 1960, which has been amended and is now cited as the Farm Surplus Reduction Act of 1960, is designed to raise the income of the family farmer and protect him from ruin. It would reduce our fantastic farm surpluses which, in the President's own words, are costing the taxpayers more than $1,000 a minute to store. And the new program would cost only a fraction—about a half billion dollars a year—compared to the more than $5 billion that the administration is now spending to shore up its existing patchwork agriculture stabilization programs.

I will not go into the other details of the bill because it is being well covered here by other speakers. But, in conclusion, I want to urge the Members of the House to support this legislation. It is must legislation to fill the vacuum which exists in our agricultural policies today.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I offer a privileged motion.

The CHAIRMAN. The Chair will advise the gentleman that his motion is not in order at this time.

Mr. ANDERSEN of Minnesota. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ANDERSEN of Minnesota. Mr. Chairman, as long as I cannot get time from my side, I wonder if the gentleman from North Carolina may have 5 minutes for me at this time?

Mr. COOLEY. Mr. Chairman, I will yield the gentleman 3 minutes.

Mr. HOEVEN. Mr. Chairman, may I say that all of the time was allotted on this side before the gentleman from Minnesota requested time.

Mr. ANDERSEN of Minnesota. I am meeting a realistic situation, that is all.

The CHAIRMAN. Is the gentleman from North Carolina yielding 3 minutes to the gentleman from Minnesota at this time?

Mr. COOLEY. Mr. Chairman, I yield 3 minutes to the gentleman at this time.

Mr. ANDERSEN of Minnesota. Mr. Chairman, we are faced with what kind of a situation here today? We are faced, first, with the problem of trying to bring to the farmers of America a little bit higher price level for what they produce. We are faced with a situation where we have $9.1 billion worth of commodities owned by the Commodity Credit Corporation which are coming to the point where they are becoming unbearable from the viewpoint of storage costs to the general public.

What can we do in reference to this? Personally, I am willing to say to the wheat farmers: "Here, you have two alternatives, take your pick."

I am going to offer an amendment when we get to the feed grain section which would say to the farmers: "Now, if you like this committee proposal that the Committee on Agriculture has brought before us today, you can choose between that and the so-called green acres proposal which the gentleman from Iowa [Mr. JENSEN] and I have been proposing during the last 2 months."

That is all I am asking, and I intend to try to get that before the House for action so that we in the feed grain part of it will be able to give to our farmers a choice between two alternatives. I would really prefer to see three there. I would like to see the Farm Bureau proposal put in there and give the farmers an opportunity to choose between Mr. JENSEN's and my green acres proposal. The Farm Bureau proposal of wide open production, or, as the committee has made it, leaves it up to nine members, a committee of nine, who have nothing whatsoever to do with the Congress. Let the farmers decide; that is all I am asking. I think here today, if we are reasonable men and women, we can do something good for agriculture in America. I feel if we do not, we will be falling down on our job.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from Iowa.

Mr. JENSEN. I am sure the record will show that the gentleman from Minnesota and I have always helped the cotton and the tobacco farmers.

Mr. ANDERSEN of Minnesota. And the peanut farmers.

Mr. JENSEN. And the rice farmers of America.

Mr. ANDERSEN of Minnesota. All through my 22 years. And, the same thing applies to the gentleman from Iowa. We have helped you gentlemen from the South to get a fair break for your commodities, but we have no fair break in this bill as far as corn and feed grains are concerned, my friends.

Mr. JENSEN. That is what I was coming to. It just seems to me in all fairness that since many of us on this side from the agricultural States and many from the large cities have supported legislation to give the cotton and the tobacco farmer a break, the same consideration should be accorded those of us who are constantly and sincerely trying to help the farmers of the Midwest.

Mr. ANDERSEN of Minnesota. I thank the gentleman for his contribution.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. HOEVEN. Mr. Chairman, I yield 1 minute to the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. Mr. Chairman, I repeat it appears to us in all fairness and sincerity that we from the corn and feed grain producing States, the large breadbasket area of these United States, should have something to say about the kind of farm legislation which we know will be good for our farmers. And, if it is good for the farmers, it is good for every American. The Andersen-Jensen green acres bill, if enacted into law, will be beneficial to every farmer in America over the long pull.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. HOEVEN. Mr. Chairman, I yield 5 minutes to the gentleman from Utah [Mr. DIXON].

Mr. DIXON. Mr. Chairman, I would like to urge the House to reject H.R. 12261 because its net affect would be to aggravate rather than to solve the farm problem. I shall offer as a substitute S. 2759—the wheat bill passed by the other body.

The wheat problem today is terribly serious. During the past 5 years the net realized cost for the stabilization of wheat prices and income amounted to about $2.9 billion. This is 30 percent of the net realized cost for all commodities although wheat represents only 6 percent of the cash receipts of all agricultural products.

It is incredible that Congress has permitted this problem to grow to the proportions that we now face. Our wheat surplus is now 2½ times greater than the annual entire U.S. consumption of wheat for food.

The fundamental reason that the problem has grown to this magnitude has been Congress' unwillingness to face the problem realistically. The majority leaders in the Congress have constantly fought for high price supports, and yet they have been unwilling to cut production sufficiently to bring it into line with consumption.

It is obvious that incentive level price supports of 75 percent combined with the 55 million minimum national acreage allotment, and the 15-acre exemption should produce far more wheat than we need.

H.R. 12261 would repeat this identical blunder—

First. By raising the price support of wheat from 75 percent to 85 percent it would discourage the development of new markets for wheat which is a key to a real solution of adjusting demand to supply. It would price wheat out of the market. Raise wheat 25 cents a bushel.

Second. By raising price supports it will raise incentive for greater production for more intensive production of the land which is still permitted to be used for wheat.

Third. Instead of lowering the cost of the wheat program which is the crying demand of the taxpayers it would raise the annual cost about $104 million a year and $230 million over S. 2759 which I am offering as a substitute.

Fourth. In addition to this raise in cost to the taxpayers it would raise the price of wheat and in all probability the price of bread and its products to the consumer. It is just another bread tax. Raises bread about 1 cent per loaf and flour ¾-cent per pound or 10 percent.

Fifth. The idea of setting up commodity committees to determine programs for the feed grains seems to be an unconstitutional delegation of power by Congress.

Sixth. These commodity committees could set up programs for feed grains which could damage other segments of agriculture. What guarantee is there that our poultry, dairy, sheep, cattle, and swine producers would be protected against artificially high priced feed grains?

Hugh Colton, president of the Utah Cattle Association, has advised me that most cattlemen throughout the Nation are unalterably opposed to this kind of treatment of the feed grain segment of agriculture. I have similarly received dozens of letters and wires from other livestock people.

The proceeds from livestock amounted in 1959 to 55.9 percent of all of the agricultural proceeds and certainly their needs must be taken into account in this legislation. By contrast the proceeds from the feed grains amounted to only 7.4 percent. There can be no justification in any sense for permitting the feed grains to establish programs which could damage the livestock industry.

Seventh. The House bill would extend the area of controls.

Eighth. The House bill would set up a costly, difficult to administer and discredited food stamp plan.

Considering all of these regrettable deficiencies in the House bill, I would like to move that we replace the House bill with the Senate bill, S. 2759, which, although it is not perfect, is from every important standpoint a much better bill than the House bill.

In essence the Senate bill would continue the present level of price supports at 75 percent for wheat for 3 years. It would require reduction of 20 percent in acreage for those who comply with the program. The marketing quotas would have to be adopted by a two-thirds vote of all those who are permitted to vote. Those permitted to vote are restricted in the Senate bill—similar to the House bill—to those subject to marketing quotas. The wheat growers are given 50 percent of the previous 3-year average yield of wheat for the 20-percent acreage that they reduce their production. They are also permitted to reduce their acreage by more than 20 percent and collect the 50 percent acreage in kind.

Let me point out that this is a generous provision. The estimates that I have been able to gather indicate that for most wheat farmers they would make a good deal more money by receiving the 50 percent payment in kind than they would if they had to grow wheat on their land. Consequently, this bill can certainly not be said to hurt the wheat farmer in any immediate sense, but to the contrary helps him and, of course, in the long run it helps him even more because it helps in adjusting supply and demand.

The Senate bill reduces the 15-acre exemption to the highest acreage produced in the years 1956 to 1960, not to exceed 12 acres. The Senate bill also raises the penalties for noncompliance as does the House bill.

In summary, the Senate bill is infinitely preferable to the House bill and should be adopted by the House for the following reasons:

First. It eliminates the unpredictable, potentially dangerous and probable unconstitutional program for feed grains.

Second. It eliminates the costly and unwieldy food stamp plan.

Third. It does not raise price supports and thereby dry up market expansion.

Fourth. It does not raise price supports and thereby greatly raise the already exorbitant cost of the wheat program.

Fifth. It does not raise price supports and thereby become a bread tax to the consumers.

Sixth. The 50-percent payment in kind will be attractive for wheat farmers but much less costly than the 55-percent payment in kind provision of the House bill.

Seventh. The administration will accept the Senate bill. Consequently, House passage of the Senate version will insure at least a partial solution for the wheat problem.

Mr. JOHNSON of Colorado. Mr. Chairman, will the gentleman yield?

Mr. DIXON. I yield.

Mr. JOHNSON of Colorado. Earlier today I showed the House that the flour that goes into one loaf of bread brings to the farmer 2.3 cents. The Poage bill would bring the farmer 2.6 cents for that flour that goes into one loaf of bread. A loaf of bread sells for 21 cents and the farmer is only getting 2.3 cents. If we

passed a bill that would give him 2.6 cents, I do not see why that should increase the price of bread.

Mr. DIXON. Mr. Chairman, I cannot yield further. I merely wish to say that there is a considerable number of people, thrifty people, who make their own bread, and this would raise the cost of the flour to them by 10 percent. That is a major factor. Let thrifty housewives save the difference between the 2.3 cents which the farmers receive and the 25 or 27 cents which the consumer pays for bread.

Mr. HOEVEN. Mr. Chairman, I yield 5 minutes to the gentleman from Minnesota [Mr. QUIE].

Mr. LANGEN. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Minnesota.

Mr. LANGEN. Mr. Chairman, I thank my distinguished colleague from Minnesota for yielding and ask unanimous consent to extend my remarks in the RECORD following the remarks of the gentleman from Minnesota [Mr. QUIE].

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. QUIE. Mr. Chairman, in the brief time that I have, I should like to point out some of the things I dislike about this bill. First, let's take the wheat section. About 70 percent of the people who raise wheat today would not be allowed to vote in the referendum on whether they supported subtitle A or subtitle B. In the past it has been argued that not all the people who raise wheat should be allowed to vote, because those who raise less than 15 acres have the choice of taking part in the program, if they wish, or of not taking part in it if they so desire.

Under this bill all farmers who raised wheat in the past would be subject to quotas whether they have been raising 15 acres or less than 15 acres, and I think this is as it should be, but I believe all farmers subject to quotas in 1961 should have the right to vote in the referendum and unless this bill is amended 70 percent would be denied their right to vote.

A second thing about this bill which I think is faulty and will prevent it from becoming law is that the price support is set higher than the President would accept. We have been arguing price supports for a long time. If we are going to help farmers who raise wheat we must pass a bill which can become law. I am more concerned about increasing the amount my farmers will receive in dollars and cents than I am in what the price support will be. One reason why there is opposition to increasing the price support on wheat from 75 percent to 85 percent of parity, as in this bill, is that it will greatly increase the export subsidy which is necessary if we are to continue the present great export of wheat and we all hope it will continue. I do not believe we should saddle the American taxpayer with a further expense of this nature when it isn't necessary.

The bill has been designed as a means of helping the farmer through a payment in kind. Properly used, the payment in kind can greatly assist farmers' income while reducing production and reducing surpluses of wheat without the use of higher price supports. I think a payment in kind of 60 percent coupled with the present support of 75 percent of parity would be a good compromise. If this had been done, I think we all know that the wheat section of this bill could become law.

Going into the feed grain section, I just cannot agree at all with this effort to completely abdicate our congressional responsibility and authority and give it to nine men who can no more easily agree than nine men in Congress could agree. We have the opportunity here through our committee system to hear the testimony of the farmers all over the Nation and come to grips with this whole situation and draft legislation of benefit to the farmers. Under this proposal nine men would set up a program. They would not just turn over their suggestions to us. If we did not veto their proposal in 30 days, it would become law. If we should be tied up in such action as we were earlier this year such as consideration of civil rights, or the tieup in the last days of the session, it would be impossible to bring their proposals up and consider them and they become law without congressional action. Surely the Congress should have to take positive action before any proposal by individuals who have not been elected by all the people of this country would have the effect of becoming law.

It is not only the farmers who raise feed grain who have an interest in the feed grains. There are the people of whom the gentleman from Maine spoke who are in deficit feed producing areas. Surely these people do have an interest and should be represented. The reason laws must be passed by Congress and should continue that way is that we represent all the people rather than any special group.

We are concerned about the welfare of feed grain producers. Under this bill, no proposal of the nine-man committee in all probability would take effect for 2 years after the passage of this bill if all goes well. I have an amendment to this title which would be beneficial to the feed grain situation next year directly and an indirect immediate beneficial effect.

Mr. LANGEN. Mr. Chairman, the legislation that is the subject of debate before the House today possibly is designed to fill as great an area of need as any legislation that has or will come before us during the course of this session. This need can be emphasized just as effectively in terms of its significance to the taxpayer, the consumer as well as our farm populace. Therefore, I should want to emphasize that we are not only considering the degree of benefit that this legislation has to the American farmer, the producer of our Nation's food and fiber, but that we are also considering legislation that is of equal importance to our Nation's economy, our supply of nutritious foods, and even the much discussed matter of a balanced budget.

I shall not take the time of the House to present a long and intricate, statistical report of the need that legislation be enacted in order to stabilize and improve the farm economy, for this fact has been set forth so emphatically on numerous occasions by Members of this House, by the Department of Agriculture and by statistical reports from a wide variety of sources. All of them portray very vividly the almost continuous decline in farm income matched by comparable increases in the cost of farm operation as well as the cost of the everyday living expenses in the same proportion as has been experienced by our entire national populace. Likewise, it is just as common knowledge to the membership of this House that there is a need for our concern of this legislation from the taxpayer's standpoint. For here again, the cost of the present farm program and its many provisions have been sufficiently and adequately emphasized. The committee report sets forth this need most emphatically. With regard to the need for our concern of this legislation in relationship to the consumer, history has revealed to us over the years that any nation's strength economically, morally, and militarily has never been any better than the extent to which the nation has had available adequate supplies of nutritious foods and fibers. Therefore, this legislation must supply the opportunity for the producers of food and fiber to produce adequate supplies and to do so in a manner that will grant them the assurance of a livelihood that is comparable to other segments of our populace, and at the same time, to do so without any unnecessary burden to the taxpayer.

I am sure that every farmer throughout the Nation has no desire other than to enjoy an equal and equitable participation in the wealth of individual opportunity and standard of living that this Nation can offer. All of our attempts to achieve this goal and objective over the past 30 years have been found lacking in many degrees. Our latest experience with present regulations is a very real example of the degree to which this problem can become burdensome to the segments of our populace that I have previously referred to.

I should want to express my compliments to the Agriculture Committee for the effort they have expanded in seeking a solution to this problem, and to the Rules Committee for having brought this legislation before us under a rule that offers ample opportunity for debate and expression. The legislation before us, however, fails to meet the criteria that, in my humble opinion, are essential if we are to entertain any hope of arriving at a solution that might provide the answers to the already established needs. May I point to a few of them.

First, may I say that I find the legislation as reported lacking in the sense that it places further restrictions and regulation upon the individual farmer's activities and operation without giving to him sufficient opportunity, responsibility, and the assurance of an improved income. Regulations provided by the different titles would have the tendency to divide producers of wheat and feed grains into separate groups, with each being subject to regulation by separate authorities. My experience as a farmer,

together with a number of years in the administration of existing farm programs, has very firmly convinced me that the responsibility connected with the reduction of surpluses needs to be brought closer to the farmer himself rather than by the penalized direction of the Federal Government. I am just as firmly convinced that this responsibility the farmer both can and will accept if he has the assurance that his efforts will produce the desired results. It is not my purpose to say that I have the only or the foolproof answer to this suggestion, but I have introduced legislation that does provide for entirely voluntary participation by the farmer in return for an assured stability in his income. This legislation offers and provides for the following 11 goals:

First. It offers opportunity for the farmer to achieve full parity prices and his rightful share of our gross national income.

Second. It offers less Government control to the farmer and provides him with the opportunity of voluntarily curtailing production to meet demands.

Third. It offers sufficient incentive to the farmer which will encourage a very high percentage of compliance. Experience has surely proven that no program will be effective to any greater degree than the extent to which we can expect to get compliance.

Fourth. It presents no problem of administration. All of the provisions of the bill can be successfully and effectively administered through the township, county, and State committees and the regulations which govern our present program.

Fifth. It permits the law of supply and demand to function within the provisions of the legislation so that acreage shifts from one crop to the other will be governed by prices as determined by supply and demand.

Sixth. It deals with the entire national productive unit of wheat and small grain feed crops and reductions are required from actual planted acres, giving assurance that compliance will produce a reduced total production.

Seventh. It offers a reduced price support on wheat to those who make no contribution to a reduced production and eliminates the present loophole permitting anyone to seed 15 acres by permitting him to collect a payment in kind if he selects to keep these acres out of production entirely.

Eighth. It does not permit the acres taken out of production to be used in producing other crops that can further enhance the surplus situation.

Ninth. It provides that the President shall institute an investigation whenever it would appear that agricultural commodities are being imported in such amounts as to interfere with the laws and price-support programs for those crops.

Tenth. Compliance with this program will be less costly to the Government in that it will reduce surplus costs and so be beneficial to consumers and taxpayers as well as to farmers.

Eleventh. It will permit the law of supply and demand to again function as soon as present surplus stocks have been diminished to a point of having only adequate supplies in cases of emergency.

That these provisions would be acceptable to the farmer might well be emphasized by his willingness to participate in the many programs that he has been exposed to up to the present time. The reason that many of these programs have not produced the desired results, by my interpretation, has been because the relation the individual farmer has had to them has been entirely without any responsibility on the part of the farmer himself. It is surely in keeping with the American tradition, established by our great Constitution providing for the rights of the individual in a free enterprise system, that growth and progress can best be achieved by adequate means of developing our full potential of individual responsibilities and talents. This goal can be achieved in the field of farm legislation to the advantage of the entire Nation.

A second item that I find completely lacking in the proposed legislation is that no consideration seems to have been given to factors that are beyond the control of the farmer himself. May I mention in passing that I note no reference to the amount of dollars that are referred to as expenditures of the Department of Agriculture which have no relationship or benefit to farm income. But more important is the fact that there is no reference or consideration given to the extent to which the farm income, the volume of surpluses, and the cost of caring for these surpluses, together with resulting increases in the total Government expenditures, have been affected by imports of agricultural products.

I have previously called to the attention of the House how in three of the main crops in my area we have had substantial surpluses and Government expenditures, even though the American farmer has not produced a single bushel of surplus in any of these crops during the past 12 years. During this period, we have constantly had large storage expenditures plus a most depressing market and a continuous reduction in support prices with the application to the Nation that our farmers were the cause of these surpluses as well as expenditures, while the actual truth of the matter has been that the farmer was rather the victim of an import situation over which he had no control. It seems completely futile to me that we should even attempt to curtail production of crops in which our own production has actually been below total disappearance. This same problem has been emphasized by other Members of this House, particularly Congressman E. Y. BERRY, of South Dakota, concerning the extent to which imports have played a part in the entire livestock industry. When this entire scene is surveyed, actually we have no farm or surplus problem within our Nation's boundaries, for if we were called upon to produce quantities sufficient to meet all of our domestic and export needs, our total productive capacity might well be found wanting.

The production of sugar beets and cane is another very lucid example of the same principle. For here is a product in which we produce only 30 percent of our continental needs, and something over 50 percent of our needs in the 50 States. In view of these glaring examples of factors that affect the surpluses and economic problems pertaining to agriculture, how can we possibly expect that the American farmer is going to accept a standard of income that is far below the rest of our citizenry without his expressed and just concern.

I would hope that each of these items might be a substantial part of our consideration today. While I could continue for a more extended time to cite comparable and factual examples of these many inequities, in the interest of time, I shall not do so, for I think that these items alone provide sufficient reason for the Congress to respond to the need of this legislation. In conclusion, may I emphasize one further point. I have noted during the course of today's discussion, in addition to the many long hours of previous deliberations, an element of fear that we had not ought to enter into new fields of legislation pertaining to agriculture and that we might rather admit defeat and hope that by some miracle the problem will go away. I should emphatically state that I do not share this fear, for rather it would seem to me that our experience with the problem over the years should rather encourage us to try and to explore every possible avenue of correction and improvement, and that surely we need have no fear in so doing, for I do not see how we could possibly do any worse than we are now doing. The only possible way that the situation could get worse would be by our neglect to meet our responsibilities as a Congress, to face up to the problem that is before us, and I have every confidence that if we do, we can come forth with a solution that will more adequately serve the needs of the farmer, the consumer and the taxpayer to the complete advantage of the entire Nation's economy. It would be a folly to assume that this can be done overnight, however. I think we need necessarily to assume that it can be done only over a period or years, for we can not correct all of the problems pertaining to surpluses and inequities that it has taken the entire period since World War II to accumulate. We definitely need an adjustment period during which we can work our way out of the dilemma that we now face. This period might require a greater degree of direction and regulation than what will be needed after we get back to a normal balance of supplies and needs for agricultural products.

Because of the great variation in agricultural practices throughout the Nation, I know that it is most difficult to arrive at a unanimity of opinion as to how we ought best to legislate in this field. May each of us today, whether we represent agricultural or metropolitan areas, display our most cooperative and compromising attitudes, for there is no plan that can possibly serve every last little need of a specific segment of the

Nation. But there is every possibility that by proper consideration of the many amendments that will be proposed we can come forth with a plan that will better serve American agriculture, the taxpayer and consumer, and in this manner add strength to our entire national economy.

Mr. COOLEY. Mr. Chairman, I yield 5 minutes to the gentleman from Colorado [Mr. JOHNSON].

Mr. JOHNSON of Colorado. Mr. Chairman, I take this time to try to answer two or three cost estimates cited this afternoon that I think are of unusual interest. Taking them in reverse order, the gentleman from Utah mentioned that this would be a tax on wheat flour. This could only raise the price of wheat going into flour by some 3 mills a pound. If flour is selling at 7 cents that could not be an increase of about 10 percent. The really important question is, What would be a fair price to the farmer? If it takes 3 cents instead of 2.7 cents to produce the wheat, I think we should get a fair price for the farmers.

Mr. DIXON. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield to the gentleman from Utah.

Mr. DIXON. With regard to whether or not this is a bread tax, most of the thrifty housewives make their own bread from flour. This bill would raise the cost of flour three-fourths of a cent a pound. Flour sells at approximately 7.5 to 8.5 cents a pound. Therefore the bill would cost the housewife approximately 10 percent more for her bread, because outside of the little salt and yeast the flour is the main ingredient, and she saves the spread in the bakery bread due to the high labor cost.

Mr. JOHNSON of Colorado. My own wife bakes bread from flour. Raising the price of wheat would increase the raw material by 10 percent, but I see no reason why it should increase the finished product by 10 percent.

The suggestion was made by the gentleman from Maine, speaking about title II, that this would increase the cost to the consumers.

I would call to the attention of the Members section 205 of the bill, pages 20 and 21, which points out that any different income stabilization method individually or in combination may be used, in order to achieve a fair price to the producers at the lowest possible cost to the consumer or the taxpayers. This is the criterion to be used. I do not see how under those circumstances the figures cited by the gentleman can be supported, and unless supporting evidence is given in the RECORD, I shall have to retain a doubt with respect to those figures.

Finally, the gentleman from Iowa [Mr. HOEVEN] speaking earlier on the overall cost, gave some figures which he did not substantiate. I would like to take the remaining time to review the estimates made by the senior specialist in agriculture for the committee on the data involved in program A of the bill.

At the present time we are producing 1,200 million bushels of wheat and only using for both domestic utilization and export about 1,050 million bushels, which means that we are increasing stocks annually at the rate of 150 million bushels. It is estimated that the reduction of 25 percent in allotments would cut production to 960 million bushels or 240 million bushels below present levels. This assumes a 20-percent reduction in output for a 25-percent reduction in acreage, a not unreasonable estimate. Therefore, we actually will not only not be adding to surplus, but we will be taking 90 million bushels out of surplus. The 150 million bushels we are currently putting into storage each year, at a cost of $1.75 per bushel, will provide a $265 million savings to the taxpayers at the outset. In addition to that, there will be savings on storage of 240 million bushels of reduced output at 30 cents per bushel, which provides a $72 million saving; or a gross annual saving of $337 million.

Against that gross saving, there is some increase in cost. For example, exports overseas would have a net increase under the terms of the bill. After taking into account the increased value of wheat under the 85-percent support figure, the increased subsidy is 10.5 cents per bushel, and figured on 450 million bushels exported, there is a $47 million increase in the export subsidy payments.

Then there is the payment in kind on reduced acres. The payment in kind needs to be figured on a net rather than a gross basis, because we are saving the cost of storing additional bushelage that would otherwise be added to it. So we have, against a 149 million bushel payment in kind, we have a reduction in stocks under this program of 90 million bushels. So that the net would be some 56 million bushels at $2.03 a bushel or $121 million.

The increased payments in kind, and the increased export payments come to $168 million, against savings of $337 million. Consequently, the net saving in governmental outlays or costs would be some $155 million to the taxpayers as a direct result of the adoption of the bill, which is pending before the committee as it stands. I fail to see, unless the gentleman from Iowa can enlighten the committee, how one can say it will be a $500 million increase.

Mr. HOEVEN. Mr. Chairman, I yield 5 minutes to the gentleman from North Dakota [Mr. SHORT].

Mr. SHORT. Mr. Chairman, a Congressman representing a State which produces roughly 10 percent of the wheat produced in the Nation finds himself in a rather peculiar position on the day that we bring before the House a bill that can so very drastically affect the income of a very large percentage of our population in the State of North Dakota. Most of the things, Mr. Chairman, that I intended to say have already been said by some of my colleagues.

I just want to make one further comment on the remarks of my colleague, the gentleman from Oklahoma [Mr. BELCHER] when he mentioned briefly the 15-acre aspect of our present wheat legislation. I think, perhaps, few people realize fully the ridiculousness of the situation that we have been in in our present wheat program.

As most of you know, we presently have a wheat-production control program. That is true so far as the original traditional wheat producers of this Nation are concerned. The wheat producers in my State that have been producing wheat for 50 years, and in all other States, have been reduced from their traditional production acreage about 35 percent. This was a curious aspect of our present wheat legislation. While we were attempting to apply controls that would to some degree balance supply and demand, what did the Congress do? They left the door wide open to every farmer in the United States that was not already producing wheat to grow up to 15 acres of wheat without any penalty. He was not eligible to participate in the Commodity Credit Corporation loan program, but he could grow up to 15 acres of wheat and sell it without any penalty.

I just wanted to inject this little aspect into consideration today as it relates to our overall farm and agricultural situation. We have been advised many times that wheat or any other feed grain, when it was in surplus would immediately contribute to a vastly increased supply of livestock. We were told last fall when hogs were selling as low as $10 and $12 per hundred that we could look forward to nothing but a continuation of that same price level. Today I am happy to report that hogs are selling today at 18 cents a pound. We did not pass any legislation last year that would have attempted to control hog prices or production. I think we can be thankful that we did not. I think the hog producers can be thankful that we did not.

Being primarily a cattleman, I want to say a word or two about cattle production and cattle prices. As most of you know, the livestock people of the United States, largely the cattle people, have resisted with everything at their command any attempt to include cattle prices or cattle production under any price support or production control program. What has happened? To me this points up an important aspect of our entire consideration of agricultural problems. Without any controls, without any supports, cattle enjoys the highest parity level of any agricultural commodity produced in the United States today. The livestock people still stand firmly behind their traditional position of wanting no part of any attempt on the part of our Government to control or subsidize or support the price of the commodity that they produce. The experience they have enjoyed has proven beyond any doubt that they are right in their contention, that the price of their commodity will enjoy a better level if left alone.

The CHAIRMAN. The time of the gentleman from North Dakota has expired.

Mr. HOEVEN. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. PIRNIE].

Mr. PIRNIE. Mr. Chairman, it is certainly true that every Member of this body is desirous of reaching an effective solution to this very, very perplexing problem, but I hope that in so doing we

are not going to create another type of problem that can very well plague us in the days ahead.

Reference has been made in the course of the debate to title 2 of H.R. 12261 and its proposal that there shall be established a nine-member committee which shall have the power to determine upon a program which shall be reported to Congress by the Secretary of Agriculture. In the event either body upon receiving a report of its action does not disapprove within 30 days the recommendation shall become final. This approach is clearly an improper delegation of authority. In addition to being unwise, as has been pointed out by my colleagues, it does not permit proper representation of all segments of our Nation directly concerned with this program. It does involve a delegation of authority which appears to be unconstitutional. We certainly should not adopt a procedure which has been demonstrated by prior action not to have the approval of the courts and not to be in keeping with the responsibilities of this body.

While it is true that we should seek and should welcome the advice of those who actively engage in the particular field with which we are dealing, we should not forget the taxpayer and the consuming public. However, their roles should be purely advisory. We have a Department within the executive branch of the Government which is charged with protecting the agricultural interests of this great Nation. This not only includes the adequacy of our food supply but also the livelihood of the farmer himself.

The recommendations of the Department of Agriculture should reflect this broad approach, and should be of great assistance to this body, enabling it to formulate a legislative program recognizing a precedent we can follow in dealing with every other similar phase of our economy.

Do we intend to say to all groups plagued with a problem of income or supply that they shall come to us, state their problem, make their recommendations, and they will be enacted into law unless we veto it? Can this be applied as a pattern in dealing with labor, in dealing with industry, in dealing with all phases of our economy producing something that may go into surplus? I think you will agree with me that such cannot be a continuing practice. Then why should it be the practice here?

I should like to call your attention, Mr. Chairman, to two cases dealing with the constitutional question of the delegation of legislative power to private persons.

The Bituminous Coal Conservation Act of 1935 provided that the producers of more than two-thirds of the annual tonnage in the preceding year and more than one-half of the mine workers could fix wages and hours for all producers and mine workers in the district. The act was declared unconstitutional by the Supreme Court in *Carter* v. *Carter Coal Co.* (298 U.S. 238, 311), wherein it was said:

> The difference between producing coal and regulating its production is, of course, fundamental. The former is a private activity; the latter is necessarily a governmental function, since, in the very nature of things, one person may not be entrusted with the power to regulate the business of another and especially of a competitor. And a statute which attempts to confer such power undertakes an intolerable and unconstitutional interference with personal liberty and private property.

By way of contrast the Bituminous Coal Act of 1937 provided for the determination of prices by a commission appointed by the President with the advice and consent of the Senate. The constitutionality of the act was upheld in *Sunshine Anthracite Coal Co.* v. *Adkins* (302 U.S. 381, 399), wherein the Court said:

> Since lawmaking is not entrusted to the industry this statutory scheme is unquestionably valid.

In *Schechter* v. *United States* (295 U.S. 495, 537), in which the Supreme Court declared invalid the "Live Poultry Code" promulgated under the National Industrial Recovery Act, the Court, speaking through Chief Justice Hughes, made the following statement:

> The Government urges that the codes will "consist of rules of competition deemed fair for each industry—by representative members of that industry, by the persons most vitally concerned and most familiar with its problems." * * * But would it be seriously contended that Congress could delegate its legislative authority to trade or industrial associations or groups so as to empower them to enact the laws they deem to be wise and beneficent for the rehabilitation and expansion of their trade or industries? Could trade or industrial associations or groups be constituted legislative bodies for that purpose because such associations or groups are familiar with the problems of their enterprises? And could an effort of that sort be made valid by such a preface of generalities as to permissible aims as we find in § 1 of title I? The answer is obvious. Such a delegation of legislative power is unknown to our law and is utterly inconsistent with the constitutional prerogatives and duties of Congress.

These precedents should inject a note of warning respecting adoption of the approach outlined in table 2, and I hope this improper procedure will be disapproved.

Mr. COOLEY. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. COAD].

Mr. COAD. Mr. Chairman, as a member of the great House Committee on Agriculture I believe that this is the time when we must speak out in behalf of the American family farm. It is a way of life that we are attempting to defend here, the family farm.

Much has been said today about the fact that we should take the agricultural problem out of politics. I am one of the first to agree that this should be done, it must be done, and it should be done today. I believe every one of us who can assume any stature at all should assume the stature of a statesman. That applies to the Members of the House and it applies to the Members of the other body as well. It also applies to those who are candidates for the Presidency of the United States, including the candidates of both parties.

If we would look at the situation today we would find that there are those on both sides of the aisle, in both political parties, who are attempting to play politics. They are not confined to the Democratic side.

In this morning's press it is stated that Vice President NIXON attempted to reassure the farmers in North Dakota that if elected President he would support a new kind of a farm program different from both the Eisenhower and the Democratic proposals, which would sustain farm income. The Vice President refused, according to the dispatch, to discuss the crucial issue of farm price supports while Congress is still debating the President's proposal, but he promised to do it later.

I say that today, the sooner the better, we need to do something for the American family farm for it is in the best interest of the entire citizenry of this country that we do. It is time that we have people stand up here and take a stand and quit waiting until it is politically expedient to do that which needs to be done.

A few weeks ago I was called home to my district. I was asked to return by a group of bankers of Winnebago County. The county of Winnebago is the richest county in the State of Iowa, bar none, and Iowa is one of the richest agricultural States in the Union.

These bankers, who are not necessarily political friends of mine, asked me to come there and talk about the serious situation that confronts the family farmers who live in that county. Winnebago County has never had a drought that has been cataclysmic to the farmers, it has never had a total crop failure for any reason. But here in this richest county of Iowa the bankers, not the farmers, asked me to come there, sit down and talk about the problems of the family farm. I believe it is high time that we quit blaming one or the other, but if we have a solution to come forward with it, and this includes Mr. NIXON.

We who are members of the Committee on Agriculture of the House have worked diligently, we have worked long and hard, and we have come forth with this bill, a bill that is not perfect but it does do some constructive things.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. COAD. I yield to the gentleman for a question.

Mr. ANDERSEN of Minnesota. I want to ask the gentleman if in his opinion the farmers of Iowa and Minnesota can make both ends meet with 95-cent corn?

Mr. COAD. They cannot make both ends meet with 95-cent corn; no. I know that the farmers, the bankers, and the Main Street merchants are concerned about the problem of 95-cent corn. And I know what it is to listen to the haunting chants of an auctioneer selling out a family farm.

We have heard some here today from farm States who are most concerned about higher consumer prices. I regret to say one of my colleagues from Iowa is seemingly most concerned and is worrying about the consumers. I am worrying about the consumers, too, but I am first worrying about the farmers. If the farmer has a strong economy the con-

sumer will receive a reflection of that stronger economy. In the wheat section of this bill there is a realistic referendum choice. I believe it is sure, I believe it is sound. Let the farmers select what they really want. The feed grain section does not impose legislatively anything upon the backs of the feed grain farmers. It simply presents guide lines that the feed grain farmers can set up in the way of their own programs; then the Congress has the right of veto. If it is not a wise program the Congress has 30 days effectively to veto it. Then in section three of the bill is a program distributing protein food to the needy. The cost of this entire bill will be low to the consumer and greatly beneficial to the farmers. I urge its adoption.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. BROCK. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

Mr. BROCK. Mr. Chairman, as we approach the closing days of this final session of the 86th Congress we are again at the crossroads in earnest deliberation to legislate a sound and workable farm program, one that will attempt to satisfy all elements vitally interested in this very important segment of our national economy.

There should be no question in the mind of any Member of this House in that we are faced with a very serious farm problem, one that represents a very definite challenge to resolve. This problem has been growing steadily worse for the past 7 or 8 years and has resulted in continual mounting surpluses of agricultural commodities, lower prices for farm products, and the constant dropping of annual net income for the average American family farmer.

It is the direct result of a series of impractical and unworkable theories and farm proposals that have not taken into consideration the technological advances made in the field of agricultural production, but instead have brought the average family farmer to the brink of bankruptcy.

I can tell you from personal knowledge and observation in my own Third District of Nebraska, which is wholly comprised of agricultural and rural communities, that we in the Midwest farm areas are in a serious economic condition.

This depressed economic situation can be better illustrated by reviewing the farm income status—for the past, present, and the future—in a very few simple and detailed steps that defy contradiction.

First. Farm prices at 75 percent of parity—the lowest in 19 years.

Second. Farmer's share of the consumer's food dollar at 37 cents—the lowest in 20 years.

Third. Net farm income, $10.3 billion for the year 1959—the lowest in 17 years.

Fourth. Farmers' out-of-pocket net income losses since 1951—over $24 billion.

Fifth. Farm production expenses at new peak of $26 billion in 1959, using up 68 cents out of each gross farm dollar—that is almost as bad as in the year 1932, the peak of depression.

Sixth. Accurate forecasts of even lower farm prices and net income for the present year 1960.

Seventh. Five Presidential vetoes of major farm bills in 7 years.

That, Mr. Chairman, tells part of the story but not all of it. While it was not, and is not, my intention to burden you and this House with statistics and figures, it is sometimes very difficult to present a constructive picture without them.

The loss of net income to the farmer started in 1951 in the amount of $2.3 billion for that year. It has progressively increased until the year 1959, when the total reached an accumulated net income loss of $24.1. The net income loss for that year, 1959, cost the farmers and the businessmen in my own State of Nebraska $800 million.

To further bring out the depressed economic situation in which the average family farmer finds himself today, we need only to look at the records of per capita income for the various segments of our national economy. You will find that in the year 1959, some 21 million people living on the farm averaged only $960 of per capita income, whereas the rest of our national population had a per capita income of $2,202.

The total national income has risen from $279 billion in 1951 to $398 billion in 1959, an expansion of $119 billion, in our national economy. Wages and salaries represented $98 billion of this expansion. Meanwhile, total farm income for the same period dropped $4.5 billion. These figures are enough to make the average farmer weep.

While the farmer has been forced to bear the increased costs of living, reflected in his purchases of farm equipment and other necessities, increased labor costs, education of his children, stipulated and the many other hidden taxes, he has been very definitely shortchanged on the distribution of the increased national wealth.

As the per capita income of the industrial worker and the other segments of the national economy moved steadily upward, the net income of the average farmer steadily declined. This lack of equal distribution of the national wealth has brought upon us the "farm problem" with which we are faced today. Unless it is solved, and promptly, we will be faced with a further and unsurmountable problem that can only result in national economic depression.

There are other reasons for the existing "farm problem" that must be taken into consideration. Of prime importance is the constant increases in our importation of livestock and red meats. During the past 2 years I have made a thorough study of this related problem and have made numerous objections to our Department of Agriculture, the Tariff Commission, and the White House, requesting them to use their constituted authority to invoke quotas that would impede or halt these increasing imports that were threatening the very existence of some of our domestic markets, particularly so when these domestic markets were in a depressed condition.

Figures compiled by the National Livestock Feeders Association indicate that in the year 1958 we imported a total of 1.154 billion pounds of beef products, livestock and the equivalent, which represented 8.2 percent of our domestic production. In the year 1959, there was a very slight drop, to a total poundage of 1.067 billion, or 7.5 percent of our domestic production. We might also refer these figures to the year 1956, when we imported a total of only 182 million pounds of beef products.

It is interesting to note that while this Nation is the world's greatest hog producer—one of the principal agricultural commodities of the Midwest States—we actually import more pork products than we export. During the 12-month fiscal year period of 1959, we imported a total of 196 million pounds of pork products, whereas our exports for the same period amounted to only 60 million pounds.

Lamb and mutton represented by far the largest percentage gain in meat imports, rising 165 percent in 1959 over the 1958 figure. This gain resulted from the imports of over 42 million pounds, as compared to less than 16 million pounds in the year 1958. The importation of these particular lucrative products have become so important to the down under countries of Australia and New Zealand that the importers have chartered innumerable freighter ships, have embarked on a shipbuilding program of larger refrigerated vessels, and have now resorted to flying in their product.

Similarly, the same products are being flown in from Iceland, and other cold countries who have realized that our wide-open import policies beckon them to greater profits than they could possibly realize in their own countries, all to the detriment of our domestic producer.

To add insult to injury, kangaroo meat, not generally used as food even in Australia today, has been imported into some of our Eastern States, in large quantities, labeled as "eating meat," to the unsuspecting public. It almost belies description when you think that our Department of Agriculture would be so lax in the performance of their duties to permit such a situation to happen. It required action on the part of the Attorney General's office to halt this corrupt and vicious import practice.

To fully understand the danger of this increased importation of meats into the United States, its effect on the economy of our domestic producers, as well as its contribution to our already mounting agricultural surpluses, it is necessary to discuss some of the problems involved in the production, and feeding of livestock, and particularly beef. Across the Nation generally it requires the annual production of an average of 20 acres to produce a beef. It also requires an average of 2 years to put that beef on the market. The beef imports alone last year supplanted the production of more than 80 million acres of land. These 80 million acres of land had to be used for some other purpose, which naturally resorted to the raising of crops

that are now branded as a surplus agricultural commodity.

While on the subject of agricultural surpluses, we might recall to mind the subject of farm subsidies. When the average persons hear the word "surpluses" and "subsidies" they immediately think of agriculture and the farmer. Far too many of our good and conscientious citizens labor under the delusion that the average farmer is the beneficiary of tremendous subsidies, all at the expense of the other taxpayers.

Actually, nothing could be further from the truth, as factual evidence will bear out. The farmer is charged with much more subsidies than he actually receives and what he does get is comparable to a drop in the bucket when you stop to consider the other enterprises subsidized by the Federal Government.

The fiscal year budget for 1959 included an item of $6.8 billion, which was supposed to subsidize agricultural activities. Many people who were fortified with adverse publicity, thought it all went to the farmer. Upon analysis we find that $2.1 billion went for losses on price supports, other supports, and the acreage reserve, all properly chargeable to the farmer.

Now, let us look at the other side of the ledger and bring it into balance. One and four-tenths billion dollars included payments for conservation, loans for rural electrification, and so forth—repaid with interest to the Federal Government—and agricultural research and education. These make the farmer more productive and efficient and the benefits accrue to the consumer in the future.

Three billion three hundred million dollars, or about half of the agricultural budget, went for foreign disposal of surpluses, storage and interest charges on surplus agricultural commodities, donations of food, free school lunches, and reserve for future losses. In a sense, this group indirectly helps the farmer by expanding the market but the majority of the benefits therefrom go to others than the farmer.

This indicates that hardly more than 50 percent of the so-called farm subsidy for that year went directly into the hands of the average farmer.

Subsidies do not have to be a direct Government handout but public acceptance is often dependent upon how well the subsidy is disguised or hidden. Very substantial subsidies are paid to the commercial aircraft and shipping industries, but the biggest and most concealed subsidies are paid out in the form of business reconversion payments, including tax amortization, which has amounted to almost $50 billion since that tax writeoff went into the statute books.

If I be permitted to use a Biblical phrase, the subsidies directly paid to the average farmer could be well-called a "Peter's Pittance" compared to the tremendous amount of subsidies paid out by the Federal Government in the field of amortization in the form of tax grants or exemption.

Today, we are considering the Surplus Reduction Act of 1960, introduced by my good friend and colleague from the State of Texas, a sincere and dedicated friend of agriculture. His bill is a step in the right direction, one that will provide for reductions in our future anticipated surplus production of agricultural commodities. In some features of the bill, we will find variance with our colleagues on the Senate side of the Capitol, particularly so in the problems of our production controls and price supports on wheat.

As previously stated, this is a good bill and one that was reported after considerable deliberation by the House Committee on Agriculture. In the absence of any other agricultural bill for this purpose, I will support it. My concern, however, does rest in my own State of Nebraska and the other Midwest States that place much dependence on the production of feed grain. It is a must with me that the producers of feed grains in my own Third District and the rest of my State and the Middle West be protected in this legislation.

With this thought in mind, I refer you to my own farm proposal, H.R. 11799, introduced in this House on April 19, this year, that will provide a new farm program for 13 basic agricultural commodities, which includes corn, wheat, oats, cotton, barley, flax, tobacco, rice, grain sorghums, soybeans, peanuts, rye, and wool.

My bill would provide for the more orderly marketing of agricultural products at reasonable process, creation of a national food and fiber reserve, price supports that would yield an average of 100 percent of parity for agriculture, and necessary controls of production that will eventually lead to reduction of our present surpluses.

In behalf of my proposal, may I say that people generally recognize that agriculture must conform to the practices of industry and produce in accordance with the demand for any or all of the basic agricultural products.

This was uppermost in my mind when drafting this legislation.

However, this cannot be conceived by the farmer himself at this time, simply by throwing him on the slogan rule of the law of supply and demand. It must be accomplished in measured steps, with the help of the Federal Government, until such time as we reach a goal of diminished surpluses of agricultural commodities, a return to a fair and just market price for farm products, aided and abetted by orderly marketing processes, and a control of production that will meet the law of supply and demand.

My bill also provides for the protection of our domestic agricultural markets by the imposition of import quotas and tariff fees on commodities imported from foreign countries. Such tariff fees collected under the authority of this bill would be deposited in a special account and credited to the nation where such imports originated for the purchase of goods produced in the United States. This would have the effect of giving us a balance in the area of reciprocal trade and would be to the advantage of the domestic producer.

One of the abject failures in our recently administered farm program has been the falling off of our exports of agricultural commodities. As a record-producing nation in the field of agriculture we naturally should be exporting far more of these products than we would import. Unfortunately, this is not true in official statistics recorded by the Departments of Agriculture and Commerce.

Any attempt to restore farm prices by curtailment of production or higher price supports will be ineffective unless we prevent an excess of farm imports. On the other hand, we cannot have any prosperity on the farm until we achieve a greater balance of exports over imports. To achieve such a balance it is necessary that our exports of agricultural products reach a figure of not less than 1½ percent of our total national income. If this ratio was maintained at the present time, we would dispose of some $6 billion in export goods which would spell the difference between prosperity and depression in the agricultural areas.

In the period 1943–52, 90 percent price support legislation resulted in 100 percent average parity for agriculture. The parity price, as defined in my bill, H.R. 11799, shall be based on an average of not less than 90 percent, or more than 110 percent of parity.

Parity prices for the 13 basic agricultural commodities under the provisions of this bill would approximate the following:

Wheat, $2.19 per bushel.
Corn, $1.67 per bushel.
Oats, 93 cents per bushel.
Barley, $1.43 per bushel.
Soybeans, $2.92 per bushel.
Rye, $1.77 per bushel.
Sorghums, $2.65 per hundredweight.
Butterfat, 78 cents per pound.
Milk, $4.91 per hundredweight.
Eggs, 49 cents per dozen.

If you will compare these given prices with the prevailing prices today for the same commodities, you will readily see the difference between prosperity and depression on the farm.

There are, however, some among us who advocate the theory of removal of all price supports and production controls of agricultural products.

With your indulgence, I will now outline the future prices that would prevail under such conditions.

A recent study completed by the economists of the Department of Agriculture and the land grant colleges, on the theory of the total elimination of price supports and acreage controls on agricultural products, will not come as a surprise to the majority of practical farmers and others in the rural areas. It should not be a surprise to the many Members of this House who are the representatives from the agricultural areas.

The conclusions reached in these economic studies indicate that farm income would fall to about $7 billion by the year 1966. if all price supports and acreage controls are removed. This represents a drop of 46 percent from the 1958 level and less than half that of 1952.

There was a difference in the related studies as to the actual prices that would prevail for the various products. The

USDA economists came up with prices projected to 1965, as follows: Wheat, 90 cents; corn, 80 cents; hogs, $11.20 and cattle, $15. The land grant economists projected their figures to the years 1962–63, and produced the following prices; wheat, 74 cents; corn, 66 cents; hogs, $10.80; and cattle, $11.51.

Now, even the figures submitted by the USDA economists would bankrupt most of the farmers and a good portion of commercial agriculture would have to go through a complete reorganization to survive. If present standards of living were to be maintained on family farms, land values would have to be assigned zero value. Farmers owning their land and other property outright, free of mortgages, would have nothing left above operating and living expenses. Their real income would be zero.

Further analysis of these studies indicate that the wheat farmers would have their net income reduced by 50 to 75 percent; feed grains and hog producers by 50 percent; and cattle producers and feeders, 25 to 35 percent.

The net result of these economic studies clearly shows the end of the low price road in a high price country, and points up the unbalanced national economy that presently exists.

Prosperity for our farmers can be brought about only by passage of good, workable farm legislation that will boost the net income of farm families, and by changing our lopsided national economy into some semblance of balance between the annual incomes of the urban industrial workers and other high-paying occupations, and the farmer who toils in our agricultural areas.

Lack of equal prosperity for the farmer will not only destroy small business in the rural communities but will be reflected in considerable measure throughout the industrial and manufacturing areas of the rest of the Nation.

In visiting with some of my colleagues who represent various industrial and manufacturing areas of the Nation, I find that they are genuinely concerned with the economic depression in the agricultural areas, particularly so, due to the adverse effect it is having on the production of the industries in their areas.

The pinch has been getting deeper as time progresses and now has become a major factor in the planning production of these industries. This has vitally affected the steel industries in Pennsylvania, Indiana, Ohio and other States, as it has also affected the tire and rubber productions in Akron and the other rubber manufacturing centers.

To realize the enormous purchasing power of the agricultural areas one needs but to turn to some of the official statistics compiled at the end of 1958:

There were more than 12 million trucks, tractors and cars on the farms.

Agriculture consumed more than 15 billion gallons of petroleum products, more than any other segment of the national economy.

Agriculture consumed more electric power than the combined total of the cities of Chicago, Detroit, Houston, Baltimore, and Boston.

Agriculture purchased over 6½ million tons of steel.

Agriculture purchased enough rubber tires to equip over 6 million cars.

Agriculture purchased more than 50 million tons of chemicals.

Agriculture and rural America represented a purchasing market of $40 billion for the national economy.

The cities of America depend on agriculture for an abundance of food and raw materials, for part of its expanding markets, much of its labor, its management and its genius.

Let us legislate wisely in this area and not cast aside the returns that come to us annually from this very important segment of our national economy.

We have made mistakes in the formulation and administration of some of our previous farm programs but it is not too late to correct them.

Mr. HOEVEN. Mr. Chairman, I yield 6 minutes to the gentleman from Ohio [Mr. LATTA].

Mr. LATTA. Mr. Chairman, for this Congress to pass H.R. 12261 would be a public admission that it cannot cope with the surplus agricultural problem that it itself helped to create. By the passage of this legislation, the greatest legislative body in the world would hope to relieve itself of the responsibility of finding an adequate and just solution to one of our greatest domestic problems.

For this Congress to attempt to delegate authority and responsibility which the people have imposed in it, would certainly be construed to be an admission of incompetency on the part of the membership to deal with this difficult problem. I personally am not ready to make such an admission and I know many other Members of this House are not ready to do so either. We need no other reason than this to strike the delegation of power from this bill.

Let us now examine what this bill proposes to do to the small family-type farmer. Even the former title of this bill, "The Family Farm Act," which in itself was a misnomer has been stricken, can now in all frankness be referred to as the act to eliminate the family-type farmer.

This bill would deny a small family-type farmer a voice in the basic referendum which is provided for herein.

The wheat section, title I, calls for a referendum in which growers would decide by a majority vote between a program of high price supports and strict controls and a program without controls and unlimited acreage with lower price supports. Such a referendum would obviously be of vital concern to the small wheat producer; yet some 70 percent of all wheat producers are denied the right to vote because they produce 15 acres or less of wheat. It seems utterly ridiculous to exclude these small wheat producers from participating in a referendum that could possibly head the Nation's wheat program in a direction in which both the producers and consumers want to go. Such a provision can only be intended to favor the large commercial wheat producer, who produces a type wheat which is causing our surplus, and assure him a dominant voice in the wheat referendum.

We also have discriminated against the small producer in the feed-grain provisions of this bill.

Under the feed-grain title, after a program has been drafted by a farmer committee, a referendum of feed-grain producers would be held to determine whether the program should take effect. The authors of this bill have denied a vote in this referendum to all farmers whose annual production of feed grains amounts to less than $500, unless the feed grains total more than 50 percent of his farm output.

This provision not only would deny many farmers the right to vote on a program that would vitally affect their family livelihood, but it would involve a cumbersome and costly chore by government people in trying to determine voting eligibility.

Lack of fairness in voting eligibility is only one of the many undesirable features of this proposed legislation. It would increase the amount of export subsidy and would create many new, costly administration problems. It could conceivably resurrect the discredited Brannan plan.

In short, the wheat and feed-grain sections of this bill would aggravate—not eliminate—our farm problem.

This bill continues the unrealistic approach to the wheat problem by failing to take cognizance of the fact that all classes of wheat are not in surplus and for this reason should not be treated in the same manner as the classes of wheat which are in surplus. Let me now direct your attention to the chart which I have prepared showing the wheat carryover by classes since 1952 to date. It is obvious to anyone examining this chart that could we eliminate but one-half of the surplus of one class of wheat, we would go far in solving this problem.

Notwithstanding the fact that our normal carryover of Soft Red Winter wheat since 1943 has been 19 million bushels and that the carryover of this class of wheat on July 1, 1960, will be but 8 million bushels—not 10 million bushels as shown on this chart according to new figures to be released on June 28, 1960, by the Department of Agriculture. This bill would apply the same reductions to this class of wheat which would be applied to the Hard Red Winter class. In view of the fact that Hard Red Winter is used primarily for the making of bread, and that Soft Red Winter wheat is used primarily for pastries, there is no justification for applying these reductions similarly as contemplated in this bill.

Another feature of this bill which does not show up on its face which is detrimental to the consumer of Soft Red Winter wheat is the fact that the 15-acre farmer who produces most of this type wheat is asked to take a larger reduction in his production than are the large farmers of the West who are producing Hard Red Winter wheat—the type wheat which is causing the lion's share of our surplus. On this hastily sketched map, I have attempted to divide the United States by the classes of wheat grown in the various regions. From examining this map, one can easily determine where the greatest production has been and

which class of wheat will be reduced the most. For example, in my State of Ohio, 123,000 of the 153,000 wheatgrowers operate under the 15-acre exemption; in Indiana, 99,000 of the 121,000 wheat farmers operate under the 15-acre exemption; in Illinois, 108,000 of the 137,000 wheat farmers operate under this exemption; in Arkansas, 18,000 of the 19,000 wheat farmers operate under this exemption; in Tennessee, 33,000 of the 35,000 operate under this exemption; in Pennsylvania, 80,000 of the 88,000 wheatgrowers operate under this exemption; in New York, 32,000 of the 38,000 operate under this exemption; in Virginia, 46,000 of the 49,000 operate under this exemption; in North Carolina, 77,000 of the 79,000 operate under this exemption; and so on throughout the entire eastern half of the United States. Yet these are the farmers who are growing the class of wheat which is not contributing to our surplus but are asked to take a greater reduction than the growers of Hard Red Winter wheat which is causing our surplus. Does such a proposal make sense?

Mr. ABBITT. Mr. Chairman, will the gentleman yield?

Mr. LATTA. I yield to the gentleman from Virginia.

Mr. ABBITT. I want to commend the gentleman for the fine statement he is making. Will you agree with me that the little 15-acre farmer is not the one that is producing these surpluses?

Mr. LATTA. I agree with the gentleman, and I want to show the committee at this time a map to substantiate that statement.

Mr. ABBITT. And will you not also agree with me that this bill should be known as the big producer bill, a bill to take care of the big producers?

Mr. LATTA. The gentleman is absolutely correct.

Mr. POAGE. Mr. Chairman, I yield 4 minutes to the gentleman from Kansas [Mr. BREEDING].

Mr. BREEDING. Mr. Chairman, at the outset of my remarks, let me say that I represent one of the largest wheat-producing districts in the Nation. The economy of the 33 counties comprising the Fifth Congressional District of Kansas are based primarily upon wheat. What happens to the wheat farmer affects the fortune of every man, woman, and child in the district.

Therefore, my great interest in the legislation now before the House is understandable. What the House does here today can, in great measure, affect the welfare of all the people of my district.

I have insisted since first coming to the Congress that the overriding consideration of any wheat legislation should be the protection of the income of the wheatgrower. I plead with you to keep that consideration in mind as we debate H.R. 12261 by the gentleman from Texas [Mr. POAGE] and the various amendments which will be offered under the 5-minute rule.

There has been a lot of loose talk, particularly by persons and publications outside the wheat areas, about the earnings of wheatgrowers. We are told they are riding the gravy train, that wheat farmers are making a killing each year at the expense of the U.S. taxpayer.

This is dangerous talk—because many well-meaning people who know absolutely nothing about the facts believe it. That explains in great part, I believe, the demand in some quarters for a drastic downward revision in support levels and, as a consequence, a decline in the income of the wheat farmer. People look at the present supply of wheat in Government warehouses and they demand Government action—without any thought given to what possible effect alternative programs might have on wheat producers.

Wheatgrowers have not insisted that the present program be continued. In fact, they recognize that changes must be made to reduce the cost to the taxpayers. Last year, wheatgrowers almost unanimously supported legislation that would have reduced production and cut about $250 million from the cost of the program during a 2-year program.

Unfortunately, the President, upon the advice of Secretary Benson, vetoed the bill.

Earlier this year, the National Association of Wheat Growers took the lead in drafting legislation to revise the wheat program. The National Grange, the Farmers Union, and a number of other farm and commodity groups approved a marketing plan under which producers could have achieved full parity and at the same time taken the Government out of the wheat storage business.

This was a bold, new proposal—the type of thinking we must have to solve a most difficult problem. Mr. Benson opposed the proposal. Unfortunately, neither the House nor the Senate Agriculture Committee saw fit to report this bill.

The House committee instead reported H.R. 12261 by the gentleman from Texas [Mr. POAGE]. I make no claims that H.R. 12261 is the answer to all wheat problems. Frankly, I would much prefer the wheat marketing plan of the national association as I introduced it in H.R. 11011.

But as an interim measure, to help us over an extremely difficult period, wheat farmers can live with subtitle A in the Poage bill. This subtitle calls for reducing the national wheat allotment of 55 million acres by 25 percent. The support level would be increased from 75 to 85 percent of parity and farmers would receive a payment in kind from CCC stocks equal to 55 percent of the average production on the idled acres.

I realize full well the Department of Agriculture and the White House have both let it be known they oppose increasing the support level. During the course of the debate I am sure we will hear threats of a veto.

My answer to that is simple. The House should do what it thinks is right for the country and for wheat producers. Then if the President in his judgment believes the legislation is unsound he should exercise his constitutional prerogative and veto the bill. But let us not legislate under the threat of a veto.

H.R. 12261 provides for a referendum at which qualified wheatgrowers will choose between two alternatives.

The first alternative is subtitle A which I outlined earlier in my remarks. Subtitle B—the second alternative—would tie the price of wheat to the support level for corn and pegging it at 120 percent of the corn price support for 1961, which means $1.27 per bushel or 50 cents per bushel below today's price.

Frankly, Mr. Chairman, I have no doubt that if this bill becomes law and wheat producers are permitted to vote, they will choose plan A instead of plan B. They will so choose because of cold, hard economic necessity.

Plan B would cut the price of wheat to ruinously low levels. Farmers in my part of the country simply could not survive. If farmers in commercial wheat areas are to continue in business they must have a higher price than plan B offers them.

Also, Mr. Chairman, I would like to comment on the bill the Senate passed last week. It is my understanding that opponents of H.R. 12261 will offer the Senate bill as a substitute for the Poage bill.

In all honesty, Mr. Chairman, I must say that the Senate bill, calling for a reduction of 20 percent in acreage with supports to remain at 75 percent of parity, is wholly unacceptable to wheat producers in my area.

This formula—including payment in kind of 50 percent—would drastically reduce farm income, already at the point where it can hardly support the ever increasing costs of doing business. For example, on a 100-acre wheat allotment, farmers would receive a gross income of $3,916 under the present program.

Under the Senate bill, this gross income would be reduced to $3,523.40—a decline of almost $400. That may not sound like much, but to a wheat farmer who is hard pressed to make ends meet, it can mean the difference between profit and loss.

Under the Poage bill, the farmer's income would be protected. He would have a gross income of $3,900 on the 100-acre allotment.

I plead with you not to be misled by propaganda about all the money wheat farmers are making. The truth is that all through the western wheat area people by the dozens are selling out and leaving the farm. I hold in my hands 25 sale bills advertising auction sales, all of which were collected by one man in a week's time in one county of my congressional district. I ask you, is this the sign of unprecedented prosperity? Are forced sales the sign of good times?

Mr. Chairman, I urge this House to accept the Poage bill as reported. It will protect the farmer's income. It will reduce production substantially, and remove almost 170 million bushels of wheat from CCC stocks. This means less cost to the taxpayer.

This is interim legislation. It offers protection for the farmer as we work off our surplus stocks and approach the time

when supply will permit larger plantings and a free market. But we simply cannot abandon the wheat farmer to ruinously low prices while he waits for the law of supply and demand to provide him once more with a decent price for the product of his toil.

If you strike out subtitle A—which affords income protection while it reduces supply—or if you substitute the Senate bill, you will have seriously injured the wheat farmers of my area. I plead with you not to do this, but instead to support the Poage bill.

Mr. HOEVEN. Mr. Chairman, I yield 5 minutes to the gentleman from Minnesota [Mr. NELSEN].

Mr. NELSEN. Mr. Chairman, we have heard a good deal of talk about the family farm. I presume that in the Midwest the family farm is one where they milk the cows, feed the pigs and the steers, and the entire crop is produced on the farm and fed on the farm. My farm is exactly that type of operation. I have never sealed a bushel of grain in my life. I never negotiated a loan of any kind, and I have operated my farm successfully.

There are 156 million acres of land in the United States where the crops are produced and they are retained on the farm. We have a little better than 187,000 farmers in the State of Minnesota, and 75 percent of them have never participated in any crop price support program whatever. It seems to me that when we are dealing with the farm program we spend a lot of time talking about individual commodities like wheat or corn or tobacco or cotton or whatever it may be and we forget that actually the thing we must do is consider the total tillable acres that produce the crops that produce the surplus. If we have 156 million acres of land that produce crops to be fed on the farm, it seems to me here is an area in which we should move with a voluntary payment-in-kind program.

I regret that in this committee bill, when all commodities were included, little by little items were taken out, and finally we are having forced on us in the feed grain areas a bill that nobody else wanted.

I should like to suggest at this time that we give some thought to amendments that will be offered later. The gentleman from Minnesota [Mr. QUIE] and myself have an amendment patterned after our payment-in-kind bills. The gentleman from Minnesota [Mr. ANDERSEN] has a bill, associating himself with the gentleman from Iowa [Mr. JENSEN], in the payment-in-kind approach. I believe in the payment-in-kind approach especially for the small dairy farmer as I have mentioned. If he could idle acres and then take from surplus what he would have raised he then would not have to sell off his dairy cows. He could continue to operate as he has in the past. If he takes 20 percent of his acres out of production, he at the same time will be replacing that 20 percent out of surplus, and you have gained 40 percent in the overall picture.

I am of the opinion we are spending too much time talking about support levels, especially since 75 percent of the average family farms in an average agricultural State like Minnesota get no direct benefit whatsoever from crop supports.

I think more time should be spent in trying to figure out a plan to reduce the surplus that is producing, as the aviator says, "a low ceiling" that we cannot penetrate. The farmer never gets an opportunity to enjoy some of the surges we find in a normal economy.

I believe the payment-in-kind amendments that will be offered have greater merit than some of the provisions that are in this bill. But I also believe the committee has worked hard, and I compliment the committee whether they agree with my point of view or not. I think it is high time we recognize that something must be done.

When we talk about the family farm, I would like to call attention to the fact that one of our problems is the cost of operation. When I started farming, way back in 1935, I bought a three-bottom plow for $140 brand new. I thought I was really going into business in a big way. Last year I bought a four-bottom plow—$918. Tractors and equipment and taxes have risen year by year by year, and the little family farm has received very little benefit under the legislation that we have had in the past and that we are talking about at this moment. The only way you can help them is to replace what the little family farm loses in idle acres so that they can continue their normal operations. Then I think you will have voluntary participation that will be more effective than all the policing you can put into any kind of bill, because here is an area where you can make headway.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOLEY. Mr. Chairman, I yield myself the balance of the time remaining.

Mr. Chairman, I think this debate has been very well conducted. I think the bill before us has been very well discussed and presented. I want to say that the Committee on Agriculture has worked faithfully and diligently trying to solve some of the problems of agriculture.

Our committee brought the wheat bill before the House in the last session. The bill finally went to the White House and was vetoed. Still we continued our efforts.

The gentleman from Oklahoma [Mr. ALBERT], as chairman of the wheat subcommittee, held extensive hearings. On the bill we have before us, which started out as the Poage bill and ends up as the Poage bill in a different form, the Committee on Agriculture held hearings for about 15 days. Everybody desiring to be heard was given an opportunity to be heard. All of the farm organizations presented their views and their plans and their programs.

The Poage bill before you now is quite different from the original Poage bill, which was a very comprehensive and all-embracing bill. Actually, it originally offered to the producers of just about all of the agricultural commodities grown in the country to develop programs to stabilize their production and income. It offered to crops that could use it advantageously a national marketing order provision. We eliminated one commodity after another. As the original bill became very controversial, we eliminated the national marketing order provision.

Now we are dealing with agriculture's problem No. 1, to wit, wheat. And we are dealing with the second most troublesome problem: the growing and costly surplus of feed grains.

The President has time and again reminded the Congress of the great magnitude of the problem presented to the American people by virtue of the manner in which the wheat program has operated. Most of you know we now have more than $3 billion invested in wheat. Something must be done about it. The President says so. Everybody else says so.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield to the gentleman from Texas.

Mr. POAGE. Would the gentleman point out that this bill, as it now stands, deals with 85 percent of the total surplus commodities that the U.S. Government holds and it deals with 59 percent of the tilled acres of the Nation?

Mr. COOLEY. I thank the gentleman for that contribution, and that makes this a national farm bill because it does deal with the greatest problems of agriculture.

Mr. Chairman, I do not want to get into any politics about this thing.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield to the gentleman from Minnesota.

Mr. ANDERSEN of Minnesota. The bill would really, in my opinion, be a pretty fair bill if there were another alternative so that the farmers could choose between them on the feed-grain portion of it.

Mr. COOLEY. I want to say to my friend, I have considered his green acres proposal. I have no devotion to the language in this bill to the exclusion of alternatives which might improve the bill. What our committee had in mind was to try to provide some alternatives for the farmers so that they could present their views to the Congress of the country.

Mr. ANDERSEN of Minnesota. I think that is good procedure.

Mr. COOLEY. Speaking only for myself, I have no objection to having the green acres proposal placed in the bill, but I cannot speak for the committee.

Mr. ANDERSEN of Minnesota. I thank the gentleman.

Mr. SCHWENGEL. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield to the gentleman from Iowa.

Mr. SCHWENGEL. I have listened all afternoon to this discussion, and I am impressed with the fact that the committee has worked diligently. I noticed what you said about hearing the people who wanted to be heard. You said every farm organization was heard on this legislation. You mean the Farmers Union, and so forth? Can you tell

me which of those organizations support this legislation?

Mr. COOLEY. Unfortunately, the farmers' organizations have not been able to agree on any legislation in the last several years. It is difficult for us to say which organization recommends and approves any particular provision of this bill, but I will say this, that the bill does provide that the Farm Bureau proposition on wheat shall be submitted to the farmers in a referendum, and if two-thirds of the farmers approve the Farm Bureau provision, then they come back to the Congress and it becomes the law of the land.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield to the gentleman from Texas.

Mr. POAGE. It only requires a majority.

Mr. COOLEY. That is correct. I stand corrected.

Mr. SCHWENGEL. Does any one of these farm organizations support this legislation?

Mr. COOLEY. I am not in a position to say that any farm organization supports it in its entirety. We heard a lot of talk about the lack of leadership. The Congress has presented the leadership with at least one wheat bill which was vetoed. We are now presenting another one.

On February 18, the Secretary of Agriculture, Mr. Benson, presented a wheat bill in our committee room. I challenge any Republican in the House to stand up now and say that he is the author of that bill. Mr. Benson has shopped around for 7 years trying to get Members of Congress to introduce legislation for him. Never has he been able to get any Member to introduce legislation on general farm policy. Mr. Marvin McLain, the Assistant Secretary, presented Mr. Benson's wheat bill to us again on March 14. Why has not some faithful Member of the minority party placed his name on this bill? Where is the administration bill? Where is the bill of my friend the gentleman from Iowa [Mr. HOEVEN]? He criticizes everything under the sun, but he has not presented a bill.

You can talk about bills and sending this bill back to the committee and recommitting the bill, but you know this late in the session you either take this to begin with or we will have no wheat legislation at this session.

I am not wedded to this bill. I am willing to consider every amendment which may be constructive.

But as to the Eisenhower-Benson wheat bill, why is it not here? It has not even been introduced, and yet we are to be criticized because we have not enough votes to override a Presidential veto. The only reason we have not already dealt effectively with the wheat problem is that we have too many Republicans and not enough Democrats. We do not have enough Democrats to override a veto.

Now let us get down to the bill. The bill is here. It has three major parts dealing respectively with wheat, feed grains, and the distribution of protein foods, as follows:

WHEAT

Farmers would be offered in title I of the bill a choice between (A) a wheat program, developed by the committee, based on strict production controls—75 percent of present allotments—with price supports at 85 percent of parity and payment in kind for retiring cropland at 55 percent of normal production and, (B) a program of no production controls with the support price of wheat at approximately the feed grain level.

The (A) program follows the lines of the bill which was reported by the Committee on Agriculture last year and approved by both Houses of Congress, but was vetoed by the President. It makes substantial changes in that bill, however, by reducing the level of price support from 90 to 85 percent—approximately $2.03 per bushel—increasing the payment in kind for retiring cropland from one-third to 55 percent of the average yield per acre, and providing acreage allotments for the 15-acre growers, those not now subject to marketing quotas, making them subject to marketing quotas, but permitting them to participate in the acreage retirement and payment-in-kind program and to vote in the referendum which will be held on the approval of marketing quotas.

The (B) wheat program was proposed by the American Farm Bureau Federation. It would repeal all acreage allotments and marketing quotas on wheat and would depart from the parity formula in determining a fair price for wheat and set the level of price support at the level of price support for corn, adjusted for the relative feed value of wheat and corn. It carries a proviso that the level of support for wheat, for the 1961 crop only, will not be less than 120 percent of the level of price support for corn, adjusted for feeding values. This means about $1.27 per bushel for wheat in 1961 with about $1.15 per bushel in 1962 as compared with the present level of $1.77 a bushel under existing law. This wheat proposal also extends the conservation reserve part of the soil bank for another 3 years, authorizes the expansion of this program to 60 million acres, with payments to be made in cash rather than in kind, and emphasizes that the greater part of the expansion is to be achieved in the first year of its operation.

FEED GRAINS

The feed-grain provisions—title II of the bill—authorizes the election of a farmer committee to develop, with the assistance of the Department of Agriculture, a program for feed grains—corn, grain sorghum, oats, barley and rye—which would bring production into balance with demand, return feed grain producers between 85 and 100 percent of parity, and authorize the retirement of up to 50 percent of cropland on the farm in return for payment in kind in feed grains. A salient feature of the feed-grain part of the bill is that it would prohibit any program entailing Government purchase or storage of grains and would limit the overall cost of any such program to not more than 10 percent of the value of the crops involved.

PROTEIN FOOD

Title III of the bill authorizes a substantially increased program for distribution of dairy, poultry, and meat products to the needy, to charitable institutions, and through the school lunch program. The program would be carried out under the general direction of the Secretary of Health, Education, and Welfare, but supplies would come not only from stocks of the Commodity Credit Corporation but also from purchases made in local markets by CCC as the agent for HEW. The cost would be charged to the Department of Health, Education, and Welfare and not to Agriculture.

The bill directs that this program be carried out in such a manner as to assist and effectuate the price support programs established under other portions of the bill. Recognizing the close interrelation between feed grains and livestock products, the bill authorizes the sale of 1 bushel of feed grains from CCC stocks for each $2 expended in the procurement of livestock products for distribution under the protein food distribution program, but the bill does not in any way authorize any controls on the production of livestock or poultry.

Mr. Chairman, H.R. 12261—the Farm Surplus Reduction Act of 1960—opens the way for effective farm programs on 198,206,000 acres, or approximately 60 percent, of all the 324,892,000 acres devoted to cultivated crops in the United States. Wheat and feed grains, which are dealt with directly in this legislation, accounted on January 1, 1960, for 80.8 percent of all Government investments in farm commodities—or $7,385 million of a total of $9,154 million of such investments.

This bill proposes to bolster the whole farm economy, at a time when farmers, caught in a depression while the remainder of the economy is experiencing unparalleled prosperity, are confronting desperate circumstances.

It seeks to reduce Government holdings of farm commodities.

It will bring down the cost of farm programs.

It adheres to the principle that farm income be protected and improved while Government surpluses and Government cost are reduced. It incorporates the principle that existing income protections must be continued until the producers themselves work out improved programs for stabilizing supplies and prices of their various commodities.

It sets up the machinery whereby wheat and feed grain producers, with the help of Government, can balance their supplies with markets available and exercise a degree of bargaining power in the marketplaces.

It seeks to remove unneeded land from production and in that way contribute to the balance of production and demand and save soil fertility for future generations.

It will provide for distribution of additional high protein food to needy people, to public institutions, and to schoolchildren.

It improves the status of the family farm through greater bargaining power, resulting from a balance in the supply and demand of farm commodities.

The bill, with these accomplishments, is not a complete answer to all the hard circumstances that again have settled upon our farm people. The committee, at the outset of its considerations of general farm legislation, sought to offer the producers of all major crops opportunities to develop programs enabling them to adjust their output to effective market demand and to command reasonable prices in the marketplaces. I regret to report that in this undertaking the committee received no cooperation from the Secretary of Agriculture who, with others who oppose the parity principle for agriculture, created such misunderstanding and confusion among farmers and friends of farmers that the committee cannot at this time develop wide agreement upon an overall commodity-by-commodity approach to the general farm problem.

However, H.R. 12261 deals directly with major surplus and cost problems of agriculture, and it establishes the guideposts on the road back to general farm stability and prosperity.

The bill is built upon the principle that any successful farm program must be fair to farmers and consumers alike. It embraces, as a pattern for the future, faith in the ability of farmers themselves to develop or select programs based upon this principle.

Mr. Chairman, with special reference to wheat, I must point out that during the last 7 years, 1953–59 inclusive, American farmers have produced less, not more, wheat than in the previous 7 years. The 1946–52 inclusive production amounted to 8,217 million bushels, whereas in the last 7 years the output has totaled 7,637 million bushels. Meanwhile, both domestic use and export of wheat have declined in the last 7 years.

During these most recent 7 years, while there has been a severe reduction in the price supports for wheat farmers, domestic use of wheat has declined to 4,269 million bushels, from the total of 4,936 million bushels consumed in the previous 7 years. A lower price has not brought about greater use of our wheat.

During the last 7-year period U.S. exports of wheat amounted to 2,708 million bushels, a drop of 138 million bushels from the total of 2,846 million bushels exported in the previous 7-year period.

World movement of wheat from 1946 through 1952 amounted to 6,524 million bushels and 44 percent of the total was American wheat; in the 1953–59 period exports of wheat by all countries amounted to 8,036 million bushels, and our share of the world movement of this food grain declined to 34 percent.

The decrease in our share of the world's market has occurred despite the fact that in 1954 the Congress gave to the Secretary of Agriculture virtually unlimited and unprecedented authority (a) to deliver wheat abroad for the currency of the country receiving the wheat, (b) to barter wheat for strategic materials needed in our own country, and (c) to donate wheat to friendly and needy peoples in other nations.

Meanwhile, Russia's wheat production now again has surpassed the United States' production and U.S.S.R. exports of wheat, although still small by comparison to ours, have increased substantially in the last 3 years.

Now, the statement has been made in this debate that so-called soft wheat, used in crackers, cookies and such, is not in surplus supply, and the acreages of the producers of soft wheat should not be reduced. I have checked the Department of Agriculture on this point.

The Department advises that production of soft wheat has been running at 160 million to 200 million bushels a year, while domestic consumption amounts to 130 million to 140 million bushels. We export from 20 to 40 million bushels of this wheat annually, most of it under the Public Law 480 programs which amounts to virtually a giveaway proposition.

There recently has been a drift away from soft wheat production, entirely apart from any production control program, largely because the small farmers are finding they get better yield and price in the production of hard wheat. An improvement of price for soft wheat no doubt would bring about the production of any amount of soft wheat that ever may be needed in the United States and for export.

Mr. Chairman, in conclusion, I feel it to be my duty to review briefly for the House the distressful conditions now prevailing in agriculture.

Farmers' net income in 1959 dropped to the lowest level, in relation to volume of their sales, of any year since the Department of Agriculture began keeping records in 1910. A further decline is predicted for 1960.

Average farm prices in December 1959 reached their lowest, in terms of parity with other prices, for any December since 1933.

The per capita annual income of people living on farms in 1959—including Government payments and, also, their earnings from off-farm work—again dropped to less than one-half that of nonfarm people. The per capita income of farm people totaled $960, compared to $2,202 for nonfarm people.

Farm net income in 1959 was 24 percent below 1952, while in this 7-year period the national income increased by 35 percent.

In 1959, farmworkers (operators and labor) received an average of 71½ cents an hour. Farmworkers' hourly earnings were down 13 percent from 1952. Farm operators actually paid their hired help 80 cents an hour which was more than they themselves received. In contrast, hourly earnings of industrial workers in 1959 averaged $2.22 an hour, up 33 percent over 1952, and corporation dividend payments in 1959 exceeded such 1952 payments by 47 percent.

The net income of farmers in the last 7 years has been $20 billion less than in the previous 7 years.

Mr. Chairman, the conditions in agriculture demand action. I hope that we may have the wisdom here today to reaffirm our faith in the parity principle for agriculture, so that the farm families of America, now so hard pressed, may make a start on the road back to recovery and stability, so that they may look forward again to sharing equitably in our economy where their contribution is so large and is such a blessing to all of us.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

All time has expired. The Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Farm Surplus Reduction Act of 1960".

Mr. DIXON. Mr. Chairman, I offer an amendment in the nature of a substitute.

The Clerk read as follows:

Amendment offered by Mr. DIXON: On page 1, line 3, strike out all afer the enacting clause and insert:

"That this Act may be cited as the 'Wheat Act of 1960'.

"TITLE I—PRICE SUPPORT AND ALLOTMENTS

"SEC. 101. Title I of the Agricultural Act of 1949, as amended, is amended by adding the following new sections:

"'SEC. 107. (a) Notwithstanding the provisions of section 101 of this Act, for each of the 1961, 1962, and 1963 crops of wheat price support shall be made available as provided in this section. The support price for each such crop shall be 75 per centum of the parity price therefor. Price support under the foregoing provision of this section shall be made available only to cooperators, only in the commercial wheat-producing area, and only if producers have not disapproved marketing quotas for the crop. In case marketing quotas are disapproved, price support to cooperators shall be as provided in section 101(d)(3).

"'(b) If marketing quotas are in effect for the particular crop of wheat, wheat of any such crop, and any other commodity produced on a farm to which a wheat marketing quota is applicable and in the calendar year in which wheat of any such crop is normally harvested, shall be eligible for price support only if—

"'(1) the farm is in compliance with the farm wheat acreage allotment for such crop;

"'(2) the total acreage on the farm devoted to the production of nonconserving crops as determined by the Secretary which would normally be harvested in the calendar year in which such wheat crop is normally harvested does not exceed the total average annual acreage on the farm devoted to the production of such nonconserving crops for harvest in 1958 and 1959, less an acreage equal to 20 per centum of the farm acreage allotment for such crop of wheat which would be in effect for the farm except for the reduction thereof as provided in section 334(c)(2) of the Agricultural Adjustment Act of 1938, as amended; and

"'(3) the producers on the farm in accordance with regulations prescribed by the Secretary—

"'(1) designate an acreage on the farm equal to the 20 per centum reduction in the

farm acreage allotment required under section 334(c)(2) of the Agricultural Adjustment Act of 1938, as amended, for the particular crop of wheat, and

"'(ii) do not produce any crop thereon which is normally harvested in the calendar year in which the particular crop of wheat is normally harvested and do not graze such acreage during such year.

A farm shall be deemed in compliance with the requirements of clauses (1) and (2) if no crop not subject to acreage allotments is produced on the farm for harvest, and the farm is in compliance with the farm acreage allotments. In accordance with regulations prescribed by the Secretary, the acreage of such nonconserving crops for harvest in 1958 and 1959 may be adjusted to the extent the Secretary determines appropriate for abnormal weather conditions, established crop rotation practices for the farm, changes in the constitution of the farm, participation in soil bank or Great Plains programs, or to give effect to the provisions of law relating to release and reapportionment or preservation of history, and such other factors as the Secretary may deem appropriate. For the purposes of eligibility for price support a producer shall not be deemed to have violated any of the foregoing conditions unless the producer knowingly violated such condition, but the Secretary may provide by regulation for adjusting any payment in kind under subsection (c) or (d) on account of any violation of any such condition or any other condition of eligibility for such payment. For the purposes of this section a wheat marketing quota shall not be deemed to be applicable to any farm exempt from wheat marketing quotas under item (7) of Public Law 74, Seventy-seventh Congress, as amended (7 U.S.C. 1340(7)) or exempt from wheat marketing penalties under section 335(f) of the Agricultural Adjustment Act of 1938, as amended (7 U.S.C. 1335(f)).

"'(c) Producers of wheat meeting the foregoing conditions of eligibility for price support for any calendar year shall be entitled for such year to a wheat payment in kind from Commodity Credit Corporation stocks equal in value to one-half of the average annual yield in bushels of wheat per harvested acre on the farm for the three years immediately preceding the year for which the designation is made, adjusted for abnormal weather conditions and as determined under regulations prescribed by the Secretary multiplied by the number of designated acres. Such wheat may be marketed without penalty but shall not be eligible for price support. The payment in kind shall be made by the issuance of a negotiable certificate which Commodity Credit Corporation shall redeem in wheat equal in value to the value of the certificate. The certificate shall have a value equal to the number of bushels determined as aforesaid multiplied by the basic county support rate per bushel for number one wheat of the crop normally harvested in the year for which the acreage is designated and for the county in which the designated acreage is located. The wheat redeemable for such certificate shall be valued at the market price thereof as determined by Commodity Credit Corporation. The Secretary shall provide by regulation for the sharing of a certificate among producers on the farm on a fair and equitable basis. The acreage designated under this section shall be in addition to any acreage devoted to the conservation reserve program.

"'(d) If marketing quotas are in effect for the 1961 crop of wheat and the producers on the farm agree to meet the requirements of subsection (b) for 1961, 1962, and 1963, and, in accordance with regulations prescribed by the Secretary—

"'(1) designate an acreage on the farm equal to not less than 20 per centum nor more than 100 per centum of the acreage allotment which would be in effect for the farm for the 1961 crop of wheat except for the reduction thereof as provided in section 334(c)(2) of the Agricultural Adjustment Act of 1938, as amended, and do not produce any crop thereon which is normally harvested in the calendar years 1961, 1962, and 1963 and do not graze such acreage during such years, but devote such acreage to soil and water conserving uses;

"'(2) reduce by the number of acres so designated the acreage of wheat on the farm in each such year below the acreage allotment which would be in effect for the farm for such year except for the reduction thereof as provided in section 334(c)(2) of the Agricultural Adjustment Act of 1938, as amended; and

"'(3) reduce by the number of acres so designated the acreage of nonconserving crops on the farm in each such calendar year below the average annual acreage on the farm devoted to the production of such nonconserving crops for harvest for 1958 and 1959 adjusted as provided in subsection (b),

such producers shall be entitled to a wheat payment in kind, in lieu of the payment provided by subsection (c), for each such year from Commodity Credit Corporation stocks equal in value to one-half of the average annual yield in bushels of wheat per harvested acre on the farm for the three years 1958 through 1960, adjusted for abnormal weather conditions and as determined under regulations prescribed by the Secretary, multiplied by the number of designated acres. Such wheat may be marketed without penalty but shall not be eligible for price support. The payment in kind shall be made by the issuance of a negotiable certificate which Commodity Credit Corporation shall redeem in wheat equal in value to the value of the certificate. The certificate shall have a value equal to the number of bushels determined as aforesaid multiplied by the basic county support rate per bushel for number one wheat of the crop normally harvested in the year for which the payment is made and for the county in which the designated acreage is located. The wheat redeemable for such certificate shall be valued at the market price thereof as determined by Commodity Credit Corporation. The Secretary shall provide by regulation for the sharing of a certificate among producers on the farm on a fair and equitable basis. The share of any producer in certificates issued under this subsection with respect to any year and with respect to all farms in which he has an interest, based on the face value of the certificates, shall not exceed the greater of (1) $10,000, or (2) such producers' share of payments made under this subsection for acreage required to be designated either in 1961 or in such year as a condition of price support. If such producers fail to comply with the requirements of this subsection for all or any part of the three year period, such producers shall forfeit or refund in cash all or such part of the payments provided for by this subsection as the Secretary determines to be fair and equitable and prescribes by regulation. The acreage on any farm which is determined under regulations of the Secretary to have been diverted from the production of wheat by reason of designation under this subsection shall be considered acreage devoted to wheat for the purposes of establishing future State, county, and farm acreage allotments under the Agricultural Adjustment Act of 1938, as amended. In applying the provisions of paragraph (6) of Public Law 74, Seventy-seventh Congress (7 U.S.C. 1340(6)), and section 326(b) of the Agricultural Adjustment Act of 1938, as amended (7 U.S.C. 1326(b)), relating to reduction of the storage amount of wheat that part of the acreage designated under this subsection in excess of the 20 per centum reduction required under section 334(c)(2) of the Agricultural Adjustment Act of 1938 on any farm shall be regarded as wheat acreage on the farm of normal production as that term is defined in section 301(b)(9) of the Agricultural Adjustment Act of 1938, as amended (7 U.S.C. 1301(b)(9)).

"'SEC. 108. Notwithstanding the provisions of section 101 or 107 of this Act or any provision of the Agricultural Adjustment Act of 1938, if marketing quotas are disapproved for the 1961 crop of wheat, the level of price support to cooperators and noncooperators for the 1961 crop and each subsequent crop of wheat shall be 50 per centum of the parity price of wheat and no national marketing quota or acreage allotment shall be proclaimed with respect to any subsequent crop of wheat: *Provided*, That if price support at 50 per centum of the parity price is in effect under this section, the current price support for wheat, for the purposes of section 407 of the Agricultural Act of 1949, as amended, shall be determined on the basis of a price support level for wheat of 75 per centum of the parity price therefor.'

"SEC. 102. (a) Item (1) of Public Law 74, Seventy-seventh Congress, as amended, is amended, effective beginning with the 1961 crop of wheat, to read as follows:

"'(1) If a national marketing quota for wheat is in effect for any marketing year, farm marketing quotas shall be in effect for the crop of wheat which is normally harvested in the calendar year in which such marketing year begins. The farm marketing quota for any crop of wheat shall be the actual production of the acreage planted to such crop of wheat on the farm less the farm marketing excess. The farm marketing excess shall be an amount equal to double the normal yield of wheat per acre established for the farm multiplied by the number of acres planted to such crop of wheat on the farm in excess of the farm acreage allotment for such crop unless the producer, in accordance with regulations prescribed by the Secretary and within the time prescribed therein, establishes to the satisfaction of the Secretary the actual production of such crop of wheat on the farm. If such actual production is so established the farm marketing excess shall be such actual production less the actual production of the farm wheat acreage allotment. Actual production of the farm wheat acreage allotment shall mean the actual average yield per harvested acre of wheat on the farm multiplied by the number of acres constituting the farm acreage allotment. In determining the actual average yield per harvested acre of wheat and the actual production of wheat on the farm any acreage utilized for feed without threshing after the wheat is headed, or available for such utilization at the time the actual production is determined, shall be considered harvested acreage and the production thereof in terms of grain shall be appraised in accordance with regulations prescribed by the Secretary and such production included in the actual production of wheat on the farm. The acreage planted to wheat on a farm shall include all acreage planted to wheat for any purpose and self-seeded (volunteer) wheat, but shall not include any acreage that is disposed of prior to harvest in accordance with regulations prescribed by the Secretary.'

"(b) Item (2) of Public Law 74, Seventy-seventh Congress, as amended, is amended, effective beginning with the 1961 crop of wheat, to read as follows:

"'(2) During any marketing year for which quotas are in effect, the producer shall be subject to a penalty on the farm marketing excess of wheat. The rate of the penalty shall be 65 per centum of the parity price per bushel of wheat as of May 1 of the calendar year in which the crop is harvested.'

"(c) Item (3) of Public Law 74, Seventy-seventh Congress, as amended, is amended,

effective beginning with the 1961 crop of wheat, to read as follows:

"'(3) The farm marketing excess for wheat shall be regarded as available for marketing, and the penalty and the storage amount or amounts of wheat to be delivered to the Secretary shall be computed upon double the normal production of the excess acreage. If the farm marketing excess so computed is adjusted downward on the basis of actual production, the difference between the amount of the penalty or storage computed on the basis of double the normal production and as computed on actual production shall be returned to or allowed the producer or a corresponding adjustment made in the amount to be delivered to the Secretary if the producer elects to make such delivery. The Secretary shall issue regulations under which the farm marketing excess of wheat for the farm shall be stored or delivered to him. Upon failure to store, or deliver to the Secretary, the farm marketing excess within such time as may be determined under regulations prescribed by the Secretary the penalty computed as aforesaid shall be paid by the producer. Any wheat delivered to the Secretary hereunder shall become the property of the United States and shall be disposed of by the Secretary for relief purposes in the United States or foreign countries or in such other manner as he shall determine will divert it from the normal channels of trade and commerce.'

"(d) Item (7) of Public Law 74, Seventy-seventh Congress, as amended (7 U.S.C. 1340(7)), is amended to read as follows:

"'(7) A farm marketing quota on any crop of wheat shall not be applicable to any farm on which the acreage planted to wheat for such crop does not exceed fifteen acres: *Provided, however,* That a farm marketing quota on the 1961 and subsequent crops of wheat shall be applicable to—

"'(i) any farm on which the acreage of wheat exceeds the smaller of (1) twelve acres or (2) the highest number of acres planted to wheat on the farm for harvest in the calendar years 1956, 1957, 1958, 1959, or 1960; and

"'(ii) any farm on which any wheat is planted if any of the producers who share in the wheat produced on such farm share in the wheat produced on any other farm.'

"(e) Item (12) of Public Law 74, Seventy-seventh Congress, as amended (7 U.S.C. 1340 (12)), is repealed, effective beginning with the 1961 crop of wheat.

"(f) Section 326(b) of the Agricultural Adjustment Act of 1938, as amended, is amended, effective beginning with the 1961 crop of wheat, to read as follows:

"'(b) If a farm is in compliance with its farm acreage allotment for any crop of wheat and the actual production of such crop of wheat on the farm is less than the normal production of the farm wheat acreage allotment, an amount equal to the deficiency may be marketed without penalty from wheat of previous crops stored by the producers on the farm to postpone the payment of marketing quota penalties.'

"SEC. 103. The Agricultural Adjustment Act of 1938, as amended, is amended as follows:

"(a) Section 334 is amended by inserting '(1)' after '(c)' and adding a new subparagraph (2) following subparagraph (c) (1) to read as follows:

"'(2) Nothwithstanding any other provision of law, each old or new farm acreage allotment for the 1961 and subsequent crops of wheat as determined on the basis of a minimum national acreage allotment of fifty-five million acres shall be reduced by 20 per centum. In the event notices of farm acreage allotments for the 1961 crop of wheat have been mailed to farm operators prior to the effective date of this subparagraph (2) new notices showing the required reduction shall be mailed to farm operators as soon as practicable.'

"(b) Section 334(e) is amended to read as follows:

"'(e) If, with respect to any crop of wheat, the Secretary determines that the production of any kind of wheat will be inadequate to provide a sufficient quantity of that kind of wheat to satisfy the demand therefor, the wheat acreage allotment (and the number of acres which may be planted under item (7)(i) of Public Law 74, Seventy-seventh Congress, without making a farm marketing quota applicable to the farm) for such crop for each farm located in a county which has produced such wheat for commercial food products during one or more of the five years immediately preceding the year in which such crop is harvested, shall be increased by such uniform percentage as he deems necessary to provide for such quantity. No increase shall be made under this subsection in the wheat acreage allotment of any farm (or in the acreage which may be planted without making a farm marketing quota applicable to the farm) for any crop if any kind of wheat other than that for which the increase is made is planted on such farm for such crop. Any increases in wheat acreage allotments authorized by this subsection shall be in addition to the National, State, and county wheat acreage allotments, and such increases shall not be considered in establishing future State, county, and farm allotments. The provisions of paragraph (6) of Public Law 74, Seventy-seventh Congress (7 U.S.C. 1340 (6)), and section 326(b) of this Act, relating to the reduction of the storage amount of wheat shall apply to the allotment for the farm established without regard to this subsection and not to the increased allotment under this subsection, except that any farm in compliance with its increased allotment under this subsection shall be considered in compliance with its farm acreage allotment for the purposes of said section 326(b). Any farm receiving an increased allotment under this subsection shall be excused from complying with clauses (2) and (3) of section 106(b) of the Agricultural Act of 1949 to the extent deemed appropriate by the Secretary to provide for the increase in allotment under this subsection, and no farm on which acreage is designated pursuant to section 106(b)(3) or 106(d) of the Agricultural Act of 1949 in a greater amount than required as a condition of price support for any crop shall be eligible for an increased allotment under this subsection for such crop.'

"(c) Subsection (f) of section 335 is amended by striking out the semicolon at the end of item (1) and adding 'and shall not apply to other farms with respect to the 1961 and subsequent crops;'.

"(d) Section 336 is amended to read as follows:

"'SEC. 336. Between the date of issuance of any proclamation of any national marketing quota for wheat and July 25 of the year in which the proclamation is made the Secretary shall conduct a referendum by secret ballot to determine whether farmers favor or oppose such quota. Farmers eligible to vote in such referendum shall be farmers who were engaged in the production of the crop of wheat normally harvested in the calendar year immediately preceding the calendar year in which the referendum is held on a farm in the commercial wheat-producing area for such crop and on which more than twelve acres was planted to wheat of such crop if such crop was the 1961, 1962, or 1963 crop, or on which more than fifteen acres was planted to wheat of such crop if such crop was any crop other than the 1961, 1962, or 1963 crop. Any acreage considered as being devoted to wheat in establishing future allotments under applicable provisions of law shall be considered as wheat-producing acreage for the purpose of determining eligibility to vote. If the Secretary determines that more than one-third of the farmers voting in the referendum oppose such quota he shall prior to the effective date of such quota by proclamation suspend the operation of the national marketing quotas with respect to wheat.'

"(e) Section 362 is amended by deleting the second sentence thereof.

"(f) Subsections (b) and (c) of section 335 are hereby repealed and subsection (d) of said section is repealed effective beginning with the 1961 crop of wheat.

"(g) The first proviso of section 377 is amended by striking out *'Provided,* That beginning with the 1960 crop' and inserting in lieu thereof *'Provided,* That beginning with the 1964 crop in the case of wheat and the 1960 crop in the case of any other commodity'.

"SEC. 104. Section 101(d) of the Agricultural Act of 1949, as amended, is amended by—

"(A) striking out paragraph (5); and

"(B) amending paragraph (7) to read as follows:

"'(7) No price support shall be made available for any crop of wheat for which acreage allotments are not in effect and no price support shall be made available for any crop of wheat in any State designated under section 335(e) of the Agricultural Adjustment Act of 1938, as amended, as outside the commercial wheat-producing area for such crop.'.

"TITLE II—AMENDMENTS TO GREAT PLAINS PROGRAM

"SEC. 201. Section 16 of the Soil Conservation and Domestic Allotment Act of 1938, as amended, is amended as follows:

"(1) Paragraph (3) of subsection (b) is amended to read as follows:

"'(3) insofar as the acreage of cropland on any farm enter into the determination of acreage allotments and marketing quotas under the Agricultural Adjustment Act of 1938, as amended, the cropland acreage on the farm shall not be decreased during the period of any contract heretofore or hereafter entered into under this subsection by reason of any action taken for the purpose of carrying out such contract and, under regulations of the Secretary, shall not be decreased, for such period after the expiration of the contract as is equal to the period of the contract, by reason of the maintenance of any change in land use from cultivated cropland to permanent vegetation carried out under the contract;'

"(2) Paragraph (4) of subsection (b) is amended to read as follows:

"'(4) the acreage on any farm which is determined under regulations of the Secretary to have been diverted from the production of any commodity subject to acreage allotments or marketing quotas in order to carry out any contract heretofore or hereafter entered into under the program or in order to maintain, for such period after the expiration of the contract as is equal to the period of the contract, any change in land use from cultivated cropland to permanent vegetation carried out under the contract shall be considered acreage devoted to the commodity for the purposes of establishing future State, county, and farm acreage allotments under the Agricultural Adjustment Act of 1938, as amended;'."

Mr. ABBITT (interrupting the reading). Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ABBITT. Is this the Ellender bill which has already been passed by the other body?

The CHAIRMAN. That is not an inquiry the Chair can answer.

Mr. ABBITT. May I ask the gentleman from Idaho whether or not the bill has been printed and whether copies are available?

Mr. DIXON. This is the exact bill which the other body passed.

Mr. ABBITT. Mr. Chairman, I ask unanimous consent that the amendment be considered as read.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The CHAIRMAN. The gentleman from Utah is recognized in support of his amendment.

Mr. DIXON. Mr. Chairman, I was very pleased to hear the gentleman from North Carolina, chairman of the Committee on Agriculture, say he was not wedded to any bill. I feel the same way. I do not think any of them is perfect. I do believe, however, that the bill which the other body passed is the best bill we have for consideration. I shall try to summarize briefly the reasons.

First, the Senate bill leaves price supports at 75 percent of parity, just as they are under present law, for the next 3 years.

Second, it reduces acreage allotments by 20 percent. It pays any man in kind who reduces his acreage by 20 percent, 50 percent of the amount of wheat he would grow on that acreage.

It will not pay any farmer more than $10,000; there is a limitation here.

Then, this reduction in acreage will place the maximum at 44 million acres of wheat that can be planted instead of the present 55 million under present law. It reduces the total number of acres, therefore, that can be planted by 11 million.

To some extent the 15-acre exemption has done most of the mischief. The bill reduces it to a 12-acre exemption, or the largest number of acres that had been used for this purpose over the last 5 years. If the largest number of acres were eight, for example, then the farmer cannot have more than 8 acres under this exemption.

It increases the penalty for overplanting, makes penalties far more severe, so we will not have farmers deliberately violating the principle of the act.

It takes away the 30-acre limitation which the farmer can plant for feed. Under the present law he can plant only 30 acres to feed his own livestock. Under the Senate bill he can plant whatever he wants so long as it is fed on the farm.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. DIXON. I yield.

Mr. ALBERT. The points the gentleman is discussing at the present time are also in the committee bill.

Mr. DIXON. Yes; but I will proceed further. It will reduce the production, and that is what the committee bill will not do, approximately 1,270 million bushels to about 960 million bushels.

It will permit us to dip into and move some of the surplus wheat. That is what we want to do. It costs the taxpayers $104 million less than the present law, and $230 million less than the Poage bill provides. The Poage bill will raise the price of wheat 25 cents and go that much further to price wheat out of the market in the export trade. If we export the wheat it will cost the Government 25 cents more so that we can compete with foreign countries.

It protects the consumer. The Poage bill is a bread tax. It will raise the baker's price by about 1 cent. It will raise the cost of flour to the thrifty housewives who make their own bread about 10 percent. There is not much else in bread than flour, except a little salt and a little yeast, and the housewife can profit by her own work, so if she is thrifty she can save this spread between 2.5 cents which the farmer receives, and 25 to 27 cents that a loaf of bread costs. That is what we ought to encourage our housewives to do.

It will not injure other branches of agriculture. The Poage bill definitely will. It will injure poultry and it will injure livestock; it will raise the price of wheat that we export under Public Law 480. Wheat already gets 65 percent of the money under Public Law 480 and if we have to tack another 25 cents a bushel on that to make it compete with foreign countries, wheat will get about 75 percent of all the money.

Where is that going to put cotton? Where is it going to put our other exports? It will just simply consume very nearly the whole appropriation and other commodities will not stand for such injustice.

The CHAIRMAN. The time of the gentleman from Utah has expired.

Mr. DIXON. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Utah?

Mr. ANDERSEN of Minnesota. Mr. Chairman, reserving the right to object, and I do not intend to object provided, Mr. Chairman, that this policy will prevail all the way through the consideration of this bill. I hope that consideration of this bill will go over until tomorrow so that we may have ample and full discussion of this very important situation. On that basis and on that assumption I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Utah?

There was no objection.

Mr. AVERY. Mr. Chairman, I have a question. That is in respect to payment in kind. I would like to have the record be abundantly clear as to what might be done with the payment in kind. I think we are realistic enough to know that the farmer is not going to drive his truck down to the commodity bin and get his payment in kind in form of a commodity. Undoubtedly he will get a certificate. What can he do with that certificate? Can that be sold on the open market the same as the 15-acre wheat without a marketing penalty? In other words, would it go to the open market or must he sell that to a livestock feeder for feed?

Mr. DIXON. I will ask the gentleman from Oklahoma of our committee to answer that.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Oklahoma.

Mr. ALBERT. A negotiable certificate will be given the producer on the price of wheat in the county in which it is produced, No. 2 wheat.

Mr. AVERY. A negotiable certificate?

Mr. ALBERT. To be deliverable at the price of wheat at point of delivery.

Mr. AVERY. At his local point of delivery?

Mr. ALBERT. Wherever the certificate is negotiated for the wheat. If in a certain county in Kansas you get a certificate, if the gentleman will permit me, the value of that certificate will be the value of wheat in your county in Kansas, the No. 2 grade.

The Government from its warehouse in Chicago will deliver wheat upon the basis of the price of wheat at the point of delivery in Chicago.

Mr. AVERY. Now, as to the negotiable certificate, I would like to pursue that just a litle further with the gentleman from Oklahoma, if the gentleman from Utah will permit.

Mr. DIXON. I should like to have the gentleman from Oklahoma take the "mike."

Mr. AVERY. As to this negotiable certificate, I presume that the same response that the gentleman is giving me now with respect to the Senate bill, as to payment in kind, would also apply to the House bill before the committee this afternoon.

Mr. ALBERT. The gentleman is correct. There is no difference in the procedure, as I read it, in the two bills.

If the gentleman would yield further, I would like to say that the amount of the payment in kind is 50 percent under the Senate bill for No. 1 wheat and 55 percent for No. 2 wheat under the House bill.

Mr. AVERY. I recognize that, but I am concerned about what happens to this negotiable certificate after it is issued by the Commodity Credit Corporation to the eligible producer. Then we are to accept the gentleman's statement as to this, that the negotiable certificate can be received and redeemed in cash by the wheat producer who has complied with the restrictions in this bill.

Mr. ALBERT. I think the normal manner in which it would be held, he would probably sell it to a miller or to some dealer in wheat, and he would redeem it in wheat at some point of delivery.

Mr. AVERY. Would he have to do that? Does it have a cash value?

Mr. JONES of Missouri. Mr. Chairman, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Missouri.

Mr. JONES of Missouri. I think what you are trying to say is that the Government will not redeem it in cash. The Government will redeem it in wheat. It is a negotiable instrument and he can get cash for it, but somebody will eventually have to take down wheat, and that is the good thing about both of these bills. It will take wheat out of the elevator eventually.

Mr. AVERY. I am not trying to say anything; I am trying to get the record straight.

Mr. DIXON. I refuse to yield any more time now. I think the matter has been well explained, and I thank the gentleman from Oklahoma [Mr. ALBERT].

Mr. JONES of Missouri. Mr. Chairman, if the gentleman will yield further, I wish the gentleman from Utah would explain one statement that he made. He left the impression that the Senate bill would bring about a 20-percent reduction in wheat; is that right?

Mr. DIXON. I conferred with the Department this afternoon relative to that.

Mr. JONES of Missouri. The bill says it will reduce it 20 percent.

Mr. DIXON. I have the statistics here that the bill would reduce the production from 1.27 billion bushels to about 960 million bushels.

Mr. JONES of Missouri. Well, that would be 20 percent.

Mr. DIXON. Yes; approximately.

Mr. JONES of Missouri. And you also left the impression—I do not think you did it intentionally, but you left the impression that the House bill would not reduce it that much, whereas the House bill calls for a 25-percent reduction and would actually reduce the production below consumption.

The CHAIRMAN. The time of the gentleman from Utah has expired.

Mr. JONES of Missouri. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I think that what we have to get clear here today is this: We are either going to solve the wheat problem, or we are not going to solve it.

Now, the Senate bill goes just part of the way. The Senate bill does not bring about enough reduction, and you are still going to pile up wheat in the Government warehouses regardless of how you interpret this bill, because with a 20-percent reduction over what we are producing now, we will still produce more wheat than we can eat or sell.

Now, what are we trying to do under this legislation? I think we have a correct title on the bill before us today. We have a farm surplus reduction bill, and we are trying to bring down the amount that we have in the surplus. Of course, both of these bills have this payment in kind, and the theory is fine. I think that is something that should have been done a long time ago, because if you can encourage a man not to produce wheat and still give him wheat that would have been produced on that land, you are giving him some incentive and additional wheat will not be produced. Under the Senate bill, the only maximum you are getting there is a 20-percent reduction.

A 20-percent reduction in the bill will not reduce the surplus that you have. It will add to the surplus we already have.

I am saying to you in all good conscience that if we want to do something to help the farmer in this crisis we are going to have to get rid of the unconscionable surplus; we have got to reduce it to a reasonable reserve. We have to have a reserve of wheat just as we have to have a reserve of cotton. But whenever you have a surplus you are in trouble. Even a 5-percent surplus is enough to destroy the market price and to make these artificial supports necessary.

I am pleading with you today, if you really want to do something for the farmer, make this reduction sufficient to bring about some effect on the market. That is the reason I would have to oppose the Senate bill. I am here today not committed to any particular bill but unless we can do something to help somebody we are just kidding ourselves. We are not here to pass a political bill. We are here presumably today to try to help the American farmer—the wheat farmer; he is the one who is in the greatest trouble. But we have to recognize that the wheat farmer is tied in with the feed grain farmer. We are going to have to attack the problems of both at the same time. That is why your committee brought in a bill which tries to solve the two major problems facing us today.

The Senate bill will not do it. The Senate bill does not go far enough to do any good. It will not cure the evil. It will still cost you a lot of money without bringing you any benefits.

Mr. Chairman, I am saying to you in all sincerity that we would be making a great mistake to pass that bill. That is why I told you this morning, that if the Senate bill came to the Committee on Agriculture I feel sure that the committee would not report it. That is why I asked you to vote for this rule under which we are discussing this bill now. We have to do something to reduce the surplus and the Senate bill will not do it.

Mr. THOMSON of Wyoming. Mr. Chairman, will the gentleman yield?

Mr. JONES of Missouri. I yield to the gentleman.

Mr. THOMSON of Wyoming. The domestic consumption is only to 649 million bushels per year. The committee bill would fall far short of bringing production down to that level; would it not?

Mr. JONES of Missouri. It would fall short of bringing it down to the domestic consumption, but with the anticipated exports and the commitments that we have, I think we would still wind up having to take wheat out of surplus. Under the committee bill we will not produce enough wheat in 1961 to take care of all our needs. It would necessitate using a part of the surplus that we now have in storage. The Senate bill will not do that. That is why I oppose the Senate bill.

Mr. THOMSON of Wyoming. Of the over 400 million bushels exported, most of that would go into export under Public Law 480, or other Government-supported programs which amount to a subsidy. Would not the effect of the House bill be to increase the subsidy with a cost to the taxpayers on those 400 million bushels?

Mr. JONES of Missouri. No; I do not agree with the gentleman on that at all.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. JONES of Missouri. I yield to the gentleman from Oklahoma.

Mr. ALBERT. The gentleman would have to deduct from that every bushel of wheat taken out of Commodity Credit Corporation stocks on which the Government now pays storage. The Department figures on costs as explained here today apparently do not take that fact into account.

The CHAIRMAN. The time of the gentleman from Missouri [Mr. JONES] has expired.

Mr. ALBERT. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, it seems to me that the objections to the Senate bill, which is the amendment under consideration, are twofold. In the first place, the adoption of this bill would reduce the income of wheat farmers at a time when their income is already at a 10-year low. The second major objection is the one suggested by the gentleman from Missouri [Mr. JONES], that is, that it will not reduce the surplus. Unless we are willing to cut the national allotment by 25 percent, we are not going to start getting rid of the surplus. This point I think we ought to keep in mind in considering this aspect of the bill. Both of these bills provide for a payment in kind. This means that every year about 20 percent of the total production, or some 250 million bushels, is going to be taken out of the stocks of the Commodity Credit Corporation. This wheat is going out into the market. Farmers are going to sell it. It cannot be returned to Government warehouses. It is not subject to price supports.

What is that going to do with the wheat the farmer has grown during that year? It is going to mean that 150 million bushels, grown during the year, if the cut is 20 percent, must go back into Commodity Credit warehouses. The result will be that the farmer will simply be trading wheat with the farmers. This just does not make sense.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. ALBERT. I yield.

Mr. ANDERSEN of Minnesota. I think the gentleman will agree with me that the wheat bill as passed by the Senate is a very sorry thing for the farmers of America.

Mr. ALBERT. It will reduce their income, it will not take care of the surplus, it is an ill-considered bill, in my judgment.

Mr. ANDERSEN of Minnesota. The gentleman is absolutely correct; and beyond all else it reduces the income of the farmers.

Mr. ALBERT. It will unquestionably reduce the income of the farmers.

Let us now consider the house bill. Under plan A we have a high support, a strict control proposal. We have the farm bureau bill under plan B. The farm bureau bill takes care of this extra loss in income through an accentuated conservation reserve program of up to 60 million acres.

It seems to me that as we approach this problem we must first start cutting down production and, second, at the same time, we must try and not drastically curtail the income of the farmers of the country. The only way to do that is either by subsidies and a reserve program

or by price-support increases and drastic cuts. I think the two alternatives presented by the committee bill are the only sound alternatives. The Senate bill should not be enacted into law.

Mr. BELCHER. Mr. Chairman, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from Oklahoma.

Mr. BELCHER. The gentleman was talking about a 20-percent cut. Do not the figures show that in 1953 there were 78 million acres planted in this country and we produced 1,141 million bushels of wheat, and this year the allotted acres in the United States are but 55 million yet we are going to produce between 1,300 and 1,400 million bushels of wheat. While acres have gone down from 78 to 55 million, production has gone up.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

(By unanimous consent (at the request of Mr. BELCHER) Mr. ALBERT was permitted to proceed for 4 additional minutes.)

Mr. BELCHER. While we cut acreage 23 million acres, we produced 200 million bushels more of wheat. Is there any reason to believe that a cut of 20 percent would affect any further reduction in view of those figures?

Mr. ALBERT. I would say to the gentleman that is based on averages and that is the best we can do. We do not know what the weather is going to be. We may have a bigger cut or we may have no cut at all. But based on averages, a cut of 20 percent will not get rid of the surpluses.

Mr. BELCHER. And that is on the averages for the past 5 years, and further the bill we are discussing does not prevent an extra 100,000 new farmers from planting 12 acres of wheat in addition to the number of acres planted this year.

Mr. ALBERT. That is true. The Senate bill, for those who think the 12-acre farmer should take more of the cut, certainly does not go as far as the House bill does in that respect. But the House bill will give the 15-acre producer more income, and it will give him a vote.

Mr. BELCHER. But under the Senate bill, is it not possible for a brandnew farmer to start raising 12 acres of wheat?

Mr. ALBERT. No, I think it is limited to 12 acres or the highest planted, if I understand it correctly.

Mr. BELCHER. I think not.

Mr. ALBERT. I have a copy of the bill here.

Mr. BELCHER. I think a new farmer can produce 12 acres of wheat next year even if he never produced any wheat at all.

Mr. ALBERT. It is a 12-acre exemption, or the highest planted.

Mr. BELCHER. That is the House bill, but I do not believe that is the provision of the Senate bill.

Mr. ALBERT. No; the House bill requires him to cut after he takes his allotment.

Mr. BELCHER. The House bill requires that, if he produced 15 acres of wheat to reduce that to 12 acres.

Mr. ALBERT. It requires him to cut it 25 percent.

Mr. LATTA. Mr. Chairman, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from Ohio.

Mr. LATTA. If we were to adopt this substitute, we could make amendments to the substitute to take care of the very think that you are talking about; could we not?

Mr. ALBERT. You have to do that before you adopt it.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from Iowa.

Mr. JENSEN. I am sure the gentleman and I agree perfectly when he says we must reduce acres in order to cut down this great production capacity that we have. Your bill, as I understand it, will make a greater acreage reduction than the Senate bill; is that correct? Do I understand that the wheat producer will receive a sufficient price for his wheat to justify making this acreage cut?

Mr. ALBERT. The answer is definitely, "Yes." The 55-percent payment in kind and 85-percent supports should bring income just about even with or slightly above present income.

Mr. JENSEN. And the reason you want to make the additional cut in acreage is the fact that the minute you make this bigger cut, the price of wheat on the open market will immediately be increased?

Mr. ALBERT. Yes; there is no question about that. The payment-in-kind wheat under the House bill will sell for more.

Mr. HALLECK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I suspect it might very properly be said I am in the position of rushing in where angels fear to tread because I cannot claim to be too much of an expert in this field although I have tried as best I could to become at least fairly well informed about some of the issues that are involved.

In all my time here I have been voting for farm programs of one sort or another, recognizing, as I have that some sort of farm program is essential to the well-being of our agricultural economy, since if our agricultural economy goes down, then sooner or later the whole economy suffers.

There have been differences of opinion through the years as to what was best to help the farmers, but by and large I have supported measures that have been brought before us. The bill that the committee has reported refers to the fact that it is an amendment of the Agricultural Adjustment Act of 1938. That was enacted during the years of a Democratic Congress. By the same token, the Agricultural Adjustment Act of 1949 was also enacted during a Democratic Congress. As I remember it, I supported both of those measures.

I would like to say also at this juncture there is no question but what the farmer, by reason of the cost-price squeeze, is the low man on the totem pole as far as our overall country is concerned. There is no one who does not want to do everything he can to improve his situation and his lot. This particular legislation deals primarily with wheat. I realize that the wheat farmer, along with the cattle and hog and corn farmers in my area, have been caught in this cost-price squeeze. I wish we could guarantee the farmer by legislative action whatever he would like to have, but there are limits beyond which we just cannot go. I am supporting the bill that has passed the other body. It is before us.

I am sorry that the Committee on Agriculture did not see fit to report that bill. I want to tell you why. Everybody here is disclaiming any political motivation in connection with this measure, and I hope everybody who says that means it, because actually what we need is sound legislation and not just something for a political issue for next November. I think in the final analysis we are going to be measured in that regard.

Why do I undertake to point that up at this time? The substitute bill incorporates the exact provisions of the measure passed in the other body by a substantial vote. If it were to be adopted here today it would go to the White House tomorrow, and I am quite sure that as soon as the President got back he would affix his signature to the bill. Let us not say it is not any improvement over existing law. Reference has been made to overproduction. May I ask the gentleman from Oklahoma [Mr. ALBERT] whether it is not true that it represents a 20-percent reduction under existing law and it represents a reduction of the 15-acre allotment from 15 to 12 acres, which is about a 20-percent reduction?

Mr. ALBERT. If the gentleman will yield, I will answer his question in the affirmative, but it also represents a big cut in the farmer's income now, and a bigger one later when payment in kind runs out.

Mr. HALLECK. The gentleman refers to what might be a cut in the farmer's income. I agree that his income is low, but reference was made by the chairman of the committee to the $3 billion worth of wheat we have. So we have got to begin to work out of it. I realize what I am about to say may not fall pleasantly upon the ears of some, but I cannot help but believe that when you raise the support price from 75 to 85 you have a built-in guarantee of production increases.

The CHAIRMAN. The time of the gentleman from Indiana [Mr. HALLECK] has expired.

(By unanimous consent, Mr. HALLECK was granted 5 additional minutes.)

Mr. HALLECK. So, unless we do something along the lines of this substitute proposal, whatever else we undertake here would be self-defeating.

I want to say further that earlier in the session—we are late in the session now—but earlier the President sent up recommendations which set up broad general guidelines. I believe the bill passed in the other body follows those guidelines and can become law.

I think it would be an improvement to the farm picture; I think it would be helpful all around. I have serious doubts

whether or not first of all if you pass the bill the committee has reported you can ever get it out of conference and get favorable action on the conference report. I am not at all sure you can pass the committee bill here in the House of Representatives. I am very sure that if the substitute prevails it will improve the existing situation.

We have been sending bills over to the other body, and it always pleases me to see them take the House version, not sending it to conference, in order to complete legislative action. They did that on the civil rights bill and on many others I might mention. So, I do not believe it would be out of order for us to take, on this occasion, the bill passed by the other body and hence complete legislative action and be sure, first, that the Congress will pass a piece of legislation which will be helpful and, second, that it will become law upon that enactment.

I asked for 5 additional minutes, but I think I have spoken my piece.

Mr. WOLF. Mr. Chairman, will the gentleman yield?

Mr. HALLECK. I will yield briefly, then I will yield back the balance of my time.

Mr. WOLF. What do you propose to do with the feed grains? Are you going to take no action on that this year or hope that something will be done about it later?

Mr. HALLECK. If the gentleman will permit me, I want to be as charitable as I can.

Mr. WOLF. I am all for charity.

Mr. HALLECK. I understand that, and the gentleman and I are good friends, and we are not going to fall out over this. Let me say to the gentleman that these recommendations for legislative action came up here in January, as I remember, or very early thereafter, and all this time until we are right down in what I hope are the closing days of this session, all of this time has elapsed before the committee brought the bill to the floor for action. In other words, I think everybody is hopeful at least, and expectant that this Congress will adjourn, if not July 2, then July 6, 7, 8, or 9. I want all of you Democrats to be able to go out to that convention. I am sorry you will not ask me to go along with you, but certainly we want you to get there for your convention, and I am going to be at mine. But I am simply saying that if this legislative process is complicated then we may well wind up with nothing.

Everybody has said there are many facets to the farm problem. The committee has not undertaken to deal with all of them. The debate here today indicates that the primary concern is with wheat, and this is heralded as a wheat bill. If that is the fact, let us deal with it by the adoption of this substitute.

Mr. Chairman, I yield back the balance of my time.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

Mr. ANDERSEN of Minnesota moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I was of the opinion that I had better offer this amendment while the bill was still in such shape that I could honestly support it.

Mr. Chairman, I would like to refer to the remarks of the gentleman from Oklahoma [Mr. ALBERT]. It is entirely correct that unless we do something in some way to start chiseling away this huge surplus we are going to accomplish nothing. The green acres proposal that the gentleman from Iowa [Mr. JENSEN] and I plan to offer as an amendment to title II will supplement what is in the first title having to do with wheat. It will do what that particular title does not do too effectively; it will help to cut down production.

We in our green acres proposal say that the farmers of America, nationwide, who produce feed grains must reduce their producing cropland acreage by 20 percent, put it in alfalfa, pasturage, or other green cover, and we protect the dairy and other cattlemen by saying that if they take that 20 percent completely out of production they can get payment-in-kind certificates to draw grain from the Commodity Credit Corporation at the rate of 25 percent of normal yield.

The amendment that will be offered by the gentleman from Iowa [Mr. JENSEN] or myself later in the day or tomorrow, if we can get the floor, will take 34 million acres of cropland that is now in production out of production.

If you will study it I believe you will see that that is one of the best plans that has been submitted. It is based in part on what is known as the "Virginia plan" and the "Illinois plan." It is not just CARL ANDERSEN'S plan or BEN JENSEN'S idea. It is a commonsense plan based on very practical principles. It would take 34 million acres of land out of production. It will help the entire situation. It will also help the wheat producer whose allotment will not be affected by this. It will be saying to the small 15- or 12-acre wheat farmers "If you have no place to put this wheat, you can put it into the green acres program and receive payment-in-kind. You do not have to grow that wheat."

It is just common sense, Mr. Chairman. We have to reduce this production. The proposal offered by the gentleman from Iowa [Mr. JENSEN] and myself will reduce it by 34 million acres according to the best estimates we can obtain.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from North Carolina.

Mr. COOLEY. Am I to assume that the gentleman is not in favor of the pending amendment, which is the Senate bill?

Mr. ANDERSEN of Minnesota. The pending amendment would be ruinous to agriculture in America. I know that. If you will look at the rollcall on the bill passed by the Senate you will see there was hardly a Senator from the upper Midwest who voted for that particular bill. You see gentlemen like CLINTON ANDERSON, Mr. HOLLAND, and Mr. ELLENDER voting for it, dictating to the wheat farmers what should be done.

The substitute would take away from the wheat farmers of America a certain amount of what they have today, and they have little enough already.

What are we trying to do? Are we going to reduce production and at the same time reduce the income of the farmers of America by hasty action? Let us not do that. Let us do something that amounts to common sense. Let us take the first section, the first title of the House bill as far as wheat is concerned, and give the farmers an alternative. Give them also an alternative under the feed grain provisions. Let them say whether they want Mr. JENSEN'S and my proposal or whether they want the committee proposal. That is all we ask.

Mr. WOLF. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from Iowa.

Mr. WOLF. I would like to ask the gentleman what provision he has in his proposal to take care of the small town that might be suffering?

Mr. ANDERSEN of Minnesota. We are providing for them under this method. Raise the general level of farm income and you do as much for small-town business.

Mr. Chairman, on the Subcommittee on Appropriations which studies these matters and which has studied them for 18 years, we have experienced members such as the original authors of the soil bank proposal, the gentleman from Minnesota [Mr. MARSHALL] and myself. I have argued with Mr. Benson on this very point. I told him he did the wrong thing when he said you must take 100 percent of any farm out of production. That was never our intention.

Mr. BROWN of Missouri. Mr. Chairman, I rise in opposition to the pending motion.

Mr. Chairman, I want to talk to some of my city friends who may not know too much about this problem and who may be confused with all this agricultural discussion.

First of all, most city district Congressmen I know support a bill now pending before the Rules Committee, which raises the existing minimum industrial wage from $1 an hour to $1.25 an hour. Fair-minded people who want to see Americans live and labor at decent wages and enjoy a decent living standard support that bill. Yet, let me tell you about some 5 million Americans who are not even making $1 an hour for their labor. Net farm income in 1959 was 24 percent below 1952, while in this 7-year period the national income increased by 35 percent. Do you know that farm people who own their farms are making 71½ cents an hour for their labor? That is the average. In my area the dairy farmers, according to a study made by the University of Missouri, are making less than 50 cents an hour for their labor.

Now, legislators ask us to take the Senate version of a wheat bill that would cut the wages, the income of farmers another 20 percent. Now, is that fair? Do you really want to raise the industrial workers, even 15 percent to $1.15, or 25 percent to $1.25 and in the same

year, cut the wheat farmers in this country 20 percent in their wages, in their income? That is what you will be doing, because the Senate bill leaves the price of wheat at exactly the same level but cuts their volume by 20 percent.

Now, I think our House committee took the fair approach to this problem. They recognized that the cost of storing wheat in this country is absurd. We are piling up wheat in Government warehouses that is not necessary and that we cannot use. Storage alone is costing millions of dollars a year. So, we must cut down the volume of wheat production. But it can be done without forcing farmers to take a still further cut in their income. Here is the offer the House bill makes: Cut the acreage 25 percent, and we will give you a slight raise in price to 85 percent of parity, and at the same time we will pay you in kind for acreage not planted. In other words, we will take some of this surplus that we have stored up and give it back to wheat farmers to help supplement the income they have lost.

The question before the House is which is the fair thing to do for the 5 million American people who, as the gentleman from Indiana said, are the low men on the totem pole. Do you want to cut them another 20 percent, by adopting the Senate bill, or do you want to give them a fair deal, such as the House committee has done? I say that there is no comparison between the two bills. Our House committee did a fair job, a reasonable job, something we can go back to our people and support with pride, whether it is before city people or country people. This wheat bill will save $155 million a year that the taxpayers are now paying in the wheat program plus what will be saved through the feed grain program. This is a good bill as the House committee has prepared it. I wish it had something in it for milk. I wish it had a long-range program that could be adapted to poultry producers in this country, because that is going to be a serious problem come this fall. I wish there were more in it, but as far as it goes, this is a good, fair, reasonable bill. I think it is an effective bill. I think the farmers will live up to it and they will be proud that this Congress passed it.

Mr. Chairman, I hope the Committee will give it careful, fairminded consideration, vote down the Senate version, and pass the House bill.

The CHAIRMAN. The question is on the motion offered by the gentleman from Minnesota [Mr. ANDERSEN].

The motion was rejected.

Mr. HAGEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I serve on the Committee on Agriculture. I represent a farm area, a farm area that is the most productive in the United States. And, I represent wheatgrowers. And, I would like to see legislation passed by the House, which will become law and do something about this wheat situation which has become a terrible burden to the taxpayers and threatens to tear down the whole structure of price support programs in this country.

Some statistics were quoted here on farm income. These statistics showing real farmers to have incomes under $1,000 are false. Now, I do not know how many of you here in this Chamber know some farmers. I certainly do. And, I will say this, there are literally tens of thousands of farmers who make more money from subsidies than is conscionable and defendable. That is the simple fact of the matter. There are all kinds of farmers and these programs we have on the books do not recognize that fact. Until we make some effort to bring some equity into these programs, attempts such as H.R. 12261 to perpetuate them should be turned down.

The gentleman from Oklahoma [Mr. ALBERT], who is a very able Member of this body and who I know wants to write a fair wheat bill, pointed the finger at the Senate bill. He did not say this, but I will say it for him. He indicated that the only difference was a difference of 5 percent in this acreage cutback. If that is the only fault of the Senate bill let it be amended. But the Senate bill does not raise the price support from 75 percent to 85 percent and it will, therefore, produce a greater reduction of bushels of wheat than the higher House acreage reduction figure. It does not compensate the farmer at the rate of 55 percent of his average yield for cutting back, as compared to the 55 percent the House bill grants him. In referring to the wheat farmer, I do not say that there are no wheat farmers who are losing money. There are participants in any business who do not make money under the best sort of conditions. But I will say this: There are wheat farmers, and a great many of them, who are making money and who are making more money than you and I and more than many fine entrepreneurs who enjoy no Federal subsidy. In effect, we have a wartime wheat production plant in this country and a great many other commodities. Somebody has got to absorb the cutback to a peacetime plant. Is the Federal Government going to have to absorb all that burden, or are these people who made great amounts of money during the war going to have to absorb part of it?

Mr. Chairman, what I wish to say is this: I think it is absolutely vital that we pass some meaningful wheat legislation that has a chance of becoming law. If this committee bill is passed, I agree with the minority leader, it will not be accepted by the Senate. The whole issue will die. If we pass a wheat bill and get it down to the White House, if it is reasonably fair both to the Government—that is, the taxpayers, and to the wheat farmers, it will be signed. This is a matter of urgent necessity. H.R. 12261 does not meet this criteria.

This feed grain section is a mere Christmas card. I cannot visualize the producers of sorghums and corn and barley and oats, all sitting down together and devising a program that one group could vote the other into. I cannot see that. It is a Christmas card. As far as the protein section goes, we all know why that is in the bill. That is a sop to the city voters. It is supposed to gain votes for this basic wheat and feed grain proposition.

I say let us adopt the Senate bill and do something about wheat. If we fail to confine this bill to wheat or fail to make the wheat provisions reasonable we will have perpetuated the present failing program by inaction and the wrath of the taxpayers will pursue us. We know the kind of legislation which has a chance of becoming law; let us, then, provide it by adopting a substitute bill.

Mr. SMITH of Iowa. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the gentleman just referred to title III of the bill. I am glad he did because I want to point out, too, that the amendment before us would also strike title III of this bill. The proposal is to substitute only a wheat bill. In this bill title III is an important part. Maybe the city folks would like to have it because, as he says, it is a sop. But the fact of the matter is anybody would like to have it if you believe in getting some of these storable goods into the stomachs of hungry people in this country. This is a provision that is properly labeled by some as a welfare provision.

As a matter of fact, this provision will give to the widows and orphans and the disabled and the blind and the elderly low-income people of this country some of this wonderful surplus we have. Most everybody talks about the surplus as if it is a curse, but we can do something about it here to make it something good.

We have heard a lot this afternoon about wheat. I want to remind the House here today there are more bushels of feed grains in storage than there are of wheat in the United States Government bins and in commercial storage rented by the U.S. Government. There is more money going out today to pay for storage on feed grains than on wheat. We cannot just slip away from this problem of feed grains lightly. We ought to deal with both of them because together they constitute 80 or 85 percent of the total Government investment in agricultural commodities today.

It was mentioned a while ago that Mr. NIXON made a speech last night in North Dakota. I notice he said we should have a program to distribute surpluses to the needy people in other countries. I say to you this is a worthy objective, but why not distribute some to the people in this country? If we can provide a way to get surpluses to the hungry people in other countries without hurting our markets, why in the world can we not do it in this country?

Mr. LEVERING. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Ohio.

Mr. LEVERING. If the Vice President's proposal for sharing our great abundance with hungry people around the world is a good idea, and I believe it is, having worked and spoken in favor of it for a long time, is it not also true that title III, which is a sort of a domestic version of the Vice President's idea, will be good for our own folks at home who are in need?

Mr. SMITH of Iowa. Exactly; that is what it is.

I have a press release here that I have received dated June 17, and it shows conclusively the Department of Agriculture is not now distributing to the needy people in this country the protein foods that could be converted from these feed grains that are in storage today.

Mr. ANFUSO. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from New York.

Mr. ANFUSO. Do I understand correctly that title III would permit youth organizations and charitable organizations who have camps, for example, to give this food to the children?

Mr. SMITH of Iowa. Title III permits the Department of Health, Education, and Welfare to distribute to needy folks through the various welfare agencies. If they come within the categories described, within their purview, that would be true.

Mr. WOLF. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Iowa.

Mr. WOLF. I should like to have the gentleman read that telegram to which he just referred.

Mr. SMITH of Iowa. It was a press release issued by the Department of Agriculture on June 17, and I believe it was sent to every Member of the House.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Minnesota.

Mr. QUIE. I think we also ought to bear in mind that in 1953 only 100,000 people in this country received surplus food from the Department of Agriculture. Now more than 5 million people receive surplus food. As was said in the report from the Department of Agriculture, we have been disbursing through relief agencies certain substantial protein foods, beef and beef products, 280 million pounds, pork and pork products, 180 million pounds, and poultry and poultry products, 135 million pounds. We have been doing a tremendous job but we could do more. Why does not our present program provide for the distribution of surplus food for the needy people throughout the country?

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. SMITH of Iowa. Mr. Chairman, I ask unanimous consent to proceed for 3 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. SMITH of Iowa. I may say to the gentleman that regardless of what has been done in the past we are not today distributing these foods and at a time when we have more abundance than ever before. I recall an experience in 1956 when I was chairman of a welfare board in Iowa, I was authorized to come to Washington to get some meat and gravy for people in that area, and do whatever was needed and to pay for the transportation of those goods. I was told at that time at the Department of Agriculture that they were not going to purchase enough food for any of the needy people, that what they would buy would only go to the school lunch program. At that time hogs were selling at 10 cents per pound and there was no surplus food for the widows and orphans and low income folks in this country. We can surely do better than that.

Mr. QUIE. The gentleman knows that when the price of hogs was down, the Department of Agriculture went into a purchase program not only on processed pork but also on frozen pork and distributed it through our various programs. Now when prices are up and there is a cutback on that program, do you feel the Department of Agriculture should continue buying pork and pork products and beef and beef products even when prices are at their present levels?

Mr. SMITH of Iowa. Under this program, they can buy any protein products which are converted from feed grains into protein food. Eggs, certainly, are not high. Cheese is not too high. There are plenty of high protein products available that needy people, people on welfare and relief, that widows and orphans and disabled people are never going to be able to buy in the amount needed in order for them to be on the kind of a diet that we think is proper in this country. We would not think of raising hogs in this country if they did not have a balanced ration. We give hogs a 10 percent protein diet. But do you know what? The needy people in this country do not begin to get that much of a protein diet. I want to point out also under this bill for each $2 spent, we take one bushel of grain in Government storage and sell it because, in fact, we have created a new market for one bushel of grain. Some people are going to convert it and merchandise it into $2 worth of protein food. As a result, that one bushel gets you more than a dollar back. In addition, the U.S. Department of Agriculture estimated it is going to cost us $1.52 for every bushel of corn we have in storage before we get rid of it. So you see, we get $2.52 back and actually we save future appropriations under this until the time when storable commodities are down to a normal supply.

Mr. FOGARTY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have sat here and listened to all of the debate here today. The longer I sit here, the more confused I get. The Committee seems to be divided. The Democrats on this side of the aisle, and the Republicans on the other side of the aisle are divided as to what kind of a program we should enact to help the farmers of our country. It seems that every speaker gets up and talks about this being necessary for all of the farmers of our country. But, it is my understanding that only 25 percent of the farmers of our country are affected by the subsidy program of our Government.

It seems to me that the bill before us today represents a pretty good example of how not to solve the farm situation. I could be wrong, but as I understand the situation one of our tremendous problems is a surplus of agricultural commodities, particularly wheat and feed grains, and the other difficult aspect is a drop in the net income of farmers.

Now then, we come along and we say—in this bill—that the way to stop all this trouble is to increase the already too high price support on wheat and on feed grains. We attempt to say that we will compensate for that high support price by taking land out of production, but I am sure that all of us realize land is only one resource in the production of any crop.

If we are willing to raise the price support of wheat from $1.79 to $2.03 a bushel, we also must be willing to face up to the fact that a lot of wheat growers are going to be doing all they can to increase their wheat yield per acre. Would not all of us here do just that?

How will all this solve the tremendous surplus problem?

Earlier, I mentioned the lowering net income of farmers. This particularly concerns me because farmers in my State and in all of the Northeast—as well as in other regions—buy tremendous quantities of livestock feed. They would buy wheat, too, if we, the Congress, had not priced it out of the livestock feed market long ago.

As my colleagues know, I spoke about this entire farm problem on June 9—particularly with regard to the manner in which the bill now before us—H.R. 12261—would affect New England. I now have had the opportunity to study this legislation even further, and I am more convinced than ever that it will do nothing to solve our farm situation.

There can be no question about the need for legislation to correct the wheat situation. But I am convinced this bill will only further aggravate the problem.

It not only fails to solve the wheat problem, but it also threatens to create new problems for the producers of feed grains, livestock, dairy, and poultry products. As my colleagues know, I am vitally concerned with dairy and poultry production.

I feel it will be a tremendous mistake to move in the direction of increasing the price support on wheat by 25 cents a bushel. The additional cost to the taxpayer—in taxes alone—would be about $114 million.

The payment-in-kind rates for cutting wheat acreage are fantastically high. It is obvious it would be more profitable not to grow wheat. It has been estimated that under this bill the average wheat farmer in Kansas would get a return of roughly $22 an acre, and in the higher yielding areas like Illinois, the payment could run as high as $33 an acre. All this money for not producing.

The feed grains provisions of this legislation provide for increasing price supports from 20 to 35 percent. If I understand the bill correctly, it could increase the price level on a bushel of corn from $1.06 to possibly $1.65. My farm constituents do not like this one little bit, and neither do my constituents who have to buy farm products.

I am for common sense in agricultural legislation—legislation that gradually gets the Government out of direct interference with production; legislation that

does not fix the prices of farm commodities.

Farmers in my State know of my keen interest in their affairs. They have not asked for any special favors, but, neither do they want special favors given to farmers of other areas.

My farmers compete, just like every other businessman does—like the grocer, the car dealer, the filling station owner, the hardware merchant, and so on. But, they do not want to have to compete against subsidized farmers elsewhere.

That is where I am, Mr. Chairman—for common sense in agricultural production. I do not believe that farmers anywhere in this country want to be thought of as a special class demanding special privileges.

Let us here in this Congress stop thinking of farmers as a special class. Let us give them the opportunity they desire—to compete, to grow, to prosper—not under the thumb of Government, but as a free and vital part of our private enterprise society.

Let us not add to our great domestic problem of our time—too much that consumers do not want.

The CHAIRMAN. The time of the gentleman from Rhode Island has expired.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I ask unanimous consent that the gentleman from Rhode Island [Mr. FOGARTY] may proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. FOGARTY. I yield.

Mr. ANDERSEN of Minnesota. The gentleman from Rhode Island has through the years been one of the Members of Congress most interested in the welfare of the people of America. I admire him for his work. The gentleman is also one of the strongest proponents of a bill shortly to come before the House and Congress to raise the minimum wage. I know the gentleman is going to work hard for that bill.

Mr. FOGARTY. You are right.

Mr. ANDERSEN of Minnesota. Now, if the gentleman is to be consistent he certainly will not object to raising the minimum wage for my farmers from about 50 cents—I think that is what they average—would he? I do not see how he could object to raising the minimum wage of my farmers, which will be the effect in a small way, of the passage of this bill.

Mr. FOGARTY. I am in favor of the farmers getting a decent annual wage, but I am not in favor of your farmers paying, as the gentleman from Missouri said a while ago, 35 cents or 40 cents an hours to farmhands that is being paid now. It just does not make sense to me. I do not think they have to pay that kind of slave wages in order to exist in that part of the country.

Mr. ANDERSEN of Minnesota. I may say to the gentleman that I have 42,000 farmers in my district, the most extremely agricultural district in America and those farmers, to buy the products manufactured in the district of the gentleman from Rhode Island have got to be able to make a little profit. So I cannot see the reason for the attitude the gentleman takes in always being against anything that helps my farmers.

Mr. FOGARTY. I am against it because the programs that you are supporting today are driving the farmers in the northeastern section of the country out of business. That is why I am opposed to it. It is costing the farmers of the State of Rhode Island over a million dollars.

Mr. ANDERSEN of Minnesota. Would the gentleman want his poultry raisers to use feed produced in my district and not pay my farmers the cost of production?

Mr. FOGARTY. I do not expect anybody to produce anything at a loss, not at all.

Mr. ANDERSEN of Minnesota. I still think the gentleman from Rhode Island is a fine gentleman, but cheap feed and the inevitable cheap poultry and livestock is no answer for either his district or mine.

Mr. FOGARTY. I think under a good administration you can do a good job. If you have a poor administration we should not be made to suffer for it.

Mr. COAD. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, the gentleman from Rhode Island is one of the best friends I have in the Congress. I feel that he is one of the most philanthropic Members we have. He has fought more battles in the well of the House for the welfare of the people of this country than any other person I know who has ever served in the Congress of the United States, living or dead.

But because of the statement he has just made, I would like to read from a recent editorial in the Des Moines Register concerning "Naive Reasoning on the Farm Policy," and this is directed to the attention of the gentleman. I quote the following:

> Opponents of Government farm income support program sometimes argue that farmers not receiving price support (or payments) for their products are "doing better" than producers of the major price-supported crops. Secretary of Agriculture Ezra Benson often has made this argument, and the Farm Bureau leaders frequently use it.
>
> For example, Charles B. Shuman, president of the American Farm Bureau, recently said that about 80 percent of U.S. farm products are now sold on a relatively free market, and that producers of those products which are "Government priced" are generally in the worst situation.
>
> It is like saying that people receiving medical care for, say, arthritis, are in worse shape than those receiving no treatment. The reason for the price support program is to help farmers who have been afflicted with surplus and low price problems beyond their control as individuals.
>
> Mr. Chairman, the reason the farmers are in trouble now is because there is a surplus, brought about because they are producing too much, and they are producing too much because the price is too low. Under the bill we have before us today there is to be a reduction in wheat production of 25 percent, but the price has moved up only 10 percent of parity. On this basis, the farmer actually is taking out of production a certain amount and getting a small increase in pay. In addition, to help make up some income deficiency a payment in kind is also made which comes out of the Government-held surplus.

I believe that the gentleman from Rhode Island has stated that he feels this kind of thing is necessary. He does not want farmers necessarily to go broke; he wants them to receive a decent and honorable wage. So we are going to cut back on the surplus that is Government held. We are going to increase the farmer's pay just 10 percent of parity, but for this he is going to cut production. The farmer is doing more than his share under the principles of the bill that we have before us today. In this bill the wheat farmers are contributing, and the consumers are contributing a small amount.

The feed grain aspect of this bill is merely a set of guidelines so that the grain people can come in and work out a program that is going to cut back on production, which will stabilize the farmer's income and keep all of the people—farmers and consumers—in a much more sound position than they were heretofore.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. COAD. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. Am I not correct that last year the average farmworker in the United States received about 80 cents an hour while the average farm operator received less than 70 cents?

Mr. COAD. That is correct. When we look at the complete aspects of farm economics, we find that the farmers are living off of inventories. They are not living off of income in the whole of the Middle West, and if that goes on it will force corporation farming. That is the kind of thing that makes for worse relations. It gets into a kind of socialism of farming by corporations, and that is certainly not a good economic system.

Mr. ANDERSON of Montana. Mr. Chairman, I move to strike the requisite number of words.

Mr. ANDERSON of Montana. Mr. Chairman, I rise to support the rule because it is in the best interest of all the people. Let me make one point quite clear. For the short term the American taxpayer will be the great gainer by passage of the Poage bill, H.R. 12261. Let us be frank. This bill is not going to make any big change in the wheat farmers' income in the next year or two. The bill will do what the people all over the country have been demanding—it will eliminate the production of wheat for storage—it will cut the costs to the taxpayer of our farm program. The wheat farmer is willing to go along, first, because he is a taxpayer, too, and interested in cutting Government costs, and second, because this legislation does protect him against a further cut in income.

We are faced at this point with a clear-cut choice between the Senate bill and the House bill. There are numerous reasons why the House should approve the carefully worked out House bill rather than accept the improvised Senate bill which was hurriedly put together on the floor of the Senate without hearings and without adequate consideration.

The Senate bill slashes the income of the wheat farmer.

The other cogent reasons are clearly evident from the discussions so far.

You talk about the subsidy to the farmer. The taxpayer is not subsidizing the farmer. For 7 years now the farmer has been subsidizing the economy of the country. For 7 years, a little more each year and most of all in the year just ended, the farmer, through the low prices he gets for producing this Nation's food and fiber, has subsidized every order of food the housewife has taken home to feed her family; every item of wool and cotton goods that she buys to clothe them. The farmer has produced more and better supplies of food and fiber than ever before in the history of the world. He has been absorbing about 25 percent of the Nation's grocery bill. His contribution has partially concealed the ever-rising prices and inflation in almost every other segment of agriculture.

How can less than 5 million farmers afford to subsidize the food for almost 175 million Americans? He cannot afford it, but I will tell you how he does it.

First, the American farmer subsidizes the food you eat because he is putting up almost $200 billion; dollars he has invested in farm plant, land and equipment. On that $200 billion, equal to about two-thirds of the national debt, he receives not a penny of interest.

Suppose all the millionaires and billionaires in the country said they would loan $200 billion to the U.S. Treasury without interest. That will be the day. But just try to imagine it. Do you not think we would fairly say they were subsidizing the taxpayers of America? Sure we would, and in the same way the farmer is subsidizing every meal served in America. Of course, there are a few farmers who make interest on their investment, but they are a relative few, generally favored by circumstances and conditions which are not typical. And, for every one who is receiving a fair rate of return on his investment, there are several who are not only not receiving any return, but they are seeing their capital eroded by ever-increasing yearly deficits. Throughout America, the farmer receives no return on his almost $200 billion investment, as I will make clear before I am through.

There is a second way in which the farmer is subsidizing every person who eats food or wears clothes. The farmer is working for less than half the wages of those in nonfarm jobs. Again, let us look at the whole picture. The total net income of America's farmers last year was less than $11 billion. That is about $2,400 per farmer, with the usual help from other members of the family, whose labors may be considered as another subsidy which helps account for the fact that an hour of the industrial worker's time will buy more and better food than ever before.

You can talk about little bits and pieces, you can point out a farmer here and there who seems to be making a profit, but the Department of Agriculture statistics make quite clear what is happening to agriculture as a whole.

Almost 5 million farmers have invested close to $200 billion so that they and their families may produce the food and fiber you eat and wear for a net return of less than $11 billion. In other words, the average farmer, the composite farmer, has put up $40,000 to buy a job; yes, that is just what it is. He has bought a job that will pay him and his family about $2,400 a year.

In our economic world, the farmer is a second-class citizen, and we have found that when our neighbor is consistently hurt, sooner or later all of us are hurt. I have copies of the Wall Street Journal, headlining, "Farmers Cut Purchases of Equipment as Drop in Income Deepens," and "Rural Retrenching, Dealers Feel Profit Pinch." Thoughtful people all over are asking how long America can keep the economic squeeze on her farmers without injuring the rest of her economy. Most of them want to make at least a start in the right direction. The Senate bill, Mr. Chairman, is a move in the wrong direction. The Senate bill means disaster for many farmers who have just been able to hang on. It is an anti-wheat-farmer bill, for it will cut farm net income even lower than the present level which is causing so much distress. Let us not give the farmer another push down the Benson road to disaster.

The Poage bill, H.R. 12261, is the bill that this Congress should pass. It moves in the right direction, it meets all the criteria for agricultural legislation. It gives the farmer an opportunity to decide which way he wants to go. In open referendum, the wheat farmer himself will decide whether he wants to go Benson's way toward unlimited production and a cutthroat free market price, or if he wants to bring his production into line with requirements and assure himself of at least his present level of income.

I am confident, Mr. Chairman, that he will choose to follow the lead of every major segment of the American economy, producing ample supplies of food and fiber, but not indulging in that unrestrained and unreasoning production which will glut the market and bankrupt the producer.

If this is his choice, then H.R. 12261 will serve all of us—farmer, housewife and taxpayer. It will eliminate production of surplus wheat, it will reduce the amounts of wheat in storage, it will reduce the Government costs for the agricultural program, and it will assure the farmer against another drop in his income.

The feed grains section of the bill provides a field test of the principles of the Family Farm Act of 1960. It will permit feed grain producers to work out their own commodity program within the broad guidelines of the bill. Such a program cannot help but provide a better program at less cost to the Government and more benefit to the farmer.

I hope my colleagues will support the Poage bill, H.R. 12261.

Mr. POAGE. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, as some of the previous speakers have said, I am thoroughly confused. I read in the newspaper this morning a statement which says:

> A method must be developed whereby the farmers themselves have a greater opportunity to choose the kind of farm program they want.

I thought that was a remarkably fine statement. And it is in keeping with the plan which the committee brings you. But I do wish that somebody would explain the situation. Those words are the words of the Vice President of the United States delivered at a political rally in North Dakota last night, where he was seeking to get farm votes. That is why he was there. It was a farm speech calculated to influence the coming senatorial election in the State of North Dakota.

I am sure that the Vice President meant what he said in this respect. This committee agrees with the Vice President that there should be a greater participation of farmers in determining these programs.

But if you accept the suggestion made by the minority leader that we simply wipe out this bill and adopt something from the Senate, farmers will have no participation whatsoever in the program, because the Senate bill did not have any consideration for farmers. The other body wrote a program which was admittedly intended to attract Presidential support and nothing else. The reason we now find a growing interest in the Senate bill seems to be because the Senate bill proposes now to support prices at something less than the level of support in the original measure. It clearly outlines the question of adequate versus low supports, but it does not leave the decision up to the farmers, as the Vice President said we should. Instead, the minority leader would have us make a decision in favor of low supports without any expression from farmers.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman.

Mr. GROSS. Did the Senate bill have the support of the Senate majority leader?

Mr. POAGE. I understand that it did not. I recall seeing that it did not have the majority leader's support. I do not know what the minority leader did, but I do know that the Senate bill requires a 20-percent cut in wheat acreage without one single compensating cent in the way of supports. I do know that it means the same thing as requiring a cut from an 8-hour day to a 6-hour day without 1 single cent of increase in wages if we may liken the payments in kind to unemployment compensation. That is what it means to the wage earners.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to my chairman.

Mr. COOLEY. Does it not mean a 20-percent permanent cut?

Mr. POAGE. It means a 20-percent permanent cut; and I am glad the chairman has called attention to that. There is a phony proposition in that Senate bill; some of you do not know it, but that Senate bill makes a 20-percent permanent cut in production and gives support in kind for only 3 years, no longer. So that the effect of the Senate bill is permanently to seal upon the wheatgrowers of America a kind of serfdom Americans do not want.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman.

Mr. ANDERSEN of Minnesota. Mr. Chairman, the gentleman from Texas [Mr. POAGE], whom I have known for 22 years and whose work I have watched, I think is a real friend of agriculture. He and I differ very seldom. The gentleman has correctly stated that the first title of the bill does give an alternative, but the same title on food and feed grains gives no alternative.

Mr. POAGE. It allows farmers to work out their own programs. As the gentleman knows, and I have told him, I am perfectly willing to include in the bill the suggestion he has made of giving farmers a still further option, because I believe in what the Vice President said. I do not know how many of you believe it, but when we take a vote on this we will know who believes in this pronouncement by the Vice President and how many are endorsing it simply for political purposes.

Mr. COOLEY. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment and all amendments thereto close in 15 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from South Dakota [Mr. MCGOVERN].

Mr. BREEDING. Mr. Chairman, I ask unanimous consent to yield my time to the gentleman from South Dakota [Mr. MCGOVERN].

The CHAIRMAN. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. MCGOVERN. Mr. Chairman, I appreciate the fact that the substitute amendment before us, which is the bill from the other body, was offered in good faith, but if it should carry I know that I and I think many Members from the wheat-producing sections of the country would vote against it on final passage. We would rather have no bill at all than this inadequate proposal now pending as a substitute.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. MCGOVERN. I yield.

Mr. ANDERSEN of Minnesota. Is it not a fact that regardless of party the great group of Senators from the upper Midwest voted against this bill?

Mr. MCGOVERN. Yes. I think with one or two exceptions all the wheat-producing representatives in the country opposed it in the other body, as I hope they will here.

Mr. Chairman, the Senate bill, as has been pointed out many times here this afternoon, has the effect of taking away from the wheat farmer 1 day's pay every week. It cuts off 20 percent of his earning power with no increase in the price per unit. We would have the same principle in operation if we went up and down Main Street 1 day a week at the end of the day and took all of the money out of the till and deprived the operator of that portion of his income for 1 day out of 5. That is exactly what this bill from the other body attempts to do to hard-pressed farmers who are already suffering from the cost-price squeeze.

There has been an argument raised here that if we were to give farmers a decent price on wheat and feed grain this would constitute a tax on bread, but, as the gentleman from Colorado demonstrated early this afternoon, when wheat prices were around $2.50 a bushel, bread was selling at a lower price than it is today with wheat price supports at $1.78. So if that inverse ratio were to hold, by raising the price of wheat maybe we will get cheaper bread.

It has also been suggested that to give farmers a fair price on wheat, or even 15 percent less than a fair price, would produce more surpluses, but here again, when we had wheat selling at 100 percent of parity and supported at 90 percent of parity, we had only 267 million bushels in surplus, which is really just a safe reserve, whereas today with wheat supported at 75 percent of parity we have accumulated surpluses of Government stocks of 1.3 billion bushels.

I want to conclude my remarks by saying that I have offered some criticism here of my Republican friends but I want to remind the Members of my party of our pledge in the platform of 1956 to support the basic commodities at 90 percent of parity.

Mr. BREEDING. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. BREEDING. Mr. Chairman, I rise in opposition to the amendment.

Before the House votes on this proposal to substitute the Senate bill for the Poage bill, I wish to repeat some figures I cited earlier in general debate.

Under the Senate bill a 100-acre wheat allotment would produce a gross income of $3,524.40 for the wheatgrower.

The Poage bill would maintain his income at $3,900—just $16 below what it would be under the present program.

Let me emphasize this point. With the cost-price index as unfavorable as it is now, the decline of almost $400 in gross income could have disastrous effects in the wheat area. It could mean nothing but red ink for thousands upon thousands of farmers.

The Poage bill will actually reduce production more than will the Senate bill. Production and supply is our great problem. We have too much wheat. The Poage bill calls for a reduction of 25 percent in acreage. It would take about 170 million bushels of wheat out of CCC stocks. This means substantial savings in storage and carrying charges.

The point to remember about the Poage bill is this. It will carry the wheat producer through this interim period without letting his head sink below the water. It will keep him going until we can achieve the balance between consumption and supply which we all so earnestly desire.

Speaking as the representative of a great wheat producing area and as a man who was active as a wheat farmer until elected to Congress, I urge you to vote for the farmer the added protection which the Poage bill offers.

I urge you to defeat this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California [Mr. BALDWIN].

Mr. BALDWIN. Mr. Chairman, there are a considerable number of wheatgrowers whom I represent. I have not received one single communication from any one of them in favor of the bill H.R. 12261. Most all of them are members of the Farm Bureau, which is an organization strongly opposed to this bill.

I do not think we are going to solve the wheat surplus problem by providing for an increase in wheat price supports. For that reason I am in opposition to the bill H.R. 12261.

Most of the wheatgrowers in my district actually would be much happier if they were relieved of Government controls of all types. Of the two versions, the Senate bill and H.R. 12261, I believe the Senate bill which has been offered as an amendment is at least an improvement over H.R. 12261 because it does not increase wheat price supports and, therefore, is not going to provide the same stimulus to increase present wheat surpluses which are a burden upon the American taxpayer and a burden upon the whole economy of this country.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. MARSHALL].

Mr. MARSHALL. Mr. Chairman, in my work on the Committee on Appropriations for the Department of Agriculture, I have been intrigued with a few things in connection with our agriculture. The first thing is the tremendous cost of carrying the surplus stocks of the Commodity Credit Corporation. I am going to base my opinion in voting on this bill on one thing and one thing only because, with all due regard to my friends on the Committee on Agriculture, and they are a fine group of people on both sides of the aisle, the bills that are proposed and what we are talking about today in my estimation will not solve the farm problem. But when we come to the matter of costs of the program, I do not believe the taxpayers of this country can afford to put up with a bill that has been proposed in the other body for this reason. It is going to add more stocks to the Commodity Credity Corporation. It is going to cost more dollars. The cost of the Commodity Credit Corporation and the support prices have not, in a large measure, gone to the farmers. The losses have been incurred after Commod-

ity Credit has taken possession of the stocks. Storage, transportation, handling, maritime shipping and so forth, costs make up the lion's share of the loss.

The most economical way to vote on this bill is to vote against the Senate proposal offered as an amendment by the gentleman from Utah [Mr. DIXON].

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. WOLF].

Mr. WOLF. Mr. Chairman, I take this time in order to propound a question to the ranking Republican member on the committee. Previously, when the gentleman was speaking in the well of the House, I asked him to yield. He did not yield so I thought I would ask this question now. The question arises, if we support the amendment which has been introduced here, what happens to the feed-grain farmer?

Mr. HOEVEN. As I understand it, the amendment offered by the gentleman from Utah [Mr. DIXON] is a substitute for the entire bill, which, of course, if adopted would be a substitute for the bill and would eliminate the feed-grain section.

Mr. WOLF. The answer to me, as I see it, is if I want to do something for the feed-grain producers in the Middle West in the Corn Belt, I will have to vote against the amendment.

Mr. HOEVEN. Not necessarily, because I pointed out earlier during the debate that there was no reason in the world why the Committee on Agriculture cannot promptly tomorrow pass out a bill which can be enacted into law.

Mr. WOLF. Does the gentleman from Iowa [Mr. HOEVEN] have such a bill ready to go that would have the support of his administration?

Mr. HOEVEN. I do not have a bill myself. I do have a payment-in-kind bill, which the gentleman knows, but I am handicapped on the Committee on Agriculture, as the gentleman very well knows, being on my side completely outnumbered. We do not have the votes to enact the legislation that we would like to present.

Mr. WOLF. Would it not be a good place, right here and now, to amend the amendment and include your payment-in-kind bill for the feed-grain producers.

Mr. HOEVEN. That is the gentleman's privilege, if he desires to do so. I am just pointing out that the substitute proposed by the gentleman from Utah would supplant the committee bill.

Mr. WOLF. My feeling is that if the gentleman from Iowa truly is concerned for the feed-grain producers, he would introduce it. As the ranking minority member of the committee, his arguments might be quite persuasive.

I thank the gentleman for his help.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin [Mr. BYRNES].

Mr. BYRNES of Wisconsin. Mr. Chairman, everybody in this House, I think, is agreed on the need for action in the field of wheat legislation and is agreed that there must be a change in the law. We also, certainly, must recognize the issue is a very controversial one. Even the wheat representatives here cannot agree on exactly what should be done. I am not an expert in this field, and I am not going to discuss the merits of the Senate bill or the merits of any other bill, although I must suggest I am quite amazed at some of the language used by my colleagues on my right to describe a bill that was written in the Senate of the United States where they control that body. I just cannot understand how under these circumstances they could put out such a defective bill. But, I want to talk about the situation right now.

Each of us has his own ideas as to what should be in the bill. Let me suggest, however, that speeches and amendments are not necessarily going to get something down to the President's desk. There is only one way to get this legislation down to the President, and that is by adopting the substitute that has been presented here. It has passed the other body. If we adopt it here we send it down to the President.

Mark this well: If no bill gets to the President, let those who have turned down this opportunity remember that they did have the opportunity to send a bill down to the President which we have some assurance the President will sign.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio [Mr. LEVERING].

Mr. LEVERING. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LEVERING to the amendment offered by Mr. DIXON: On page 12, line 11 of said amendment strike out all of subsection (d) of section 102.

Mr. LEVERING. Mr. Chairman, the effect of subsection (d) under section 102 of the substitute amendment is to strike a real blow, in my opinion, to the family farmers of America, because it strikes at the very heart of the traditional 15-acre exemption which applies to the great multitude of small family farms throughout America. In other words, this provision reduces the 15-acre exemption down to 12, or the highest planted acreage over the past 5 years, 1956, 1957, 1958, 1959, and 1960, and then makes that permanent.

I say to you that if you are interested in preserving the interests of the small farmer in America adopt my amendment which strikes subsection (d) of section 102 from the substitute. This will permit us to continue under existing law that gives our family farmers a 15-acre exemption. I hope my amendment will be adopted.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. HOEVEN].

Mr. HOEVEN. Mr. Chairman, I would like to ask the gentleman from Ohio [Mr. LEVERING] a question: Do I understand that the gentleman from Ohio is now changing his position? Did he not vote in committee for the 12-acre proposition?

Mr. LEVERING. The gentleman is incorrect when he says that in committee I voted for the 12-acre limitation. If the gentleman recalls, I worked very hard to get the 15-acre exemption back into the bill which was reported out by the committee.

Mr. HOEVEN. Mr. Chairman, just let me say in the remaining time that I want to emphasize what the gentleman from Indiana, the minority leader, and the gentleman from Wisconsin [Mr. BYRNES] have said: If you actually want a wheat bill in this session of Congress, in my humble judgment you should support the substitute as proposed by the gentleman from Utah [Mr. DIXON]. The substitute may not be to everyone's liking but it seems to afford the best possibility of being enacted into law.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I yield.

Mr. HALLECK. I would just like to say with regard to the 15-acre exemption that in my district I could not very well call upon my large wheat producers to accept a reduction of 20 percent and not ask my small farmers to reduce by the same percentage.

I shall vote against the Levering amendment.

The CHAIRMAN. The gentleman from North Carolina [Mr. COOLEY] is recognized to close the debate.

Mr. COOLEY. Mr. Chairman, we are in a rather unusual situation, because if we adopt the pending amendment that is the end of it; we are then, in effect, adopting the Senate bill which we have never seen. We have not even heard it read. No member of the Committee on Agriculture has spoken in behalf of the pending substitute except the gentleman from Idaho [Mr. DIXON].

Conspicuous by his absence from this debate is the distinguished minority leader of our committee, the gentleman from Iowa. At the last minute he comes in and says: "Yes, if you want to have a bill you must adopt the substitute and take the Senate bill." Just how stupid can we be to sit here and adopt a Senate bill that has not even been read?

Mr. HOEVEN. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. Yes, but be quick, for I have very little time.

Mr. HOEVEN. The Senate bill has been in the Committee on Agriculture for several days, but the gentleman never held hearings on it.

Mr. COOLEY. Did not the gentleman say in the Rules Committee he was not for the Senate bill?

Mr. HOEVEN. I did not. I said I was ready to accept the Senate bill.

Mr. COOLEY. The Senate bill?

Mr. HOEVEN. The Senate bill; yes.

Mr. COOLEY. I understood the gentleman opposed the Senate bill. But he does not have and the administration does not have a bill to offer here. How can we be so naive in voting on one of the greatest problems we have today, wheat, and vote for a bill we have never seen?

If we pass the House bill I will call up the Senate bill and move to strike out everything after the enacting clause and substitute the House bill. Then the whole thing goes to conference. We shall work out our differences and bring back a bill that will be acceptable, I am sure, to both Houses of Congress.

We should defeat the amendment offered by the gentleman from Utah.

The CHAIRMAN. The question is on the amendment to the amendment offered by the gentleman from Ohio [Mr. LEVERING].

The amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Utah [Mr. DIXON].

The question was taken; and on a division (demanded by Mr. HALLECK) there were—ayes 85, noes 92.

Mr. HALLECK. Mr. Chairman, I demand tellers.

Tellers were ordered and the Chairman appointed as tellers Mr. POAGE and Mr. DIXON.

The committee again divided and the tellers reported that there were—ayes 92, noes 108.

So the amendment was rejected.

The clerk read as follows:

TITLE I—WHEAT

SEC. 101. (a) Notwithstanding the provisions of sections 332 and 336 of the Agricultural Adjustment Act of 1938, as amended, the Secretary of Agriculture shall conduct a referendum, by secret ballot on or before July 25, 1960, of producers subject to marketing quotas on the 1960 crop of wheat, to offer such producers a choice between the programs set forth in subtitles A and B of this title.

(b) Notwithstanding any other provision of law, if less than a majority of producers voting in the referendum conducted pursuant to subsection (a) hereof favor a program as provided by subtitle B, such subtitle B shall become inoperative, and the program as provided in subtitle A shall be in effect for the 1961 through 1965 crops of wheat. In such event, the Secretary shall, within thirty days thereafter, conduct a referendum, by secret ballot, of producers who will be subject to the marketing quota provided in said subtitle A to determine whether such producers favor or oppose such quota for the 1961 crop of wheat. If more than one-third of the producers voting in such referendum oppose such quota, the Secretary shall by proclamation suspend the operation of such quota with respect to the 1961 crop of wheat.

(c) Notwithstanding any other provision of law, if less than a majority of producers voting in the referendum conducted pursuant to subsection (a) hereof favor a program as provided by subtitle A, such subtitle A shall become inoperative, and the program as provided in subtitle B shall be in effect for the 1961 through 1965 crops of wheat.

Mr. AVERY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I asked for the floor in order to propound two questions to the gentleman from Texas. Since it appears that the committee bill can possibly become law I think we should have something in the record to clarify the meaning of some of the language. For instance, on page 24 of the bill, line 5, it says:

Such products may be purchased on the local market in accordance with regulations promulgated by the Secretary.

What does "local market" mean? And how is he supposed to purchase these protein products?

Mr. POAGE. That means that the Secretary of Health, Education, and Welfare—not the Secretary of Agriculture—may from appropriated funds go on to any local market.

Mr. AVERY. What does "local market" mean?

Mr. POAGE. That means any market, whether it be in New York City or Emporia, Kans.

Mr. AVERY. Does that mean a retail market or a wholesale market?

Mr. POAGE. It means either market, a "local market," as we understand it, refers to the location and not the type. Presumably he would make purchases of the size he intended at the time. It would be rather inconsistent for him to go to the wholesale market to buy a side of bacon, and it would be equally inconsistent for him to go to the regular market to buy a carload.

Mr. AVERY. On the other hand, it might also be presumed from the quantities it is anticipated he would be buying, that it would hardly be in the public interest for him to go to a retail market, because he would not be buying only a pound of bacon at one time. Will the gentleman state for the RECORD at this point to indicate whether the Secretary of HEW is to do this by open competitive bids, or issue invitations to bid, or would he be compelled to go into the open market and buy at regular retail or wholesale prices, whatever they happen to be? This language is ambiguous on this point.

Mr. POAGE. I think it is rather clear that it is intended for him to go into the market, the same as any other purchaser would go. The purpose is to maintain the "local market" and it is contemplated that he would become a purchaser just the same as anyone else would become a purchaser.

Mr. AVERY. Then he is not to issue invitations to bid, is that the inference? I think there should be something said on the subject in the debate, so there would be some guidance to the Secretary. Does the gentleman wish to comment on this?

Mr. POAGE. I think it should be pointed out, of course, that the legislation as written does not prohibit him from securing whatever he can from the CCC, in which case he would do just as he does today. But neither does it prohibit him from going into local markets and making purchases just as you and I would do, nor does it prohibit him if he prescribes certain regulations that certain amounts will be purchased on competitive bids, on certain days, to follow that course. That would be permissible under the regulations he issues. But it is definitely not intended that he should bypass the local dealers.

Mr. AVERY. I have no particular feeling on this, just so there is some guidance in the bill. There should be something in the RECORD to explain what the intent is.

I call the attention of the gentleman to the next line which reads:

The Secretary shall obtain such assurance as he deems necessary that recipients will not diminish their normal expenditures for food by reason of such donations.

Is he supposed to go around to all the recipients and welfare agents and say, "How many pounds of bacon did you buy last year?" or, "How many eggs did you get?" and therefore he must buy that much and get this in addition? Or how is that determination to be made?

Mr. POAGE. He is supposed to determine it just as it is determined today. We have that provision in the existing law relating to the disposition of cereal stocks. The Secretary of Agriculture has to make that determination now in using these cereals. The Secretary of HEW would be required to use the same formula that is now imposed on the Secretary of Agriculture.

Mr. AVERY. For the distribution of surplus commodities held by the Commodity Credit Corporation?

Mr. POAGE. That is right.

Mr. COOLEY. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. IKARD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes, had come to no resolution thereon.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE APPROPRIATION BILL, 1961

Mr. FOGARTY. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 11390) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1961, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Rhode Island? [After a pause.] The Chair hears none, and appoints the following conferees: Messrs. FOGARTY, DENTON, CANNON, LAIRD, and TABER.

RECAPITULATION OF FEDERAL REVENUES

Mr. PASSMAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. PASSMAN. Mr. Speaker, intended for the particular attention of those who persist in believing, or pretending to believe, that anything and everything can be accomplished through the appropriation and spending of more and more money, a large portion of which is borrowed money, I wish to present a recapitulation of U.S. Treasury revenues since the beginning of our Federal system of government in 1789. This tabulation of Treasury receipts covers the period from

April 30, 1789, to June 1, 1960, and it is divided into three categories—154 years from the beginning of George Washington's term to the administration of President Truman, the 7-plus years of President Truman's incumbency, and 7 years, 4 months and 11 days of President Eisenhower's term. I certainly hope the Members will have an opportunity to study these figures, which I also mailed to them yesterday in the form of a letter. The facts of the recapitulation are self-evident, and do not require any further comment from me. Therefore, I submit at this time, and incorporate as a part of my remarks, the following verified tabulation:

U.S. Treasury receipts

157 YEARS (WASHINGTON TO TRUMAN)

Apr. 30, 1789, to Jan. 1, 1946: Total	$233,124,696,392

7-PLUS YEARS—(TRUMAN)

Jan 1, 1946, to Jan 20, 1953:	
1946	$42,867,772,454
1947	42,911,827,900
1948	43,098,474,025
1949	39,833,226,896
1950	40,510,854,464
1951	56,842,879,512
1952	69,336,974,951
1953 (to Jan. 20)	2,259,855,220
Total	337,661,865,422
Total revenues received: George Washington-Harry Truman (inclusive), 164 years	570,786,561,814

7 YEARS, 4 MONTHS, AND 11 DAYS—(EISENHOWER)

Jan. 20, 1953, to June 1, 1960:	
1953 (from Jan. 20)	$65,811,590,850
1954	66,894,388,427
1955	69,613,680,692
1956	78,233,911,713
1957	82,091,696,351
1958	79,285,472,618
1959	84,515,760,844
1960 (to June 1)	45,811,318,170
Total revenues received: Eisenhower (7 years, 4 months 11 days)	572,258,819,664
Eisenhower revenues over all other Presidents	1,472,257,850

Is it not quite obvious that more and more unjustified spending on the part of Government does not provide the solution for our problems? Do not the facts make it clear that our Federal Government must return to the policy and practice of fiscal responsibility?

LEGISLATION RELATING TO FOREIGN COMMUNIST PROPAGANDA

Mr. WALTER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. WALTER. Mr. Speaker, I have introduced a bill to plug certain loopholes in the law applicable to foreign Communist propaganda which has been the subject of extensive investigations and hearings by the Committee on Un-American Activities.

During the past year, the U.S. Customs Service processed over 6 million packages of foreign Communist propaganda entering the United States. These 6 million packages contained over 10 million items of printed matter and constituted an 18 percent increase over the preceding year. This was exclusive of the millions of mail articles containing Communist propaganda which are received from overseas via first class mail which, of course, is not subject to inspection.

The studies of the Committee on Un-American Activities at the various ports of entry show that there is a steady increase in the volume of Communist propaganda entering the United States. One of the devilish aspects of this Communist propaganda is its subtlety. In very few publications do identifying data appear. In fact, as in most Communist operations, these publications present an appealing masquerade.

The material directed to youth in this country has increased almost 40 percent during 1959 over the preceding year. In 1959 there were 380,000 packages containing 580,000 items destined to youth groups in the United States.

The Foreign Agents Registration Act requires the registration with the Attorney General of those agents of a foreign power who disseminate political propaganda in the United States, and also requires a labeling of the political propaganda so that the American public can be on notice respecting it. The theory underlining the law rejects any concept of censorship, but is based on the same premise which undergirds the labeling provisions commonly found in food and drug laws which require the producers of poisonous drugs to label them as such.

While I am in thorough accord with the concepts of the existing law, the factual situations which our investigations and hearings have brought to light, compel me to conclude that the American public is not being given the protection which the law contemplates, because we have yet to find a port of entry where Communist propaganda is being processed, in which there is compliance with the labeling requirements of the law. In other words, the poison is being poured into the veins of our society without notice or warning of its nature.

In the studies which our committee has conducted at different ports of entry, we have found several different subterfuges used in order to avoid the impact of the law. We have found, first of all, that the existing exemptions in the law for certain commercial enterprises have been used as a conduit for evading the impact of the general statute. Likewise, we have found that certain of the criteria pertaining to the form of political propaganda subject to the provisions of the act are cumbersome and difficult to apply. We have, moreover, observed a pattern of evasion because of various interpretations of the term "foreign principal." In the enforcement of the law, furthermore, there has not been a fixation of responsibility which would appear to be essential for effective control.

I have, from time to time, over the course of many months, been in conferences with experts on the subject matter relating to the foregoing principal loopholes requiring legislation, as well as some minor related defects which I believe could be handled administratively. Accordingly, the bill which I have just introduced amends the Internal Security Act of 1950 in order to expand the provisions of the Foreign Agent Registration Act by—

First. Bringing within the coverage of the definition of "foreign principal" an organization which is "supervised, directed, controlled, or financed, in whole or in part, by any foreign government or foreign political party," regardless of whether the organization is supervised by a foreign government.

Second. Including within the registration requirements of the Foreign Agents Registration Act persons who have used the existing exemption for certain commercial activities to disseminate propaganda.

Third. Eliminating cumbersome criteria pertaining to the form of political propaganda subject to the provisions of the act; and

Fourth. Establishing in the Bureau of Customs an Office of a Comptroller of Foreign Propaganda and fixing responsibility for the control of foreign political propaganda.

A NATIONAL LOTTERY

Mr. FINO. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. FINO. Mr. Speaker, while some of the Members of this Congress, as well as some of our Government officials, express fear that a national lottery in the United States might raise economic, social, and moral issues, most of the foreign countries throughout this civilized world continue to capitalize on the natural gambling urge of their people.

In all of these foreign countries where lotteries are legal and proper and where their governments harvest fat and painless revenue, gambling, regulated and controlled, has had no adverse effect on the economic, social, or moral standards—if anything, it has improved their lot. In fact, gambling in these foreign countries is treated and respected as an instinctive and universal human trait and not as an evil.

Mr. Speaker, although these foreign nations are small and poor in comparison with the United States, they have shown themselves smarter by coupling the gambling spirit of their people with the need for revenue. This realistic and sensible approach toward the human urge to gamble has been most profitable to these countries. The governments in these countries know the fiscal facts of life and by adopting an understanding and

courageous attitude they have brought pleasure to their inhabitants and financial benefits to their government treasuries.

Mr. Speaker, I wonder whether the opponents of a national lottery in the United States would suggest that all of these foreign-run lotteries and the people who voluntarily participate in them are immoral and evil? None of these countries express any fear that there is evil in capitalizing on the gambling instincts of man. As a matter of fact, in none of these countries have moral, economic, or social arguments prevailed against the spirit of optimism.

On the other hand, Mr. Speaker, we in the United States by ignoring this gambling issue and by continuously and stubbornly refusing to recognize and control this deeply ingrained urge, have encouraged this evil—if we can call it such—to flourish and triumph. This, to me, represents hypocrisy at its best.

Mr. Speaker, I believe the time is now ripe for all of us to stop playing this game of hypocrisy and apply a commonsense, realistic approach toward this multi-billion-dollar gambling industry. The time has come for this Congress to take a good, long look at this entire gambling problem in the United States and realize that the American urge to gamble cannot be curbed nor stopped any more than we were able to prevent people from drinking during the sad, stupid, expensive, and illogical prohibition era.

Mr. Speaker, it is about time that we wiped out hypocrisy and started to treat this entire gambling question with commonsense. It is about time that we showed some courage and tied the gambling spirit of our American people together with the ever-growing need for additional revenue and the increasing demands for tax relief.

I believe we have reached the point where we can no longer be two faced about this whole problem.

Mr. Speaker, I would like to bring to the attention of the Members of this House some interesting figures which I have gathered from 43 countries where the wheels of fortune spin. In the foreign countries listed below, the gross receipts for the year 1959 were $1,277,981,844 and, after payment of generous prizes and ample overhead expenses, the governments' share was $412,765,883. Not bad for these financially hard-pressed foreign treasuries.

I hope that these startling revenue figures will help convince this Congress that a national lottery in the United States would not only satisfy the American people's appetite to gamble but would pump into our Treasury $10 billion a year in added revenue.

Mr. Speaker, with a national lottery we would not only regulate, check, and control the gambling desire of our American people but we could with the additional revenue bring tax relief to our overburdened wage earners and help to reduce our mounting national debt.

Mr. Speaker, if we are honest with ourselves, we must admit that the situation that now exists in this country regarding a national lottery is in every way reminiscent of the one during prohibition. When we found that that law became impossible to enforce, we wisely repealed it. As a result, the crime wave that existed diminished and the Government profits soared to the tune of upward of $3 billion a year. I say the time has come for us to be equally sensible and realistic about a national lottery. The money, $30 billion a year, is going to be gambled, whether we legalize it or not, and, by legalizing it, we can have it gambled honestly and to everyone's benefit—the Government and the people.

Mr. Speaker, I hope that this Congress will have the intestinal fortitude to tap this new source of revenue which can be ours just for the asking. Let us make Mr. and Mrs. Taxpayers' dreams for tax relief become a reality and relieve our people from what President Eisenhower has described, "the heavy burdens of taxation." It is worth a try—at least, for the sake of our American people. There is no question in my mind that a national lottery is the only profitable and satisfactory answer to the whole problem of gambling and the best solution to our taxpayers' demands for tax relief. Why not at least try it?

Country	Population	Gross receipts	Government's share
1. Argentina	20,613,900	$19,630,265	$10,464,003
2. Australia	10,166,000	71,578,409	21,981,419
3. Austria	6,933,905	14,300,000	4,100,000
4. Belgium	9,144,000	16,800,000	5,872,437
5. Bolivia	3,416,000	727,905	112,771
6. Brazil	65,000,000	17,465,000	6,090,000
7. Chile	7,550,000	18,700,000	5,250,000
8. Colombia	14,000,000	3,506,283	194,592
9. Costa Rica	1,099,962	9,437,036	2,874,897
10. Cuba	6,300,000	35,420,000	11,125,304
11. Czechoslovakia	13,500,000	11,000,000	9,000,000
12. Denmark	4,500,000	6,042,000	280,000
13. Dominican Republic	2,900,000	31,870,306	6,984,988
14. Ecuador	4,254,000	3,152,300	1,045,597
15. Finland	4,434,000	3,867,200	1,314,800
16. France	45,400,000	123,700,000	41,500,000
17. Germany	54,798,000	240,000,000	48,000,000
18. Greece	8,618,000	15,000,000	3,700,000
19. Guatemala	3,618,000	2,954,080	458,976
20. Haiti	3,500,000	1,628,800	100,000
21. Honduras	1,887,389	11,977,867	1,282,959
22. Ireland	2,894,822	46,059,680	19,500,000
23. Israel	2,089,000	7,111,111	3,666,666
24. Italy	50,600,000	71,200,000	58,100,000
25. Japan	93,050,000	11,467,000	4,366,000
26. Mexico [1]	33,304,000	55,120,000	14,160,000
27. Netherlands	11,400,000	9,654,204	2,500,000
28. New Zealand	2,343,000	1,684,145	617,747
29. Norway	3,572,000	12,000,000	3,700,000
30. Panama	1,000,000	27,289,919	4,522,005
31. Paraguay	1,728,000	1,363,934	279,738
32. Peru	10,000,000	2,460,800	465,200
33. Philippines	23,662,900	17,827,335	7,554,778
34. Poland	29,500,000	53,364,417	17,236,958
35. Portugal	8,980,682	20,749,400	6,943,727
36. Puerto Rico	2,300,000	45,000,000	9,970,060
37. Spain	30,000,000	82,803,000	22,590,000
38. Sweden	7,475,000	51,200,000	29,400,000

CYRUS EATON: MERCHANT OF PEACE

Mr. PORTER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, the question has been raised by several newspapers in Oregon and by a few individuals outside of Oregon in letters to me as to whether or not it was proper for me to permit Cyrus Eaton, Cleveland industrialist, to pay my way to a recent disarmament conference of parliamentarians in Stockholm.

This question was not raised last February when Cyrus Eaton paid my way to a similar but larger conference in London although the fact was duly publicized at that time.

It was not raised after I mentioned it in the RECORD—page 10993—May 24, 1960, and disclosed that Mr. Eaton had agreed to pay my way to the Stockholm conference.

The question was first raised by the distinguished chairman of the National Republican Congressional Committee [Mr. MILLER] in a press release made public on June 3, 1960, the day I left for Stockholm. I had expected the criticism to arise earlier because this is an election year and I knew that Cyrus Eaton was, to many people, a controversial person.

In late January 1960 a mutual friend relayed Eaton's offer to pay my expenses to the London Disarmament Conference of Parliamentarians. Before I accepted I obtained from the Library of Congress and the Department of State information about the conference and about Cyrus Eaton.

URGENCY OF ABOLISHING WAR

While it was clear that on many issues I did not agree with him, we definitely did agree as to the urgency of working earnestly and ceaselessly to abolish war before war abolished mankind. It was clear to me that no fairminded person could dismiss Cyrus Eaton as either Communist or crackpot although one certainly can disagree, as I do disagree, with various opinions expressed by him.

I emphatically agree in both the judgment and the determination set forth in the following statement which was included in a speech Cyrus Eaton made June 9, 1959, in Canada at the annual dinner of the Canadian Manufacturers' Association:

> The stark and terrifying fact is that the use of only 5 percent of the atom and hydrogen bombs now in the possession of the nuclear powers would completely wipe out every last vestige of life on this earth. We businessmen cannot be called cowards if, to safeguard our families and the commercial and cultural institutions to which we have devoted our lives, we remonstrate with heedless statesmen for running the nuclear risk. For myself, I long ago incorporated into my personal philosophy Spinoza's advice to harbor "no regrets, no fears." I have lived a busy and productive life, and I shall labor to the end to enable my children and grandchildren to enjoy the opportunities that have been mine. I know that the United States cannot go on spending $50 billion a year for military weapons without succumbing to annihilation or impoverishment, and I shall fight both awful fates with all my strength.

Cyrus Eaton is a rare bird on the contemporary scene but not in history. We can recall Andrew Carnegie, Henry Ford, Alfred Nobel, and other leading industrialists who turned their talents and

fortunes to the quest for peace. But how many such men are living today? Too few. I hope more will appear on the scene, and soon.

What made Cyrus Eaton embark on his stormy path? This question was put to him by a London reporter earlier this month. Here is a part of the interview:

Mr. Eaton then started to talk about the reasons that had made him, a dedicated capitalist, pursue his policy, in spite of all the troubles he has run into.

"First, there was the awareness of the annihilation that an all-out nuclear war would mean. Secondly, there is the crushing burden of taxation to carry out the cold war. And thirdly, there was the conviction that World War II didn't produce the results we have hoped for.

"I had two sons and six nephews in the war. Two of the nephews were killed. And then I saw so many of the most brilliant sons of cousins and friends who were killed, many of them in the Battle of the Bulge in the winter of 1944–45."

WHERE WE DISAGREE

In that same story Mr. Eaton told the reporter, "We have more of a police state than there is in those countries," referring to Eastern European countries. I do not agree with that opinion. What he saw in a brief visit is hardly adequate proof. I also doubt that he would be likely to see much of that side of these governments.

Nor do I agree with another statement he is supposed to have made at one time:

The only people in the United States who believe that communism is a menace—

Time magazine quoted him as saying—

are the boys on the payroll of the FBI.

On the other hand, one must concede that extreme statements in the other direction are far more common, and equally erroneous.

In April of this year Cyrus Eaton made a ripsnorting, capitalistic speech to his fellow Chesapeake & Ohio Railway stockholders. Consider these statements:

A question of paramount importance to all of my fellow stockholders today is, I am sure, can we ever again have our stock selling for $400 a share? My answer is, if all the railroads of America could be emancipated from the bondage of Federal Government regulations, and really be permitted to practice free enterprise, I am certain we could pursue policies that would again bring our stock to the $400 level.

Our railroad has done well, it is true, because of the extraordinary dedication and devotion to our entire organization. The C. & O. probably has the most continuous record of success of any railroad in the world. But we can do infinitely better if the Government wraps are removed.

Such free enterprise might be fine, for a while, for the stockholders, but I know it would be hard on the employees and the public. Again I record my disagreement.

MAN MUST USE HIS BRAINS

These disagreements and others we may have do not matter. This is a free country. Where we agree and where we collaborate—his money and my time—has to do with our mutual conviction that man has to use his brains quickly if he is to survive his incredibly powerful weapons.

I have never met Cyrus Eaton. He has never tried to tell me what to do or say, He did commend the report I made to the House on the London East-West Disarmament Conference last February. He even requested reprints. And I commend him for his major role in improving East-West communication.

Before I studied up on Cyrus Eaton and his speeches I knew about and was grateful for the Pugwash Thinkers Conferences. In five of those Conferences up in Nova Scotia and in Europe, 112 leading international scientists from 23 nations of the East and of the West came together to consider ways of saving the world from nuclear, biological, and chemical warfare.

The first two such Conferences had much to do with the inspiration and support of the Geneva negotiations on nuclear weapons tests cessation. This is no small accomplishment.

It is seldom that any two people agree on all questions. This is particularly true with persons of wide experience, deep feelings, and aggressive character like Cyrus Eaton. Most thoughtful voters have reservations about their favorite candidates. I have reservations about Cyrus Eaton, but if there were a contested election for the title "The American Industrialist Doing the Most for Peace," I would vote for him. I wish there were such a contest. As it is, because there is apparently no competition, Cyrus Eaton wins the title by default.

Under unanimous consent, I am including hereafter editorials from Oregon newspapers and my replies; the full text of the interview I quoted in part from the London Evening Standard; the full text of the two speeches quoted; another longer speech; and a brief biography of this remarkable and most timely merchant of peace, Cyrus Eaton:

[From the Eugene (Oreg.) Register-Guard, June 8, 1960]

CHARLIE, WHY DO YOU DO IT?

Political observers are saying that Representative CHARLES O. PORTER may be in for trouble this fall. They feel that Dr. Edwin Durno may give him his toughest race yet, and that the Medford doctor might actually unseat him.

This could be. However, the odds appear to be against it. First, there is a Democratic majority in every county in the Fourth Congressional District. Second, there is the matter of name familiarity that attaches itself to an incumbent, especially to one as active as Mr. PORTER. So, for those reasons the Congressman would seem to have the edge.

However, Mr. PORTER should not let himself forget that he has irritated a great many of his constituents since they returned him to office in 1958. This he has done courageously, true enough, clinging to the advice of Edmund Burke who told the electors of Bristol in 1774 that a representative should use his own judgment and not sacrifice it to the opinions of his constituents. He apparently believes, and we agree, that a representative should be more than a messenger boy. He should go to Congress as a freeman. If, at the end of his term, the voters in his district do not approve of what he has done, they can call him home.

Nobody can doubt Mr. PORTER's courage, nor his intelligence, nor his industry. But we are entitled to doubt his judgment. "Quick." That is the word for the Congressman. He thinks fast and is given to acting fast, sometimes when more considered judgments are called for. If we were asked to put a finger on his greatest single weakness, we'd settle upon his apparent inability to "play it cool."

He certainly didn't play it cool when he went down the tube for Castro 18 months ago. Even WAYNE MORSE, who is also given to shooting from the hip, played it cool on Castro. Time, an amazingly short amount of time, showed that Castro was certainly not the great liberator that Mr. PORTER had been telling us about. Even Mr. PORTER admits that—now, long after he had let himself be stampeded into a serious error of judgment.

Mr. PORTER's constituents have reason to wonder, as he continues to advocate closer relations with Red China, if his judgment today is as bad as it was the day Castro entered Havana.

Mr. PORTER's latest error in judgment was his acceptance of a no-strings-attached gift of $1,000 from Cyrus Eaton, the Cleveland industrialist who is so often associated with party-line causes. Mr. PORTER will use the money to pay his way to a foothills conference on disarmament in Stockholm. Many voters will remember that the first time Mr. PORTER made headlines was by picketing the NIXON train in the Eugene train station in 1952. He objected to the fact that businessmen were helping Senator NIXON with his expenses. Voters now are entitled to ask how much difference there is in what Mr. NIXON did and what Mr. PORTER is doing. And, considering Mr. Eaton's record of espousing leftwing causes, Mr. PORTER certainly opened himself to criticism of another type. Too many of his enemies are already too willing to accuse him of being a radical of some sort. If his judgment were better, he would have avoided any and all association with Mr. Eaton. That he did not will accrue to his woe come fall.

Likeable, affable, energetic, bright, ambitious, articulate, a splendid companion, the Congressman keeps irritating his own friends by painting himself into corners. They, even more than his opponents, have reason to ask "CHARLIE, why do you do it?"

JUNE 13, 1960.

The EDITOR,
Eugene Register-Guard,
Eugene, Oreg.

DEAR SIR: Grateful though I am for the kind words in your editorial, "CHARLIE, Why Do You Do It?" (June 8, 1960) and conscious though I am of the fallibility of my judgment, I don't believe that I acted with too much haste in connection with the examples you mention.

What exactly you mean by "playing it cool" I am not sure. If it means sniffing the political winds, being cautious, then I'd say I don't try to play it cool.

Castro had my enthusiastic support for knocking over Batista and promising to establish democracy in Cuba. Castro lost my support as he broke his promises. No Member of Congress has criticized Castro more than I have. A lot of people changed their minds about Charles Van Doren.

If I acted too quickly and shot from the hip in advocating closer relations with China, then I've persisted in this error very publicly since 1954. Moreover, my fellow Democrats Jack Kennedy, Adlai Stevenson, Stuart Symington, Chester Bowles, and others are in the same boat with me.

You say that my permitting Cyrus Eaton, Cleveland industrialist, to pay my expenses to a Stockholm disarmament conference was an error in judgment. You say that voters can ask how this differs from what NIXON did in allowing businessmen to help him with his expenses. It differs, for one thing, in that I publicized this underwriting whereas NIXON's fund was kept secret. Mr. Eaton, by the way, paid my expenses to a 16-nation

peace conference of parliamentarians in London last February, a fact I included in my press releases at the time and nobody was at all disturbed.

Another obvious difference is the purpose of the money. The contributions to NIXON went for his personal and political benefit. Eaton's money went for expenses so I could be present at a conference where conferees from eight nations exchanged points of view in the interests of averting world war III.

Last January when Mr. Eaton offered to pay my way to the London conference I received reports from the Library of Congress and the Department of State on the conference and on Mr. Eaton before I agreed to go. I did not shoot from the hip. I wanted to attend these conferences to do what I could, however little, for world peace.

I'll soon be back in Oregon to discuss with my constituents why I continue to be active with regard to leaders like Castro, nations like China and active peace seekers like Cyrus Eaton. From the looks of my mail from Oregon, many of them emphatically approve.

Of course I don't like to irritate any of my friends, but my friends must come to understand, if they don't already, that I am dead serious about this job of being the U.S. Representative from the Fourth District of Oregon. I still believe that the gravest problem facing us all is whether or not we can survive our incredibly powerful weapons.

I believe everyone should do what he can and that those of us in public office have larger responsibilities. If this entails political risks, as you properly point out, well, so be it. Playing it cool on matters this critical is not my idea of worthwhile politics or a worthwhile life.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

[From the Albany (Oreg.) Democrat Herald]

WHY THEY DON'T LIKE PORTER

Fourth District Congressman CHARLES O. PORTER evidently doesn't like newspapers, and we don't blame him much, for most newspapers don't like him, either. And neither do a lot of people.

It isn't that newspapers and people don't like PORTER personally—far from it. He is a personally likable guy. It is the things that he says and does that they don't like.

Most recent example is his implied acceptance of $1,000 from Cyrus Eaton to help him finance a trip to Stockholm, Sweden. Objective of the trip is attendance at an East-West meeting of parliamentary officials.

Now there would be nothing wrong about this gift, in our opinion, were it not for the fact that Eaton has long since been nuzzling Nikita Khrushchev, though we suspect that if somebody else, say Harvey S. Firestone, should pay $1,000 to First District Congressman WALTER NORBLAD, to enable NORBLAD to attend a conference of rubber plantation owners in Indonesia PORTER might make quite a noise about it.

Eaton's avowed goal is to establish trade between Communist countries and the United States. His motive is primarily mercenary and he seems to give little consideration to the intangible ideological conflicts between the two political systems—capitalism and communism, and the irreconcilable differences between them—irreconcilable because the Communists cannot tolerate any concessions that might become obstacles in the path of their program of world conquest. Theirs is, to them, a movement that cannot be challenged on moral grounds for it is above morals, ethics, or humanism, of any kind.

It is PORTER's insistence on advocating compromises with the Reds, such as recognizing Red China and being kind to Fidel Castro, that makes many Oregonians dislike PORTER.

PORTER is not endearing himself to newspapers, particularly the smaller ones, in pushing for an increase in second-class postal rates only. His bill would, according to a National Editorial Association survey, increase publications costs to smalltown newspapers, including many small weeklies, by $2,000 a year and that in some cases is just about their margin of profit. Since larger dailies distribute a smaller percentage of their circulation by mail it is not they that would be hurt the worst, though all would suffer some. Papers delivered by carrier would not be affected.

PORTER's bill says nothing about increasing rates for other classes of mail. When he was accused by the NEA of sponsoring "punitive" legislation he denied it but it can hardly be only coincidental that he singled out second-class mail for a rate boost.

At a hearing on his bill starting May 10 at Washington, D.C., PORTER, according to the National Editorial Association Bulletin, unnecessarily prolonged the examination of witnesses through excessive questioning. In fact, said the Bulletin, "the NEA witnesses felt they had been badgered or even filibustered" by PORTER. So long did he query witnesses that there was no time for reading two of three NEA statements, so the other two had to be inserted in the record without being read in full.

At the hearing PORTER alluded to the so-called "free in county" newspaper privilege as a subsidy. It is enjoyed mainly by weeklies, most of whose subscribers receive their papers through rural carriers within the county in which they are published. PORTER asked if NEA witnesses would support a bill for an outright subsidy to the weekly press, and when Edgar S. Bayol, executive vice president of NEA, remarked that "subsidy is a horrid word" PORTER offered sarcastically to term it "a consideration from Congress."

We would not have Representative PORTER be a habitual conformist, but when he becomes a nonconformist on so many things that the American people stand for he must expect to reap the harvest.

JUNE 10, 1960.

The EDITOR,
Albany Democrat Herald,
Albany, Oreg.

DEAR SIR: I thank you for saying, in your editorial, "Why They Don't Like PORTER," June 3, 1960, that I am "a personally likeable guy." I hope, however, that you are not as wrong in that as you are elsewhere in that article.

You say I don't like newspapers. You are wrong. I like them. I value them. I don't always agree with them. Sometimes I deplore their editorial and news policies. As an institution, newspapers are essential in a free society. (I'm an old newspaperman myself.)

You say my accepting expenses for my Stockholm trip from Cyrus Eaton would be all right except for the fact that "Eaton has long since been nuzzling Nikita Khrushchev." Here you are up to your old tricks of making those of us who believe in communication between the East and West into "pals" of the Communists.

The purpose of my trip to Stockholm was to discuss peace and disarmament with parliamentarians of other nations and to plan a larger meeting for this fall. I can't see how you can believe that this resembles Harvey Firestone's giving $1,000 to WALTER NORBLAD to go to a conference of rubber plantation owners in Indonesia. How would such a trip be in the public interest?

Your statement that Eaton's motives are "primarily mercenary" is ridiculous. Cyrus Eaton is 75 years old and worth more than $100 million. His crusade for peace is no business enterprise. He believes we have to work hard if we want reason to prevail in time to prevent a nuclear holocaust. I agree with this point of view.

According to the Postmaster General, the newspapers and magazines will be paying only 26 percent of their mailing costs after the final step of the 1958 rate increase goes into effect next January. The National Editorial Association at the hearing you mention offered no evidence to refute this figure. Their witnesses said they felt they were paying their way.

The record of the hearings will soon be printed and you can see for yourself that I did not badger or filibuster the NEA executive vice president, Mr. Bayol, about whether the NEA wanted a subsidy from the Government for part of their mailing costs.

Suppose we turn to the record. I asked Mr. Bayol if he thought that newspapers ought to pay the full costs of their mailings:

Mr. Bayol: "We do not agree with that theory; no, sir."

Mr. Esters: "No."

Mr. Bayol: "The Post Office is a public service, and it should not have to pay its way any more than the Agriculture Department."

Mr. PORTER: "Fine. Then you think that the second-class users ought to have a subsidy?"

Mr. Bayol: "Subsidy is, shall we say, a horrid word. Is that not the language?"

Mr. PORTER: "All right. But you deal in words; so do I. Let's find a word. You should have some sort of consideration from the Congress because you are achieving such great things for the public?"

Mr. Bayol: "Yes, that is right."

Mr. PORTER: "What does that add up to, though? That somebody has to pay what you do not pay, and that somebody is going to be the taxpayer."

Would you take a different position? I hope not.

Maybe some newspaper publishers don't want to pay their fair share of postal rates. I believe most of them will not object although they may not like us Congressmen who want to end at least part of their present subsidy.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

[From the Portland Oregonian, June 8, 1960]

PORTER'S PEACE SUBSIDY

There should be some discussion among voters in Oregon's Fourth Congressional District about the propriety of Representative CHARLES O. PORTER's acceptance of $1,000 from Cyrus Eaton, Cleveland industrialist and close U.S. pal of Nikita Khrushchev, to pay his way to an unofficial "foothills" conference of Communists and non-Communists in Stockholm.

Representative PORTER says no strings were attached to the cash. It may be assumed that Mr. Eaton did not feel it necessary to attach any strings because Representative PORTER has been advocating steps favored by Mr. Eaton—trade with and diplomatic exchange with Red China, admission of Red China to the United Nations, an open-arms policy toward the Soviet Union, etc.

But whatever the coincidence of their views on U.S. policy toward the Communist nations, we believe it questionable for a Member of Congress to accept expense money from a private citizen of the United States who has identified himself so closely, in business and in politics, with the Communist dictatorships. Also, in patronizing this so-called disarmament rally in Stockholm, Representative PORTER is lending his name as a U.S. Congressman to an activity not in keeping with U.S. foreign policy.

We do not challenge Representative PORTER's right to seek headlines in Castro's Cuba, where his ardent support of the "liberator" blew up in his face; to challenge the State

Department's right, though unsuccessfully in the courts, to refuse him a passport to Red China; to join in these international gatherings chiefly sponsored by Communists, Socialists, and pacifists which usually make propaganda for the Kremlin.

We do think the voters of the Fourth District should consider carefully whether or not Mr. PORTER is representing their interests and views accurately. One doubts they approve his acceptance of money from Cyrus Eaton to attend the Stockholm "peace" conference.

JUNE 10, 1960.

The EDITOR,
The Oregonian,
Portland, Oreg.

DEAR SIR: With regard to your editorial, "PORTER'S Peace Subsidy," June 8, 1960, you are inaccurate in an important respect and you rival the late Joe McCarthy in your slurs.

You write that in going to the Stockholm "disarmament rally" I was "lending my name to an activity not in keeping with U.S. foreign policy." You are in error. Disarmament has long been a major aim of our foreign policy. Moreover, the President rightly continues to stress the need for East-West contacts at all levels.

You say you don't challenge my "right . . . to join in these international gatherings chiefly sponsored by Communists, Socialists, and pacifists which usually make propaganda for the Kremlin." The East-West Round Table was started by West Europeans, Socialists, yes, but most of them are. Meaningful discussion of disarmament and other problems having to do with peace requires the presence of your opponents. At Stockholm, of the eight conferees all came from NATO nations except our Swedish host and Ilya Ehrenburg from the Soviet Union.

The labor member of Parliament in attendance at the Stockholm committee meeting is, I suppose, a pacifist but then so are about half or more of the British people these days.

Your assertion that these groups "usually make propaganda for the Kremlin" is a snide slur. Any East-West contact can be used by the Kremlin to make propaganda. This is no reason why we should break off such associations. We can and do make our own propaganda.

You criticize my acceptance of Stockholm travel expenses from Cyrus Eaton. You call him "close pal of Nikita Khrushchev" with as much reason as you could put the President in that category prior the U–2 incident. You compound this slur in the next paragraph alleging that Eaton and I want "an open-arms policy toward the Soviet Union, etc."

Like the President and many others, I want communication, contact at all levels, but not in any way to suggest that we approve police-state methods. This is the familiar formal handshake-warm embrace distinction which Mr. NIXON learned in Puerto Rico in 1958 from Governor Munoz-Marin.

You say it is "questionable" for me to accept money from Eaton because "he has identified himself so closely, in business and politics, with the Communist dictatorships." I say baloney. Eaton is a capitalist, make no mistake about that, and a firm believer in freedom. He believes that men of good will have to work hard to make reason prevail if we are to avoid disastrous nuclear war. So do I.

Where were you last February when Eaton paid my way, a fact I made public at the time, to London for a 16-nation meeting of some 60 parliamentarians in London? I had no protests then from you or anybody else. It would seem that blunders of Republican leadership have made you Republicans a little touchy about international conferences. This is too bad because there is no other way to make peaceful adjustments.

As for the voters in the Fourth District, for whom you show concern, none has to date protested to me. It may be that, as in the 1956 and 1958 elections, they disagree with your pontifications, inaccuracies and slurs.

I hope you will read the enclosed pages from the CONGRESSIONAL RECORD. One of them has to do with Cyrus Eaton. The other is the report that I made on the floor of the House yesterday about the Stockholm meeting followed by a colloquy with Representative WALTER JUDD, Republican, of Minnesota.

Your attitude with respect to my trying to help in whatever ways I can, to further the cause of peace is deeply disappointing to me. I would like to think that you wrote the editorial out of sheer partisanship. I suspect, however, that the origins go deeper, namely, that you are ignorant where you ought to be informed and indifferent where you ought to be concerned.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

[From the London, England, Evening Standard, June 8, 1960]

MR. KHRUSHCHEV'S CAPITALIST FRIEND ON POWER AND THE PENTAGON

(By Donald Edgar)

It is not often that you come away from an interview saying to yourself—"I think that was a great man."

I did last night as I went down the lift in Claridges after seeing Mr. Cyrus Eaton.

He is the 76-year-old powerful and rich North American industrialist who has been trying to build bridges between the East and the West.

Trying to build a bridge of peace.

Needless to say, with the result that he has been vilified in his own country.

A MENACE

I asked him what he thought the situation was after the breakdown of the summit talks.

"There is a great change needed in the United States. The Pentagon is a power and a menace.

"The generals have been intoxicated by their successes in World War I and II. They have forgotten the part played by the British. They have a complex of omnipotence. It's a state of mind that they have got themselves into.

"As you know," he added, "at the moment the world is teeming with generals who are heads of state. We have had two fine generals who have exercised power in recent years. There was General Marshall, who was Secretary of State.

"He was a fine man. But the trouble of it was that he thought in terms of military power. And it was Marshall who laid down the basis of our postwar policy.

"And then General Eisenhower came later as President. And they can't escape the idea of military strength. They have a military complex.

"You remember we had a great general in our civil war, Ulysses Grant. He was a great general but he turned out a poor President. You had Wellington who was a great soldier—but not so good, it appears, as a politician.

"The trouble is we are relying too much on weapons of war. Not on a mentality of political thinking."

Mr. Eaton, who has spent some time with Mr. Khrushchev in the past, has just come back with his wife from a tour of eastern Europe—Poland, Hungary, Czechoslovakia, and Eastern Germany.

I asked him whether he had found many restrictions on liberty.

He became even more lively.

"We have more in the United States," he said. "Do you know that there are practically half a million people in the United States whose job in one way or another is to supervise the citizens?"

ALARMED

"There are in all 75 agencies. We didn't see policemen everywhere in the countries we have just visited. But if Ike came to Cleveland there would be 60 security men looking after him. We found nothing like that where we went.

"We have more of a police state than there is in those countries."

Mrs. Eaton nodded in agreement. She is a very attractive woman—many years younger than her husband. She was sitting in the wheelchair that is her life. She is a polio victim.

"How did you find it otherwise in Eastern Europe?"

"Well, they are worried. They are greatly alarmed over the rearming of Germany. They feel that the United States is encouraging the Germans.

"And I was greatly concerned over the lack of effective diplomatic activity on the part of the American diplomats and their allies."

OUT OF TOUCH

"They are all out of touch with the people. There is little or no contact with political leaders. The representatives of the English speaking world have a real hatred of communism.

"Therefore, it is not fashionable to mix. And therefore they are living in a world completely cut off from reality.

"They still repeat the old cliches and they still keep themselves to themselves."

I then asked Mr. Eaton why he thought the summit talks had broken down.

"In my opinion," he replied, "there was a great influence brought to bear on President Eisenhower after his meeting at Camp David with Mr. Khrushchev.

"I think at that time there was an honest desire to reach an understanding.

"But then pressure was brought. There was the Atomic Energy Commission. The Pentagon. The CIA—the Central Intelligence Agency.

"All people who have a vested interest in keeping tension between the East and the West.

"And of course, the Germans did their bit."

HIS REASONS

Mr. Eaton then started to talk about the reasons that had made him, a dedicated capitalist, pursue his policy, in spite of all the troubles he has run into.

"First, there was the awareness of the annihilation that an all out nuclear war would mean. Second, there is the crushing burden of taxation to carry out the cold war. And third there was the conviction that World War II didn't produce the results we have hoped for.

"I had two sons and six nephews in the war. Two of the nephews were killed. And then I saw so many of the most brilliant sons of cousins and friends who were killed, many of them in the Battle of the Bulge in the winter of 1944–45."

He mentioned then about his last meeting in Paris with Mr. Khrushchev. "What do you think of him?" I asked.

"Oh, he's a very clever man. He impressed me right from the start. He has a keen intelligence, blunt frankness, and an extensive knowledge of what is going on in the world.

"He astonished me by the width of his information. He is hard working and widely read. I told him that if he had come to America as a boy he would have been the head of one of our greatest corporations."

I felt the time had come to ask Mr. Eaton what he felt about the long-term development of capitalism and communism.

"I think that undoubtedly capitalism is going to undergo many changes and be influenced by the Socialist experiment. But I think that on the other hand Socialist countries will also change as they develop economically."

A CHANCE

"If we let time and evolution work, free from the threats of a hostile attitude by the Western World, then I think there would be a great chance of lasting peace. The emphasis must be on the progress of the human race."

"How are you able to think in these terms when you are a supremely successful example of high capitalism?" I asked.

"Oh," answered Mr. Eaton, "I don't think there is much in the prestige of wealth. You can only wear one suit. You can only eat three meals a day. What matters is the creativeness. That is the real distinction between one man and another."

We then talked about other Americans who have also tried to work for peace.

There was Ford with his Peace Ship which he sailed across the Atlantic to try to end the First World War.

There was Andrew Carnegie, the great steelmaster, who left most of his fortune in the interests of peace.

But is it altogether strange that Nobel, the explosives king, Carnegie maker of one of the materials of war—and now Eaton, who is also a great steel man, should devote themselves to peace?

CANADA'S CHOICE: LEADERSHIP OR ANNIHILATION?

(Address of Cyrus Eaton, Canadian-born chairman of the board, Steep Rock Iron Mines Ltd., and Chesapeake & Ohio Railway, at annual dinner meeting of the Canadian Manufacturers' Association, St. Andrews by-the-Sea, New Brunswick, June 9, 1959)

My pleasure in addressing this distinguished group of Canadian business leaders is doubled because of your selection of my beloved Maritimes as the site of your 1959 meetings.

In nearby Pugwash, Nova Scotia, where I was born 75 years ago and where I still spend part of every summer, one readily gains a sense of the seaside glory of the Atlantic provinces. Look north from Pugwash across the Northumberland Straits, and the coast of Prince Edward Island fills the horizon. Turn your head but slightly to the west, and New Brunswick's Cape Tormentine quickly catches your eye.

I shall have something else to say about the Maritimes and their place in the Canadian economy later. First, however, I should like to have you share with me a broad view of the complex world in which we are living in this revolutionary new nuclear age, and a more particular look at the preeminent part Canada can play in it if she chooses.

MOOD OF WHOLE MODERN WORLD IS TO BUILD INDUSTRY

The keynote of this convention, "Build Industry—Build Canada," clearly states the ideal goal. The mood of the whole modern world, east and west, capitalist and Communist, is to build industry. The peoples of every race, creed and color are doggedly determined to secure for themselves a greater share of the good things of this earth.

Old Mother India, whose civilization dates back 5,000 years, typifies the trend. Some years ago I spent a weekend with Sir Rabindranath Tagore, Bengal scholar and classicist whose poetry had won him the Nobel Prize for literature. Justifiably proud of India's ageless fame for art, poetry and philosophy, Tagore frankly expressed his scorn for Western industrialism. "In India," he asserted, "we do not want your automobiles, we do not want your locomotives. We are happy as we are." More recently there has been assurance from Prime Minister Nehru that India will not rest in her quest to upbuild industry. At the same time, I feel sure she will demonstrate that emphasis on the material need not result in neglect of matters of the mind and the spirit.

Those of us who dedicate the working part of our lives to industry and trade will find strong allies in many quarters. I have just been reading Faber's new life of Jowett, one of the greatest classical scholars and philosophers the English-speaking world has known. Jowett gave tremendous impetus to the growth of Oxford as a center of learning during the second half of the 19th century. Quoting a less orthodox but better known British savant as saying, "The greatest of evils and the worst of crimes is poverty," Jowett designated that as the one statement by Bernard Shaw with which he completely agreed.

NINETEENTH CENTURY CANADA LACKED ECONOMIC OPPORTUNITIES

The Canada of my boyhood, particularly the Maritime Provinces, offered limited economic opportunities for ambitious and industrious boys and girls. So it was around the turn of the century that I joined my footsteps with the countless others beating a path across the border to the better jobs that then beckoned there. My good fortune was to find my first American business association with the late John D. Rockefeller, the very model of creative and imaginative industrialism. At that time Mr. Rockefeller was receiving lavish praise for his philanthropies. Although he took satisfaction in the founding of universities and the building of hospitals and churches, I often heard him say that he considered his greatest contribution to the welfare of mankind the giving of gainful employment through the industry he created.

TWENTIETH CENTURY CANADA OFFERS LIMITLESS POSSIBILITIES

If I were a boy in Canada today, I would waste no time casting a covetous eye across the border. My native land, which was content to be little more than a colony in my youth, has attained sovereign status. Second in area only to Soviet Russia, Canada possesses rich and limitless natural resources, whose surface has barely begun to be scratched. Industry for the most part is in its young and vigorous beginnings.

Canada is blessed with a strong centralized banking system, for which I am impelled to say a special word of praise. The small and scattered banks of the archaic American system suffer sharply in contrast. Their impotence in times of financial difficulty have accentuated panics of the past. Sooner or later, banking in America is bound to be reformed.

Because of her comparatively small population, as contrasted with the gigantic and costly enterprises pressing to be undertaken, Canada must call on outside capital. The generally high character of her governments, federal, provincial, and municipal, under whatever political party, fortunately commands the confidence of the investors of the world. This is not to say that Canada will always automatically win the keen worldwide competition for capital. Other countries hold out great inducements. Chile, for instance, allows all machinery and equipment for new mines to enter duty free, in her eagerness to develop her iron ore deposits.

I spoke earlier of the colonial status with which Canada was so long content. Even more we were proud to do obeisance to Britain, and to follow her lead both at home and abroad. I must confess that I have never lost my nostalgic affection for England, and that I have made a conscious effort down the years to maintain daily contact with things British. The Times of London and the Economist of London come regularly to my desk by airmail. In 60 years I have never missed an issue of Punch, the Illustrated London News, or the Times Literary Supplement.

BRITAIN SETS THE EXAMPLE IN WORLD COMMERCE

Four hundred years ago England dispatched her first trade mission to Russia. Within recent weeks she has concluded a promising new 5-year trade treaty with the Soviet Union. She is following up to bring about the broadest exchange of goods by making government loans to her industries that will conduct the trading. This makes better sense than our customary American and Canadian policy of direct foreign aid for the development of resources and industries in countries that will not permit our nationals to participate in ownership of any of their enterprises.

The British, very wisely in my view, have concluded that Russia is determined to occupy a prominent place in world commerce, and that Russia will accordingly make a policy of maintaining her credit at a high level. The Soviet Union, after all, is no feeble or faltering economy seeking a handout, but a front rank industrial power possessing vast resources and hard-working people, ambitious to excel in every field of modern life.

Even while we bow to Britain for her brilliant success in maintaining world leadership in commerce for more than four centuries, we must also recognize that her failure to encourage the upbuilding of industry in Canada, Australia, India, and South Africa not only retarded their development, but ultimately changed the empire into a loosely knit commonwealth. Through this oversight, England has become a "tight little island" in fact as well as in poetry.

Canada has cut the ties that bound with Britain as far as foreign policy goes. For her former deference to English judgment in this field, however, she has substituted hesitation to differ with the United States on international matters. Here I submit, as one who knows and loves both North American countries well, Canada is making a mistake. Her most favorable course, not only to further her own economic development but perhaps to help save all mankind from annihilation, lies in exercising complete independence in foreign policy.

America's late Secretary of State persistently proclaimed that we could not do business with the Soviets because they embraced ideologies that differed from ours. On the same grounds, he forced the United States to embrace the fatuous myth that Red China, with its 600 million citizens occupying the world's third largest land area, did not exist. These precepts have been repeated so frequently and so shrilly that burning hatred of everything Russian and Chinese has practically become a condition of political respectability in the United States. Hopefully the new head of the U.S. State Department will adhere to sounder and less fanatical doctrines.

VAST CANADIAN COMMERCIAL POTENTIAL LIES ACROSS PACIFIC

Whether or not this turns out to be the case, Canada cannot afford to wait and see, without sacrificing her tremendous potential for trade with the Far East. Opportunities for business with expanding Communist China have already manifested themselves. An examination of the ambitious Siberian development program in the new Soviet 7-year plan leaves no doubt of the thriving traffic that can be conducted across the Pacific between the west coast of Canada and the Russian Far East. The Siberian prison bastion of the storybooks should not be allowed to cloud the reality that here is a vast area, liberally endowed with rich mineral wealth and fertile soil, and destined to

become a busy modern industrial workshop. Certainly the Soviets have not inaugurated jet plane service to connect Moscow and Vladivostok by a vast 5,300-mile flight for the mere purpose of quickly transporting political malcontents into exile.

OPPOSING IDEOLOGIES POSE NO OBSTACLE TO COMMERCE

Let us examine the fallacy that peoples of opposing ideologies cannot do business with each other, that cold war or even hot war between them becomes inevitable. I speak as a dedicated capitalist and an incurable free enterpriser, who believes that the economic system under which I have enjoyed success is the best that man has been able to devise. Despite these unshakable convictions, I see no reason for the United States to declare cold war and to threaten to unleash hydrogen bombs on Great Britain because she has socialized all of her railroads, telephone companies, electric and gas utilities and coal mines.

As a director of the Cleveland Electric Illuminating Co. and the Kansas City Power & Light Co., I credit private ownership with providing the incentive that spurs these utilities to operations of unsurpassed efficiency in the electric power world. The Chesapeake & Ohio Railway, of which I am chairman, last year made more profit under private ownership than any railroad in the world, privately or publicly owned. These records of success incite no uncontrollable urge on my part to demand that the United States aim nuclear warheads at Canada to force her to give up Federal ownership of her largest railroad and airline, as well as provincial proprietorship of all but a fraction of her electric power facilities.

As long as the Canadian people support the able men who are employed to operate Government-owned enterprises, and as long as the Government companies satisfactorily serve their purpose, public ownership of them will continue. The United States would be regarded as guilty of unwarranted interference to suggest that Canada change her system. Does the American cold war on Russia constitute less of an impertinence?

CANADA SHOULD DISASSOCIATE HERSELF FROM AMERICAN OBDURACY IN FOREIGN AFFAIRS

The insistence of the U.S. State Department on preserving the status quo, if not indeed harking back to the status quo ante, flies in the face of all recorded history. Change is inevitable; to attempt to stop it is to induce violence. Tremendous transformations are now taking place in standards and conditions that were established in Soviet Russia and Red China when they were backward countries. Success and prosperity stand to modify, while failure can only intensify, the more extreme and less desirable features of their political and economic systems. When and as the Communist countries make progress, the strong likelihood is for less dogmatism and more flexibility. By disassociating herself thoroughly from American obduracy, Canada can set a salutary example for her bellicose southern neighbor and, at the same time, lessen the prospect of a nuclear holocaust that will engulf all mankind if it ever happens.

U.S. SUCCESS IN WARFARE HAS LED TO MILITARY CONCEIT

In my lifetime, the United States has engaged in three wars—the Spanish-American War and World Wars I and II, all fought away from her shores. In both World Wars, America came in late with her great industrial resources, and contributed heavily to the success of the winning side. With the conceit to which human nature is given, she has subsequently claimed almost complete credit for the victories, and come to the conclusion that she is invincible.

The atom bombs that rained down on Hiroshima and Nagasaki at the end of World War II marked a revolution in the nature of armed conflict. Civilians and soldiers alike, grownups, and children, wherever situated, become frontline combatants when the first nuclear warhead begins to describe its trajectory. American monopoly of nuclear weapons was transitory. In fact, while the U.S. State Department smugly sat back and taunted the U.S.S.R., Soviet scientists went earnestly to work and demonstrated the capacity to produce weapons of even greater deadliness than those created in the United States. In recent weeks, I have been heartened to observe Viscount Montgomery, the 20th century's ablest soldier, repeatedly warning the world to step back from the nuclear abyss and to work tirelessly for better understanding between East and West.

U.S. SCIENTISTS CALL FOR HALT IN NUCLEAR ARMAMENTS RACE

I have watched the evolution of nuclear weapons with intense concern from the start. The University of Chicago, of which I am a trustee, conducted the initial experiments that led to the production of the first bombs. Most of the leading scientists who participated in the early development work have subsequently been devoting their full energies to efforts to persuade the American Government to halt the armaments race. Through the Pugwash Conferences of international nuclear scientists, I have been trying to help. I fervently hope that history will support the famous French scientist who predicts that Pugwash will rank with Austerlitz and Waterloo as a turning point in the fate of the world.

ENOUGH NUCLEAR WEAPONS IN EXISTENCE TO WIPE OUT ALL LIFE

The stark and terrifying fact is that the use of only 5 percent of the atom and hydrogen bombs now in the possession of the nuclear powers would completely wipe out every last vestige of life on this earth. We businessmen cannot be called cowards if, to safeguard our families and the commercial and cultural institutions to which we have devoted our lives, we remonstrate with heedless statesmen for running the nuclear risk. For myself, I long ago incorporated into my personal philosophy Spinoza's advice to harbor "no regrets, no fears." I have lived a busy and productive life, and I shall labor to the end to enable my children and grandchildren to enjoy the opportunities that have been mine. I know that the United States cannot go on spending $50 billion a year for military weapons without succumbing to annihilation or impoverishment, and I shall fight both awful fates with all my strength. Canada is caught in the same web, so I would hope that Canadian policy and Canadian opinion might be directed to bringing American statesmanship to its senses.

FORMULA FOR FULLEST CANADIAN DOMESTIC DEVELOPMENT

Let us turn now from the foreign scene to the leadership that must be provided at home if Canada is to realize her almost infinite potential to the full. It should go without saying that the people of Canada should be encouraged toward the highest physical and intellectual development. The new world in which we live is no place for weaklings of mind or body. The amazing advances in science throw down a tremendous intellectual challenge. Colleges and universities must pursue the truth relentlessly wherever it leads, even if it means modifying opinions that have been tenaciously held for centuries.

Even as better understanding and closer cooperation are needed among nations of the world, so are they essential between management and labor. This, I think, is industry's most crucial problem, and it is one that cannot successfully be delegated, but must be handled directly by constant contacts between top management and the leaders of labor. Crossing the Atlantic last fall on the Queen Elizabeth, I heard from the commodore of the Cunard fleet a success story of labor relations that all businessmen could profitably ponder. Conducting the largest shipping operation on the high seas, the Cunard Line has not had a strike for 50 years. Problems that arise are discussed and settled at monthly meetings of high Cunard officers with top union officials. The two sides recognize the mutual benefit of finding some middle course of agreement. Thus, while the rest of the world's shipping has become notorious for labor troubles, Cunard has set a unique record in its freedom from destructive warfare between management and labor.

INDUSTRIAL LEADERS MUST TAKE INTELLIGENT INTEREST IN GOVERNMENT

Leaders of industry should, I believe, form a habit not only of making their views frequently known to Government leaders, but also of keeping in close touch with politicians, whether of the city, the province, or the Federal Government. This is not to go so far as to recommend that big businessmen attempt a wholesale invasion of the Cabinet, because I think we have demonstrated in the United States that the 1952 American Cabinet composed of eight millionaires and a plumber was not an unqualified success. In democracies like Canada and the United States, however, it behooves all citizens, including businessmen, to take an active and intelligent interest in government.

Finally, since this is a gathering of businessmen who have made their marks in their various fields, I am sure it would be in order to point out that a special moral and social obligation rests upon those of us who have prospered under the capitalistic system. If we exercise restraint in our conduct, and give loyal support to all that is highest and best in our civilization, then we can be confident that we have done our utmost to make this wonderful world of ours a better place in which to live.

May I add a postscript on the Maritimes to these remarks, even as you are adding a post-convention tour to these meetings you have held here.

MARITIME TOURIST POTENTIAL CALLS FOR BROAD DEVELOPMENT

Early in the season though it is, I hope your tour will give you some appreciation of the vast possibilities of the Atlantic Provinces for large and profitable tourist traffic. A look at the map will show you that the superlative summer attractions of this area could by adequate transportation be made easily accessible to the eastern American population numbering some 50 million.

Recently I made a brief visit to Puerto Rico, which makes tourism its principal and thriving industry. The government and the newspapers have worked hard to popularize Puerto Rico as a tourist paradise. Their efforts would have come to nought, however, if first class transportation had not been available. Flying the 1,600 miles from New York to San Juan, the tourist has his choice of magnificent modern planes owned by a number of strong airlines. New Brunswick, Newfoundland, Nova Scotia, and Prince Edward Island deserve as much.

There are other ways in which the Maritimes can and should be lifted economically. One would be the location here of a number of small industries to give year around employment to the present labor surplus. The problem belongs not to the Maritimes alone, but to all of Canada. In the interests of brevity, I shall not attempt to spell the subject out.

I could not be in New Brunswick without saluting Lord Beaverbrook, who has just celebrated his 80th birthday here, and who has made such generous contributions to the

Province's cultural institutions. In my own way, through the Pugwash Conferences and through Deep Cove Farms, with its Shorthorn cattle herd and its wild fowl conservation program, I am trying to give my native Nova Scotia a hand.

May I remind you that the only Canadian in the great American Hall of Fame in New York is Simon Newcomb, the noted astronomer who was born near Pugwash in Nova Scotia. I challenge any other part of the world to match the Maritimes' record for producing university president, scholars, physicians, statesmen, bank president, and business leaders.

In conclusion, I commend the Maritimes to you, and ask that you give them the earnest consideration to which they are entitled.

BACKGROUND DATA ON CYRUS EATON

Cyrus Eaton, Canadian-born chairman of the board of the Chesapeake & Ohio Railway, has been prominently identified with both Canadian and American industry and mining for more than half a century.

Mr. Eaton's largest present business interests in Canada are Steep Rock Iron Mines Ltd., of which he is also chairman of the board, the C. & O., which operates an important division from Windsor to Sarnia and Buffalo, and Ungava Iron Ores in far northern Quebec. On September 17, 1957, formation of Ungava Iron Ores Co. was announced in Montreal by Mr. Eaton and representatives of five leading West German steel producers. The joint development, to cost an estimated $200 million, will tap vast iron ore deposits to supply world industry. As a director of Sherwin-Williams Co., Mr. Eaton is closely associated with another company doing a broad business in Canada.

Other basic segments of the economy in which Mr. Eaton is recognized as a leader are steel, coal, public utilities, and agriculture. Among his other corporate offices, he is chairman of Portsmouth Steel Corp., and West Kentucky Coal Co., and director of Cleveland-Cliffs Iron Co., Cleveland Electric Illuminating Co., and Kansas City Power & Light Co.

Mr. Eaton owns and operates the 3,000-acre Deep Cove Farms in Nova Scotia and the 860-acre Acadia Farms in Ohio, and specializes in the raising of purebred and registered Scotch Shorthorn cattle. PS Troubadour, the 995-pound Shorthorn calf that was crowned 1956 International Grand Champion over all breeds, was bred by Mr. Eaton at Acadia Farms. Troubadour brought the all-time record price of $20.50 a pound at auction for a total of $20,397.50 after winning this most coveted award of cattledom.

Mr. Eaton held his earliest business position with John D. Rockefeller, Sr., and through association with the Rockefeller family's oil and natural gas enterprises, gained his first experience in natural resources.

On December 28, 1954, Mr. Eaton announced he was turning his ancestral home at Pugwash, Nova Scotia, into a vacation place for authors, scholars, statesmen, labor leaders, and businessmen. His plan was to give thinking men from all over the world an opportunity to relax together, exchange views, sharpen their own thinking, and design formulas for us to live in this brand new world. Conspicuous among participants of first Pugwash sessions in 1955 was Julian Huxley, world-famed British biologist. In 1956, Mr. Eaton broadened the Pugwash plan to bring together Communist and anti-Communist, Israeli and Arab, in an atmosphere of comradeship.

The main 1957 Pugwash conference, for the first time in history, brought together international nuclear and other scientists, from East and West, to discuss nuclear perils to mankind. They issued a warning that misuse of nuclear energy could mean annihilation of mankind.

The New York Herald Tribune subsequently devoted a major part of its editorial page to an article by Mr. Eaton entitled, "A Capitalist Speaks: Let's Meet the Soviets Half Way." The newspaper backed the article with a leading editorial on the same page lauding Mr. Eaton on his stand. The editorial commented on an appeal by 195 Soviet scientists and a formal resolution by the Presidium of the Academy of Sciences of the U.S.S.R. for a "broad international conference of scientists" to discuss the dangers to mankind of a thermonuclear war.

In response to worldwide demand, a second international conference of nuclear scientists was held under the Pugwash name in Canada in March–April of 1958, while a third Pugwash Conference was convened in Austria in September, under the joint sponsorship of the Austrian Government and Mr. Eaton. An all-time record indoor crowd of 15,000, including Austria's President Adolf Schaerf, jammed Vienna's city hall auditorium to hear 11 of the world's leading scientists report the findings of the Third Pugwash Nuclear Conference, at its final session.

Three additional meetings of international opinion leaders took place in Pugwash itself during the summer of 1958. Greatest public attention was attracted by a conference of 14 leading American, British, and Canadian historians and men of letters, who concluded their deliberations with a call to their colleagues everywhere to "work in cooperation with scientists to help create an atmosphere of common understanding which can prevent the mass suicide of mankind."

Mr. Eaton's visit to leading European countries in late 1958 was marked by a history-making 90-minute interview with Soviet Premier Nikita Khrushchev in Moscow. The Soviet Government took occasion during Mr. Eaton's Russian sojourn to present him with a Troika, national championship team of three matched white Russian stallions, in recognition of his earlier service to Soviet agriculture. In 1955 Mr. Eaton had sent one of his prize Scotch Shorthorn bulls to Russia for improvement of Soviet beef cattle.

Mr. Eaton's vacations are always spent in Canada. Every winter he leads the older of his 13 grandchildren on a skiing expedition in the Quebec mountains, while the whole family joins him in dividing their summers between Deep Cove Farms and Pugwash in his native Nova Scotia.

Mr. Eaton is also noted for his literary and intellectual attainments. He is the author of many articles and essays on economic, philosophical, and political subjects.

ADDRESS TO STOCKHOLDERS

(By Cyrus Eaton, chairman of the board, Chesapeake & Ohio Railway, at meeting marking 175th anniversary of founding of C. & O. by George Washington, College of William and Mary, Williamsburg, Va., April 28, 1960)

Fellow stockholders, we can all take great satisfaction that George Washington, the founder and first president of the Chesapeake & Ohio Railway's predecessor company, excelled as a sound and successful businessman, as well as a superlative statesman.

Washington was a capitalist, both in theory and in practice. In 1785, when our predecessor company was chartered, he opened its stock subscription books at $200 a share. The enterprise prospered, so that the stock was selling for $400 a share within a few years.

A question of paramount importance to all of my fellow stockholders today is, I am sure, can we ever again have our stock selling for $400 a share? My answer is, if all the railroads of America could be emancipated from the bondage of Federal Government regulations, and really be permitted to practice free enterprise, I am certain we could pursue policies that would again bring our stock to the $400 level.

Our railroad has done well, it is true, because of the extraordinary dedication and devotion of our entire organization. The C. & O. probably has the most continuous record of success of any railroad in the world. But we can do infinitely better if the Government wraps are removed. You, of course, appreciate that this is a family party, where one can speak with complete frankness.

Last week I devoted a day in Toledo, Ohio, to inspecting our modern docks and examining our matchless new coal-loading facilities. In Toledo we, in fact, have the most modern and most efficient coal docks in the world. We can put 300 cars of coal into a 20,000-ton ship in less than 4 hours. I am vastly impressed with what the Toledo installation represents in human intelligence, skill, and accomplishment.

From Toledo I went to Detroit for a day at the Ford Motor Co. I spent several hours in the Henry Ford Museum, a building that covers 8 acres, all under one roof. The museum displays models of all forms of transportation from the earliest times until now, and also exhibits replicas of material progress in many other fields of industry and science.

My visit to the museum was made in company with distinguished representatives of our Federal Government. All of us became acutely conscious of the vast progress that has been made from the days of the ox-drawn covered wagon to the miracles of modern-day transportation. I said to these Government representatives, "We are looking at a thrilling picture of American accomplishment in the fields of science, industry, and agriculture over the past 175 years. One is accordingly doubly depressed to realize that, in our political institutions and form of government, we are still back in the covered wagon era."

The system devised by our wise Founding Fathers was appropriate for the time when the Federal Government played only a small part in the affairs of the Nation, and when the individual States held most of the authority and made most of the decisions. In recent years, the power and size of the Federal Government have increased far beyond the point contemplated by the Founding Fathers. Let me just cite an example or two of outworn features of our Government.

A Congressman faced with a primary and a final election every 2 years has, in effect, an election every year. His mind must therefore be on what will get him votes, so he consistently appeals to the prejudices and whims of the moment. In this way, he substitutes expediency for sound, fundamental principles. With only 2 years between these congressional contests, as compared with 4 years between Presidential elections, frequent conflict is bound to arise between the legislative and executive branches of Government. Meanwhile, we are forced to witness the biennial spectacle of candidates from the same party fighting each other in the primaries, and furnishing fuel to the opposition by denouncing each other in undignified fashion. I submit that national elections should be held at 4, or perhaps even 6, year intervals, and that all Federal elective offices should be filled at the same time.

Let me give you another illustration that seriously affects our railroad industry. In recent years a total of 75 so-called independent governmental agencies have been created in Washington. The men who run these bureaus are not responsible to either the executive or legislative branches of the Government. The occupants of these offices are human, so they are constantly seeking an extension of their powers. Well-meaning though they are, they consume endless time

in efforts to interpret statutes. They feel that their main task is to crib, cabin and confine American industry and finance, and all of their ramifications. The railroad industry is the most completely regulated. Management is not permitted to use, on behalf of stockholders, the imagination and drive that are essential to success in the capitalistic system. One of the weaknesses of our Government that demands sweeping changes is the vast system of bureaucracy represented by these Federal agencies.

I appeal to you stockholders to take a personal interest in these political problems. The main buttress of free enterprise and the capitalistic system is the stockholder. If all stockholders of all companies would speak up at one time on a given subject, their voices would have a far-reaching effect on the politicians. In my economic philosophy, I believe every man and woman should be a stockholder in some corporation. I should like to see all men and women who work for companies have a personal stake in the ownership of those companies. This would bring labor and labor leadership into partnership with the management of corporations, big and small, and the combined influence would be irresistible.

We urgently need a revival of the spirit of George Washington, both as applied to business and to Government. We urgently need a new constitutional convention to bring our Federal Government up to date and put it in harmony with the marvelous progress of science, business, industry and finance. The Chesapeake & Ohio Railway, I may add, would be proud to extend the superb facilities of our Greenbrier Hotel for such a constitutional convention.

We have neglected George Washington's example and advice. The father of our country warned us against entangling alliances. He reiterated, again and again, that we should never let our foreign policies be influenced by prejudices against any other nation. We have flagrantly disregarded these two pieces of sound advice. We are now inextricably entangled with one-third of the nations of the world. We are angling for alliances with another third through a lavish foreign aid program. Finally, we are permitting prejudice to lead us into bitter wrangling with the remaining third. As Walter Lippmann wrote a few days ago, the ghost writers of the State Department and the Defense Department cannot compose a letter or issue a statement concerning any part of the Communist world without employing vulgar and opprobrious epithets.

These policies that flout the advice of George Washington are burying us under a crushing burden of taxation. If they are allowed to go to the length of flaring into open war, our people will be annihilated and everything that industry and science have created will be utterly destroyed. If the wise man who founded this transportation system and started his country on the road to greatness were alive today, he would move vigorously to restore us to commonsense and wisdom.

For my peroration, may I borrow a couple of lines from Wordsworth. "Washington! thou shouldst be living at this hour: America hath need of thee."

[From the Commercial and Financial Chronicle, Dec. 4, 1958]

IS THE GLOBE BIG ENOUGH FOR CAPITALISM AND COMMUNISM?

(By Cyrus S. Eaton, chairman of the board, Chesapeake & Ohio Railway; chairman of the board, Steep Rock Iron Mines, Ltd., at meeting of the Economic Club of Detroit, Monday, November 24, 1958; presiding officer, John S. Knight, editor and publisher, the Knight Newspapers)

As a dedicated capitalist, I recently went to Russia to try to see for myself what makes the rival system of communism tick. I visited the Soviet Union for a relatively brief period, and I do not pretend to have come away with all the answers. But I saw enough to convince me that communism is not likely to crumble from within, despite all the wishful thinking of some of our diehard, sandy-headed, political and economic ostriches.

The Union of Soviet Socialist Republics occupies the largest land area of any nation in the world, and its 200 million people are moving swiftly to make the utmost of the broad array of resources that abound in their vast and varied terrain. You are struck with this sense of both distance and speed as you wing your fast way the comparatively short 1,000-mile journey from Copenhagen to Moscow by giant Russian jetplane in 2 hours.

Your impression of speed is reinforced as you observe the rapid pace with which the Russian people move, even as they walk along the city streets and country roads. You simultaneously observe that they must be ardent devotees of physical fitness, for they combine powerful physiques with abundant good health. Watch them at their jobs, and you conclude that love of hard work occupies a high place in their credo. Especially striking is the large number of women enthusiastically performing tasks that we normally consider the exclusive province of men.

RUSSIANS ARE EAGER TO LEARN

As you visit the Soviet schools and libraries, you are impressed with the obvious eagerness of both young and old to learn. From 5,000 to 10,000 people come each day to Moscow's All-Union Lenin Library, which contains 20 million books and pamphlets. You cannot fail to marvel at the almost universal literacy of a nation in which 40 years ago, 80 percent of the people could neither read nor write.

At the same time, one must not forget that Russia has traditionally held a position of prominence among nations in cultural fields. Some of the world's literary masterpieces have been produced by Russian writers, and the theater, the opera, and especially the ballet, today as in the past, flourish and excel in Russian hands. The museums, particularly in Leningrad, serve as a reminder of Russia's reverence for the arts.

RUSSIANS ARE FRIENDLY AND PEACE-LOVING

Throughout my stay in the Soviet Union, I made a determined effort to meet and talk to as many people of all ages and occupations as possible. Regrettably, I do not speak Russian, so I was obliged to communicate through an interpreter. I did not have to rely on my interpreter, however, to sense that one of the most marked characteristics of the Russians is their friendliness. With this pronounced trait, I feel there goes hand in hand an overwhelming desire for peace. Here, in my mind, lies great hope for the future harmony of the world, for I believe the people of America match the Soviet populace both in capacity for friendliness and in love of peace.

I met the editors of Pravda, Izvestia, and Trud, the three leading papers, as well as a number of magazine editors, and the head of Tass, Russia's wire service. I hardly need point out to this sophisticated audience that Soviet journalism differs markedly from American, but I do want to stress that I was impressed with the intelligence and ability of these leading editors. I also had private conferences with ambassadors and foreign correspondents of leading countries.

RUSSIAN LEADERS ARE ABLE

Able is also distinctly the word for the men who head Russia's Government, industry and banking. I met with seven cabinet members, numerous other government officials, a number of industry leaders and the head of the State Bank of Moscow. Let me say a word concerning Russian banking. Deposits draw 3 percent interest, while only 2 percent is charged on loans. Credit is extended solely for the building of homes. A Russian can own his own house if he chooses to, but the land on which it is built belongs to the state. There is no rent for the land, but a property tax based on the value of the land. The Russian owns all the furnishings of his home and, if he has an automobile and a radio, those are his property, too. At present, he has to pay cash on the barrelhead for everything. If installment buying is ever introduced in the Soviet Union—and my hunch is that it will come eventually—the consequent increase in demand for consumer products will create a mass market well worth American attention.

RUSSIANS ARE SOLD ON THEIR SYSTEM

I would not know where to look for the American who would want to trade our system for the Russian way. On the other hand, I think we Americans must take full cognizance of the fact that the Russians are enthusiastically sold on their system. In the 40 years since their revolution, they have made immense material and intellectual progress on a mass scale, and they are determined to continue to get ahead. Furthermore, they are as imbued with devotion to Mother Russia as we are with respect for our beloved Stars and Stripes. The nation that succeeded in launching the first sputnik must be taken as seriously as the country in whose laboratories the first nuclear chain reaction was produced.

From my 90-minute interview with Premier Nikita Khrushchev, I believe I gained some insight into the Russian attitude. I hope I also left with him some notion of the intensity with which an American industrialist can and does believe in both capitalism and peace.

Mr. Khrushchev struck me as a powerful personality, utterly lacking in the pretense and pose associated with the stuffed shirt school of pompous politicians and statesmen. He is strong of body, intellect, and will. Short and stocky, he seemed hardly more than half as tall as I, but twice as broad. He looks as though he takes good care of his health. Natural and down-to-earth, he gives frequent evidence of enjoying a good sense of humor.

KHRUSHCHEV EXPLAINS WHY RUSSIANS WANT PEACE

Mr. Khrushchev expounded in detail the reasons why the Russians want peace. First he cited the colossal cost of armaments, and pointed out that, in these days of astounding scientific progress, today's effective weapons may well be obsolete 6 months from now. The more you spend on armaments, in fact, the more you have to spend. Then he quickly enumerated half a dozen programs, to which the Soviet Union has committed itself, and for the rapid accomplishment of which the maximum of money and labor are required.

At the top of his agenda was a broad expansion of schools, colleges, and other educational facilities, requiring hundreds of thousands of new buildings and additional teachers.

Second came an ambitious housing and home building program. "You will observe the great number of apartment houses that have been put up in Moscow," Mr. Khrushchev said. "We have only started. We want every citizen of the Soviet Union to have a comfortable modern home."

Next Mr. Khrushchev called attention to important developments under way in the agricultural field, in which he takes particular interest and pride because of his own farm background. He mentioned that he had opened up great areas of virgin territory. He wants to expand that program, while also introducing the most modern scientific agricultural methods on all farms, old and new.

Also prominent on Mr. Khrushchev's list was a transportation plan calling for new highways as well as substantial additions and improvements to existing railroad facilities. Large-scale expansion of Soviet electric generating and transmitting facilities is also in progress. Attention is also being turned to the chemical industry, and so on down the list.

MR. KHRUSHCHEV SUGGESTS UNITED STATES-U.S.S.R. TRADE AND FRIENDSHIP

"To take our country from its backward position of 40 years ago to the modern ideal we hold for it calls for unlimited capital and for the labor of all of our people," Mr. Khrushchev stated emphatically. He added that machinery, equipment, and materials from the United States could be used in these vast Soviet expansion programs, and that there should be profitable opportunities for trade between our two countries. By engaging in mutual trade, furthermore, he felt that we might find a way of establishing friendship between our two nations.

Then Mr. Khrushchev made the observation that I consider the most significant of the entire long discourse. If by some means, he said, genuine cooperation and understanding could be created between the Soviet Union and the United States, if these two most powerful nations the world has ever seen could come to work together in harmony, all of the political disturbances in every other part of the world would be adjusted by compromise and peaceful means, instead of becoming the occasion for fomenting renewed bitterness and hatred between the United States of America and the U.S.S.R. Both of these giant nations are so extensive geographically and so richly endowed in natural resources that neither needs have much incentive to impose on other countries. If the two giants agree, the rest of the world will pose no major problem. This suggestion, I believe, is realistic and offers promise of a workable peace.

MR. KHRUSHCHEV HEARS THAT CAPITALISM IS IDEAL FOR UNITED STATES

For my part, I told Mr. Khrushchev I thought capitalism had produced excellent results in my country, and would remain the ideal system for us. I reminded him that Andrew Carnegie, perhaps the most successful steel man in our history, had dedicated his large fortune to the promotion of peace and education, and I suggested that the Russians consider Carnegie as a typical American capitalist. I told Mr. Khrushchev that anyone who pictured the American businessman as encouraging war preparation in order to sell more iron ore, coal, and steel, misunderstood the United States. I stated that I had long advocated a working partnership between capital and labor, and that I liked to have the men and women who work for companies with which I am associated become stockholders, as I believed that the ownership of American industry should be widely diffused.

Mr. Khrushchev did not overlook the opportunity to inject good-humoredly at this point that while he considered this a commendable policy, in his country they did even better; the people owned everything. He went on to asert that he had no desire to try to change the form of government or the system of economics of America. He added that the Soviet Union was eager to live on good terms with the United States, and that he wished the United States would stop our worldwide denunciation of the Soviet system, and cease to try to ring Russia with missile and bomber sites. (Neither of us raised the point, but I had a graphic mental image of our own agitated state of mind if the Soviet Union were able to build similar installations in Canada and Mexico.)

DOES U.S. FOREIGN POLICY FOLLOW THE ELECTION RETURNS?

I told Mr. Khrushchev that I had been a lifetime student of Russian history and Russian literature. In recent years, I noted, I had enjoyed meeting Russian scientists, scholars, journalists, and others visiting North America and, from my visit to the Soviet Union, I had become convinced of the friendliness of the Russian people. I expressed the view that we ought to reach friendship and understanding, and that we should trade with each other, and I ventured to suggest that, in due course, the American industrialist, the American labor leader, and the American farmer would demonstrate that they agree with me. Meanwhile, I suggested patience and forbearance on the Russian part. I also invited Mr. Khrushchev to watch the election returns carefully in November, to see if the American voters did not express strong sentiment in favor of fresher and wiser foreign policies.

In the course of our discussion, when I commented on Mr. Khrushchev's ability to speak decisively for his country, he replied emphatically, "Any policy I announce must first be discussed with the cabinet and backed by it. Furthermore, we make no decision unless we are sure it will have the support of the people." Mr. Khrushchev added that the cabinet customarily meets several times a week, and holds daily meetings in times of emergency.

In reply to my question, How can our two countries move toward friendship and understanding?—Mr. Khrushchev said that a first and important step would be a good will visit from President Eisenhower to the Soviet Union. Mr. Khrushchev thought it would be fruitful for the President to determine the friendliness of the Russian people and their Government for himself, and to observe at firsthand the progress that the nation was making. For his own part, Mr. Khrushchev said he would like to pay a visit to the United States and Canada, to see for himself our great cities, our industrial companies, our railroads, and our agriculture. I told Mr. Khrushchev that this sounded like a good sensible program to me, and that, in my modest and unofficial way, I would encourage it.

U.S. SPECIALISTS TESTIFY TO SOVIET PROGRESS

On this subject of see-for-yourself trips, I should like to call attention to three distinguished delegations of specialists who have visited the Soviet Union and come away impressed, in recent months. The steel group was headed by Edward T. Ryerson, retired chairman of the board of Inland Steel Co. Walker L. Cisler, president of Detroit Edison Co., led the electric power group. Prominent among the educational delegation was my long-time friend, Dr. T. Keith Glennan, former member of the Atomic Energy Commission, who not long ago left the presidency of Cleveland's Case Institute of Technology to become head of the new National Space Agency.

No one can conceivably write these men off as being weak in the intellect or lacking in devotion to their country. The accounts they and those who accompanied them have given of what they saw certainly can be accepted as reliable by their fellow Americans. While their reports were issued with restraint, they all emphasize the great progress Russia has made in the respective fields of steel, electric power, and education. What is more, all of these men testify to the friendliness and kindness of the Russian people.

If visits like these can be productive, would it not be worth while to have a political delegation headed by the President go to the Soviet Union? With America spending $50 billion a year for defense, and the fate of humanity at stake, surely the head of our Government, with his fine personality and his infinite capability for friendship, can afford to make an attempt to deal directly with his Russian counterpart on the ground.

THE GLOBE IS BIG ENOUGH FOR BOTH CAPITALISM AND COMMUNISM

By this time, I think it must be abundantly clear to you that I emphatically believe the globe is big enough for both capitalism and communism. For capitalism to flourish as I am convinced it can, though, I suggest that rapid and radical changes are required not only in our international relationships, but also in our domestic industrial relationships.

I have already had considerable to say about our foreign policies. Let me go further and suggest that we urgently need a new Secretary of State. Mr. Dulles goes gaily on gambling with the destiny of the world, without restraint from any quarter. Rejected by the voters of his own State when he ran for office in New York, and then elevated to high office by appointment, he evidently is impervious to the 1958 election returns, which his inflammatory activities helped to render catastrophic for the Republican Party. He blithely courts the ultimate world catastrophe of the bomb, without consultation with even the Senate Foreign Relations Committee and the House Foreign Affairs Committee.

U.S. FOREIGN POLICY HAS LOST INTERNATIONAL FRIENDS

Let's take an objective look at the present state of our international relations. When I came to the United States from my native Canada at the beginning of the century, this was the only major nation in the world without a single enemy. Since then we have contrived to tread on the toes of practically every country on earth. We are constantly meddling in both the internal and external affairs of other nations, friendly and unfriendly.

Our critics are not confined to Communist nations. When I traveled through Europe recently, I was chagrined to discover that the newspapers of such countries as Denmark, France, Germany, Austria, and England were unanimously critical of our Formosa Strait policy. Our high Government officials can no longer visit the Republics of South America without inciting riots. In Canada, our near neighbor and best customer, the latest Federal election was won by the party that proclaimed its lack of warmth, if not its downright hostility, to the United States.

U.S. STATE DEPARTMENT SIMULATES THE OSTRICH IN CHINA POLICY

We have elected to invite the enmity of the 600 million Chinese on the mainland, and have substituted for our old friendship with that proud and powerful nation a futile alliance with Chiang Kai-shek, an exiled has-been whom we have installed and maintained on a neighboring island at fantastic expense to the American taxpayer. Thanks to the ostrich-like antics of our State Department, few Americans have been permitted to go see for themselves what is happening in the People's Republic of China. We can take the word of such reliable and distinguished Canadians as James Muir, head of the Royal Bank of Canada, and Dr. J. Tuzo Wilson, president of the International Union of Geodesy and Geophysics, who have been in China this year. Banker and scientist alike testify to the tremendous advances of the Chinese in all fields. Muir's injunction to his fellow businessmen, on his return to Canada, was to trade with China or miss the opportunity of a lifetime.

Now let's consider the alternatives to reaching a livable accommodation with communism. Through the Pugwash Conferences I have for several years been trying to promote understanding on a private and in-

formal level between scientists and scholars of East and West. The proceedings and conclusions of our several Pugwash Conferences of Nuclear Scientists have been made available to the heads of the world's major states, as well as the Pope and the United Nations. From President Eisenhower, India's Prime Minister Nehru, The Vatican, Canada's Prime Minister Diefenbaker, Yugoslavia's President Tito, to name just a few, have come letters endorsing the purpose of the conferences. When I was introduced to Premier Khrushchev in Moscow, his first words were, "I have personally read the proceedings of the Pugwash Conferences, and I want to thank you on behalf of the Soviet people for bringing the scientists of the world together. It is a highly constructive move."

PUGWASH SCIENTISTS WARN AGAINST NUCLEAR ANNIHILATION

At the recent Third Pugwash Conference of Nuclear Scientists, 80 experts gathered from 22 Eastern and Western nations to consider "The Dangers of the Atomic Age and What Scientists Can Do About Them." Bear in mind that all that united these participants was that they were scientists and that they had given much of their individual thought to the implications of modern science for the future of mankind. At the conclusion of their meetings, they reached the unanimous conclusion that enough atom and hydrogen bombs have now been stockpiled by both sides to blow all the cities off the face of the earth and to annihilate all their inhabitants. They further agreed that there is no defense, civil or military, against the bomb.

In the absence of an understanding between the capitalist and the Communist nations, both sides will go on increasing their lethal stockpiles. Twelve years of this cold war have already cost astronomical amounts. Ever increasing expenditures have been accompanied by ever increasing hatred and bitterness. Continuation of the cold war will create a crushing burden of taxation that will bankrupt us.

Meanwhile, make no mistake about this: every day that the arms race continues, the chance of mutual destruction grows greater. Any day, by accident or by design, some fool, some fanatic, even some fumbler, may touch off the explosion that will cause the holocaust. Consider the consequences from your personal standpoint. One hydrogen bomb dropped anywhere within 40 miles of Detroit, whether in the lake or on the land, will obliterate every form of life in this great city and reduce all its institutions to dust and ashes.

FRIENDSHIP WITH RUSSIA VERSUS COLD AND HOT WARS

Which course shall we choose? Certainly the risk in a treaty of peace and friendship with the Soviet Union is fraught with far less hazard to humanity than either the cold war or the hot war.

Assume that we do reach an understanding with Russia. What steps must we take at home to make sure that capitalism will flourish on the same globe that also holds communism?

First we will have to stop fussing about the progress of other countries. The Soviet Union, Red China, India, and Africa are determined to create their own successful industrial civilizations. We will have nothing to fear from any part of the world if we concentrate on upbuilding our own capitalistic system.

At the same time, I should like to suggest that our Government quit subsidizing socialism in other countries. If a nation forbids American corporations or individuals to have a financial interest in one of its natural resources or any of its other business institutions, our Government has no business turning the American taxpayers' money over to that nation to create state-owned enterprises to develop those natural resources or conduct those other businesses.

HOW WE CAN MAKE OUR CAPITALISM FLOURISH

To begin with, all of us, whatever our calling, are going to have to repledge our allegiance to the old-fashioned credo of joyful hard work that originally made America great. We must give close attention to the physical fitness and the mental development of every man, woman, and child in the United States.

Next we must search for further and surer ways to ward off the depressions and recessions with which our economy is periodically beset. Few if any of you will remember the financial panics of 1907, 1914, and 1921. Some of you will recall, and vivdly, the depression that began in 1929 and took years to run its course. Our weak banking system was the root of our trouble then and, while we have strengthened it some since, we still have a distance to go.

Black Friday, October 18, 1929, has gone down in history as the fateful day when the stock markets started their downward plunge. The following Monday, October 21, when I was in Detroit for a celebration of the 50th anniversary of the invention of light, with such familiar figures as Thomas Alva Edison, Henry Ford and President Herbert Hoover, word came that panic had struck the markets. The banks started falling all over one another to see which could sell out their customers fastest, in an effort to keep liquid. This, of course, heightened the crisis. Before the ensuing debacle was over, the stocks of sound companies had shriveled almost to nothing, and business had ground almost to a standstill.

Two examples from among my own companies will suffice as illustrations. The stock of a great industrial like Sherwin-Williams, which today has a market around $190 a share, sold down to $7 a share. The stock of the conservative old National Refining Co., whose assets in 1929 consisted largely of cash and Government bonds, plummeted from $50 to 25 cents a share.

I am not attempting to prove that there would have been no 1929 readjustment if our banking system had been stronger, but I do firmly believe we could have avoided the depths to which the combination of weak banks and our own emotionalism carried us. We still need larger and more powerful banks.

UNITED STATES NEEDS RAPPROCHEMENT BETWEEN CAPITAL AND LABOR

Now I come to what I consider the most important step we must take to give our capitalism fresh impetus. Just as we need a rapprochement between east and west on the international scene, we need a warmer understanding between capital and labor on the domestic front, with the full approval and cooperation of the farmer.

To get started in this direction, I suggest that, in every important industry in the United States, there should be a meeting at least once a month between top management and labor leaders, to discuss their mutual problems in a friendly spirit. Wisdom and restraint are required on both sides. The business leaders responsible for putting right-to-work legislation on the ticket this year hopefully learned some lesson from the defeat not only of this phony measure, but also of the candidates who went down with it.

NEW U.S. LEADERSHIP NEEDED FOR NEW ERA OF ENLIGHTENED CAPITALISM

Let me conclude on an optimistic note, for I fervently believe that we can carry American capitalism to new heights. We need additional leadership and, with all due credit to the politician, who must be elected, and to the editor, who cannot get too far ahead of his constituency, I think we must look beyond these old sources. I should like to nominate the industrialist, the labor leader and the farmer, as representing the indispensable elements of dynamic capitalism. Let the teacher, the preacher and the scholar add their best thinking, and I know we can look forward to a new era of enlightened capitalism that will excite the admiration of the entire world.

SUPPLEMENTAL BIOGRAPHICAL INFORMATION ON CYRUS EATON

Born in Pugwash, Nova Scotia, Canada, December 27, 1883. Son of Joseph Howe and Mary Adelle (McPherson) Eaton.

Student Amherst Academy, Woodstock College; A.B., McMaster University, Toronto, Canada, 1905; D.C.L., Acadia University, Nova Scotia, 1946; LL.D., Mount Allison University, Sackville, New Brunswick, Canada, 1957; LL.D., Bard College, Annandale-on-Hudson, New York, 1958.

Married; 6 or 7 children living; 13 grandchildren.

Came to the United States 1900, naturalized citizen 1913.

Held earliest business position with John D. Rockefeller, Sr. Subsequently associated with East Ohio Gas Co.; later organized Canada Gas & Electric Corp. In 1912 began extensive activity in American utility industry and formed Continental Gas & Electric Co., which consolidated a number of electric and gas companies in the American West. Joined Otis & Co., 1916.

Principal business association has been with iron ore, steel, coal, railroads, paint, chemicals, rubber, and lake shipping, as well as public utilities. Also active in agriculture.

In 1929 formed Cliffs Corp. (now Cleveland-Cliffs Iron Co.), holder substantial interest in six important iron and steel companies. In 1930 organized Republic Steel Corp., has led in formation and reorganization many other corporations.

Present corporate offices are: Chairman of the board and director, Chesapeake & Ohio Railway, Steep Rock Iron Mines, Ltd., Portsmouth Steel Corp., and West Kentucky Coal Co.; director, Cleveland-Cliffs Iron Co., Cleveland Electric Illuminating Co., Kansas City Power & Light Co., Sherwin-Williams Co., etc. Past director, Republic Steel, Inland Steel, Youngstown Sheet & Tube, and other companies, including Cleveland Trust Co. and National Acme Co., in Cleveland.

Owner and operator: Acadia Farms, Northfield, Ohio, U.S.A., and Deep Cove Farms, Upper Blandford, Nova Scotia, Canada, specializing in raising purebred and registered Scotch Shorthorn beef breeding cattle, and breeder of record price 1956 International Grand Champion Steer over all breeds.

Founder and sponsor of Pugwash Thinkers Conferences to promote international understanding and stimulate renewal of intellectual life. More than 20 conferences have been held not only at Pugwash but also in the United States and Europe since 1954. Five Pugwash Conferences of international scientists have brought together 112 authorities from 23 nations of East and West to consider ways of diminishing the grave hazards of nuclear, biological, and chemical warfare. The first and second Pugwash Conferences of nuclear scientists in mid-1957 and early 1958 have been acclaimed for paving the way for the official 1958 Geneva conference of technical experts on detection of nuclear weapons tests, the first such official postwar deliberation to result in measurable agreement between East and West.

Since inception of Pugwash Conferences, has conducted a broad speaking campaign in major centers of North America to urge

rapprochement between East and West. After visiting leading European countries, including U.S.S.R. where he was received by Soviet Premier Nikita S. Khrushchev and also had private interviews with eight other leading Soviet Cabinet Ministers and Ambassadors to the Soviet Union from principal nations of the world, delivered a rapid series of major addresses with the common theme, "A Capitalist Speaks: Let's Meet the Soviets Half Way," to record-breaking audiences in key cities in the United States of America and Canada. These public appearances have been widely credited with softening the cold water spirit.

Active in educational and civic affairs. Trustee, University of Chicago, Case Institute of Technology, Denison University and Harry S. Truman Library. Cofounder and lifetime trustee, Cleveland museum of natural history. Director, Cleveland Metropolitan park board, 1930–39. Elector, U.S. Hall of Fame. Member, American Council of Learned Societies, American Historical Association, and American Philosophical Association.

In 1958 elected a fellow of the American Academy of Arts and Sciences. The academy, which is limited in membership to men of "genius and learning," was founded in 1779 to "advance the honor, dignity and happiness of the people."

Author of many articles and essays on international affairs, economics, philosophy, and politics.

Residence, Acadia Farms, Northfield, Ohio, U.S.A. Summer residences, Thinkers Lodge, Pugwash, Nova Scotia, Canada, and Deep Cove Farms, Upper Blandford, Nova Scotia, Canada.

Office, 36th floor, Terminal Tower, Cleveland, Ohio.

MEDICAL CARE FOR THE AGED

Mr. LANE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, the two major issues of concern to the American people are:

First. Measures to strengthen the military, economic, and political position of the United States in order to improve its leadership of the free world, and;

Second. Legislation to provide health and medical care for the elderly, and to insure them against the costs of hospital, nursing home, and surgical services.

The Federal census will reveal that there are almost 16 million persons in the United States who are 65 years or older.

In the year 1900, they constituted only 4 percent of the population.

Today, they comprise 9 percent of all our people.

Older people have two to three times as much chronic illness as the rest of the population. Most of their illnesses are of the crippling, long-term type, needing extended periods of care or hospitalization.

They have reached the time of life when they need more medical care, but do not have the income to pay for it.

Most persons over 65 either cannot afford, or do not want health insurance policies that are available from commercial companies and nonprofit organizations. About 45 percent of them do have some coverage under these plans, but the benefits are insufficient, especially in cases of long-lasting illnesses.

In its April 7, 1960, editorial summarizing the testimony given at the U.S. Senate hearings on the health needs of the aged, the Washington, D.C., Post observed:

> The one practical way to provide insurance against the health hazards of retirement years is to let people pay the premiums in the form of social security taxes while they are earning wages and are able to do so. This is precisely how they now provide retirement income for themselves under the social security program * * * and this kind of protection is made compulsory because the lack of it would have a disastrous social impact. Those who denounce this proposal as socialistic without proposing any workable alternative, are foolishly doctrinaire. They might just as well oppose * * * as being socialistic * * * the Nation's public schools, fire departments, and parks because these represent communal efforts financed through taxation. One of the fundamental purposes for which the U.S. Government was established, was to promote the general welfare.

The United States is the only large industrialized country where the Government does not, in some form or another, provide medical care for all, or most, of its inhabitants.

Most of the 59 countries of the world which have such programs, provide medical benefits under a social insurance system.

But the United States, which is wealthier by far, than any other country, and which is proud of its ability to solve social and economic problems, is dragging its heels when it comes to providing health insurance for the aged.

Mr. Patrick A. Tompkins, commissioner of public welfare, Commonwealth of Massachusetts, spoke eloquently on this subject at hearings held by the Committee on Ways and Means, U.S. House of Representatives, last year:

> H.R. 4700 * * * the Forand bill * * * represents a victory over the most growing, destructive, degenerating evil, experienced by any man or woman; victory over fear. Fear of pain unrelieved, fear of loneliness and rejection by society because of helpless invalidism, due to advanced age alone and to the sin or the virtue of growing old; fear of being unwanted, fear of being an anchor and a hindrance to one's children and grandchildren, fear of the charity ward and its too frequently impersonal, aloof, cold and unfriendly atmosphere, fear of becoming a statistic both in life and in death, fear of physical and mental torment alike, but most of all, fear of loss of intrinsic dignity, graciously and eternally given to man by God and richly and deservedly earned by all aged during their trial on earth.
>
> More than the assured solvency of our voluntary and municipal hospitals and nursing homes, more than a strengthening of our free enterprise system in the purchase of drugs, glasses, and prosthetic appliances, more than the maintenance of the proper economic status of doctors, dentists, nurses, optometrists, and other professional medical practitioners by a reasonable fee for service payment, more than the guaranteed medical and surgical services of an insurance plan, H.R. 4700 becomes a burning flame of hope, a symbol of faith, and living testament to all men in all countries that in America, so blessed and so enriched by the Almighty, men never need live in fear of anything, and least of all, in fear of growing old.

With all the skills and facilities available in the United States, our people should be the healthiest in the world. But the life expectancy of Americans who are 60 years of age and over, is less than in Canada, Cyprus, Denmark, West Germany, Iceland, Israel, Japan, the Netherlands, Norway, and Sweden.

The reason that many older Americans are not getting the medical care that they need is that they cannot afford it.

Ask the old people themselves and they will tell you that medical care and drugs are first among their unmet needs.

A great many people accept their symptoms, instead of having them treated, because of the expense.

A study of this problem in Boston discovered that people in the lower socio-economic group cited expense as the reason for not seeking treatment—three times as frequently as those in the higher groups.

Or take the testimony of Mrs. Jennie Herbon, Detroit housewife, aged 69, who is a social security and old-age assistance beneficiary.

She gets $129 a month. Her basic expenses for rent, utilities, burial insurance and drugs, come to $79 a month. That leaves this elderly couple with only $50 a month for food and all other expenses. By economical buying, which means that they have had no fresh meat on the table except chicken in 6 months, they can eat for about $12 a week. This leaves practically nothing for incidental expenses, including transportation, clothing, recreation, and so forth.

Many times they had to "piece out" their food during the last week before their next social security check came in, so much so that she was blacking out from anemia until her doctor recommended vitamins to supplement the lack of protein in her diet; but of course this added more to her expenses for drugs. Even though she considers herself better off financially than many of her friends and neighbors, she asks the pointed question: "Where then, would they, or I, get the money for Blue Cross-Blue Shield, or even one of those 65-plus plans?"

After all—

As Mrs. Herbon said to the committee—

> it is time that America recognized its responsibilities to us old folks. We built the country into what it is today. We furnished the manpower and the war machines to keep America free. We did most of the suffering associated with the troubles through which our country has come in the past 50 to 75 years * * * the hot wars, and cold wars, and, worst of all, the great depression and the hard times.
>
> We raised our families and we contributed through our taxes and social security payments to our own old-age security. Our only real fault is that we seem to have lived too long. But, I ask you, gentlemen, what is wrong with that? We can still be independent and useful citizens if you only give us a chance. All we ask is an opportunity to live out our lives with a sense of personal dignity and self-respect. The Forand bill will help us to do this.

I believe that Mrs. Herbon, the little old lady from Detroit, was speaking for every "senior citizen" in the United States.

What is the Forand bill?

Sponsored by Representative AIME J. FORAND, Democrat, of Rhode Island, it proposes to add health insurance features to the old age, survivors and disability provisions of the social security system.

It provides for 120 days a year of care, including surgical fees, in hospitals and nursing homes. Hospital care alone would be limited to 60 days a year. A beneficiary would have the right to freely select the surgeon of his choice.

This insurance would be financed by an extra social security tax of one-half of 1 percent on employers and employees, and three-eighths of 1 percent on the self-employed. This spreads the cost of health insurance over the whole of our working population and assures a strong financial base for the program.

Opponents of this bill say that it will not help about 4 million persons over 65 who are not covered by the old age and survivors' insurance benefits of the Social Security Act. But this can be corrected by a special appropriation. Eventually, as coverage is expanded, all the younger people will come under the protection of the Social Security Act and no one will be without health insurance.

The administration, on the other hand, proposes a program that shall be financed out of compulsory taxes collected by the National and State Governments that shall pay health insurance doles only to the aged who are very poor. This would be based on the means test which is repulsive to the dignity and self-respect of every person over 65.

One cannot say when the Forand bill, or legislation similar to it will be enacted into law.

But one can predict, without reservation, that nothing can stop it.

Walter Lippmann in his column of last Thursday in the New York Herald Tribune, wrote:

> In 1798 Congress set up the first medical insurance scheme under the U.S. Marine Hospital Service. The scheme was financed by deducting from seamen's wages, contributions to pay for their hospital expenses. If that was socialized medicine, the generation of the Founding Fathers was blandly unaware of it.

To which I add my own confident belief that health insurance for the aged is on the way.

FITTING THE COMMUNIST PATTERN IN JAPAN

The SPEAKER. Under previous order of the House, the gentleman from Illinois [Mr. MICHEL] is recognized for 30 minutes.

Mr. MICHEL. Mr. Speaker, last fall our Agricultural Subcommittee on Appropriations capped its trip to the Far East with a visit to Japan. The subcommittee members were very impressed with what we saw in Japan. At the testimonial dinner given for me by my friends in Peoria last December 7 after my return, I devoted the greater part of my remarks to our future relations with our new friend and ally comprising the great industrial complex of Japan. I predicted during the course of those remarks that when the new security treaty would come up for ratification, there would be "considerable trouble fomented by the left-wing elements in Japan." The recent turn of events have borne out my prediction in a much more forceful and effective manner than any of us would have dared to predict.

Mr. Speaker, what has been going on in Japan during the last several weeks should leave no doubt whatsoever in the minds of our people that a vicious Communist minority is responsible for this lawlessness. It fits the pattern and Communist design perfectly.

This is just one of the means by which the worldwide Communist conspiracy is implemented to impose its brutal will upon the entire free world.

V. I. Lenin once explained the methods by which the party could achieve its aims, by propaganda or agitation:

> A propagandist * * * must explain the capitalist nature of crises, the reasons why crises are inevitable. * * * In a word, he must present "many ideas," so many indeed that they will be understood as a whole only by a (comparatively) few persons.

This tool of propaganda is used to recruit party members. To enlist mass support, however, the Kremlin, again in the words of Lenin, uses agitation:

> An agitator * * * will take * * * a fact that is most widely known and outstanding among his audience * * * and, utilizing this fact, which is known to all and sundry, will direct all his efforts to presenting a single idea to the masses. * * * He will strive to rouse discontent and indignation among the masses.

Communist tactics, in every part of the world, have built the discontent into schemes that include provocative mass meetings designed to ultimately produce mob violence. The party has never deplored bloodshed as a means to gain its ends. God is denied and law and order laughed at as this obstructionist minority moves always to destroy every constitutionally created country and to enslave the free. This is the most serious aspect of the present cold war, as evidenced in the Khrushchev torpedoing of the summit and the incitement to riot of students and Red sympathizers in Japan.

All the while, the Communist Party cries, with tongue in cheek, for "peaceful coexistence." Mr. Khrushchev, in a speech in Leningrad in July 1957, described this as "a policy directed to the strengthening of our mighty socialist camp." He revealed more of the lie behind the cry when he spoke, in January 1959, before the 21st Congress of the Soviet Communist Party, stating that in the field of foreign policy "the fundamental problem of the coming 7 years is to make the most of the time factor in socialism's peaceful economic competition with capitalism."

Clearly, the Kremlin expected peaceful coexistence to last only so long as it desired it to last. Central Intelligence Agency Director Allen Dulles, in an address in December 1959, put a heavier finger on the way of the Soviet. In discussing the tactics the Kremlin had been using in the recent past and would probably continue to use in the years immediately ahead, he said that in its messages to the West the idea of "coexistence" had been stressed. He then added:

> However, to avoid any confusion among the Communist Party faithful, the latter have recently received clarifying directives which point out that: "In the ideological field there never was peaceful coexistence between socialism and capitalism and there can never be."

By this means, communism seeks to convey the impression that its world revolution has been called off, to delude and ensnare the free world into letting down its guard, to become easy prey for the monster.

American diplomacy has been criticized severely, and from many quarters, for the summit failure and the riotous Tokyo fiasco. Blame has been placed here, there, and everywhere, from the President to the State Department and even upon the Congress. We must accept some blame as justifiable, but let me say that, regardless of who sits in the White House, who heads the State Department and who controls the Congress, any diplomacy in dealing with the Communists is hazardous diplomacy.

Let us take a look, for example, at the evidence of Communist support for the recent turmoil in Japan, turmoil that is continuing and will continue.

June 5: At United States-Japan centennial ceremonies at Sakura City, Chiba Prefecture, Transportation Minister Narahashi stated that the then current demonstrations in Japan were directed by the Soviets and Chinese Communists in an attempt to divide Japan from the United States.

June 7: At a visit to the American Embassy, two top officers of the 7-million-member International Council of Youth Organizations in Japan identified the spearhead group of the present agitation as a "minor group manipulated by the Chinese Communists and the Soviets."

June 7: A meeting of the executives of the Federation of Employers Associations stated that the Socialist struggle against the Kishi regime has developed into an anti-American drive, testifying to the fact that the Socialists have fallen into a trap set by the Chinese Communists.

June 8: At the opening of upper House deliberations on the Security Treaty, Prime Minister Kishi stated that some opponents of the treaty advocate neutrality for Japan, but that their true goal is to bring Japan closer to the Communist bloc.

June 10: Refuting the Socialist-Sohyo claim that the Eisenhower visit would constitute interference in domestic affairs, the Yomiuri, one of Japan's big three national dailies, stated that, on the contrary, if the Socialist Party forced a suspension of the President's visit, the Socialist Party could be charged with employing the "influence of a foreign nation in order to deal a blow to our own Government."

June 11: Kishi directly blamed international communism for the demonstrations against Hagerty, saying that the

incident was closely linked with the international Communist infiltration strategy against democratic nations.

Straws in the wind? Certainly, and straws that smack of the old Bolshevik tactics; tactics which will be continued, I am sure, for some time to come.

And there is additional evidence. Tokyo's Japan Times reported in its June 16 English edition that—

> A Government statement issued early this morning after an emergency Cabinet meeting describes yesterday's riot at the Diet as "nothing but a planned destructive action agitated by Communists in line with the international Communist principle of taking over the world."

And the Yomiuri, of the same date, reported:

> The Communist Party, acting under direct orders from Communist China, is directing the wave of demonstrations against the Japan-United States Security Pact and President Eisenhower's visit to Japan, Liberal-Democratic Diet Member Kosaku said Wednesday * * * Kosaku strongly hinted that the demonstrations were financed by money from Russia and Communist China.

This is typical of the cold-war technique employed by the Communists. They wait for a suitable issue to arise on the basis of which they can cause democracy to lose face, or a basis on which they can successfully provoke mob excitement and violence. The U–2 incident gave them basis for the first, which, with vilification and vulgarity, Khrushchev used to undermine the summit. Fortunately, the reaction of the free world was such that the Soviets, not the Big Three, lost face. A basis for the second method of Communist action was given the Kremlin in the United States-Japan Security Treaty and the Eisenhower visit. On this occasion, the vicious minority was successful.

Let me point out, here, that the Communists are a minority. Even in Russia, with a population of 208 million, there are only 8 million Communists, and, in Japan, within its 92 million population, a mere 80,000. Should such a minority, whose aims are enslavement and domination of the free people of the world, force democratic Japan—or any other of the free nations—to bow to its brutal will? That is the issue at stake. That is the issue that must be decided, one which cannot be dodged by futile partisan debate over foreign policy.

America cannot leave Japan, or any other country of the free world, at the mercy of an arrogant Communist minority. To do so would pave the way to a Communist grab of all the Far East and a stepped-up program, undoubtedly inclusive of nuclear blackmail, against the rest of the world.

I do not profess to know all the avenues by which we can hold Communist aggression in check. We must be alert and we must be militant. We must take calculated risks, just as the President was willing to do in his visit to Japan. We must continue to explore every avenue of hope of freedom and lasting peace despite the fact that the ways of the Communists make such hope seemingly futile.

We must, of course, negotiate from our strength. This the Communists can and will understand. We cannot expect to contain communism from a position of weakness. Along with this, we need a fighting anti-Communist spirit at home, for we need to use our moral and spiritual power as well as our industrial and military as bulwarks against the ungodly threat that makes our present peace a precarious one.

Whatever our course of action, bearing in mind that the basic goal in all our policy is peace with dignity, we must have behind us an enlightened, alert and united people. Every citizen must understand that communism, as it denies God, also denies the very foundation of our civilization, and so destroys everything upon which human rights and the individual value of man have been built. The tragedy of communism is not only that it murders and seeks to destroy but that it considers such acts righteous and moral. And, when it has been successful in inciting bloodshed and riot, it goes merrily on its way to further such despicable acts.

In this year of 1960 alone, the Kremlin has used its satanic ways to incite a series of riots in Korea, Italy, Indonesia, Laos, Brazil, Great Britain and, in our own country, in New York and San Francisco. And then came the confusion and chaos and bloodshed in Japan which led to the request by Premier Kishi that the President cancel his planned visit.

We can expect the same for the immediate future and many years to come. But the infamy must some day run its course, for free men with the will and determination to remain free have always triumphed over tyranny.

THE SAVINGS BOND BONUS ACT

The SPEAKER. Under previous order of the House, the gentleman from Illinois [Mr. PUCINSKI] is recognized for 10 minutes.

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PUCINSKI. Mr. Speaker, I have today introduced legislation which will encourage thrift and at the same time will help the Treasury Department convert a substantial part of our Federal debt to non-interest-bearing bonds, thus reducing the annual expenditure of some $9½ billion which we Americans are paying in the form of interest on the national debt.

The legislation which I have introduced today would be known as the "Savings Bond Bonus Act."

I am very deeply concerned with the fact that this Nation is now forced to appropriate in its annual budget the sum of $9½ billion for interest alone on the national debt, which today stands at $289 billion. The annual appropriation for interest on the national debt becomes even more significant when we consider that the total cost of the Federal Government 20 years ago was only $8½ billion. It appears, then, that we are now spending more money for interest on the national debt than we did 20 years ago for the total cost of our Government—and I should like to point out that two decades ago, when we were spending only $8½ billion annually the Federal budget included such items as WPA, PWA, and many other projects designed to bring the Nation out of the prolonged depression.

It is not my purpose at this time to enter into any lengthy debate as to whether or not our Federal expenditures are too high. Certainly, it goes without saying, that Congress should make every effort to bring down the huge national debt. I, myself, am supporting legislation which would require an item in the budget every year to reduce the debt by at least 1 percent annually. Meritorious as the arguments may be for keeping Federal expenditures down, this is not a simple task in view of the present world and domestic situation. However, the fact remains that as long as this Nation has a Federal debt on which we are compelled to pay some $9½ billion interest annually, we here in Congress should make every effort to find at least a partial solution to this problem. The bill I have introduced today is intended for just that purpose.

Stated in its simplest form, this legislation would permit the Treasury Department to issue a new savings bond to be known as "savings bonus bonds." These bonds would be issued at a face value of $25 each and would bear no interest. Under provisions of this bill, no individual could purchase more than four of these bonds annually.

The immediate effect of this plan would be that every American could loan his Federal Government up to $100 a year interest free. This principle was first introduced in America when the Civil War was financed with noninterest bearing bonds issued by President Lincoln and frequently referred to as "green back."

As an inducement to encourage people to do this very patriotic thing, under my proposal the Secretary of the Treasury, four times a year, or once in each quarter, would cause to be selected at random among the serial numbers of the eligible savings bonus bonds holders the serial numbers of 1,003 bonds. The Secretary would pay to the owner of the first bond so selected a bonus of $1 million. The second person so selected would receive $750,000; the third person would receive $500,000; and the next 1,000 savings bonus bond holders selected would receive a bonus of $1,000 each.

Under provisions of my proposal, this bonus money would be exempt from income taxation imposed by the United States or any State.

It appears, then, that under my proposal, millions of Americans would be asked to invest in these non-interest-bearing bonds, and as an inducement, they would be eligible to share in these very attractive bonuses four times a year.

I want to point out that this is not a lottery because the legislation provides that these savings bonus bonds shall be redeemable on demand by the holder so that actually the owners of these bonds would continue to retain their money. They would merely be waiving the interest rate on the money they have loaned to their Government. The Treasury Department in turn would apply the revenue from these non-interest-bearing bonds to buy up outstanding interest-bearing bonds on which we are now spending such a colossal sum of money in interest.

I am aware that there might be those who will argue that waiver of the interest by the holder of the bond, which could amount to anywhere from $3 to $4 a year, constitutes a lottery, but after studying the various court decisions, I find that there is considerable variance of opinion, and it is my own firm belief that since the owners of these non-interest-bearing bonds could redeem them at any time, this removes this project from the strict sense of a lottery as most of us know it.

As you know, within the common definition of a lottery those who participate in it divest themselves of any further claim on their investment after the lottery has been concluded. This is not the case under the legislation which I am proposing today.

Mr. Speaker, I am aware that many bills have been introduced in Congress to permit a national lottery and many of these proposals would actually deprive our people of their investment once the lottery has been concluded. For instance, under the Irish Sweepstakes, in which thousands of Americans participate annually—and I might say that one of my constituents last year won $140,000—the amount of money which a participant invests in a ticket is lost forever to this person unless he is fortunate enough to win.

I want to stress that under my legislation the participants would have constant access to their initial investment and could cash in their bonds at any time they needed the money.

One reason I have introduced this legislation and hope it will be approved by Congress is that under our present tax structure in America it is mathematically impossible for a person to accumulate $1 million in cold cash during his lifetime. It would appear to me that my legislation could very well rekindle the dream of many an American to do the many things he would like to do if he were a millionaire. Since the bonus under my proposal would be tax free, perhaps this is one way to give America a new class of millionaires.

The only limitation in order to make a bondholder eligible for a bonus in any given quarter is that he must have purchased the bond at least in the preceding quarter. In order to eliminate violent fluctuations in the purchase and sale of these bonds, I have proposed that the bonuses be paid four times a year. Thus, while an owner of the bonds may withdraw the bond at any time, he automatically would remove that particular bond from consideration for the bonus in the following quarter.

I have also set a limitation that states each person can purchase only four such bonds a year because I do not want to affect the overall economy of our Nation in any adverse manner. If we did not provide for this type limitation, I fear that too many people in their enthusiasm to support this plan might withdraw large sums of money from conventional savings institutions, and this, of course, we do not want.

My other reason for limiting this to only four savings bonds a year per person is to give everybody in this country, wealthy or otherwise, an opportunity to share in this bonus program.

Under this legislation, once a purchaser bought one of these non-interest-bearings bonds, it would remain effective for as long as the purchaser did not redeem it. Thus every year a purchaser could add four additional certificates to those he had bought in previous years and they would all be eligible for the bonus if selected.

Mr. Speaker, I am advised that the Federal Government is now paying well in excess of 4 percent on all of its short-term bonds, that is, those which mature in less than 5 years. I am further informed that the average interest rate paid on all outstanding obligations which constitute our national debt is 3.3 percent. Since the overall trend seems to be toward the short-term market, it appears that more and more the Treasury Department will be forced to pay in excess of 4 percent interest on the short-term obligations, which in ever-increasing numbers are making up a major portion of our national debt.

On the basis of these figures, therefore, if every wage earner in America loaned Uncle Sam $100 interest free, the Federal Government would take in during each calendar year approximately $6½ billion. At 4 percent, this means that the Federal Government would save an estimated $260 million annually, which it must now pay to borrow this amount of money or which it must pay on outstanding short-term obligations.

The bonus under my plan which would be paid to owners of these non-interest-bearing bonds would be $13 million a year. Subtracting this amount from the $260 million that the Government would save in interest, the net saving to the Government the first year would be $247 million, less the cost of administering this project.

During the first year of this program the savings admittedly would be relatively small, even if every wage earner in the country bought the maximum of savings bonus bonds permissible. But this project takes on very significant meaning if we project it for the next 10 years. If during this next 10-year period every wage earner in this country were to buy four additional bonds each succeeding year, by 1970 there would be some $65 billion worth of non-interest-bearing bonds outstanding, and the present interest-bearing Federal debt could be converted to a non-interest-bearing Federal debt by this amount. Since the annual bonus paid out by the Treasury Department in 1970 would be the same as in any other year, the total saving to the Federal Government in interest on the Federal debt by 1970 under my plan would be in excess of $2½ billion annually.

Since I am mindful of the fact that various pension trusts rely on the interest they earn from their investments with the Federal Government, I am not sure that it would be a good idea to convert the entire Federal debt to a non-interest-bearing debt and, therefore, I believe that under the limitations I have written into this legislation, the likelihood of such a thing happening is highly remote.

I believe this is sound legislation.

Throughout my discussion so far I have used the figure 65 million wage earners, but there is nothing in this legislation that would prohibit a parent, for instance, from purchasing these savings bonus bonds for his children. Thus, we see that properly presented and properly promoted, this program conceivably might attract a good deal more people than I have suggested.

I believe this program would be good for the Nation. It would help people to be more interested in their Federal Government and the financial difficulties it is encountering, and I think it would also give the entire Nation a great deal of pleasure four times a year when the Treasury Department commences to select the fortunate recipients of the quarterly bonuses. I shall leave to the imagination of others an appraisal of the situation in America on the eve, four times a year, of the Treasury's announcement of the bonus recipients. I doubt very much that the press of America would be able to print enough papers to carry the news to the country with the listing of 1,003 recipients on those 4 days during the year, unless they vastly improve the potential of their presses.

Mr. Speaker, I hope this legislation will receive serious consideration by the appropriate committee. It is my firm belief that the tremendous cost of our national debt will plague us for many years to come. I feel confident that the American people, fully apprised of the situation, would be more than happy to loan their Federal Government $100 a year interest free at a total loss to each such individual of only $3 or $4 a year, or at the end of a 10-year period, assuming each of these people bought an additional $100 worth of bonds every year for a total of $1,000 worth by 1970, a total loss of $30 a year in interest, particularly when we consider the very enticing inducement.

There are two significant things I should like to stress:

First of all, any holder of these bonds could cash them in and get the face value of the bond at any time such holder desires to do so. In effect, therefore, under this plan, we are encouraging savings and thrift.

Second. I would like to emphasize that with every 4 additional bonds that a person bought, he would have that many more bonds making him eligible for the bonus. In other words, a person who bought 4 bonds every year would have 40 bonds eligible for a bonus at the end of 10 years, and at the end of 20 years would have 80 such bonds eligible for a bonus.

Under this legislation those who now hold series E savings bonds could, if they wish to waive the interest rate on these bonds, under proper procedures established by the Secretary, convert them to the savings bonus bonds.

I have discussed this legislation with literally hundreds of my constituents, and I can assure you, Mr. Speaker, that the immediate response from every single person to whom I spoke has been, "Put me down for the first saving bonus bond to be issued by the Treasury Department." There is no question in my mind that all of us in this country would not only have a great deal of pleasure—and heaven knows in this troubled world we need a little bit of diversion—but we, as Americans, would be making a great contribution to our Nation at a time when our financial difficulties are mounting.

Since I have limited this legislation to a maximum of $100 a year invested by each participant, I can see no reason for any serious opposition from the conventional banking or savings institutions. As a matter of fact, I rather hope that the conventional banking and savings institutions of the country will support this legislation because under this plan the Treasury Department could take in billions of dollars annually which are needed for short-term financing and, in this way, perhaps get the Government out of the short-term market and bring down the entire interest structure so that our established banking and savings institutions would again be in a better position to compete for short-term loans.

Mr. Speaker, I am enclosing a copy of my proposed bill. I hope this legislation will get speedy consideration from Congress.

H.R. 12749

A bill to authorize the issuance of savings bonus bonds and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Savings Bond Bonus Act".

SEC. 2. For the purposes of this Act—

(a) The term "Secretary" means the Secretary of the Treasury.

(b) The term "quarter" means a period of three consecutive calendar months beginning on January 1, April 1, July 1, or October 1 of any year.

SEC. 3. (a) The Secretary is hereby authorized and directed to offer for sale to the people of the United States bonds which shall be known as savings bonus bonds.

(b) Each savings bonus bond shall be issued in the denomination of $25, shall bear no interest, shall be redeemable on demand, shall be issued only to a natural person or persons, shall be registered in the name of the owner or owners, and shall be transferable only in accordance with such rules and regulations as the Secretary may prescribe. Such rules and regulations may permit the transfer of such bonds to fiduciaries (including corporate fiduciaries).

SEC. 4. (a) Once in each quarter, the Secretary shall cause to be selected at random, from among the serial numbers of eligible bonds (as defined in subsection (b)), the serial numbers of 1,003 bonds, which shall be listed in the order selected. Such list shall be known as the quarterly bonus list. The Secretary shall pay to the eligible owner or owners (as defined pursuant to subsection (c)) of each such bond a bonus in accordance with the following table:

Position on quarterly bonus list:	*Amount of bonus*
1st	$1,000,000
2d	750,000
3d	500,000
4th through 1003d	1,000

(b) The term "eligible bond" with respect to any quarter means a savings bonus bond outstanding at the beginning of such quarter and originally issued prior to the beginning of the quarter immediately preceding such quarter.

(c) The term "eligible owner" with respect to any quarter means a person who, at the beginning of such quarter, did not own more than four savings bonus bonds originally issued to him in any one calendar year. The Secretary may prescribe such rules and regulations as may be appropriate to carry out the purposes of this subsection and subsection (a) in the case of bonds held in individual ownership, coownership, ownership by a fiduciary, and such other forms of ownership as may be permitted.

SEC. 5. The savings bonus bonds authorized by this act shall be issued under the authority and subject to the provisions of the Second Liberty Bond Act. The provisions of section 22 of that act (31 U.S.C. 757c) with respect to utilization of, and compensation for, the services of the Postmaster General, the Post Office Department, the Postal Service, and nongovernmental financial institutions in connection with savings bonds shall be applicable to savings bonus bonds.

SEC. 6. The bonuses authorized by this act shall be exempt from income taxation imposed by the United States, any State, or any taxing authority subject to the jurisdiction of the United States or any State.

PENNSYLVANIA CHAPTER OF FBI NATIONAL ACADEMY ASSOCIATES

The SPEAKER. Under previous order of the House, the gentleman from Pennsylvania [Mr. BYRNE] is recognized for 10 minutes.

Mr. BYRNE of Pennsylvania. Mr. Speaker, I have received a most pleasant request to present some remarks relating to a resolution adopted by the Pennsylvania Chapter of the FBI National Academy in connection with the 25th anniversary of the FBI National Academy, which will be observed on July 29, 1960.

The resolution was proposed and adopted by the Pennsylvania Chapter of the FBI National Academy Associates on May 25, 1960, during their spring dinner held at Dugan's on the Boulevard.

The Pennsylvania Chapter of the FBI National Academy Associates is composed of those law enforcement officers who have graduated from the FBI National Academy, and numbers approximately 200 police executives and educators. The resolution commends the Director, J. Edgar Hoover, for having founded the Academy and for having guided it so successfully during the last 25 years.

The president of the Pennsylvania chapter is Chief John G. Good, of Williamsport; the first vice president is Capt. George W. Purvis, of Pittsburgh; the second vice president is Sgt. Harris J. Wilson, of Fountain Hill; and the secretary-treasurer is Chief Lawrence H. Shores, Upper Moreland Township, Willow Grove, who forwarded the resolution to me.

Many of the associates are Philadelphia police executives, among them being Chief Inspector Albert J. Trimmer; Inspector Harry G. Fox; Staff Inspectors Edwin S. Shriver, William P. Britton, and Millard T. Meers; Capts. Edward J. Bell and Frank E. Nolan; and Police Academy Superintendent Harry G. Merker.

As a former U.S. marshal of the U.S. District Court for the Eastern District of Pennsylvania, I am well acquainted with the reputation of the FBI National Academy. The new booklet released on June 6, 1960, by the Federal Bureau of Investigation, entitled "Cooperation—The Backbone of Effective Law Enforcement," describes the FBI Academy located at the Marine Corps Schools, Quantico, Va., which is used for training both FBI agents and police officers, as follows:

The FBI National Academy, established in 1935, often is referred to as "The West Point of Law Enforcement." Its purpose is to reduce crime by teaching the most effective methods of combating it and by acquainting law enforcement officers with new and improved techniques. This is accomplished by preparing selected career police officers to serve as instructors and administrators in their own departments.

Two sessions of the Academy, each attended by approximately 60 men, are held every year. The FBI selects those who will attend from men nominated by the heads of their respective departments, and each officer must meet specific requirements in order to be considered. An intensive 12-week course of instruction is offered. There is no charge either to the individual officer or to the department he represents for this schooling, and FBI facilities, including the laboratory, gymnasiums, classrooms, firearms ranges, and training and identification equipment are shared with National Academy students.

More than 3,800 officers have been graduated from the National Academy. Of those still active in law enforcement, 28 percent hold the position of executive head of their respective agencies.

The resolution adopted by the Pennsylvania chapter of the FBI National Academy Associates is as follows:

Whereas July 29, 1960, marks the 25th anniversary of the FBI National Academy;

Whereas we, as graduates of the same, consider it to be one of the foremost forces in the establishment of law enforcement as a profession;

Whereas we are sincerely appreciative of the outstanding training, high prestige, and beneficial associations we have secured through attendance at the Academy:

Therefore, it is deemed most appropriate and timely that the Pennsylvania Chapter of the FBI National Academy Associates laud and pay well-deserved tribute to J. Edgar Hoover, Director of the FBI, for his foresight, sagacity, and outstanding administrative ability, so ably demonstrated in the founding of the Academy, and for the 25 years in which he has been a guiding force in accomplishing the intentions for which the FBI National Academy was created: Now, therefore, be it

Resolved, That on this day we wish to reaffirm our dedication to the ethics and pur-

poses of our profession and to pledge our continued cooperation and support of those principles for which the Academy was founded, namely, the training of police officers as instructors and executives in the profession of law enforcement;

Furthermore, it is directed that our secretary forward a copy of this resolution to William P. Rogers, Attorney General of the United States, and to John Edgar Hoover, Director of the Federal Bureau of Investigation.

GROWTH OF URBAN AREAS

Mr. CHAMBERLAIN. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. HALPERN] may extend his remarks in the body of the RECORD and may include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HALPERN. Mr. Speaker, one of the more serious challenges to the Nation is the uncontrolled growth of our great urban areas. About 85 percent of all Americans live entirely within or on the fringes of our cities. Inadequate urban planning in the past has left us with a residue of problems ranging from slums to outdated mass-transportation facilities.

Many of us are deeply concerned with the lack of coordinated guidance to what is actually a national problem. Some of us, including myself, have introduced bills to establish a Department of Housing and Urban Affairs in the Federal Government which could provide leadership to all levels of government in a total attack on the problems of urbanization.

On June 12, our distinguished junior Senator from New York, Senator KEATING, delivered an excellent, thought-provoking address on this subject in Boston before the National Society of Professional Engineers. Senator KEATING's bill to create such a Department was, I am pleased to say, recently reported out by the Senate Banking and Currency Committee—S. 3292.

Because this is a national problem—

The Senator stated—

it calls for a national solution.

The attack cannot be sporadic on the regional, State, or local level. It must be total. It must be a grand design. It must be given the stature and direction of a Cabinet responsibility.

The Department of Agriculture—

He said—

was founded at a time when 80 percent of the Nation's population lived on farms. Today, with that situation literally reversed, in terms of urban population, it seems to me that the time has come for the establishment, in our executive branch, of a new, cabinet-level department especially created and empowered to deal with the problems of expanding population.

Such a Department, he pointed out, could be viewed "as a means of assuring that the cities get a fair share of the substantial funds now being spent on housing, highway and similar problems. In close cooperation with State and local government, it could develop national programs for combating smog, slums, and traffic snarls just as the Department of Agriculture has developed programs to combat drought, soil erosion and depressed farm income."

It is time, Mr. Speaker, that the House bestirred itself on the need to meet this direct challenge to the orderly development of our cities. A Department of Housing and Urban Affairs is more than just a subject for contemplation, it is a necessity. I appeal for consideration of the problem by the House and for the enactment of legislation which would provide for the responsible representation of urban matters in the Cabinet.

In this connection, Mr. Speaker, under unanimous consent, I include at the conclusion of my remarks the outstanding address on this subject by Senator KEATING, as follows:

Mr. Chairman, members of the National Society of Professional Engineers, it is a heartfelt pleasure for me to be here with you tonight, and to participate in this important meeting.

Tonight I should like to discuss with you the implication of one of the great social phenomena of this century—the unparalleled trend towards urbanization in America. We are all aware of an accelerated population movement from rural to urban areas, but the extent of the migration is not fully appreciated until we are confronted by the cold statistics of this mass displacement. Today 85 percent of Americans are city-dwellers, living either in cities or in the sprawling urban peripheries that have given rise to such a new designation as greater New York, greater Boston, or greater Philadelphia.

What has happened is simple to state, but it is born of a host of social and economic complexities. In our grandfather's day, the farmer hitched up and went to town on market day. In our day, he drives to town—and stays there. Mechanization of farms, consolidation of acreage, and big business marketing methods—have resulted in a massive reduction in farm population. Concurrently, the pressures, economic, social, psychological that urge men from the field to the city have been intensified as the industrial age increases its opportunities and its lures.

I think it is fair to state that the shifting of the population balance from farm to city has caught us all by surprise. Certainly, it is a phenomenon we continue to stare at, mesmerized by its magnitude, rather than to accept its implications and act vigorously upon them.

In a sense, one might say that the city is the little boy that suddenly grew up. His suit no longer fits him. It's bursting at every seam. He has put on weight, he has put on muscle, and he needs to be completely re-tailored, readjusted to the new and different world in which he lives.

I submit to you that the time for such retailoring is now. The problem grows as we continue to stare at it, and it's time we begin to cut our cloth and study our designs for a blueprint of the cities of tomorrow, not of yesterday.

It is, of course, true, that those closest to the problem have often appeared to ignore it, as though it were something that might go away if left alone. In far too many metropolitan areas there have been sins of omission and commission which have speeded the onset of urban decay and self-strangulation.

This log jam of neglect and out-dated thinking must be broken. We need to develop a fresh, creative attitude about the kind of city planning that responds to the needs of the times. There is much talk of the modern "design for living"—but the designers seem more concerned with the fragments than with the whole. Sometimes I think we are plagued by a split-level mentality. Our homes are geared for the present. Our cities are geared for the past.

Our vocabulary is full of new words—urbanite, suburbanite, exurbanite, but our planning is tethered to the hitching post of horse-and-buggy days.

What we need is to initiate a bold and imaginative change in our whole concept of the demands of this new urban age. Only in this way will we be able to cope with the task of making our cities more liveable and of insuring their social and economic viability.

Last January, in his State of the Union Message, President Eisenhower drew attention to the explosive growth of our metropolitan areas. He cited the fact that by 1975 those areas will occupy twice the territory they do today. In my opinion, the fact of the President's underscoring of this vital problem augurs well for the prospect of his executive approval of the idea of a Department of Urbiculture.

Clearly, the crises which face all major cities today are of vast dimensions. They range from slums to juvenile delinquency, from crime problems to financing problems, from water and air pollution to the need for additional parking and recreation areas.

As you are aware, the Federal Government has already come to the assistance of our municipalities by means of a variety of important programs. This help is provided notably in the field of housing, but grants are being made also for urban and metropolitan planning, and public works projects are an integral part of Federal aid to communities.

Because this is a national problem, it calls for a national solution. The attack cannot be sporadic, on the regional, State, or local level. It must be total. It must be a grand design. It must be given the stature and the direction of a cabinet responsibility.

The Department of Agriculture was founded at a time when 80 percent of the Nation's population lived on farms. Today, with that situation literally reversed, in terms of urban population, it seems to me that the time has come for the establishment, in our executive branch, of a new, Cabinet-level Department especially created and empowered to deal with the problems of expanding urbanization.

To that end, I have formally placed before the Senate a bill authorizing the creation of a Department of Urbiculture in the Executive Branch of our Government. I intend to push it as strongly as I possibly can.

This projected Department could center attention on the many unique city and suburban problems of national scope and importance. It would allow the coordination of numerous existing Federal programs directed at the metropolitan areas of the country. It would promote consideration of the interests of the Nation's city dwellers at the highest levels of Government.

I look to a Department of Urbiculture as a means of assuring that the cities get a fair share of the substantial Federal funds now being spent on housing, highway, and similar programs. In close cooperation with State and local governments, it could develop national programs for combating smog, slums, and traffic snarls just as the Department of Agriculture has developed programs to combat drought, soil erosion, and depressed farm income.

I should like to emphasize that this Department would not seek out new means for Federal interference in urban affairs.

Its prime and constant function would be the task of providing guidelines, advice, programing and planning assistance, and overall cooperation and coordination intended

to assist our cities and localities in solving their own problems. In a word, the proposed Department of Urbiculture would subscribe fully to the philosophy that the best answers to the problems of the people lie as close as possible to the people themselves.

Already a first beginning has been made by official recognition of the need for action.

On September 10, of last year, the proposal for a Study Commission on Metropolitan Problems passed the Senate. It is presently under consideration in the House.

Wherever Americans live, the city is the very heartbeat of their social and economic lives. To the extent that any city is made a better, healthier, more productive place in which to live and raise one's family, the whole of our Nation is the benefactor. Conversely, inadequate urban planning, or no planning at all, robs the present of its opportunities and robs the future of its rightful heritage.

Surely no one group is more aware than you engineers are of the extent to which physical conditions constitute either the shaping forces of growth or the eroding forces of decay in our urban communities. A healthy, vigorous urban climate is the atmosphere of dynamism and prosperity. A climate choked by the weeds of neglect, of backwardness, of civic apathy, is not the garden where progress grows. It's all dressed up to be a graveyard—for opportunities that die a premature death.

The time is past when we can stand by in bemused fashion and watch the malady of our cities spread. This is not a remote challenge. It is a challenge of today—a challenge that confronts us wherever we turn. Let us meet it in the only way it can be met—with courage. And let us beat it in the only way it can be beaten—with action.

The entire problem is a challenge to all of us as Americans, but it represents a special and provocative challenge to you and to the members of your profession throughout the Nation. The modernization of our city agglomerations is not a mere matter of spending money. It is, above all, an exercise in imagination, in vision—a projection of trained minds beyond the doorway of the present into the vistas of the future. Only the gifted and dynamic forces of your intellects and talents can create the physical America-to-be—can untether us from the past and build the setting proper to a new, expanding and evolving national life.

In this exploding new era, we must look to men equipped to handle the kind of urban explosions that challenge us—that cry for attention and solution.

As engineers, you are, in the truest sense, shapers of history. No one group of professional men has changed the economic and social fabric of our Nation to the extent that you have. The creative work of your minds is the yeast of ferment that has transformed, remolded, revolutionized the daily lives of millions of people. You have brought the gifts of work, of achievement, of opportunity, of happiness, to an entire population.

This tremendous influence of your imagination, your discoveries, your amelioration of conditions of life must be more than a source of gratification to you. It must carry with it, as well, a sense of the responsibility that develops upon you, precisely because of the magnitude of your influence.

In this connection, I am referring to the added responsibility of your role in the direction—the political direction— of the Nation whose pattern of life you have been so instrumental in creating and developing. Government must not be conceived as incidental in your careers—as a kind of fringe interest that commands your attention periodically. Good government—effective government, the best possible government, must be a constant preoccupation of men like yourselves. It must be conceived by you—not as an automatic democratic process that will run forever with the occasional oiling of new ideas and new approaches—but as a living democratic process that has to be nurtured, enriched, improved, if its full benefits and blessings are to be assured to the people.

For this reason, I would urge an intensification of your personal interest in the political life of your community and of your Nation. Do not isolate yourself from the forces that determine the course of history, be it local history or natural history. Cultivate an interest in the issues, in the candidates, in the platforms that are placed before your minds, that compete for your favor. Accord them the personal commitment of time and analysis that they deserve. Remain immersed in, rather than isolated from, the stream of history that must affect so many lives, not the least of all your own.

To the extent that we Americans consider politics as a kind of occult science, with participation of a limited number of practioners, we miss the whole point of true democracy.

DETERMINATION OF STOCKOWNERSHIP OF PERSONAL HOLDING COMPANIES

Mr. JOHNSON of Colorado. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. KING] may extend his remarks at this point in the body of the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. KING of California. Mr. Speaker, on June 16 I introduced H.R. 12691, a bill relating to the determination of stockownership of personal holding companies.

The following statement is to briefly outline the purpose of the legislation.

ATTRIBUTION OF STOCKOWNERSHIP FOR PERSONAL HOLDING COMPANY PURPOSES

A corporation cannot be classified as a personal holding company under the Federal tax laws unless more than half its stock is owned by five or fewer individuals. The Internal Revenue Code, at section 544(a)(1), provides that stock owned by a trust or estate "shall be considered as being owned proportionately by its beneficiaries."

This amendment clarifies this rule by providing specifically, as was originally intended, that the ownership be divided among the beneficiaries of the trust or estate in proportion to their actuarial interests.

The amendment is necessary at this time because of recent indications that the Internal Revenue Service may attempt to attribute the entire value of trust stock to the income beneficiary—even though the actuarial value of the interest of the remainder beneficiary was as great or greater than that of the income beneficiary. This attempt may be based on statements in a 1943 opinion of the Tax Court—Steuben Securities Corp. (1 T.C. 395)—which go beyond the issue submitted to the court in that case, and on a Service ruling under the stock option provisions of the code—Revenue Ruling 58-325—which was itself based on the same statements in the Tax Court opinion. These statements were rejected in a subsequent decision of a U.S. court of appeals—*Phinney* v. *Tuboscope Co.* (268 F. (2d) 233)—and are clearly contrary to the intent of the Congress.

In providing that ownership be proportioned among beneficiaries, it was certainly never intended to exclude beneficiaries holding remainder interests. An apportionment in such cases on the basis of an actuarial determination obviously reaches the proper result, and is in accord with the principle followed for determining ownership under other provisions of the code.

Being of a clarifying nature, the amendment is made applicable from the effective date of the 1954 Code.

DISCLOSURE OF COUNTERPART EXPENDITURES

Mr. JOHNSON of Colorado. Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. REUSS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. REUSS. Mr. Speaker, the other body last night added to the legislative appropriation bill, 1961—H.R. 12232—an amendment requiring the public accounting of counterpart expenditures of Members and employees of either body. The amendment was adopted by a rollcall vote of 56 to 31. The entire bill, as amended, passed by a rollcall vote of 81 to 0.

The amendment is substantially identical with measures offered by myself and by other Members of this body over the last 4 years designed to bring about public accounting of congressional foreign travel expenditures.

Recent press stories have complained of alleged abuses in congressional travel acounting. I have great confidence in the integrity of the Members of this body. In my opinion, the best way of vindicating that integrity is to make full and straightforward disclosures of travel expenditures. This House has rightfully opposed secrecy in the executive branch of the Government. Secrecy should likewise have no place in congressional travel expenditures.

Accordingly, Mr. Speaker, I hope that the conferees on the part of this body will go along with the amendment made by the other body. If they do, I am confident that the House will approve the bill, containing the counterpart reporting provision, just as unanimously as did the other body.

News accounts of last night's amendment report that "the Senate put the House on the spot." We can get off the spot readily and with dignity by accepting the amendment.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. HOGAN (at the request of Mr. ALBERT), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. FLOOD, for 1 hour, on Thursday.

Mr. RHODES of Pennsylvania, for 60 minutes, on Friday, June 24, and 60 minutes, on Tuesday, June 28.

Mr. MACHROWICZ, for 60 minutes, on Monday, June 27.

Mr. PUCINSKI, for 10 minutes, today.

Mr. BYRNE of Pennsylvania, for 10 minutes, today.

Mr. BROCK, for 10 minutes, tomorrow.

Mr. SCHWENGEL (at the request of Mr. CHAMBERLAIN), on June 22, for 30 minutes.

Mr. BRAY (at the request of Mr. CHAMBERLAIN), on June 29, for 15 minutes.

Mr. CHAMBERLAIN, on June 24, for 30 minutes.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. METCALF.

Mr. BOLAND and to include extraneous matter.

Mr. FEIGHAN in two instances and to include extraneous matter.

Mr. LINDSAY and to include extraneous matter.

(At the request of Mr. CHAMBERLAIN, and to include extraneous matter, the following:)

Mr. CUNNINGHAM.

Mr. SCHERER.

Mrs. DWYER.

(At the request of Mr. JOHNSON of Colorado, the following Member was granted permission to revise and extend his remarks in the CONGRESSIONAL RECORD and to include extraneous matter.

Mr. ANFUSO in two instances.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 1543. An act for the relief of Angela D'Agata Nicolosi;

H.R. 2007. An act for the relief of May Hourani;

H.R. 3242. An act for the relief of Mrs. Virginia Lee Sage;

H.R. 5530. An act for the relief of Lelia Bernstorff Grauert;

H.R. 5788. An act to authorize the Secretary of the Army to transfer to the Waukegan Port District the commitment of the city of Waukegan, Ill., to maintain a public wharf in Waukegan Harbor on land conveyed to the city in 1914, and for other purposes;

H.R. 5850. An act for the relief of the Borough of Ford City, Pa.;

H.R. 6149. An act for the relief of Wesley C. Newcomb;

H.R. 6456. An act concerning payment of debts out of compensation for trust land on the Lower Brule Sioux Reservation taken by the United States;

H.R. 6498. An act concerning payment of debts out of compensation for trust land in the Standing Rock Sioux Reservation taken by the United States;

H.R. 6529. An act concerning payment of debts out of compensation for trust land on the Crow Creek Sioux Reservation taken by the United States;

H.R. 7480. An act to amend the Federal Food, Drug, and Cosmetic Act, with respect to label declaration of the use of pesticide chemicals on raw agricultural commodities which are the produce of the soil;

H.R. 7847. An act to make the uniform law relating to the record on review of agency orders (Public Law 85–701) applicable to the judicial review of orders issued under the Federal Aviation Act of 1958 and the Food Additives Amendment of 1958;

H.R. 8457. An act for the relief of Richard Schoenfelder and Lidwina S. Wagner;

H.R. 9028. An act to provide that certain funds shall be paid to the Kickapoo Tribal Council of Oklahoma;

H.R. 9226. An act for the relief of Pietro Mela;

H.R. 9652. An act for the relief of Lt. Col. Alonzo C. Tenney;

H.R. 10631. An act for the relief of George T. Moore, Carl D. Berry, and Dr. Harold J. Heck;

H.R. 10639. An act to amend section 3(b) of the act of May 9, 1958 (72 Stat. 105) relating to the preparation of a roll of the members of the Otoe and Missouria Tribe and to per capita distribution of judgment funds;

H.R. 10840. An act to amend Public Law 85–626 relating to dual rate contract agreement;

H.R. 11161. An act to donate to the pueblos of Zia and Jemez a tract of land on the Ojo del Esperitu Santo grant, New Mexico;

H.R. 11615. An act to amend section 4 of the Watershed Protection and Flood Control Act;

H.R. 11706. An act to authorize an extension of time for final proof under the desert land laws under certain conditions;

H.R. 11952. An act to repeal the act of May 29, 1958, which authorized and directed the Administrator of General Services to provide for the release of restrictions and reservations contained in an instrument conveying certain land by the United States to the State of Wisconsin;

H.R. 11985. An act to make American nationals eligible for scholarships and fellowships authorized by the National Science Foundation Act of 1950;

H.R. 12115. An act to extend the minimum national marketing quota for extra-long staple cotton to the 1961 crop; and

H.J. Res. 696. Joint resolution to provide for the designation of the month of September 1960, as "National Wool Month."

ADJOURNMENT

Mr. JOHNSON of Colorado. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 57 minutes p.m.), the House adjourned until tomorrow, Wednesday, June 22, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2280. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to make nationals, American and foreign, eligible for certain scholarships under the Surplus Property Act of 1944, as amended"; to the Committee on Government Operations.

2281. A letter from the Assistant Secretary of the Interior, relative to drainage works and minor construction, and submitting a draft of contract relating to proposed drainage work exceeding a total cost of $200,000 on the Wellton-Mohawk Division, Gila project, Arizona, pursuant to the act of June 13, 1956 (70 Stat. 274); to the Committee on Interior and Insular Affairs.

2282. A letter from the Assistant Secretary of the Interior, transmitting for approval drafts of contracts covering drainage works and minor construction required for completion of the drainage construction program on the Roza Division of the Yakima project, Washington; to the Committee on Interior and Insular Affairs.

2283. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated May 27, 1960, submitting a report, together with accompanying papers and illustrations, on a cooperative beach erosion control and interim hurricane survey of the south shore of Long Island from Fire Island Inlet to Montauk Point, N.Y., authorized by section 2 of Public Law 520, 71st Congress, approved July 3, 1930, as amended and supplemented, and Public Law 71, 84th Congress, approved June 15, 1955 (H. Doc. No. 425); to the Committee on Public Works and ordered to be printed with six illustrations.

2284. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated June 1, 1960, submitting a report, together with accompanying papers and an illustration, on a review of reports on Vermilion River and tributaries, South Dakota, requested by resolutions of the Committees on Public Works, U.S. Senate and House of Representatives, adopted on February 29, 1956 and June 13, 1956 (H. Doc. No. 426); to the Committee on Public Works and ordered to be printed with one illustration.

2285. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated May 27, 1960, submitting a report, together with accompanying papers and an illustration, on an interim report on Texas City Channel, Tex., requested by a resolution of the Committee on Public Works, House of Representatives, adopted April 21, 1960 (H. Doc. No. 427); to the Committee on Public Works and ordered to be printed with one illustration.

2286. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated June 1, 1960, submitting a report, together with accompanying papers and an illustration, on a review of reports on Brazos Island Harbor, Tex., requested by a resolution of the Committee on Public Works, House of Representatives, adopted on July 29, 1955 (H. Doc. No. 428); to the Committee on Public Works and ordered to be printed with one illustration.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk

for printing and reference to the proper calendar, as follows:

Mr. WALTER: Committee on the Judiciary. H.R. 7209. A bill to amend the Immigration and Nationality Act to accord Korean war veterans equal naturalization privileges, and to authorize the Attorney General to admit certain aliens who have served in the Armed Forces of the United States for a period aggregating 5 years as permanent residents; with amendment (Rept. No. 1925). Referred to the Committee of the Whole House on the State of the Union.

Mr. PORTER: Committee on Post Office and Civil Service. H.R. 8424. A bill to amend section 505 of the Classification Act of 1949 with respect to positions in the Library of Congress; without amendment (Rept. No. 1926). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMPSON of New Jersey: Joint Committee on the Disposition of Executive Papers. House Report No. 1927. Report on the disposition of certain papers of sundry executive departments. Ordered to be printed.

Mr. LANE: Committee on the Judiciary. H.R. 5435. A bill to extend the Federal Tort Claims Act to members of the National Guard when engaged in training or duty under Federal law, and for other purposes; with amendment (Rept. No. 1928). Referred to the Committee of the Whole House on the State of the Union.

Mrs. GRANAHAN: Committee on Post Office and Civil Service. H.R. 12595. A bill to clarify the law with respect to transportation of airmail, and for other purposes; with amendment (Rept. No. 1929). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAVIS of Georgia: Committee on Post Office and Civil Service. S. 2575. An act to provide a health benefits program for certain retired employees of the Government; with amendment (Rept. No. 1930). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSEN of Minnesota:

H.R. 12741. A bill to provide a reduced third-class (bulk) mail rate for local mailings of small business; to the Committee on Post Office and Civil Service.

By Mr. BOGGS:

H.R. 12742. A bill to amend the definition of a small business corporation for purposes of subchapter S of chapter 1 of the Internal Revenue Code of 1954; to the Committee on Ways and Means.

By Mr. CUNNINGHAM:

H.R. 12743. A bill to prescribe policy and procedure in connection with construction contracts made by executive agencies, and for other purposes; to the Committee on the Judiciary.

By Mr. DOWDY (by request):

H.R. 12744. A bill to repeal the provisions of the Reorganization Plan No. 5 of 1952 relating to the Real Estate Commission of the District of Columbia; to the Committee on the District of Columbia.

By Mrs. DWYER:

H.R. 12745. A bill to amend section 701 of the Housing Act of 1954 (relating to urban planning grants), and title II of the Housing Amendments of 1955 (relating to public facility loans), to assist State and local governments and their public instrumentalities in improving mass transportation services in metropolitan areas; to the Committee on Banking and Currency.

H.R. 12746. A bill relating to the reporting by Members of the House of Representatives of expenditures from the contingent fund of the House of Representatives and of expenditures of counterpart funds by Members of Congress; to the Committee on House Administration.

By Mr. FOLEY:

H.R. 12747. A bill to increase the salaries of assistant U.S. attorneys and certain other attorneys appointed by the Attorney General; to the Committee on the Judiciary.

By Mr. McMILLAN:

H.R. 12748. A bill to authorize the Commissioners of the District of Columbia on behalf of the United States to transfer from the United States to the District of Columbia Redevelopment Land Agency title to certain real property in said District; to the Committee on the District of Columbia.

By Mr. PUCINSKI:

H.R. 12749. A bill to authorize the issuance of savings bonus bonds, and for other purposes; to the Committee on Ways and Means.

By Mr. ROOSEVELT:

H.R. 12750. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. TEAGUE of Texas:

H.R. 12751. A bill to amend chapter 11 of title 38, United States Code, to provide that certain medical questions involved in veterans' claims shall be referred to medical panels appointed by the Director of the National Institutes of Health; to the Committee on Veterans' Affairs.

By Mr. VAN PELT:

H.R. 12752. A bill to amend section 1478, title 10, United States Code; to the Committee on Armed Services.

By Mr. WALTER:

H.R. 12753. A bill to amend the Subversive Activities Control Act of 1950 so as to require the registration of certain additional persons disseminating political propaganda within the United States as agents of a foreign principal, and for other purposes; to the Committee on Un-American Activities.

By Mr. BURKE of Massachusetts:

H.R. 12754. A bill to relieve certain members of the Armed Forces from liability to repay to the United States certain payments erroneously made to them; to the Committee on the Judiciary.

By Mr. CELLER:

H.R. 12755. A bill to amend section 960 of title 18 of the United States Code; to the Committee on the Judiciary.

By Mr. HERLONG:

H.R. 12756. A bill to amend the Tariff Act of 1930 as it relates to clinical thermometers; to the Committee on Ways and Means.

By Mr. OLIVER:

H.R. 12757. A bill to provide for the humane treatment of animals used in experiment and tests by recipients of grants from the United States and by agencies and instrumentalities of the U.S. Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. PHILBIN:

H.R. 12758. A bill to amend the Internal Revenue Code of 1954 so as to permit certain tax-exempt organizations to engage in certain activities for the purpose of influencing legislation directly relevant to the purposes which qualify such organizations for tax exemption, without losing certain benefits under that code; to the Committee on Ways and Means.

By Mr. SISK:

H.R. 12759. A bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. BECKWORTH:

H.R. 12760. A bill to amend title II of the Social Security Act to increase from $1,200 to $2,400 the amount of outside earnings permitted each year without deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. McMILLAN:

H.R. 12761. A bill to provide for the bonding of persons engaging in the repair, remodeling, alteration, conversion, or modernization of residential property; to impose limitations on the assertion of mechanics' liens where payment has been made for work in connection with the repair, remodeling, alteration, conversion, or modernization of residential property, and for other purposes; to the Committee on the District of Columbia.

By Mr. TEAGUE of Texas:

H.J. Res. 767. Joint resolution providing for a study by the Veterans' Administration into the problems of veterans who are elderly, chronically ill, or otherwise handicapped, and providing for the establishment of a pilot project of assistance to veterans' organizations operating convalescent centers for disabled veterans, to gain experience in the practicability of such a program; to the Committee on Veterans' Affairs.

By Mr. LESINSKI:

H. Con Res. 703. Concurrent resolution to authorize printing as a House document "Volume 1: Number of Inhabitants of the 1960 Census of Population"; and providing for additional copies; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BOLAND:

H.R. 12762. A bill for the relief of Dr. John M. Zytkiewicz; to the Committee on the Judiciary.

By Mr. BURKE of Kentucky:

H.R. 12763. A bill for the relief of Harry Zegart; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 12764. A bill for the relief of John L. Afros; to the Committee on the Judiciary.

By Mr. FOGARTY:

H.R. 12765. A bill for the relief of Marie Silva Arruda; to the Committee on the Judiciary.

By Mrs. KELLY:

H.R. 12766. A bill for the relief of Turenne Jean; to the Committee on the Judiciary.

By Mr. LANE:

H.R. 12767. A bill to provide tax relief for certain pension and annuity funds and the contributors thereto; to the Committee on the Judiciary.

By Mr. WESTLAND:

H.R. 12768. A bill for the relief of Ki Su Moun; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause I of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

502. By Mr. CHIPERFIELD: Petition of citizens of Rock Island, Ill., area in favor of H.R. 1354; to the Committee on Interstate and Foreign Commerce.

503. By the SPEAKER: Petition of Roy Bateman, city secretary, Fort Worth, Tex., with reference to enacting legislation repealing the special excise taxes on the transportation of passengers; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

The Failure of Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address which I delivered at the opening session of the 14th biennial convention of the Affiliated Young Democrats of the State of New York on Friday, June 17, 1960, at the Hotel Piccadilly in New York City:

Mr. Chairman, my good friends of the Affiliated Young Democrats, ladies and gentlemen, it is a pleasure to be back with you again. I appreciate very much the invitation of my dear friend and your very able State president, Harold Moskovit, to participate in this opening session of your 14th State convention. May I take this opportunity to extend to you my best wishes for a most successful convention.

Nineteen hundred and sixty is a most important political year for us Democrats. This could very well be a year of great victory, if we show the necessary courage and bring the true facts to the American people. It could be a year of great disaster, for America as well as for our party, if we should nominate the wrong candidate. Knowing you as I do, I feel that I can speak my mind.

For the next 5 months, until election day, you and I are going to be very busy people. It will be our job to help clear up the confusion and the smokescreen of the Republican apologists, who will seek to explain away the mistakes of this Republican Administration with the aid of Madison Avenue tactics and unlimited funds.

And while I am on this subject, may I say that I am strongly opposed to Madison Avenue technique, regardless of which party indulges in it, when it comes to nominating and electing a President of the United States. We are not trying to sell a piece of soap or a brassiere which would make all women look like Miss America. We are endeavoring to sell a man with all of the virtues and shortcomings of a human being, except that he must be the best man this country has to offer for its highest position of leadership.

Time was when we would search for that kind of a man in every nook and corner of the land. He did not have to be rich or have a wide TV grin. You and I know that an Abe Lincoln could not have run for the Presidency in this day and age for the simple reason that he couldn't afford to pay for the television and radio time and the newspaper publicity. Is this good for America? Are we getting the best man in public office? Think about it, if you please.

What are some of the major issues of the day which demand that we nominate and elect, not the richest man or the one with the most charming smile, but the best man that America has to offer at this crucial time?

Take the international situation, for example, which involves such problems as peace or war, the security of our country, and our very survival in the future. When you try to engage the average citizen in a discussion of foreign policy, he will usually shrug you off. It is too technical for him. It is something which is out of his realm of interest, something remote and unreal. But ask the same person whether he would like to see another world war prevented, or whether he would rather see his children marching off to war, his country attacked, his city bombed and destroyed, his whole life disrupted—and he will react promptly and with utmost interest.

It is clear, therefore, that when it comes to foreign policy we need a man of proven ability, one who has demonstrated responsible leadership, if we are to survive as a free nation and as a world power. I cannot emphasize this too strongly for you.

We must remember at all times that we are dealing with the most cagey, the shrewdest, the most unorthodox enemy in all history, who utilizes every phase of human activity in the process to bring us to our knees—political, economic, psychological, technological, cultural, and at the opportune moment also military. A struggle of this type, whether you call it "cold war," "protracted conflict," or by any other name, can be very quickly lost if we are unaware of the tactics of the enemy, or if we refuse to recognize that we are in the midst of a desperate struggle for survival.

Just to show you what kind of an enemy we are dealing with, I want to quote to you from a brochure which recently came to my attention, where the basic guidelines for the Communist conflict against us are stated as follows:

1. Knock off your enemies one by one, as they become exposed.
2. Keep the enemy off balance.
3. Sap the enemy's will to resist.
4. Avoid a frontal assault, a knockout punch, until such time that it can succeed without powerful retaliation.
5. Divide the battlefield into a peace zone and a war zone. Whatever the Soviet Union does comes within the realm of the peace zone; whatever the United States does comes within the realm of the war zone, because the United States represents "warmongering imperialism."

This is not a new concept. It is new to us, but actually it is an old oriental concept which has been practiced in the past by both China and Russia. In fact, it was an old Chinese militarist named Sun Tzu, who wrote some 2,500 years ago:

"To fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting."

And that is exactly what communism is trying to accomplish: To break our resistance without fighting. It is using every possible means—diplomatic pressure, economic competition, scientific achievements, propaganda, culture, education, and other ways—to convince us that we are inferior, that our tactics are stupid, that we are doomed, that we should give up the struggle before we start.

Unfortunately, the leadership this Nation has been given during these past seven and a half years has been anything but inspiring and mature, anything but virtuous and honorable, and very often anything but the truth.

The damage done to our prestige abroad is quite evident to all by now. Under the Democratic administrations of Franklin D. Roosevelt and Harry S. Truman we enjoyed the trust and cooperation of many nations. They were our willing allies in war and peace. They were our dependable friends in the international councils. I leave it to you to make your own comparison of the situation today, where nations all over Asia, Africa, Latin America and elsewhere jeer at us, berate us, condemn us at the least provocation, show disrespect to our highest officials and our flag. Never in my life do I recall witnessing such a "hate America" campaign as exists today throughout the world. I am not going to try to explain it, I am merely citing a fact—no matter how much it hurts.

Who is to blame? Is it President Eisenhower? No. He was a very capable general and a great war hero, but he allowed himself to be captured by the Old Guard Republicans—as the next Republican Presidential nominee is sure to be. You know what the policy of the Old Guard has always been: Prosperity at any price; business as usual; get rich quick; and the public be damned.

What bothers me today is the irrefutable fact that this great land of ours is in mortal danger, our very survival as a free Nation is at stake. There have been many warnings, including some from Republican ranks, but the top men of this administration profess not to see any such danger.

To my mind, the most critical indictment of the present administration is the fact that it has failed to ask Congress for sufficient ballistic missiles and manned aircraft to close the growing deterrent gap relative to Soviet Russia in the area of massive weapon systems. Mr. Khrushchev would not be talking as tough as he now does, if we were as strong as we should be.

It is my view that, at this very moment, we are losing world war III for a number of reasons. Let me mention a few of these reasons: lack of a sufficient and timely intercontinental ballistic missile (ICBM) program; lack of proper defense against a submarine attack; lack of an adequate civil defense program; lack of a weapons program and policy to deter limited aggression; lack of an adequate space program; and, finally, lack of recognition that we are, and for a long time have been, actually engaged in world war III.

I know this to be a fact because, as a member of the House Committee on Science and Astronautics, I have learned in these past 2 years that modern weaponry, in the hands of the Soviet Union, can be assumed to have reached a qualitative and quantitative point at which our incalculable power to destroy an aggressor can probably itself be destroyed now in the matter of minutes.

Let me try to make this thought a little clearer. It is by this time a matter of common knowledge that a revolution in the development of arms has taken place on both sides of the Iron Curtain over the past decade. We speak of the most fantastic weapons, but let us not forget for a single moment that the Russians have such weapons, too. We have no monopoly in this field.

The most amazing thing about it is that this revolution in arms is not yet fully recognized or acknowledged at the policy-formulating levels of the present administration in Washington—but you can be sure that it is not only recognized by those who determine policy in the Kremlin, but it is being utilized for every possible advantage it can give the Russians.

I emphasize these things merely to point up the danger which America and the free world are facing. As we look back in retrospect of events in recent years, we must reach the conclusion that we need never have gotten into the position in which we find ourselves today. Certainly we had the

resources, the money, the scientists, and the manpower to have retained the supremacy that we enjoyed during and after World War II. But we have neglected to use all this to our advantage, because of the desire on the part of the Republican leadership to balance budgets, to economize on expenditures, and to play favoritism toward certain groups.

We are in this mess now because the Republican Party is, and always has been, the party of a single interest—the party of big business. The Democratic Party, on the contrary, has always represented the interests of all the people, of the entire Nation. The Republican Party was a bankrupt party 8 years ago—not financially—but bankrupt in ideas. It received a temporary respite because its ticket was headed by a national military hero, who first found it expedient to become a member of the Republican Party after he had retired from the Army and had become a candidate for public office.

In conclusion, I wish to State my opinion that the failure of the summit conference, the increased tensions and demonstrations against the United States in other countries, plus the inability of Japan to guarantee the safety of a President of the United States, mark a complete failure of the present administration's foreign policy. This, in itself, calls for a change in administration.

Yet, I must warn you that we can lose the election next November 8 if we permit Madison Avenue tactics to prevail. The people of America and of the free world will be the losers if the nominee of the Democratic Party is picked by the same pressure methods as those used by the Republican Party in foreclosing a convention fight.

We must allow a free choice to be made at the Democratic Convention. All the candidates must have a chance to be heard and to state their views on the major issues, so that the American people may have all the facts. Unless we do this, the people will not have much to choose from in the election.

Address of Hon. Michael A. Feighan of Ohio, Before the Donauschwaben Society of the United States

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. FEIGHAN. Mr. Speaker, on Sunday, June 12, 1960, the Donauschwaben Society of the United States held its annual meeting in Cleveland, Ohio. The Donauschwaben people were among the many who were dispossessed and pauperized by the Russian Communists during and immediately following World War II. Many of these victims of Red tyranny have come to our shores and here they have built a new life in freedom for themselves and for their families. A deeply religious and hard-working people, they look to the United States to give vigorous leadership to the cause of justice as the key to a lasting peace.

Under leave obtained, I include in the RECORD my address "The Donauschwaben People Look for Justice":

I am happy to have this opportunity to attend this national meeting of the Donauschwaben (Dough-na-schwa-ben) and to say a few words of greeting. At the outset, I want to commend Reverend Sulzer for the wonderful work he has done and I am confident will continue to do, for the Donauschwaben people here in Cleveland. He deserves the grateful thanks of all present here for his untiring efforts and sacrifices in the cause. You have a fine man as president of the Cleveland chapter, Mr. Anton Rumpf, who is equally concerned with the future welfare of your people; good leadership is the requisite to happy results and I am sure you have enjoyed both.

It was some years ago that I became acquainted with the Donauschwaben people. The circumstances were not happy ones because it had to do with the expulsion of all people of German ethnic origin from the nations and territories occupied by the Red Army. As a member of the Judiciary Committee I made a number of official visits to Europe immediately following the war to study the plight of the homeless and dispossessed. I was concerned with all who were so stricken regardless of their ethnic origin or country of nationality. The magnitude of this problem in the years 1945 to 1948 was such as to cause some people to throw up their hands in despair. I was not among them. This, I felt, was the greatest of our immediate postwar problems because it involved millions of innocent people. A solution to this problem had to be found, a solution which met the requirements of justice.

Sufficient time has passed to permit an objective examination of the reasons which led the Russian Communists and their collaborators to expel the people of German ethnic origin from homelands they had enjoyed for centuries. I see these as the major reasons:

1. Most of these people were dedicated Christians, people who clung to their faith in the face of all odds. As such they would find all the works and demands of communism as repulsive, as something to be fought. This attitude would lead to resistance against the new order the Russians planned to impose upon the people. Thus, the Russians decided forced expulsion was in the interest of communism. This would mean fewer people to control and fewer problems for their police state methods.

2. Communist functionaries were demanding loot and reward for their collaboration with the Russians. By expropriating all the property held by the people of German ethnic origin and expelling them, the Russians would acquire a rich treasure of loot which they could share with their hired hands in the countries occupied by the Red Army. The record of performance tells us this is exactly what they did. But the record also tells us that many of those who collaborated with the Russians to share in this loot were later liquidated by the Russians—a just reward for their treasonable services.

3. The Russians were convinced that by throwing some 10 million homeless and pauperized people upon the war-torn economies of Germany and Austria they would create chaos and insoluble human problems—the grounds upon which the Communist vulture feeds. They believed the people of the Western world would lack the courage and spirit of sacrifice required to resolve this great human problem. But here they were wrong. We have reduced the size of the problem to manageable proportions, we have found new homelands for several millions of the dispossessed, we have provided economic programs for the assimilation of more millions of people in the Federal Republic of Germany, we have utterly defeated the hopes of the Russians for chaos and civil disorder on a scale which would make Communist takeover of Germany possible. What we have done has not fully compensated the individuals who were deprived of their rights, property, and heritage by these Russian expulsions but we have acted in the spirit of justice. Time and the scales of international justice, we know, will take care of the rest.

The United States became a haven for over 400 thousand of the dispossessed and homeless of all creeds, all nationalities and all ethnic origins. There were those who sought to exclude persons of German ethnic origin from the right to participate in our resettlement programs. They sought to blame the expellees for the crimes of the Nazis, being blind to the fact that the expellees were equal victims of tyranny and inhumanities, that they were human beings with the same problems, the same hopes and the same rights before God as all the rest of the displaced. Any effort to discriminate against people on the basis of their ethnic origin is completely un-American. That is why Congress provided opportunities for your people to come to America and here to build a new life in freedom. I have always been proud of the part I played in making this possible. My efforts have been amply rewarded by the fine record of achievement and good citizenship your people have made in this land of their adoption.

Let us look for a moment to the Russian problem in its broader context, in the context of their struggle for the world. All thinking people are concerned with the tensions which grip our international life. The Russians have created these tensions during the past 40 years of Communist conspiracy. Today they occupy and enslave more than a score of non-Russian nations with a total population of over 200 million people. They are attempting to put the entire world behind their Iron Curtain, to turn back the pages of history to the dark days of the Mongol khans. Seeing this in its reality has caused free men to unite, to prepare to meet the challenge, to turn back the Muscovite hordes.

The great question of our times is not summit conferences, it is not personal diplomacy. It is not peaceful coexistence. All these questions have been disposed of by the present administration in Washington. They have disposed of them by proving the utter futility of attempting to resolve the Russian problem by these methods. For this we give them credit, they have performed a useful service, they have proven that no administration can carry on negotiations with the Russians unless it is prepared to agree to concessions which will lead only to war or peaceful surrender.

The time has arrived to take the political offensive against the Russians. We must look forward to the peaceful dismemberment of the present-day Russian Empire—the source of all the world tensions. This can be done by the people of the captive, non-Russian nations if we will give them full moral and political support. There are only 70 million Russians in the U.S.S.R. To this we can add no more than a few thousand non-Russians who are fully collaborating with them in the preservation and extension of the empire. We have several hundred million non-Russian captives behind the Iron Curtain who want the United States and other free nations to collaborate with them in their fight against Russian imperial communism. It is foolhardy on our part to reject their pleas for assistance in destroying the menace which is attempting to destroy our free way of life. This is the only sure course to prevent war, the only road to peace with justice.

I do not believe it is too much for us to believe that the restoration of freedom and national independence to these captive nations will open the door for a just settlement of the injustices done the Donauschwaben people by the Russians and their communistic collaborators in those countries. We Americans believe in justice for all nations and people. This includes the just

claims of your people for the properties expropriated by the Russians who occupy these captive nations.

You have found the good life here in the United States of America. You have worked hard for the success you have attained. You have found a new happiness in all the opportunities our free way of life offers to all other people. You are proud of your heritage. You have preserved your culture and the historic aspirations of your people. This is a story of success. It is the American story. This is the story all of us seek to preserve and share with all the nations of the world.

Accounting for Congressional Expenses

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mrs. DWYER. Mr. Speaker, it is imperative, I believe, that the House take action prior to adjournment next month on legislation to establish a workable and effective system for the public accounting by Members of Congress of their expenditures of public funds.

Only in this way can we help erase the suspicion and cynicism among the people bred by reports of loose handling and inaccurate accounting of public moneys by Members of Congress. Only in this way can we help to restore the confidence of the people in the integrity of their elected representatives—a confidence that is essential to the proper functioning of free, representative government.

In order to encourage the earliest possible action by the House, I have introduced a comprehensive bill which I believe would establish the necessary procedures in the legislative accounting system of the House to assure full, frequent, and public understanding and control of House expenses.

Mr. Speaker, I know of no Member of Congress who has publicly objected to legislation of this kind or who has maintained that some kind of reform is unnecessary. On the contrary, there is general agreement that present accounting procedures are inadequate to protect the public interest. For these reasons, therefore, I urge the leadership of the House, on both sides, to make it possible for the House to act during this session on expense accounting legislation. Since the House Administration Committee is presently studying this matter, there seems to be no good reason why a bill cannot be reported in time for action this year.

The principal provisions of my bill, Mr. Speaker, are as follows:

No payment could be made from the contingent fund of the House except in accordance with regulations issued by the House Administration Committee and on vouchers approved by that committee.

All such vouchers approved for payment, together with supporting documentation, would be available for public inspection.

At least once every 6 months, the Comptroller General of the United States would audit all disbursements from the contingent fund and within 30 days after completion of the audit would report the results to the Speaker of the House and the House Administration Committee.

Within 30 days from their return from foreign travel, for the purpose of investigation, study, meetings, or conferences, each Member of the House and Senate would be required to file with the Senate Committee on Rules and Administration or the House Administration Committee a statement of expenses including: an accounting of foreign counterpart funds used for the Member's expenses, the number and identity of all persons in the party, and information concerning expenses, if any, paid for husbands or wives of Members from Government or counterpart funds and services, if any, performed by such persons for the Government.

At the beginning of each session of Congress, all such expense statements together with a detailed statement of the manner in which the contingent fund of the House has been expended during the preceding year would be printed as a House document.

Certain provisions of present law, including the "finality clause" which hold that payments approved by the House Administration Committee are conclusive on all departments and officers of the Government, would be repealed.

H.R. 8860, A Bill To Stabilize the Mining of Lead and Zinc by Small Producers

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. METCALF. Mr. Speaker, H.R. 8860, which I have cosponsored, would stabilize the mining of lead and zinc by small producers, conserve domestic reserves of lead and zinc, provide jobs for unemployed miners and payrolls for the depressed business communities which serve them.

The measure would authorize stabilization payments to domestic producers of lead and zinc. These payments would make up the difference between the stabilization price of 17 cents per pound for lead and 14½ cents a pound for zinc, and the price received by the producers in the open market. Payments would be limited to "small domestic producers," defined in the bill as those producing or selling up to 2,000 tons of lead and/or 2,000 tons of zinc in a 12-month period.

Current prices (13 cents for lead, 12 cents for zinc) are below the domestic cost of production.

As they have done previously, administration agencies are leading the opposition to this legislation, claiming, among other things, that the import quotas imposed late in 1958 are doing a job. Secretary of the Interior Seaton says the quotas "have already materially assisted in stabilizing the domestic lead and zinc industries." As far as the small miners are concerned, they have been stabilized right out of business.

In 1956, U.S. mine production of lead totaled 348,329 short tons, of which 18,610 came from Montana mines. In that same year, we imported 458,553 tons of lead. Preliminary figures for 1959 show that total domestic production fell to 253,260 only 7,520 tons of it mined in Montana. Imports totaled 410,954 tons.

For zinc, the picture is the same. In 1956, domestic mines produced 537,643 short tons, 71,865 of it mined in Montana, and we imported 770,775 tons. Last year, total domestic production fell to 416,965 short tons, of which only 27,560 tons was mined in Montana.

As you can see, foreign producers still dominate the market, as they have for at least 10 years. Imports of lead, 75 percent of U.S. production in 1951, rose to 91 percent in 1958. From 72 percent of U.S. production in 1952, imports of zinc increased to 119 percent in 1958. In the same period, domestic mine output of lead dropped 35 percent and that of zinc fell 37 percent.

In 1956, there were 696 individual mines in the United States producing lead and zinc. By 1958 this number had dropped to 447.

The decline in domestic production of ores and concentrates has brought a depression to our mining centers, among them Butte, Mont. Thousands of men have been laid off. When their unemployment compensation benefits were exhausted, they were forced to turn to welfare agencies. The loss of payrolls multiplied throughout the business community as merchants were forced to cut back in their operations.

Our domestic mining industry is basic in peace, vital in war. We cannot stockpile a mine for emergency use. When necessary daily maintenance ceases, shafts and tunnels shift or fill with water, gas creeps in, supports give way and roofs collapse, machinery deteriorates rapidly, and it may take years to get that mine back into production.

Maintenance of a healthy, active domestic mining industry is in the national interest. This bill would help.

Pony Airlift

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. CUNNINGHAM. Mr. Speaker, during the past several weeks a Subcommittee of the House Committee on Post Office and Civil Service has been busily engaged in examining the activities of the Post Office Department in the field of transporting 4-cent letter mail by air.

The Post Office Department has maintained that it is able to transport this

mail by air without paying any more in overall costs than is currently being paid for surface transportation. The Post Office Department is also making claims of drastic service improvements.

In its philately section on Sunday, June 19, the New York Times included an item on the Pony Express. The Times article explained how the Post Office Department has announced that it will not use jet airplanes to carry first day "Pony Express" covers westward from St. Joseph, Mo.

The Post Office Department said it has had to discard its plans because the flight schedule could not be worked out, and therefore first day covers from the respective points will be dispatched through ordinary mail channels. Many postal patrons feel that the schedules on transporting 4-cent letter mail by air have not been very well worked out and as a sponsor of a bill to eliminate the so-called airlift I feel that the Post Office Department has not worked out the necessary congressional authority to enable the operation to be continued.

Mr. Speaker, I am concerned over the way in which the Post Office Department has continued to expand its unauthorized transportation of 4-cent letter mail by air, even though the House Subcommittee on Appropriations has specifically asked that there be no extension and even thought the full Committee on Post Office and Civil Service has approved a bill directing that the operation be discontinued. The reported bill, H.R. 12595, should be approved swiftly on the floor of the House of Representatives and the Post Office Department should immediately take note of official expressed congressional displeasure and desist from any further experimentation with this type of mail transportation.

Commencement Address by Senator Keating at Pace College

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. LINDSAY. Mr. Speaker, I am pleased to insert in the CONGRESSIONAL RECORD an address by my colleague the Honorable KENNETH B. KEATING before the graduating class at Pace College, which awarded him an honorary doctor of civil law degree. The subject of Senator KEATING's remarks is timely and it is another indication of the distinction with which he serves New York.

The address follows:

I am indeed honored to be here with you today, and to have the opportunity to address you, on this day that means so much in your lives, this day that is at once an end and a beginning.

Many senior classes have gone out from your fine college in the past. None, I am certain, goes out into a world of greater ferment, of greater challenge, and, potentially, of greater opportunity. You do not embark upon a placid sea of history. The tides of change, of evolution, yes of transformation, are running high.

The world of your graduation is no longer the world of your matriculation at Pace. The pressures of events have reshaped it, literally before our eyes, in the immediate past. Yesterday is a land we shall never see again. We stand, all of us, at the threshold of a new and exciting tomorrow—a tomorrow that holds hope as well as danger—but whose immense challenge to the human mind, the human heart, and human energies is unparalleled in history.

The first graduates of Pace lived in the context of America, in the well-bounded confines of their chosen careers and surroundings. In a sense, they were hermetically sealed against pressures from beyond our shores.

It is your destiny, in this year of 1960, to live in the context of humanity, in a world where all men are your neighbors, where what happens anywhere is something that happens to you—that touches your life, that leaves its mark in your mind and in your heart.

Korea, Lebanon, West Berlin, Ghana, South Africa—these were once names to memorize in a geography lesson. Today they have become names that we live rather then learn—for they are a part of the fabric of the new history—the world-spanning history that leaves no man an island, no man a hermit.

One of the great challenges, therefore, that confronts you today is to equate yourself with this new-dimensional world, to widen the vistas of your intellect and your spirit in order to encompass the full range of the vast human experience in which you are now called upon to participate. Alexander Pope once wrote: "The proper study of mankind is man." Today, we can well paraphrase that historic line by saying that "the proper preoccupation of man is mankind."

Consider for a moment the tremendous phenomenon that is taking place in Africa. After centuries of being locked in the chrysalis of time—whole nations—millions of people—are emerging into the sunlight of a destiny of their own. And as they emerge, into freedom, into self-determination, they pose a challenge which each one of us, as brothers in freedom, must feel, to which we must respond.

It is heartening to know that the Government and people of the United States are, in fact, responding to this monumental challenge. Under our mutual security legislation, we now operate programs in 13 African nations and territories.

By June 30 of this year, we will have about 780 American technicians in all of Africa, and we expect to increase this number to 1,000 in the coming year. This is no more than a first step on the stairway out of darkness—for the challenge of Africa will be a continuing, an expanding one—and it must ever be considered by each of you as a personal challenge to free men. Africa is not remote. It is only a heartbeat away, on the map of humanity.

And no farther, too, are the lands of Asia, of the Far East, of South America—wherever the quest for human dignity, for self-realization, for lives unyoked to degradation or tyranny stirs men to make their own history rather than to have it made for them.

If the challenge presented to us by these emerging nations were confined to the purely economic realm of support and assistance, it would still be of awesome magnitude. But it is a challenge compounded and intensified—because the great drama of this emergence of new nations is being played against the ominous backdrop of a world struggle between freedom and tyranny.

This great silent struggle is precisely the effort on the one hand to extend the area of human freedom and on the other the effort to reduce that area. History shows us how fragile, how perishable a commodity freedom is. Nations once free are no longer free.

They have been manacled by tyranny—or their freedom has slowly, subtly been eaten away by the termite colony of infiltration and propaganda. In Cuba we have the chilling paradox of a nation that lost its freedom while ostensibly fighting for it—that threw one brutal master only to be mounted and ridden by another.

The great and overriding point to remember is that we are not mere spectators wherever freedom loses ground. We are involved — inescapably involved — because whenever and wherever in the world the enemy of freedom gains a yard, we are forced back a yard.

And here is the greatest challenge of all—not only because it is the supreme challenge in point of meaning for our lives—but because it is the easiest to avoid. We are prone to make the defense of freedom a vested interest of Government, rather than a personal and deeply felt responsibility of each of us as individuals. Do not, I pray you, catch this fatal disease of apathy. It does not become a young heart. It does not become a young intellect. For apathy is a way of dying, not a way of living—throughout history it has been the suicide weapon of men who mistook freedom for a jewel that could never be stolen.

Stop with me for a moment to reflect on how your freedom came about. You accept it as a birthright—but ponder on how it was born. You didn't have to lift a finger for it—because young men before you—from Lexington through the centuries—whole generations of men your age, yes and even younger—bought freedom with their blood, and left thousands of unlived years on the battlefields of the world—so that we, you and I, might meet here today as free men and women, unchained, unbowed, unmastered.

Thus, the defense of human freedom is more than a challenge to you. It is a sacred and unending responsibility.

We must not wait until it is in jeopardy, or lost, to discover how priceless a gift we hold. For when it is lost, it is the young people like yourselves who must win it back. The youth of Hungary had to meet that historic test—and they met it with a heroism so magnificent, so memorable, that it touched the hearts of free men throughout the world. In other lands, still fresh in memory are the spontaneous marches against oppression—marches in freedom's name—and the marchers, the fighters, the victors, were in the flower of their youth—but old enough to know that nothing in this world is more worth fighting for than human dignity, than the right to think, to speak, to act as free men.

May you never, please God, be put to the test of regaining your lost freedom—but if there is one thought I would leave with you today it is this: Freedom is not an heirloom that is passed on automatically from one generation to another. It is rather a treasure left in trust—a treasure that is kept only so long as it is guarded—and it is best guarded when its irreplaceable value is burned into the hearts and minds of those in whose custody it is left.

There is one last challenge I would touch upon on this day you enter the world of your careers. It is the personal challenge that each of you must feel instinctively, and deeply—the challenge to make the most of your life, to realize to the full your talents and capabilities, to make those you love—and those you will love—proud of who you are and what you represent in their lives. I would counsel you sincerely, as you embark upon your careers, to think more of the giving of yourself than of the getting in terms of money. If you live your life on the gold standard—with everything calcu-

lated in salary return—you are missing the true and wonderful adventure of life—which is the growth of you as a person, not the growth of your bank deposits.

I do not suggest that you cultivate insecurity, but I would warn you against a too intense preoccupation with security. Life can be a dull and empty journey if your mind is on the destination rather than on the pleasure and excitement of the journey. Security is not the proper business of young people. Always consider it a fringe benefit of life, not an ultimate reason for diligence and dedication.

And I would counsel you to treasure above all else your personal dignity—the sense of yourself as a God-made individual, distinct, not identical, mindful that you wear nothing more precious than your name. Be zealous to conform, not to each new style in thought and taste, but to the inner compulsions of your own spirit and intellect, of your individual concept of the true, the good, and the beautiful.

Today, this moment, you hold your life-to-be in your hands. The true spending of it is not in the currency of days and years, but in the deeper, richer exchange of the offering of your talents, your energies, your gifts of heart, to making this a world that will be—because you have lived in it—a finer dwelling place for all humanity.

Onion Trading

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ANFUSO. Mr. Speaker, on August 28, 1958, a bill to abolish futures trading in onions was signed by President Eisenhower.

In November 1959, after court tests of the measure, futures trading in onions ceased on the Chicago Mercantile Exchange and on all other commodity exchanges.

The passage of the onion bill marked the first time in history that the Congress had enacted a measure to prohibit futures trading on an organized commodity exchange, although between 1880 and 1930 more than 200 bills were introduced.

When this matter was considered in the House on March 13, 1958, I stated that this measure helps no one, neither the farmer nor the consumer, and that it would be a mistake to pass it.

Many of the Members of Congress will remember the campaign against futures trading in onions. It was well organized and, at times, was so intensive in character that it became hysterical.

The principal complaint against futures trading in onions was that this trading depressed prices. It did little good to argue that onion prices always had been highly volatile in nature.

Nor did it curb the opponents of futures trading to point out that the per capita consumption of onions has not increased in the past 20 to 30 years. But since 1949 the production of onions has increased 35 percent more than the rise in population.

Nor did it avail to have oniongrowers tell the committees of Congress that they used futures trading to protect themselves from the unpredictable and drastic changes which frequently took place in onions.

One of the most articulate of these, Chester W. Kempley, onion producer of Montello, Wis., told the House Agriculture Committee:

If the Congress approves a measure to end futures trading in this commodity, I will lose the privilege of insuring my crop against a possible decline in prices. I will have to assume the entire risk of those unforeseeable changes in price which affect most commodities. Since there is no Government floor for onion prices, I will be thrown to the wolves.

With today's high fixed costs of production, hedging has become a most valuable privilege, the continuance of which could mean life or death to the grower. Without it, many of us could be wiped out by a couple of consecutive bad years.

The pleas of growers who used the exchanges to protect themselves made little impression. The chorus that low prices and price declines were the fault of futures trading rose higher and higher.

One argument against futures trading in onions was that the commodity was perishable and, therefore, not adaptable to trading. I never quite grasped this argument, but it was made.

During the hearings on the onion bill it developed that the only study conducted by the Department of Agriculture indicated that futures trading lessened price fluctuations and contributed to price stability in the commodity.

The survey was made by the Division of Agricultural Economics, Agricultural Marketing Service, USDA. The gist of it was contained in this statement:

Price variability is best measured in short-time periods, such as month to month, or, if feasible, on a week-to-week basis. Of price variability data herein measured, the month-to-month changes in the cash price of onions in the 1930–40 period and 1947–55 period are probably the most valuable. This analysis showed that a significantly greater average month-to-month variation occurred in the 1930–40 period than in the 1947–55 period.

Once again, we went right ahead to outlaw futures trading—and do away with low prices in the onion industry.

What has happened since futures trading in onions ceased?

The aftermath has been some of the lowest prices in recent years.

It is evident that the solution for the troubles of the oniongrowers is not the abolition of futures trading.

Let me quote some of the prices since November by comparison with prices in other years:

Average monthly prices per hundredweight

Year	January	February	March	April	May	June	July	August	September	October	November	December	Season average price
1957	2.20	2.55	2.55	4.35	4.55	4.90	2.85	1.75	1.65	2.00	2.10	2.20	2.85
1958	2.45	3.10	5.00	5.50	2.65	2.50	2.45	2.20	2.30	2.50	2.70	3.25	3.39
1959	4.50	5.00	7.70	7.90	3.85	2.40	2.70	2.80	1.90	1.90	1.80	1.60	2.41
1960	1.50	1.30	1.60	2.50									

May prices are not yet available, but all indications are that they will be well below average prices for the month for the past 3 years.

In February, 1960, the Food Research Institute at Stanford University published a comprehensive study of futures trading in onions. The study is contained in the February bulletin of the Institute.

For those interested, I would advise that they get the February bulletin and study the article, "Price Effects of Futures Trading" by Holbrook Working.

Like the study by the Department of Agriculture, the Stanford study concludes that futures trading promotes price stability in onion prices, the inference being that such trading is in the interests of the producers.

We have then this aftermath of the action in banning futures trading in onions:

First. Extremely low onion prices, contradicting the primary argument relied upon in the campaign against trading.

Second. The power of the Congress has been employed to outlaw a legitimate business and one which, on the basis of the record, served a most useful purpose.

Third. The attention of the onion industry, and of those interested in its welfare, has been diverted from the real problems of the industry which must be dealt with on a practical basis if the situation of the onion producers is to be improved.

Fourth. The abolition of futures trading in onions has injured all commodity exchanges through a precedent which indicates that they are conducting their operations on sufferance.

Mr. Speaker, we live in a most dangerous period, a period when propaganda and agitation are weapons employed systematically and effectively against democracy and free enterprise.

This is all the more reason for us to keep our heads, to proceed on the basis of logic and reason rather than emotion and prejudice.

From one standpoint, abolition of futures trading was a minor matter, one with comparatively little effect. From another, it is disturbing and raises questions as to our own ability to conduct our affairs in an orderly, calm, and logical manner. We were, in my opinion, stampeded into an unwise act. This entire episode has some most disturbing implications.

I have heard it said that if the commodity exchanges had done away with abuses and had cooperated with the Congress and the onion growers, the abolition of futures trading in onions never would have taken place.

I do not defend abuses on the commodity exchanges any more than I defend abuses and excesses in any industry. But the remedy is not to kill the

business concerned; granted, of course, that the abuses can be eliminated.

I think we made a mistake when we killed futures trading in onions. I said so at the time. I think the developments since then prove I was right.

There is no equity in singling out futures trading in onions for death, while leaving futures trading in potatoes and in many other commodities untouched. All the arguments made against futures trading in onions can, for example, be made against trading in potatoes.

Yet today we deny the onion farmer the means of protecting himself through futures trading. We grant that protection to the potato farmer and other farmers whose products are traded in on the commodity exchanges.

Not that I advocate further action toward the abolition of futures trading. Quite the contrary. I think we should take steps to restore futures trading in onions. This is the way to correct a mistake and to undo a wrong.

Twentieth Anniversary of the Occupation of Baltic States

EXTENSION OF REMARKS
OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FEIGHAN. Mr. Speaker, on Sunday, June 12, 1960, it was my pleasure to address a large rally held at Ciurlionis Hall in Cleveland, commemorating the 20th anniversary of the Russian Communist takeover of the Baltic States. The chairman of this rally was Mr. Julius R. Smetona, who is the son of the last legal President of Lithuania. Much has happened during the 20 years of Russian occupation of the Baltic States. I felt the major events of this period should be examined in terms of whether or not they advanced the emancipation of Lithuania, Latvia, and Estonia from the yoke of Russian imperial communism. By so doing, I believe we can best evaluate national policy, past and present, and find the guideposts for our policy of the future.

Under leave obtained, I insert in the RECORD my address on the 20th anniversary of the occupation of Baltic States:

My Lithuanian-American friends, I deem it a privilege to be here with you today to play a part in this sad commemoration of the 20th anniversary of the Russian occupation of the Lithuanian, Latvian, and Estonian nations. This is the anniversary of one of the blackest chapters in the history of civilized mankind. It marks the days when the true colors of the Russian Communists were exposed for all to see, the days when the Russian imperialists were the happy allies of the tyrant Hitler. It also marks the days when the peace-loving people of the Baltic States were forced to accept, by treaty, peaceful coexistence with the Russians which turned out in reality to be military occupation. These long 20 years which have elapsed since have provided undisputed evidence of what the Russians mean by peaceful coexistence. Let us look, briefly, at the record of these past 20 years.

We see that all the Baltic States are still occupied by the Russian Communists. They are in these countries in violation of solemn treaties of peace and mutual understanding entered into between these countries and the U.S.S.R. They are not welcome. They remain there by military force alone.

We recall the brutal mass deportations carried out by the Russian Communists—deportations which violate the genocide code and shock the conscience of all mankind. Today loyal sons and daughters of Estonia, Latvia, and Lithuania are scattered throughout the Russian Empire against their will. Thousands and thousands have died at the hands of the Russian slave masters.

We remind the people of the world that these mass deportations were directed by none other than one General Serov, an NKVD specialist in crimes against humanity. This same General Serov is Czar Khrushchev's favorite executioner. He accompanied Khrushchev on his tour of London a few years ago, serving as chief of security for the Russian dictator and his entourage. Khrushchev selected him to succeed Beria as head of the dreaded MVD. These two are real buddies in crime, inseparable partners. This, by the way, is the same Khrushchev who was invited by President Eisenhower to be his guest in the United States.

We can never forget that the people of Lithuania, Latvia, and Estonia have been fighting these past 20 years to preserve their national identity, their rich Christian cultures, their historic values. These are the things the Russians have been attempting to destroy in their plan to make the people of these countries into Soviet peoples. We all know what they mean by Soviet people—they mean Russian Communists, people without love for their fellow man, people who live on hate, people who worship tyranny and despotism and reject all thoughts of God and the divine plan for mankind.

We are constantly reminded that the people of the Baltic States remain dedicated to human liberty, to freedom, and to the political ideals of the West. They are prepared to fight for the restoration of their national independence if the United States and its allies will take the political initiative against the Russian imperialists who are their oppressors. This spirit, this desire for liberty and national independence by these captive people constitutes a powerful deterrent to war. The Russians know that if they start a war the captive people will seize this opportunity to fall upon them, to destroy the chains which bind them to the empire, to dismember once and for all this empire of fear. This is a fact, an inescapable fact, of contemporary international political affairs. It is time the American people were awakened to this fact and the present administration in Washington did something to help keep this flame of freedom burning ever brighter.

This is the record of the past. Now what is the record we are going to make in the future? We have several choices as to the course of action we shall take. Let us look at them.

1. We can accept a status quo which the Russians have been attempting to force down the throats of free people. The Russians say that if we will recognize their empire of captive nations as final and unchangeable, they will not drive us out of free Berlin. They ask us to close our eyes to the genocide of nations going on behind the Iron Curtain. They ask us to join with them in killing the aspirations for freedom in the hearts of several hundred millions of non-Russian people. They ask us to turn our backs on our proven allies, the captive people, in return for which they promise not to throw us out of Berlin until they are ready for an all-out war against the free world. This, then, is the certain course to war and it must be publicly rejected by both political parties in the United States.

2. We can continue to engage in the Russian instigated plan of coexistence, as the present administration has been doing these past years. We are now censored to speak no evil against the Russian tyrants, which throttles the truth. We are admonished by Vice President NIXON to receive the arch criminal Khrushchev with courtesy and consideration. The Voice of America has been reduced to a faint whisper, daring not to even echo the call to freedom. We are speaking over the Voice of America to the people of many captive nations in the Russian language, the mother tongue of communism and the language of their oppressors. On all sides the caution is urged "Do not provoke the Russians"—which has come to mean moral and political paralysis for our Nation. The time has long passed when we should have stepped out of this Russian bear trap. We can be sure the people are going to demand a new administration this November, which will remove these chains from our national honor.

3. We can continue to allow our Nation to be dragged into and out of so-called summit conferences. This device is nothing but the stage for the "mirage of peace" which the present administration has attempted to foist upon the American people. Our people were thoroughly brainwashed into believing some good could come out of such propaganda exhibits. But the complete collapse of this ill-conceived balloon at Paris a few weeks ago has awakened the American people to the Disneyland in which our leaders have been living and into which these same leaders sought to entice them. Summit conferences and personal diplomacy with the Russians have been exposed as the road to appeasement and the road to appeasement is the course to war. The only way anyone can do business with the Russians is to concede to them all they demand—and this is peaceful surrender.

4. We can look honestly at the nature of the Russian Communist empire. If we do we will find the road to peace with justice and freedom. We will find that the empire is tottering, that the 70 million Russians cannot possibly hold it together much longer, that the several hundred million non-Russians in the empire—the people of all the captive nations—are anxious to work with us in bringing about the dismemberment of this unholy empire. If we take the time to look close enough we will find abundant evidence that a great political explosion is in the making, an internal explosion, an explosion caused by the powerful desire of enslaved people to be emancipated. Look what is happening again in Tibet, recall what happened in Turkestan a month ago, see what is now happening in Poland, remember what happened in Hungary and East Germany but a short time ago. This is the march of freedom, the march which our Nation must lead with courage and boldness.

This brings us to the Captive Nations Week observation under Public Law 86-90, which will take place this year from July 17 to 23. I am proud of the part I played in introducing this law in the House and in helping to bring about its enactment. This law forms the foundation for the foreign policy our country must pursue if we are going to win the struggle for a just and lasting peace.

Allow me to point out that 1 month from now the Democratic Party will hold its convention in Los Angeles. Immediately following the Republicans will gather in Chicago. Now I ask you—what are your plans for informing both parties of what you

believe our foreign policy toward the Russian Communists should be? Both parties are moved by what the electorate demands. This is the strength of our democratic system—it is the duty of informed citizens to make their demands known.

How should our country observe Captive Nations Week this year? This is my second question leading to citizen action. I have recommended to Mayor Celebrezze that he appoint a civic committee here in Cleveland to make certain we make the most of this opportunity. I am sure that all present here will want to play a part in the work of that committee.

If we do these things, not just once a year, but in spirit and dedication every day of the year, the record for the future will look much brighter and more hopeful than the record of the past. We must not wait another 20 years for Lithuania and her sister republics on the Baltic Sea to be free and independent. We must act now. This is my wish for the gallant people of Lithuania and all other nations behind the Russian Iron Curtain.

Address Delivered by Senator Bridges at FBI Commencement Exercises

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 21, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent that there may be inserted in the CONGRESSIONAL RECORD an address delivered by the Honorable STYLES BRIDGES, senior Senator from the State of New Hampshire, delivered at the commencement exercises of the Federal Bureau of Investigation, held in the city of Washington, D.C., on June 8, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY U.S. SENATOR STYLES BRIDGES, REPUBLICAN, OF NEW HAMPSHIRE, AT THE FBI COMMENCEMENT EXERCISES IN WASHINGTON, D.C., JUNE 8, 1960

Mr. Hoover, Mr. Justice Clark, Mr. Assistant Attorney General Morton, Mr. Bartley, distinguished guests, members of the graduating class and your friends and associates, it was just 14 years ago when I had the privilege of giving a commencement address here once before. It's good to be back. This year marks the 25th anniversary of this Academy, one of the very unique institutions in this Nation. Director J. Edgar Hoover is universally recognized today as one of our greatest living Americans—a man whose entire life has been devoted to the single ideal of service to his country without thought of self-interest or politics. His numerous contributions to more effective law enforcement are well known to all of you, but I regard the creation of this Academy, 25 years ago, almost as a stroke of genius and great credit must go to all his associates in the FBI organization and in the hard-working staff that conducts this Academy, who have prepared this course and who have made this Academy world renowned.

I am particularly proud of my own State of New Hampshire which now has 25 graduates from this academy and of Chief of Police Richard Flynn of Dover, N.H., who is a member of this graduating class.

Hundreds of thousands of young men and women are graduating at this time of year from colleges and universities. The great service academies at Annapolis, Colorado Springs, and West Point this month will graduate our future naval and military leaders in colorful and impressive ceremonies. The leaders of this country's continuous war against crime graduate from the FBI Academy twice a year. Actually, of course, this is really a sort of postgraduate course for all of you in forms of police administration and law enforcement as you are already qualified and trained professionals or you wouldn't be enrolled here. According to Director Hoover, our annual tribute to crime has now reached the incredible total of $22 billion per year. In this sense, crime does pay as it snatches $9 from our pockets for every dollar we donate to churches and religious work. In 1958 our population had increased a trifle less than 2 percent over 1957—but crime in this Nation jumped 9 percent.

According to the FBI figures, we now have a murder, forcible rape, or assault to kill committed in the United States every 4 minutes. Last year, some 271,000 automobiles were stolen and, as you have to deal with the problem of mounting crime, I am sure you are as deeply disturbed with the problem as I am.

We used to believe, you know, that crime was largely the product of poverty, of ignorance, of lack of schooling, of bad companions, and "bad home influence." Now some of our most shocking and senseless crimes are committed by youngsters from fairly good homes, some the very best homes, and the products of the best and most expensive educational system in the world. Some 800,000 youngsters under 18 years of age were arrested in 1958 for crimes other than traffic violations.

Obviously, 800,000 juveniles involved in crimes in one year could not all have come from "broken homes" or "underprivileged families." Most professional men in police work, I think, recognize that that source, at least, is not wholly the cause.

Testifying last February before a congressional subcommittee, Mr. Hoover stated that lewd films, indecent magazines, sensational yellow journalism, and lurid crime-inciting TV shows were in part responsible. Particularly those books, magazines, TV shows, films, and other media which glamorized and glorified criminals rather than the old-fashioned virtues which most of us knew in growing up in this country.

Adolescents naturally like to think they are grown up. So, it is not hard to understand why some of them should ape the manners and morals of what they conceive to be the sophisticated and the "smart" people. They little realize that these ultrasophisticates actually represent the wormy and rotten fruit on the tree of culture.

Just as sex deviates often fancy themselves a third and superior sex, so the intellectual decadent feels quite sure that he represents a new and sparkling elite. I draw a sharp line, of course, between the sex degenerate, who is a psychopathic problem, and the intellectual degenerate, who is harder to detect and expose. This whole problem, menacing our culture and our way of life, has been inadequately studied and reported.

Instead, we have seen that whole new development in this country of the so-called social scientists who tend to blame everything on society or the system instead of the individual responsible for the criminal or antisocial activity. Indeed, there is even a small segment of this new school of behavioral science, perhaps we should call them, prepared to argue there is no such thing as the criminal type. There are only misunderstood problem people.

Today, of course, everything is a problem—even such simple things as lawbreaking or gross breaches of the accepted moral codes. And needless to say, problems can only be studied and treated by specialists and experts. To these problem experts there are no criminals or bad actors—just maladjusted people. Their maladjustment, they say, is never the responsibility of the individual concerned or those who failed to bring him up properly—it is all the fault of organized society. It is as simple as that.

We often tend to go from one extreme to the other in our attempts to solve all the problems of life. Up to 60 or 70 years ago it was believed that severe punishment was the only answer to crime. Until recent times savage prison terms and often brutal treatment in many countries of the world were the answer to the punishment of crime. Today, the concept of crime has had a change. It is probably well known to most of you, but I want to observe that many of us feel that in dealing with crime the pendulum has swung too far the other way.

The Chessman case is probably a good example of the other extreme in giving a condemned, hardened criminal every advantage to be squeezed out of the law.

I am sure you are all familiar with the Mallory case. This was an extraordinary example of stretching the law to the breaking point through the use of a needle's eye technicality. The U.S. Supreme Court ordered the conviction of Mallory thrown out—even though he had admitted his guilt—on the technicality that he had been held for questioning a few hours longer than was considered proper before arraignment. Here we have a case where the Court was more concerned with correcting what it believed to be a minor abuse of police power than it was in seeing that justice was done in a major crime. So Mallory was freed and went on to Philadelphia where you know by the papers he recently allegedly committed the same crime.

Now in 1958 all forms of murder in the United States took 8,182 lives. There were 75,347 armed robberies and 679,000 burglaries. These are disturbing figures. But they are small indeed in comparison with the toll taken by the worldwide criminal conspiracy known as communism.

No accurate figure exists for the total number of human lives taken by Communists all over the world since the Bolshevik seizure of power in Russia in 1917. But it is generally estimated, and in my judgment the estimates are correct, as between 30 and 40 million human lives. Five million people perished alone in 1931 and 1932 as a result of Stalin's "liquidation" made possible by a manmade famine.

The horrible part of these Communist mass murders, dwarfing any others in history, is that they were ordered and carried out with complete detachment and in a spirit of absolute righteousness. These Communist massacres were not based on anger, hatred, or even blood lust—the most common reason for most murders. Communists murder entire classes of people and entire social groups solely on the grounds of what they believe to be "socialist hygiene." Their reasons are as impersonal as that of a cattleman or a farmer who reluctantly kills off some diseased cattle lest they infect and destroy the whole valuable herd.

As for the not-so-gentle art of robbery, here too the Communists make ordinary criminals appear softhearted. They never settle for just part of their belongings—they want to take everything as Mikoyan boasted to Castro recently in Cuba. Only in Communist terminology they use the word "expropriate"—it's nicer sounding than stealing or robbery because it comes from Latin.

I did not come here today to deliver another speech against communism. We've been denouncing communism and Communists in this country now over 40 years, and I'm sorry to say, in many instances, we still have an apathetic public. I mention communism today for two reasons. One, because communism and internal subversion will continue to be a big problem for law enforcement officials for some time to come in the future. This means your profession will have to devote considerable time and study to the ramifications of communism.

Let me remind you that some of the most authoritative information available on communism will be found in the congressional committee reports and hearings which you can obtain by writing your Senator or your Congressman or to the committees directly. You can also turn to Mr. Hoover's book, "Masters of Deceit," which should be a handbook for every well-informed police officer. May I also call your attention to a book written by the former chief of police of Salt Lake City who has published one of the best books on the subject entitled "The Naked Communist."

Almost everybody is against communism, but all too few of us fully understand the nature of the beast, and even fewer of us are prepared to do anything practical to expose and retard it from making further inroads in our society. Merely being against leprosy is not going to do much to stop the spread of that dread disease or to prevent others from contracting it. Communism has been aptly described as leprosy of the human soul. Or, if you prefer, the syphilis of the human intellect. It is most positively not the result of poverty and ignorance as so many well-meaning but badly informed people will still try to tell you today.

During 1947 and 1948 when the House Committee on Un-American Activities was holding its sensational hearings exposing Soviet atomic espionage in this country, a long list of witnesses took the fifth amendment, not only on the question of whether they were Communists, but also whether they had ever engaged in espionage. You can look the list over and you will find, with a few exceptions, that most of them were native-born Americans with exceptional scholastic records in some of the best schools and colleges in this country. That's a shocking thing.

One could also very easily draw up a long list of Americans of considerable wealth and fine educations who have been deeply involved in various other aspects of Communist subversive activity in this country.

Secondly, many leaders of the West still make the mistake of assuming that Communists think and act like normal human beings. They are bent on world domination and the creation of a world Soviet state, and anything they do is predicated solely on the single question—Does this advance the world revolution?

That is why I firmly believe that we are permitting ourselves to be boobytrapped over the so-called summit situation—fiasco, some people call it. Khrushchev knew in advance that Western unity could not be split at Paris. He knew he would get very little or nothing in the way of concessions. Why, then, go to Paris and waste time negotiating with people he despises anyway and have to come back and report to his people and the satellites over the world that he came back empty-handed?

He also knew that President Eisenhower had less than 8 more months to serve and that any agreements worked out with him might be rejected by his successor or the next administration. That is why he torpedoed the conference and said he would be ready to talk again in 6 to 8 months. The U–2 plane incident was made to order for his scuttling act, but had it not occurred, believe me, he would have forced a showdown over some other issue, and charged the West with bad faith anyway.

The lesson of history has been all too plainly written—you can't do business with Communists. It is high time we stopped kidding ourselves that through endless talks with Communist leaders we may be able to find mutual agreement and accommodation that they will keep. We may be able to find areas of mutual agreement sometimes, but if a maniac in your community threatens to kill you and your family and has demonstrated that he means what he says, having killed several people prior to that, what in the name of common sense would the object be of negotiating with him? You might be able to negotiate for a little more time. You might be able to negotiate the choice of the cemetery where you are going to be buried, but if he persists in threatening to kill you, the real area of any possible negotiation is practically nil.

You would be better advised to have him locked up and put out of circulation, or, failing that, to defend yourself to the utmost against any surprise or treacherous attack.

We learned to our cost that one could not do business with Hitler and the Nazis. Millions lost their lives, their countries, and their freedom as the result of chasing the will-o'-the-wisp hope that if only we tried hard enough and talked long enough, we might persuade that madman from his openly announced designs. Why anybody in his right mind and knowing the facts of history in this late day still believes and asks others to believe that somehow we can work out things with Khrushchev and the Communists is beyond me.

I understand that this academy has graduated close to 4,000 law enforcement officers in the past 25 years. I congratulate Director Hoover and his able staff on the fine work they have done. This postgraduate academy has been very effective. A Federal police force which some people advocate in this country would be a direct contradiction to the 10th amendment to the Constitution reserving to the States all rights and functions of Government not spelled out in the Constitution. It would also create a most undesirable precedent for further expansion and extension of Federal power into every community and village in this country. The manner and the way in which the FBI has conducted itself during the years of its existence are probably the best argument we have against some of the people in this country who have been trying from time to time to create a national policy system.

After some 300 years of local self-government, I think Americans have more than amply proven they can also police their own communities without Federal intervention, and I would be similarly doubtful about any other device directly trying to set up a Federal clearinghouse for local police information and records. I am not so sure that the Federal Government under the 10th amendment should be asked to act in this capacity for States and communities.

I know you have all profited from this course. I know you will go back to your own communities better equipped to face the mounting problems of crime and subversion. We face dark and uncertain days ahead as long as the men of the Kremlin and Peiping continue their plotting against the free world. This is a long-time proposition I point out to you, and may last during your entire lifetime. You may face this problem of outside and inside threats. You will be in the front lines on the home front, and you will need all the courage, all the intelligence, and all the fortitude you can muster. I am delighted to be with you on the occasion of this graduation, and I extend each and every one of you my best wishes and good luck in your chosen profession.

High School of Commerce, Springfield, Mass., Graduation Exercises, June 13, 1960

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. BOLAND. Mr. Speaker, the High School of Commerce in Springfield, Mass., is one of the finest commercial secondary institutions in this country. It has contributed much to the well-being of its own locality and to the thousands of students that have passed through its doors. Founded and built in 1915, its function was to give special business training, development of punctuality, industry, self-reliance, and trustworthiness. Today, Commerce High prepares students for college, nursing, or business. Throughout its existence it has had a long list of dedicated teachers. The principals who have supervised the curriculum from its birth to the present day have been outstanding educators. Its record of accomplishment has added immeasurably to the excellent reputation that Springfield's school system enjoys throughout the Nation.

Mr. Speaker, it was my honor to be invited by Principal Philip A. Sweeney to deliver the address to the graduating class of 1960 of the High School of Commerce on June 13. Under unanimous consent, I include the address, program, and list of graduates as part of my remarks:

Your honor, Mayor O'Connor; chairman of the school committee, Mrs. Lynch; Superintendent of Schools McCook; Principal Sweeney; members of the faculty; President Dolan and members of the class of 1960; their parents, family, and friends, first let me express my gratitude for the invitation which makes possible my presence here this evening and the honor you pay me by the invitation to speak to you on this happy occasion.

When your principal and my friend, Mr. Sweeney, asked me, some time ago, to be your guest speaker, I felt then and I know now that my talents would not be equal to the task. For this is no ordinary, run-of-the-mill affair. Indeed, it is a movingly deep, significant event in the lives of all who are presented tonight to receive their diplomas. For the High School of Commerce class of 1960, it is the first time and the only time that it will experience this event.

For an occasion so important and for an event that so swells the emotions, it is not an easy task to put words together that will spell out momentous or lasting impressions. Perhaps this is not too important. It seems to me in a high school or any graduation, it is the awarding of the diplomas that pales everything else into insignificance.

But guest speakers are thrown in for good measure and they have become part and parcel of the graduation ritual.

When Eleanor Larson interviewed me for your fine high school paper, Commerce, I quizzed her on what I should talk about. A good newspaperwoman, she suggested that I talk about 5 minutes.

With a few minutes leeway, I have taken her advice. Too many years back to remember, in the very place you now sit, I sat,

with starched collar, tight shoes, and rented jacket. As with you, we had things to do and places to go before the day was ended. With us, and some of your parents will recall, it was Sam's Diner. Of course, that was before the days of house parties, Howard Johnson and Friendly with their three deckers and awful-awfuls.

Well, what counsel to give you or what wish to hold? As I look into your clean, fresh, beautiful faces, I can tell you what I wish. I wish I were 17 again.

For these, indeed, were and are the wonderful years. Teenage and high school. Rose-hued, fragrantly fresh, excitingly pleasant days. Always on the move but always moving forward in development and ability. I am sure that as you now pause and reflect, you are shocked by the rapidity with which your high schol days have raced by. As a matter of fact, it seems only yesterday that you were taken by hand of devoted parents to start in kindergarten or first grade. Surely, you can recall the untutored, self-taught answers of those days.

From those very first days, the educational process set in, and slowly, but steadily, you advanced in wisdom and learning.

And tonight you step across another threshold of life—you enter a new era and a new phase. Some of you will go on to business schools and colleges, others will find their place in the great field of nursing and public health, most of you will seek and find employment. But, for all of you, the scenery will change, the values of life will increase, responsibility will begin to grow heavier.

The rather carefree high school days will become a lovely memory. It will not now be so important to you that Frankie Avalon, Rickey Nelson, or Conway Twitty were replaced in the record race or hit tunes by Bobby Rydell, Bobby Darrin, or the Everly brothers.

Within a few years, you will be moving into legal maturity and adulthood. What the future has in store for each of you, it is impossible to foretell.

None of us doubt, for all of us know, that we are living in a marvelous, magnificent, ever-changing period. The fusion and fission of the atom—the incredible exploration of space—the miracles of aviation and electronics—the fantastic progress in medical research that portends the ultimate conquering of the diseases that afflict mankind—all of these you are now witnessing, and they have played or will play an important part in your future. For you, life itself will be longer and healthier than for any of the grown adults you now know. Life expectancy has jumped remarkably over the past 25 years. It will expand even more in the next 25. So, you have very, very many years ahead of you.

I am sure you are also aware that you are living in a dangerous, difficult period. That is why you have to continue to develop your character, your ability—whether through further college study or the practical education that comes through experience or self-study. It might very well be that, in your time, just as have your parents, you will be called upon to make sacrifices to keep freedom alive, the Nation strong and democracy safe.

There is something to an editorial I read the other day which said "Our age is likely the blackest and brightest in human history; the most destructive and the most creative; the most humanitarian and the most barbarous; the most pagan and the most religious. What direction the world takes tomorrow depends on the rising generation of today."

You are the rising generation. The future belongs to you. To meet its challenge, there is a need that you make a success of yourself—of your own personal life. I do not mean success which is measured by the material considerations of fame and personal gain—or the attainment of high place and prestige. But rather, that true success which is the crown of all those who honestly, earnestly, do their best and live the everyday, simple life with all that it involves in the practice of the commonplace duties of every day—that consists in the unselfishness of motive, the integrity of purpose, the passion for fairness.

No one else can purchase these attributes for you. The way can be pointed by training and loving parents. But the sort of a person you will make of yourself—how you will be regarded—whether people will admire and respect or despise you—all this is in your hands.

No matter where your lot may be cast, no power on earth can keep you from making a real person of yourself. Only you can choose the direction in which you will go. Every day you can say to yourself: Without capital, without influence—even in spite of the opposition of others, I can be true to myself. I can be a real woman or a real man and make my life a masterpiece. I am the only enemy I shall ever have. The only one who can wreck my personal career, keep me from being a success is the man or woman living inside my own skin. There is no destiny, no fate, that can ruin me. Under God, I am my own maker, my own destiny. "I am the master of my fate * * * the captain of my soul."

You have had a magnificent start to cope with the problems of the future. You have looked forward for years to this day—one of the crowning achievements of your young life. Your parents—self-sacrificing, devoted, loving—have toiled and lived for this day. For the part they have played in the success that is yours tonight, you can never repay. Teachers who have inspired and taught you and brought you to this moment are entitled to your gratitude.

This thanks and gratitude can best be expressed by doing the very best you can in whatever task is yours. By so doing, you will be a credit to Springfield's outstanding educational system, the High School of Commerce you love so much, to your devoted teachers, to your wonderful parents.

Yes, the future belongs to you. May God grant you the ability, the courage and the wisdom to face it with confidence and to meet it with unbounded success.

GRADUATION EXERCISES, HIGH SCHOOL OF COMMERCE, SPRINGFIELD, MASS., MONDAY, JUNE 13, 1960, AT 8 O'CLOCK, MUNICIPAL AUDITORIUM

PROGRAM

Organ Prelude: Prelude in F Minor, Bach; Folk Tune, Whitlock.

Processional: Pomp and Circumstance, Mr. LeRoy Hanson, organist, Elgar.

"Star-Spangled Banner," class, choir, chorus, and audience, Smith.

Invocation: The Lord's Prayer, High School of Commerce girls' choir, Walter D. Nickerson, director, Malotte.

Hymn of Praise, Mozart.

Three Wishes, Roff.

One World, O'Hara.

Greetings from the school committee, Mrs. Mary M. Lynch, chairman.

Address: "The High School Graduate's Responsibility for the Future," Hon. EDWARD P. BOLAND, U.S. Representative, Second District, Massachusetts.

Presentation of class for graduation, Philip A. Sweeney, principal.

Declaration of graduation, Dr. T. Joseph McCook, superintendent.

Awarding of diplomas, Hon. Thomas J. O'Connor, Jr., mayor.

In appreciation, Bert Dolan, president, class of 1960.

Benediction: The Lord Bless You and Keep You, choir, Lutkin.

Recessional: "Pomp and Circumstance," Elgar.

MEMBERS OF THE GRADUATING CLASS

Ann Marie Abair, Judith Carole Abbe, Carolyn A. Agen, Brenda Dawn Agnoli,[1] Sandra Ann Aiken, Marianne Ames, Dorothy R. Arabik, Grace Catherine Arillotta.

Amos Lee Bailey, Barrie R. Baker, Laura Mae Barry, Beverly Ann Barufaldi, Ruth D. Beaulieu,[1] Joan Becker, Marvin E. Becker, Lucille Ann Bedard, Carol Ann Begley, Richard Belden, Elizabeth Frances Bell, Joan-Ann Bell, Charles H. Bentley, Ida Marie Bernardes,[1] Rosemary Katherine Beturne, Roy Edward Beusee, Carole Ann Bianconi, Annalouise Almeda Bieard, Sandra Lee Bielecki, Dianne Marie Bisi,[1] Carol Ann Black, Rita Blais, Gail Patricia Blanchard, Sandra Joy Blanchard, Patricia Ann Bordeaux, Ann Ellen Borecki, Rosemarie May Borowik, Hazel Borrette, Elizabeth Borst, Rita Marie Bourcier, Maureen Rita Bourque Cherie Carmen Bousquet,[1] Judith Thurston Bradway, Karen Irene Brauns, Karen Ann Bressette, Robert H. Brosnon, Carole Ann Brown, James Edward Brown, Sandra Harriet Brown, Joanne Olive Brunt, Sandra Vicki Bryant, Margaret Ann Buchanan, Catherine Marie Buldrini, Geraldine Ann Burke, Carol Ann Burrell, Judith Ann Burt, Pamela Joan Butler.

Cecelia Ann Calabrese, Louis A. Calabrese, Mary Ellen Cameron, Rose Marie Theresa Casali, Jane Marie Caserio, Rosemary J. Cavanaugh, Frances June Champagne, Patricia Lee Chapin, Elaine Alice Choiniere, Nancy May Clark, Joanne Consolini, Eleanor Rose Ann Cote, John W. Coughlin, Jr. Annette Marie Cox, Barbara Joan Coyle, Geraldine Giles Cullen.

Joanne Marie D'Amato, Linda Daniele, Helen Anne Daubmann, Judith Ann Davignon, Dorothy Mary Delarm, Annette R. Demers, Gloria Ann DePalo, Theodore Paul Dernago, Jr., Irene B. Desmarais, Anna Isabelle DiNoia, Bert Dolan, Dennis Robert Donahue, Catherine Marie Donnellan, Joyce Beatrice Dorman, Rena Helen Douglas, Linda Ann Dressel, Barbara Ann Dunn, Irene Jeanne Duquette,[1] Carolyn Margaret Durkee, Martha Angela Dziura.[1]

M. Judith Edgerton, Pamela Mae Edwards,[1] Richard A. Elsoid, Sondra Anne Elim, Judith Ann Elms, Regina Mary Emirzian.

Anne Marie Falcone, Marilyn Ann Farina, Gloria Jeanne Yay, Carol Marini Fazlo, Donna Lee Fett,[1] Marilyn Ruth Figarsky, Marie Louise Florentino, Frances E. Fisk, Edna Mae Fitzgerald, Esther Ida Flemister, Joyce Mary Flynn, Elaine Alice Forsyth,[1] Joyce Ann Fortini, Portia Mae Freeman, Gale Lnida Freyenhagen, Judith Barbara Friedman, Martha Miriam Froebel, Barbara Jean Fronzi.

Dennis R. Gagnon, Suzanne Theresa Gallagher, Gay Carol Gallerani, William Anthony Galletti, Bettyanne Doris Gardner, Catherine Theresa Garvey, Beverly Faith Geiger, Joyce Ann Gelineau, Rosalie Diane Gentile,[1] Peter Eugene George, Geraldine Frances Giancola, Adelaide Giupponi, Joan P. Goodnough, Carol Ann Gordon, Agnes Pauline Gore, Arlene F. Gouvan, Joan Marie Gouvan, Joyce Amelia Grant,[1] Carl Arthur Greene, Regina Grilli, Lorraine Eva Groulx, Jean Alma Grover, Carolyn Lois Grundstrom, Lois Evelyn Gurney.

Frank Halloran, Evelyn Ann Hanson,[1] Priscilla Mildred Hartmann, Juliette Ann Hebert,[1] Vivian Madeleine Hebert, Rachel Virginia Hewitt, Carol Irene Holman, Judith Elizabeth Holman, Barbara Ann Hooper, Sandra Mary Hovagimian, Joseph H. Hrycay, Paula Hurley.

Shirley Elizabeth Jackson, Marjorie Ann Jameson, Petronela Helen Jaszewski, Irene Anne Jodlowski, Carol Ann Jodoin, Donna Lee Jones,[1] Lisa F. Jones, Vernia Mae Jones.

Camille Ann Kaczowka, Barbara A. Kamuda, Anne Marie Kane, Dinah Kay Kaplinger,[1] Joanne Beverly Keane, Sandra Mary

[1] Honor students.

Keeley, Dennis F. Kimball, Gwendolyn Viola King, Emmanuel P. Klenakis, Portia Klenakis,[1] Beverly Ann Knaus, Robert G. Knox, Marie Elaine Koob, Victoria Jane Kucharski, Cathryn Ann Kudrikoff[1].

Gail Margaret LaBrode, Joyce E. LaCroix, Shirley Ann LaPine, Marie Ellen Larro, Eleanor Louise Larson, Carol Lauer, Linda Ruth Law, Janet Leddy, Kathleen Marie LeDuc,[1] Annette Celia Lemire, Elaine Ann LeMoine, Constance Ann Letourneau, William Spiros Leventis, Elizabeth Ann Lewis, Joyce Marilyn Lewis, Priscilla Elsa Lindquist, Maryann Frances Lipczak, Margaret Ann Lohan, Patricia Ann Loizzo, Angelina Marie Lombardi, Sandra Diane Marie Longhi, Sandra Anne Lopata, Angela R. Lore, Barbara Ann Los, Ann Lotito,[1] Richard Allen Luchini, Joan Luppi, Lucille Barbara Lussler, Elizabeth Anne Lyle, Joanne Lilla Lyman,[1] Charlotte Louise Lynch.

Will We Point With Pride?

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. SCHERER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech:

WILL WE POINT WITH PRIDE?

(Speech by GORDON H. SCHERER, Republican, Ohio, at Convention of National Society of Professional Engineers, Boston, Mass., June 10, 1960)

When President Eisenhower took over in 1953, he decided that a new and dynamic highway program had to be brought into being to break the traffic bottlenecks and snarls that were slowly but surely strangling a large segment of the American economy. He decided that our outmoded and deteriorated highway system had to be rebuilt in the shortest possible time to reduce the tremendous loss in life and property which was increasing at an alarming rate.

Those of us on the Roads Subcommittee in the Congress, who in 1954 began the formulation of legislation to make the President's program a reality, at first had no conception of the magnitude of the undertaking, even though we knew that we were embarking on the biggest public works program in the history of the world. We had only a faint glimmer of the difficult and complex problems which would be encountered in the planning and construction of this highway system.

We get some idea of the magnitude of this program when we realize that, if we could have a public works program which would combine the Panama Canal, the Grand Coulee Dam, and the St. Lawrence Seaway into one tremendous construction project, and then multiply it 35 times, we would have the equivalent of this highway construction program I am talking about today.

This highway effort which is now under serious attack from various quarters contains some new, basic, and sound provisions and principles. If we lose our perspective, some of these landmark provisions of the act are going to fall. You men of the engineering profession should be in the frontline of the fight not only because of your own personal interests but also because the basic concepts and principles established in the 1956 Highway Act conform to the general ethics which are a guide to the engineering profession.

Let's take a brief look at the four benchmarks of this historic legislation.

The 1956 act for the first time provided that highways should be built and the money spent where the need exists, where the roads would do the most good for the general public, where they would relieve the terrible traffic congestion which is adversely affecting our whole economy, where they would cut the terrific accident and death toll. In support of this principle, the 1956 act, insofar as the Interstate System is concerned, did away with the old pork-barrel formulas for distributing funds and specifically provided that the money should be spent where the need exists.

Let us move on to a second, basic principle enunciated by the 1956 act. For more than two decades the Federal Government has been going deeper and deeper into debt. During practically all of these years we have had unbalanced budgets and have engaged in deficit financing, thereby feeding and accelerating the ruinous fires of inflation which have devalued Uncle Sam's dollar all over the world and increased the cost of everything we buy and sell.

In the 1956 Highway Act we finally decided to pay for this tremendous public works program as we built it and not pass the cost on to our children.

Third, we provided that the beneficiaries and users of these highways should pay for them in proportion to the use and benefits derived. I, for one, recognize that we must reexamine—and we will—whether or not those who are now classed as users and beneficiaries are paying fairly in accordance with this principle. We must also decide whether or not the tax base should be broadened to include others who may be beneficiaries of this program but are presently contributing nothing to the highway trust fund.

Prior to the passage of the 1956 act the highway program went along on a sort of hit-or-miss plan. Congress appropriated funds every 2 years. The States, highway engineers, contractors, and suppliers were never certain as to the amounts that would be available. There could be no planning ahead. In the 1956 act, as I have said, we provided for a 13- to 16-year construction and financing program. We thought we could complete the entire job in that time. Thus the States, highway engineers, contractors, and others could plan a well-integrated program. They could safely expand their organizations to do the job.

Some will say: "Well, SCHERER, if these are such fine and sound principles, why are we now facing such a crisis in this highway program? Why all the bitter and unpleasant controversy?" Let me tell you.

During the hearings on the 1956 act we were told by the experts that the 40,000-mile Interstate System would cost $27 billion to build. Today we know that, in order to complete the Interstate System as now contemplated, it will cost $40 billion or more. Of course, the cost of the ABC System has increased in almost the same proportion.

Why almost a 50 percent increase in a 4-year period? Who goofed? Let me tell you five things that happened which put us in this precarious financial condition.

You will recall that sufficient revenues were provided for the trust fund over the 16-year period to pay the estimated cost of this program. Here's what happened.

1. The trust fund absorbed, as was not contemplated, approximately $1.5 billion of highway obligations due and owing on the effective date of the 1956 act.

2. In 1958 Congress, particularly the Senate, got the recession jitters and provided in the 1958 act for an acceleration of the road program by $1.6 billion. This was done without providing the revenue for the trust fund to meet this increased cost.

3. The Senate also added 1,000 miles to the 40,000-mile Interstate System. These are

often called political miles. Again, no revenues were provided for the trust fund to pay for this additional mileage.

4. Highway standards and requirements were increased to take care of some local needs. Standards had to be increased because, like our population, there was an unexpected and unforeseen increase in motor vehicles. Even since 1956 motor vehicle use on our highways had increased at a far greater rate than was predicted by the experts just 3 years ago.

5. The original estimates of cost on which the 1956 act was based were made rather hurriedly by the State highway departments in 1954. There were some miscalculations. From 1954 to 1958 construction costs and right-of-way acquisitions increased by about 12 percent because of inflation.

We can now understand why on July 1, 1959, almost $500 million then due the States for obligations already incurred could not be paid. We can now understand why the apportionment of the $2.5 billion provided for fiscal year 1961 could not be made, and why this July only a token apportionment of the $2.2 billion for fiscal year 1962 could have been made.

It was apparent on January 1, 1959, and to some of us sooner, that the trust fund was busted. The President immediately asked for an additional 1½-cent increase in the Federal gas tax in order to meet the crisis. This would have made up the deficiency.

The Congress faced three alternatives: pass the 1½-cent gas tax increase; stop the road program for a little over 2 years, which, of course, would have been disastrous for the country and for those industries which had expanded their organizations at the request of the Congress to accomplish this mammoth highway construction job; or, third, borrow the money and go further into debt with all of the attendant evils which I have pointed out resulting.

The majority in the Congress dawdled and politicked for 9 months while the road program started slowly to grind to a halt. Finally in September of last year they provided a 1 cent gas tax increase for 21 months. The balance was provided by deficit financing as a result of diversions from the general fund. Of course, the total amount provided for 1960–61 was far short of the moneys contemplated to be spent under the construction levels provided in the 1956 act. The interstate construction levels for these 2 years have had to be cut back between 20 and 25 percent.

Now there are a lot of people in the United States who either through ignorance or politically motivated, are blaming the administration or the Bureau of Public Roads for these cutbacks, for the so-called contract controls that have had to be put into effect.

This is pure and unadulterated nonsense. The responsibility lies with the Congress for not providing the necessary funds. Furthermore, the Congress enacted the so-called Byrd amendment which in effect says that the Bureau of Public Roads cannot approve contracts unless there will be sufficient money in the trust fund to pay the Federal Government's share when the States present their bills for reimbursement.

Now while we have had a cutback for these 2 years, I feel confident that this program will be straightened out, that it will go forward as contemplated in the 1956 Highway Act. As you know, there are two reports called for by the 1956 act. These will be before our committee next year. These reports, resulting from exhaustive, scientific studies, will enable us to determine the many highly controversial questions that have temporarily stymied the program.

Here is what these two reports will tell us:

1. Should the tax base for the trust fund be broadened to include other than highway users who may receive benefits from our modern highways, such as adjoining landowners, Department of Defense, and so forth?

2. What effect do various vehicles have on the highways and the life thereof, and what standards and costs of construction are made necessary to carry and support the different sizes and weights of vehicles?

3. What is the fair and equitable share of the taxes or charges that each class of highway users should pay?

4. What will be the actual cost of completing the Interstate System?

5. Are highway users paying too much or too little of the cost of building and maintaining highways?

6. Are commercial vehicles paying too much or too little compared to passenger cars?

7. Should standards of construction, right-of-way widths, etc., be increased or decreased?

8. Is the Interstate or ABC System being discriminated against?

9. Should the formula of sharing costs between the States and the Federal Government be changed?

Now you have seen what has happened and what can and in all probability will be done to get this program back on schedule. In the meantime, unfortunately, when the funds ran out, when the construction program had to be curtailed for the reasons I have shown, there were some people, both in and out of Congress, who panicked. There were others who wanted to and did make political hay out of the highway crisis.

They looked for scapegoats. The Bureau of Public Roads and State highway departments became the chief whipping boys and so did private consulting engineers. In the short space of a few weeks we developed an amazing number of sidewalk highway engineers and experts on road legislation.

The country was led to believe from the way some people talked that the depleted condition of the trust fund was due to the fact that the highway engineers and others had gone hog wild with the people's money.

Charges of waste, inefficiency, and even fraud in the administration of the highway program were hurled about with some abandon. State highway departments were repeatedly accused of squandering money on the Interstate System because the Federal Government was paying 90 percent of the cost. It was argued that by raising the State's contribution to the Interstate System, this waste could be stopped.

Now I would be the last to say that in a program of this size, the biggest public works program in the history of the world, one encompassing the whole United States, one involving millions of people, both in government and in private industry, you are not going to have some mistakes, inefficiency, waste, and even fraud.

In speech after speech, as far back as in 1956, I discussed at length the necessity of guarding against waste, graft, and fraud in a program such as this. I pointed out the necessity of having a committee maintain constant surveillance over this program in order to keep these incidents at a minimum.

What some of us wanted was a committee which realized that in a program of this magnitude there was bound to be negligence, fraud, and graft, but a committee that would keep these incidents in proper perspective with the entire program.

We did not want a politically inspired committee which would leave the public with the impression that the whole program was fraught with waste, inefficiency, and fraud. We wanted a fair comparison between the deficiencies in the program and the magnitude of its accomplishments.

We did not want the public misled by charges of wholesale overdesigning, frills, excessively wide rights-of-way, and unconscionable engineering costs unless and until such wholesale charges were proved by competent evidence.

As you know, there was eventually appointed a Special Highway Investigating Committee. Whether we got the type of committee that was wanted only time will tell. I have been highly critical of some phases of this committee because of the political connotations attached to its organizational makeup and some of its activities.

The committee recently completed hearings in connection with the construction of a bypass around Tulsa, Okla. These hearings were an elaboration of a local grand jury investigation which had returned a series of indictments for fraud in connection with the building of this bypass. Both the grand jury investigation and the hearings revealed evidence of gross fraud and chicanery.

Employees of the State highway department, some of them inspectors and engineers, readily admitted that they had engaged in various fraudulent practices. Their conduct was certainly reprehensible, not only insofar as this particular job was concerned, but also because it gave to those who were seeking headlines and wanting to discredit the road program the opportunity to throw an ominous shadow over this great construction effort. For this reason their acts were more reprehensible.

There is no question but that the conduct of these people in Oklahoma weakened the confidence of the public in this great highway effort and hurt it badly.

Frankly, as I have indicated, this is not only a vitally needed construction program in which we are engaged, but to date it has been a highly successful one. We can point with pride to hundreds of fine accomplishments resulting from the competent and dedicated service of the men in the Bureau of Public Roads—headed by that excellent administrator, Bert Tallamy, and his assistants, Frank Turner and Ellis Armstrong—the fine service of the overwhelming number of State highway engineers and their staffs, and of you men in the private engineering organizations.

This unfortunate fiasco in Oklahoma should be a lesson to all of us that we must be extremely careful and scrupulously honest in every phase of this program; that, like Caesar's wife, we must even be above suspicion, because there are always those who for political considerations or otherwise are willing to tear down at the slightest pretext. Unless we follow this course, we can discredit and bring about a dangerous curtailment of this highway construction program. This will be a disservice to the Nation and certainly a disservice to those whose business it is to build highways.

Now let me pass for a minute to another and a little brighter note. All of us are aware of the fact that, as the result of the shortage of money in the trust fund and the charges of frills and overdesign, the Bragdon staff at the White House was about to make recommendations that the Interstate System in urban areas be substantially cut back. The adoption of such a policy would have been a serious mistake. I feel certain that such a policy and such a course have now been averted. But all of us who are interested in highways must keep on top of the efforts that will continue to be made by some to cut back on standards and design.

Let's be sure that such a mistake is never made.

Remember we are building these roads so that, when they are completed about 1975, they will be able to handle 1975 traffic. Traffic like our population is now increasing at a rate far exceeding that predicted by the experts just 4 years ago. We need to build permanence into the new highways to protect this multibillion dollar investment from becoming obsolete at the very moment it is completed.

In the years past the most crucial failure in highway construction has been to underestimate traffic, the potential of the automobile, and the urgent need for sufficient highway capacity. We must realize that, if we cannot buy rights-of-way adequate for future widening, we do not have the correct location. As Charles Noble, the former Ohio highway director, said: "We must not allow today's desires and pressures to blind us to tomorrow's needs."

In the Wall Street Journal, we find this quote which pretty well answers the question as to what constitutes real waste: "Some of these plans may look too big for their britches in 1959, but they will fit just right in 1979. It does not make sense to build something new and then have to rebuild it in 10 years. That is real waste."

Before concluding, I want to discuss briefly the problem with which you here today are most vitally concerned, namely, the use of private professional engineers by Government agencies in the construction of public works.

As I have previously pointed out, when it was found that this great highway program which had started with so much promise was grinding slowly to a halt because of the lack of money in the trust fund, some people began to look for scapegoats, either to excuse their own failures to act or to make dramatic headlines. One of the principal charges was that the Interstate System was overdesigned; that the rights-of-way were too wide, and the interchanges too complex; and that the entire highway layout was adorned with too many frills. It was then that the roof fell in on you consulting engineers and you wondered who had kicked away the supports.

Well, I will tell you. These charges of overdesign were the answer to the professional bureaucrats' prayer, the boys who believe in bigger and bigger Government and the paternalistic, all-powerful state. For quite some time these professionals have been attempting to build up and expand the engineering departments of the Federal Government. This is the very nature of the bureaucracy with which we are plagued in this country and, believe me, it is not confined to one department, one agency, or one field of activity.

You private engineers should not get too chesty and feel that you are the only segment of private enterprise that is constantly being given the bum's rush by the professional bureaucrats and politicians who believe that the Great White Father in Washington knows best. This charge of overdesigning gave these boys the club they have been looking for to knock you completely out of Government work. So you were charged with overdesigning and overbuilding so that your percentage cut for engineering services would be higher.

Now, as I have indicated, with a program of this magnitude, in all probability we will find occasionally where this charge can be justified. You have some bad apples in the engineering profession, the same as we find in other professions, in business, in labor, and in Government—but not quite as many proportionately. However, we cannot tar the entire engineering profession or let the bureaucrats get away with it because of a few bad boys. But, believe me, they are trying.

To say that the taxpayer will save money by having the various agencies of the Federal and State Governments set up huge staffs and bureaus to perform all of the engineering services required by Government for all of its public works programs, including highways, is plain, unadulterated nonsense. I have been around Washington just long enough to know that, whenever it is possible to have private enterprise perform a service, it is done more economically and more efficiently than when Government tries its hand.

Let me give you the prize example. As you know, during the 8 years I have been in Congress, I have been a member of the Committee on Public Works. I have heard the liberals, the spenders, the proponents of big Government and the welfare state, use TVA as an example or yardstick of a successful Government operation. Every time the proponents and operators of the Tennessee Valley Authority come before our committee, they go back to the valley with their arms in slings from patting themselves on the back for their accomplishments.

I am no engineer, I am no businessman, just an ordinary lawyer, but if I could not operate an enterprise successfully if the Government gave me all the money to start the business, provided additional amounts when I needed to expand it, and did not require me to pay any income taxes, my parents ought to disown me.

Now why do I mention TVA? Simply because it is the best illustration of the point I want to make. Of all the Government agencies, TVA is the only one that has its own fully staffed, engineering department and never uses private consulting engineers in any way. You guessed it—it is at the head of the class—it takes first prize as having the highest engineering costs of all governmental agencies for the type of engineering services required. Need I go further?

The Atomic Energy Commission which has only a skeleton engineering staff of its own to make preliminary studies and to supervise the Commission's construction projects, makes the greatest use of private consulting engineers. According to the Hoover Commission task force report, its engineering costs are 5.23 percent which are the lowest of any Government agency. It is significant that those agencies which make the least use of private engineering organizations have the highest costs, some running as high as 17 percent. In fact, the engineering costs of agencies increase in proportion to the lesser use they make of the services of private engineers.

And don't let those who are crying crocodile tears and looking for whipping boys because of the increased costs of the highway program tell you that it is different when it comes to highway engineering services. The companies and organizations which built most of our toll roads with private capital have used the highest standards of highway construction because they want to be able to handle the tremendously increased traffic loads in the next 5, 10, and 15 years. The toll road people, to be able to pay off their bondholders, had to keep their costs at a minimum. All the engineering work on these toll roads was done by private consulting engineers. These costs, as you know, averaged approximately 8.79 percent. This is considerably lower than the engineering costs for any publicly constructed highways. By contrast, the State of California which has a fine highway engineering department, and does all of its own highway engineering services has a comparable cost of 24.1 percent.

Now don't get me wrong. The various highway departments of the several States are excellent organizations headed by competent and dedicated men who are doing an outstanding job in getting this mammoth highway program under way. To their credit they have used, particularly in urban areas where the design is unusually complex, consulting engineering firms. It is not the fault of these men if their costs are higher.

This always happens, as I have pointed out, when Government performs a service. It is the very nature of bureaucracy. It is the result of the way Government works, the result of political and other pressures, and the fact that the department does not have to make a profit or pay taxes as do your private organizations.

There are peaks and valleys, as we all know, in highway construction. We had a cogent example last year when the highway program ground almost to a halt because Congress dawdled and politicked and for 9 months failed to provide the necessary moneys for the depleted trust fund. A great big valley resulted which hurt everyone connected with the highway program. The contractors and engineers who had expanded their organizations and invested large sums of money, some through borrowing, in order to meet this great construction challenge, were left sitting, holding the bag because of the dropoff in awarding contracts they had been promised by the 1956 act.

As I have said, there are peaks and valleys in this game. When a State highway department builds up an organization of sufficient magnitude to take care of the engineering services that are so vitally needed during the peaks, then it has a lot of people sitting around, twiddling their thumbs during the valleys. This costs money—this is waste—and it is not the fault of the State highway engineer if the professional politicians want that kind of operation and adopt that kind of a policy.

In contrast, the private consulting engineer during the off seasons has his organization geared to perform a dozen different types of engineering services not only for other agencies of Government but also for the great private industrial empire in this country.

I am aware of the fact that the General Accounting Office of the Government, which is not entirely free from the attitude of the professional bureaucrats I have been talking about, last year complained about the use of private consulting engineers on the highway program and blamed some of the increase in costs on their use. Now, as I have said, you are going to find an occasional instance where they will be able to substantiate that charge, but I will bet my last dollar that on the thousands and thousands of highway projects, this charge will not stand and that the very opposite is true. In fact, if you read GAO's report carefully, you see that it makes the general charge without substantiating it by competent evidence or reasonable arguments.

Let's look at a few of the excerpts from the report and findings of the task force of the Hoover Commission on this very subject. We find this language:

"The Atomic Energy Commission has the most efficient design and construction procedures of all Government agencies. AEC takes full advantage of the services of private architect-engineer and construction organizations by contracting all phases of its design and construction work. Its small technical staff is engaged in preparation of preliminary plans and budgets and in the supervisory control normally exercised by a client employing an architect-engineering firm.

"If other Federal agencies could attain the operating efficiency of the AEC, the savings to Government in just the cost of design and supervision of construction, on the basis of present volume of business, would be more than $100 million annually."

In another part of its report, we find this language:

"The Tennessee Valley Authority is the only Federal organization of the eight under consideration which does not use the services of private engineering-construction organizations. Its costs for engineering and construction services are abnormally high."

Finally, the Hoover task force makes this recommendation:

"That the Federal design and construction organizations retain in their own organizations only the personnel required for preliminary study, preplanning and budgeting, and essential supervisory management and control, and that they contract to private architect-engineering and construction firms design and supervision of construc-

tion to the maximum extent consistent with national security."

In spite of the findings and recommendations of the Hoover Commission, you are going to have an increasing demand for bigger and bigger engineering departments and for the elimination of private engineering services in Government work. The only way to stop this assault on this particular segment of the private enterprise system is to bring about an informed public opinion through an educational process.

This special Highway Investigating Committee, of which I am a minority member, is going to investigate private engineering costs. I assure you there is a lot of preconceived sentiment for the reduction or elimination of private consultants in highway work. Of course, they will overlook that section of the Highway Act which says:

"It is declared to be in the national interest to encourage and develop the actual and potential capacity of small business and to utilize this important segment of our economy to the fullest practicable extent in construction of the Federal highway systems, including the Interstate System. In order to carry out that intent and encourage full and free competition, the Secretary should assist, insofar as feasible, small business enterprises in obtaining contracts in connection with the prosecution of the highway program."

We must insist that before any action is taken, an unbiased study be made of highway construction engineering costs by both Government agencies and by private engineering companies. In other words, the Hoover task force report made in 1955 must be brought up to date. I myself have no doubt as to the outcome of an impartial survey, especially if there is taken into consideration the fact that the private organizations pay taxes back to the Federal Government on whatever profit they make.

SENATE

WEDNESDAY, JUNE 22, 1960

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

O Thou who art from everlasting to everlasting: We come conscious of the cloud of witnesses no longer here in the flesh, but who look down upon this Chamber where vital questions challenge the best in mind and heart.

We pray that those who, in this tense day, bear the responsibilities of public office may serve in the spirit of the great legislators and liberators of the past.

May the final enactments which emerge be the true expression of the fairer ideals of brotherhood and freedom which now are seeking their incarnation in a new age.

Grant that the servants of the state may feel ever more deeply that my diversion for private ends of the powers with which the people have entrusted them is a betrayal of the Nation.

In the red glare of the titanic battle now engulfing the earth in a war against Thy supreme sovereignty and against the rights of the individual man, may those who speak or write from any pedestal of influence, scorning party cunning, unite to breathe a new dedication to the things of the spirit which alone have made our America the hope of the world. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, June 21, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed the following bills of the Senate, severally with an amendment, in which it requested the concurrence of the Senate:

S. 2384. An act for the relief of Tommy Tadayoshi Shuto (Tadayoshi Takeda);

S. 2740. An act for the relief of Julia Sukkar; and

S. 2969. An act to authorize the award posthumously of appropriate medals to Chaplain George L. Fox, Chaplain Alexander D. Goode, Chaplain Clark V. Poling, and Chaplain John P. Washington.

The message also announced that the House had passed the following bills of the Senate, severally with amendments, in which it requested the concurrence of the Senate:

S. 1765. An act to authorize and direct the Treasury to cause the vessel *Edith Q.*, owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States with full coastwise privileges;

S. 2941. An act for the relief of Mrs. Ming-Chen Hsu (nee Nai-Fu Mo); and

S. 2967. An act for the relief of Huan-pin Tso.

The message further announced that the House had agreed to the amendments of the Senate to each of the following bills of the House:

H.R. 6479. An act to provide for the conveyance of certain real property of the United States to the village of Highland Falls, N.Y.; and

H.R. 8241. An act to amend certain provisions of the Civil Service Retirement Act relating to the reemployment of former Members of Congress.

The message also announced that the House had agreed to the concurrent resolution (S. Con. Res. 103) favoring the suspension of deportation in the cases of certain aliens, with amendments, in which it requested the concurrence of the Senate.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 1422. An act for the relief of Alessandro Maraessa;

H.R. 1526. An act for the relief of F. P. Tower, Lillie B. Lewis, the estate of Manuel Branco, John Santos Carinhas, Joaquin Gomez Carinhas, and Manuel Jesus Carinhas;

H.R. 1588. An act for the relief of Julius F. Steinhoff;

H.R. 1643. An act for the relief of Francesco Carozza;

H.R. 1671. An act for the relief of Hans E. T. Hansen;

H.R. 1681. An act for the relief of Maurice Devlin;

H.R. 2117. An act for the relief of Ireneo D. Brodit and Antonio D. Brodit;

H.R. 2124. An act for the relief of Mrs. Teruko Teri Miyamoto (nee Ikeda);

H.R. 2584. An act for the relief of Gourgen H. Assaturian;

H.R. 2705. An act for the relief of Bernardo Paternostro;

H.R. 2716. An act for the relief of Miss Elisabeth Hollander;

H.R. 2944. An act for the relief of Luciano Di Franco;

H.R. 3534. An act for the relief of Epifanio Trupiano;

H.R. 3536. An act for the relief of Guadalupe Villarreal, Jr.;

H.R. 3800. An act for the relief of Mrs. Maud A. Provoost;

H.R. 3804. An act for the relief of Rosolina Ciuferri;

H.R. 4236. An act for the relief of Mah Quock;

H.R. 4555. An act for the relief of Anatolijs Janitis;

H.R. 4835. An act for the relief of Milton S. Koblitz;

H.R. 4970. An act for the relief of Haralambos Groutas;

H.R. 4981. An act for the relief of Mina and Henek Sznaider;

H.R. 5647. An act for the relief of Wong Gee Sing;

H.R. 6338. An act for the relief of Miss Hedwig Dora;

H.R. 6804. An act for the relief of Mary Elizabeth Tighe Crespo;

H.R. 7425. An act for the relief of Mrs. Humiko Ross;

H.R. 7551. An act for the relief of Hubert O. Beckles;

H.R. 7854. An act to provide tax relief to the annuity fund of the electrical switchboard and panelboard manufacturing industry of New York City and the contributors thereto;

H.R. 7877. An act for the relief of Vladislav Fotich;

H.R. 8054. An act for the relief of William Edgar Weaver;

H.R. 8253. An act for the relief of Pierre R. DeBroux;

H.R. 8384. An act for the relief of Otto Small;

H.R. 8882. An act for the relief of John Calvin Taylor;

H.R. 8989. An act for the relief of Ralph W. Anderson;

H.R. 9042. An act for the relief of Anna Semechole Marcolina;

H.R. 9079. An act for the relief of William Radkovich Co., Inc.;

H.R. 9432. An act for the relief of Maj. Edmund T. Coppinger;

H.R. 9610. An act for the relief of Sister Frances Cabrini (Virginia Bilbao);

H.R. 9648. An act for the relief of Mrs. Elizabeth Fowler;

H.R. 9913. An act for the relief of Lt. Matthew A. Wojdak, U.S. Navy (retired);

H.R. 9958. An act for the relief of Brooklyn Steel Warehouse Co.;

H.R. 9960. An act for the relief of Dr. Tze I. Chiang;

H.R. 10002. An act for the relief of Ida Exle (nee Ida Sterio);

H.R. 10376. An act for the relief of Adolf B. Jochnick;

H.R. 10431. An act for the relief of Isami Nozuka (also known as Isami Notsuka);

H.R. 10793. An act for the relief of Ray C. Thompson;

H.R. 10801. An act for the relief of Clark L. Simpson;

H.R. 11165. An act for the relief of Robert J. Reeves;

H.R. 11188. An act for the relief of Edward S. Anderson;
H.R. 11322. An act for the relief of Col. Joseph A. Nichols;
H.R. 11486. An act for the relief of Richard J. Power; and
H.R. 12350. An act for the relief of Marion John Nagurski.

The message also announced that the House had agreed to a concurrent resolution (H. Con. Res. 660) relating to the status of certain aliens, in which it requested the concurrence of the Senate.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution, and they were signed by the President pro tempore:

S. 762. An act for the relief of Manuel Alves de Carvalho;
S. 2089. An act for the relief of Henry K. Lee (Hyun Kui);
S. 2106. An act for the relief of Emiko Nagamine;
S. 2528. An act for the relief of John Lipset;
S. 2639. An act for the relief of Mo Tong Lui;
S. 2646. An act for the relief of Lloyd C. Kimm;
S. 2681. An act for the relief of Yi Young An;
S. 2768. An act for the relief of Frederick T. C. Yu and his wife, Alice Siao-Fen Chen Yu; and
H.J. Res. 765. Joint resolution making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred to the Committee on the Judiciary:

H.R. 1422. An act for the relief of Alessandro Maraessa;
H.R. 1526. An act for the relief of F. P. Tower, Lillie B. Lewis, the estate of Manuel Branco, John Santos Carinhas, Joaquin Gomez Carinhas, and Manuel Jesus Carinhas;
H.R. 1588. An act for the relief of Julius F. Steinhoff;
H.R. 1643. An act for the relief of Francesco Carozza;
H.R. 1671. An act for the relief of Hans E. T. Hansen;
H.R. 1681. An act for the relief of Maurice Devlin;
H.R. 2117. An act for the relief of Ireneo D. Brodit and Antonio D. Brodit;
H.R. 2124. An act for the relief of Mrs. Teruko Teri Miyamoto (nee Ikeda);
H.R. 2584. An act for the relief of Gourgen H. Assaturian;
H.R. 2705. An act for the relief of Bernardo Paternostro;
H.R. 2716. An act for the relief of Miss Elisabeth Hollander;
H.R. 2944. An act for the relief of Luciano Di Franco;
H.R. 3534. An act for the relief of Epifanio Trupiano;
H.R. 3536. An act for the relief of Guadalupe Villarreal, Jr.;
H.R. 3800. An act for the relief of Mrs. Maud A. Provoost;
H.R. 3804. An act for the relief of Rosolina Cluferri;
H.R. 4236. An act for the relief of Mah Quock;
H.R. 4555. An act for the relief of Anatolijs Janitis;
H.R. 4835. An act for the relief of Milton S. Koblitz;
H.R. 4970. An act for the relief of Haralambos Groutas;
H.R. 4981. An act for the relief of Mina and Henek Sznaider;
H.R. 5647. An act for the relief of Wong Gee Sing;
H.R. 6338. An act for the relief of Miss Hedwig Dora;
H.R. 6804. An act for the relief of Mary Elizabeth Tighe Crespo;
H.R. 7425. An act for the relief of Mrs. Humiko Ross;
H.R. 7551. An act for the relief of Hubert O. Beckles;
H.R. 7854. An act to provide tax relief to the annuity fund of the electrical switchboard and panelboard manufacturing industry of New York City and the contributors thereto;
H.R. 7877. An act for the relief of Vladislav Fotich;
H.R. 8054. An act for the relief of William Edgar Weaver;
H.R. 8253. An act for the relief of Pierre R. DeBroux;
H.R. 8384. An act for the relief of Otto Small;
H.R. 8882. An act for the relief of John Calvin Taylor;
H.R. 8989. An act for the relief of Ralph W. Anderson;
H.R. 9042. An act for the relief of Anna Semenchole Marcolina;
H.R. 9079. An act for the relief of William Radkovich Co., Inc.;
H.R. 9432. An act for the relief of Maj. Edmund T. Coppinger;
H.R. 9610. An act for the relief of Sister Frances Cabrini (Virginia Bilbao);
H.R. 9648. An act for the relief of Mrs. Elizabeth Fowler;
H.R. 9913. An act for the relief of Lt. Matthew A. Wojdak, U.S. Navy (retired);
H.R. 9958. An act for the relief of Brooklyn Steel Warehouse Co.;
H.R. 9960. An act for the relief of Dr. Tze I. Chiang;
H.R. 10002. An act for the relief of Ida Exle (nee Ida Sterio);
H.R. 10376. An act for the relief of Adolf B. Jochnick;
H.R. 10431. An act for the relief of Isami Nozuka (also known as Isami Notsuka);
H.R. 10793. An act for the relief of Ray C. Thompson;
H.R. 10801. An act for the relief of Clark L. Simpson;
H.R. 11165. An act for the relief of Robert J. Reeves;
H.R. 11188. An act for the relief of Edward S. Anderson;
H.R. 11322. An act for the relief of Col. Joseph A. Nichols;
H.R. 11486. An act for the relief of Richard J. Power; and
H.R. 12350. An act for the relief of Marion John Nagurski.

HOUSE CONCURRENT RESOLUTION REFERRED

The concurrent resolution (H. Con. Res. 660) relating to the status of certain aliens, was referred to the Committee on the Judiciary, as follows:

Resolved by the House of Representatives (the Senate concurring), That the Congress favors the granting of the status of permanent residence in the case of each alien hereinafter named, in which case the Attorney General has determined that such alien is qualified under the provisions of section 4 of the Displaced Persons Act of 1948, as amended (62 Stat. 101; 64 Stat. 219):

A-6236179 Sciama, Alberto, also known as Alberto Vita Sciama.
A-7210380 Wei, Edith Hou.
A-6355520 Charia, Steven J.
A-6355517 Charia, Nevenka.
A-6348962 Charia, Tania Mira.
A-6384962 Charia, Igor Ivan.

SEC. 2. The Congress approves the granting of the status of permanent residence in the case of each alien hereinafter named, in which case the Attorney General has determined that such alien is qualified under the provisions of section 6 of the Refugee Relief Act of 1953, as amended (67 Stat. 403; 68 Stat. 1044):

A-8117815 Assing, Carlton also known as Yin Ket Wong.
A-10145339 Chang, Chin also known as Chang, Gene.
A-10491831 Cheng, Chan also known as Quan Hong.
A-8031577 Kuldkepp, Oscar.
A-9547460 Lee, Fou Yueh.
A-7274366 Lee, Irving Tack-Shing or Tack Shing Lee.
A-7274430 Lee, Vivien Wei-Ning or Wei-Ning Lee.
A-10237562 Linker, Jonas Beno.
A-10237561 Linker, Estera Idesa.
A-10136001 Podlacki Jozef.
A-9771465 Wing, Koon.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

TREATY WITH JAPAN—DEATH OF REPRESENTATIVE ELLIOTT, OF PENNSYLVANIA

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that at this time the senior Senator from Pennsylvania [Mr. CLARK] and the junior Senator from Pennsylvania [Mr. SCOTT] be recognized for 3 minutes each.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. CLARK. Mr. President, in a few moments it will be my sad duty, as a representative of the Senate, to leave the floor, to attend the funeral of Representative Douglas H. Elliott, of Pennsylvania.

Accordingly, under the unanimous-consent agreement adopted last night, I shall not be able to cast my vote in support of consent to the ratification of the Japanese Treaty.

However, I should like to take just a moment to state for the record my strong support of that treaty, and to have it noted that if I could be on the floor at the time of the taking of the vote, I would vote in favor of consent to the ratification of the treaty.

Anyone who reads the debate which took place yesterday in the Senate must reach the conclusion that this treaty is in the best interest of the United States of America. I harbor some reservations about the treaty; nevertheless, I am convinced that, all things considered, it should be ratified.

We must keep Japan as our friend. She is a stanch ally as well as our second greatest customer. We must have an understanding heart about the problems of Japan. We must not conclude

that only a small handful of Communists is opposed to this treaty. There is a strong neutralist sentiment in Japan, too; and this we must understand, and be sympathetic with, because if we were in the situation of Japan, there would be a large neutralist sentiment in our country, too.

Nevertheless, on the whole, and all things taken into consideration, I am convinced that the treaty should be ratified; and if I were here at the time of the taking of the vote, I would vote for consent to the ratification of the treaty.

I thank the majority leader for his courtesy in making it possible for my colleague, the Senator from Pennsylvania [Mr. SCOTT] and me to make these comments before we must leave the floor.

Mr. SCOTT. Mr. President, as my colleague, the senior Senator from Pennsylvania [Mr. CLARK], has just now stated, the two Senators from Pennsylvania have been appointed by resolution adopted by the Senate, to represent the Senate at the funeral, in the middle of today, of the late Hon. Douglas H. Elliott, a Member of the House of Representatives from the State of Pennsylvania.

I had known Doug Elliott for a great many years. He was a State Senator before he was elected in a special election on April 22 to the present Congress.

He was a man of wonderful, magnetic personality—a tall, handsome, extraverted man, whom all of us admired, respected, and loved.

His death is a great and tragic loss to his family, to all his friends, to all who knew him, and to the Members of Congress. At this very sad time, my colleague and I will attend his funeral.

Mr. President, before leaving the Chamber, my colleague and I have requested this time in order to make these statements.

I wish to say, in addition, that, by the action of the Senate itself, our departure at this time will compel our absence from the Chamber at the time when the vote is taken on the question of consent to the ratification of the security treaty with Japan.

I am very strongly in favor of the treaty. I wish that fact to be recorded at this time, inasmuch as I was unable to gain recognition on the floor on yesterday.

I have visited Japan six times. I was there on the first day of the occupation, as a member of the Third Amphibious Force. I actually drove the first Navy jeep into Tokyo, following the landing of the occupation forces.

I have grown to admire and love the Japanese people and to respect their commitments toward the free world and their definite and strong feelings as a people for freedom, honor, decency, and justice under law.

We need the Japanese people on our side. We need them as much as they need us. The treaty is favorable to Japan, but it is also favorable to the United States.

It is my earnest hope that the ratification of the treaty may, in itself, lead to a subsidence of the difficulties which presently are occurring in Japan.

Therefore, Mr. President, I gladly and wholeheartedly support the treaty.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

WORKWEEK OF FIRE DEPARTMENT OF DISTRICT OF COLUMBIA

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the act of June 19, 1948, relating to the workweek of the Fire Department of the District of Columbia, and for other purposes (with an accompanying paper); to the Committee on the District of Columbia.

ELIGIBILITY FOR CERTAIN SCHOLARSHIPS UNDER SURPLUS PROPERTY ACT OF 1944

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to make nationals, American and foreign, eligible for certain scholarships under the Surplus Property Act of 1944, as amended (with an accompanying paper); to the Committee on Government Operations.

AUDIT REPORT ON FEDERAL HOUSING ADMINISTRATION

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the Federal Housing Administration, Housing and Home Finance Agency, fiscal year 1959 (with an accompanying report); to the Committee on Government Operations.

PETITION

The PRESIDENT pro tempore laid before the Senate a resolution adopted by the Board of Supervisors of San Diego County, Calif., favoring the enactment of legislation to repeal the excise tax on transportation, which was ordered to lie on the table.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service, without amendment:

H.R. 9751. An act for the relief of Mrs. Icile Helen Hinman (Rept. No. 1663).

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service, with amendments:

H.R. 7758. An act to improve the administration of overseas activities of the Government of the United States, and for other purposes (Rept. No. 1647).

By Mr. SMATHERS, from the Committee on Interstate and Foreign Commerce, with amendments:

S. 3228. A bill to amend the provisions of part II of the Interstate Commerce Act which authorize certain operations within a State as a common carrier by motor vehicle engaged in interstate or foreign commerce if State authorized (Rept. No. 1648).

By Mr. MORSE, from the Committee on the District of Columbia, without amendment:

S. 3416. A bill to provide for the restoration to the United States of amounts expended in the District of Columbia in carrying out the Temporary Unemployment Compensation Act of 1958 (Rept. No. 1649).

By Mr. MORSE, from the Committee on the District of Columbia, with amendments:

S. 2363. A bill to provide for more effective administration of public assistance in the District of Columbia; to make certain relatives responsible for support of needy persons, and for other purposes (Rept. No. 1650).

By Mr. HARTKE, from the Committee on the District of Columbia, without amendment:

H.R. 10021. An act providing a uniform law for the transfer of securities to and by fiduciaries in the District of Columbia (Rept. No. 1652).

By Mr. EASTLAND, from the Committee on the Judiciary, with amendments:

H.J. Res. 397. Joint resolution to enable the United States to participate in the resettlement of certain refugees (Rept. No. 1651).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, without amendment:

S. 2806. A bill to revise the boundaries of the Coronado National Memorial and to authorize the repair and maintenance of an access road thereto, in the State of Arizona, and for other purposes (Rept. No. 1654); and

S.J. Res. 95. Joint resolution to provide for the acceleration of the various reforestation programs of the Department of Agriculture and the Department of the Interior, and for other purposes (Rept. No. 1653).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, with amendments:

H.R. 6179. An act to grant the right, title, and interest of the United States in and to certain lands to the city of Crawford, Nebr. (Rept. No. 1656).

By Mr. FONG, from the Committee on Interior and Insular Affairs, without amendment:

S. 3623. A bill to designate and establish that portion of the Hawaii National Park on the island of Maui, in the State of Hawaii, as the Haleakala National Park, and for other purposes (Rept. No. 1655).

By Mr. HAYDEN, from the Committee on Rules and Administration, without amendment:

S. Res. 329. Resolution to provide additional funds for the Committee on Interior and Insular Affairs;

S. Res. 330. Resolution to study the conditions in American Samoa (Rept. No. 1657);

S. Res. 333. Resolution to print additional copies of the report entitled "Documentation, Indexing, and Retrieval of Scientific Information";

S. Res. 335. Resolution to provide additional funds for the Committee on Appropriations; and

H. Con. Res. 691. Concurrent resolution authorizing the disposal of certain publications now stored in the folding room of the House of Representatives and the warehouse of the Senate (Rept. No. 1661).

By Mr. HAYDEN, from the Committee on Rules and Administration, with an amendment:

S. Res. 337. Resolution to print a certain number of copies of the prayers of the Chaplain of the Senate for the 85th and 86th Congresses.

By Mr. HAYDEN, from the Committee on Rules and Administration, with amendments:

S.J. Res. 176. Joint resolution authorizing the preparation and printing of a Supplement to the Constitution of the United States of America, Annotated, as published in 1953 as Senate Document No. 170, 82d Congress (Rept. No. 1659);

S. Con. Res. 107. Concurrent resolution to print for the use of the Internal Security Subcommittee of the Senate Judiciary Committee copies of certain publications (Rept. No. 1660); and

S. Res. 328. Resolution amending S. Res. 244 authorizing the Committee on Interstate

and Foreign Commerce to investigate certain matters within its jurisdiction (Rept. No. 1658).

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare, without amendment:

H.R. 7965. An act to amend section 612 of title 28, United States Code, to authorize outpatient treatment incident to authorized hospital care for certain veterans (Rept. No. 1662).

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare, with amendments:

S. 3274. A bill to permit certain veterans pursuing courses of vocational rehabilitation training to continue in pursuit thereof for such period as may be necessary to complete such courses; (Rept. No. 1644).

EXTENSION OF WORLD WAR II LOAN GUARANTEE PROGRAM—REPORT OF A COMMITTEE—MINORITY VIEWS

Mr. YARBOROUGH. Mr. President, from the Committee on Labor and Public Welfare, I report favorably, with an amendment, the bill (S. 3275) to extend, with respect to World War II veterans, the guaranteed loan programs under chapter 37 of title 38, United States Code, to February 1, 1965, and I submit a report (No. 1646) thereon. I ask that the report be printed, together with minority views thereon.

The PRESIDING OFFICER. The report will be received and the bill will be placed on the calendar; and, without objection, the report will be printed, as requested by the Senator from Texas.

EDUCATIONAL ASSISTANCE FOR ORPHANS—REPORT OF A COMMITTEE—MINORITY VIEWS

Mr. YARBOROUGH. Mr. President, from the Committee on Labor and Public Welfare, I report favorably, with amendments, the bill (H.R. 4306) to provide education and training for the children of veterans dying of a service-connected disability incurred after January 31, 1955, and before the end of compulsory military service, and I submit a report (No. 1645) thereon. I ask that the report may be printed, together with minority views thereon.

The PRESIDING OFFICER. The report will be received and the bill will be placed on the calendar; and, without objection, the report will be printed, as requested by the Senator from Texas.

ROSANNE WILLCOX PURVIS

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 341) to pay a gratuity to Rosanne Willcox Purvis, which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Rosanne Willcox Purvis, widow of Melvin H. Purvis, an employee of the Senate at the time of his death, a sum equal to 8½ month's compensation at the rate he was receiving at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

LEON R. DEVILLE, JR.

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 342) to pay a gratuity to Leon R. DeVille, Jr., which was placed on the calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Leon R. DeVille, Jr., son of Leon DeVille, an employee of the Senate at the time of his death, a sum equal to 1 year's compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

THELMA MARGUARETTE HEDGE

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 343) to pay a gratuity to Thelma Marguarette Hedge, which was placed on the Calendar, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Thelma Marguarette Hedge, widow of Porter M. Hedge, an employee of the Senate at the time of his death, a sum equal to 10 months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. HILL, from the Committee on Labor and Public Welfare:

Charles R. Ferguson, of Pennsylvania, to be a member of the Federal Coal Mine Safety Board of Review;

Theodore M. Hesburgh, of Indiana, and sundry other persons, to be members of the National Science Board, National Science Foundation; and

James L. Baker, and sundry other candidates, for personnel action in the Regular Corps of the Public Health Service.

TIMOTHY J. MURPHY—EXECUTIVE REPORT OF A COMMITTEE—MINORITY VIEWS (EX. REPT. NO. 9)

Mr. MAGNUSON. Mr. President, as in executive session, from the Committee on Interstate and Foreign Commerce, I report favorably the nomination of Timothy J. Murphy of Massachusetts to be an Interstate Commerce Commissioner for the remainder of the term expiring December 31, 1964, vice Anthony F. Arpaia, resigned; and I submit a report thereon.

I ask unanimous consent that the report be printed, together with the minority views of Senators YARBOROUGH, ENGLE, BARTLETT, and MCGEE.

The PRESIDING OFFICER. The report will be received and printed, as requested by the Senator from Washington, and the nomination will be placed on the Executive Calendar.

Mr. DOUGLAS. Mr. President, will the Senator from Washington yield for a question?

Mr. MAGNUSON. I yield.

Mr. DOUGLAS. May I ask the Senator from Washington if this is the gentleman who is being appointed to fill the vacancy created by the failure to reappoint Mr. Connole?

Mr. MAGNUSON. No; this is in the Interstate Commerce Commission, not the Federal Power Commission.

Mr. DOUGLAS. I thank the Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BEALL (for himself, Mr. BIBLE, and Mr. MANSFIELD):

S. 3713. A bill to increase the salaries of officers and members of the Metropolitan Police force, and the Fire Department of the District of Columbia, the U.S. Park Police, the White House Police, and for other purposes; to the Committee on the District of Columbia.

By Mr. ROBERTSON (by request):

S. 3714. A bill to authorize adjustments in accounts of outstanding old series currency, and for other purposes; to the Committee on Banking and Currency.

By Mr. HUMPHREY:

S. 3715. A bill to improve commerce and industrial development through the establishment of a county industrial agent program; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. JORDAN:

S. 3716. A bill to delay for 60 days in limited cases the applicability of certain provisions of law relating to humane slaughter of livestock; to the Committee on Agriculture and Forestry.

By Mr. MUSKIE (for himself, Mr. ANDERSON, Mr. BARTLETT, Mr. BEALL, Mr. CAPEHART, Mr. CASE of South Dakota, Mr. DODD, Mr. DOUGLAS, Mr. ERVIN, Mr. FONG, Mr. GREEN, Mr. GRUENING, Mr. HUMPHREY, Mr. JAVITS, Mr. KEATING, Mr. LUSK, Mr. MANSFIELD, Mr. MOSS, Mr. MORSE, Mr. RANDOLPH, Mr. SYMINGTON, Mr. YOUNG of North Dakota, Mr. MCGEE, and Mr. STENNIS):

S. 3717. A bill to authorize the enlargement of the Arlington National Cemetery and to provide that land therein shall be reserved for the interment of persons who have served with greatest distinction and valor in the Armed Forces of the United States as a memorial to the preservation of our freedoms and the ideals of democracy and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. MUSKIE when he introduced the above bill, which appear under a separate heading.)

By Mr. MOSS:

S. 3718. A bill for the relief of Misako Takahashi; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 3719. A bill to authorize an additional Assistant Secretary of Commerce; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. HOLLAND:

S. 3720. A bill to authorize the Secretary of the Interior to sell reserved phosphate interests of the United States in lands

located in the State of Florida to the record owners of the surface thereof; to the Committee on Interior and Insular Affairs.

By Mr. KEATING (by request):

S. 3721. A bill to amend section 371, title 28, United States Code, to provide an alternative plan for the retirement of justices and judges of the United States having 10 or more years' service, after the attainment of the age of 65 years, and for other purposes; to the Committee on the Judiciary.

By Mr. HARTKE:

S. 3722. A bill for the relief of Giacomo Ferro; to the Committee on the Judiciary.

By Mr. JAVITS (for himself and Mr. KEATING):

S.J. Res. 210. Joint resolution to provide for the determination of U.S. participation in the New York World's Fair to be held at New York City in 1964 and 1965; to the Committee on Foreign Relations.

RESOLUTIONS

INTERNATIONAL FOOD AND RAW MATERIALS RESERVE

Mr. MURRAY submitted a resolution (S. Res. 340) to provide for the creation of an International Food and Raw Materials Reserve, which was referred to the Committee on Foreign Relations.

(See the remarks of Mr. MURRAY when he submitted the above resolution, which appear under a separate heading.)

ROSANNE WILLCOX PURVIS

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 341) to pay a gratuity to Rosanne Willcox Purvis, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

LEON R. DEVILLE, JR.

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 342) to pay a gratuity to Leon R. DeVille, Jr., which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

THELMA MARGUARETTE HEDGE

Mr. HAYDEN, from the Committee on Rules and Administration, reported an original resolution (S. Res. 343) to pay a gratuity to Thelma Marguarette Hedge, which was placed on the calendar.

(See the above resolution printed in full when reported by Mr. HAYDEN, which appears under the heading "Reports of Committees.")

COUNTY INDUSTRIAL AGENT PROGRAM

Mr. HUMPHREY. Mr. President, community cooperation has a very special meaning for Americans. It is a very special part of American life—a hallmark especially of the development of our smaller communities.

We Americans like to get together and talk over a community problem and then set about together to do something about it. This is the basis for many fine community ventures designed to rehabilitate and revitalize the many declining rural communities and smaller depressed areas in our Nation by attracting new industries, opening new markets, developing new skills among our unemployed men and women and initiating relief measures to ease the terrible personal hardship of economic depression.

Mr. President, since the administration insists on stubbornly ignoring the desperate needs of our people who live in these unfortunately depressed small urban areas or in rural communities losing population to heavily industrialized cities, I propose that the Federal Government take at least one modest step toward creation of new employment opportunities in these areas without reducing employment in other parts of our Nation.

It should be clearly understood that the proposal I am making is not to be viewed as a substitute for so-called depressed areas legislation or area redevelopment legislation. That legislation is still needed. It is regrettable, and unforgiveably regrettable, that the administration blocks such legislation at every turn, and that the President has vetoed it.

I believe we can borrow a page from the experience of our agricultural community and establish a county industrial agent program. Like the work of the agricultural extension agent, this program would be supported with equal financial support from county, State, and Federal governments.

It would be the work of this agent to give technical assistance, channeling information on opportunities for diversification of industries, new legislation, new industrial improvements, and new markets to the local community. He would also have the responsibility of reporting on the local situation to the State and Federal authorities so that their policymaking would be based on the hard facts of local conditions and not solely on statistical projections. He would further promote cooperation and coordination of voluntary groups now at work in local communities with public governmental agencies—eliminating costly duplication and false starts. Finally, he would create opportunities for vocational training of the unemployed men and women in each locality.

These responsibilities are stated in terms of the work such an agent might undertake in a depressed area. But, though born of the emergency of the present situation in which some 140 communities bear the label "depressed area," the county industrial agent like his partner, the agricultural agent, would give continuing service to his area.

The vocational training responsibilities he would undertake could easily be adapted to provide for retraining for older workers or those displaced from their farms by automation. The cooperation the agency would promote among private groups—labor and management, a major example—would be of lasting value to the stable growth of the local community.

And finally, a byproduct of efforts to attract new industries would have repercussions for national security, relocating and decentralizing portions of our massive Defense Establishment to reduce its vulnerability to surprise attack.

We must not overlook the fact also that by maintaining smaller communities and rural areas with their own existing educational, health, and other facilities, this program would ease the steadily increasing financial burdens of our large cities faced with sudden influxes of untrained workers.

Thus, Mr. President, for both present and future development of America's industrial and rural communities, I introduce, for appropriate referral, a bill to improve commerce and industrial development through the establishment of a county industrial agent program, and ask unanimous consent that it be printed at this point in my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3715) to improve commerce and industrial development through the establishment of a county industrial agent program, introduced by Mr. HUMPHREY, was received, read twice by its title, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

FINDINGS OF THE CONGRESS

SECTION 1. The Congress finds that there exists special circumstances in certain areas of the United States which cause such areas to be at a disadvantage insofar as economic development and social stability is concerned for the following reasons:

(1) Excessive concentration on one product or one nonbasic industry.

(2) Changing agricultural technology, which produces a need for fewer and fewer workers, combined with a significant drop in farm income has caused supportive towns and industries to become depressed areas.

(3) A nonintegrated approach to the problems of economic development in underdeveloped or depressed communities.

PURPOSE OF THE ACT

SEC. 2. The purpose of this Act is to:

(1) Promote the economic development of certain areas of this country which have been known as one-industry areas.

(2) Preserve, improve, and protect the sociological advantages of rural communities and family farm living through the creation of new economic opportunities.

(3) Reestablish as rapidly as possible the industrial and commercial basis of communities outlined in paragraphs (1) and (2) of this section, so that emigration to large urban areas will decrease.

(4) Establish extension-type education programs to teach alternative jobs and technical skills to residents of areas described in section 1 of this Act.

(5) Develop well-organized and integrated approach to the problem of area economic development through Federal-State-local cooperation.

COUNTY INDUSTRIAL AGENT PROGRAM

SEC. 3. In order to carry out the purposes of this Act, the Secretary of Commerce is authorized to establish a county industrial agent program as part of the Office of Area Development, and to appoint that number

of industrial agents which he deems appropriate to carry out the purposes of this Act, but no fewer than one-half the number of county agricultural extension agents provided by the Department of Agriculture on the date of enactment of this Act.

COOPERATION WITH CERTAIN AGENCIES AND ORGANIZATIONS

SEC. 4. The Secretary of Commerce and the industrial agents are authorized to cooperate with Government officers and agencies and commercial, agricultural, and labor organizations on a local, State, and National level for the purpose of receiving (1) support and assistance in the establishment of an area development program, and (2) support and assistance in training persons in alternative job skills.

APPROPRIATIONS AUTHORIZED

SEC. 5. There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

Mr. HUMPHREY. Mr. President, Father Francis Hayden, rural life director of the diocese of New Ulm, Minn., in a column in the Catholic Bulletin of St. Paul, Minn., on June 3, 1960, analyzed some of the signs of vitality and growth potential in small communities. These signs, development of community facilities, attraction of new industries, vocational training and retraining and, of course, a cooperative spirit of determination and self-help within the community—are all matters which would be the concern of the county industrial agent, who would assist and develop existing community initiatives.

Mr. President, I ask unanimous consent that Father Hayden's article, entitled "Improve Your Town; People, Jobs Will Come," be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMPROVE YOUR TOWN, PEOPLE, JOBS WILL COME

(By Fr. Francis Hayden)

GAYLORD, MINN.—I am sure it was only a coincidence that placed a report on declining farm population next to the obituary notices in one of our recent Sunday papers.

Unofficial U.S. census figures show, the article said, that 40 of the agricultural counties of Minnesota have suffered a loss in population in the last decade.

Falling farm income and higher city wages are given as part of the reason for the population shift.

Another cause is larger and better machinery which enables a farmer to accomplish much more by himself today than he did 20 years ago with a helper or two. Two decades ago, 23 percent of our population lived on farms. Today, only 11 percent live on the land.

A declining farm population is the result of progress which we have all gladly accepted. No one wants to go back to the horse and buggy or to the sulky plow.

What we do not want to accept, however, is the population loss which we are suffering and which is a problem for the whole rural community. Can we do anything about it?

We can best answer that question by considering the rural counties that reported an increased population and examining the reasons they did.

First of all, there were people who liked their home communities enough to want to stay here.

They hoped that their children too would remain near their homes instead of joining the 70 to 80 percent of the rural youth who go elsewhere to work and live after they have been raised and educated.

There were also businessmen who, with an eye to the future, sought unselfishly to save their places of business.

Pastors needed their parishioners to share the burden of support of their churches and schools, and they realized that conditions in the rural communities were good for family life.

These people cooperated to build their future.

Secondly, there were others who noted the attractiveness of those towns and moved to live in them. Some were district salesmen who had to make a choice between a dozen or so of the neighboring towns.

Others who made similar decisions were retiring farmers and businessmen. That is about all it takes to make small towns continue to thrive.

Finally, industrialists who were seeking favorable sites for their small factories decided that they could have flourishing establishments in those types of communities. They hired some of the youth who would otherwise have had to move away.

They employed a few of the farmers who were looking for part-time work or, in some cases, gave full-time employment to farmers leaving the land before they were ready to retire.

It usually takes only one such energetic community in a county to enable that county to hold its population. While this happens, it is good for the local governments.

It contributes to the continued success of the businessmen. Churches and schools find it easier to be effective. Many good rural homes are also saved.

That is what happened in the rural counties that showed an increased population. It is really quite simple, beginning with knowing, loving, and serving God through thoughtfulness of our neighbor who bears His image.

How is your town doing?

Maybe you have wanted and have been looking for a factory to coax into your town while you should have been busy making yours the kind of community that factory people would want.

FREEDOM MEMORIAL ACT OF 1960

Mr. MUSKIE. Mr. President, on behalf of myself and Senators ANDERSON, BARTLETT, BEALL, CAPEHART, CASE of South Dakota, DODD, DOUGLAS, ERVIN, FONG, GREEN, GRUENING, HUMPHREY, JAVITS, KEATING, LUSK, MANSFIELD, MCGEE, MOSS, MORSE, RANDOLPH, STENNIS, SYMINGTON, YOUNG of North Dakota, I introduce for appropriate reference, a bill to authorize the enlargement of Arlington National Cemetery and to provide that land therein shall be reserved for the interment of persons who have served with the greatest distinction and valor in the Armed Forces of the United States.

Mr. President, I was dismayed to learn recently that America's most hallowed ground—Arlington National Cemetery—is filling up so fast that within a very few years all remaining space for the interment of the Nation's honored dead will have been occupied. It has been reliably estimated that the cemetery will be closed to future burials by 1968.

Upon investigation, I found that the area adjoining the north boundary of Arlington National Cemetery, the so-called Nevius tract, consists of approximately 20 acres of unoccupied federally owned land that could well be utilized in extending the cemetery. It has the same general topography and is contiguous to the present cemetery.

This land is presently under the jurisdiction of the Department of the Interior. Proposed plans would utilize this high, gently sloping tract of land facing the Potomac River, Washington, and the Mall for a monument to freedom symbolized by the erection of a so-called Freedom Wall 68 feet high, 327½ feet long, and 204½ feet wide.

Mr. President, it would be sheer folly to waste this tract of land, so admirably suited to receive the last remains of those who have borne the Nation's battles, by constructing with Federal funds this gigantic wall and terming it a monument to freedom. I submit that a more appropriate memorial to freedom would be the reservation of this land for the remains of those who have served in the Armed Forces and have been awarded our Nation's highest decorations.

The bill I am introducing would transfer the tract of land in question to the jurisdiction of the Secretary of the Army and would reserve it for the interment of persons who have received the Congressional Medal of Honor; the Distinguished Service Cross; the Navy Cross; the Distinguished Flying Cross; the Army and Navy Distinguished Service Medals and such other persons as may be designated by the President of the United States.

This shall then be a fitting memorial to the preservation of our freedoms and the ideals of democracy, and to those persons who by their acts of great valor in time of war exemplified most magnificently the very great contribution made by all members of the armed services of the United States in the defense of this Nation and its ideals and its people.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3717) to authorize the enlargement of the Arlington National Cemetery and to provide that land therein shall be reserved for the interment of persons who have served with greatest distinction and valor in the Armed Forces of the United States as a memorial to the preservation of our freedoms and the ideals of democracy, and for other purposes, introduced by Mr. MUSKIE (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

ADDITIONAL ASSISTANT SECRETARY OF COMMERCE

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to authorize an additional Assistant Secretary of Commerce. I ask unanimous consent to have printed in the RECORD a letter from the Under Secretary of Commerce, requesting the proposed legislation.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3719) to authorize an additional Assistant Secretary of Commerce, introduced by Mr. MAGNUSON, by

request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

THE SECRETARY OF COMMERCE,
Washington, D.C., June 15, 1960.

Hon. RICHARD M. NIXON,
President of the Senate
U.S. Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Transmitted herewith is a draft bill "to authorize an additional Assistant Secretary of Commerce."

Enactment of this legislation is necessary to carry out a major recommendation of the Special Advisory Committee of the National Academy of Sciences and to assure that the important scientific and technical functions and responsibilities of the Department of Commerce are effectively directed by the Secretary assisted by an officer of high rank.

Today, more than ever before in our history, science and technology are playing an ever-increasing role in the industrial and business activities of our Nation. Included within the Department of Commerce, and importantly related to our basic mission of fostering and promoting industry, commerce, and transportation are such outstanding scientific agencies as the National Bureau of Standards, the Weather Bureau, and the Coast and Geodetic Survey. Also contributing to the scientific and technical needs of our expanding economy are such agencies as the Patent Office and the Office of Technical Services. In addition, the fulfillment of the responsibilities of the Bureau of Public Roads and the Maritime Administration require extensive research and development activities in a number of scientific and technical fields. These agencies and the activities they conduct are of immeasurable importance not only to our economy, but to our national defense and the general welfare of our people as well. The scientific and technical functions conducted within the Department of Commerce are important links in the overall scientific efforts being conducted by other agencies of our Government in the areas of national defense, atomic energy, space technology, oceanography, meteorology, and others. The scope and importance of these functions and the part which agencies of the Department of Commerce must assume are constantly increasing.

It is of vital importance that there be competent direction and administration of our scientific and technical programs and that they be adequately coordinated with other related activities throughout the Government to assure the maximum effectiveness of our national efforts.

It is intended that this additional Assistant Secretary of Commerce will serve as the principal adviser to the Secretary on all scientific and technological matters of concern to the Department.

The incumbent in this new position will provide vital assistance to the Secretary in:

1. The coordination and evaluation of existing programs of the Department in the fields of science and technology;

2. The expansion of such programs where deemed desirable to meet our national needs;

3. The development and implementation of new research and development programs in furtherance of the Department's objectives;

4. Representing the Department on top policy level scientific committees and groups, including the Federal Council for Science and Technology.

Authorization for the appointment of an additional Assistant Secretary of Commerce will make it possible to provide the most effective review of the expanding science activities of the Department of Commerce by a highly qualified science administrator. The increasing importance of the scientific and technological agencies of the Department of Commerce require an officer with the rank of Assistant Secretary to assure that our responsibilities and programs are adequately carried out in the interests of our economy, national defense, and public welfare.

We strongly urge prompt favorable consideration of this proposed bill by Congress.

It is estimated that enactment of this legislation will involve the expenditure of approximately $50,000 per year.

We have been advised by the Bureau of the Budget that it would interpose no objection to the submission of this proposed legislation.

Sincerely yours,

PHILIP A. RAY,
Under Secretary of Commerce.

AMENDMENT AND EXTENSION OF SUGAR ACT OF 1948—AMENDMENTS

Mr. CHAVEZ (for himself, Mr. ANDERSON, Mr. KERR, and Mr. YARBOROUGH) submitted an amendment, intended to be proposed by them, jointly, to the bill (S. 3361) to amend and extend the provisions of the Sugar Act of 1948, as amended, which was referred to the Committee on Finance, and ordered to be printed.

Mr. CHAVEZ (for himself, Mr. ANDERSON, Mr. KERR, and Mr. YARBOROUGH) submitted an amendment, intended to be proposed by them, jointly, to the bill (S. 3508) to amend and extend the provisions of the Sugar Act of 1948, as amended, which was referred to the Committee on Finance, and ordered to be printed.

AUTHORIZATION FOR HIGHWAY CONSTRUCTION APPROPRIATIONS FOR FISCAL YEARS 1962 AND 1963—AMENDMENT

Mr. JAVITS (for himself and Mr. KEATING) submitted an amendment, intended to be proposed by them, jointly, to the bill (H.R. 10495) to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes, which was referred to the Committee on Public Works and ordered to be printed.

AMENDMENT OF MERCHANT MARINE ACT, 1936, TO CHANGE THE LIMITATION OF CONSTRUCTION DIFFERENTIAL SUBSIDY

The PRESIDING OFFICER laid before the Senate a message from the House of Representatives announcing its disagreement to the amendments of the Senate to the bill (H.R. 10644) to amend title V of the Merchant Marine Act, 1936, in order to change the limitation of the construction differential subsidy under such title, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. MAGNUSON. I move that the Senate insist upon its amendments, agree to the request of the House for a conference and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. PASTORE, Mr. BARTLETT, and Mr. BUTLER conferees on the part of the Senate.

NOTICE OF HEARING ON NOMINATION OF HAROLD R. TYLER, JR., TO BE AN ASSISTANT ATTORNEY GENERAL

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to announce that a public hearing has been scheduled on the nomination of Harold R. Tyler, Jr., of New York, to be Assistant Attorney General, vice W. Wilson White, resigned, for 10:30 a.m., Wednesday, June 29, 1960, in room 2228, New Senate Office Building.

At the indicated time and place all persons interested in this nomination may make such representations as are pertinent. The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from North Carolina [Mr. ERVIN], the Senator from Illinois [Mr. DIRKSEN], the Senator from Nebraska [Mr. HRUSKA], and myself, as chairman.

NOTICE OF HEARING ON NOMINATION OF JACOB MISHLER TO BE U.S. DISTRICT JUDGE, EASTERN DISTRICT OF NEW YORK

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to announce that a public hearing has been scheduled on the nomination of Jacob Mishler, of New York, to be U.S. district judge, for the eastern district of New York, vice Mortimer Byers, retired, for 2:30 p.m., Wednesday, June 29, 1960, in room 2228, New Senate Office Building.

At the indicated time and place all persons interested in this nomination may make such representations as are pertinent. The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from Nebraska [Mr. HRUSKA], and myself, as chairman.

NOTICE OF HEARING ON NOMINATION OF ROBERT S. RANKIN TO BE A MEMBER OF COMMISSION ON CIVIL RIGHTS

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to announce that a public hearing has been scheduled on the nomination of Robert S. Rankin, of North Carolina, to be member of the Commission on Civil Rights, vice John S. Battle, resigned, for 2:30 p.m., Wednesday, June 29, 1960, in room 2228, New Senate Office Building.

At the indicated time and place all persons interested in this nomination may make such representations as are pertinent. The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from Nebraska [Mr. HRUSKA], and myself, as chairman.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. BYRD of Virginia:

Address delivered by him at Peaks of Otter, Va., in connection with the ceremonies opening the James River Bridge on the Blue Ridge Parkway.

THE TREATY WITH JAPAN

Mr. JOHNSON of Texas. Mr. President, we are soon to take one of the most important actions of this session—ratification of the Japanese security treaty.

I think it is a good example for the world that the Senate has debated this treaty objectively, coolly, and with dignity. We have neither stampeded into hasty action nor slowed down to no action at all.

I do not intend to go into a lengthy discussion of the treaty itself. I am convinced it is one of mutual advantage to both the United States and Japan; and the distinguished chairman of the Foreign Relations Committee [Mr. FULBRIGHT], for whom I have great respect, and the other members of that committee have assured me that, after many tedious hours and much diligent study, they too, have reached that conclusion. That is good enough for me; and I am convinced, as I have said, that the treaty is of mutual advantage to both the United States and Japan, and is in the best interest of our country and in the best interest of the free world.

It is crucial in these days that we look to shoring up the defenses of the free world. We must erect a shield around the boundaries of freedom, if the institutions that we cherish are to survive.

The unfortunate events which took place in Japan itself are evidence of the threat against freedom. There can be no question but that Communists played upon the understandable fears of the Japanese people—the only people who have felt the fury of atomic war—to humiliate and to embarrass our country.

But I think we can be certain that the Communists in Japan are a very small minority, and that the great majority of the Japanese still prefer freedom as a way of life.

The massive Communist attack against our way of life is being felt on many fronts—Japan; Quemoy and Matsu; West Berlin; the Middle East; here in our own hemisphere, our own front door, Cuba; and many other areas. Without strength we cannot survive, because the Communists will always resort to brute force if they think it will achieve their ends.

I think it should be said, however, that we also realize that strength alone will not bring us peace. The best we can hope from weapons and armed might is a shield to frustrate a physical attack upon the free world.

We will not be worthy of our heritage or equal to our responsibilities if we do not make moves behind that shield which will truly bring us peace.

For the past 2 days, I have been conducting hearings upon the State Department appropriation bill for the coming fiscal year. I have heard the dedicated officials of our State Department outline their activities throughout the world.

It seems to me that there is a depressing lack of vital, new ideas in our foreign policy. What we are doing is commendable. The people who are carrying out our programs are patriotic, dedicated, and devoted. But I cannot find the bold steps that would reach to the hearts and souls of men throughout the world and convince them that their future lies with freedom;

I believe we will have to launch somewhere along the line, sometime soon, a really massive offensive for peace.

I think it is incumbent upon us, as the leader of the free world, and one of the stronger nations, to propose great programs, through the United Nations, that would stamp out killing and crippling disease.

I think we will have to propose great programs of international cooperation in moving the world's food surplus to areas of deficit.

I should think we will have to propose great programs of international cooperation to break down the barriers that prevent communications between people.

I think we will have to propose great programs of international cooperation to harness the water resources in arid regions of the world.

Some of these things we are doing already. But they are being done on far too modest a scale and without the dramatic drive that would symbolize the heart and soul of America.

I vote for this treaty today because I believe it is a wise and prudent move; because it has been recommended by the outstanding scholars and the ablest foreign relations experts in this body.

But I hope that in the days which lie ahead we shall really realize that this treaty is basically a defensive measure, and that we in America must do much more—yes, much more—if we are to find true peace in this world.

THE LAUNCHING TODAY OF TRANSIT–II–A

Mr. BRIDGES. Mr. President, the United States has achieved outstanding success in the science of space exploration in the short span of just 2 years.

Since our first successful launching of a space vehicle in 1958, we have put 24 scientific devices in orbit, compared with 6 by the Soviet Union—our only rival in this field.

Our latest achievement, the perfect launching early today of the Transit–II–A, should silence any regular critics who apparently seek to make a career of disparaging their own country.

The Transit–II–A success serves to reassure all Americans, as well as the rest of the world, that the United States intends to stay in the foreground of the space race.

Our scientists, engineers, and skilled technicians—not to mention the American taxpayers who foot the bills for all this—deserve the hearty congratulations and thanks of the entire world, for Transit–II–A was designed to benefit the whole world.

The scientific objectives of this two-package satellite attest to the moral fiber of the people of the United States, who unselfishly seek information to be shared with all peoples everywhere.

First. We intend to give all nations a pinpoint accurate navigation system for ships and planes. The prospect of a time when a ship never will be lost at sea, when rescuers will go directly and promptly to a downed aircraft, when food can be shipped to any point on the globe directly and in record time, staggers the imagination.

Second. The significance of a completely accurate time system—when all the clocks of the world will strike at the same time—is a monumental contribution to civilization.

Third. Further and accurate measurement of the sun's radiation will contribute immensely to scientific achievement in many areas.

Those who were so willing to relegate the United States to a "has-been" status in science and technology should take heart from the notable achievement represented by the launching of Transit–II–A.

I congratulate the Navy and Air Force in their successful joint endeavor, and I also congratulate the administration for its continued success in space achievements.

"THE SACCO-VANZETTI STORY"—TELEVISION PLAY

Mr. BRIDGES. Mr. President, in these days when the fundamental institutions of this country are constantly open to question and attack, in many instances, I believe, by Communist propagandists who are trying to undermine us, it seems hardly necessary to further that effort, even unwittingly, in the field of entertainment.

Mr. President, I refer specifically to the play, "The Sacco-Vanzetti Story," by Reginald Rose, which was recently adapted for television and appeared in two parts of 1 hour each on June 3 and June 10. I do not for a moment feel that our institutions are so untouchably sacrosanct that they should be immune to growth and helpful change. It is essential to the proper working of our republican form of government that failures and shortcomings in our institutions should be openly and objectively discussed. What I do object to is taking historical incidents, distorting them apparently for dramatic effect, and yet presenting them as though a strictly documentary presentation was being made. That is actually what was done in the case of the NBC television show to which I referred and in which the American judicial system, as administered by the courts of the Commonwealth of Massachusetts, was presented in a most unobjective and slanted fashion.

The tragedy of this sort of presentation of a course of events starting 40 years ago is that many people are too

young to have a firsthand knowledge of the historical facts, and the tendency will be for them to give full faith and credit to this distorted dramatic presentation, rather than to take the time in this fast-paced life to do their own historical research.

It is for this reason, Mr. President, that I felt that the television reviews pointing out the historical distortion should have as wide distribution as possible. To that end, Mr. President, I request that at this point in the body of the RECORD the following articles be included: the column of Arthur E. Fetridge entitled "On Television," with particular reference to the section entitled "Lovely People," from the Boston Herald of June 3, 1960; the article by Arthur E. Fetridge entitled "Famed Trial 'Distorted' as TV Play," from the June 4, 1960, issue of the Boston Herald; the article by Peter Barnicle entitled "TV Play Excoriates Courts, Governor Fuller," from the June 11, 1960, issue of the Boston Herald; the column by Percy Shain entitled "Night Watch," with subtitle "Governor Fuller Vilified as S-V Drama Ends," appearing in the June 11, 1960, issue of the Boston Globe; the editorial entitled "Bias and Distortion," from the Boston Traveler of June 14, 1960; and the article by Paul Jones entitled "Television's Slanted Sacco-Vanzetti Drama," appearing in the June 23, 1960, issue of Human Events.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Boston Herald, June 3, 1960]

ON TELEVISION—"THE MILLIONAIRE" DEPARTS IN FALL

(By Arthur E. Fetridge)

"The Millionaire," one of the longest run television series, will join "Father Knows Best," "The Steve Allen Show," and "George Gobel Show" in departing from the evening scene next fall. "The Millionaire," which has "given away" a million dollars each Wednesday night on the CBS network during the regular season, has been on the air for the past 5 years.

It will be replaced in the Wednesday night 9 to 9:30 time period by "My Sister Eileen." Elaine Stritch will portray Ruth Sherwood. The role of Eileen is yet to be filled.

The sponsors made their decision on "My Sister Eileen" only after a research bureau was hired to help it choose between this series, which will be based on the Ruth McKinley stories in the New Yorker, and a drama anthology series.

A hot tip for those who care to stay up tonight: Don't under any circumstances miss the premiere play of the week, "Medea," on channel 4 at 11:15. Judith Anderson's performance is one of the best we've ever seen on television.

Channel 2's popular summer feature, "Pianoforte," opens the series tonight at 9 with the noted concert pianist and Boston University professor, Alexander Borovsky, who will play Bach, Beethoven, and Prokofieff.

LOVELY PEOPLE

The more interviews we read in other newspapers with Robert Aurthur, executive producer, and Reginald Rose, who did the television script, the more convinced we are that "The Sacco-Vanzetti Story," to be seen on channel 4 in two parts—the first tonight at 8:30—will follow the "they weren't guilty theory" straight down the line.

Rose is quoted by a nationally syndicated columnist as saying of Sacco and Vanzetti: "They were intelligent, lovely, gentle people." What utter rot. They were admitted draft dodgers, they admitted they carried loaded guns and there is little doubt they were anarchists. Vanzetti had been convicted only a short time before he was arrested in this controversial case of another armed robbery.

Of course they were intelligent, lovely, gentle people.

Producer Aurthur is so certain these two men, who were convicted of murder by a jury, were innocent that he would like to have them tried again and then have Governor Furcolo issue posthumous pardons.

I shall watch this great exposé of a miscarriage of justice in the Commonwealth of Massachusetts as done by that unbiased pair with great interest tonight at 8:30.

[From the Boston Herald, June 4, 1960]

FAMED TRIAL "DISTORTED" AS TV PLAY

(By Arthur E. Fetridge)

To those who knew little or nothing about the famous Sacco-Vanzetti case the Commonwealth of Massachusetts stood convicted of a grave miscarriage of justice in hanging them on the basis of the first part of the "Sacco-Vanzetti Story," as presented last night on channel 4.

The author, Reginald Rose, made out a very plausible case for the innocence of these two men. People who never had read unbiased newspaper accounts of the trial and the jury's decision that they were guilty in the first degree of the murder of two paymasters in Bridgewater on April 15, 1920, would have little choice but to agree with Rose that they were not guilty.

VIEW OF JUDGE

Judge Webster Thayer, who presided over the trial, was made to look like a doddering old man. If it was the intent of the producer to make him a knave, as well, he succeeded beautifully.

Prior to the trial Rose let us in on a bit of conversation between two of the prospective jurors. One was overheard saying that if he had his way all "Dagoes" would be banned from this country and he'd be glad to help convict this pair. He became the jury foreman.

The author played the "Italian angle" heavily. He also built up the anarchist angle, evidently in an effort to show that it was because these men were anarchists and draftdodgers that they were convicted for that reason alone and that they never should have been found guilty of the murders.

District Attorney Frederick Katzmann was seen practically ordering Capt. William H. Proctor of the State police to change his testimony as to whether the bullet found in the body of one of the victims came from Sacco's pistol.

SCENES INJECTED

Scenes like that and many others that did not take place in the courtroom were injected into the drama, all of which gave the definite impression that Sacco and Vanzetti were victims of a horrible frameup.

Credibility of several witnesses for the prosecution was impugned, but never actually in the courtroom in this presentation. We constantly wondered why the defense lawyer failed to bring out the points that Rose emphasized so strongly in his play.

From an entertainment point of view, the play was dull. However, the acting of Martin Balsam as Sacco and Steven Hill as Vanzetti was excellent. Carroll O'Connor made a fine district attorney and the narration by Ben Grauer couldn't have been bettered.

Part II to be seen next Friday will cover the fight to free the men through numerous appeals and mass meetings throughout the world.

[From the Boston Herald, June 10, 1960]

MORE SACCO, VANZETTI—TV PLAY EXCORIATES COURTS, GOVERNOR FULLER

(By Peter Barnicle)

The courts of Massachusetts, Gov. Alvan T. Fuller and the Lowell Commission, named to review testimony, were excoriated last night in the second part of NBC's television version of the famed Saco-Vanzetti case (WBZ–TV, Ch. 4).

What viewers in other sections of the country thought we do not know. But we are sure that Massachusetts viewers were shocked to see TV author Reginald Rose imply that the Governor of the Commonwealth visited the state prison at Charlestown and offered condemned murderer Celestino Maderios a chance for commutation if he would retract his alleged confession of the crime for which Nicola Sacco and Bartolomeo Vanzetti were convicted.

Granted, the narrator did say that the scene was based on a conversation which Maderios reported to defense attorneys.

The play also implied that Governor Fuller had his eye on the White House in holding firm against commuting the sentences of the two men who were convicted of the murder of a South Braintree paymaster and his guard on April 15, 1920.

The Lowell Commission made up of A. Lawrence Lowell, president of Harvard, Julius A. Stratton, president of M.I.T., and Judge Robert Grant, were depicted as three men who had made up their minds before they sat down to discuss the case.

The worst indictment was read against Judge Webster Thayer who presided at the trial. He was portrayed as a doddering old man who looked to be about 85 or 90. At the time of the trial Judge Thayer was in his mid-sixties—hardly the age of senility.

It is difficult to understand why after more than 30 years the case should be presented again in such a biased and prejudiced manner and why the courts of Massachusetts should be held up to ridicule.

Although the action was slow, comprising a series of scenes in which each defeat for the condemned men was highlighted with hope and then dispair, the acting was excellent.

[From the Boston Globe, June 11, 1960]

NIGHT WATCH—GOVERNOR FULLER VILIFIED AS S-V DRAMA ENDS—SACCO-VANZETTI STORY, CHANNEL 4

(By Percy Shain)

Massachusetts officialdom in an hysterical frenzy; killing Sacco and Vanzetti because it didn't dare not to; even hoping to profit personally by their executions.

That was the frankly nauseating picture left behind in the concluding chapter of this searing, tearing, Robert Alan Arthur production on the NBC network last night.

Gov. Alvan T. Fuller, a public benefactor of long standing and considered one of Massachusetts' abler Governors, was the latest to be vilified by the train of events as built up by writer Reginald Rose in sketching the losing fight to save these two men from the shadow of the electric chair.

This is what Rose said about Fuller (by putting the words into the mouth of a defense committee leader):

"He's trying to become President of the United States over their dead bodies, as Calvin Coolidge did before him on the issue of law and order."

And this is what Rose said Fuller did (on the word of a convicted killer):

He offered Celestino Madeiros, the killer, a "deal" for his life. He would commute the pending execution if Madeiros would take back his statement that he was in on the Braintree murder-robbery and that Sacco and Vanzetti were not there.

Those weren't the exact words he was quoted as using in their prison cell talk, but the meaning was plain.

And when Madeiros refused, the Governor, according to the TV version, called him a "double murderer," which to Madeiros meant that Fuller didn't think the famed pair were guilty.

Fuller was depicted as being frankly contemptuous of the poor—as calling them the rabble, the great unwashed. He was shown as more horrified by the property damage done in demonstrations than by the possibility that he might be putting two innocent men to death.

But that's not all.

"Gentlemen, there's such a thing as overselling your case," he told committee counsel (as if he were talking about a product instead of human lives, Rose points out).

And he couldn't understand why William Thompson was fighting for them.

"You're not Italian, are you?" he asked the noted lawyer.

"They are anarchists. I believe they should be crucified," he said at another point.

To him, the issue was strictly class and race, according to the script. The merits of the case were secondary. And all he did about the facts were to try to twist them to justify his actions, such as believing one man who said Sacco and Vanzetti were at the crime scene and ignoring the testimony of 40 others who said they weren't. That's the way Rose plainly viewed it.

But what about the commission he appointed to study the case, headed by A. Lawrence Lowell, president of Harvard?

Rose dismisses them casually.

They listened to an eccentric, taking her words seriously even though she spoke vaguely of "music running through my head."

And one of the three members of the board was biased anyway. He believed the two were guilty even before they started the probe, according to Rose.

And of course there was more about old Judge Webster Thayer, who was the prime villain in last week's chapter.

TO SUPREME COURT

"Did you see what I did to those anarchistic * * * the other day?" he asks a friend at a Dartmouth homecoming football game. "Now let them go to the Supreme Court."

(The Supreme Court was powerless to act on the evidence; only on the conduct of the trial. It did not find the trial was conducted unfairly.)

Later, as execution day nears, he is shown sidling up to some newsmen.

"I treated you pretty good. See what you can do for me," he pleads plaintively.

There was much of this emotional type of drama—the blacks very black, the whites very white, in the manner of the most elemental crime yarns.

But there was also a solid array of facts on the crime itself which attests to the thorough research done by Arthur and his cohorts in advance of filming.

They not only set out to prove Sacco and Vanzetti didn't do it; they told who did, almost down to the last detail.

It was the Morelli gang from Providence, professional killers out on bail from another job, according to writer Rose. And the motive? They needed the money to finance their coming trial.

The guns checked, the number of bullets checked, the facts checked, the story was complete, in this version.

Who fired the bullets? Joe Morelli and Tony Mancini, two members of the mob.

Also the defense dug up a Maine man, Roy E. Gould, who was within 5 feet of the bandits and swore Sacco and Vanzetti weren't among them.

But all this made no difference to Judge Thayer. He kept turning down appeals for a new trial.

HEARTRENDING

And if much of this material was most moving to those who hate injustice, the last words of the defendants just before they went to the chair were even more heartrending.

Sacco is seen writing to his son, urging him to "live for father's plea: Love me a little."

Vanzetti's final words: "This last moment belongs to us. This agony is our triumph."

Once again, the acting was on a high level.

Martin Balsam and Steven Hill showed the torture and agony of 7 long years of waiting in most convincing terms. Robert Emhardt made a brusque, heartless Governor Fuller. Stuart Germain completed the task of making Judge Thayer an object of contempt. E. G. Marshall was excellent as shocked lawyer Thompson who could not believe what was going on around him.

Summing up: This was as stirring a drama as has been seen on the networks this season. But in sharpening the conflict, pointing up the story values, the script was guilty of shameless distortions and omissions that make it highly suspect as a documentary.

It was an absorbing story. How true it was nobody will ever know. It's a shame Massachusetts had to be the scapegoat in the 1960 televised play that will be remembered longest.

[From the Boston Traveler, June 14, 1960]

BIAS AND DISTORTION

The television version of the Sacco-Vanzetti case was a dangerous disservice to the American public.

It was dangerous in the sense that it set a precedent for feeding the TV fans a concoction of distortions and half-truths that perverted the documented facts of the case. This may have opened the way for other outpourings of bias through the TV pipeline.

It was a disservice in the sense that it misled the public, it ridiculed a respected judicial system, and it deliberately misrepresented honorable men like Judge Thayer and Gov. Alvan T. Fuller.

All this—for the sake of arousing old bitterness, deriding American justice and whipping up sympathy for two convicted murderers.

Scores of TV editors already have blasted author Rose for his misshapen story and his spurning of the truth. There's no sense in beating a dead horse by citing more of the same here.

The TV industry needs a sharp warning, though. It has lost face in allowing itself to be the stooge for the false rantings of author Rose. His is the sort of hokum that turns an audience away in disgust.

[From Human Events, June 23, 1960]

TELEVISION'S SLANTED SACCO-VANZETTI DRAMA

(By Paul Jones)

What is adult television?

TV is not precisely our field, but the question we have just posed has been nagging us ever since we sat through two programs concerned with the Sacco-Vanzetti case. Critics in general found the direction routine, the presentation partial, and the characters oversimplified. Yet, said many, this was adult television, and we should have more of the same.

Presumably it was adult because it dealt with a controversial subject which agitated many people 25 years ago. On the other hand, it is scarcely adult to present a complicated issue in the crude colors of a children's primer.

The "goodies" and the "baddies" in the melodrama we saw were neatly divided. The prisoners at the bar, their defense counsel, their friends and families, everybody who was on their side glowed with the inner light of perfect innocence and unselfish devotion. Their adversaries, the Commonwealth of Massachusetts, its Governor, the prosecutor, and the judge, not to mention the police, came off very badly.

The judge was represented as doddering and senile, with a persecution mania; in point of fact, he was 63 at the time of the first trial, and sat on the bench for 13 years thereafter, retiring only after his house was blown up by a bomb.

The Governor was shown as a monstrous combination of political ambition and dishonest doubledealing. The prosecutor was ready at all times to falsify evidence, with the ready cooperation of an unprincipled police force.

These, of course, are routine characterizations in the sort of fictional courtroom drama that TV writers love. But the Sacco-Vanzetti case was supposed to be a documentary, with some of the accuracy of history and some of the responsibility that reporters have.

One difficulty that must have confronted the playwrights was the fact that Governor Fuller, 7 years after the first trial, named a public commission to look into the case and offer impartial advice on whether justice had or had not been done. The members of this tribunal were A. Lawrence Lowell, president of Harvard, Samuel Stratton, president of the Massachusetts Institute of Technology, and Robert Grant, a former probate court judge.

On August 6, 1927, they rendered a report on their findings.

They said: "The inquiry that you have asked the committee to undertake seems to consist of the three following questions:"

1. "In their opinion, was the trial fairly conducted?" To this, their answer was "Yes."

2. "Was the subsequently discovered evidence such that in their opinion a new trial ought to have been granted?" To this they answered "No."

3. "Are they, or are they not, convinced beyond reasonable doubt that Sacco and Vanzetti were guilty of the murder?" On this their verdict was guilty, after an exhaustive examination of the record, and long questioning of 10 jurors (1 had died, another was in Florida) and available witnesses.

A key paragraph read: "To the committee the jury seemed an unusually intelligent and independent body of men, and withal representative, 7 of the 12 appearing to be wage earners, 1 a farmer, 2 engaged in dealing in real estate, a grocer. Each of them felt sure that the fact that the accused were foreigners and radicals had no effect upon his opinion, and that native Americans would have been equally certain to be convicted upon the same evidence."

They examined the evidence for and against in the greatest detail, weighing the credibility of witnesses and the statements of the accused, as well as the evidence of the ballistic experts. "The fact," they said, "that persons accused are or are not Socialists or radicals of any type neither increases nor lessens the probability of their having committed the crime, and should be left wholly out of account."

The basic question, of course, is: Did the prisoners get a fair shake? And on the record, but not on TV, the answer had to be yes, unless you assume an enormous conspiracy to defeat justice.

TWELVE-NATION TREATY ON THE ANTARCTIC

Mr. ENGLE. Mr. President, today I addressed a letter to the Honorable Thomas S. Gates, Jr., Secretary of Defense, relating to the treaty on the Antarctic, this week approved by the

Senate Committee on Foreign Relations. I addressed the Secretary as follows:

DEAR MR. SECRETARY: As you perhaps know, the Senate Committee on Foreign Relations met this week and voted out with approval the 12-nation treaty on the Antarctic. On June 14, I appeared before the committee and opposed the ratification of the treaty. At that time I expressed considerable interest, among other things, in the military aspects of the treaty and raised some serious questions regarding the effect the treaty may have on the military posture of this country.

Mr. President, I ask unanimous consent that my statement before the Senate Committee on Foreign Relations be made a part of my remarks at the conclusion hereof.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ENGLE. Mr. President, I continue to read the letter to the Secretary of Defense, Mr. Gates:

I have noted that within recent months we have substantially increased the range of our Atlas missile. Present reports indicate also that the Navy plans on perhaps doubling the range of the Polaris. Our information is that the Russians have a greater capability in the field of thrust than we have. Under these circumstances

Mr. President, this is a key question:

I would like to raise the question as to whether or not it would be possible in the foreseeable future for the Soviets to increase the range of their intercontinental ballistic missiles sufficiently to enable them to launch missiles around the underside of the globe at targets in the United States.

In asking this question I have in mind that we have built and are building our detection system on the assumption of an attack over the arctic regions. This detection system will be built at great expense. It seems to me that we may be guarding the front door and leaving the rear of our house wide open to attack. My reading of the Antarctic Treaty indicates that it would preclude the installation of even passive defensive systems, that is, detection systems of any type.

This is the key to the matter. The treaty precludes the installation of any defensive system, including a passive defensive system for detection purposes. It is my belief the Soviets can increase the range of their missiles, fire them around the underside of the world, and hit targets in the United States of America; and in approving the treaty we are, while guarding our front door in the Arctic region, leaving the rear door open to attack.

Mr. President, I continue to read the letter:

If it is technically possible for the Soviets to increase the range of their missiles and come around the underside of the globe, passive defensive systems for detecting purposes would be of immense importance to our Government, and the time might come when the installation of active defensive systems in the Antarctic area would be the logical location for such systems.

I mean that when we perfect the Nike-Zeus and other active defensive systems it may be logical to put them in the Antarctic, rather than somewhere else, and the treaty would preclude it from happening.

Mr. President, I continue to read the letter:

In addition to the answer to this specific question, it would be appreciated if you would give me your observations on what you think is the general effect of demilitarizing the Antarctic area on the present and future military posture of this country.

I have in mind that the Navy testified in this matter for the Department of Defense. I read the testimony. It boils down to what we could call, out West, "a bucket of smoke." It does not amount to anything. I should like to have the Secretary of Defense give us the kind of answers we ought to have with respect to this vital question.

I continue to read the letter:

Inasmuch as there are only several days left in this session and since it is anticipated that the treaty will be called up in the Senate in the next few days, I would like your answer at the earliest possible time for my guidance in discussing the treaty when it comes up on the Senate floor.

Mr. President, because I have read the letter in excerpts and because I have commented upon the letter in reading it, I ask unanimous consent that the letter in toto be made a part of the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

EXHIBIT 1

THE SENATE SHOULD REJECT THE ANTARCTIC TREATY

(Testimony of Senator CLAIR ENGLE, before the Senate Foreign Relations Committee, June 14, 1960)

Mr. Chairman, I am sure that my colleagues are all aware that the Antarctic Treaty, which was signed by the 12 participating countries last December 1, is pending before the Senate for ratification. They may not be equally aware of the fact that the United States took the lead in initiating the conference in 1958 which led to the creation and signature of the treaty. They may not be aware that the U.S.S.R., as 1 of the 12 countries participating in the International Geophysical Year program in Antarctica, received a gratuitous invitation to enter into the treaty and lost no time in doing so. They may well consider these matters and ask "why?"

Indeed, I ask that primary question and a good many others besides. And I am still looking for adequate answers. It is difficult for me to escape the conclusion that there are none, and that the Antarctic Treaty perforce is a setback for U.S. interests.

Frankly, I cannot but believe that signature of the treaty by this country violates at least two sound maxims: One historically prevalent in legal and diplomatic circles, and the other of a proverbial nature. On the one hand, we are giving something for nothing; or, if we insist on the value of small promises, we are giving a very large quid for an insignificant quo. In essence, we are settling the seal of free world recognition on the Soviet presence in Antarctica in return for whatever assurance the treaty offers that the Soviets will not be troublemakers. On the other hand, we are indeed "putting the cart before the horse." For the treaty demilitarizes the continent and prohibits nuclear explosions and disposal of waste just as if we had already concluded disarmament and nuclear test ban agreements with the U.S.S.R. The truth seems to be that prospects for such agreements have been made dimmer by the current Soviet tantrums of bellicosity and bad manners than they have been for quite some time.

But before I pursue these lines of inquiry in greater depth, let us first look at the historical setting in order to ascertain the comparative relevance of Soviet, American, and other interests in the subcontinent.

Between 1819 and 1821, the Russian explorer Von Bellingshausen, duplicated the feat of Capt. James Cook nearly 50 years earlier by crossing the Antarctic Circle; the Russian also sighted two islands off the coast of the continent, but apparently did not sight the mainland. During the century and a quarter between that time and the period after the end of World War II, the Russians displayed no further interest in Antarctic exploration. In fact, the Soviet bases established through participation in the IGY are all located in territory claimed by Australia.

The United States, on the other hand, has had perhaps the longest and clearest record of continuing interest in the Antarctic Continent. There is little doubt that it has the legal right to territorial sovereignty over a large portion of Antarctica. It could base its claim on discoveries, explorations, occupations, or performance of administrative acts, the main basis for the claims which have been filed to date.

On any basis that sovereignty over new territory is determined, the United States has a sound position. An example is discovery. American investigators believe that the continent of Antarctica was first sighted by Nathaniel Brown Palmer, an American sealing captain, on November 17, 1820. Nineteen years later the American naval officer, Charles Wilkes, made a voyage more than halfway around Antarctica and demonstrated the existence of a continental landmass.

Rights based upon early discoveries are strengthened by an outstanding American role in exploring the continent. Americans all take pride in such activities as the establishment of Little America by Rear Adm. Richard E. Byrd—Byrd's flight over the South Pole on November 29, 1929—and Lincoln Ellsworth's later flight across the entire continent.

Many of the American citizens who took part in these historic explorations have made claims on behalf of their country. For example, Marie Byrd land was claimed for the United States by the first Byrd expedition. James W. Ellsworth land was claimed in 1936 by Lincoln Ellsworth, who also claimed another portion for the United States in 1939. Additional markers laying the basis for U.S. claims were planted during the postwar Antarctic expeditions undertaken prior to the International Geophysical Year. Instructions for these expeditions called for the extension and consolidation of U.S. sovereignty over "the largest practicable area of the Antarctic Continent." By these activities the groundwork has been laid for the United States to assert its sovereignty. All that has been lacking is the official action on the part of the Government which would solidify the claims.

Unfortunately, while the State Department through the years adopted a narrowly legalistic interpretation of the basis for a claim, other countries were not encumbered by the fiction that a requirement of permanent settlement had much relevance to Antarctica. Seven nations have made formal claims to portions of the continent. Of these, Britain and Norway, through years of exploration, have rights most nearly comparable in weight to those of the United States. Whatever the status of these disputed claims, none of which is recognized by this country, the fact remains that only the unfavorably situated territory between 90° and 150° west longitude is as yet unclaimed. At a minimum then, it would seem that the United States should be concerned with establishing its rights in this one uncontested area.

On the contrary, however, the U.S. Government has signed a treaty which in effect

denies this country the opportunity to take such a step. For the treaty explicitly provides that no new claims may be asserted as long as it is in effect.

Now proponents of the treaty argue that no nation will be giving up anything, since the treaty also provides that claims, rights to claims, and recognition of claims are frozen as they currently exist for the duration of the treaty. This is true in theory because the treaty states that nothing in it shall be interpreted as a renunciation of previously asserted claims to territorial sovereignty, or as a renunciation or diminution of any basis of claim. In spite of these provisions, however, it is only realistic to recognize that once the treaty comes into force it is very unlikely the United States will ever gain any benefit from its preeminent role in the opening up of Antarctica.

In the first place, the whole purpose of the treaty is to extinguish national claims once and for all. It seems apparent that the clause freezing the status of claims was adopted primarily for the purpose of making the treaty palatable to states which have already made claims. The treaty has no termination date and seems designed to stay in effect indefinitely. As long as it remains in force, the entire continent would be under international control. But while the treaty is supposedly permanent in nature, the provisions freezing sovereign rights give the impression that at some future date the treaty will expire and the status of claims will fall back into the same pattern which exists today.

Second, even if the treaty were unsuccessful in its objective of bringing about permanent internationalization, it is extremely unlikely that U.S. rights in the unclaimed area would ever again be as predominant and undisputed as they are now. Countries such as the Soviet Union, which have been given a voice in the control of Antarctica by this treaty, will not readily pack up and go home if the treaty comes to an end. Meanwhile, the claims problem will have become more difficult as more and more countries undertake activities.

Again, the treaty has a provision to mask this danger. It states that no activities taking place during the treaty period shall constitute a basis for asserting, supporting, or denying a claim. In practice, however, we can be fairly sure that if the treaty arrangement eventually were to dissolve, new claims not now justified would be made. It is difficult to believe that the Soviet Union would be backward in this respect.

Well, some may ask, why all the fuss about an almost inaccessible chunk of ice at the bottom of the world? Perhaps they should also ask the skipper of the *Nautilus* why he believed there was any significance in his trip under the ice across the roof of the world. Yet we need not be quite so contemporary in our thinking about the shrunken nature of our globe and its lines of communications.

Even in World War II Antarctica proved of military advantage to an enemy. German raiders operated very successfully from antarctic waters against allied shipping, sinking or capturing several hundred thousands tons; a substantial part of the Norwegian whaling fleet was captured in the area. So important were the shipping routes near the Antarctic that three major fleet actions were fought by the British squadron based in the Falkland Islands. If the Panama or the Suez Canals were closed in a future war, Western shipping would be detoured into the southern oceans around Cape Horn, the Cape of Good Hope, and Australia. Whoever controlled Antarctica would have a great asset in the control of these vital southern routes.

With current advances in military technology, the strategic importance of Antarctica for the defense of the free world has manifestly increased. Not only is the continent advantageously situated for the observation and conduct of space activities, it could also be made into a long-range missile base of signal importance.

It is true that the treaty makes sweeping provisions for demilitarization of Antarctica, and for complete freedom of inspection from land, sea, and air. Yet the use of military personnel and equipment for scientific and other peaceful purposes would be permitted. This in itself could provide an avenue for evasion of the much-heralded full inspection to be permitted each country. Far more significant, however, is the fact that the vast inaccessible Antarctic Continent is over 5 million square miles in extent, more than six times the size of Greenland and not very much smaller than all of South America. The policing of this isolated region could prove a monumental undertaking.

Other applauded features of the treaty which could have quite reverse effects from those intended relate to the prohibitions against nuclear explosions and disposal of radioactive waste material. It is also stated that in the event of an international agreement on these issues, the rules of the agreement would be applied to Antarctica—provided all the Antarctic Treaty countries adhere to the nuclear treaty. Despite the breakdown at the summit, it is still within the realm of possibility that a global test ban, including Antarctica, may yet be concluded. Until that time, however, it seems unwise to prohibit all nuclear explosions in the Antarctic Continent.

In the first place, if tests are going to continue, Antarctica would be a better region in which to explode nuclear weapons than previous and existing possible sites. It is isolated from any centers of population, and residual radioactivity would not be as great a problem as in populated areas. In the second place, nuclear explosions for peaceful uses could have greater possibilities in Antarctica than anywhere else in the world. They might be used to open up harbors or melt the icecap. The Soviet Union has agreed, in principle, that nuclear explosions for peaceful purposes should be permitted under a worldwide test ban. If such a treaty were not concluded, however, Antarctica would be denied the use of nuclear explosions, no matter how necessary they might be.

Similarly, the prohibition of the disposal of radioactive waste material in Antarctica could be very disadvantageous. Nuclear power may be the key to opening up Antarctica and developing its potentialities. Even for the scientific projects of the near future, nuclear power could save the transportation of huge quantities of fuel. The flat prohibition of all disposal of radioactive waste material, a prohibition which does not exist in this country, should be carefully studied by those engaged in nuclear power projects to make sure that radioactive waste would not be diverted to locations more dangerous to mankind.

Alongside these political and strategic considerations, it would be shortsighted not to think of Antarctica in terms of economic importance. Antarctica is a land of the future. Its potentialities are hidden by ice and snow. Nevertheless, we can be virtually certain that modern science and technology in time will open up the continent to beneficial uses. For the United States to give up the sovereign rights it has earned in Antarctica would be as great a folly as it would have been many years ago to forego the purchase of Alaska.

The amount of natural resources in Antarctica is still a subject of study. Already, however, traces of some 175 minerals have been found, including manganese, copper, lead, nickel, and uranium. It is believed Antarctica may contain one of the most extensive coal fields in the world. Certainly there are many problems to be solved before these resources can be extracted, but in an atomic age there is every reason to believe it can be done. As the resources in the rest of the world are depleted, the resources of Antarctica will increase in value.

Looking further into the future, Antarctica may hold even greater benefits in store. For example, it is not inconceivable that Antarctica might help provide food for the world's rapidly growing population. The Antarctic seas abound in certain types of plant and animal life which scientists believe might be harvested someday.

Although the Antarctic Treaty provides for freedom of scientific investigation, it makes no mention of the logical aftermath of the scientific research—namely, economic development. This is a subject which is entirely omitted. Moreover, because the development of the Antarctic resources will require large amounts of funds, it is highly questionable whether development will be undertaken as long as the continent is under international control. A nation such as the United States could afford to make the necessary investments if it knew that the American taxpayers who paid the bill were also to reap the benefits. However, it would be reluctant to invest for the benefit of the Soviet Government. The experience of the United Nations has shown that it is very difficult to obtain large amounts of funds for international projects; it is thus no idle fear that the economic development of Antarctica will be impeded by this treaty.

Mr. Chairman, I think I have said enough to permit a summing up of one American's reaction to the Antarctic Treaty. In practice, if not in theory, it will reduce the preeminent rights which the United States has in a large part of Antarctica. It will give the Soviet Union a position of equality which it does not deserve, and which poses a danger to the security of the United States and its allies in the Southern Hemisphere.

One alleged return for these sacrifices is freedom of scientific investigation. This has always existed in Antarctica anyway for the nations willing to undertake the effort involved.

Another alleged gain is the settlement of a political problem by the freezing of national claims in favor of international control. It seems likely that if international control ever ends, and the claims thaw, they will be more complicated than ever before. They certainly will not be restricted to free world nations as they have been in the past.

Proponents of the treaty point to the demilitarization of Antarctica as a step forward. In reality, it appears to take what could have been an asset to the defense of the free world and, at best, neutralizes it. At worst, the treaty does not fully insure against the possibility of clandestine military operations by the Soviet Union.

Frankly, Mr. Chairman, I do not believe that the Soviet record with respect to the maintenance of treaties is one which could inspire confidence in anyone but a congenital optimist. I do believe that the Senate should reject this treaty as being contrary to the best interests of the United States.

EXHIBIT 2

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., June 22, 1960.

HON. THOMAS S. GATES, Jr.,
The Secretary of Defense,
Washington, D.C.

DEAR MR. SECRETARY: As you perhaps know, the Senate Committee on Foreign Relations met this week and voted out with approval the 12-nation treaty on the Antarctic. On June 14, I appeared before the committee and opposed the ratification of the treaty. At that time I expressed considerable interest, among other things, in the military aspects

of the treaty and raised some serious questions regarding the effect the treaty may have on the military posture of this country.

I have noted that within recent months we have substantially increased the range of our Atlas missile. Present reports indicate also that the Navy plans on perhaps doubling the range of the Polaris. Our information is that the Russians have a greater capability in the field of thrust than we have. Under these circumstances, I would like to raise the question as to whether or not it would be possible in the foreseeable future for the Soviets to increase the range of their intercontinental ballistic missiles sufficiently to enable them to launch missiles around the underside of the globe at targets in the United States.

In asking this question I have in mind that we have built and are building our detection systems on the assumption of an attack over the Arctic regions. This detection system will be built at great expense. It seems to me that we may be guarding the front door and leaving the rear of our house wide open to attack. My reading of the Antarctic Treaty indicates that it would preclude the installation of even passive defensive system, that is, detection systems of any type.

If it is technically possible for the Soviets to increase the range of their missiles and come around the underside of the globe, passive defensive systems for detecting purposes would be of immense importance to our Government, and the time might come when the installation of active defensive systems in the Antarctic area would be the logical location of such system.

In addition to the answer to this specific question, it would be appreciated if you would give me your observations on what you think is the general effect of demilitarizing the Antarctic area on the present and future military posture of this country.

Inasmuch as there are only several days left in this session and since it is anticipated that the treaty will be called up in the Senate in the next few days, I would like your answer at the earliest possible time for my guidance in discussing the treaty when it comes up on the Senate floor.

Sincerely yours,

CLAIR ENGLE,
U.S. Senator.

PRESIDENT EISENHOWER'S TRAVELS ABROAD

Mr. SALTONSTALL. Mr. President, there has been some criticism recently of President Eisenhower's travels abroad. I believe that this primarily stems, simply enough, from the fact that all has not gone exactly as well as it might have in our relationship with friends abroad and our efforts to seek peace. But the reasoning offered is that the administration is substituting so-called "personal diplomacy" for normal and traditional diplomatic procedures.

Yesterday I listened to Secretary of State Herter testify on the State Department appropriations bill, and he touched upon the President's trip to the Far East. Mr. Herter emphasized the importance of regular channels for international contact. But he stressed that the purpose of President Eisenhower's travels were to increase friendliness and understanding across the world, and not to negotiate with foreign chiefs of state. The one exception, of course—and the point has been clearly made—was the trip to Paris for the summit meeting.

It seems to me that the criticism I have mentioned is founded on a misunderstanding, either accidental or contrived, of the true purpose of the President's trips. There is need, therefore, for a clear distinction to be made between international contact among Government officials for actual negotiation and, on the other hand, for the generation of good will.

Perhaps the catchy term "personal diplomacy" has been used too often to describe the President's intent. It has certainly been used imprecisely and even inaccurately. Diplomacy relates directly to conducting negotiations; to arranging treaties, for instance. The President's travels did not have negotiation as their purpose, and therefore could not supplant the normal diplomatic processes, which have continued unabated. Perhaps we should carefully make the distinction between "social" and "business" purposes when we characterize the Eisenhower trips. When the term "personal Presidential diplomacy" is used it must be applied specifically to a situation like the Paris summit meeting, rather than tossed around casually as a description of everything the President does outside the borders of the United States. Good will missions, efforts to convince farflung peoples of the basic unity of free men everywhere, travels to demonstrate the dynamic belief of the United States in world peace—these must be separately identified and given full credit for what they are.

I believe these purposes are not only valuable, but necessary, considering the nature of the world today and the character of the Soviet challenge.

It is actually standard practice for chiefs of state and heads of government to advance their national interests by good will trips, and with good reason. We all know of Chairman Khrushchev's efforts in this regard, continuing, in one way or another, since the highly publicized Bulganin-Khrushchev "team visit" to India in 1955. There is no doubt that this is a crucial weapon in the battle for men's minds, and it would be preposterous for anyone to suggest we should leave it for the Russians alone.

The need for goodwill tours for the President of the leader of free world nations has been advanced by the revolution in transportation and communications technology. If a head of state can easily and practically visit those he claims to be his foreign friends, it becomes increasingly difficult for him not to do so.

There is another revolution, so-called, which affects the matter also, and more basically. The new, yearning, emerging nations of the less developed areas have high aspirations for success and prestige in a world previously closed to them. This is the revolution of rising expectations. In order to encourage these peoples to sustain self-determination, independence and progress in a free democratic context, we must prove our affection and regard for them. We must seek to build their self-confidence and self-respect. We go to their homelands to do this, demonstrating directly and personally our recognition of and regard for them. This the President has sought to accomplish in his immensely successful visits to the Near East in 1959, and Latin America and the Far East in 1960. His European trip in 1959 was directed toward vigorously cementing the ties of unity and friendship between ourselves and our Western allies.

Indeed, a prime reason for Chairman Khrushchev's cancellation of President Eisenhower's visit to the Soviet Union was the fear that such a trip might be too successful from the free world's point of view. The same apprehension undoubtedly directed the organized Communist efforts to block the President's visit to Japan more recently. President Eisenhower's tremendous reputation as a man of peace has had a profound effect on the tactics of international communism.

The dissatisfaction of the Tokyo agitators must be measured against the overwhelming outpourings of affection, admiration, and support from millions of people who have greeted President Eisenhower across the world. We must not overdraw this recent and temporary damage to our prestige. In many visits—for the first time—of the American head of government to overlooked nations and peoples, President Eisenhower has demonstrated his willingness to go many thousands of extra miles to improve the chances for peace. Foreign leaders have assured us of the great value to the cause of peace of these journeys, and they have received universal support from within the United States.

USELESS AGENCY—CIVIL DEFENSE

Mr. YOUNG of Ohio. Mr. President, later today the Senate will consider the independent offices appropriation bill, which includes the appropriation for the Office of Civil and Defense Mobilization.

Civil defense, Mr. President, might have been of some value during World War II and for a few years thereafter. However, we are now in an age of intercontinental ballistic missiles, nuclear bombs and space satellites.

Civil defense as it is now operated is about as useful as flintlock muskets, tallow dips, mustache cups, or Civil War cannonballs. This boondoggling bureaucracy has spent over $1 billion of taxpayers' money during the past 9 years. I challenge anyone to prove that the American people are in reality any more secure than when this wasteful program began.

Yet, with this fact staring us in the face, we continue to fool ourselves and to take money from taxpayers with a civil defense program which is not only false in concept of defense in this nuclear age, but wasteful and extravagant in its implementation.

The goals of our civil defense planners are hidden by confusion. On the one hand they tell us to build shelters in our basements and back yards. On the other hand they map out elaborate evacuation schemes and tell us to run in event of attack.

As I have pointed out many times before, neither of these plans is feasible. Together they are ludicrous.

The futility, the waste, and the bungling of this outmoded agency are almost beyond belief.

In the bill which will be before the Senate shortly this agency is requesting $12 million in matching funds for personnel. In reality, we are being asked to provide this money to create more than 4,000 paid positions in city halls and county courthouses. Not only is this a waste of Federal funds, it is also an encouragement to State and local governments to waste money.

In Ohio there are some 90 employees in the State organization costing the State $554,000. Under the proposed matching program, Ohio would have 200 salaried civil defense workers and would spend almost $1½ million, of which the Federal Government would contribute $570,000. I wonder whether the people of Ohio will be any more secure with these added paid employees. To judge by the past, there will be no more safety but a lot more confusion.

We are told that these new employees will be chosen under State civil service merit systems. If these are the same merit systems that have given us the paid civil defense employees we have today, I shudder to think of the consequences.

At the same time I cannot say enough on behalf of the fine volunteer workers who have made sacrifices and rendered great services in time of floods and fires and other disasters without thought of compensation. They will do so again as they have always done without paid civil defense officials directing them from behind desks.

This bill also contains an appropriation of $6½ million for the General Services Administration for fallout shelters in proposed Government buildings throughout the country. The only people this will help are contractors.

Of what earthly use will shallow shelters be in Federal buildings, most of which are located in metropolitan areas where shelters will be of little or no protection?

At a time when the Nation faces serious housing problems which administration leaders refuse to face for fear of unbalancing the Federal budget, this same administration proposes $6 million worth of useless shelters in Government buildings.

It is interesting to note that, of the $76 million requested for this agency, $47 million, or 62 percent of the total appropriation request, is designated for salaries and expenses.

Mr. President, the House of Representatives denied the $12 million request for salaries and the $6½ million for fallout shelters. I intend to vote against this bill if these requests are included in its final version. It is my fervent hope that the House of Representatives will stand firm, as it did last year, in refusing to grant these sums.

If we allow this bureaucratic monstrosity to expand this year, who knows to what extent it will grow and spend; grow and waste—always a refuge for ex-governors, defeated politicians, and political hangers-on of the party in power.

Mr. President, rather than pouring additional millions of taxpayers' dollars into a worthless plan for passive resistance, let us scrap civil defense as now conducted. Boot out the politicians from the Federal Administrator of the Office of Civilian Defense and Mobilization right down the line. Remove these paid officials and employees from the public payroll. Place the defense of citizens of our country in the hands of those trained to defend and maintain our freedom—the Armed Forces of our country. Surely, the defense of civilians is too important to be entrusted to civilians in armbands.

Shelter programs for basements and backyards required in the construction of buildings connote a waste of money. In reality, in event of a nuclear attack and conflagrations that would follow, such so-called shelters would not be shelters but would prove deadly firetraps. We should depend upon our Armed Forces and their power for instant retaliation and defending this nation and its citizens instead of adding appropriations for this worse than useless Office of Civil and Defense Mobilization.

PLAIN TALK ON CIVIL RIGHTS

Mr. RUSSELL. Mr. President, the July edition of Reader's Digest magazine contains an informative and interesting article that is in the nature of a debate between two of our distinguished colleagues, the Senator from Georgia [Mr. TALMADGE] and the Senator from Illinois [Mr. DOUGLAS]. The subject matter of their debate deals with the so-called civil rights question.

As every Member of the Senate is well aware, both of these Senators are well informed on this subject. Both are able and articulate spokesmen for the point of view they hold on this issue. Because of the general interest in the so-called civil rights question, I ask unanimous consent that the article be printed in the body of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAIN TALK ON CIVIL RIGHTS

(Senator PAUL H. DOUGLAS versus Senator HERMAN E. TALMADGE)

(The explosive civil rights issue will undoubtedly shake the platforms of both the Democratic and Republican national conventions during the coming month. It is an issue on which it is impossible for an informed U.S. citizen not to have an opinion. With this in mind, shortly after passage of the controversial Civil Rights Act of 1960, the Reader's Digest asked Senator PAUL H. DOUGLAS, Democrat, of Illinois, leading advocate of civil rights legislation, to participate in a candid, face-to-face discussion of the subject with Senator HERMAN E. TALMADGE, Democrat, of Georgia, a most articulate spokesman for the southern viewpoint. A recording of their forthright talk follows:)

Senator DOUGLAS. Senator TALMADGE, the current conflict over civil rights, to my mind, is the most tragic thing that has occurred to divide our Nation in this century. If we are going to discuss our views—and we know we differ—I think we must do so calmly but frankly, and with the hope that we can make some contribution toward solving the problem.

Senator TALMADGE. I certainly want to enter the discussion in that spirit, Senator DOUGLAS. I agree that this tragic issue is dividing our country, setting section against section and race against race, at a time when we should be strong and united in a troubled world.

Senator DOUGLAS. Let us begin with fundamentals. I think our attitude toward the Negro depends largely upon our view of the nature of man. If we believe, as I think most Americans do, that all men, regardless of race or color, are created equal by Almighty God, that they all have within them the divine spark, and that they all have the right and, indeed, the obligation to develop their moral character as God would have it, then we must reexamine our attitude toward the Negro in the light of that belief.

Senator TALMADGE. I agree that all men of all races are equal in the sight of God and that all American citizens have equal rights under the Constitution of the United States and the laws of the individual States.

Senator DOUGLAS. Then we cannot set the Negroes apart as social or intellectual inferiors. We cannot hamper them in getting an education. We cannot deprive them of the right to vote. On the contrary, we have an almost sacred duty to enhance the Negroes' social, economic, and political development. That is what we are trying to do in our efforts to safeguard the Negroes' rights as American citizens. I believe that is the basic issue in the present civil rights controversy.

Senator TALMADGE. I cannot agree that that is the basic issue. The people of the South do not want to deny the Negro his right to vote, or to deprive his children of an equal education. Neither do they want to hamper his development as an individual or as a good citizen.

Senator DOUGLAS. Those are brave and heartening words, Senator. But, unhappily, they are not supported by the facts in the Southern States. May I ask what you consider the basic issue?

Senator TALMADGE. What the people in the South resent is the attempt of powerful forces within this country to elevate a minority, in this case, the Negroes, to a special and favored status by means of Federal laws. They resent Federal compulsion to make fundamental changes in the social traditions of the majority merely as a special political favor to the minority.

Senator DOUGLAS. That is not the case, Senator. We seek only to obtain and guarantee equal rights for the Negro under the law.

Senator TALMADGE. But when we speak of equal rights, Senator, we must remember that under our republican form of government the individual has other rights. Among them are the rights of privacy, of protecting one's family, of educating one's children according to one's own choosing. These are rights that are cherished not only by southerners but by free men everywhere. Yet the social reformers and agitators would sacrifice these rights of the majority in order to bestow special rights on a minority. That is the issue that is now dividing our country. And it is working to the detriment of our Negro citizens instead of advancing their interests.

Senator DOUGLAS. I am afraid you are confusing the issue, Senator. No one is proposing that white people must invite Negro citizens into their homes. No one is saying that white girls should marry Negro boys. No one is saying that Negroes must be admitted to white private clubs. What we are discussing is the attitude of the Southern States toward the law of the land. Will the Southern States, in defiance of the Constitution, hamper the Negro in obtaining an adequate education. Will the Southern States continue to set the Negroes apart as inferiors? Will the Southern States continue to deprive the Negro citizen, because of his race, of his right to vote?

Senator TALMADGE. Senator, those rights were established in 1868–70 by the 14th and

15th amendments to the Constitution. When those amendments were adopted, most States already had separate school systems for whites and for Negroes. And up until 1954 the courts held in a long series of decisions that the provisions of the 14th amendment were being complied with when the States provided separate but equal facilities for both races. Then, in 1954, without any amendment to the Constitution or any act of Congress, without any basis except sociological and psychological theories, the Supreme Court reversed all these precedents and ruled that separate but equal schools were no longer constitutional.

Senator DOUGLAS. But you and I know Senator, that these separate schools for Negroes were seldom equal. I thing it is undeniable that schools for Negroes in the South, indeed in some sections of the North, were grossly inferior. But then, a few years ago, came the case of Topeka, Kans., where the separate high schools for Negroes were approximately equal to the white schools. The Supreme Court then had to decide whether segregation in itself was not a denial of the equal protection of the laws guaranteed by the 14th amendment. The Court ruled unanimously that the segregation of children because of race and during their formative years actually retarded their education and implanted an inferiority complex in the children which becomes a handicap in later life. That decision was reaffirmed later by the Supreme Court, and again unanimously, with three new justices sitting.

Senator TALMADGE. But public education is the right and responsibility of the States, Senator. The acts of Congress admitting the last 14 States to the Union makes that perfectly clear. Yet the Supreme Court decision of 1954 sought to deny the Southern States that right.

Senator DOUGLAS. The court decision dealt with but one thing, segregation—which it declared unconstitutional. It didn't tell you how to desegregate or when to desegregate, and I don't think it interfered with your States rights. I know that you have called the decision "sociological and psychological jurisprudence." But I believe that the decision clearly reflects the awakening of America's moral consciousness to what is involved in the separation of American citizens along racial lines.

Senator TALMADGE. During recent years the people of the South, whites and Negroes, have made real progress in promoting racial harmony and good will. The court decision of 1954, contrary to its own declaration, really turned back the clock. Why? The answer can be found in the Supreme Court decision of 1896 which declared: "If the races are to meet upon terms of social equality, it must be the result of natural affinities, a mutual appreciation of each other's merits, and a voluntary consent of the individuals." We cannot solve by Federal laws or court decisions social problems as old and complex as those involved here. If the 18th amendment taught us anything, it is that Federal laws cannot be effective or enforced when they lack the support of the majority of the people—or what the Declaration of Independence calls the "consent of the governed."

Senator DOUGLAS. But that refers to the consent of the majority in the Nation as a whole. What you are saying, as I understand it, Senator, is, "These are local problems, and we must deal with them locally in the South." The sad fact is that the white South has not dealt with the problems either fairly or realistically. Even today, 6 years after the Supreme Court decision, every State in the South appropriates less money for Negro schools than for white schools.

Senator TALMADGE. I do not say that our schools for white or colored children are what we want them to be. But I must remind you that until very recent years the South has been struggling to overcome the legacy of destruction and poverty which it inherited after the War Between the States. Only after World War II were the Southern States able to provide for the educational needs of their children, both white, and colored. During my administration as Governor of Georgia from 1947 to 1955, we spent about 53 cents of every tax dollar for education, and launched a $200 million building program which has since been accelerated. The people of Georgia do not have to apologize to anyone for their schools for whites or Negroes, and those schools are open to the inspection of anyone.

Senator DOUGLAS. Well, Senator, perhaps we should take another look. For the record shows plainly that in Georgia as well as in other Southern States there is a great disparity between public school facilities for Negroes and those for white children. But let us talk about voting, which is another critical problem. There are 16 counties in the South where, even though Negroes constitute the majority, there is not a single registered Negro voter. There are 49 counties where Negroes are the majority, but where less than 5 percent of the Negroes of voting age are registered. There are about 5 million Negroes of voting age in the South, but only about 1,200,000 were registered in 1956. Is this the best that the white South, left to its own devices, can do to solve that problem?

Senator TALMADGE. You must be aware, Senator DOUGLAS, that a time factor is involved here. Until 1946 we had white Democratic primaries in the South in which Negroes did not vote. Since the Supreme Court held the white primaries unconstitutional in 1946 we have come a long way. While I do not consider the report of the Civil Rights Commission authoritative, let us look at those figures. They show that Negro registration in the Southern States climbed from 595,000 in 1947 to about 1,200,000 in 1956. In Georgia, where we have some 600,000 Negroes of voting age, more than 180,000 are registered and voting, and the number is increasing every year.

Senator DOUGLAS. But aren't these Negro voters nearly all in the cities? How many are voting in the rural areas?

Senator TALMADGE. These voters are scattered all over the State. True, there is a large concentration—about 33,000—in Fulton County where Atlanta is located. But in Liberty County, which is rural, there are more Negroes than whites voting. The Negro vote is equal to the white vote in Long, McIntosh, and Taliaferro Counties, all of which are rural. Colored voters in Georgia have elected public officials. They frequently hold the balance of power in local elections. My point is that we have accomplished this in less than 15 years. We have done it under State law and without Federal compulsion. We cannot help it if all the Negroes who are qualified to vote do not choose to exercise that right. The National Association for the Advancement of Colored People has reported that only 25 percent of the Negroes in Cleveland, Ohio, register and vote. We do better than that in Georgia.

Senator DOUGLAS. Well, it is good to know that Negroes in Georgia are voting in such numbers. But let us not blink the fact, Senator, that in many parts of the South, Negroes are being denied their right to vote in an outrageous manner. Read the facts in the report of the President's Civil Rights Commission—a six-member body that included three southerners, incidentally.

Senator TALMADGE. In my opinion that report is a prejudiced and unreliable document, and I call your attention to the dissent of Commissioner Battle, who states: "I concur in the proposition that all properly qualified American citizens should have the right to vote, but I believe that the present laws are sufficient to protect that right."

Senator DOUGLAS. But, Senator, the evidence shows that present laws are far from sufficient. Consider what happened in Tuskegee, Ala., the site of the renowned Tuskegee Institute. Negro Ph. D.'s were denied the right to register on the ground that they were not qualified. Then the State of Alabama gerrymandered the town boundaries in such a way as to disenfranchise Tuskegee Negroes in the local elections.

Senator TALMADGE. Let me say that if any citizen in the Tuskegee area feels he has been denied his right to vote, he has four recourses under Federal law, including the Civil Rights Acts of 1957 and 1960. I have yet to hear of any citizen, of whatever race, who sought protection of his voting rights who did not receive redress in the courts.

Senator DOUGLAS. Well, thus far, Senator, you have asserted that the white people in the South do not wish to deprive the Negro of his right to vote, and you have pointed with pride to the increasing number of Negroes in Georgia who are voting. Why, then, do you oppose the recommendation of fair-minded people who are only trying to enable the Negro to exercise his constitutional rights?

Senator TALMADGE. We oppose such recommendations because they tend to violate our States rights, because they usually emanate from agitators and social theorists, and because they result in dangerous and unworkable laws which do more harm than good. So far as voting is concerned, further laws are unnecessary. But the Supreme Court decision affecting the schools of the South is particularly repugnant to the majority of southerners because it would force the intermingling of white and colored children at their most impressionable ages. I think it is fundamental that people prefer to associate with their own kind—whites with whites, Negroes with Negroes: you may call this discrimination. But people of all races discriminate all through their lives and even among themselves. We whites discriminate when we select our churches, schools, and clubs. We discriminate when we choose our friends and our children's playmates. We discriminate when we decide which boys may escort our daughters to a dance.

Senator DOUGLAS. Now, Senator, I think you are getting to the crux of the matter. But you are only hinting at it. I believe that the southern attitude is based upon fears or prejudices which are unjustified.

Senator TALMADGE. We are reluctant to discuss this aspect of the problem. Whenever we do, we are called racist or worse. But I cannot agree that the fears of southern people are as unfounded as you say. Let me put it this way: history shows that wherever people of different races have been forced to mingle intimately, as would be the case in our public schools, the result has been a biological mixing of the races, whether legally or otherwise. This has been true in Cuba, Egypt, Brazil, and elsewhere. People in some of these countries are proud of their racial assimilation. We do not want it to happen in the South. Indeed, I think it is repugnant to Americans of all regions, whether they are white or colored. You will find a number of Negro sociologists who have written that assimilation will be the inevitable result of integration. Only a few years ago, to cite a specific example, a Negro lawyer in South Carolina, a local counsel of the NAACP, told a reporter that while intermarriage was not discussed at NAACP meetings, "I am sure the NAACP knows that once you integrate it is the natural consequence." You cannot expect us to derive any reassurance from that sort of talk.

Senator DOUGLAS. That does not follow at all. There is no more intermarriage in the North than in the South, and, I might add, there is far less interbreeding.

Senator TALMADGE. Nor are we reassured, Senator, when we read about what happens

in the North as a result of efforts to mix Negroes and whites in schools and housing developments. There has been plenty of violence in your own State of Illinois, and only recently there was rioting and at least one fatal stabbing in a newly integrated school in Philadelphia. We have been able to avoid that sort of thing in the South, and we want to continue doing so.

Senator DOUGLAS. We are not entirely blameless in the North, and we, too, have our problems to solve. Nevertheless, there have been racial clashes in the South recently, and the whites have been the aggressors. The peace which previously existed in southern communities was due primarily to the Negroes' fear of white violence if they stood up for their rights. A graveyard is a rather peaceful place, too, Senator; but who wants to live there?

Senator TALMADGE. Most southerners, Senator, are born and bred in the traditions of the Old and New Testaments. They know and acknowledge the true brotherhood of man. We are also traditionally a conservative and law abiding people. But Thomas Jefferson once said that while strict observance of the law is one of the highest duties of a good citizen, it is not the highest. "To lose our country by scrupulous adherence to written law," he said, "would be to lose the law itself, with life, liberty, property and all those who are enjoying them with us—thus absurdly sacrificing the end to the means."

Senator DOUGLAS. Yes, Senator, but it was Thomas Jefferson who fought to have slavery outlawed by the Constitution, and he was defeated by his colleagues from the South. I believe Thomas Jefferson would be on our side today. And, despite what you say, I am convinced that there is a large and growing body of white citizens in the South who are eager to have this problem settled once and for all within the framework of the Constitution.

Senator TALMADGE. These people would like to see the school issue settled, Senator, by a constitutional amendment, and not by the whims of the Court. It has not been easy for us to get the southern viewpoint before the rest of the Nation. But I think that is changing. Last April a survey of public opinion in 39 States outside the South disclosed genuine sympathy for the southern viewpoint.

"From California to Maine," the survey reported, "men recognize that decades of strict social custom in the South cannot be overturned quickly." Those are heartwarming words to all thinking southerners.

JANE ADDAMS AND THE ARTS

Mr. WILEY. Mr. President, it was my privilege this morning to hear a wonderful talk by the distinguished Senator from Minnesota [Mr. HUMPHREY] when he addressed the Women's International League for Peace and Freedom. As usual, he did a grand job. The occasion, of course, was a part of the Jane Addams Centennial.

Mr. HUMPHREY. I thank the Senator.

Mr. WILEY. Mr. President, it might seem a contradiction to some that Jane Addams, raised in an almost Puritanical background and early in life deeply concerned with righting the social injustices that she saw, should have begun her efforts to help the poor by providing an opportunity for them to participate in and appreciate the arts.

Hull House was begun as a kindergarten where mothers could leave their children with Jane Addams and Ellen Gates Starr, while they worked long hours over a machine, knowing that the children would be fed and well cared for. More than that, as Jane Addams observed the children playing, in the particularly creative way that children play, the idea of this creative life for all people, for the continuing use of the imagination that adults often forget, beban to take hold. She wrote: "We realize afresh that it is the business of youth to reaffirm the beauty and joy in the world that such spontaneity may become a source of new vitality, a wellspring of refreshment to a jaded city. It is easy to fail to utilize it; the artists are preoccupied trying to recapture it after the first bloom has escaped them and only occasionally do the educators demonstrate that each child lives not only in an actual environment visible to all, but in enchanted surroundings which may be reproduced by the child himself."

She saw the value of each national and racial culture as a very real contribution to American society into which each was assimilating, and she saw this growing American culture as the product of all of them.

But more than that she recognized the value to each individual and family of preserving and taking pride in the music and art of the old country. She watched older immigrants gain new self-respect when given the opportunity to pursue crafts they had learned as young people and which had since been shunted aside in the growing industrialism of the New World. It was to foster the art instinct of these immigrants that the Hull House Labor Museum was started; and it was a delight to Miss Addams. Here one found a Russian woman spinning, an Irish woman carding, Syrians making rugs, a German potter's wheel, a bindery, a basketry, and the din of cabinetmaking or metalwork.

And she watched the young people, children and grandchildren of the immigrants, take a fresh look at the old folks. "It has made Americanized children look upon the Old World accomplishments of their parents with something better than eyes of scorn," she writes.

The very first large gift of funds to Hull House was used for the erection and maintenance of an art gallery, and it was a matter of great pride to Jane Addams that "the first brick-and-mortar expansion of Hull House should be in the field of pure esthetics." She saw the awakening of pride in the young people, and the surge to go forward, beginning where their parents had left off. There immediately began clubs and classes for children in the studio. Adults, too, soon entered the fold, and Hull House later developed a close alliance with the Chicago Art Institute.

A key, then, of Jane Addams' receptivity to art was its use toward that goal that half a century later, we are faced with the problem of achieving through the educational and recreation programs that began in her days: the fullest development of the child and adult potential.

I ask unanimous consent that an article entitled "Jane Addams and the Arts" be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JANE ADDAMS AND THE ARTS

CHILD-NATURE AND ART

Nurtured as Jane Addams was in an almost Puritanical background, her warm response to the creative arts may seem a strange anomaly, but as we follow her development of social consciousness, the key quite easily reveals itself. Take Jane, the eight-year-old little girl playing with her stepbrother: "When we said that the purple windflowers—the anemone patterns—'looked as if the winds had made them,' we thought much more of the fact that they were windborn than that they were beautiful; we clapped our hands in sudden joy over the soft radiance of the rainbow, but its enchantment lay in our half belief that a pot of gold was to be found at its farther end." In the chapter on "The Play Instinct and The Arts" of her book, "The Second Twenty Years At Hull House," her words carry us along in the development of this early theme: "We realize afresh that it is the business of youth to reaffirm the beauty and joy in the world that such spontaneity may become a source of new vitality, a wellspring of refreshment to a jaded city. It is easy to fail to utilize it, the artists are preoccupied trying to recapture it after the first bloom has escaped them and only occasionally do the educators demonstrate that each child lives not only in an actual environment visible to all, but in enchanted surroundings which may be reproduced by the child himself."

CITY DWELLER AND ART

But Jane Addams had equal concern for the old ones: "What is the function of art but to preserve in permanent and lovely form those emotions and solaces which cheer life and make it kindlier, more heroic and easier to comprehend; which lift the mind of the worker from the harshness and loneliness of his task, and by connecting him with what has gone before, free him from a besetting sense of isolation and hardship?" She sees the release function of art, the offering of an escape from the monotony of daily living. Nor did she omit to stress the American's need to appreciate the rich heritage of the foreign-born; has he been properly taught if he never learns to recognize that the Greek peddling bananas at the corner once wakened every morning in sight of the Acropolis, and what that sight has meant to him? It was to foster the art instinct of these immigrants that the Hull House Labor Museum was started; and it became a delight to Miss Addams. Here one found a Russian woman spinning, an Irish woman carding, Syrians making rugs, a German potter's wheel, a bindery, basketry, and the din of cabinetmaking or metal work. This inspired Julius Rosenwald to found the Industrial Museum in the Fine Arts Building at Jackson Park, Chicago. Of even more importance to Jane Addams: "It has made Americanized children look upon the old-world accomplishments of their parents with something better than eyes of scorn."

MORAL RESPONSIBILITIES OF ART

Art for art's sake was never enough for Jane Addams, even as a very young woman traveling abroad: "The wonder and beauty of Italy later brought healing and some relief to the paralyzing sense of the futility of all artistic and intellectual effort when disconnected from the ultimate test of the conduct it inspired." She reiterated: "We were spending 2 months in Dresden that winter, given over to much reading of the 'History of Art' and to much visiting of its art gallery and opera house, and after such an experience I would invariably suffer a moral revulsion against this feverish search after culture."

Now she began to demand a certain artistic integrity. "It was doubtless in such moods that I founded my admiration for Albrecht Dürer, taking his wonderful pictures, however, in the most unorthodox manner, merely as human documents. I was chiefly appealed to by his unwillingness to lend himself to a smooth and cultivated view of life, by his determination to record its frustrations and even the hideous forms which darken the day for our imagination and to ignore no human complications. * * * I believed that his canvases intimated the coming religious and social changes of the Reformation and the peasants' wars, that they were surcharged with pity for the downtrodden, that his sad knights, gravely standing guard, were longing to avert that shedding of blood which is sure to occur when men forget how complicated life is and insist upon reducing it to logical dogmas." A unique approach, indeed.

ART AT HULL HOUSE

With art so closely interwoven by Jane Addams' consciousness into the very art of living, it is more easily understood how art became such an important cornerstone at the founding of Hull House. So it happened that the very first large gift of funds was used for the erection and maintenance of an art gallery, and it was a matter of great pride to her that "the first brick-and-mortar expansion of Hull House should be in the field of pure esthetics." There immediately began clubs and classes for children in the studio. Miss Addams "was not in the least afraid of what much later came to be called fads and frill in the schools—she would have liked to see everybody 'privileged' in the same fashion." Adults soon entered the fold, and Hull House then developed a close alliance with the Chicago Art Institute.

"Her quest for beauty, her dream of bringing beauty into even the most miserable of the lives about her did not cease." And there began at Hull House "that scheme for giving the public school children of Chicago a chance to see good pictures every day, which has since developed so splendidly into the Public School Art Society." The Hull House Dramatic Association was founded—to become "the oldest continuously performing 'Little Theater' group in America." At the same time the Music School began to flourish: "In addition to sharing with our neighborhood the best music we could procure, we have conscientiously provided careful musical instruction that at least a few young people might understand those old usages of art." * * * "From the first lessons they are taught to compose and to reduce to order the musical suggestions which may come to them, and in this wise the school has sometimes been able to recover the songs of immigrants through their children." Again that concern for sharing at all ages.

From the music school young professionals began to emerge and take their place in the musical world, and from the Hull House Theatre talented young actors entered the legitimate stage. The art studio, presided over by the genius of Enella Benedict, who had been there from the very first, mothered improverished artists—even to allowing an occasional student to sleep upon the studio couch when all resources had failed, one among: "that gallant company of men and women—who are fairly indifferent to starvation itself because of their preoccupation with higher ends." Added to the young unknowns (many of whom have since become famous), a nucleus of established artists came from far and wide as residents. Under the leadership of some of these "the work of the studio merged into the crafts—a shop was opened at Hull House under the direction of residents who were also members of the Chicago Arts & Crafts Society" and "buildings on the Hull House quadrangle furnish studios for artists who find something of the same spirit in the contiguous Italian colony—they find their classes filled not only by young people but also by the older people to whom the studio affords the one opportunity of escape from dreariness."

In the last months of her life Jane Addams proudly noted: "A thousand children a week find room there (at Hull House) to sing, to dance, to act, to draw, to read poetry—and to play games." The key, then, of Jane Addams' receptivity to art was its use toward that goal she consistently cherished—the fullest development of the child, or adult, potential. We hope her words may be especially prophetic at this late hour: "Doubtless our scientific advance depends more upon disinterested intellectual curiosity than upon any other human trait, but we may be faced at this moment with an opportunity to so revitalize our own experiences that we may score as never before in the very art of living itself. We may drink from a fountain into which are flowing fresh waters from remote mountain ranges which only the artists could have discovered and made part of our familiar world."

FOUR HUNDRED THOUSAND DOLLARS FOR ARMS CONTROL STUDIES SHOULD BE RESTORED IN STATE DEPARTMENT APPROPRIATION

Mr. PROXMIRE. Mr. President, in our discussions and evaluations of recent events in Japan and the Far East, let us not lose sight of a relatively small but crucially important appropriation in the State Department budget for 1961. I refer to the appropriation of $400,000 requested for arms control studies and preparation for disarmament.

In his prepared statement before the Subcommittee on Appropriations for the State Department, Secretary of State Christian Herter yesterday gave top priority to the restoration of this sum, which has been deleted in the House. Here is what Secretary Herter said:

First there are items which bear directly upon the future of East-West relations. The most important of these is the request for disarmament studies and staff.

Disarmament negotiations are continuing at Geneva, as you are aware, both those dealing with a possible nuclear test ban, and those looking toward broader arms reductions. The prospects for early progress are, frankly, a bit uncertain at present. Nevertheless, discussions continue. The problems of disarmament are so important that we must exhaust all avenues in seeking meaningful, enforceable agreements. We must by every action demonstrate the continuing good faith of our side. We must by our preparations be ready to deal promptly and realistically both with technological change and with any eventual progress in negotiation.

In the past 10 days we here in the Senate have appropriated over $41 billion to maintain and strengthen our Military Establishment. All of us supported this enormous expenditure on final passage, because we believe it is essential for our country to stay strong, at a peak of military ability, to deter attack from any potential enemy.

It was timely that a few minutes ago the majority leader, the Senator from Texas [Mr. JOHNSON], called for a massive program for peace. I could not agree more with the majority leader, but what a travesty it will be if the Senate fails to match its words with deeds when we have this opportunity to do so.

The $400,000 request for disarmament and arms control studies in the State Department represents a fantastically tiny fraction of our total arms budget, less than one-thousandth of 1 percent. Small as it is in the total arms picture, this sum would make possible a far more effective and coordinated program of research and development concerned with an enforceable nuclear test ban, effective arms control, and eventual controlled worldwide disarmament. It would permit the State Department to devote the full time and skills of some of its personnel to preparations in this area, providing badly needed background support for our negotiators in Geneva. We are currently engaged in two sets of negotiations in that city, one concerned with the achievement of a ban on nuclear testing, the other with the more general question of disarmament. Setting aside a specific sum for preparations in this area seems to me the very least we can do at this time to demonstrate our good faith, and our continuing belief in the possibility of a successful conclusion to these negotiations.

I have written to the Appropriations Subcommittee in support of this appropriation, and I ask consent that a copy of my letter be printed at this point in my remarks.

Mr. President, I should also like to have printed at the conclusion of these remarks two articles which demonstrate the need for thorough preparations prior to disarmament, arms control, and test ban negotiations. One is by columnist Marquis Childs, and is entitled "Lack of Support Perils Arms Talk." It appeared in the Washington Post and other papers on May 13, 1960. The events of the 5 weeks since Mr. Child's comments appeared have served to underline the urgency of his concern.

The United Nations correspondent of the Christian Science Monitor, Mr. William R. Frye, has written a thoughtful account of the present state of disarmament research in this country, which points again to the need for a greater expenditure in this area.

I ask unanimous consent that both these articles be printed at this point in the RECORD.

There being no objection, the letter and articles were ordered to be printed in the RECORD, as follows:

JUNE 21, 1960.

Hon. LYNDON B. JOHNSON,
Chairman, Subcommittee on Departments of State, Justice, Judiciary, and Related Agencies Appropriations, Senate Committee on Appropriations, Washington, D.C.

DEAR LYNDON: I am writing to urge that the appropriation of $400,000 for arms control studies and preparation for disarmament be included in the Department of State appropriation for 1961.

As you know, the disarmament and nuclear test ban talks are continuing in Geneva. In the New York Times today, Mr. Dana Adams Schmidt reports that the chief U.S. delegate to the 10-nation disarmament

conference, Mr. Frederick M. Eaton, on June 20 advised the State Department and Department of Defense that "the West needed a fresh approach to disarmament." The article goes on to state that it is Mr. Eaton's belief "that the West's March 15 (disarmament) proposals could be modified and made more effective for purposes of propaganda and negotiation."

In a companion article, New York Times correspondent A. M. Rosenthal reports: "Geneva's two East-West conferences were in political suspension today while their futures were being decided in Washington and Moscow. * * * Under the urging of its allies, Washington is considering whether to present any new disarmament proposals to the Geneva conference. Some Western diplomats feel that, having praised the Soviet Union, perhaps too fully, for having made 'concessions' the West should now make a move of its own."

In my view, it is of the greatest importance that the United States once again clearly demonstrate its readiness to explore every avenue which may lead to a solution of the very difficult questions being discussed in Geneva. We have ample evidence that technological changes are continually reshaping the problems connected with arms control. New detection systems are devised, and more advanced military weapons are invented. Research in this field is badly needed. Expenditure of a relatively modest sum would enable the State Department to coordinate a program of research and preparation looking toward effective arms control, an enforcible nuclear test ban, and eventual worldwide, controlled disarmament. This is the least we can do at this time to demonstrate our good faith, and our continuing belief in the possibility of a successful conclusion to the negotiations in Geneva.

Sincerely,

WILLIAM PROXMIRE.

[From the Washington Post, May 13, 1960]

LACK OF SUPPORT PERILS ARMS TALK

(By Marquis Childs)

GENEVA.—It is not alone the pilots of espionage airplanes who brave great dangers in the service of their country on oversea missions. Diplomats and negotiators confronting the Russians across the conference table all too often find themselves perched precariously at the end of a forgotten limb.

A case in point is Ambassador James J. Wadsworth, who was sent here 18 months ago by Washington to negotiate a nuclear test agreement treaty with the British and the Russians. Close to success after long and painstaking effort, he finds that a massive propaganda attack is being launched against the treaty and, incidentally, against him. From the principal figures in the administration, who are supposedly behind his efforts, there comes scarcely a peep of support, not to mention encouragement.

The propaganda concentrates on the technical difficulties of perfecting a system of inspection that will be cheatproof, and these difficulties are considerable. But this stress entirely ignores the political advantages of a test treaty and by implication it greatly exaggerates the gains that might come from further testing.

A familiar experience of the American negotiator is to have an American Senator or Congressman pop in and out for a few days and then to presume on the basis of this brief experience of an enormously complicated subject that he knows more than the men around the conference table. Wadsworth has experienced this kind of harassment which has included inspired attacks on him in the familiar cliches of "soft" and "appeaser."

He comes of a family distinguished for public service in a tradition more familiar in Britain than in America. His father, the late James W. Wadsworth, served first in the Senate from his native New York and then in the House. Ambassador Wadsworth's grandfather was John Hay, who started his public career as secretary to Lincoln and then, as the climax to a series of diplomatic posts, became Secretary of State.

A big, shambling man with an easy, friendly manner, he has shown a monumental patience and persistence in bringing the Soviets around to the Western view on the major issues of control, inspection and joint research. If he—and far more important his work—are to be shot down in flames, the disastrous effect on America's standing in the world can hardly be exaggerated.

America's position is rapidly deteriorating because the visible signs of leadership, the friendly grin to one side, are fewer and fewer. The tragedy of the U–2 illuminated this as with a lightning flash. The universal regret and sorrow in the European press, even in West Germany where there is a confused desire to cling to the concept of American infallibility, are expressed in terms of restraint that cloak dismay and indignation.

At the 10-nation disarmament conference, which met here for 7 weeks of polite futility, the chief of the American delegation was Frederick M. Eaton. A New York lawyer of standing and integrity, Eaton started from scratch with no knowledge of disarmament, of the Russians, or of negotiation. He proved himself a quick and resourceful learner who often puzzled the Soviets by the novel frankness of his approach.

But he was thrown in against a tough, hardened, experienced, professional Valerian Zorin, a deputy foreign minister and head of the Soviet delegation. Zorin held repeated press conferences at which the world press represented in Geneva was free to ask any and all questions. After repeated prodding, Eaton announced a press conference. He appeared with a written statement which he said he would read but no questions would be permitted. That was the last as well as the first Eaton press confernce.

What is most damaging to America's prestige and standing is the wibble and wobble of American policy from one side of the road to the other. Nothing could illustrate this more forcefully than the backing and filling over the proposed nuclear test treaty; the impression so strongly reinforced in the U–2 case that the left hand and the right hand are operated by quite different sets of intellectual and emotional controls. The record on nuclear testing can be set straight only by strong affirmative words from the President and his Secretary of State.

[From the Christian Science Monitor]

UNITED STATES RESTUDIES ARMS CONTROL

(By William R. Frye)

UNITED NATIONS, N.Y.—As East and West sit down anew at Geneva to explore disarmament with the propaganda initiative apparently in Soviet hands, a group of leading American educators, natural scientists, businessmen, and others have posed this question:

Why should the United States spend hundreds of millions—indeed, billions—of dollars each year developing new weapons systems and at the same time refuse to spend more than a few thousand dollars exploring such other paths to national security as arms control?

A mere handful—not even a dozen—full-time experts are assigned to this subject in the U.S. Government, it is pointed out; and although a number of private study groups have been established to consider it, their work is ill coordinated and rarely has direct impact on governmental policy planning.

IMPROVISATION CHARGED

At least two proposals have gone through the machinery of the Eisenhower administration for a special department or section devoted to peace planning. For a time, special Presidential Assistant Harold E. Stassen headed the nucleus of such a group. But the Stassen operation broke down, and efforts to replace it have been wrecked by interdepartmental rivalries.

Thus at a time such as this, with a new or ostensibly new Soviet proposal on the table in Geneva, the United States must improvise its response as best it can and hope that the technique of asking questions and making skeptical speeches—that is, of "barking and nipping at the heels," as it sometimes is called—will prove adequate in the worldwide market place of ideas.

Continuous, long-range contingency planning would do much to help regain the initiative in such instances, and to avoid losing it in the first place, it is pointed out.

QUESTIONS FIRED

Had the Western powers been on record with a more imaginative plan of their own, many feel, the Soviet Union could not have outbid them with anything of such limited novelty and value as the latest Moscow plan for general and complete disarmament.

The group of educators, natural scientists, and business and professional men was brought together at Arden House, Harriman, N.Y., by Tom Slick, multimillionaire Texas oilman, with Mrs. Mary Lasker, New York philanthropist, also a sponsor. There were approximately 110 in the group.

Their "strategy for peace conference" lasted 3 days, June 3 to 5. In that time, they could not do much more than attempt to ask the right questions, it was agreed. Some of the questions posed during the discussion were these:

Are there any circumstances under which the United States could go down to "zero force level," that is, complete disarmament, accepting the risk that, despite all legal inspection and illegal espionage, between 50 and 500 nuclear weapons might still be secreted away in the Soviet Union?

NEW STRATEGY NEEDED?

Would surreptitious delivery mechanisms—mobile intercontinental ballistic missiles, for example—be of much value in a surprise attack after they had been left unused for, say, 3 or 4 years? Would an international police force be able to deal with whatever security threat there was?

On the other hand, would general and complete disarmament simply be followed by some political crisis—for example, over Berlin or Formosa—which would touch off a new arms race in which the Soviet Union, because of its ability to concentrate formidable efforts in a single field, would have an advantage?

In a completely disarmed world, policed by an international force, which rival in the political, economic, and psychological cold war would have an advantage? Would a disarmed world be more or less likely to become gradually communized than an armed world?

If total disarmament is not desired or feasible, should the West frankly say so at Geneva? Or should it continue to accept battle on the terms Soviet Premier Nikita S. Khrushchev has laid down, professing to seek total disarmament and attempting to demonstrate Soviet insecurity?

If a minimum nuclear deterrent should be kept by both sides to protect against secret evasions, how large should it be? Large enough to knock out the enemy's forces in a first-strike blow? Or just large enough to retaliate in a second strike?

PRIORITIES PROBED

The latter, it is estimated, probably would require no more than 500 to 1,000 bombs, plus hard (relatively invulnerable) delivery mechanisms which an enemy could not knock out without vast superiority in num-

bers. Efforts to build such a superiority could be detected by any reasonably adequate inspection system, it was argued, once both sides had reduced down to the agreed minimum.

Those who preferred the latter plan to general and complete disarmament expressed dissatisfaction that higher priority had not been given inside the Government to the task of hardening the United States present nuclear deterrent.

Few agreed conclusions were reached on matters of this kind, since the group was chosen from a broad spectrum of opinion. But virtually no one disagreed that intensive, full-time study of the problem was needed both inside the Government and outside, and, indeed, within the United Nations Secretariat as well. The need was called tremendous.

The group also called for "more active steps to develop and implement a working system of international law," beginning with repeal by the U.S. Congress of the Connally amendment, which restricts World Court jurisdiction over disputes involving the United States.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Minnesota, without losing my right to the floor.

Mr. HUMPHREY. I wish to thank the Senator from Wisconsin for his timely remarks. It is wonderful to have assistance in the cause of disarmament, and the brilliant mind and effective words of the Senator from Wisconsin will be the power of a legion. I am deeply grateful to him for his words this morning relating to this appropriation. His words relating to the appropriation are surely very helpful. As the Senator knows, it is my privilege to work with him in this effort to see if we cannot at least make some beginning toward the kinds of studies and inquiries that are necessitated by the disarmament problem.

Mr. PROXMIRE. What I am doing, of course, is following the leadership of the Senator from Minnesota. There is no leadership I would rather follow. There is no question that he has led a fight which sometimes must have seemed to him to be a lonely contest. The fight for a thoughtful and effective arms control program is the most important fight in America today.

ELDERLY MAN FACES BLINDNESS BECAUSE OF HIGH MEDICAL COSTS

Mr. PROXMIRE. Mr. President, picture the plight of senior citizens who desperately need operations—perhaps to block or arrest serious disease or to save their eyesight—and who put off such operations simply because they have no way to pay for them.

Major surgery plus extended hospital care costs anywhere from several hundreds to several thousands of dollars. Compare that with the facts cited by Secretary Arthur S. Flemming of the Department of Health, Education, and Welfare in testimony before the Subcommittee on Problems of the Aged of the Senate Labor and Public Welfare Committee:

Fifty percent of the aged have less than $1,000 a year in income; 23 percent have between $1,000 and $2,000; 8 percent have between $2,000 and $3,000; 12 percent have $3,000 or more.

The cost of medical care to the aged is more than double the cost to the average citizen because of the high incidence of illness among older people, and those costs are rising rapidly.

Every day we delay action, we are prolonging a great and growing American tragedy that cries out for a solution only we can provide. Here is a letter from a senior citizen of Wisconsin that illustrates this tragedy. I ask unanimous consent, Mr. President, that this letter be printed in the RECORD at this point.

There being no objection, the letter was ordered printed in the RECORD, as follows:

DEAR SENATOR: I am writing about the medical and hospital benefits you are trying to get for old people. They do need it so badly; I know as I am one of them.

I have cataracts on my eyes and don't see how I can afford an operation, which costs about $1,000 for one eye and $2,000 for both eyes in two separate operations. I am 70 years old and my husband is 76 and it's impossible to get work.

I do hope this bill will be passed before I have to have my eyes operated on which may be in another year. We had to drop our hospital and medical insurance as we can't afford to pay on it each month, and I know at least a dozen of my friends who are in the same fix. What can we do?

So please push hard for this bill. I pray that you will be able to get them to see how we older ones need this.

Sincerely,

——— ———.

DOCUMENTATION OF THE VESSEL "EDITH Q"

Mr. MAGNUSON. Mr. President, I ask the Presiding Officer to lay before the Senate a message from the House on the bill, S. 1765, to authorize and direct the Treasury to cause the vessel, *Edith Q*, owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States with full coastwise privileges.

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the bill (S. 1765) to authorize and direct the Treasury to cause the vessel *Edith Q.*, owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States with full coastwise privileges, which were, to strike out all after the enacting clause and insert:

That, notwithstanding the provisions of section 4132 of the Revised Statutes of the United States, as amended (46 U.S.C. 11), the Secretary of the Treasury is authorized and directed to cause that certain vessel now known as the *Edith Q.* (formerly the *Miss Paul*), built in 1950 in Nova Scotia, and now owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States, upon compliance with the usual requirements, with the privilege of engaging in the coastwise trade to the extent necessary to permit the carriage of passengers and merchandise, whether for hire or otherwise, between Camden, Great Spruce Head Island, and other points in Maine, located on the Penobscot River and Penobscot Bay, and the tributaries and approaches thereto, during the period from May 15 through September 15 annually, so long as the vessel shall continue to be owned by a citizen of the United States.

And to amend the title so as to read:

An act to authorize and direct the Treasury to cause the vessel *Edith Q.*, owned by James O. Quinn, of Sunset, Maine, to be documented as a vessel of the United States with limited coastwise privileges.

Mr. MAGNUSON. The House added a very minor technical amendment to the bill. I move that the Senate concur in the amendment of the House.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Washington.

The motion was agreed to.

PILOTAGE REQUIREMENTS IN NAVIGATION OF WATERS OF GREAT LAKES

Mr. MAGNUSON. Mr. President, I ask the Chair to lay before the Senate a message from the House on the bill, S. 3019, to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes.

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the bill (S. 3019) to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes, which were on page 11, line 4, strike out "(a)", and on page 11, strike out lines 8 through 15 inclusive.

Mr. MAGNUSON. The only difference between the House and the Senate bills is that the Senate bill provided for the creation of some supergrades in the civil service to handle the pilot problem. The House bill did not do so. In view of the time element involved, and the necessity of having pilotage in our growing commerce on the Great Lakes and St. Lawrence Seaway, I move that the Senate concur in the amendments of the House.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Washington.

The motion was agreed to.

THE JAPANESE-UNITED STATES TREATY

Mr. HUMPHREY. Mr. President, yesterday I addressed myself to the subject which is on our executive calendar, namely, the treaty between Japan and the United States. I wish to supplement those remarks during the morning hour with some insertions in the RECORD.

When the summit conference collapsed, I predicted that there would be a significant step-up of both propaganda and military attack by the Chinese Communists.

It seemed to me that the Communists would feel that the failure of the summit conference would catch the United States off balance and cast our leadership into a sea of doubt.

We have already been given proof of a step-up of Chinese Communist military efforts. While the President was in Formosa, Red Chinese guns fired across the Formosa Strait to blast Quemoy.

This might be just a beginning. I think we can expect further aggressive

military tactics by the Chinese Communists, including additional infiltrations on the Chinese-Indian border and on every other front.

The Peiping regime was also quick to intensify a propaganda campaign of hate directed toward the United States. An Associated Press story in this mornings' Washington Post reports:

Newspapers, radio stations, posters on sidewalk bulletin boards and public address systems piped into every town and village square blared their message of hate against the United States in general and Mr. Eisenhower in particular.

These stories need to be read and understood by every American.

It indicates what confronts us in the Far East and, therefore, the caution with which we must proceed.

Mr. President, I ask unanimous consent that the Associated Press article entitled "Red Chinese Drive Against the United States Rises in Fury," published in the Washington Post and Times Herald of June 22, 1960, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED CHINESE DRIVE AGAINST THE UNITED STATES RISES IN FURY

TOKYO, June 21.—Red China today launched an anti-United States imperialist propaganda week keyed to its furious campaign of vituperation against President Eisenhower.

Drumming out its main theme that Mr. Eisenhower's Asian good will tour was a flop—the campaign went into high gear at mass rallies across China. The Peiping radio said millions of Chinese from subtropical Kwangtung Province to northernmost Heilungkiang were screaming denunciations of the American President.

Mr. Eisenhower was described as the "chieftain of U.S. imperialism," the "god of plague," and the "viscous wolf of Western imperialism."

Newspapers, radio stations, posters on sidewalk bulletin boards, and public address systems piped into every town and village square blared their message of hate against the United States in general and Mr. Eisenhower in particular.

The official Peiping People's Daily said the President's tour ended in "ignominious failure."

The Communist New China News Agency said that "everywhere he went he was like a rat scurrying down the street with the people shouting, 'Kill it.'

"Mr. Eisenhower," it said, "made a laughing stock of himself and was condemned everywhere."

According to the Peiping radio, the million or more Filipinos who turned out to welcome Mr. Eisenhower in Manila were shouting curses and not friendly greetings.

The Chinese on Formosa who gave Mr. Eisenhower one of his most colorful welcomes had, according to the broadcast, nothing but scorn for the President.

One hundred thousand Okinawans "put Eisenhower to such fright "that he left earlier than scheduled," the radio said. Actually the overwhelming majority of the Okinawan crowds welcomed Mr. Eisenhower, and only a small Communist-led minority staged a noisy anti-American demonstration.

Mr. HUMPHREY. Mr. President, it is also vital for us to realize the delicate situation in the Far East today. The focus of the Communist attacks there is Japan, which is a center of free world power in Asia. An article written by Wilbur Elston, and published in the Minneapolis, Minn., Tribune, reads, in part:

Japan, of course, is an especially inviting target for both Communist China and the Soviet Union. * * *

Japan has become an important factor on the anti-Communist side in the struggle in Asia between the free world and the Communist world.

Mr. President, I commend to all Senators the reading of the article because it contains a very thoughtful discussion of the complex political situation which exists in Japan and the relationship of the United States-Japanese treaty to that political situation. The article is particularly pertinent at this time in the Senate's deliberations because of the action to be taken by the Senate relating to the ratification of the treaty. Therefore, I ask unanimous consent that Mr. Elston's article entitled "Why Japan Is Choice Communist Target," be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY JAPAN IS CHOICE COMMUNIST TARGET

(By Wilbur Elston)

It is too early to say whether the Japanese-United States security treaty will be a casualty of the rioting in Japan, but it is obvious that American-Japanese relations already have been severely damaged.

Such a result must be extremely satisfying to Premier Chou En-lai in Peiping and Premier Khrushchev in Moscow. Both no doubt will view it as one of the major dividends of Mr. K's new tough line toward the West.

After the breakdown of the Paris summit talks, Khrushchev renewed his campaign to destroy America's system of defensive alliances that encircle the globe. Now Khrushchev and Chou, who had been attacking U.S. bases in the Far East even during Khrushchev's advocacy of peaceful coexistence with the West, will take credit for what happened in Japan, although many other factors also were responsible.

Japan, of course, is an especially inviting target for both Communist China and the Soviet Union.

In just the 15 years since the end of World War II, Japan has rebuilt its economy and now is one of the most productive industrial nations in the world. Japan also has allied itself with the free world. It has provided bases for American forces. And it has even begun to give economic help to the other free nations of Asia.

In other words, Japan has become an important factor on the anti-Communist side in the struggle in Asia between the free world and the Communist world. In that part of the world, the territories and independence of more than 300 million people are at stake in this contest.

Supporting the Communists in that area are bases in the eastern part of the Soviet Union, in North Korea, in North Vietnam and in Communist China, Adm. Harry D. Felt, Navy commander in chief in the Pacific, recently told the House Foreign Affairs Committee.

America's contributions to the defense of the free nations in the Far East include 243,000 sailors, marines and naval aviators manning two fleets, one in the eastern Pacific and the Seventh Fleet in the western Pacific, Felt told the committee. In addition, 67,000 American soldiers are stationed in Korea and in reserve in Hawaii. Another 70,000 air force officers and men fly from bases in Korea, Okinawa, the Philippines, Taiwan and Japan.

The United States also backs up its allies in the Far East with military and economic aid programs. In the last 10 years, for example, the United States has provided $711,557,000 in military aid and $16,253,000 in economic aid to Japan as part of more than $9,500 million allocated to the Far Eastern area in the 1950–59 decade.

Those expenditures in Japan do not include the cost of procurement for and maintenance of American military forces in Japan. Back in 1955, the cost amounted to more than half a billion dollars a year, but it has been cut in recent years because of Japan's economic recovery and the rebuilding of Japan's own military forces.

Starting in 1950, the Japanese, with American help, now have developed a military force of more than 210,000 men. In addition, the Japanese recently decided to build the F–104 all-weather jet fighter. This is the third postwar aircraft production program started in Japan.

The new democracy of Japan has increased in economic growth in the past decade at a rate almost twice as high as that in the United States and in Western Europe. As a consequence, the living standard has risen rapidly and national income per capita now surpasses the prewar level by more than 30 percent.

Japan also has become the second largest market for American goods and the United States is Japan's largest single market with almost one-third of Japan's exports coming to this country. Japan expects to become the world's third largest steel producer, after the United States and the Soviet Union.

In part because of Japan's resurgence, American administrators of the mutual security program were optimistic about the Far East when they went before congressional committees early this spring. One said "stabilization has been substantially achieved," although he acknowledged that the activities of Communist China in its border disputes indicated that stabilization is inimical to its objectives.

MSA witnesses also did note that "repeatedly the Chinese Communists revert to tactics of bluster and threat as they did in January when the Japanese signed the new treaty of mutual cooperation and security." This is the same treaty that now is up for ratification in Japan.

But the MSA administrators, while asking for $1,231,000,000 in aid for the Far East during the 1961 fiscal year, also seemed optimistic about Japan's future. They pointed out the United States technical assistance is being phased out in Japan and U.S. military aid there is becoming "more selective and limited."

In addition, they pointed with pride to the "important Japanese assistance" being extended to other countries of southwest Asia in the form of reparations and special assistance.

Such factors help explain why Japan now is an inviting target for the Communists. They also help explain why the United States is anxious to keep Japan in the non-Communist camp and to help preserve its freedom.

Mr. HUMPHREY. Mr. President, the situation in Japan right now is extremely complex and delicate. Our relations with that country hang in the balance. Any misstep on our part could fan new violence and opposition and could result in a government unfriendly to the United States.

The issue of the Japanese-American security treaty has stirred strong pacifist feelings on the part of the Japanese people, particularly among the students and the young, whose views were formed during a period when pacifism was en-

couraged by the occupation by the United States.

This suggests the need for America to expand not only its military programs in Japan, but its political, technical, and cultural efforts, as well. We must show the Japanese people that the United States will back up its talk about peace with solid works for peace.

I was very much pleased to hear the remarks of the majority leader this morning, when he said to the Senate, in support of the Japanese-American security treaty:

I believe we will have to launch somewhere along the line a really massive offensive for peace.

I think it is incumbent upon us, as the leader of the free world, and one of the stronger nations, to propose great programs, through the United Nations, that would stamp out killing and crippling disease.

I think we will have to propose great programs of international cooperation in moving the world's food surplus to areas of deficit.

I should think we will have to propose great programs of international cooperation to break down the barriers that prevent communications between people.

I think we will have to propose great programs of international cooperation to harness the water resources in arid regions of the world.

The PRESIDING OFFICER. The time of the Senator from Minnesota has expired.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that I may have 3 more minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. HUMPHREY. Mr. President, the words of the majority leader I have read must be taken seriously. It is important that they have been said by the leader of the majority of the Senate, because his word means, at least, a statement of policy by the majority. I commend the majority leader.

Mr. President, an editorial entitled, "Japanese Dilemma," published in the Minneapolis Tribune of June 19, 1960, points up the dilemma of the Japanese in the matter of conflicting pacifist-militarist viewpoints. I ask unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JAPANESE DILEMMA

Japan's seven major newspapers have issued a joint statement saying, "Never have we been so concerned over the future of Japan." They might well be worried—not because there is a difference of opinion about the security treaty with the United States but because Communist elements have been able to use widespread pacifist feeling to generate demonstrations which threaten growing chaos.

Americans would be deceiving themselves if they placed all antitreaty sentiment with the Communists. A recent editorial in the Asahi Evening News of Tokyo said: "The Japanese people are firmly determined to uphold the spirit of article 9 of the Constition which renounces war and bans the possession of war material. The Japanese will endure any hardship to live up to the spirit of the article.

"While we fully recognize the improvements that have been made in the revised security treaty, we have opposed the inclusion of the purport of the Vandenburg resolution and article 5 which gives the pact the character of a joint defense pact. It is our belief that United States-Japan cooperation must gradually switch from military cooperation to political and economic cooperation."

The Japan Times, however, defends the new treaty as rectifying the arrangements of the old security treaty (signed at San Francisco in 1951) to which many Japanese objected—permitting the United States to use bases and deploy forces elsewhere in the Far East in such a manner as might involve Japan; allowing the use of nuclear arms without consultation with the Japanese Government; permitting American forces to intervene in large-scale domestic disturbances.

Says the Times: "We have to look further afield for the real reasons for the noisy opposition to ratification of the new treaty. We see first of all the Socialist Party, repeatedly defeated at the polls and recently torn asunder by internal faction, seeking under new leadership for an opportunity to ride to power on a wave of popular emotion, however unfairly engendered, and secondly a combined effort on the part of the various leftist elements whose political and economic ideas are borrowed from the Communist regimes in Soviet Russia and Red China to break off Japan's friendship with the United States."

The situation calls for careful handling by those in authority in both Japan and the United States so that the leftists are not able to capitalize enough on Japanese antiwar feeling to put themselves into power in Tokyo.

Mr. HUMPHREY. Mr. President, an article entitled "Contradictions Blur Picture of Japanese Crisis," written by Bill Hosokawa, of the Denver Post, relates, in concise, succinct terms, some of the issues which are at stake in the present political situation in Japan. I commend the article to the careful reading of Senators as a part of the general discussion relating to the Japanese-United States treaty. I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONTRADICTIONS BLUR PICTURE OF JAPANESE CRISIS

(By Bill Hosokawa)

TOKYO, June 21.—On the same night last week that a quarter million Japanese demonstrated against the Kishi government—and incidentally the United States, thousands jammed a Tokyo stadium to see a baseball game. Both events were televised and some viewers switched from one to the other as excitement rose or waned.

Nor did the Japanese think it unusual when a group of students, who had been up most of the night in a snake-dancing protest to Mr. Eisenhower's impending visit voiced concern when their American teacher failed to appear for a class.

This is the confused atmosphere in which Japan's American-imposed democracy is getting its severest test. Some Japanese see that current series of demonstrations as a battle to the death between constitutional democracy and anarchy.

Oher sophisticates, carousing in Tokyo's countless tiny bars, kid the girls and chant lewd parodies of the rallying cries used by leftist student demonstrators.

This much is certain:

The demonstrations, with a broad range of targets, have stirred the public imagination as nothing else since war's end.

The demonstrations are well organized and bear the unmistakable earmarks of professional Communist leadership and financing.

Demonstration masterminds are capitalizing on the public's genuine and widespread fear of war and intense pacifism. However, most of the demonstrators and their sympathizers have only vague understanding of real issues.

The Kishi government has been inept but by no means is it a bad, repressive or corrupt government.

The American people still enjoy a good deal of respect, if not affection, among the Japanese masses.

The Japanese people are a long way from political maturity, and the nation will suffer many crises before it reaches maturity.

DISCONTENT MOUNTS

The magnitude and rapid spread of Japan's protest demonstrations bespeak discontent that was building up for a long time. However, the event that touched off the demonstrations took place the night of May 19.

On that night Japan's Parliament was studying extension of the session another 50 days. For months, Parliament had been locked in debate on the United States-Japan security pact. The majority party, Kishi's Liberal-Democrats, had sought to ratify it. The opposition Socialists opposed it bitterly.

A joint committee had met 39 times and debated the treaty inconclusively for a total of 140 hours.

Now, as the Parliament session neared its constitutional end, it appeared the Socialists' delaying tactics would force postponement of a ratification vote. So the Liberal-Democrats proposed to extend the session, the strategy being to let the Socialists talk themselves out and bring the matter to a vote. Since Kishi commanded an absolute majority, there could be no question of the outcome.

When the Speaker of the House announced his intention to call for a vote on extending the session, the Socialists imprisoned him in his office so he could not reach the chamber. Six hours later the Speaker summoned police, who carried out a number of Socialists bodily to clear a path for the Speaker.

Once the Speaker reached the floor the police left and the Socialists were free to enter the chamber for the vote. They chose instead to boycott the session.

TREATY APPROVED

Since a quorum was present Parliament quickly voted to extend the session as proposed. Then someone—he was never identified—suggested that the treaty be approved while the Socialists were absent, and this was quickly done.

The Socialists reacted explosively. They accused Kishi of high-handed tactics and demanded his resignation. By a curious logic, the Socialists portrayed themselves as defenders of parliamentary government and Kishi as its foe. The Socialists came up with the concept "tasu boryoku," which can be translated as "dictatorship by the majority." In other words, they were arguing Kishi was wrong to utilize his majority power.

The militant far-left Zengakuren student federation needed no encouragement to jump into the hassle. Soon, chanting, marching students were demonstrating almost nightly against the security pact and Kishi.

The demonstrations were not born of mass indignation. Many students admit they showed up because their friends did, and their friends were demonstrating because somebody told them to.

The demonstrators I talked to could answer glibly that they were opposed to the security pact, that Kishi must resign, but they were far less articulate when asked precisely why the treaty was bad for Japan, or where Kishi had failed.

Nor are their elders often better informed, most having never studied the treaty.

Obviously, when a people as highly literate as the Japanese are willing to follow the crowd unquestioningly, there's something wrong.

Mr. HUMPHREY. Mr. President, it is widely and erroneously believed that the demonstrations in Tokyo were caused by a small minority, dominated by the Communists. Although there is no question that the Communists played a leading role in organizing these demonstrations, there is also every evidence that they reflected widespread public sentiment. No definitive study has been made of neutralist sentiment in Japan, but responsible estimates range from 35 to 50 percent of the Japanese public opposed to the security pact. If the prevalence of neutralist thinking in Japan is ignored, the nature of recent events cannot be properly understood and future policies cannot be intelligently appraised. Clear evidence of public sentiment is that the Kishi government was unwilling to quell the riots by the use of traditional anti-riot police work. This inability is widely interpreted in Japan as a recognition that forcible suppression of the riots would not have been tolerated by the public.

Much of the public reaction in Japan to the current situation can be explained as anti-Kishi rather than anti-American or even anti-pact.

Kishi's unpopularity in Japan stems from the following factors: First, he is identified with the prewar and wartime governments of Japan and although he espouses democracy publicly, it is feared by some that his real sentiments are of another era; second, he has declared himself in favor of amending the "no-war" provision of the constitution; third, in the fall of 1958, he proposed an amendment to the police laws which would have strengthened the powers of the police to arrest. This, it was feared, was the first step in a return to prewar police power; fourth, his espousal of the security pact was looked upon as an integral part of a program which included revision of the constitution and amendment of the police laws; and fifth, Kishi's parliamentary tactics, although perhaps defensible in our view of the role of majorities, were in Japan widely interpreted as anti-democratic.

Kishi is and has for some time been generally unpopular in Japan. A poll conducted on June 2 by the Asahi, Japan's leading newspaper, showed the following: Do you approve of Kishi pushing the security pact through the Diet? Fifty percent were against; 6 percent were for; 18 percent were undecided; 25 percent, no answer; other opinions, 1 percent. Do you approve of the Socialists' sitdown and blockade tactics in the Diet? Eleven percent were for; 32 percent were against; 31 percent were undecided; 25 percent had no answer; 1 percent had other answers. Do you think the Diet really represents the opinions of the people? Yes, 17 percent; no, 56 percent; other, 5 percent; no answer, 22 percent.

I remind the Senate that this information came from the largest and supposedly most responsible press in Japan.

A poll taken about a month ago showed that only 20 percent supported the Kishi cabinet. In the face of this widespread unpopularity, our policies, nevertheless, were apparently directed to the support of Kishi. The facts here are elusive, but the statement of the Secretary of State before the Senate Foreign Relations Committee on this pact left little doubt that in fact our policies were directed toward the support of Kishi. It is widely believed in Japan that our Ambassador played Japanese politics in support of Kishi. It is widely alleged that our Embassy had limited contacts with other factions of the Liberal Democratic Party and for all intents and purposes completely ignored the opposition party. The facts here are difficult to ascertain, but these widespread beliefs cannot be ignored. Whether true or not, these rumors and comments are repeated again and again. I, personally, doubt their validity; but I am concerned.

Our State Department has apparently not been well informed of Japanese thinking. This may be attributed to the lack of contact with other factions of the Liberal Democratic Party and with the Socialist Party.

In view of the foregoing, it seems to have been a mistake to have interjected a Presidential visit to Japan in the midst of great internal disruption. It calls into question the judgment of those who felt it desirable that the pact be rushed through the Diet so as to complete action before the President's visit. There have been stories in the Japanese press to the effect that the initiative came from our Ambassador. I do not know if this is true and perhaps the facts will never come to light, but it should have been clear to those in positions of responsibility that a visit by the President on June 19, the same day on which ratification was completed, would be inopportune. At best, it would have given a flavor to the visit—which was planned to commemorate the centennial of United States-Japan relations—which was inappropriate. At worst, the riots, which in fact resulted, and which caused the President to cancel his trip could have been foreseen.

In conclusion, we have rather clumsily interjected ourselves or have been drawn into Japanese politics and greatly damaged what have been the most cordial and friendly relations with Japan.

Therefore, I urge that in our action on the treaty we emphasize the economic, political, and social aspects, and that we seek to improve the relations between our two countries in the most careful and prudent manner.

CENTENARY OF BIRTH OF JANE ADDAMS

Mr. DOUGLAS. Mr. President, Miss Jane Addams was born 100 years ago, and the Nation is properly celebrating the centenary of her birth.

Miss Addams died a quarter of a century ago. A great deal of recognition of her true worth and nobility has dawned upon the American public.

It was my personal privilege to know Miss Addams fairly intimately for the last 15 years of her life, and of course, for many years previous to that I had known about her work and her character.

I can say with due restraint that Miss Addams is the only person of my knowledge who could properly be called a saint. To me, she was the finest character I have ever known or known about in my generation. She was the living embodiment of intelligent good will translated into action. She was a woman of great courage, who was willing to take unpopular positions; and although she suffered from attack and contumely which she felt keenly, that never damaged her spirit, which always was loving and kind to all those who attacked her.

Some weeks ago, I had the privilege of speaking at greater length about Miss Addams at a service at Rockford College, from which she graduated in the early 1880's; and on a previous occasion I had that address printed in the RECORD, together with an address by another noted person, Dr. Frank Graham. So, at this time I shall not make lengthy comments about Miss Addams.

We in Illinois have sometimes been criticized for abuses which have occurred in our State. But we take pride in the fact that not only Abraham Lincoln came from Illinois, but also Jane Addams came from Illinois.

She lived for almost 50 years in what was known as the Bloody 20th Ward; and her influence was always for good. She had culture, as well as character. She had intelligence, as well as compassion. She had kindness, as well as acuteness of mind. She supported every good movement for the benefit of mankind. Since her name began with "Add," it was always at the head of every list of supporters of good causes. Hence like Arnold von Winkelried, she drew upon herself the arrows and slings of those who were opposed to those measures.

I did not always agree with Miss Addams in every position she took, but I knew that everything she did was swayed by her sensitive conscience and her brave soul.

I have often thought of the similarity between Miss Addams and the last scene in Bernard Shaw's "St. Joan," where St. Joan is about to return to the earth, and where those who praised her suddenly take alarm at the thought that she might come back, and that they would be exposed to great dangers if she once again started to crusade for the things in which she believed.

It is very easy to praise Miss Addams, now that she has been dead for 25 years. I could not agree with her on every position she took, particularly on the question of nonresistance; but I certainly loved and admired her; and the concluding words of Shaw's play are, I think, appropriate in the case of Miss Addams:

O God, who made this beautiful earth, when will it be ready to receive Thy sons? How long, O Lord, how long?

Mr. HUMPHREY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I am glad to yield.

Mr. HUMPHREY. I wish to associate myself with the remarks of the Senator from Illinois in regard to this great and wonderful woman, Miss Jane Addams. It is always a joy to hear the Senator from Illinois give testimony in praise of our great Americans, or, indeed, to hear him speak on any subject.

But I believe his remarks today were especially moving, because he was speaking of a person whom he has known, and one for whom he has great respect and admiration.

Such testimony to a crusader and reformer is much needed at this time in American life. In our America of 1960 there is a great lack of Jane Addamses; and if ever there were a time when we needed this same spirit, it is now, when we see such monstrous evil throughout the world, so many challenges which need to be met, and so many problems which need to be faced.

Mr. President, it is a particular honor to pay tribute to Jane Addams, an extraordinary American woman, who with vision and determination brought our Nation to realize and accept its responsibilities to our neighbors who were poor, weak, exploited, or otherwise unfortunate.

Jane Addams had great courage. She had tremendous respect for the dignity of every individual. For a woman of her times, she had an unusual grasp of the "solidarity of the human race."

Her understanding of the worth of every man, woman, and child, and of the impact of every individual's life on that of every other individual, not only in his neighborhood, but in the entire world, was at the root of her concern for peace.

Jane Addams devoted her life to the cause of peace—within the family, in her city, and, finally, on the international scene, through her founding and leadership of the Women's International League for Peace and Freedom.

Nineteen hundred and sixty is the 100th anniversary of the birth of Jane Addams, Mr. President. Because of Jane Addams' leadership and inspiration, we are closer to attaining some of the goals of social peace in our Nation which she set. Our educational system, our social welfare programs, our standard of living, and our great labor movement are ample testimony to this. But the goal of world peace seems at times to recede, especially as the threat of a nuclear holocaust appears on the horizon and grows.

In honoring Jane Addams, I know that we could do nothing better than rededicate ourselves, whatever the sacrifices required, to a great offensive in the cause of world peace with justice and with freedom.

I always believe that when one talks of peace and dedicates himself to it, he must never forget that peace is meaningless without justice and without freedom. It is the peace of justice and freedom that is worthy of people of democratic persuasion.

I thank the Senator from Illinois.

Mr. JAVITS. Mr. President, this year marks the 100th anniversary of the birth of Jane Addams, famed social worker and founder of one of our most notable institutions of social welfare—Hull House in Chicago. I think it appropriate that we pause to remember her today and to note the latest of many tributes to her. Two days ago, the Committee of Twenty-one of the Hall of Fame for Great Americans announced that Miss Addams was one of three people deemed worthy of special consideration for election to the Hall of Fame at New York University. That election will be held on November 1.

Jane Addams' accomplishments served both America and the world. At home, she made Hull House a lively community of those whose interest was reform and whose end was justice. She led the effort to obtain passage of juvenile court laws, mothers' pensions, tenement house regulations, workmen's compensation laws, and woman suffrage. Internationally, Miss Addams worked consistently for world peace through the Women's International League for Peace and Freedom, of which she was president. The work of the International Congress of Women at The Hague in 1915, over which she presided, became important to President Woodrow Wilson when he composed his program for world peace. And Miss Addams worked after the war as well to see that Europe's food needs were satisfied.

Jane Addams' teachings can guide us today. Her articulate concern for civil rights—as well as her awareness of the difficulty of their vindication—is clear in these words from her book, "Democracy and Social Ethics":

> We believe that man's moral idealism is the constructive force of progress—but we are skeptical of the moral idealism of the few and demand the education of the many. * * * We are not content to include all men in our hopes but have become conscious that all men are hoping and are part of the same movement.

SENATOR CHURCH, OF IDAHO, TO DELIVER KEYNOTE ADDRESS AT DEMOCRATIC NATIONAL CONVENTION

Mr. MANSFIELD. Mr. President, the youngest Member of the Senate of the United States, the junior Senator from Idaho [Mr. CHURCH] is, in many respects, one of the most mature Members of this body. He has been selected to be the keynoter at the Democratic Convention in Los Angeles on July 11. We are honored indeed that this outstanding member of our party has been selected.

I ask unanimous consent that a series of editorials, articles, and stories relative to this honor may be inserted at this point in the RECORD with my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Post, May 29, 1960]

VERY JUNIOR SENATOR FROM THE GOLDEN WEST

(By Robert G. Spivack)

When his colleagues speak of Senator FRANK F. CHURCH, JR., the 35-year-old, modern-day "silver-tongued orator of the Golden West" who has been chosen to keynote the Democratic National Convention, they call him a "nice young fellow" who is "well mannered and pleasant"—the "kind of kid who doesn't try to throw his weight around."

They will also tell you that the junior Senator from Idaho is not the most exciting young man to hit this hard-boiled town. Certainly he lacks the dash and daring of, for example, his Democratic confrere from Ohio, STEPHEN M. YOUNG, twice CHURCH's age but a rebel whose tart, well-phrased barbs have made him the delight of the press corps.

Nor is CHURCH a brash young Bobby Kennedy, or a Roy Cohn, or a Rush Holt, the former West Virginia Senator who started out in the Senate, also in his early thirties, as ultraradical and finished up at the other side of the political spectrum.

In short, FRANK CHURCH is not an angry young man. To put it more specifically, he is a happy young man—but in a hurry.

When the word reached him that he had been chosen as convention keynoter, he was motoring between Leadore and Mountain Home, two tiny towns in his home State, to which he returns at this time of the year to deliver commencement addresses.

"I am deeply moved by this news," said CHURCH in a statement issued by his office. "The keynoter must state the case for the Democratic Party at a convention which will be watched by an attentive nation and an anxious world.

"This is a grave responsibility," he somberly continued.

Then he injected the proper note of boldness and caution: "I intend to pull no punches, but there will be no hitting below the belt."

These were the public utterances.

But his first words, according to his attractive young wife, Bethine, were, "Well, we made it, didn't we?"

She added earnestly that "it was nice of him to include me in it." However, her own reaction on hearing the good news was more succinct. "Yippee."

Actually, she explained, the young Senator has been thinking all year about the possibility that he might be named keynoter and has given much thought to the "posture of the Democratic Party."

Obviously, the bigger things are not all that CHURCH gives thought to. Although from Los Angeles he will be addressing a nationwide television audience of possibly 100 million, there were only 7 students in the high school graduating class at Leadore, Idaho. He is not one to overlook the smaller things that affect people in their daily lives, and therein lies a clue to his success as a politician at such an early age.

While he has not set the Capital on fire, CHURCH's popularity stems, in part, from the contrast people inevitably make between him and some of the bright, young men who started to come here in the early days of the New Deal.

Most of the others have worn too well. They tended to become too opinionated, or too self-centered, or too eager to rebuild Rome in a day.

MOTIVE

Politics being politics and politicians being a naturally suspicious breed, there has been the usual search for motives behind Democratic National Chairman Paul Butler's choice of CHURCH as the Los Angeles keynoter.

As far as the presidential hopefuls are concerned, CHURCH is a self-proclaimed neutral (although as a Member of the Senate he has been a faithful follower of Majority Leader LYNDON JOHNSON). He has a rich, sonorous voice, is mildly liberal, won an American Legion oratory award and used the $4,000 prize to help pay his way through Stanford University. But if there is anything otherwise significant about the selection of CHURCH it has yet to be discovered.

Some wits have suggested that CHURCH was really chosen because he is so young in appearance that the delegates may come to think of the current frontrunner, Senator JOHN KENNEDY, as elderly by comparison.

When CHURCH first came to Washington his biggest problem, once the thrill of being a Senator subsided, was that he was constantly being mistaken for a Senate page boy. So often was he asked to run errands and carry messages that he gave up blue suits in favor of brown. By Senate custom, page boys always wear blue.

Aside from such minor annoyances, CHURCH's first term has been relatively tranquil. His voting record on liberal questions, as rated by Americans for Democratic Action, has varied between 77 and 83 percent. The only time he ran into real trouble was in trying to help out JOHNSON and some of the majority leader's western allies in the Senate.

This was during the civil rights debate of 1957. CHURCH and 10 others went along with the southerners in insisting on the so-called jury trial amendment, which meant the Justice Department could not get injunctions where civil rights violations were charged. CHURCH tried to remove some of the onus of being allied with the Dixie Democrats by introducing an amendment which provided that Negroes be given the right to serve on Federal juries.

TEMPEST

Critics felt that this was a meaningless gesture, although it was dressed up as a new civil right for Negroes. CHURCH's move so angered Negro leaders that an invitation to address a Minnesota Young Democratic-Farmer-Labor dinner in September, 1957, was withdrawn. CHURCH defended himself and insisted he was dedicated to the cause of civil rights.

In time, he predicted, the jury trial amendment will come to be regarded as having served the best interests of civil rights for all the people, colored and white alike.

CHURCH's other views have stirred less controversy. He has criticized the Eisenhower policy of peace by pilgrimage and he has spoken of a stopgap agreement with Russia to halt nuclear tests.

One of his major activities has been to fight for construction of the Hell's Canyon power project, a matter of intense interest in his State and throughout the Northwest. He helped pilot a Hell's Canyon bill through the Senate, but the administration and private utilities killed it eventually.

Although it is his reputation as a boy orator that first won him national attention, CHURCH practiced law in Boise, Idaho, served two terms as departmental judge advocate for the American Legion in his State, and in 1950-51 was legal counsel for the Idaho Office of Price Stabilization.

He was born on July 25, 1924, at Boise. His father operated a sporting goods store. In 1942, at the age of 18, he enlisted as a private in the Army and 2 years later was commissioned a second lieutenant in the infantry. He transferred to military intelligence and served overseas in the China-Burma-India theater.

CHURCH received the Bronze Star and was commended for his work with the Chinese Combat Command. He was discharged on June 22, 1946, as a first lieutenant.

VICTORY

Although brought up in a Republican family, he married Democratic. His wife is the daughter of a former Federal judge. The Churches have two sons, Forrester, 11, and Clark, 2.

After he returned to his studies at Stanford, he earned a Phi Beta Kappa key, studied briefly at Harvard and then returned to Stanford, winning a law degree in 1950. In the next 2 years he became active in the Young Democratic Clubs of Idaho and served as their State president in 1952–54. In 1956 he entered the Democratic senatorial primary and defeated, by 170 votes, former Senator Glen Taylor, the banjo-strumming 1948 Progressive Party candidate for Vice President.

CHURCH went on to wallop Herman Welker, a Joe McCarthy Republican, by some 50,000 votes out of 250,000 cast. That made him the youngest Senator and he was on his way.

Despite his reputation as a talker, he has generally abided by the rule that first-term Senators are seen and not heard.

Once he turned to poetry during the debate over the missile gap and said this is how the President might have expressed the state of the Union:

"Now we lay us down to sleep
With Ike's smug team the watch to keep;
If we die before we wake,
Well, the bed was soft and we slept too late."

He may have to work up a little more oratorical lather to make the rafters ring at Los Angeles, but these days the administration seems to be providing him with enough material to make his assignment comparatively easy.

His big problem will be to overcome the tradition that the words of convention keynoters are not long remembered. But considering some of his predecessors in recent years, that may be just as well.

[From the Montgomery County (Md.) Record, June 2, 1960]

DEDICATION TO YOUTH

It was 1896 at the Democratic National Convention at Chicago. William Jennings Bryan, a 36-year-old silver-tongued orator from Nebraska, delivered his "Cross of Gold" speech. He swayed the delegates into nominating him for President despite his years. It was the first of three times that his party was to make the Commoner its standard bearer.

July 16 at Los Angeles, another silver-tongued orator will be 9 days short of his 36th birthday. Senator FRANK CHURCH of Idaho has the gift to sway the convention and he will be the keynote speaker. But while no one expects him to sweep the delegates to give him the presidential nomination, the second place on the ticket could come his way.

CHURCH has been an orator 20 of his 36 years. At 16, he won a nationwide American Legion oratory contest on "Our Way of Life" that brought him a $4,000 scholarship. At 20, he was commissioned a second lieutenant and saw service in the China-Burma-India theater. At 28, he was the keynote speaker at the Idaho State Democratic Convention. At 32, he was elected U.S. Senator.

He is sure to get the Democratic Convention off to a rousing start, and especially to emphasize its dedication to youth.

[From the Payette (Idaho) Independent-Enterprise, June 2, 1960]

THE NAMING OF SENATOR CHURCH AS DEMOCRATIC KEYNOTER WAS A COMPLIMENT TO THE STATE OF IDAHO

We believe that the naming of Senator FRANK CHURCH to be the keynoter speaker at the Democratic National Convention at Los Angeles next month was a compliment to both the young Senator himself and to the State of Idaho as well.

Moreover we believe that the appointment to the coveted post should be considered complimentary both by Idaho Republicans and Democrats.

We should remember, that while government and politics are important, and necessarily bring differences of opinion among us, we can and should be on common grounds when it comes to the matter of loyalty to our great State.

Idaho as everyone knows, because of its size is pretty "small potatoes" when it comes to the tremendous big game of national politics. For a man from Idaho and particularly one as young as Senator CHURCH, to receive such a prize plum, is something to be elated over and cherished.

In fact it will be the first time in history that Idaho has received such an honor.

All Idahoans should therefore be pleased, because it will bring much needed good publicity to the State.

People across the Nation will learn that here in Idaho we produce outstanding young men as well as big potatoes.

[From the Idaho County Free Press, June 2, 1960]

THE KEYNOTER

Idaho Democrats are quite proud of the selection of Senator CHURCH to be keynoter for the Democratic Convention in Los Angeles beginning July 11. This genius at oratory will undoubtedly spark the convention from the outset and set the pace for an unending attack on Republicans everywhere.

This does not mean the Grand Old Party must run for shelter, for its chance comes in Chicago at another date.

It is timely, however, to congratulate Idaho's youthful Senator on his assignment. Idaho elected him in 1956. During his service in Congress his speechmaking ability won acclaim in a ripsnorter about Hells Canyon. President Eisenhower appointed him to serve the United States in a delegation to South America and he also was enrolled in an international conference in Poland. The Senator also has met Premier Khrushchev, if that means anything now.

The Senator has won respect from leaders of both political parties for his proposals regarding the Geneva conference on curtailing worldwide atomic tests of lethal weapons.

So the Democratic keynoter in a brief time has established himself as a coming statesman.

[From the Kimberly Advertiser, June 2, 1960]

IDAHO'S SENATOR CHURCH TO KEYNOTE AT DEMOCRATIC CONVENTION IN LOS ANGELES

Senator FRANK CHURCH will be the first Idahoan in history to play a major role at a National Democratic Convention when he keynotes the 1960 session at Los Angeles.

Selection of CHURCH as keynoter was announced last week by the convention arrangements committee meeting in New York.

In recent years, the keynote address has been delivered by a Democratic Governor, and CHURCH will be the first United States Senator to deliver the address since the late Alben W. Barkley in 1948. Barkley was elected Vice President the same year.

The convention has been keynoted by a Senator only 4 times since 1920, with Barkley doing the honors in 1932, 1936 and 1948. Senator Pat Harrison, of Mississippi, was keynoter of the 1924 convention in New York.

CHURCH has earned a reputation as one of the outstanding speakers of the Senate, which has a tradition of oratory, and only recently was named to the Senate Democratic campaign committee.

The Idaho Senator was keynoter for the Young Democratic Clubs of America at the annual convention in Reno, Nev., in 1957. In 1958, in recognition of his work for Alaskan statehood, he was invited to keynote the new State's Democratic convention.

[From the Louisville Courier-Journal, May 26, 1960]

TWO FAIR OMENS FOR THE SUMMER

Of the two national political conventions this summer, the Democratic gathering promises at the moment to be far the more interesting and thus to attract the larger television audience. Vice President NIXON seems likely to be in unchallenged, cut-and-dried control of the Republican machinery, able to dictate not only his own nomination but also that of his running mate. Not many people think that Governor Rockefeller, who among all the leading Republican figures excites the most popular curiosity, expects to be in the picture, even though available.

So the Democrats have an unusual opportunity, and the early signs are that they propose to take advantage of it. Gov. LeRoy Collins, of Florida, has been chosen to be their chairman and Senator FRANK CHURCH, of Idaho, their keynoter. Neither of them is a mere windbag. Each has impressively substantial qualities. Governor Collins has displayed both outstanding ability as an administrator and the courage to be a moderate on the race question in a region whose more violent inhabitants regard moderation as a kind of treason.

Senator CHURCH, youngest Member of the upper House has, without being brash, won more attention than a newcomer generally does in that august assembly. He is 36 years old, and Governor Collins, at 51, can hardly be classed as an ancient. Both men have engaging personalities and appealing speaking styles. The impression they make upon the televiewers should be favorable.

Of course, the Democrats, as history proves, are always capable of making a shambles out of a national convention. If they do that this time, it will be in spite of the good omen suggested by the choice of Messrs. Collins and CHURCH.

[From the Miami News, June 1, 1960]

CHURCH: "DEMO" KEYNOTER

Senator FRANK FORRESTER CHURCH, Democrat of Idaho, will make the keynote speech at the Democratic National Convention at Los Angeles in July. This address, to be heard throughout the Nation, will keynote the program presided over by permanent chairman, Gov. LeRoy Collins (Governor Collins also will address the gathering).

The 35-year-old Senator doubtless will be ready with a thundering speech—one which both points with pride and views with alarm. This is in the time-tested tradition of all good keynoters.

Public speaking is nothing new to the Idaho Democrat. As a boy of 16 he won a nationwide public speaking contest sponsored by the American Legion.

As a young man of 28 he keynoted the Idaho State Democratic convention.

Senator CHURCH has made rapid progress in politics since his election to the Senate in 1956. Prior to that, he was virtually unknown outside of Boise, where he was born July 25, 1924.

When he first came to the Senate, he was so youthful in appearance that he found it necessary to wear brown suits so (he) wouldn't be mistaken for one of the page boys, who have to wear blue.

The Senator's interest in politics began during his high school days when, he says, he became a converted and confirmed Democrat despite a Republican family, and was determined to become a U.S. Senator.

Son of a sporting goods dealer, the young CHURCH married Bethine Clark whose father, Chase A. Clark, was a former Idaho Governor. (The latter is now a Federal judge.)

Senator CHURCH has a personal feeling for history.

Affixed to his Senate office door is a simple, handwrought brass plate bearing the name "F. F. CHURCH." The marker originally belonged to his grandfather who had nailed it to his own office door when appointed a U.S. assayer in Boise during the gold rush of the 1890's.

Someday the nameplate will be passed on to the Senator's oldest son, 11-year-old Frank Forrester Church IV.

[From the Blackfoot (Idaho) News, May 26, 1960]

SENATOR CHURCH SPEAKS TO GRADUATES

"Schooling is the means provided to help you achieve a good life as a free citizen," Senator FRANK CHURCH told members of the Snake River High School graduating class last night at commencement exercises.

"Only by earning your own way can you achieve the independence that will permit you to be free.

"But don't spend the rest of your life working just to make money. You can make life as flat and dull as this gymnasium floor, or you can make of it a beautiful tapestry.

"Acquire good reading habits. Learn to read a good book a week. Set aside time to appreciate the beautiful, both man-made and God-made."

He told members of the graduating class they have inherited a bundle of rights in a free land. Those rights came to them unearned. They can earn them only by using them and passing them on, Senator CHURCH said.

Those unearned rights include the right to choose the place in which they shall live—the right of free movement. Included are the right to choose work and the right to change that work—the right to own property which is protected against the trespass of others. They have the right to worship in the church of their choice.

Other inherited rights that Senator CHURCH reminded them of are the rights to a fair trial if accused of a wrong; the right to learn; the right to differ; the right of self-government; the right to engage in politics which is the art of self-government by majority vote.

Senator CHURCH told of the college student who told him he couldn't see the difference between the United States and Russia. Russians are acquiring housing and automobiles, he said: they own television sets and refrigerators.

In a world half slave and half free, Senator CHURCH said, that student had not learned to measure the value of his country. He did not understand that the United States is great not because it is rich, but because it is free.

As an example of wrong emphasis he cited an evening of TV commercials. "You owe it to yourself to be beautiful—to be comfortable—"

"It takes character and intelligence to remain free. In a world filled with people who would like to do your thinking for you, you must look within. With the training that you have received if you look within you, you will find the means to help keep your country strong and free."

So spoke the junior Senator from Idaho, a man who in the coming months will be in the national spotlight as he delivers the keynote address of a national political convention.

There was not a reference to politics or to national affairs.

It is hard to reproduce words and make them meaningful out of context of manner and delivery.

Those hearing him last night, regardless of political affiliation, must have experienced a sense of pride that in 4 years of service in the U.S. Senate he has demonstrated a high order of statesmanship.

When the Senator from Idaho speaks to the Nation he will carry conviction to his listeners.

[From the New York Times, May 26, 1960]

LOS ANGELES APPROACHING

The quickening tempo of this campaign year is signaled by the Democrats' announcement that they have chosen the permanent chairman and the keynote speaker for their Los Angeles convention. Now all they have to do is agree on a presidential nominee.

The man selected for the chairmanship, Governor LeRoy Collins, of Florida, is universally liked and respected, even though he did receive a rude political defeat in his home State on the very day he was picked to run the convention. In a hot gubernatorial primary which was the equivalent of election, the candidate Mr. Collins had endorsed was, unfortunately, beaten by an opponent who had taken a much stronger prosegregational line.

Mr. Collins himself, now nearing the end of his 6 years' service as chief executive, is nationally known as one of the leading Southern "moderationists" as well as an exceptionally able and successful Governor. His selection as permanent chairman of the Democratic convention would be a good choice on any grounds, but it is of particular interest because it clearly reflects the tragic dichotomy on integration that exists within the party. Though a southerner, Governor Collins is acceptable to the northern liberals, or at least he is not mortally offensive to them, because he is a moderate on the race question; though a moderate on the race question, he is still a southerner and thus anathema only to the radical extremists of the South. As the convention's permanent chairman he is a symbol of the Democratic hope that on this most important domestic issue the South can be restrained from walking out while the North remains satisfied with the party's platform position.

Senator FRANK CHURCH, this generation's boy orator from well beyond the Platte, is a natural for keynoter. He is young, handsome, articulate, uninhibited, with a western enthusiasm that is sure to blow in upon the steaming delegates like a refreshing Idaho mountain breeze. It may be irrelevant in a keynote speaker, but Senator CHURCH is also capable of thought; and it would be a delightful innovation if he should decide to exercise his very considerable talents to give this keynote speech some real content appropriate to the grave issues that are facing the voter and the country.

[From the New York Daily News, May 28, 1960]

D.C. WASH

(By Gwen Gibson)

WASHINGTON, May 27.—It's debatable at best whether young Senator FRANK CHURCH, the golden-voiced orator from the west, won a political plum or a hot potato when he was named keynote speaker for the 1960 Democratic National Convention. Since the advent of nationwide TV, the job has spelled nothing but trouble.

Two of CHURCH's promising predecessors, the late Paul A. Dever and Frank G. Clement, keynoters respectively of the 1952 and 1956 conventions, went on to political obscurity.

And don't forget Arthur B. Langlie, who keynoted the 1956 Republican convention. Langlie lost his bid for reelection as Governor of Washington the next fall.

CHURCH steps into the make-or-break hot spot with one ironic strike against him—his youthful good looks. He's 35 and looks younger. He also is a serious-minded, able lawmaker with courtly manners, all of which once caused a colleague to joke that "sometimes he seems like a cross between a Boy Scout and an old maid."

HE'S PLAGUED BY "PAGE BOY" JOKES

Jokes about how often he is mistaken for a Senate page boy have been the bane of CHURCH's existence since the voters of Idaho sent him to the Senate in 1956 as the youngest Member of that body.

The classic involves the day the tall, dark, and boyishly slim Senator was standing near a page boy waiting for an elevator. A kindly little old lady walked up and said, "I understand you boys are often mistaken for Senator CHURCH."

On the plus side, CHURCH is a champion speaker. He has been winning oratorical prizes since he was 16, when the American Legion awarded him $4,000 as the top high school speaker in a nationwide contest.

CHURCH still makes springtime tours of Idaho, delivering high school commencement

addresses. He was talking to a graduating class of seven at Leadore, Idaho, a remote sheep and cattle-raising village, when the official announcement came that he was to make the keynote address at Los Angeles for an audience of some 70 million.

HE'LL PULL NO PUNCHES AND HIT HIGH, HE SAYS

"I intend to pull no punches," CHURCH proclaimed. "But there will be no hitting below the belt."

The chubby Dever, then Governor of Massachusetts, appalled many TV viewers and party faithfuls with a diatribe, delivered in a hoarse and gravelly voice as beads of sweat poured into his collar. So raucous was the speech that Republicans used recordings of it when Dever sought reelection the next fall. He was defeated by Christian Herter, now Secretary of State.

Clement, whose appearance had been widely heralded, came to the 1956 Democratic Convention at Chicago with one asset—his beautiful, blonde wife. The arm-waving, hackneyed speech he gave was pure backwoods demagoguery, and even some Democrats cringed at his vitriolic attacks on Vice President NIXON.

Clement was then serving his second term as Governor of Tennessee. He apparently felt his popularity had plummeted, because he failed to run against ESTES KEFAUVER for U.S. Senator as expected. He has retired from bigtime politics.

CAN BE BLISTERING WITH HONEYED TONES

If CHURCH delivers ringing denunciations of the GOP, they will be in honeyed tones.

He has provided the CONGRESSIONAL RECORD with some of its most eloquent language. For example, his opening speech on the Alaskan statehood bill began: "Mr. President, many years ago a poet stood on America's last frontier. With wonderment he watched the Arctic lights turn the sky to fire. He listened to the crack of the glacier as it yielded to the sea. He heard the sounding water of mighty rivers and he felt the loneliness of this virgin land."

CHURCH proceeded to quote to his elders verses which he said "give voice to the need of Alaska."

Assistant Senate Majority Leader MIKE MANSFIELD, Democrat, of Montana, gives CHURCH as much credit as anyone for getting the Alaskan statehood bill through the last Congress.

Church has moved ahead exceptionally fast in the Senate, copping assignments on such committees as the labor rackets investigating group (now dissolved) and the Foreign Relations Committee.

GAVE JIMMY HOFFA HIS COMEUPPANCE

During a labor rackets hearing, he once shut up Teamster czar Jimmy Hoffa—no easy job—with a fatherly scolding that started, "We don't need you, Mr. Hoffa, to come up here and moralize on what's right and wrong."

It was a long time before CHURCH, the low-ranking member in terms of seniority, got a chance to preside over a session of the Foreign Relations Committee. When the chance finally came, CHURCH walked to the chairman's high-backed swivel chair trying to look as old and dignified as possible. With confidence he leaned back—and toppled right over on his head.

Unruffled, he righted himself and the chair and calmly observed: "The junior Senator from Idaho is not accustomed to presiding over this lofty committee."

WIFE REMINDS YOU OF GIRL NEXT DOOR

CHURCH is married and the father of two boys, 2 and 11. His wife, Bethine—an attractive brunette who reminds you of the girl next door—is from an Idaho family long prominent in Democratic politics.

Asked to size up CHURCH as a keynoter, she diplomatically predicted that he will be "different • • • straightforward."

"He looks older on TV," Mrs. Church said.

CHURCH and other Democratic officials will be welcomed to Los Angeles for the July convention by Mayor Norris Poulson, a stanch Republican who made national news last September by dressing down Communist boss Khrushchev.

RELIEF FOR LAMB AND WOOL GROWERS—TRIBUTE TO SENATORS FROM WYOMING

Mr. MANSFIELD. Mr. President, the senior Senator from Wyoming [Mr. O'MAHONEY] has long been known as "Mr. Wool" because of the interest he has displayed in the sheep industry, which is one of the most important economic segments of the State of Wyoming. To our sorrow, the Senator from Wyoming [Mr. O'MAHONEY] is to leave us shortly; but those of us who come from the West and who have a deep interest in the wool and sheep industry in our part of the country, are glad to know that the junior Senator from Wyoming [Mr. MCGEE] is not only a worthy associate of JOE O'MAHONEY, but is also an extremely capable successor.

I ask unanimous consent that an editorial which appeared in the Wyoming Eagle, of Cheyenne, Wyo., on June 16, 1960, entitled "Relief for Sheepmen," be included in the RECORD at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RELIEF FOR SHEEPMEN

Wyoming's Senator MCGEE has taken the lead in Congress in attempting to get relief for one of the vital economic interests in the West—the business of lamb and wool growing.

In a speech on the floor of the Senate last week, the Wyoming Senator urged careful study by his colleagues of a report by two members of the U.S. Tariff Commission in which they advocate fixed quotas on imports of live sheep and lambs, lamb and mutton.

Relief for the industry is long overdue, for it has been in serious economic straits for some time. The seriousness of its economic condition has been aggravated by the imports of lamb from the Pacific side of the continent, primarily Australia and New Zealand.

Various appeals have been presented to the Tariff Commission in recent years, but the Commission has not seen fit to take action to sustain the interests of the lamb and wool industry of this country.

"I hasten to point out to my colleagues that in the event of national emergency, such as in time of war, both lamb and wool are regarded as indispensable parts of our national economic effort; it is agreed by all that the industry should be sustained.

"Yet in recent years, the industry has been losing ground; now it is threatened with going out of existence entirely," MCGEE declared.

While recognizing the necessity for the international exchange of goods, MCGEE added, "It is necessary to help sustain essential industries which must operate in the American economy if the Nation is to continue its economic growth and also is to have sufficient economic capacity in the event of emergency."

It is to be hoped MCGEE's petition that the lamb and wool industry be shown more consideration than the Tariff Commission has given to date will be given favorable attention. Some relief is essential if one of the West's great industries is to survive and provide a modest measure of profit.

PRIVILEGE OF THE FLOOR FOR THE HONORABLE PEDRO BELTRAN, PRIME MINISTER OF PERU

Mr. MANSFIELD. Mr. President, the Senate is honored today to have as its guest the distinguished Prime Minister of Peru, the Honorable Pedro Beltran.

I ask unanimous consent that Prime Minister Beltran may be accorded the privilege of the floor so that he may be introduced to the Senate by the distinguished chairman of the Committee on Foreign Relations, the Senator from Arkansas [Mr. FULBRIGHT].

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. I am making this request ahead of time, because the Prime Minister of Peru is not on the floor at this time, but will be, I believe, within the hour.

AMERICAN NURSES' FOUNDATION DRIVE

Mr. HILL. Mr. President, the American Nurses' Foundation has made and continues to make tremendous strides forward in its program for research in nursing. The foundation is undertaking, at this time, to further expand this important nursing research program. As funds become available, the foundation will make grants to research teams, to colleges and universities, to hospitals, special study groups, and to selected individuals in the promotion of an expanded nursing research program. Research fellowships, research consultant services, and research information services will be initiated to carry the program forward.

Mr. President, many of us today remember when nursing consisted of little more than an elaborate system of domestic service. It was just before the turn of the century that schools were founded offering regular courses of instruction for American nurses. It was not until after 1900 that standards for licensing nurses were first established.

In the years following these early beginnings, the nurse's responsibilities grew rapidly both in variety and complexity. Her quick hand, versatility, and courage in the face of emergency gained for her a ready acceptance among men of medicine. Patients, too, were quick to appreciate the essential care that the nurses alone could render.

Her special skills soon were in great demand in areas outside the general hospital; in chronic disease hospitals, in public health, in industry, in institutions for the mentally ill, in the convalescent home, in private homes, in the doctor's office.

Keeping pace with the mounting need for well-trained nurses, the number of schools dedicated to nursing education has risen from 35 before 1900 to over a thousand institutions today located throughout the United States and its territories. Our nursing population has grown to nearly a half million licensed professional nurses actively engaged in providing expert nursing care for the American public.

Probably no other profession has attained greater maturity in so short a

time. In 1950, nursing authorities recognized that if sound progress were to continue, a way had to be found whereby the rapid advances already made in nursing practice could be more efficiently assimilated, and new areas and methods could be explored to provide the knowledge and direction needed to maintain continued improvements in patient care.

To determine how this might best be done, the American Nurses' Association initiated an intensive 5-year program of studies of nursing functions. This program was financed entirely by the nurses themselves.

Approximately 30 separate investigations into nursing practice brought to light much information of immense value to the profession. It was discovered, for example, existing research activity in the field was the work of a comparatively few nurses, and their efforts represented an attempt to determine the forces which prevent or enhance the effective performance of nursing personnel.

Great credit is due these sturdy pioneers, because they had voluntarily undertaken these tasks while carrying heavy responsibilities in full-time positions. Most of their research work had been done in comparative isolation, and only occasionally did the results of their studies reach a wider public through Government reports or publications in the health field.

The evidence gathered during the 5-year program pointed to an overwhelming need for an effective national organization to conduct and sponsor research and for a center where nursing research information could be made available, quickly sifted, evaluated and disseminated to all members of the profession and to other interested groups.

To meet the need for such a research center, the American Nurses Association, in 1955, brought into being the American Nurses Foundation, located at 10 Columbus Circle in New York City. The foundation was created as a nonprofit organization to identify nursing needs and to enrich nursing knowledge urgently required for the proper health care of America's fast growing population.

In its first year of service, the foundation administered the final phases of ANA's original 5-year program. Since then, it has struck out in many directions to uncover new knowledge and to record and to correlate a wealth of facts about existing procedures in nursing.

With funds made available to ANF from private sources, foundations, the Government, and from the American Nurses Association, the foundation has sponsored, guided, and conducted research studies on: Private duty nursing in a metropolitan hospital environment, and its relation to other areas of nursing practice; patterns of career mobility in professional nursing; practical nursing in nonmetropolitan hospitals; patterns of psychiatric nursing; current nursing practice in relation to care of the chronically ill; social and psychological factors involved in nursing practice in hospital outpatient departments; nursing practice in industrial plants; and public health nursing practice.

On an international level, the foundation has undertaken a program to implement the exchange of information with nurses from other countries studying in the United States. As a result of a special grant from the Rockefeller Foundation, the nurses foundation has been able to locate Hungarian refugee nurses and advise them on requirements for reestablishing their careers in this country.

A grant of $11,831 from the National Institutes of Health of the U.S. Public Health Service enabled the foundation to conduct a major workshop session on the progress and future of research in nursing. This conference and workshop, held at Cleveland's Western Reserve University in September of 1958, was attended by 87 outstanding leaders in the fields of social science, health, and patient care.

Mr. President, in its brief 5-year history, the achievements of the American Nurses Foundation have been significant. Since its founding in 1955, almost $300,000 has been expended in research projects. Approximately $100,000 of this sum was dispersed in the form of grants to nine institutions consisting mainly of universities to conduct research in nursing studies. Most of the studies supported by the foundation were conducted by staffs on which nurses participated with social scientists, clinical psychologists, and psychiatrists.

In those instances where projects have now been completed, research reports have been prepared and widely distributed. Interim reports have been issued on projects which are still going forward.

In addition a nucleus of books, papers, and pamphlets has been assembled by the foundation to form the beginnings of a comprehensive research library.

In a recent address, a leading sociologist said:

> We must recognize that a profession is committed to the task of enlarging the body of knowledge that applies to the problems and troubles with which it deals. The provision of research personnel and resources is one of the greatest requirements of a profession.

While great satisfaction can be taken in the progress that has been made, the work accomplished to date has also provided ample evidence that we need to continue the present programs and to move out into new areas of research now more than ever before.

Today, research in nursing faces a prime responsibility for finding—in a variety of nursing situations—new and better methods of patient care to help ease both immediate and future shortages of well-trained nurses to meet the needs of our increasing population. The foundation is emphasizing four areas of study:

First. Nursing procedures: Continue activities in promoting or conducting studies, surveys, and demonstrations in patient care and nursing practices. A part of this program will include experiments on new and more effective ways of providing comfort and safety to patients, ways of improving human relations with patients and families, and methods for health teaching and the rehabilitation of patients.

Second. Effects on nursing due to changing patterns of patient care: Study the impact of changes taking place outside the nursing profession, such as: the development of new drugs and equipment, new techniques, and new philosophies of health care, which automatically necessitate new approaches to patient care.

Third. Effects of administrative organization on patient care: Study nursing care in a variety of administrative units including hospitals, clinics, public health agencies, industries, nursing and convalescent homes and the physician's office.

Fourth. Nursing needs of patients and nursing in different categories of illness: Seek a deeper understanding of the many types of patients and their particular nursing problems since the values, attitudes, and cultural background of the patients and their families affect what medicine and nursing care can accomplish. Special emphasis will be directed toward studying chronically ill and long-term patients in their own homes as well as in hospitals.

To strengthen research in nursing, the foundation is concentrating its efforts through five principal approaches:

First. Sponsor research projects: The foundation will identify and sponsor financially the most urgent projects that can be carried out with qualified personnel within the four general research areas described above. Such projects will be performed by colleges, universities, hospitals, special study groups, and selected individuals.

Second. Conduct research projects: Although the ANF is primarily committed to sponsoring—rather than doing—research, there are instances wherein unique circumstances would indicate a limited number of projects which should be undertaken by the organization itself because of its position in the field of nursing research. In such instances, the foundation staff will conduct research projects.

Third. Stimulate research progress: Through a program of fellowships, the foundation will provide financial aid to nurse researchers and encourage other nurses with research talents to take part in projects.

Matching funds will be made available for joint research projects undertaken in cooperation with other organizations.

Fourth. Provide research consultant services: A staff of skilled and experienced personnel will be maintained to provide counsel, both in the headquarters office and in the field, in planning and developing research projects. Research consultants will be available to advise organizations and groups on particular problems.

Fifth. Disseminate research information: Research findings and other pertinent information will be distributed in the United States and abroad. Monographs and a journal of applied research will be published and a research library will be maintained to stimulate interest in and give information on research

findings. Mailings, field demonstrations, lectures, seminars, annual workshop conferences, and other activities will be included in this program.

Mr. President, the nursing profession of our Nation is closely associated with and directly influences the degree of success with which our medical profession is able to protect and improve the health and happiness of our people.

The American Nurses' Foundation is doing a splendid and challenging job of helping the nursing profession to better meet its vast responsibilities by providing immediate and developing programs for better nursing and health care for our people.

The foundation's efforts in this regard directly affect the care of more than 25 million Americans each year, or one out of every seven persons throughout our Nation.

I believe, therefore, that the program of the American Nurses' Foundation is of urgent interest and common concern to all of us, Mr. President, and it is for this reason that I bring the matter to the attention of my colleagues at this time.

COLD WAR GI BILL SHOULD PASS NOW

Mr. YARBOROUGH. Mr. President, within a few days the Senate again will be called upon to consider and pass the cold war veterans readjustment bill, this time as an amendment to H.R. 10596.

Additional Senate action on the cold war veterans bill was made necessary by the fact that, although the original proposal, S. 1138, was approved by the Senate last July 21 by a vote of 57 to 31, the full House membership has not yet been given the opportunity to vote on it.

Since this matter is of vital importance to more than a million veterans and their families, as well as a significant step in our national effort to develop the abilities and talents of more of our young people, I believe all Members of the Congress will be particularly interested in seeing estimates on how many veterans from their States can be expected to train under this program.

As I have said, S. 1138 passed the Senate last year by a vote of 57 to 31. It is in the House Veterans Affairs Committee, and the House as a whole has had no opportunity to pass on it, though many informal polls show that Members of the House favor the bill by a margin of over 2 to 1.

With respect to H.R. 10596, which is pending on the Senate Calendar, the Senate Committee on Labor and Public Welfare amended the bill by placing the full text of S. 1138 in the bill, which was passed by the Senate last year, in order to give this body an opportunity to pass it and to give an opportunity to the entire House to vote on the bill.

It is one of the most critically needed programs in our country today. For example, based on experience with the Korean GI educational program, the Veterans' Administration estimates that 72,000 young Texans would participate in this cold war veterans training program and would have allowances totaling $106.5 million.

In California, which would have the largest number of participants, 121,000 young veterans would probably take the training and receive allowances of $131.5 million over the 5-year life of the program. A total of 1,237,000 veterans could be expected to take part in the program.

From the State of Ohio, for example, 50,000 are expected to take the training, representing a total outlay of more than $53 million.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table of probable participation and total amounts of educational allowances by State for the first 5 years under the readjustment training program proposed by amendments to H.R. 10596.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Probable participation and total amounts of educational allowances by State for the 1st 5 years under the readjustment training program proposed by amendments to H.R. 10596

State	1st 5 years only [1]	
	Veterans expected to train	Amounts of educational allowances
Total	1,237,000	$1,654,000,000
Alabama	32,000	53,900,000
Alaska	1,000	500,000
Arizona	8,000	10,100,000
Arkansas	12,000	19,000,000
California	121,000	151,500,000
Colorado	14,000	19,000,000
Connecticut	15,000	17,000,000
Delaware	2,000	2,000,000
District of Columbia	16,000	24,600,000
Florida	34,000	43,800,000
Georgia	34,000	50,000,000
Hawaii	4,000	10,400,000
Idaho	4,000	6,500,000
Illinois	64,000	76,300,000
Indiana	26,000	33,200,000
Iowa	18,000	29,400,000
Kansas	13,000	15,900,000
Kentucky	18,000	24,800,000
Louisiana	24,000	40,500,000
Maine	4,000	5,800,000
Maryland	15,000	11,600,000
Massachusetts	40,000	44,700,000
Michigan	42,000	50,800,000
Minnesota	27,000	35,900,000
Mississippi	15,000	26,800,000
Missouri	32,000	45,800,000
Montana	4,000	6,100,000
Nebraska	12,000	19,800,000
Nevada	1,000	1,200,000
New Hampshire	3,000	4,300,000
New Jersey	28,000	26,500,000
New Mexico	7,000	9,600,000
New York	107,000	109,700,000
North Carolina	33,000	47,100,000
North Dakota	6,000	10,800,000
Ohio	50,000	53,300,000
Oklahoma	22,000	33,200,000
Oregon	11,000	14,400,000
Pennsylvania	75,000	90,300,000
Rhode Island	6,000	8,900,000
South Carolina	17,000	27,100,000
South Dakota	7,000	11,600,000
Tennessee	27,000	39,000,000
Texas	72,000	106,500,000
Utah	11,000	16,900,000
Vermont	2,000	2,600,000
Virginia	18,000	22,500,000
Washington	20,000	24,000,000
West Virginia	12,000	14,700,000
Wisconsin	22,000	31,600,000
Wyoming	2,000	2,800,000
Territories and possessions (total)	23,000	60,400,000
Foreign (total)	4,000	4,300,000

[1] State distributions are based on cumulative experience with Korean veterans.

PADRE ISLAND

Mr. YARBOROUGH. Mr. President, for more than a quarter of a century efforts have been made periodically to have a national park area established on Padre Island. Establishing such a national park is mandatory if this last long stretch of America's natural shoreline is to be kept open for the inspiration and enjoyment of all Americans.

Today the fight to preserve Padre Island has moved into an emergency status. Some landowners and cattle owners have taken railroad ties and driven them into the beach as barricades to prevent free access to the beach and passage up and down the beach.

From the earliest days of the settlement of the area, the people have had full and free passage to the beach, first under Spanish rule, then under Mexican rule, then under the Republic of Texas, and then under the flag of the United States.

Mr. President, after more than 200 years of settlement by people of European descent in that area, for the first time in more than two centuries under the four different governments and the six flags which have waved over Texas, this effort is made to disturb the free passage over those beaches. After two centuries of free passage, within the past 3 weeks the land and cattle companies are driving in the railroad ties. Unfortunately, we cannot have photographs printed in the RECORD. I should like to have some photographs of crosstie barriers shown. One would think these men were putting up barricades to keep tanks from going up and down the beach.

This fight has been a critical one, from the standpoint of time. Some property owners already have built fences and are attempting to regulate access to the beaches of Padre Island. Therefore, I believe pending legislation to establish a national seashore recreation area has taken on new significance and immediacy.

Nothing is to be gained and a great deal may be lost by further delay on this already too long delayed project. I strongly urge the Senate Interior and Insular Affairs Committee to approve S. 4, as amended, without loss of time so that we may have congressional action on the bill this year.

Mr. President, I should like to explain my proposal. As I introduced the bill S. 4 early last year, to create the Padre Island National Seashore Recreation Area, we had hoped to have a recreation area on that beach for 100 miles of the island. The island is 117 miles long, and about 5 miles on each end is developed, either under private ownership or in county parks. There is Cameron County on the south end and Nueces County on the north end.

The bill would have provided a 100-mile national recreation area, would have excluded all the developed areas at each end, and would have excluded some other lands, so that they might be developed also. That left a 100-mile beach on the island, without a single building.

This is a barrier reef island from a half mile to 3 miles wide, which is off the mainland and the shore. It is separated from the mainland by a body of water known as Laguna Madre, a shallow body of water.

The area has been found by the National Parks Advisory Board as an ideal site for a seashore recreation area. It is the longest stretch of undeveloped beach in America.

Mr. President, it is 3,700 miles along the Gulf of Mexico and the Atlantic Ocean, from Brownsville, Tex., at the mouth of the Rio Grande, the southernmost point in Texas, to the easternmost point on the shore of Maine. In those 3,700 miles we have only 265 miles of public parks, beaches and recreation areas. Of the 265 miles of such areas, over half are federally owned. Over half of the limited area of 265 miles of public beaches, from a total along the vast Atlantic Ocean and Gulf of Mexico coast shoreline of 3,700 miles, is in Federal ownership. The Acadia National Park in Maine, with its great rockbound coast, has little beach. The great swamp areas of the Everglades of Florida, on the southwestern shores of Florida, have few beaches. The marshes gradually merge into the sea. We have the one good beach at Cape Hatteras recreation area in North Carolina, which is about 50 miles long.

If we establish the proposed 100-mile park we shall have the greatest beach area in America, the only place which is still available which might be made into a recreation area for all Americans.

The PRESIDING OFFICER. The time of the Senator from Texas has expired.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that I may speak for an additional 3 minutes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

Mr. YARBOROUGH. Mr. President, this beach needs to be preserved for all Americans.

One item which held up the establishment of this park was an objection to the full 100-mile area which I advocated. However, the Secretary of the Interior has endorsed an 88-mile park. I agree with him in that matter. The majority leader has issued a public statement approving the 88-mile park. There is a composite administration bill to create the Padre Island Park, the Oregon Dunes Park, and the Cape Cod Park in Massachusetts, all of which are covered in one bill.

On the 23d of May, 1960, Secretary of the Interior Seaton wrote a letter to the chairman of the Committee on Interior and Insular Affairs, the Senator from Montana [Mr. MURRAY] approving S. 4 as a separate bill, and placed the support of the administration behind it.

Mr. President, S. 4 as a separate bill would establish the Padre Island recreation area alone.

We have the statement of the Secretary of the Interior that the administration is willing to spend $8 million in a 5-year period to preserve the beach for the American people.

These are the reasons why the need is immediate and is urgent, Mr. President. The Committee on Interior and Insular Affairs should report the bill to the Senate immediately, because of the fact that railroad ties have been driven into the beaches to block access by Americans. The Secretary of the Interior recognizes the urgency of the problem, and says that he is willing to spend this money in a period of 5 years, $4 million to buy the land and the other money for facilities.

Mr. President, I ask unanimous consent to have printed in the RECORD two timely editorials on this subject; one from the Corpus Christi Caller of June 10, 1960 entitled "Act Now To Make Padre National Seashore Area," and the other from the Houston Press of June 16, 1960 entitled "What's Holding Up Action on Padre?"

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Corpus Christi Caller-Times, June 10, 1960]

ACT NOW TO MAKE PADRE NATIONAL SEASHORE AREA

Padre Island ought to be made a national seashore area.

The designation, which requires an act of Congress, should be made without further delay.

Developments in the last few days should make it clear to all that the best way to preserve the primitive beauty of the long, windswept, sandy island and guarantee its accessibility to this and future generations is to bring it under the protection of the Federal Government's National Park Service.

Visitors to national parks all over the Nation are generally in agreement that the Park Service has done an outstanding job of safeguarding natural wonders and taking care of the millions of citizens who want to enjoy them. National Park Service experts have testified that Padre Island would make an excellent shoreline park. They have stated that it would be desirable to have 88 miles of the island included within the park. This would leave a few miles at each end for private development.

Some of the politicians who have publicly committed themselves to a national seashore on Padre have remained vague on the area to be involved. It appears they are willing for the Federal Government to control a portion of the island, provided, of course, that it builds highways the full length to provide access to all types of private development. If this attitude prevails it will kill the whole project. Federal officials here for the Senate hearing last fall made it clear that they were not interested in any such plan; they want to preserve the whole primitive seashore area. If Texans don't want a national seashore, the Government money can be spent in Massachusetts, Oregon, or some of the other States which are clamoring for the establishment of such a park.

We believe that Texans do want the national seashore, however. Those who have taken for granted their right of access to the beaches of the gulf don't want that right denied to their children and grandchildren.

Congress probably will adjourn within the next few weeks. There is still time, however, to enact a national seashore measure. If you want this done, act today. If you live in the 14th (Corpus Christi) Congressional District, your Congressman is Representative JOHN YOUNG, House Office Building, Washington, D.C. If you live in the 15th (Valley) Congressional District, your Congressman is Representative JOE KILGORE, House Office Building, Washington, D.C. Your Senators are Senator LYNDON B. JOHNSON and Senator RALPH YARBOROUGH, both of whom can be addressed at Senate Office Building, Washington, D.C.

Write or wire them right now.

[From the Houston Press, June 16, 1960]

WHAT'S HOLDING UP ACTION ON PADRE?

Now that our State conventions are over and our Congressmen are back on the job in Washington, we'd like to remind them of one serious piece of unfinished business.

That's congressional action approving and providing funds for the establishment on Padre Island of a national seashore park.

Nearly everybody's for this project to some degree. There are those, however, who would try to use this development for private gain by having an inadequate part of Padre preserved as a park. Most of us agree with the National Parks Board that a national park covering 88 miles of Padre's 110-mile length would retain the island's magnificent isolation and untouched grandeur while leaving ample space at each end for private, commercial development.

President Eisenhower weeks ago put in a request to Congress for the necessary funds and action. Senators JOHNSON and YARBOROUGH have given their unqualified support. Most of Texas' 25 Congressmen are on record for the project.

Everything's set for Congress to act.

What are we waiting on?

The national conventions begin shortly. This Congress is due to adjourn before they begin.

No good purpose can be served by losing any more time.

From Corpus Christi, we've recently had news that private owners are trying to fence off sections of Padre Beach and require the public to register at their "gates" to improve their land titles.

Fortunately, Texas Attorney General Will Wilson hopped on this hard and fast. He has secured temporary injunctions. He has stopped the fence builders. But the warning is clear:

Act now on Padre or trouble as well as fences will build up—and build up fast.

That's something we mustn't let happen, on a project that means as much to America as the preservation of Padre.

THE REPUBLICAN RECORD OF ACCOMPLISHMENTS IN REGARD TO THE PEACEFUL UTILIZATION OF ATOMIC ENERGY

Mr. HRUSKA. Mr. President, since its innovation, all mankind has been interested in opportunities for peaceful utilization of atomic energy. The senior Senator from Iowa [Mr. HICKENLOOPER] has compiled and presented an important report on the Republican record of accomplishments in this field.

President Eisenhower expressed his view in 1953 that this new source of energy should be dedicated to man's betterment rather than his annihilation. Since that time the administration has made great progress along this road. The construction of nuclear powerplants and the flow of knowledge from research have materially contributed to the success of this program.

Mr. President, I ask unanimous consent that this excellent report by the Senator from Iowa be printed in the body of the RECORD following these remarks.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE REPUBLICAN RECORD OF ACCOMPLISHMENTS IN ATOMIC ENERGY, 1953–60

(By U.S. Senator BOURKE B. HICKENLOOPER, of Iowa, senior Republican member, Joint Committee on Atomic Energy)

The Atomic Energy Commission programs for developing the uses of atomic energy have been reshaped and organized in the past 7 years to place full emphasis upon the President's fundamental policy, announced in 1953, that this great new source of energy should be dedicated to man's betterment—not to his annihilation.

Under this policy, the Republican administration has taken the first steps toward economic benefits, both in this country and among our friends in other nations, has accomplished sound progress in the search for new knowledge, and has promoted the peace of the world through scientific and economic cooperation, and through providing the free world with a defensive shield of atomic weapons.

BACKGROUND

When the Republican Party took office, the Nation was rich in opportunities for peaceful utilization of atomic energy, and the full weapons potential also remained to be developed. An international deadlock—unbroken since 1946—prevented all constructive international cooperation in the field of atomic energy. The Federal Government held a monopoly of ownership of atomic energy facilities and of atomic knowledge. Late in 1952, the Joint Committee on Atomic Energy had reported that "Since spring 1950 there has been no major project whose purpose is to achieve a reactor directly advancing industrial power." The United States had a strong stockpile of atomic weapons, but thermonuclear bombs had only recently been tested. The first nuclear-powered submarine was still on the way. Major production plants were under construction in the years after the outbreak of the Korean conflict. The United States was still largely dependent on imports for the raw materials of nuclear power and nuclear weapons.

All of these situations were left to the Republicans when Mr. Eisenhower took office in January 1953.

INTERNATIONAL

The international deadlock was broken when, on December 8, 1953, President Eisenhower made a world-applauded address before the United Nations General Assembly, and brought forth the first fresh approach to this problem since 1946: That peaceful boons from atomic science could be achieved by united effort, and need not wait until the intricate problem of weapons control was solved.

Since that time, 42 nations, and the city of West Berlin, have joined with the United States in bilateral agreements to develop and apply this new source of energy to economic betterment and human welfare throughout the free world.

The nations of Western Europe formed the Euratom Community to develop and build nuclear power stations in cooperation with the United States.

The International Atomic Energy Agency, which President Eisenhower proposed in his historic address, has become an actuality with 70 nations cooperating for peaceful uses of the atom. The Organization of American States is moving forward with atomic sciences and applications.

In recent months there have been conferences between the Western Allies and the Soviet Union on means of ending the menace of nuclear warfare, and weapons tests have been suspended.

The United States has given comprehensive libraries of atomic energy information to 58 countries, and five international organizations. It has made or authorized grants to 19 nations to assist in research reactor projects, and is making grants of research equipment.

Our Nation has allocated more than three-quarter billion dollars' worth of uranium 235 for sale or lease to friendly nations, and has provided deferred payment for the fuel for power reactors overseas. An equal amount has been made available for similar purposes in the United States.

The United States initiated the First International Conference on Peaceful Uses of Atomic Energy in 1955 in which 72 nations participated. In this and in the Second United Nations Conference on Peaceful Uses of Atomic Energy held in 1958, this country presented for unlimited use a great volume of data to assist further progress in beneficial uses. Cooperation in the application of atomic energy to the welfare of man has become a living fact throughout the free world.

THE NEW ATOMIC CHARTER

The President's pledge before the world in 1953 was swiftly supported in 1954 by a new charter for the peaceful development of atomic energy in the United States, and for cooperative work with other nations. This notable legislation of the Republican administration—the Atomic Energy Act of 1954—opened the door for private ownership and development of atomic power. It ended the Federal monopoly on atomic science and technology. It authorized and energized international cooperation for all peaceful purposes. It made possible the rapid advances of the last 6 years in applying atomic energy to mankind's betterment.

ATOMIC POWER

The United States leads the world in atomic power today, a leadership measured not in the production of high-cost kilowatts, but in the basic technology and variety of approaches to the problem of competitive costs for power. Industry is cooperating fully in the attack on this problem.

Eight nuclear powerplants that were not even on the designing boards when this administration took office are now operable, and 21 additional plants have been authorized for construction, either by government or by industry.

Most of the plants are relatively small, but we can expect—on the basis of plants already authorized—a total of some 1,400,000 kilowatts of electricity on the line by the end of 1964. Most of this capacity will come into operation during 1960, 1961, and 1962.

A survey of expenditures and commitments for nuclear reactors, as of the end of 1959, showed that about $1.7 billion was being invested in civilian and military reactors under construction or active development by the Government and industry. About $1 billion of the total was for civilian projects and the remainder for military projects, including more than $650 million for naval powerplants.

This administration has formulated and adopted as guidelines for the Nation's development of civilian nuclear power these five broad objectives:

1. To reduce the cost of nuclear power to competitive levels in high-cost energy areas of this country by 1968.

2. To assist friendly nations now having high energy cost to achieve competitive levels in a shorter period.

3. To support a continuing long-range program to further reduce the cost of nuclear power.

4. To maintain the U.S. position of leadership in the technology of nuclear power for civilian use.

5. To develop breeder type reactors to make full use of nuclear energy latent in both uranium and thorium.

The Republican administration has laid plans for an aggressive 10-year effort to accomplish these objectives. We are laying down detailed programs for efficient development. With expanded industrial cooperation, we believe this effort will make it possible to achieve economic nuclear power in high-cost areas of the United States by 1968 with two types of reactors—those cooled with water, and those cooled with organic materials such as benzene derivatives. We believe that, later on, it will be possible to attain economic costs in wider areas of the country.

The Republican administration is continuing its pattern of cooperative development under Federal leadership with the vigorous support of publicly and privately owned utilities.

The leadership of this administration has produced and will continue to produce technology, and to promote development so that before this country must have nuclear energy to supplement conventional fuels in meeting the ever-growing energy needs of this expanding economy nuclear power will be available at competitive costs.

NUCLEAR MERCHANT SHIPS

Late this year, the world's first nuclear-powered merchant ship, the NS *Savannah*, will begin initial test operations in domestic waters. When initial operations are successfully completed, the *Savannah* will visit various ports on both coasts of North America, after which a cruise in foreign waters will be scheduled.

Operation of this vessel will carry over into ships of peace the success of the Navy's developing fleet of nuclear craft. Plans for other merchant ships, and for increasingly efficient nuclear plants, are under development.

The United States is extending into this promising field the technological leadership it already has demonstrated in design, construction, and operation of power reactors.

THE PROMISE OF RESEARCH

The flow of knowledge and ideas from research in the atomic energy sciences which has contributed to this Nation's advances has been broadened and expanded.

The Atomic Energy Commission's major laboratories have been strengthened and provided with new facilities for research in physical, medical and biological sciences. Research in colleges and research institutions has been largely increased. For the current year, there were 1,083 contracts for research of this kind that in total amounted to $52 million—an increase of 75 percent in numbers and more than 185 percent in dollar amounts over 1953.

A portion of this research is directed toward producing useful power from heavy hydrogen in the fusion reaction—the field of controlled thermonuclear research. Encouraging first results have been won, and each year sees further gains.

This program is for the future, but to make sure that this Nation and the world gain every possible advantage from this field, our research in controlled thermonuclear power has been expanded several hundredfold, and the results made available to the public, to science, and to industry.

Every practical use for nuclear energy that our scientists and technologists can extract is being fully exploited.

The United States is investigating the possible peaceful uses of nuclear explosives (the Plowshare program).

Many peaceful applications such as scientific measurements, excavation, exploitation of natural resources, production of power and isotopes and the development of new industrial chemicals appear to be feasible. Initial experiments are being considered in

excavation, power and isotope production, and in oil recovery. No detonation of nuclear devices has been authorized.

Initial tests have been successfully completed in a series of experiments leading toward the use of nuclear energy to propel space vehicles.

Lightweight, compact nuclear batteries—actually miniature electric plants—are being developed for a wide range of applications, including power for space vehicle instruments. They give promise of having other practical uses—to power remote weather stations and navigation aids, and as power sources for isolated stations.

RADIOISOTOPES

Since 1953 the use of radioisotopes in research and in practical applications has increased threefold. As tools of research, as diagnostic and therapeutic devices in medicine, and as adjuncts of industrial operations, these radioactive varieties of chemical elements have already yielded the equivalent of large dividends on the tax investment in atomic energy.

The ills of a million medical patients are being diagnosed or treated with the aid of radioisotopes each year—a rapidly developing program urged by the Republican Administration.

In agriculture, radioisotopes have opened the way to new and more accurate knowledge of the action of fertilizers on crops, of weed killers and other chemical aids to agriculture. Radiation applied to plant genetics has assisted in developing rust-resistant strains of oats and wheat, and stronger, higher yielding strains of peanuts. The screwworm fly—that costly pest of the cattle industry—has been practically eradicated from the southeastern States, and the campaign of eradication is being extended.

In industry, savings through the use of isotopes have been increasing rapidly since 1953 and further savings lie ahead. Radioisotopes are being used to preserve food and avert food contamination, to improve sewage disposal, to combat sewage and stream pollution, and to increase industrial safety.

Many isotope applications have become standard practice for an entire segment of industry.

Over 90 percent of the tire fabric and 80 percent of the tin cans made in the United States now are controlled in production by radioisotope thickness gages. Similar devices are contributing to the efficiency of steel rolling mills.

To hasten realization of these, and of other benefits from the use of radioisotopes, the Atomic Energy Commission has undertaken, with the encouragement of the Republican administration, a development program to discover new uses of public benefit, to increase training and understanding in industrial uses, and to make larger quantities of radioisotopes available at lower cost.

Over 1 million curies of radioisotopes valued at $20 million have been shipped to doctors, researchers, industries, and private processors.

INDUSTRIAL PARTICIPATION

The great increase of industrial participation in the atomic energy program, and the growth of international cooperation, were made possible by the grants of authority under the new charter, the Atomic Energy Act of 1954. Under the previous law, a vast body of scientific and technical knowledge necessarily was held secret.

Since passage of the act, the United States has established a privately owned atomic energy industry, licensed, regulated, and inspected to assure the public health and safety.

This progress would not have been possible without the success of vigorous efforts to place in the public domain, accessible to all, most of the nonweapons technological data previously held secret by the Government. This enormous, but careful, release of information has been accomplished without compromising the essential defense and security of this country.

Indicative of this progress is the rate of declassification of technical reports during the last 6 years. In 1954 fewer than 9,000 reports had been declassified; by 1960 the total had grown to more than 30,000.

In addition, the United States has made strong efforts to see that the technical information produced in the atomic energy program has been assembled into reports and distributed. In 1954 some 300,000 individual copies of reports had been placed on deposit at libraries through the country for open use by scientists and engineers; by 1960 this number of documents had grown to over 2,400,000. The reports also have been made available through public sale.

HEALTH AND SAFETY

The Republican administration has actively enforced safeguards for the public health in every phase of atomic energy activity.

It laid down the licensing and regulation procedures for U.S. industry, based on years of experience and research in Government operation.

It established a Federal Radiation Council to advise on safety standards, and a Reactor Safeguard Committee to review licensed reactor installations from the standpoint of safety—both bodies afterward being given a statutory charter by the Congress.

This country has readily made available to the use of all nations its knowledge and techniques in the fields of radiation safety—the basis for an unprecedented record of safety in the Federal atomic energy program which has received numerous safety awards—so that this vast new source of energy may be put to work for mankind with a minimum of hazard.

PRODUCTION

During this administration, a complex of production plants was completed which pours out a steady flow of uranium 235 and plutonium for production of the nuclear weapons that guard the free world, and for the production of power in nuclear reactors.

The United States has become the world's leading producer of uranium ore. In fact, the rate of discovery and the flow of raw materials in this country became so large that, since 1957 and 1958, it was necessary for the Government to announce a limitation on development and purchase to bring the domestic supply, plus its commitment for imports, more nearly in line with requirements. This contrasts with the inadequate supplies of uranium up to the mid-1950's—under another administration.

ATOMIC DEFENSE

The United States has, of course, continued to produce and improve powerful weapons for the defense of the free world.

The noblest product of this Nation's atomic energy program is the shield for the peace of the free world. The number of weapons has increased manifold in total numbers as well as in the variety and military usefulness of fissionable material. New designs have been introduced, and others are under development, which greatly simplify the logistic problems of nuclear weapons use, and which meet specific military requirements. As a result of these gains, increased emphasis became possible on defensive weapons to protect the people of the free world from airborne or missileborne attack.

The contribution of atomic energy to free-world defense goes far beyond the design and production of weapons and new methods for their delivery. It has made possible a fleet of nuclear-powered warships without equal in the world.

The first nuclear-powered submarine was launched in January 1954. Since that time, the *Nautilus* and other nuclear submarines—the *Skate*, the *Seawolf*, the *Triton*—have cruised thousands of miles beneath the surface, have crossed and recrossed the North Pole beneath the ice, have circled the globe while submerged. They are the first true submersibles in the world, as contrasted with the earlier submarines which were actually surface craft capable of submerging.

This achievement, unique in the world, has added greatly to the international stature of the United States as a pioneer in technology, and as a leader in atomic energy development.

This administration has been prompt to seize upon and exploit our lead in this important aspect of defense.

We are building a nuclear Navy, presently including 37 atomic submarines, constructed or authorized—10 already are operating—3 surface vessels, a missile-armed cruiser and destroyed, and an aircraft carrier.

We are developing small portable nuclear power stations for use in remote regions such as on the DEW line radar warning system.

SUMMARY

The progress of this Nation in all aspects of atomic energy during the Republican administration has been sound and rapid—in peaceful uses of this new source of energy and its products, in developing power, and in promoting human welfare in this and other countries.

Equally, this awful power has been harnessed for the defense and protection of the free world.

The promise for mankind's betterment, and for peace, is strong and encouraging.

The progress is steadily forward.

THE REPUBLICAN RECORD ON BEHALF OF SMALL BUSINESS—1953–60

Mr. COTTON. Mr President, the status of the American small businessman has long been of concern to Congress. My colleague, the senior Senator from New Hampshire [Mr. BRIDGES], has prepared a heartening report reviewing the record of the Republic administration on behalf of small business, to which I commend the attention of this body.

The birth of the Small Business Administration in 1953 has proven a tremendous impetus to the character of our economy over the past 7 years. Today there are nearly 5 million businesses in the United States, and 95 percent of these are small enterprises.

We hear much these days about the growth and influence of big business. It is gratifying indeed to know that the backbone of our national economy is still the small businessman; as he prospers so does our country prosper.

Mr. President, I ask unanimous consent that the excellent report of the Senator from New Hampshire be printed in the body of the RECORD at this point.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE REPUBLICAN RECORD ON BEHALF OF SMALL BUSINESS—1953–60

(By U.S. Senator STYLES BRIDGES, of New Hampshire, chairman, Senate Republican policy committee)

American small business has grown and prospered more in the 7½ years of the Republican administration than at any time during the previous 20 years.

Today, there are 4,666,000 businesses in the United States, an alltime high, and 95 percent of them are small enterprises.

The Small Business Administration, created in 1953 by the Republican 83d Congress upon recommendation of the Republican administration, now is a permanent agency, by act of Congress in 1958—upon the recommendation of President Eisenhower.

Twenty thousand business loans have been made by the Small Business Administration for an aggregate of about $930 million, of which about $787 million have been furnished by SBA, the remainder coming from local banks and lending institutions which participated.

SBA loans of all types—though running high into the thousands—have been good loans in more than 98 cases out of 100. Fewer than 2 percent of all SBA loans have been written off as losses. This record attests to the character of those who are the backbone of our economy—the small businessman.

Enterprises in all States, the District of Columbia, Puerto Rico, and the Virgin Islands have been aided.

The Small Business Administration's activities extend far beyond the lending program.

More than 9,000 disaster loans have been made—at 3-percent interest—to owners of homes, businesses, and charitable institutions damaged or destroyed by floods, storms, droughts, or other natural disasters. These loans have amounted to some $96 million, with local banks furnishing about $3½ million and the SBA furnishing the remainder.

The Congress declared, in creating the agency, that particular efforts should be directed toward helping small businesses to participate in Government contracts and services.

Under what is called the joint set-aside program, SBA has worked closely with other Government agencies to get proposed Federal purchases, sales, and services specifically earmarked for competitive bidding by qualified small enterprises. The results in this case have been great. More than 79,700 contracts, valued at nearly $5 billion, have been channeled into small businesses by this program.

Similar services by SBA include certificates of competency which go to concerns showing their capacity to perform specific Government contracts. About 700 of these certificates have been issued, resulting in contracts amounting to $105 million.

Another program is called registration of facilities. Under it, small concerns are placed on appropriate bidders' lists. There are approximately 46,600 firms registered with SBA under this program.

A popular SBA program is that of research and development which is carried on at Government expense and the findings or benefits passed on to small concerns not individually able to do it themselves.

Other SBA projects provide small plant production surveys and regular listings of new products and processes which small firms might want to take up.

The Small Business Administration's management assistance program has been of widespread value. The agency publishes a variety of technical aids for small manufacturers, wholesalers, and retailers, which are distributed free upon request. Nearly 8 million of these have been distributed.

This program includes special management courses offered by public and private schools and other institutions. Instituted 6 years ago, this project has been offered in 275 institutions for a total of 800 courses. More than 24,000 small business owners and managers have attended. The cost is borne by tuitions.

Financial grants have been made to schools and colleges across the country for specific small business management research studies. These findings are later released, in published form, to small businesses.

The Small Business Investment Division, created by Congress in 1958, helps finance small firms at the local level.

This program has generated (mid-June) over $80 million in funds, mostly private, which are available for long-term loans and equity financing of small businesses through privately owned and operated small business investment companies (SBIC's), licensed by the Small Business Administration.

Already, more than 100 SBIC's have been formed. They are located in all parts of the country. Hundreds of small firms have been financed by these SBIC's in a wide variety of industries.

SBA helps small businesses through loans to State and local development companies. This is to help establish diversified industries in local communities through Government cooperation with local citizens. In this way, SBA has helped to finance some 50 projects in 19 States totaling some $10 million.

The small business record of the Republican administration is one of outstanding assistance in helping to keep the national economy healthy and prosperous and to provide jobs.

ADDRESS BY SENATOR GREEN BEFORE INTER-AMERICAN DEFENSE BOARD

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an address which I delivered on June 22, 1960, before representatives of the Inter-American Defense Board.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF U.S. SENATOR THEODORE FRANCIS GREEN OF RHODE ISLAND, CHAIRMAN EMERITUS OF THE SENATE COMMITTEE ON FOREIGN RELATIONS, ADDRESSING REPRESENTATIVES OF THE INTER-AMERICAN DEFENSE BOARD, WEDNESDAY, JUNE 22, 1960

General Mathewson and representatives of the Inter-American Defense Board, it is a pleasure and an honor for me on behalf of the Congress of the United States to welcome you to our Capitol. In these troubled times it is of increasing importance that we Americans stand shoulder to shoulder and present a united front to the rest of the world. There probably is no single group which contributes more in the way of practical achievements toward this solidarity than you gentlemen here. I wish personally, and also in behalf of my colleagues in the Congress, to congratulate you upon this extremely important work which you are accomplishing.

We members of the American Congress are happy that you have taken the time from your busy schedules to come to the Capitol and observe the workings of our Congress. We believe that it presents an excellent example of how peoples with varied and sometimes conflicting interests can solve their problems to their mutual advantage. Perhaps this Congress will serve as a useful example of how the American States working together may contribute to the common good.

Many times, as a member of the Senate Foreign Relations Committee I have visited your various Embassies and in several instances your respective countries. On all of these occasions I have been greeted with a warm handshake of friendliness. I have many cherished friendships among your countrymen. It is this type of warm friendship that all of us seek on a worldwide basis. I am sure that each of you as a representative of your individual country shares in this desire. Individually and as a body you are probably the greatest influence toward peace and friendship throughout the Americas. It is the firm belief of my colleagues and myself that only through the ceaseless, tireless, work accomplished by organizations like yours, can we ever arrive at a lasting peace based on friendship, mutual understanding and above all else, respect. Gentlemen, I salute you and again on behalf of all Members of the U.S. Congress I bid you welcome to our Capitol and may your stay among us be happy, fruitful, and an experience you will cherish forever.

AMENDMENT OF THE NORRIS-LAGUARDIA ACT, THE NATIONAL LABOR RELATIONS ACT, AND THE RAILWAY LABOR ACT

Mr. DIRKSEN. Mr. President, I ask unanimous consent that there be inserted in the RECORD three statements that have been made before the subcommittee of the Senate Judiciary Committee on Senate bill 3548, on which hearings are in progress at the present time.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF THEODORE R. ISERMAN ON BEHALF OF NATIONAL SMALL BUSINESS MEN'S ASSOCIATION, BEFORE THE COMMITTEE ON THE JUDICIARY, U.S. SENATE, SPECIAL SUBCOMMITTEE HOLDING HEARINGS ON S. 3548, JUNE 16, 1960

My name is Theodore R. Iserman. I am a member of the law firm of Kelley, Drye, Newhall & Maginnes, 70 Broadway, New York, N.Y. I appear here today on behalf of the National Small Business Men's Association. This association represents some 35,000 small business concerns, a great many of which have a vital interest in S. 3548.

Featherbedding is one of the most malignant evils in our economic system. It is one with which Congress long has battled, but too often when Congress thought it had gained a victory in its war on this particular form of social and economic waste, the courts have managed to turn the victory into defeat or to deprive the country of the fruits of the victory.

Featherbedding is, perhaps, most notorious on the railroads. The facts in the Chicago & North Western case, in which the Supreme Court, contrary to what seems to be the clear congressional intent, opened wide the doors to more and more featherbedding, typify the tremendous waste that featherbedding involves in that industry. But featherbedding takes many other forms and prevails in many other industries.

Labor, whether organized, or unorganized, generally tends to resist laborsaving changes. But, as the late Professor Slichter pointed out,[1] organized resistance always is much more effective than unorganized resistance. Employees fear that more output will mean fewer jobs. This has not been the general experience of American industry. With higher output, costs and prices go down. So many people buy the cheaper goods or services that, notwithstanding the greater output per man-hour, we use more people to make the goods or to render the services.

The practice of unions, either through formal agreements or through pressure on their members, to limit the output resulting from improved methods and techniques has two evil effects on the public. First, it makes

[1] "Union Policies and Industrial Management," Brookings Institution, 1941, p. 172.

the cost of goods needlessly high, thereby pricing some consumers out of the market and holding down their standard of living. When unions limit output, they increase not only the cost of direct labor in the product, but also the cost of indirect labor, burden and overhead that goes into each unit. Thus, in the North Western case, the railroad must not only pay the wages of scores of employees it does not need, but it must pay, also, the cost of maintaining the surplus stations in which those employees idle away their time.

The second adverse effect of featherbedding is to discourage progress. Employers are less inclined to invest ingenuity and capital in new methods and machines that raise output and lower costs if unions are unwilling to permit the new methods and machines to operate efficiently.

Congress repeatedly has shown its concern over various forms of featherbedding. An early instance was in 1934, when it passed the Anti-Racketeering Act (48 Stat. 979 U.S.C., T. 18, 420(a)). That act undertook to put a stop to a form of racketeering that was common in the trucking industry, especially around New York, where officials of Teamsters Local 807 coerced drivers of trucks entering New York City, including members of other Teamster locals, farmers and other self-employed persons, to pay the equivalent of a day's wages to the officials or to hire members of local 807 to ride the trucks into the city. The Supreme Court in effect eviscerated the Anti-Racketeering Act, holding local 807's extortion to be permissible if it offered to provide drivers, even if it persisted in its demands after the truckowner declined those services.[2]

In the Case bill (H.R. 4908) in 1946, Congress sought to correct that decision, but the President vetoed that bill. Congress later incorporated the Case bill's antiracketeering provisions in the Hobbs bill, which it passed (60 Stat. 420; U.S.C., T. 18, 1951, 62 Stat. 793). This third effort to discourage one form of extortion in trucking has been relatively effective.

In 1946, Congress passed also the Lea Act (60 Stat. 89). That purported to forbid the American Federation of Musicians to coerce radio stations to employ or agree to employ "any person or persons in excess of the number of employees needed * * * to perform actual services," or to pay more than once for services rendered. In *United States* v. *Petrillo*, Judge La Buy, in the District Court for the Eastern District of Illinois, held the Lea Act to be unconstitutional under the 5th (due process and equal protection of the laws), 1st (free speech), and 13th (involuntary servitude) amendments (68 F. Supp. 845 (N.D. Ill., 1946)). On appeal, the Supreme Court sustained the constitutionality of the Lea Act (332 U.S. 1 (1947)). On a retrial before Judge La Buy, notwithstanding that Mr. Petrillo had publicly proclaimed that he was deliberately violating the act in order to test its constitutionality, the judge held that Mr. Petrillo was innocent because the prosecution did not show that Mr. Petrillo knew that the radio station involved in the case did not need the extra employees that Mr. Petrillo, by picketing, had forced it to hire. The judge again dismissed the indictment (75 F. Supp. 176 (N.D. Ill., 1948)). Since then, there has been no effective enforcement of the Lea Act.

In 1947, in enacting the Labor-Management Relations Act, 1947, over the President's veto, Congress made it an unfair labor practice for a labor union "to cause or attempt to cause an employer to pay or deliver or agree to pay or deliver any money or other thing of value, in the nature of an exaction, for services which are not performed or not to be performed."[3]

The U.S. Supreme Court made a dead letter of this provision in two decisions. In the first, it held that the International Typographers Union's enforcing its "bogus work" rule did not violate the clause. Under this rule, the union requires newspapers and other employers in the printing business to set up duplicate forms for mats from which they print advertisements, which forms ordinarily serve no useful purpose and are destroyed as soon as the printers finish setting them up (*American Newspaper Publishers' Ass'n.* v. *N.L.R.B.*, 345 U.S. 100 (1953)). In the second case, the Court held that the American Federation of Musicians did not violate the act by requiring a theater to employ a local orchestra to render services that the theater did not want or need (*N.L.R.B.* v. *Gamble Enterprises*, 345 U.S. 117 (1953)). Since then, the National Labor Relations Board has deemed it futile to try to enforce the clause.

Turning now to S. 3548, it does not go nearly as far as the Hobbs Act went in dealing with abuses in the trucking industry, as the Lea Act purported to go in dealing with abuses in the broadcasting industry, or as Congress obviously intended to go in enacting section 8(b)(6) of the National Labor Relations Act, as amended. Indeed, if there is any fair criticism of the bill, it is that the bill does not go far enough.

The truth is that a statute ought not to be necessary to exclude the creation or discontinuance of positions from the area of collective bargaining. Very respectable authority holds that a union, when it strikes to prevent an employer from discontinuing an operation, illegally interferes with the employer's business. New York has a "Little Norris-LaGuardia Act" (Civil Practice Act, sec. 876a). Yet the courts of that State have held repeatedly that striking and picketing to force an employer to continue an operation does not constitute a "labor dispute" within the meaning of the State's Anti-Injunction Act, and that such strikes and picketing may be enjoined notwithstanding such act.

The leading New York case is *Paul* v. *Mencher* (169 Misc. 657 (1937), aff'd in 254 App. Div. 851 (1938), leave to appeal denied in 279 N.Y. 813 (1939)). At special term, the Court said:

"There is no labor dispute as defined by statute between the parties hereto. It is the prerogative of any businessman, with or without reason, to continue or discontinue in business as he sees fit without necessity of explanation or excuse to anyone. When the plaintiff elected to discontinue his factory no one was privileged to complain even though it was done deliberately to avoid a labor dispute. Since there is no labor dispute there is no need to consider whether compliance with 876-a, Civil Practice Act, has been had, as that is not an issue."

The same reasoning applies to strikes and picketing to prevent employers from discontinuing either all or part of their operations. See, for example, *Huron Stevedoring Corp.* v. *Grogan* (127 N.Y.S. 2d 99 (1953)), involving maintenance work that the employer discontinued and contracted out to another company; *Anheuser-Busch, Inc.* v. *Brewery Workers Local 1059, et al.* (N.Y.L.J. Apr. 6, 1955, leave to appeal denied in 285 App. Div. 1134 (1955)), involving the discontinuance of certain branch distribution centers. In *American Type Founders, Inc.* v. *Webendorf-Wills Employees' Ass'n., Inc.* (N.Y.L.J., Jan. 13, 1955, p. 3) the employer announced its intention to close a branch operation at Mount Vernon, N.Y., and move it to the main plant in New Jersey. The employees picketed the New York plant, preventing the employer from moving its operations. In granting an injunction, the Supreme Court of New York, per Bailey, J., said:

"It is the prerogative of any man in business to terminate such business or a branch thereof. The decision to do so constitutes the exercise of a fundamental right and is binding upon the employees. The cessation of business terminates the employer-employee relationship and precludes the existence of a labor controversy. Any picketing thereafter is without a lawful labor objective and may be restrained (*Paul* v. *Mencher* (169 Misc. 657, aff'd 254 App. Div. 851, leave to appeal denied, 279 N.Y. 813); *Huron Stevedoring Corp'n et al.* v. *Grogan* (127 N.Y. Supp. 2d 99), and *M. Mittman & Co.* v. *Sirota* (111 N.Y. Supp. 2d, 100, not otherwise reported)).

"Picketing conducted without a lawful labor objective may be enjoined without compliance with section 876a, Civil Practice Act (*Goodwins, Inc.* v. *Hagedorn* (303 N.Y. 300)).

"The absence of a labor controversy and a lawful labor objective reduces the picketing to tortious conduct which does not fall within the preempted field of Federal jurisdiction but may be enjoined by State courts (*S–M News Co., Inc.* v. *Simons* (279 App. Div. 364); *Willoughby Camera Stores* v. *District No. 15, etc.* (205 Misc. 455); *G. H. & E. Freydberg, Inc.* v. *Internat. Ladies' Garment Workers Union et al.* (128 N.Y. Supp. 2d 470, not otherwise reported))."

The effect of S. 3548 would be to provide, as the New York courts now hold, that striking and picketing to compel an employer to create jobs or to continue existing jobs does not constitute a labor dispute within the meaning of the Norris-LaGuardia Act. This would not in any way interfere with the right of labor unions to negotiate concerning the terms and conditions of employment in jobs that the employer establishes or concerning benefits, in the way of severance pay or new jobs, for employees who lose work by reason of the discontinuance of their positions, nor would the new statute limit the right of labor unions to strike and picket in order to enforce their demands in these areas.

In concluding, I wish to commend to the attention of the committee language that appeared in H.R. 3020, which the House adopted by an overwhelming majority in 1947. That bill made "featherbedding practices" unlawful concerted activities, and defined "featherbedding practice" in section 2(17) as follows:

"(17) The term 'featherbedding practice' means a practice which has as its purpose or effect requiring an employer—

"(A) to employ or agree to employ any person or persons in excess of the number of employees reasonably required by such employer to perform actual services; or

"(B) to pay or give or agree to pay or give any money or other thing of value in lieu of employing, or on account of failure to employ, any person or persons, in connection with the conduct of the business of an employer, in excess of the number of employees reasonably required by such employer to perform actual services; or

"(C) to pay or agree to pay more than once for services performed; or

"(D) to pay or give or agree to pay or give any money or other thing of value for services, in connection with the conduct of a business, which are not to be performed; or

"(E) to pay or agree to pay any tax or exaction for the privilege of, or on account of, producing, preparing, manufacturing, selling, buying, renting, operating, using, or maintaining any article, machine, equipment, or materials; or to accede to or impose any restriction upon the production, preparation, manufacture, sale, purchase, rental, operation, use, or maintenance of the

[2] *United States* v. *Local 807* (315 U.S. 521 (1942)).

[3] 49 Stat. 452, 61 Stat. 140; U.S.C., T. 29, 158(b)(6).

same, if such restriction is for the purpose of preventing or limiting the use of such article, machine, equipment or materials."

S. 3548 is a step in the right direction, but it is only a step. Complete and effective relief against such practices can result only from exempting them, as the Hartley bill defined them, from the immunities of the Norris-LaGuardia Act or by making such practices unlawful under the antitrust laws or other statutes.

STATEMENT OF HARRY O. MATHEWS ON BEHALF OF THE NATIONAL INDUSTRIAL TRAFFIC LEAGUE BEFORE A SPECIAL SUBCOMMITTEE OF THE SENATE COMMITTEE ON THE JUDICIARY IN SUPPORT OF S. 3548

My name is Harry O. Mathews and I am manager of transportation for Armour & Co.; my office is in Chicago, Ill. I appear today in my capacity as chairman of the legislative committee of the National Industrial Traffic League, of which my company is a member and in which I have been active for many years. The league strongly supports the principle of the bill, S. 3548, insofar as it relates to transportation, either private or for hire.

The league is a nationwide organization of shippers. Its membership numbers over 1,700 and includes those directly and individually engaged in the shipment and receipt of commodities, as well as numerous chambers of commerce and traffic associations which in turn represent many members of their own. Many league members conduct extensive transportation operations as private carriers. League members generally are the ones who pay the freight.

The league has a primary concern for sound economic conditions in transportation and the encouragement of fair wages and equitable working conditions in accordance with the National Transportation Policy. Accordingly, it is a policy of the league that work rules which are inconsistent with modern operating practices and sound economic conditions in transportation should be eliminated. The league favors fair and flexible working rules in harmony with modern economic transportation methods. This policy was considered by the entire membership and adopted at the last annual meeting of the league in November 1959.

The league policy is opposed to unwarranted requirements or payments for work that is not needed or not performed. So far as such requirements or payments are proposed in connection with existing jobs as to which there is no question of the creation or discontinuation of positions, they raise questions which may be recognized as labor disputes and which are customarily handled by labor negotiation between the carriers and their employees. The proposed bill would not affect that process. However, a very different situation exists in respect of attempts to require a carrier to continue to provide jobs even though the jobs relate to a service or facility that has been abandoned or merged by authority of regulatory agencies. Where such jobs are proven to be unnecessary or to involve no performance of work their continuance runs counter to the sound principle of economic conditions in transportation. Moreover, until recently such matters have not been the subject of labor dispute or negotiation between the carriers and their employees. Instead, they have been treated in the regulatory proceedings in which the carriers obtained authority for the service abandonment or unification which resulted in the discontinuance of jobs.

For example, when a railroad desires to abandon a branch line it is required as a requisite therefor to obtain a certificate from the Interstate Commerce Commission under section 1(18) of the Interstate Commerce Act. In exercising its authority to grant such certificate the Commission is authorized to impose conditions for the protection of employees who are eliminated by the abandonment. This is customarily done as in the case of *Chicago, B. & Q.R. Co. Abandonment* ((1944) 257 I.C.C. 700). Further, consolidations of railroads are permitted only with approval of the Interstate Commerce Commission under section 5(2)(f) of the Interstate Commerce Act, which provides that the Commission "shall require a fair and equitable arrangement to protect the interests of the railroad employees affected." Similar treatment of other types of carriers is provided.

I am not familiar with all the State laws on the subject but I do know that the general custom and practice in the railroad industry in connection with discontinuance of service has been for the unions to appear in the formal regulatory proceedings, where they urge and obtain protection of the employees. State and Federal regulatory authorities have generally granted such protection according to their fair and impartial view of the merits. In any event it has not been the practice of labor and management to negotiate the discontinuance of service or jobs or the terms and conditions for the protection of employees affected thereby.

As far as I know the first important example of a labor union attempting to negotiate a contract providing that its consent must be obtained for the discontinuance of any jobs is the recent case of the railroad telegraphers demands upon the Chicago & North Western Railway, which was decided by the Supreme Court of the United States last April. Although the Court was divided on the questions of law presented, we think there can be no question but what the inclusion of such dispute in the broad range of subjects for labor negotiation will be a revolutionary and wholly injurious change.

Labor unions understandably desire to have the right to veto any discontinuance of jobs. They attempted to get that right through the Harrington amendment to section 5(2)(f) of the Interstate Commerce Act as presented in the 84th Congress. That amendment would have forbidden the approval of any merger or consolidation if such transaction would result in unemployment or displacement of employees. Congress wisely rejected the Harrington proviso because the very object of unification is to save expense, usually by the saving of labor. The matter is fully discussed in the dissenting opinion of four Justices in the recent North Western case.

Since the North Western case, it is clear that amendment of labor laws along the lines proposed in S. 3548 is absolutely necessary. Otherwise, labor unions will have the power to veto any unification or abandonment of service even though it has been authorized or is required by order of the Interstate Commerce Commission or a State regulatory body. Under the present workable scheme of regulation of transportation, the subject of job discontinuance is simply not an appropriate subject for negotiation. It always has been and should remain a subject for managerial discretion subject only to such appropriate terms and conditions as may be within the power of Government agencies to impose in the regulatory certificates.

The league urgently petitions the Congress to act before adjournment in this important matter by adopting the principles of S. 3548 to exclude from the broad coverage of the phrase "terms or conditions of employment" the creation or discontinuation of positions.

TESTIMONY OF STUART G. TIPTON, PRESIDENT, AIR TRANSPORT ASSOCIATION OF AMERICA, BEFORE A SUBCOMMITTEE OF THE SENATE JUDICIARY COMMITTEE, ON S. 3548, JUNE 22, 1960

My name is Stuart G. Tipton. I am president of the Air Transport Association of America, which is the association of the certificated, regularly scheduled airlines of the United States. The airline industry is grateful to the committee for this opportunity to state its views in support of S. 3548.

As the committee studies the legislation before it, occasioned by the Supreme Court decision in the *Telegraphers* v. *North Western Railroad* case, it is necessary, we believe, that the committee understand the probable effect of this case on the airline industry.

Specifically, the Supreme Court case treated the question of whether the Norris-LaGuardia Act, prohibiting Federal court injunctions in cases involving labor disputes, would bar an injunction in the circumstances there presented.

Briefly stated, the underlying facts were as follows:

In the latter part of 1957 the North Western Railroad filed petitions with various State utility commissions to institute a "central agency plan" which would consolidate and abolish many small, unproductive, outdated freight stations. A few weeks later the union presented the company with a contract demand to the effect that:

"No position in existence on December 3, 1957, will be abolished or discontinued except by agreement between the carrier and the organization."

When the railroad refused to consider this demand and suggested instead that they discuss severence pay, relocation allowances, etc., the union threatened to strike. The railroad sought an injunction from the Federal district court, challenging the legality of the demand in that the State regulatory commissions had given, or were considering, approval to abolish these stations, which included the jobs in issue at those stations.

The Supreme Court, in a 5 to 4 decision, upheld the legality of a strike over this demand and denied the Federal court's jurisdiction to grant an injunction.

It is significant to note that in denying North Western's claim for an injunction, the Supreme Court was not altogether unsympathetic with the situation of the railroad. Justice Black stated:

"In concluding that the injunction ordered by the court of appeals is forbidden * * * we have taken due account of the railroad's argument that the operation of unnecessary stations, services, and lines is wasteful and thus runs counter to the congressional policy * * * these arguments, however, are addressed to the wrong forum. If the scope of the Norris-LaGuardia Act is to be cut down in order to prevent waste * * * Congress should be the body to do so."

The bill before the committee responds to these latter remarks.

S. 3548, in our opinion, will prevent waste. It will relieve unions of the temptation to make demands for veto power over job discontinuances or abolishments. It will allow the company, presented with such a demand, to seek a Federal court injunction against a strike to enforce such a demand. This is as it should be. Such a demand should not be decided upon the basis of relative economic strength.

We, therefore, support S. 3548.

In essence, the result of this legislation would be to preserve the recognized methods of protecting employee rights. The right to be represented by a union would not be affected. The right to bargain over seniority rights, severance pay, unemployment compensation, retirement benefits, relocation expenses, etc., would not be reduced.

In terms of the airline industry and airline employees, the general application of the Railway Labor Act would not be changed; existing union representation certifications would continue; existing conflicts would not be eradicated, the National Mediation Board would continue to mediate airline labor disputes in an attempt to bring about peaceful

settlements; the Federal Aviation Agency would continue to exercise its best judgment for promoting safety in the public interest, as it has done in the past; and the Civil Aeronautics Board would continue to exercise its best economic judgment for promoting and safeguarding the public interest, as it has done in the past.

What is sought is "the ounce of prevention" more than "the pound of cure."

Just as the North Western case involved abandonments and abolishments which required Commission approval, so too, the airline abandonments and abolishments require Civil Aeronautics Board approval.

Once an air carrier has received a certificate of public convenience and necessity from the CAB, prescribing the points it may serve and the service to be rendered, it may not give up, transfer or otherwise abandon that service without approval from the CAB in the public interest. Likewise, the CAB, upon its own initiative, may alter, amend, modify or suspend any such certificate, if the public convenience and necessity so require (sec. 401 of the Federal Aviation Act).

Just as the railroad was considering a "Central Agency Plan" to eliminate inefficient operations and to prevent waste, so too, are the airlines operating under an avowed policy, supported by the Civil Aeronautics Board, to eliminate inefficient operations and to prevent waste.

As you know, the trunk air carriers have been reequipping with long range jets at a very rapid rate. This equipment, because of its size and operation, requires a realinement of route patterns. As a result, there are some instances where short distance service between intermediate points is being transferred from the larger trunk carriers to the smaller, local service carriers. The local service carriers, at the same time, have stepped up from the old DC–3 equipment to faster more modern aircraft which allow them to adequately serve these intermediate points. In addition, the local service carriers are instituting new air service at some communities on a use it or lose it basis, which means that if the locality will support air service by enplaning an average of five daily passengers during a specified period, the service will remain; if not, it will be abandoned.

In terms of specifics, the most significant recent case is one involving an area of seven States (Illinois, Iowa, Minnesota, Nebraska, North Dakota, South Dakota, and Wisconsin). The CAB here, approved requests for suspension of service at 3 points and deletion of service at some 22 points by Braniff Airways, United Air Lines, and Western Air Lines. These points and others were to be served by local service carriers in accordance with the use it or lose it policy.

In the past year and a half, since the Seven States Area case, the CAB has heard the Pacific Northwest and the Montana-Local cases involving suspensions and deletions for Northwest and United; the North East Area case involving suspensions and deletions for American, Capital, Northeast, and United; and the South East Area case involving suspensions and deletions for Delta and National.

Based on these mentioned cases, the CAB has approved trunkline "abandonments" of service in 48 instances. More will follow. The Wall Street Journal recently predicted that the CAB is planning to "overhaul its policies to better fit the jet age," which will mean "abandonment of money-losing airline service to perhaps 100 smaller cities and towns."

These forward steps, involving the discontinuance of service by trunk carriers in favor of the local service carriers and the possible future abandonment of service by local service carriers where the "use it or lose it" test is not satisfied, could be seriously hampered if the air carriers are forced to negotiate the type of union demand held to be legal in the North Western case. It would be senseless for a carrier to discontinue service at an intermediate point and at the same time perpetuate the employment of personnel at such point. A union rule which would freeze jobs on the airlines could also freeze progress.

Another area of potential injury to airline progress is in terms of restriction on mergers and consolidations. It is well known that TWA and Northeast Airlines are considering a merger and that various other airlines have stated their willingness to consider mergers which will strengthen their position and allow them to give better service in this highly expensive jet age. Some writers have even predicted that the only salvation for the airlines' poor earning future lies in reduction of almost violent competition through mergers and consolidations.

In order to perfect a consolidation, merger, purchase, operational lease, contract or other arrangement, air carriers must obtain the approval of the CAB. To be approved the action must be in the public interest (sec. 408 of the act). Since 1943 there have been approximately 20 proposals for mergers, half of which were consummated.

In 1952 the CAB approved the merger of Braniff Airways with Mid-Continent Airlines, and Delta Air Lines with Chicago and Southern Air Lines. In 1954 the CAB approved the merger of Flying Tiger Line with Slick Airways, and of Continental Air Lines with Pioneer Air Lines. In 1956 the CAB approved the merger of Eastern Air Lines with Colonial Airlines.

Each of these mergers was subject to certain economic conditions which included employee protective provisions so that no one would be placed in a worse position without appropriate compensation. The compensation referred to included CAB-determined monthly displacement allowances, dismissal allowances, and separation allowances, as well as moving allowances and relocation expenses and losses.

Future mergers, like these, will invariably result in duplicated job positions, and a union rule that jobs may not be discontinued without union approval could seriously affect a proposed merger. The price a union may demand for job discontinuance could more than offset the advantages sought and thus deny the practicality of the merger.

Thus you have the picture of the airline industry in terms of the discontinuance of service and jobs occasioned by abandonments or mergers and consolidations. An airline may not discontinue service unless the CAB finds such action to be in the public interest. And the CAB's guardianship of the public interest includes the imposition of conditions to protect employees who may be separated from service entirely, temporarily laid off, relocated, or otherwise put in a worse position financially.

As stated by Second Circuit Judge Chase in a 1953 test case of this interpretation of the public interest, *Kent* v. *CAB* (204 F. 2d 263 at p. 265):

"Statutory authority is broad enough to enable the Board to approve a merger and transfer of a certificate upon 'such terms and conditions as it shall find to be just and reasonable' in the public interest. This public interest, though not broadly one of general employee welfare, is to obtain the degree of stability in air transportation that freedom from industrial strife will provide."

If the recent Supreme Court decision in the North Western case is to stand, however, what was determined by an arm of the Federal Government in the public interest, may hereafter be determined by a strong union bargaining committee in the private interests of a minority of its union members. There will not be "freedom from industrial strife."

Let us assume for the purposes of this discussion that trunk airlines, which may be contemplating a deletion or suspension of service at intermediate points which are better served by local service carriers, or a merger or consolidation, are faced with the same type of contract demand that the North Western Railroad received. That is, that no position in existence on a given date will be abolished or discontinued without union approval. To give in to such a demand would totally divest management of its inherent right to control the size of its work force; it would be granting the union the power of veto. To refuse to give in to such a demand could mean a long and costly strike.

The air transport industry requires the protection that S. 3548 offers. Without it, continued progress may be seriously curtailed.

THE EXISTENCE OF GOD

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a lecture on the existence of God, delivered at Gonzaga University in Spokane, Wash., by the Reverend Francis J. Conklin, S.J.

There being no objection, the lecture was ordered to be printed in the RECORD, as follows:

We have outlined the fundamental materialistic interpretation which Karl Marx gave to this universe. In this lecture we will endeavor to understand his analysis and conclusions regarding the existence of God. Before proceeding we must emphasize a very important distinction. A considerable gulf often separates the rational proofs for the existence of God and the personal relationship which each individual human being has with God.

Marx rejects some of the rational proofs for the existence of God and his interpretation is perfectly correct because the rejected proofs were invalid. With some reservations, the God whom Marx denied did not exist anyway.

On the other side of the slate, the question of Marx's personal contact with God remains a mystery. We do not know and cannot discover what graces Marx may have received; we do not know what special lights he received, nor what formal sin he may or may not have committed. The judgment of any individual person remains in the hands of God alone, and no idle speculation can anticipate nor supplant the judgment of God in so profound and intimate a matter.

In one sense we must sympathize with Marx, because you will remember that St. Augustine spent years before he realized that something can exist which is not matter. Marx selected matter as the absolute; as the eternal and self-explanatory. Once this commitment crystalizes, as a philosopher (perhaps logician is a better word) Marx no longer need look beyond external matter for an explanation and ultimate principle of being. Marx sincerely believed—and we must give him credit for that—that the material evolution explained everything requiring explanation in the philosophic world. We can call his viewpoint shortsighted and we can disagree—but we must acknowledge his sincerity—and the climate in which he lived.

Without too much playing at the psychologist, we can examine in some detail certain motives which bolstered Marx's conviction that God does not exist. To begin with, the political attitude of the clergy was, to Marx, appalling. The prominent representatives of God in Europe in the early part of the 19th century were alined with the forces of political reaction. Make no mistake about that.

Catholic Austria was easily identified with the ultraconservatism of Metternich. On the throne of Peter, prior to Pius IX, sat some

of the most conservative and reactionary Popes that ever walked the earth. And the incipient liberalism (too little, too late) of Pius IX was summarily stifled by the exigencies of the times. In Protestant Prussia, Lutheranism was the state religion. And Marx quickly pointed to the anomoly of an official state religion: the Jew could not be a citizen in Prussia because the public question of religious affiliation cut off from the body of the state a natural member.

In Russia the Orthodox Church was tied in so completely with the reigning Czar that the situation simply eludes comprehension, due to our American prejudices. We cannot form a simple apprehension of Russian Caesaro-papism.

The phrase "Caesaro-papism" dates back to the Council of Nicea. Shortly after Christianity became the official religion of the Roman State, the very bishops who had been so bitterly persecuted just a short time before marched to the sessions of the Council between honor guards of servient soldiers. Most were frightened by the presence of the soldiers. The sudden transformation from fugitives to powerfully protected administrators ultimately pleased the hierarchy. Gradually, the idea developed that the head of the church and the head of the state should reside in the same place. In later years Constantinople became the center of the Eastern Roman Empire and the focal point around which the orthodox bishops sattelized. After Kiev, Moscow became the center of Russia's political world and Russian orthodox bishops transferred their allegiance from the patriarchs of Constantinople to the patriarch of the third Rome.

Without doubt the union of church and state solves a host of financial and administrative problems for the church. But the judgment of history must be that politico-religious union creates more problems than it solves. Despite the advantages gained by individual ambitious churchmen through concordats and other concessions, the sword of the spirit always seems to end up in the service of the great sword of state.

Continuing our view of religion in Europe in Marx's time: in England the established church was the church of the respectable or propertied class. Such new religions as Methodism were disreputable. We can draw a parallel in the United States today. Middle class, comfortable Catholicism, to a certain extent, although not exclusively; certain branches of Lutheranism and Episcopalianism have arrived. They have established and proved themselves as respectable religions. This seems to mean that the majority of their members belong to the classes which are financially secure, or at least, financially independent. For the poor classes—Negroes; poor whites; many Mexicans—religious desires are increasingly filled in those forms of religion which are less reputable: evangelical and pentecostal sects, revivalism, etc.

In Catholic France the passionate agitation for the restoration of L'ancienne regime served to identify many members of the laiety and hierarchy with the cause of ultra conservatism. This political partisanship alienated many of the French social thinkers of that era. Moreover, the Catholics in France developed a ghetto attitude, which may be defined as a defensive outlook, whereby all must be defended and justified. In any organization as large as the Catholic Church, the human element plays a vital part. Human mistakes are inevitable. A ghetto attitude refuses to concede the error in human frailty and defends mistakes after they are made. This refusal to face very evident shortcomings and defects in individual clergymen, joined with the longing for the restoration of the good old days of political absolutism, was enough to permanently turn away many who had more progressive and liberal ideas.

Permit me to digress for a moment. Without any doubt any alert Catholic may be tempted to sin because he sees unconscious injustice or even deliberate wrong committed by those who hold high places in the visible hierarchy of the church's administration. When we are victims of this supposed or real injustice the human element of the church stands out in all its naked reality. Even a sincere and mutual desire for the good, even for the same good, does not prevent tragic clashes. It can even provoke them. In such a situation patience and loving silence will be of more value than anything else to the true Catholic. There is, of course, nothing to fear in the judgments of those who do not see the heart and we can comfort ourselves with the thought that the church never gives Christ to us better than when she offers us a chance of sharing in the likeness of his passion. But while they may be profoundly true for an "insider"—even the "insider," occasionally rebels. The "outsider"—and Marx was an outsider, by instinct, a natural instinct of justice—turns away from the institution which occasioned his misfortune.

Returning to our central theme: another point bears emphasis: When an individual clergyman speaks in behalf of religion—whether he be Catholic, Protestant, or Jew—and his teaching or writing reaches an atheist, the reader does not make the distinctions which a person more familiar with religion would make. For example, the fact that a single priest or an individual minister makes an intemperate statement will be interpreted as the common teaching of all religions by a person who is not disposed to make careful distinctions.

Without doubt, during the 19th century, certain religious leaders taught that the existence of the poor was a plan of divine providence. We mentioned some of them in our first lecture. In other words, God was held up as a justification of existing social inequalities. To classify morality as an exclusively individual problem appealed to the self-directed men in Victorian Europe. In this view the only consequential moral considerations relate to personal holiness and sanctification. Anything dealing with a broader application of the moral code; anything relating to the social consequences of the gospel message, is passed over in silence.

We might add—and must add—that today one of the frequent charges pressed against Western European religions by the various Communist parties, is that the churches lack a social conscience. One proof advanced for this assertion—and not without foundation—in questions of personal morality, especially anything pertaining to chastity, the thinking of divines and moral theologians has been very specific and detailed. For example, ask any Catholic girl who has had the benefit of a Catholic education what is the most serious sin she can commit. Her instinctive defense of purity will scarcely coincide with the emphasis Christ placed upon charity as the characteristic of the new life of grace. When more complex questions are proposed: problems of legal justice, e.g., the moral effect of a statute of limitations, etc.; or distributive justice; or social justice; the chorus of unanimity is replaced by an apprehensive silence—broken by a few isolated thinkers.

At this point we must clarify the phrase "promethean antheism." In the myth Prometheus, a Titan out of power, and Zeus or Jupiter or Jove, the supreme god, clashed. Prometheus tricked Zeus by placing sacrificial bones covered with a thin layer of fat alongside entrails stuffed with fat. Zeus loved fat meat, greedily chose the bones—discovered the fraud, and angrily took fire from Prometheus so that no more such fraudulent sacrifices could be offered.

Prometheus stole fire from heaven, i.e., he showed men how to rub sticks together in order to make fire. This infuriated Zeus. To punish Prometheus, Zeus tied him to a rock over in the Caucasus and all day long an eagle picked out Prometheus' liver. Since Prometheus was an immortal the liver grew back again at night, and Prometheus was thus condemned to eternal torment. To punish mankind for having received the gift of fire Zeus created woman.

The idea behind the myth is that Zeus—i.e., the supreme god—is a tyrant, a despot and an enemy of man. In other words, men suffer because of God's tyranny. God is unjust and enjoys torturing men. Prometheus symbolizes man's defiant will. Even though God is all-powerful, man will resist to the last. It is better to reign in hell than to serve in heaven. Man's immortal spirit cannot be killed and those who benefit mankind, although they must suffer to wrest secrets from nature and from nature's god, will nevertheless triumph by defying the all-powerful but merciless God.

What we are saying is simply this: the central problem in the philosophy of Marx is the problem of evil. This gives rise to the whole of this system. The entire superstructure of dialectical materialism constitutes a solution to the problem of evil. Of course, we have memorized somewhere, that God wills physical evil only indirectly; moral evil He does not will at all but only permits. So that takes care of Karl Marx. Would to God it were that simple.

One rational proof for the existence of God which Marx attacks was an argument which is often confused with the fifth way of St. Thomas: If we contemplate the order and harmony within the universe, we find the balance so delicate that one cannot move a flower without moving a star. Such a disposition and ordering could not have come into existence by chance. It could only be the result of a supreme intelligence which exists and guides all beings to their proper destiny. The intricate mechanism of an ordinary watch could not have come about by chance, so the universe itself could never be the result of blind forces in nature. Consequently, there must be a God.

This argument does not prove the existence of God. The supreme architect could have passed out of existence many years ago, and the universe itself would continue to exist just like the watch—a mute memorial to the skill of its fabricator. The frequently misunderstood five proofs of St. Thomas are not five distinct proofs but one proof which St. Thomas expressed in five different ways. In this same connection, St. Thomas pointed out that any attempt to prove the existence of God by what he calls causae per accidens subordinatae is predestined to failure. Among other reasons there is the fact that you cannot prove by reason alone whether or not the world, that is, the material world, is eternal. Another difficulty: Suppose we say that A was made by B, which was made by C, etc. Finally we may arrive at a concept of a being which is necessary—and then we fall into the trap of the Anselmian argument. In other words, we argue from the nature of the concept to the existence of a supreme being.

These arguments, especially the argument from order in the universe, were used by the Deists at the time of Marx. Deism was a respectable type of religion for the statesman and businessman, because Deism demanded very little and provided a convenient method to dispose of God during the important hours of the business week. By allowing God a certain amount of time on

the Sabbath the Deist could keep pace with respectable neighbors, and return to the jungle of the Monday morning business world without the impediments which arise from conscience.

Marx and Engels launched out against Deism. The charges of hypocrisy which they leveled against many of their English acquaintances were certainly well founded. Their classic attack on Deism is contained in Engels' "Dialectics of Nature":

"God is nowhere treated worse than by natural scientists who believe in Him. * * * But what God has had to suffer at the hands of His defenders. In the history of modern natural science, God is treated by His defenders as Frederick William III was treated by his generals and officials in the campaign of Jena. One division of the army after another lowers its weapons, one fortress after another capitulates before the march of science, until at last there is no place left in it for the Creator. Newton still allowed Him the 'first impulse' but forbade Him any further interference in His solar system. Father Secchi bows Him out of the solar system altogether, with all canonical honors it is true, but nonetheless categorically for all that, and he only allows Him a creative act as regards the primordial nebula. And so in all spheres. In biology, his last great Don Quixote, Agassiz, even ascribes positive nonsense to Him; He is supposed to have created not only the actual animals, but also abstract animals, the fish as such. And finally Tyndall totally forbids Him any entry into nature and relegates Him to the world of emotional processes, only admitting Him, because, after all, there must be somebody who knows more about all these things (nature) than J. Tyndall. What a distance from the old God—the Creator of Heaven and Earth, the maintainer of all things—without whom not a hair can fall from the head."

We come now to a more profound consideration of the influence of Ludwig Feuerbach. In the "Essence of Christianity," Feuerbach writes:

"Religion has its basis in the essential difference between man and the brute—the brutes have no religion. What is the essential difference between man and the brute? The most simple, general, and also the most popular answer to this question is consciousness; but consciousness in the strict sense, for the consciousness implied in the feeling of self as an individual, in discrimination by the senses, in the perception and even judgment of outward things according to definite sensible signs, cannot be denied to the brutes. Consciousness in the strictest sense is present only in a being to whom his species, his essential nature, is an object of thought. Religion being identical with the distinctive characteristic of man is then identical with self-consciousness—with the consciousness which man has of his nature. But religion, expressed generally, is consciousness of the infinite; thus it is and can be nothing else than the consciousness which man has of his own not finite but infinite nature."

Expressed in terms of the Hegelian dialectic, the same concept may be more easily comprehended. We begin with the thesis: The existing self with the attributes, i.e., the potentialities for reason and love which are infinite; i.e. unlimited. This self projects a god: i.e. man creates his own God. Then comes the synthesis wherein man realizes that he is divine and that God is a denial of self.

Marx is not content to merely accept Feuerbach at face value. Marx says that Feuerbach has done a good job, but has not gone far enough. "Feuerbach starts out from the fact of religious self-alienation, the duplication of this world into a religious imaginary world and a real one. But he overlooks the fact that after completing this analysis the chief thing remains to be done." ("Thesis on Feuerbach.")

Feuerbach does not explain why man creates God. The man who creates God is no abstraction like humanity; he is a real concrete human being, a social being, an individual immersed in society. Consequently, it is society which creates religion and society creates religion or creates God because society is alienated, unreal, frustrated—or, if you prefer, contains a contradiction at the heart.

Marx goes further. Men are distinguished from animals by consciousness or anything else that you want. But the real thing that distinguishes man from animal is the fact that men produce the means of their existence: in a word men produce their own material life. Marx employs a phrase which has to be pondered: "It is not the consciousness of men which determines their existence, but their existence determines their consciousness."

Marx has completely broken with subjective idealism, so it is not the makeup of the human mind that determines the real world—the world of existence—but this world in which economics is of such vital importance is what determines the thinking of men. Thus, it is the production of life's necessities and after their production, their exchange, which forms the basis of all history.

Engels wrote: "Then came Feuerbach's 'Essence of Christianity.' With one blow it pulverized the contradiction, in that without circumlocutions it placed materialism on the throne again. * * * Nothing exists outside nature and man, and the higher beings our religious fantasies have created are only the fantastic reflection of our own essence."

In the process of creating God man is no abstract being squatting outside the world; man is the world, of men, the state and society. The essence of man is no abstraction inherent in each individual; it is the reality of the ensemble or group of social relations. Men distinguish themselves from animals, as soon as they begin to produce their means of subsistence. By producing these means of subsistence, men are indirectly producing their actual material life—their own existence, as such. For this reason the production of life's necessities, and after production their distribution and exchange constitutes the driving force of all history.

The consequence of this is that the contradiction which creates religions must be sought for in the world of political economy. In political economy, the true contradiction must be found, understood and revolutionized in practice. In the 19th century society in which Marx lived, production was a social phenomena; in other words, all men worked, but the enjoyment of the fruits of work was granted only to the few. Consequently, social production was contrasted starkly with individual enjoyment. This contradiction lay like a cancer at the very core of 19th century economic life. To eradicate this cancer Marx would reconstruct society through revolution. A new society must be created which is humane; which is constituted by a socialized humanity in which all will enjoy the fruits of production.

"This is the process of development of practical humanism. Atheism is humanism brought about by abolishing religion; communism is humanism brought about by abolishing private property. Only by first removing this interceding element, which, however, is a necessary prerequisite, does positive, self-created humanism come into being. Atheism and communism are not escapes; they are not abstractions, they are not a loss of the real world produced by man or of his powers which have matured into objectivity. They are not a poverty returning to unnatural, undeveloped simplicity. They are the first real development, the first materialization for man of his being." ("Literature and Art," p. 62.)

"When this act has been accomplished, when society by taking possession of all means of production and using them on a planned basis has freed itself and all its members from the bondage in which they are now held by these means of production which they themselves have produced but which now confront them as an irresistible extraneous force; when therefore, man no longer merely proposes, but also disposes—only then will the last extraneous force which is still reflected in religion vanish, and with it will also vanish the religious reflection itself, for the simple reason that there will be nothing left to reflect." ("Anti Duhring," p. 355.)

"Thus the criticism of heaven transforms itself into a criticism of earth, the criticism of religion into the criticism of legal rights and the criticism of theology into the criticism of politics." (Marx penned this prophecy in an early newspaper article.)

Marx has surpassed Feuerbach. Feuerbach has correctly analyzed the nature of religion. Marx has explained why man creates religion. Religion arises from the contradictions, strain, alienation and frustration in the real day-to-day economic order.

The problem with all previous philosophers—Feuerbach included—is that they have only interpreted the world. The point is to change it.

Therefore, "The criticism of religion ends with the doctrine that man is the supreme being for mankind, and with the categorial imperative to overthrow all conditions in which man is a degraded, serval, neglected contemptible being."

"The religion of the worker has no god since it seeks to restore the divinity of man."

Mr. HRUSKA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, is morning business concluded?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN

The Senate resumed the consideration of Executive E (86th Cong., 2d sess.), the Treaty of Mutual Cooperation and Security between the United States of America and Japan, signed at Washington on January 19, 1960.

The PRESIDING OFFICER. Under the order of the Senate, the resolution of ratification of the Japanese-United States treaty is before the Senate under a 30-minute limitation.

Mr. JOHNSON of Texas. Mr. President, I ask that 15 minutes be allotted to the distinguished and beloved Senator from Louisiana [Mr. LONG].

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, as one member of the Foreign Relations Committee, I purposely absented myself from the session of the committee when it was considering the Japanese Treaty, in deference to the desire of many members that the treaty might be favorably reported by unanimous vote. Had I voted, I would have voted against it.

Since the day the treaty was reported, I have had occasion to consider what advantages, if any, this Nation would achieve from a unanimous showing of advice and consent. It is my conclusion that, in this case, unanimity gains us nothing. In fact, it will even be costly to us. The Communists around the world will seize upon the ratification of this treaty to claim that we have imposed upon a vanquished nation terms and conditions to which the people of that nation were unwilling to agree. A unanimous vote will be construed by many to indicate that the treaty was extremely favorable to the United States and contrary to the interests of Japan.

Actually, the facts are the other way around.

This treaty is entirely a one-way street. We give much and gain practically nothing that we do not already have.

In the first place, this treaty gives away the right of the United States to use bases on Japanese soil for the defense of the free world unless the Japanese Government agrees to such use. In view of the imminent fall of the Kishi government and the indications that this government is likely to be succeeded by a Socialist or neutralist government, with the clear possibility that the nation will be taken over by a Communist coup at any time, the rights which we give here can very well mean that the Japanese bases upon which we have spent more than a billion dollars could not be used to defend the position of the free world.

Second. In contrast to our existing treaty, it will be possible that troops of a foreign nation can be stationed on Japanese soil without our consent. While this is not an immediate possibility, it could lead to the eventual situation wherein Communist forces could be stationed on Japanese soil, and perhaps enjoy the use of some of the same facilities constructed there with our money.

Third, and most important of all, we undertake to commit ourselves to defend the nation of Japan if that country is attacked, without any reciprocal commitment that the Japanese nation will take similar action to assist the United States if we are the victim of aggression. Under the terms and conditions to which we agree here, it could very well happen that the United States will be attacked suddenly by intercontinental missiles and nuclear explosives. We might find within a few hours that over 40 million of our people had been killed and 80 percent of our fighting capacity destroyed by surprise.

If this Nation had been so devastated that it had little left with which to retaliate, it is entirely likely that any nation which was privileged to remain neutral would not dare subject itself to the same devastation. Under those conditions, we could predict that the Japanese Government would not permit our planes to take off from the bases in Japan. Under this treaty, the government which succeeds the Kishi regime will have the right and power to insist upon precautions to assure the compliance with article 5 of this treaty with the result that American forces in Japan will not be used to engage in hostilities outside of that nation without the agreement of the Japanese Government.

Our experience in Korea should have demonstrated how little assistance we can expect from other nations under the general terms of the United Nations Charter. It will be recalled in that instance that the Soviet Union had boycotted the Security Council and was not present to exercise its veto. This is not likely to happen in the future.

Even after the Security Council had called upon all United Nations members to resist aggression in Korea, it was only the United States that sent more than token forces. The help that we received varied from one division to an ambulance.

A nation which made one of the greatest contributions was Turkey—a nation which lies in a very exposed position to the Soviet Union. At that time, Turkey had no treaty with the United States and she was seeking to obtain a commitment that we would assist Turkey in the event of Soviet aggression. Turkey was perfectly willing and expected to make a similar commitment to respond in the event that the United States was attacked.

One of the reasons why Turkey responded so admirably compared to other members of the United Nations was the hope of Turkey that she could obtain an alliance with the United States.

This Nation is, in my judgment, foolhardy to agree to defend nations who are not willing to make a firm agreement that they will join in the common defense. Those who are unwilling to assist in the common defense have no right to request or demand that others should fight for them.

The United States has far more to offer than any other nation to the resistance of Communist aggression and Communist subversion. We have, by far, the strongest Air Force, Army, and Navy, as well as the most advanced missiles and weapons in the free world. Based on the relation of military expenditures to gross national product, the United States is making almost twice the effort being made by any of our allies, with the possible exception of those nations whose governments are being supported by the American Treasury.

How can we expect other nations to provide adequately for their own defense when they can expect Uncle Sam to do it for them and Uncle Sam has a good reputation for keeping his word?

How can we expect them to provide anything like adequate defenses for themselves when that which they can provide is only a fraction of that which Uncle Sam will provide otherwise?

How can we expect them to fight at all when they are faced with the imminent threat of nuclear destruction on the one hand while their contribution may very well be small and undecisive on the other?

The smaller and weaker nations have every incentive and every advantage in standing aside while the great powers fight it out. A power which is privileged to remain neutral can be spared the horrors of nuclear warfare by staying out of the conflict and by bending to the will of the victor, whoever he may be, if demands should be made by that power.

A neutral government in Japan would not permit the use of American forces from Japanese bases knowing that the granting of such permission would immediately subject that nation to a charge of belligerency by the Soviet Union or by Communist China.

It would be my suggestion that this Nation should seek firm commitments from all nations of the free world that each member would join in the common defense and that each member would make an adequate contribution to that common defense. Failure of any nation to make its adequate contribution should cause it to be in default on its obligations and hence not entitled to the protection which would otherwise have been accorded.

As the Nation with the most to give, this Nation should withhold commitments to those who would not join in the common effort.

Instead of working consistently toward such a policy, our State Department has undertaken to commit us first by one treaty and next by another to defend almost every nation on earth which borders upon the Soviet Union or Communist China and almost every nation that is located anywhere in the vicinity of those great powers. Practically all of these undertakings are sufficiently vague to permit other powers to stop short of actual hostilities in the event the United States is attacked. There is no doubt of the intentions of this country that we expect to fight if those nations are attacked. The worst part of these piecemeal pacts and treaties is that, in many instances, we are committed to fight under circumstances where very few, if any, of our allies are committed to do likewise.

The Japanese Treaty is, in this respect, the worst of them all.

We undertake to defend Japan against aggression if an attack is made upon territory under the administration of Japan. Japan does not agree to fight if an attack is made upon the United States or any of its possessions, or upon any of our military units located in the Far East and outside Japanese territory.

These one-way, unilateral, lopsided agreements, always tilted against the United States, seem to be a part of a

State Department pattern to firmly pledge the United States to go to war no matter where the Communist powers may move without any serious effort to assure us that we will have strong and dependable allies at our side. The developments of postwar diplomacy—viewed in totality—amount to a tremendous diplomatic victory for many free nations over the United States of America.

At the close of World War II, nations which bordered the Soviet Union were in a very exposed position. They were in danger of being overrun by Communist armies and in need of a strong defense which an alliance with the United States could provide them. Those nations have now succeeded in working out arrangements whereby Communist movements must, in all events, be engaged by U.S. arms. There is no iron-clad agreement that any of these nations will go to war under all conditions. In fact, it can hardly be said that there is a firm agreement anywhere that any of these nations will go to war under any conditions.

The United States is expected to fight under all conditions.

It would be foolish indeed for the Soviet Union to start a war by military aggression upon those nations which lie along its borders. To do so would offer the United States complete justification for striking the first blow with all of the enormous military advantages which that decision entails. If the Soviet Union has decided to embark upon a pattern of military aggression, the kind of pacts, treaties, and agreements to which this Nation has become committed since World War II gives us assurance that the entire weight of her military potential will be thrown against the United States as the first victim. The type treaty to which we here agree is conferring to another nation the protection of our arms and a free ringside seat as an observer at the fight if it should occur.

Stress has been laid upon the provision of the Japanese Constitution in which that nation renounces the right to wage war. This condition was imposed upon the Japanese by General MacArthur in pursuance of American policy at that time. Viewed from hindsight, it has been regarded as a major mistake. The Japanese as well as the Germans, notwithstanding past differences with other nations of the free world, are potentially two of the strongest forces to maintain freedom and resist Communist aggression. They should bear their fair share of the cost and burdens of freedom.

Unless and until Japan is willing to modify its Constitution to join in a common defense with other free nations, it is, in my opinion, an unwise commitment for the strongest military power in the free world to agree unilaterally to defend that nation or any other which will not make a reasonable effort to assist in a joint undertaking.

One further point should not be overlooked.

The Communist and otherwise politically inspired rioting going on in Japan today precedes the fall of the Kishi regime. I know little of Premier Kishi but everything I know about him is good. If ratification of this treaty would save his government, I might be inclined to reconsider my position. Unfortunately, Premier Kishi is a man of peace who is on his way out of power. From all appearances, he is a marked man for assassination or other brutality at the hands of Communists and Communist sympathizers. It will not be Kishi who will administer the powers of the Japanese Government under this treaty. In all probability, the successor to the Kishi government will immediately demand renegotiation of this treaty, ratified by a lame-duck government of Japan against the stormy protests of mobs in the street.

Sooner or later—and probably sooner—our Nation will be compelled to renegotiate and make further concessions. When the renegotiations begin we will already have given away everything we could afford to give and much that we could not afford to give. We will have nothing left with which to bargain and yet we shall be compelled to make further concessions to pacify the same type mob violence of which we are being daily informed.

Accordingly, Mr. President, I see much to be lost and little to be gained by ratification of the treaty before us, and I shall cast my vote against consenting to it.

Mr. MANSFIELD. Mr. President, I yield 3 minutes to the Senator from South Carolina.

Mr. THURMOND. Mr. President, the treaty which we are considering has caused me grave concern, as I am sure it has the other Members of the Senate. I have certain reservations about some of its provisions, but I feel that the serious world conditions we face today make it imperative that the Senate consent to the ratification of the treaty and do so by an overwhelming vote.

Communists in Japan have been leading riots against the ratification of this treaty, evidently because they feel that ratification would not be in the best interest of their goal of communization of the world. If we were to refuse to consent to the ratification at this time, we would be playing directly into the hands of the Communists by insuring without question not only the downfall of Mr. Kishi but of the entire Japanese Government. This would result in increased strength and prestige for the radical and rioting elements in Japan.

In addition, this treaty serves notice on Mr. Khrushchev and his Communist cohorts that the armed might of the United States stands behind the security of the Japanese people against Communist attack. If we refuse to approve the treaty, we will present the Soviets an open invitation to gobble up Japan, which, in the view of experts on world affairs, is the key to the entire Far East. Should Japan fall to communism, then all of Korea, Formosa, and other vital areas of the Far East, extending on into southeast Asia, with its huge populations and great wealth of mineral and other resources, will be endangered.

As I stated at the beginning of these remarks, I realize full well that this is by no means a perfect treaty. However, under the circumstances I have mentioned, I feel that there is no alternative to the Senate voting to consent to the ratification of the treaty, despite the very serious reservations which I have as to some provisions of it.

Mr. President, at this critical time we cannot fail to affirm our unswerving purpose to stand steadfastly by our friends throughout the free world.

Mr. JOHNSON of Texas. Mr. President, we shall soon make one of the most important decisions we shall be called upon to make at this session. The distinguished members of the Committee on Foreign Relations, on both sides of the aisle, have given the treaty their most thorough consideration. They have reported the treaty to the Senate with the recommendation that it is in the national interest to ratify it.

I am hopeful that the Senate will carefully reflect upon those recommendations, will consider them studiously, and will confirm the action of the committee.

I believe the approval of the treaty by the Senate is in the best interest of the Nation and in the best interest of the free world. In these crucial days, it is incumbent upon us, as responsible leaders, to do all we can to shore up the defenses of the free world. I think the treaty is a step in the right direction.

The distinguished Secretary of State has written to the leadership, has testified before the Committee on Foreign Relations, and as late as yesterday afternoon felt that the course of wisdom dictated that the Senate should act expeditiously and favorably upon the treaty. I trust that the Senate will support the recommendations of the Secretary of State, the President of the United States, and the Committee on Foreign Relations. I have confidence that we shall do so overwhelmingly.

I yield to the distinguished Senator from Montana.

Mr. MANSFIELD. Mr. President, I join with the distinguished majority leader in urging the Senate to consent to the ratification of the treaty which is now before the Senate. I hope the treaty will not be involved in personalities, either in this country or in Japan, and that it will not be involved in any issue either in this country or in Japan.

We are, as a matter of record, faced with an accomplished fact. The treaty has passed through the Japanese Diet and has been ratified and signed by the Emperor of Japan. It is now in its final stage here.

In the best interests of both Japan and the United States, I believe the best thing we can do is to bring the matter to a speedy and successful conclusion.

Mr. JOHNSON of Texas. I thank the Senator from Montana. I believe the Senate has set a very good example for the world, because we have debated the treaty in an atmosphere of calmness and judiciousness. We have been thorough. Now we are about to resolve the matter.

I yield to the distinguished Senator from Illinois.

Mr. DIRKSEN. Mr. President, when the consultations begin on a matter as solemn as a treaty, I think the experts who sit around the table are conscious of their responsibilities and who they represent. In this connection, obviously the representatives of the Japanese Government were considering some 90 million people who had their peculiar problems. The representatives of the United States, on the other hand, were thinking of a country of 180 million people who had their problems, also. To put everything together in a solemn document, ultimately to be ratified and to be placed into effect for a long period of time, is indeed a solemn responsibility. I believe all the experts have measured up to it, and have brought to us a most acceptable treaty.

As the majority whip, the distinguished Senator from Montana [Mr. MANSFIELD], has pointed out, the treaty was ratified in Japan. As a matter of fact, it was ratified in the Japanese Diet on the 20th day of May.

All the stormy action which took place followed a very carefully calculated pattern. It was Red inspired, even as the Japanese Prime Minister said. It followed two lines: First, an effort to stop the ratification of the treaty; second, if that could not be done, then either dissolve or prorogue or adjourn or put an end to the sessions of the Japanese Diet, because then the treaty would automatically fall.

The Japanese opposition failed on the first count. The treaty was ratified on May 20. They failed on the second count because the Diet remained in session until Saturday noon, our time, Sunday noon, Japanese time, and automatically the treaty became effective.

Under the treaty, we retain our bases; we retain our facilities. It is an 11-year treaty, meaning 10 years plus the year which is involved when notice might be given by either side. If ever there was a defeat for the Red-inspired crowd, that was it.

I add one thought. There have been many speculations as to whether the United States has lost prestige in this matter. When one wins, he does not lose prestige. When we win by having the treaty ratified, we do not lose prestige. When we win by keeping the Diet in session, we do not lose prestige. When we retain our bases, contrary to every Communist hope that the U.S. troops might ultimately be expelled from Japan, we do not lose prestige.

As we prepare for the final approval of the treaty, I concur fully in what the distinguished majority leader said. I hope there will be an overwhelming vote in favor of the ratification of the treaty.

If I might utter a fervent hope, it would be that there will be no vote against the treaty, so that when the word goes out across the Pacific, the Japanese people will know how this body acted as representative of the American people.

Mr. JOHNSON of Texas. I thank the distinguished minority leader for his very fine comment.

I conclude on this note: The alternative to this treaty is the existing treaty. I do not believe there is any question that all of us admit that what we are seeking is a better treaty than the one which exists. I am confident that the great majority of the Japanese people still prefer freedom as the way of life. I think that in the interest of freedom in Japan and the United States, and all the other countries who look to us for leadership, the treaty should be ratified.

Mr. President, I yield back the remainder of my time.

Mr. LONG of Louisiana. I yield back the remainder of my time.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. All time has been yielded back.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Without objection, it is so ordered.

If there be no objection, the treaty will be considered as having passed through its several parliamentary stages, up to the point of consideration of the resolution of ratification, which the clerk will read.

The Chief Clerk read the resolution of ratification, as follows:

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of Executive E, 86th Congress, 2d session, the Treaty of Mutual Cooperation and Security between the United States of America and Japan, signed at Washington on January 19, 1960.

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to the resolution of ratification of the treaty?

Mr. MANSFIELD. Mr. President, on this question, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to the resolution of ratification of the treaty?

On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSTON of South Carolina (when his name was called). On this vote, I have a pair with the senior Senator from Pennsylvania [Mr. CLARK] and the junior Senator from Pennsylvania [Mr. SCOTT]. If the two Senators from Pennsylvania were present and voting, they would each vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

The rollcall was concluded.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Pennsylvania [Mr. CLARK], and the Senator from Tennessee [Mr. GORE] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER] is necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Missouri [Mr. HENNINGS], and the Senator from Tennessee [Mr. KEFAUVER] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Kansas [Mr. SCHOEPPEL] is absent because of death in his family. If present and voting, the Senator from Kansas would vote "yea."

The Senator from Pennsylvania [Mr. SCOTT] is absent on official business, as a Member of the Senate attending the funeral of Representative Douglas H. Elliott.

The pair of the Senator from Pennsylvania has previously been announced.

The yeas and nays resulted, yeas 90, nays 2, as follows:

YEAS—90

Aiken	Ervin	Magnuson
Allott	Fong	Mansfield
Anderson	Frear	Martin
Bartlett	Fulbright	Monroney
Beall	Goldwater	Morse
Bennett	Green	Morton
Bible	Gruening	Moss
Bridges	Hart	Mundt
Brunsdale	Hartke	Murray
Bush	Hayden	Muskie
Butler	Hickenlooper	O'Mahoney
Byrd, Va.	Hill	Pastore
Byrd, W. Va.	Holland	Prouty
Cannon	Hruska	Proxmire
Capehart	Humphrey	Randolph
Carlson	Jackson	Robertson
Carroll	Javits	Saltonstall
Case, N.J.	Johnson, Tex.	Smathers
Case, S. Dak.	Jordan	Smith
Church	Keating	Sparkman
Cooper	Kennedy	Stennis
Cotton	Kerr	Symington
Curtis	Kuchel	Talmadge
Dirksen	Lausche	Thurmond
Dodd	Long, Hawaii	Wiley

Dworshak	McCarthy	Williams, N.J.
Eastland	McClellan	Yarborough
Ellender	McGee	Young, N. Dak.
Engle	McNamara	Young, Ohio

NAYS—2

Long, La.	Russell

NOT VOTING—8

Chavez	Hennings	Schoeppel
Clark	Johnston, S.C.	Scott
Gore	Kefauver	

The PRESIDING OFFICER. On this vote, the yeas are 90; the nays are 2. Two-thirds of the Senators present having voted in the affirmative, the resolution of ratification is agreed to.

Mr. JOHNSON of Texas. Mr. President, I ask that the President be notified immediately that the Senate has advised and consented to the ratification.

The PRESIDING OFFICER. The President will be so notified.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

INDEPENDENT OFFICES APPROPRIATIONS, 1961

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1674, H.R. 11776, the independent offices appropriation bill.

The PRESIDING OFFICER. The bill will be stated by title.

The CHIEF CLERK. A bill (H.R. 11776) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices for the fiscal year ending June 30, 1961, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Appropriations with amendments.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I should like to inform the Senate that we are going to ask the Senate to take a 5-minute recess in order that Members of the Senate, at the suggestion of the very able and distinguished Senator from Arkansas [Mr. FULBRIGHT], chairman of the Committee on Foreign Relations, may have an opportunity to visit with the distinguished Prime Minister of Peru.

I should like all Members of the Senate to know we anticipate debating, and voting if possible, on the independent offices appropriation bill and the general government matters appropriations bill. These appropriation bills need to go to conference. We hope we may act on them first, and that Senators will make their speeches on extraneous matters later; but we agreed last night to consent to a 30-minute speech. Perhaps it will be necessary to give consent for an equal amount of time to the other side.

I plead with Senators to give me their cooperation, so that we may act on the bills and so they may go to conference first. Then we shall be glad to keep the Senate in session as long as necessary for Senators to make speeches on other matters.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the minority leader.

Mr. DIRKSEN. Mr. President, I am sure Senators would like to be advised, if the majority leader knows at this time, what will follow the two appropriation bills, which will probably take the remainder of the day, and whether the calendar of business for tomorrow has been determined at this time.

Mr. JOHNSON of Texas. Mr. President, I would anticipate the order of business would be the independent offices appropriation bill first. How long it will take, I do not know. It depends largely on the desire of Members of the Senate to get the bill to conference.

Second, I would think the general government appropriations bill.

Appropriation bills have the highest priority.

Third, I would think the amendment to the Mineral Leasing Act.

Fourth, I would think Calendar No. 1553, H.R. 2565, relating to wildlife conservation on military reservations.

Fifth, Calendar No. 1588, S. 2692, relating to marine sciences, and so forth.

In addition, there are some other measures that I do not have before me at the moment, but that have been cleared by both sides and are on the calendar.

It could very well be we shall be in here late tonight and not complete action on the appropriation bill. If I could get a unanimous-consent agreement to limit debate, I would request one, but I am informed I could not. We will have to play it by ear. I do not know how many Senators will want to talk. It is important that we get these two appropriation bills to conference.

VISIT TO THE SENATE BY PEDRO BELTRAN, PRIME MINISTER AND MINISTER OF FINANCE OF PERU

Mr. FULBRIGHT. Mr. President, the Senate is honored today by the presence of one of the most distinguished leaders of the Latin American world. I take great pleasure in introducing the Prime Minister of Peru, Senor Pedro Beltran.

Mr. President, I ask unanimous consent that the Senate take a recess for 10 minutes in order to give Senators an opportunity to meet the Prime Minister.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas? The Chair hears none, and it is so ordered.

[Applause, Senators rising.]

Thereupon (at 2 o'clock and 20 minutes p.m.) the Senate took a recess until 2:30 p.m.

During the recess, the Prime Minister of Peru was greeted by Members of the Senate, who were presented by Mr. AIKEN.

On the expiration of the recess, the Senate reassembled, and was called to order by the Presiding Officer (Mr. CANNON in the chair).

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the RECORD at this point a biographic sketch of Pedro Beltran, Prime Minister and Minister of Finance of Peru.

There being no objection, the biographic sketch was ordered to be printed in the RECORD, as follows:

BIOGRAPHIC SKETCH OF PEDRO BELTRAN, PRIME MINISTER AND MINISTER OF FINANCE OF PERU

Born in Lima on February 17, 1897, Pedro Beltran comes from the old aristocracy of Peru, with considerable land holdings and investments in mining and other enterprises. His secondary education was at the Colegio de la Recoleta in Lima, and he is a graduate of the School of Economics of the University of London. He is married to the former Miriam Kropp, of San Francisco.

Beltran's career has been devoted largely to finance, journalism, diplomacy and government. In the field of diplomacy and international financial and economic affairs, he served as Commercial Delegate of Peru to Great Britain, France, and the United States (1940–43); member of the Inter-American Financial and Economic Advisory Committee, Washington (1940–43); delegate to the Third Meeting of Ministers of Foreign Affairs of the American Republics, Rio de Janeiro (1942); Ambassador to the United States (May 1944–November 1945); the U.N. Monetary Conference, Bretton Woods (1944); the Chapultepec Conference, Mexico City (1945); the U.N. Conference on International Organization, San Francisco (1945); and President Prado's representative on the Committee of Presidential Representatives formed to improve operations of the OAS (1957). At home Beltran has served as president of the Central Reserve Bank (1948–50); and more recently as chairman of President Prado's Committee for Agrarian Reform and Housing. In addition to managing his land holdings (including ranching) and business investments, Beltran is the owner and was long the editor of the Lima daily La Prensa, a moderate conservative paper.

By mid-1959, Peru's economic and financial situation had reached the point of serious crisis, with an increasingly unfavorable balance of trade resulting largely from a drop in the prices of Peru's major export commodities, with the near exhaustion of Peru's dollar reserves, with continued deficit spending, with an increasing spiral of inflation and with the expatriation of capital. Beltran, while serving President Prado on the aforementioned committees, was one of the Government's strongest critics as far as its financial policies were concerned, and his criticism was voiced both directly and through La Prensa. In July 1959, however, President Prado asked his critic to head a new Cabinet to face up to the crisis.

Under Beltran's firm and able leadership great strides have been made to reverse the deteriorating economic and financial situation and to restore confidence. As a result of a series of measures undertaken by the Government (as well as an improvement in the prices of Peru's export commodities), Peru's unfavorable trade balance has been converted to a favorable one, deficit spending has been largely halted, dollar reserves have grown notably, the inflationary spiral has been checked and flight capital has been returning. With the restoration of a sound, stable economy, Beltran is now in a position to undertake his longer range economic and social program, encompassing the fields of economic development, housing, agrarian reform, colonization, etc.

As far as the United States is concerned, Prime Minister Beltran is one of our stanchest friends both in the political and economic spheres of international relations. A firm believer in the free enterprise system, he is in full sympathy with Peru's policy of encouraging American capital investment. His friendship is frank, however, and he has not hesitated to criticize certain U.S. policies with which he disagrees.

WORLD FOOD BANK

Mr. MURRAY. Mr. President, the headlines of yesterday's morning paper from Minot, N. Dak., report that Vice President RICHARD M. NIXON has made the distribution of food surpluses to needy people around the world through the United Nations a major plank in his farm program.

The Vice President revealed that President Eisenhower had intended to make the proposal at the summit conference in Paris last month.

The proposal is extremely familiar to me. As a matter of fact, I was the author, together with a number of other Senators, of resolutions in both the 83d

and 84th Congresses to initiate a World Food Bank.

On March 30, 1955, in the 84th Congress, I introduced Senate Resolution 86, for myself, Mr. Case of South Dakota, Mr. Chavez, Mr. Douglas, Mr. Hennings, Mr. Hill, Mr. Humphrey, Mr. Jackson, Mr. Kefauver, Mr. Kerr, Mr. Kilgore, Mr. Lehman, Mr. Long of Louisiana, Mr. Magnuson, Mr. Mansfield, Mr. Morse, Mr. Mundt, Mr. Neely, Mr. Neuberger, Mr. Scott, Mr. Sparkman, Mr. Stennis, and Mr. Young. The resolution declared it the policy of the Congress that the United States participate with other nations under the auspices of the United Nations, the Food and Agriculture Organization, and other specialized international agencies in sponsoring an international food and raw materials reserve.

The resolution authorized and requested the President to enter into international negotiations on a specific international agreement or agreements along the lines proposed.

Hearings were held on Senate Resolution 86 on May 28 and 29, 1956. Assistant Secretary of Agriculture Earl L. Butz advised the subcommittee of the Foreign Relations Committee that—

> We see no need for the proposed World Food Bank or the proposed food and raw materials reserve.

Thorston B. Kalijarvi, Deputy Assistant Secretary of State for Economic Affairs, advised the committee that the proposed World Food Bank would be unmanageable. He was concerned by interference with free market forces. He advised the committee:

> The inherent difficulties in managing such programs would surely be increased by the multiplicity and conflict of interests represented through a large number of participating governments.
>
> In view of the existing programs, and in view of the prospective heavy cost, negotiating and administering difficulty and threat of displacement of normal trade and interference with private enterprise connected with the proposed food bank or materials reserve, the Department is unable to support Resolution 85 or 86.

It is heartening to know, despite the wasted years, that the Vice President and the President of the United States now regard an international food agency as a workable, promising, and enlightened proposal.

In view of the new situation, I resubmit in my own behalf, and in behalf of any others who may wish to join me, a copy of Senate Resolution 86 of the 84th Congress, edited slightly to bring up to date section 1, which is in the nature of a preamble. I request that the resolution lie on the desk until Friday, June 24, so any other Members who care to do so may join in its authorship.

Now that the Vice President is for it and the President was prepared to propose a world food agency at the summit conference, perhaps we can get some action on this proposal before the Congress adjourns rather than wait another year while it is used as a political vehicle.

I do not desire to discourage the Vice President in any way in taking the position on this matter which he took in North Dakota yesterday. I ran for reelection to the Senate on it in 1954 and won. I might add that I won in spite of an effort to smear me which is today being repeated against the Democratic candidate for the Senate in North Dakota.

The PRESIDING OFFICER. The resolution will be received and appropriately referred; and, without objection, the resolution will lie on the desk until June 24, as requested.

The resolution (S. Res. 340) was referred to the Committee on Foreign Relations, as follows:

Resolved, That the Senate of the United States hereby finds that—

(a) the prices and incomes received by American farmers have been declining and threaten to decline still further in the future;

(b) there is need to increase the export of American farm products;

(c) shrinkage in foreign markets for American farm products might bring about a decline in farm and national income which could not be offset, even with a more adequate system of farm credit, price supports, and stockpiling programs;

(d) the world market for farm commodities and raw materials has historically been characterized by fluctuations which adversely affect prices, undermine the security of producers, and impede steady expansion consistent with the need for larger supplies of food, clothing, and other commodities as basic elements in expanding economies and improved living standards;

(e) fluctuations in the level of the prices of primary materials have had disruptive effects on world production and trade, and declines in the general level of these prices have historically been important factors in world economic depressions;

(f) food, clothing, and other essential supplies per person in many areas of the world are far below the minimum required for healthful and productive living;

(g) the people in some countries live under the ever-present threat of famine and starvation;

(h) the development of more adequate reserves of farm products and other raw materials would provide essential safeguards against shortages resulting from natural causes such as drought, flood, and pestilence; from breakdowns in distribution; from inflation, insurrection, and war;

(i) the ever-present threat of a major decline in the level of raw-material prices makes it impossible for underdeveloped countries to proceed with the confidence that is needed for their orderly development; and

(j) the existence of a reserve from which could be drawn, in time of need, some of the basic materials from which food, clothing, and other essentials are produced, would be an important step toward strengthening democracy throughout the world and creating the economic foundations and the atmosphere of hope and confidence necessary for world peace.

SEC. 2. It is the policy of the Congress that the United States participate with other nations, under the auspices of the United Nations, the Food and Agriculture Organization, and other specialized international agencies, in establishing an International Food and Raw Materials Reserve which would—

(a) provide for the acquisition and appropriate storage, in the United States and in other countries, of raw or processed farm products and other raw materials, such acquisition to take place at times when overall surpluses of such materials would otherwise cause undesirable price movements;

(b) be developed in a manner that will help to prevent extreme price fluctuations in the international market for farm products and other raw materials and keep production expanding to meet the world's pressing need for more food, clothing, and other essential supplies;

(c) be used to prevent famine and starvation;

(d) help absorb temporary market surpluses of farm products and other raw materials;

(e) provide for the use of currencies paid to the International Food and Raw Materials Reserve by purchasers of materials, or for the use of instruments of credit issued in connection with the operations of the Reserve, to finance purchases of raw or processed products or to assist in the financing of approved economic and social development programs, formulated in cooperation with the appropriate international lending, economic development, and technical assistance agencies, such programs to include (without being limited to) those which further universal public general and vocational education, literacy, public health and medical care.

SEC. 3. The President and his representatives before the United Nations and the Food and Agriculture Organization and other appropriate international bodies are hereby authorized and requested to enter into international negotiations for the purpose of preparing a specific plan and a proposed international agreement or agreements on the creation of an International Food and Raw Materials Reserve along the general lines set forth in section 2 hereof.

SEC. 4. The plan and agreement or agreements developed in accordance with section 3 hereof, together with full supporting material and information on operating methods, shall be presented to the Senate of the United States for approval.

NATIONAL CLEARINGHOUSE OF INFORMATION ON CROOKED BUSINESS SCHEMES

Mr. KEATING. Mr. President, on May 10, I introduced, on behalf of the senior Senator from New York [Mr. JAVITS] and myself, a bill (S. 3530) to authorize the Attorney General to maintain records of fraudulent and other unethical business practices. The purpose of the bill is to make it easier for State and local authorities to keep tabs on business racketeers, and to make it as difficult as possible for unscrupulous promoters to set up fly-by-night operations in locality after locality throughout the country.

The bill was an outgrowth of recommendations made by the attorney general of New York, the Honorable Louis J. Lefkowitz, who has done outstanding work in the field. Attorney General Lefkowitz recently wrote a letter to each member of the Senate Committee on the Judiciary, explaining the importance of the establishment of the clearinghouse proposed in the bill, and urging its support. I know that many Members of the Senate will be interested in Attorney General Lefkowitz' comments on this important subject, and I therefore ask unanimous consent that the text of his letter be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW YORK, N.Y., *June 15, 1960.*

DEAR SENATOR: I am writing to urge your support of S. 3530 (cosponsored by Sena-

tors KEATING and JAVITS) and now before the Committee on the Judiciary.

This bill authorizes the Attorney General of the United States to maintain, and make available to other governmental and private agencies, records of injunctions, dissolutions and other civil and administrative actions involving unethical or fraudulent business practices.

There is a shocking scope to the frauds, deceptions and illegal practices which enable a relatively small segment of business and security racketeers to drain millions of dollars from the consumer and investor each year.

Shady operators and their slick schemes not only rob the consumer but do incalculable harm to the legitimate businessman. Through monopolistic practices which destroy free competition and impose arbitrary price premiums, they squeeze a bit more out of the consumer's pocketbook. Silently and unseen, they drive upward the cost of living and add to inflationary pressures.

Unscrupulous securities promoters not alone defraud the investor but undermine public confidence in the integrity of capital markets, and deprive industry of the mechanism by which is raised the capital required to serve the economic needs of our people.

In New York State, and in other States I am sure, law enforcement agencies are carrying on a vigorous fight to drive these business charlatans out of business. But these unprincipled operators do not give up easily. The individual or firm driven out of business in one State moves to another location and continues fraudulent activities there. Without a central agency which can catalog and make the pertinent information available to all States and local agencies we find ourselves in a merry-go-round situation.

The central clearing medium established by S. 3530 would be the center for an exchange of information. Here would be gathered and cross indexed all data concerning these operators and the schemes and devices which they use to bilk the public. Such information could be made available to governmental agencies and law enforcement forces fighting for business decency. The scheming promoter who is thrown out of one State will find that his record has preceded him to every other place where he may seek to set up shop.

I am taking the liberty of enclosing a copy of the statement released by Senator KEATING in connection with this bill. I respectfully urge you to give S. 3530 your full support.

Best wishes.

Cordially yours,

LOUIS J. LEFKOWITZ,
Attorney General of New York.

NEED FOR FEDERAL AIR POLLUTION CONTROL EFFORTS

Mr. KEATING. Mr. President, several weeks ago I spoke on the floor and discussed my views on the great and pressing need to control air pollution in our Nation's major industrial and metropolitan areas. Although I am by no means expert in this field, I feel strongly that we must correct the all too widely held notion that the air we breathe can also serve as America's wastebasket.

In my remarks on May 24 I spoke of a number of the most common causes of air pollution and of existing Federal, State, and local agencies which are working hard to combat them. I am delighted that these efforts are going forward, and I certainly intend, wherever possible, to be of assistance in this very vital work. In this statement I paid special attention to the programs on air pollution research carried out by the Public Health Service and of the attitude of the Secretary of the Department of Health, Education, and Welfare, which, of course, is responsible for the implementation and coordination of all of the activities of the Federal Government in assisting in the fight against air pollution.

Mr. President, I was very gratified to recently receive a letter from Secretary Flemming of the Department of Health, Education, and Welfare in which he comments on my remarks on the floor and in which he discusses the problem of air pollution and the types of legislation which are needed to expand our Federal programs in this area. The Secretary clearly asserts that "air pollution problems are not confined to any specific section of our country." He further states that "We think it is important that the Federal Government exercise leadership in the development of measures needed for coping with this problem."

I think this thesis is a sound one and is extremely significant. Certainly the air pollution problem crosses State boundaries and is national in its scope and impact. New York's air this morning may be New Jersey's this afternoon.

Mr. President, the position and attitude of the Department of Health, Education, and Welfare on the matter of air pollution control is both constructive and realistic. I commend the Secretary for the leadership which he has taken in this field and ask unanimous consent that his letter to me, dated June 20, be inserted at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D.C., June 21, 1960.

Hon. KENNETH KEATING,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KEATING: We have read with interest your statement regarding air pollution in the May 24 issue of the CONGRESSIONAL RECORD, a copy of which was forwarded with your memorandum of June 3.

Your statement clearly delineates the fact that air pollution is of national significance, and outlines the need for greater attention to air pollution problems by many groups in our society.

It is important to note that air pollution problems are not confined to any specific section of our country. Air pollution of the type which has been widely publicized as afflicting certain sections of the west coast has been measured in significant quantities, and its effects on vegetation have been recorded now in some 19 States and the District of Columbia. Similarly, one recent study by the Public Health Service has shown the widespread occurrence of 3,4-benzpyrene, a pollutant of suspected health significance, to be present in varying quantities in the atmospheres of over 100 cities included in the survey. All in all, it is fair to state that all of our urban communities of appreciable size have air pollution problems which, of course, may vary in degree and character from one location to another. Inevitably, the air pollution potential nationally may be expected to increase significantly because of our growing population and economy, and increasing urbanization.

We think it is important that the Federal Government exercise leadership in the development of measures needed for coping with this problem. A good start has been made along these lines under the provisions of Public Law 84-159, which authorized a research and technical assistance program in the Public Health Service. It is important that this program be further strengthened. The recent enactment of Public Law 86-493, providing for an intensification of research by the Public Health Service into the health-related aspects of automobile exhausts, will be helpful. We consider it highly necessary, also, that favorable consideration be given to the amendments to the Air Pollution Control Act which we forwarded to the Congress and which have been embodied in H.R. 10696 and S. 3108.

We sincerely appreciate your interest in and concern about the overall problem of air pollution. We, too, are much concerned with the hazard to health and well-being which is posed by air pollution.

Sincerely yours,

ARTHUR S. FLEMMING,
Secretary.

AGRICULTURAL PROGRAM

Mr. HUMPHREY. Mr. President, I wish to express my thanks and appreciation to the Senator from Montana [Mr. MURRAY] for again reminding us of his leadership through the several Congresses relating to the establishment of a world food bank or an international food and fiber reserve under the general provisions of the Charter of the United Nations. I am well aware of the activities of the Senator from Montana, because I was one of his cosponsors on that measure, and it was my privilege to participate in the hearings to which the Senator from Montana has referred in the Committee on Foreign Relations when the proposal of the Senator from Montana, the Senator from Minnesota, and others, along with the proposal of the late Senator from North Carolina, Kerr Scott, was also before us.

I have commented on the statement of the Senator from Montana because the measures to which he has referred, and which we have had before us in several Congresses, and other related measures, some of which, by the way, have been passed by the Congress, are now back in headline news.

In the Midwest on June 30, while speaking at Minot, N. Dak., and extending his assistance to the Republican candidate for the U.S. Senate against the Democratic candidate, Mr. QUENTIN BURDICK, the Vice President of the United States outlined his views relating to agricultural policy. I have in my hands a copy of the address of the Vice President. Many parts of his speech I find reassuring. Many parts I find at least interesting from an historical point of view. Many parts I find very general, loosely drawn and without any specific nature.

For example, the Vice President of the United States said:

Putting it bluntly, there has been a political stalemate between the administration and Congress over the past 5 years. The majority in Congress has persisted in refusing to face up to the farm problem, and it continues to support obsolete solutions which were conceived for an entirely different period and for different problems.

After those pointed remarks towards the majority, the Vice President made a generous, kindly remark about the administration. He said:

> The administration, on the other hand, has sought solutions which were in effect a reversal of previous policies. The result has been that Congress has refused to approve the administration's program, but has not come forward with one of its own which the administration could accept.

Mr. President, the fact is that the majority has passed five farm bills since 1953 and five farm bills have been vetoed. The fact is that the majority has been compelled, because some of the provisions of the farm legislation were expiring, to renew these provisions with administration-supported modifications leading into what we call the flexible price support program, including the reduction of controls over production and marketing, which has been basic to the agricultural philosophy of the administration.

The philosophy of those of us of the majority has not been sustained, because we have not had the two-thirds vote necessary to override the vetoes. The philosophy of the administration on agricultural economics is the prevailing law of the day. Its effect is clear; its effect is unmistakable. There are fewer farms and fewer farmers; there is lower farm income, higher farm production, accumulated surpluses, an increase in farm mortgages at the rate of $600 million a year, a tremendous increase in the Government's holdings of surplus commodities; and a fantastic increase in the cost of the operation of the Department of Agriculture even though there are fewer farmers and fewer farms. That is the result of the administration's farm program.

It will do us no good at this late date to argue the merits and demerits of the administration's farm program. That question has been decided by the farmers themselves. Most of them have rebuked it, and those who have not will have their opportunity to do so in the months ahead, specifically, in November. I have a feeling they will then make manifestly clear their views relating to the administration's farm program. At least, I am sure that will be so in the Midwest.

What I should like to comment upon are the proposals of the Vice President relating to the expansion of the rural development program, strategic food reserves, commercial uses of surpluses of agricultural commodities, and the international food and fiber program.

I find all of these proposals most interesting. I find all of them issues which some of us have fought for in the Congress for years. Each and every one of these suggestions has been resisted by the administration as if it were consummate evil. The Vice President of the United States has purloined, so to speak, a number of proposals such as that of the Senator from Montana [Mr. MURRAY], and he now claims them as his own.

For a period of time the administration refused to recognize even the existence of these agricultural children—for example, emergency food reserves—but now they would like to claim them as blood sons.

Let me start with the rural development program. I quote from the Vice President's message. Mr. NIXON said in Minot, N. Dak., appealing essentially to farmers:

> The rural development program, which has been so successful, should be expanded so that the marginal farmers can supplement their income and not be forced to move from the rural communities in which they live.

That is a noble expression of philosophy and policy, but an expression of the philosophy and policy that is adhered to by this administration in token proportions only.

Let me give the facts. The rural development program was initiated in 1955 and passed by this Congress. It was supposedly expanded by the administration to 30 rural counties by September 30, 1957—30 counties out of the thousands of counties in the United States.

In 1960 there are still 30 counties in this pilot program. It started as a pilot program. It continues as a pilot program. With only 30 rural counties in the pilot program, still the Vice President of the United States, speaking to the farm people of North Dakota, said that the rural development program which has been so successful should be expanded so that marginal farmers can supplement their income.

I agree it should be expanded. I have been an advocate of its expansion. I have quizzed representatives of the Department of Agriculture repeatedly about its expansion, and they have refused to move. Their feet are imbedded in political concrete, and their imagination with regard to farm programs is without substance. The effect is that the rural development program remains only a pilot program, instead of being pushed forward as a positive aid and improvement to the farm economy.

I would suggest to Mr. NIXON that the people of North Dakota are well aware of the needs of agriculture. Where Mr. NIXON should have taken his message was to the Secretary of Agriculture. Where Mr. NIXON should have taken his message and suggestions was to the President of the United States. Mr. NIXON is a member of the "Eisenhower team." He has been a loyal player on the "team." He says he is going to run on the record of the administration. He is a part of it.

I must say for Mr. Benson, for whom I have had many words of criticism, that I must say a word of praise at this time. He likes to keep the record straight. In recent months the Vice President, carefully checking back in his files, has found that the Secretary of Agriculture is a political liability in many areas of the country, if not all. Looking forward to his hoped-for but not-to-be-realized occupancy of the White House, the Vice President has suggested that he has a program different from that of Mr. Benson, that he disagrees with Mr. Benson, that he disagrees with the administration. But I should like to say, for the integrity of the Secretary of Agriculture, that he is unwilling to let such a tricky answer, such a tricky proposal, be pulled on the American people. He is not for such a slick deal. He says that Mr. NIXON has been part and parcel of the program. He says Mr. NIXON was one of the architects of the program. He cannot imagine Mr. NIXON's not supporting it, because he helped to design it.

I compliment Mr. Benson for his words of integrity, his words of honesty, and his clear and unqualified statement. The Secretary of Agriculture is not about to let RICHARD MILHOUS NIXON, the Vice President of the United States, avoid responsibility for the disastrous policies which this administration has followed.

Mr. President, the family farm yardstick credit bill, S. 2111, which the Senator from Minnesota and others introduced, under title V, proposes a positive action program for the development of family farms in 500 counties having the largest low income farm population. Under this title, means are provided to insure adequate credit facilities to implement farm and home plans and to increase the income-producing ability of farm units; to assist in securing part and full time employment opportunities for farm people; to provide vocational training to adults, both in farm and home management and in other farm and nonfarm activities in order to maximize family income and productivity of family labor; and to provide industrial dispersion in rural areas in the interest of increased employment and national security. This administration's Department of Agriculture submitted an adverse report on the family farm yardstick credit bill. It said it was opposed to all titles of the bill.

Regarding the Family Farm Development Act, title V, the Department report said: More experience is needed.

Mr. President, this administration is addicted to slow learning. By the time it gets enough experience to do something about a problem, the problem has consumed the people who have been beset with the problem.

So, Mr. NIXON's advice on the necessity of a rural development program fell on ears that had heard these soothing words many times. The farm people in North Dakota are fully aware that their needs are not being met. I think they will respond accordingly.

What is the next point Mr. NIXON made in his address? He said:

> Our major aim and our major effort must be, however, not to reduce production but to expand markets for farm products and to increase consumption.

That is a noble thought, with which I fully agree:

> There are three proposals in this area that I think are among those that are worthy of consideration. Governor Rockefeller, in his recent appearance in North Dakota, proposed that a year's supply of food for the Nation be set aside against the eventuality of an atomic attack. This is a sound and constructive proposal and I would only add that because a 1-year or a 2-year reserve would represent an enormous permanent storage burden in its present form, a research program should be undertaken to find economically feasible ways to convert surplus grains into storable form.

Mr. President, this is called the strategic food reserve program. Is it new? The proposal has been made in Congress. Here are the facts:

Back on February 8, 1955, the Senator from Minnesota proposed a national food and fiber policy.

I ask unanimous consent to have printed in the RECORD at this point a press release issued by me relating to the proposal.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

SENATOR HUMPHREY PROPOSES NATIONAL FOOD AND FIBER POLICY

Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, called upon the Congress today to adopt a national food and fiber policy setting guideposts for wise use of America's abundance.

Senator HUMPHREY introduced a resolution asking establishment of a national policy for the production and utilization of food and fiber so as to make full economic use of the productive capacity of U.S. farms to improve domestic nutrition and clothing standards, and buttress the foreign policy of the United States. Cosponsors include Senators Neuberger, Lehman, Scott, Langer, McNamara, Murray, Mansfield, and Neely.

"The great productive ability of American farmers and farm families should be put fully to work in the interest of national security and the maintenance of the health, efficiency, and morale of the American people," Senator HUMPHREY declared.

He described the resolution as a companion to one previously introduced calling for establishment of an American family farm policy, saying both were intended to clarify objectives "in the national interest," and to serve as a yardsick for future legislation aimed at achieving such objectives.

The new resolution declares it the policy of the Congress that:

1. The means of obtaining sufficient food for an adequate diet and clothing for an adequate standard will be placed, so far as possible, within the reach of every person in the Nation;

2. The food and fiber products on American farms and not needed for fully adequate domestic consumption will be put to work to implement U.S. foreign policy through facilitating—

(a) The inauguration of universal public general and vocational education systems in friendly nations not now having them,

(b) more rapid economic development that will expand markets and increase consumer purchasing power in friendly nations,

(c) the elimination of the threat of starvation and famine; and

(d) increases in the security and income-earning capacities of farm families in friendly nations;

3. Adequate safety reserves of farm commodities and of food and fiber products will be developed and maintained;

4. Extreme price fluctuations in the international market for farm products will be prevented and production will be kept expanding; and

5. American farm families will be assured of adequate income to maintain a standard of living equivalent to those afforded persons dependent upon other gainful occupations, while maintaining full production on the family farms of the Nation, conserving and improving the Nation's farm soil and water resources, and meeting all costs of production and capital replacement.

The resolution calls upon the President to incorporate in the Economic Report required by the Employment Act of 1946 a program for carrying out the policy, together with such recommendations for legislation as he may deem necessary or advisable in connection with the program.

Mr. HUMPHREY. Mr. President, I have before me the proceedings of the Senate for February 27, 1956. At that time the senior Senator from Oregon [Mr. MORSE] joined me in offering what we called the national security reserve amendment. The amendment is found in the CONGRESSIONAL RECORD, volume 102, part 3, page 3355. The debate is found on pages 4168, 4169, 4170, 4172, and 4175. This proposal was incorporated in the Agricultural Act of 1956, to provide for a national security reserve of food, to meet emergency conditions in the United States.

The Agricultural Act of 1956 provides in section 201(b) in part as follows:

(2) The Secretary shall submit to Congress within 90 days after the enactment of this act detailed programs, with recommendations for any additional legislation needed to carry out such programs * * * (3) for strategic stockpiling of foodstuffs and other agricultural products (A) in the United States and (B) outside the United States as authorized in section 415 of the Mutual Security Act of 1954.

The Secretary of Agriculture submitted his report, required by the act, and it came to us in January 1957.

On the subject of a strategic food reserve, a safety reserve, the Secretary said:

Strategic stockpiling of food for emergency use in the event of nuclear attack upon this country would present extensive difficulties and involve substantial costs. The inadequacy of suitable warehousing facilities, the difficulties of management and rotation of supplies, and other problems such as to make stockpiling on a large scale undesirable if it can be avoided without undue risk to the population.

Instead of borrowing the idea from Mr. Rockefeller, I say with all due modesty that Mr. NIXON borrowed it from the Senator from Minnesota and the Senator from Oregon. He borrowed it from the law of 1956, to which his own administration has said, "No, no, that cannot and will not be done."

I shall not burden the RECORD with the debate of 1956. I have made reference to it, and it is available for all to see. I merely want the Senate to know that the proposal was offered as a floor amendment, that it was adopted, and that the legislative history is crystal clear.

The Family Farm Program Development Act, S. 2502, introduced by the senior Senator from Minnesota and others, authorizes and directs the Secretary of Agriculture, among other things, to submit a domestic food and fiber program for the United States, including provisions for a national security reserve of food and fiber products designed to protect people of the United States against shortages of such products in the event of war or other national emergency.

The bill also directs the Secretary to submit an international food and fiber program. It directs the Secretary to submit to Congress a comprehensive study of the food needs of the free world and a plan by which the United States could join with other surplus-producing nations in meeting these needs. I say this particularly, and most respectfully, to the senior Senator from Montana [Mr. MURRAY].

The Family Farm Program Development Act also offers a method "whereby the farmers themselves have a greater opportunity to choose the kind of farm program that they want—that is what Mr. NIXON says he supports.

What was the attitude of the Department of Agriculture on the domestic food and fiber program and the international food and fiber program in this bill?

The Department of Agriculture recommended against every one of the provisions of the bill. The programs proposed were in conflict, the Department said, and the Bureau of the Budget said, with the President's program.

Mr. NIXON cannot be on the "Eisenhower team" on Sunday, and get off the team at Minot, N. Dak., on Monday.

If he is going to take credit for Mr. Eisenhower's popularity, or to share in Mr. Eisenhower's popularity, he will have to share in responsibility for the undesirability of some of the administration's programs and for the adverse comment made by the administration on more worthy program proposals.

Mr. President, I ask unanimous consent that the pertinent sections of the bill to which I have referred, together with the report of the Department of Agriculture, be printed at this point in the RECORD.

There being no objection, the sections and the report were ordered to be printed in the RECORD, as follows:

TITLE II—DOMESTIC FOOD AND NUTRITION PROGRAM

SEC. 201. (a) The Secretary of Agriculture (hereafter called the Secretary) is authorized and directed to formulate annually and submit to the Congress on or before February 1 of each year a domestic food and fiber program for the United States, both immediate and long range, together with budgetary estimates for carrying out such program in the first year and in subsequent years of operation.

(b) Any food and fiber program submitted by the Secretary pursuant to subsection (a) shall include provisions for—

(1) expanding and liberalizing the national school lunch program (carried out under the National School Lunch Act) and the special milk program for children (carried out under the Act of July 1, 1958 (72 Stat. 276));

(2) a food allotment program under which the nutritional needs of low income persons, the unemployed, the aged, and the handicapped will be more adequately fulfilled; and

(3) a national security reserve of food and fiber products designed to protect people of the United States against shortages of such products in the event of war or other national emergency.

TITLE III—INTERNATIONAL FOOD AND FIBER PROGRAM

SEC. 301. (a) The Secretary is authorized and directed to cause a study to be made for the purpose of determining the annual fiber, food, and nutritional deficiency in the world and submit a report of such study to the Congress annually on or before February 1 of each year. He shall include in such report—

(1) recommendations as to the fair and feasible share of that deficiency which should

be met from food products produced in the United States;

(2) recommendations for making food and fiber products produced in the United States available to aid in meeting such deficiency; and

(3) estimates of the annual cost of carrying out such program.

(b) The program specified in subsection (a) shall be planned as a long-term program in order to facilitate the effective use of food products made available in the recipient countries. Such program shall be planned in such a manner as to be consistent with the international objectives of the United States and so as not to interfere with the commercial trading activities of friendly exporting countries; but planned so as to afford maximum economic benefit to the recipient countries.

TITLE IV—ADJUSTING SUPPLY AND DEMAND

SEC. 401. (a) Whenever the Secretary determines that the supply of any agricultural commodity exceeds effective demand at a fair price, he shall establish for each such farm commodity a farm commodity program development committee to be composed of representative producers of such commodity. Each such committee shall be composed of members elected from their own number by the producers of such commodity and shall be established and operated in accordance with regulations prescribed by the Secretary.

(b) Whenever any such farm commodity program development committee recommends it, the Secretary is authorized to conduct a referendum of the producers of such commodity to determine whether they favor a national marketing quota for such commodity as outlined by the Secretary after the consultation and guidance of the commodity committee. If two-thirds or more of the producers voting in any such referendum vote in favor of such a program, the Secretary shall submit to the Congress a national marketing program for the commodity concerned in conformity with principles hereafter outlined in this title, together with estimates of the annual costs of each such program.

(c) The national marketing quota for any marketing year in the case of any farm commodity for which a marketing program is effectuated pursuant to subsection (b) shall be an amount of such commodity which will move in domestic and foreign markets in such marketing year, as determined by the Secretary, at a fair price for such commodity, taking into account the amount of such commodity to be utilized pursuant to any program effected under title II and III of this Act.

(d) With respect to any national marketing quota program submitted to the Congress under subsection (a), the Secretary shall—

(1) establish the necessary production adjustment and orderly marketing control procedures for the commodities concerned, including the necessary incentives or penalties to effect compliance with the program;

(2) establish procedures for transferring sales quotas among producers in the same area, and among different areas; and

(3) utilize, as may be necessary for the effective administration of such program, any alternative income stabilization methods, individually or in combination, including but not limited to crop loans, marketing premium payments, marketing agreements, marketing orders, surplus diversion purchases, purchase agreements, export incentive payments, export equalization payments, stabilization pools, or income deficiency or compensatory payments direct to farmers, in order to achieve the fair price objectives of this legislation at the lowest possible cost to consumers and taxpayers: *Provided, however,* That in no instance shall any individual farm operator receive total Government payments of more than $5,000 for such purposes in any one marketing year, or more than $25,000 in crop loans.

(e) The term "fair price" as used in this section means, with respect to any commodity, the price which will yield returns on capital and labor (on representative family farms) comparable to nonfarm earnings, as determined by the Secretary on the basis of costs and returns collected and published annually by the United States Department of Agriculture for typical family-operated commercial farms.

(f) If the Secretary determines that the fair price for any commodity encourages competition from synthetics or tends to otherwise significantly reduce domestic consumption or export of such commodity, or in the case of oilseeds the products thereof, he may allow the commodity to move through the market at a competitive price and pay the difference between the competitive price and the fair price as a compensatory payment directly to the producer.

(g) Unless any such marketing program submitted to the Congress under provisions of this title is disapproved by concurrent resolution of the Congress after sixty days after submission by the Secretary, it shall be placed into operation; and all other previously existing price-support provisions for such commodity shall be suspended for the period for which such program is in effect.

(h) The Secretary shall use funds of the Commodity Credit Corporation for the purposes of implementing this title.

TITLE VI—LOW PRODUCTION FARMS

SEC. 601. (a) The Secretary is authorized and directed (1) to review and report to the Congress the progress of the rural development program in solving the production and income problems of low production and low income family farms, and (2) to submit to the Congress, within six months after the date of the enactment of this Act, further recommendations for dealing more effectively and more rapidly with these problems, and (3) to submit estimates of the costs of carrying out such recommendations.

(b) The Secretary shall, with respect to any recommendation submitted pursuant to subsection (a), consider, but not be limited by—

(1) the use of increased supervised credit to help speed farm reorganization and to help achieve more efficient sized and better organized farm units;

(2) the establishment of special services, including individual farm and home management guidance;

(3) the feasibility of payment of special grants to assist families with poor economic futures in agriculture who may desire to seek more gainful opportunities; and

(4) better protection for the benefit of families or persons who gain their living primarily as hired farm workers; and

(5) stimulation of further industrial development in underdeveloped rural areas; and

(6) the desirability of extending the United States Employment Service to rural areas and providing counseling service to people living in rural areas.

Mr. HUMPHREY. Mr. President, the Vice President had something to say about the commercial uses of agricultural commodities. It was a very splendid statement.

I may say to Mr. NIXON that his speech had statesmanlike qualities to it. The speech contained some wonderful features. There is only one thing wrong with it. It is all fluff and no substance. It has no follow through. If Mr. NIXON could not convince his own administration, how does he think he will convince the clear thinking people of North Dakota? If he could not convince his own President, Secretary of Agriculture, and the Director of the Bureau of the Budget, how does he expect to convince the general constituency? The power has been in the hands of the administration to do everything which Mr. NIXON has recommended, but the administration has refused to act on every count. Yet the Vice President of the United States now says that he has something new to offer. It is about as new as Ben Franklin's Alamanac.

Relating to the expansion of the commercial uses of farm commodities, I quote:

> I believe the amount of effort we are presently devoting to research for expanding the commercial uses of farm products is inadequate. It is an established practice in business to allot funds for basic research which bear a proper relationship to the overall magnitude of the problem to be dealt with. It doesn't make sense to spend only $16 million a year on finding new uses for agricultural products when we are spending $5 billion a year in financing and storing surplus farm products.

Mr. President, what is the record? In the 1st session of the 86th Congress, the Senate passed a bill, S. 690, to provide for research into the increased use of agricultural products for industrial purposes. The bill was introduced on January 27, 1959. Its sponsors were the Senator from South Carolina [Mr. JOHNSTON], the Senator from Wisconsin [Mr. PROXMIRE], the Senator from Georgia [Mr. TALMADGE], the Senator from Texas [Mr. YARBOROUGH], and me.

The Department of Agriculture submitted an adverse report on the bill, stating:

> We support the objectives the bills are designed to achieve, but oppose their enactment.

In other words, the Department supported the objectives but opposed anything being done about them.

S. 690 passed the Senate on July 27, 1959. The bill is now in conference, and the administration has been blocking it at every step of the way. I suggest most respectfully to the distinguished Vice President that he use his eloquence, his persuasive logic, and his unique rhetorical ability upon the administration. It has passed the Senate and House in a form which requires a conference. It could be enacted in this Congress. I suggest that the help of the Vice President will be mightily appreciated.

Finally, within the limitations of my time, I quote further from the speech of the Vice President:

> There is a third area which provides by far the best opportunity for making our food surpluses a national asset rather than a liability as they tend to be today. I refer to the use of our foods in the humane, as distinguished from the commercial market abroad.

Then the Vice President points out:

> The first step would have been to call a conference of all the surplus-producing nations, including the Soviet Union. These nations would then work out a joint proposal for a multilateral program under which the food surpluses of all nations which desired to participate would have been turned

over to United Nations agencies for distribution to the hungry people of member nations.

Mr. President, that proposal is not new. A World Food Board was proposed immediately after World War II by Lord John Boyd-Orr, the first Director General of the World Food and Agriculture Organization. It was widely supported by nations around the world, but failed at that time because of the hesitancy of the United States and Great Britain to give it their support.

An International Commodity Clearinghouse was later proposed by the so-called Committee of Exports of the Food and Agriculture Organization and the International Federation of Agricultural Producers.

In 1954 the International Federation of Agricultural Producers, meeting in Nairobi, Kenya, adopted a report declaring:

> The matter of a world food reserve should be kept under active consideration and to that end, the Committee recommends that the Secretariat prepare a study indicating the nature of the machinery needed to implement the plan and the obstacles that have stood in the way of attainment of this objective and giving all possible suggestions as to how such obstacles might be overcome.

The study was prepared in thorough detail. Necessary subsequent action to put the findings into building a concrete program has not been taken.

In 1955, in the 1st session of the 84th Congress, the following resolutions were submitted:

Senate Resolution 85, World Food Bank. Sponsors: Scott of North Carolina, and MURRAY.

Senate Resolution 86, International Food and Raw Materials Reserve. Sponsors: Murray, Humphrey, Case of South Dakota, Javits, Douglas, Hennings, Hill, Jackson, Kefauver, Kerr, Kilgore, Lehman, Long, Magnuson, Mansfield, Morse, Mundt, Neeley, Neuberger, Scott, Sparkman, Stennis, Young of North Dakota.

Hearings on these proposals were held May 28, and 29, 1956, before a special subcommittee of the Committee on Foreign Relations. I was chairman of this subcommittee. Witnesses for the State Department, the Department of Agriculture, and the Department of Interior, all testified in strong opposition to these measures. The Deputy Assistant Secretary of State for Economic Affairs Testified that: "It is hard to visualize how an operation of this nature could be 'businesslike.'"

The Assistant Secretary of Agriculture stated "we see no need" for the proposals.

On July 18, 1956, the Committee on Foreign Relations reported Senate Resolution 316. This resolution expressed the sense of the Senate that the President should explore with other nations the establishment of an International Food and Raw Materials Reserve under the auspices of the United Nations.

There was strong objection to the resolution by the administration. It was stated at the time that we should not act. The Republican administration had every opportunity to do so, but it prevented any exploration of the possibilities of the suggestion, and discouraged official discussions of it.

I might add that the mutual security authorization bill of 1956, as passed by the Senate, included a request to the executive branch to take the initiative in negotiations for the establishment of a World Food Bank or an International Food and Raw Materials Reserve. I offered that amendment. It was adopted. Due to administration opposition, this section was deleted from the bill in the conference. The administration firmly refused to act.

I may say to the Vice President that I was a delegate to the United Nations and handled the subject of international food reserves for our Government in the United Nations. I wanted an international food and fiber organization, such as the Vice President now talks about. However, the State Department, the President, and the United States delegation to the United Nations opposed it.

I went to see the Secretary of State and the representatives in the State Department and insisted that the Government of the United States quit dragging its feet on the use of our surplus foods for international purposes and to relieve suffering. As a result, a compromise was effectuated. The compromise resulted in a resolution favoring the establishment of national food reserves, with the United States pledging both food for the reserves and financial assistance to implement the building of storage facilities. Compared with an international reserve or world food bank, this was a poor compromise. Unfortunately, even this compromise plan has never been put into effect.

So I conclude in the limitation of my time. I have here the testimony of the representatives of the State Department and of the Assistant Secretary of Agriculture. They have all opposed what Mr. NIXON proposed at Minot, N. Dak.

Mr. President, we cannot work both sides of the street with honor. We cannot in Congress and we cannot in the executive branch oppose the use of agricultural commodities for a world food program and then parade out in the public domain, before the American people, and get huge headlines as if it were a brand new program and that we are for it.

Mr. President, I call the attention of the Senate to an editorial in the Washington Post this morning. It is entitled, "Surplus Food and Hunger." I am amazed. I have the greatest respect for that fine newspaper. But the editor seems to think that the concept of a strategic food reserve is new. He said it is a new proposal of the Governor of New York; that the international food and fiber organization concept is new.

Mr. President, the only thing new about this is that at long last a responsible official in the administration is belatedly getting political religion and is coming around to acceptance of these sound proposals.

Mr. NIXON today is proving that when he was a member of the Eisenhower team, he did not fight for this proposal; he did not work for this proposal. He is proving that when he is out looking for votes, when he is out promoting his own candidacy, when he is promoting the well being of his own party, he accepts these proposals. He marches out to the American people and says: "We need strategic reserves of food. We need to keep a supply of food in reserve. We need an international food and fiber reserve. We need a world food bank. We need an expansion of commercial uses of agricultural commodities. We need to expand the rural development program."

Mr. President, everything we have fought for, everything for which many of us in the Senate have worked, he now makes a part of his public platform.

I suggest that the true test of political integrity, the true test of political responsibility, when one is in a position of authority, is the exercise of that authority to fulfill his commitments. The administration has reneged on its commitments, commitments made in the campaign of 1952. An administration spokesman must now recognize either that he is playing politics with those issues today, or that the administration has been wrong during the past years.

I hope Mr. NIXON will continue to make speeches. I hope he will come to the concept of the soundness of the proposals which are being advanced by some of us. I may say that if he wants a really good speech on agriculture, I shall place one in the RECORD today. He can make this speech in Minnesota, because it went over well the last time I made it in Minnesota.

Mr. President, I ask unanimous consent that the speech I delivered to the Farmers Grain Union Terminal Association, at St. Paul, Minn., on December 15, 1953, be printed at this point in the RECORD. I suggest to Mr. NIXON that the next time he writes a speech, he should not skip some paragraphs and so leave out some of the proposals we have developed.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FARMER'S "BILL OF RIGHTS"

(Address by Senator HUBERT H. HUMPHREY, Democrat of Minnesota, at the 16th annual dinner of Farmers Union Grain Terminal Association, St. Paul, Minn., Tuesday, December 15, 1953)

Mr. Thatcher, Senator YOUNG, other distinguished guests, and ladies and gentlemen:

It is indeed a pleasure and an honor to address this 16th annual banquet of the Grain Terminal Association—a great enterprise symbolic of the growth and progress of agriculture in the Midwest, and symbolic of what farm people can do working together.

It's an inspiring and thrilling sight to look out over this vast gathering of farmers from throughout the great breadbasket of the Midwest.

This is America—the solid, determined, dependable America—the deep roots of democracy, embedded firmly in the soil.

America owes a tremendous debt of gratitude to its farmers, the farmers of the past and of the present.

Every farmer in this auditorium, yes, every farmer in the Nation, can be justly proud of the great contribution American agriculture has made, and is still making, to our country's growth and progress.

Agriculture is basic to life itself. It is the lifeline of food and fiber, without which we cannot survive.

Farmers were among our Nation's founders. They paved the way for creation of our great Nation of today, by producing in ever-increasing abundance the essentials of our survival—the food and fiber we needed for a growing and struggling nation of free people.

The struggle for food comes before all else. By the ever-increasing efficiency of America's farmers, in providing food not only for themselves but for others about them as well, they have made possible the release of manpower to create a mighty industrial as well as a rich agricultural empire in our new world.

But agriculture has contributed more than food and fiber to our Nation. It has contributed much to our basic strength of moral character, our hardiness, our respect for family ties. It has contributed our American pattern of family farming, with its broad base of independent landholders as a firm foundation upon which democracy could survive and grow.

Is it any wonder, then, that I say America owes a great debt of gratitude to its farm people?

Farmers today, however, are seriously concerned about the future. They have every right to be concerned. They see strangely familiar symptoms of economic trouble. Farm prices have been falling too far and too fast. The parity ratio—the relation of what a farmer receives to what he must pay—has gone steadily downward. It has slumped to a national average of 90 percent, the lowest since 1941. It's even lower in many States, and for many important commodities.

Farmers aren't the only ones concerned about these danger signs. The President and Congress are concerned. The business community is growing increasingly concerned. Why? Because we have learned that agricultural income and national prosperity go hand in hand. We have learned that depressions start on the farm. We have learned that the economic problems of agriculture are not just farm problems, but everybody's problems.

Agriculture is still basic to America's economy. Without a sound, efficient, abundant, prosperous agriculture, America's dynamic economy cannot long maintain its expending pace of higher living standards and greater comforts of life for all.

We have learned that lesson in the past—the hard way. We must never forget it.

There is a public interest responsibility toward agriculture that cannot be ignored.

Our Government early recognized the public's interest and the Nation's welfare in a strong agriculture, in a family-farm type of agriculture, by opening up vast public lands to homesteading in order to encourage agricultural expansion and farm ownership.

By making such opportunities available, the Nation was repaid many times the value of its investment in agriculture's future.

And, if you'll pardon an aside, I very much doubt if the moral fiber of our pioneering fathers was corrupted by accepting that homestead subsidy of free land.

As our Nation embarked upon its industrial development, it was business and industry—not agriculture—that first shunned the risks of the "free market," and asked for aid and protection by law—the tariffs, the grants and subsidies, the power of regulating production—and competition—to assure reasonable profits.

As a new aristocracy of industrial barons developed in our country, their influence upon Government resulted in public policy being designed more and more to serve their own ends—at the expense of American agriculture, and the American workingman.

Our economy grew out of balance, and weaker became the foundation upon which it all was based.

The rich grew richer, and the poor grew poorer, until the bubble had to burst.

I need not, I am sure, remind you at length of the great depression. Most of us remember all too well that tragic period in our economic and political history.

Agriculture, as usual, felt its impact first, longest, and hardest.

Agriculture was and is today the bellwether of our economy. It is where the symptoms first strike, then spread to the main streets, the factories, and the homes of all America, rural and city alike.

Out of that depression of the twenties and thirties, we learned that the cost of depression is far greater, in money and human misery, than any cost of maintaining a sound and prosperous nation.

From the despair of the great depression, agriculture united in a historic fight for rightful recognition of the importance of its role in American life. It brought forth a great concept so in keeping with the principles of American democracy that it has earned a permanent place in America's economic life—the parity concept, of equality for agriculture.

All of the efforts down through the years by our great organizations of farmers became solidly pinpointed toward one major purpose:

The clear declaration of public policy that prices and income of farmers should be maintained on a basis of parity with industrial wages and industrial prices.

None of us should ever forget the fight it took to establish the parity concept of equality for agriculture as the law of our land.

The great voices of that earlier historic battle for farm parity—the voices of the agricultural statesmen of that day, Ed O'Neal of the American Farm Bureau Federation, Louis Taber of the Grange, and yes, the great voice of your own hard-hitting Bill Thatcher—these voices refused to be silenced. They knew they were right. They knew they were not only fighting for farmers. They knew they were fighting for the sound economic welfare of America, for the country they loved.

It wasn't an easy fight. Powerful forces were arrayed against them. A strange coalition of the uninformed, the ill-advised, the men of little faith and little vision, looking backward instead of ahead, was moulded together and manipulated as a "front" against agriculture.

Let me make myself clear: Fairminded Americans—and I think most Americans are fairminded—have never been against decent prices and fair and equal treatment for agriculture, or for anyone else. But always in any society, there are a few who refuse to look beyond their own money-counting tables, regardless of the public interest that may be involved.

It is always these vocal few who raise the entirely false cry of Government interference with "free enterprise," when their own toes are stepped upon in order to assure the benefits and blessings of free enterprise to all the rest of us.

But all the misleading attempts to distort agriculture's just plea for equality failed.

We became realists about our economy, and the world we live in.

We recognized that there no longer exists a complete free exchange of goods and services, a complete "free market." Instead, we faced up to the fact that we work and live in the midst of protective regulations by Government, firm prices administered by business, fixed costs established by accepted standards of fair wages and reasonable profits in other segments of our economy. Federal reserve regulations, utility and transportation rate fixing, tariffs to protect industry, minimum wage laws, the fair trade practices act to eliminate unfair price cutting, and subsidies to shipping firms, airlines, and newspapers are but a few of many examples.

The farmer has never lost his spirit of independence, his willingness to work, and work hard.

But the world about him has changed. The ways of farming have changed. The world in which he must compete for survival has changed. Manmade changes have hemmed him in on all sides by a complex, legislated economy, in which he has too often become the forgotten man.

None of us can thwart the tide of change. The hands of Time can never be turned backward. Our task is to keep abreast of change, to keep pace with the progress and the problems it creates, and to look to the future.

If the farmer must compete in a legislated economy, to ask him alone to exist by the simple standards of a bygone generation is like asking our superhighways of today to be governed by traffic rules of the horse-and-buggy days. Only confusion and tragedy can result.

In a democracy dedicated to serving all the people, what is wrong with farmers asking the Government—their Government—to remember that they, too, must be able to keep pace with the times, and must have traffic rules that do not leave them by the wayside as everyone else zooms past on the highway of modern life and modern living?

Government—your Government—has the obligation, under our Constitution, to promote the general welfare—not the welfare of the few at the expense of the many.

Congress recognized that obligation in declaring it to be the policy of our country that prices and income of farmers should be maintained on a basis of parity with other segments of our economy. With full parity as its goal, our Government launched a courageous and historic series of national farm programs aimed at achieving that objective.

From time to time those programs have been changed, improved, and adapted to agriculture's changing needs—but always the same objective has been spelled out—the objective of parity prices and parity income.

Let me say right now, that it has taken nonpartisan support from the great farm States of our Nation to maintain our strides toward the objective, and to withstand the powerful pressure that would divert us. It has taken the wholehearted support of men who know and understand agriculture, and men with plenty of gumption to stand up and be counted—sometimes against their own colleagues—like my good friend, the distinguished Republican Senator MILT YOUNG of North Dakota. I was proud to fight shoulder to shoulder with him in the great battle of 1949 for the Russell-Young amendment, to keep our farm program from being directed away from its historic objective.

We have made progress—tremendous progress—under the stabilizing influence of our national farm programs.

Hand in hand with the concept of fair returns for agriculture came other great strides forward in American farm life—reasonable credit, sound conservation, rural electrification. We've tossed out the kerosene lanterns, and brightened the rural countryside with electricity. We've eased the drudgery of farm life by bringing the blessings of modern conveniences and modern power to the farm. We've checked the depletion and waste of America's potential productivity, by lifting the face of the rural countryside through sound conservation farming. We've strengthened the opportunities for farm ownership, by a credit structure geared to agriculture's needs. We breathed new life, new hope, new opportu-

nity into a prostrate rural America—and with it, we breathed new strength and new stability into the entire American economy.

From such gains we can never turn back. Yet the real job has just begun. We are still far from our goal, far from the original objective of equality which agriculture started out to achieve. And there are still forces at work to divert us from that objective, both through misguided differences of opinion over methods of achieving it, and deliberate intent to keep us from achieving it. Together, they make a formidable foe.

By devious means, they seek to divide and divert the farm unity of this country. They try to turn consumers against farmers, to turn farmers against labor, and labor against farmers, and to even turn farmers against farmers—to split your own household against you.

They are failing on one front. American labor is still the farmer's best friend. They are your customers, yet they know you are their customers, too. They too haven't forgotten grim lessons of the past; and they are worried about dangerous symptoms of the present. They want farmers to have decent prices and decent incomes, just as they want such goals for themselves. They know that only in a well-balanced, expanding economy, can higher living standards be maintained for all. Farmers need more of such understanding among consumers.

But the forces historically alined against you have gained on another front. They have split the ranks of agriculture itself.

At a time when unity of purpose is needed in agriculture as never before since the great crusade of 1933, new leadership of some major farm groups has wavered from the very objectives upon which their own organizations grew great and powerful. In the heat of controversy over how such objectives can best be achieved, willingly or unwillingly, they have allowed themselves to be diverted from the objectives themselves.

Where now are the voices of Ed O'Neal and Louis Taber, forceful voices crying out for full parity, for full equality of economic opportunity for agriculture?

Thank God the great voice of Bill Thatcher has never been stilled, has never wavered, has never been sidetracked from the main line of agriculture's fight for full economic equality.

You can be thankful, too, for the vigorous leadership of Jim Patton as president of the National Farmers Union.

Every farmer stockholder of GTA can be proud of the great record of achievement and service of this cooperative grain marketing organization. It has done more than serve you well. It has fought for you. Along with the Farmers Union, with which it is affiliated, it has always been in the forefront of the struggle for a square deal for all farmers.

Agriculture needs such vigorous champions today.

Agriculture would do well, today, to harken back to the wise words of Ed O'Neal in 1941, when he prophetically said:

"This issue raised is very clear * * * that issue is whether the parity objective is to be a reality for American farmers, or whether it is to be merely an illusive mirage, constantly dangled before the eyes of farmers, but which they are never permitted to attain."

Now, as then, that is the issue.

The issue is joined; the battle lines are being drawn.

On the one hand, we have those lacking faith in democracy, men of little vision and less confidence in America's ability to maintain a dynamic, expanding economy. They are the flexers, holding to a philosophy of scarcity, an outmoded philosophy of survival by jungle laws alone.

On the other hand, we have those holding firm to the conviction that government in a democracy must promote the general welfare, with equality of economic growth and progress.

Between these groups is a large segment of the American population which, unfortunately, fails to fully realize how much everyone is involved. They have taken our abundance for granted. America has never suffered scarcity. As a result, many haven't stopped to realize, perhaps, how our abundance has kept prices to consumers reasonable. A smaller percentage of our income is required to purchase food and clothes in America than anywhere else on earth, freeing more money for purchase of homes, automobiles, television sets, and other products keeping the wheels of industry and commerce spinning. All of us should be concerned about what makes that abundance of food possible. We should be looking ahead, too, at our population growth of 2,700,000 a year—new people who have to be fed and clothed and provided with jobs. They, too, have a stake in this struggle.

The issue is not whether the present farm programs are perfect.

It is whether we hold firm to the basic objective of those farm programs—the right of farmers to equal economic opportunity—while seeking to improve our means of achieving it.

The challenge is to go ahead, rather than turn backward.

With our eyes firmly fixed on the same historic goal, there is much more that we can and must do—and do now.

We must point closer to the income objectives set forth time after time in our farm legislation, the take-home pay the farmer receives. We must raise our sights, rather than lower them, toward effective devices to achieve full parity.

We need to extend price protection to the major income-producing perishable commodities, as well as the storage products. To achieve such price protection, we must use the methods or combination of methods most effective for each commodity. A diversified agriculture may call for a diversified approach. On those commodities where the price support system has worked well, both to the benefit of the producer and the consumer, let there be no tinkering or tampering. For those commodities, particularly in the perishable field, where experience may reveal the need for improved methods of price protection, let us have the courage and the imagination to try new methods. This is within the American spirit. We are not hidebound by doctrine or theory. We are a practical people. As such, all of us want to see food used, not wasted.

We need longer-range assurance of stability for agriculture. The American farmer justly deserves a long-range policy he can depend upon. Temporary extension of legislation, year by year, does not represent a policy; it represents only expediency. Constant uncertainty as to the long-range agricultural policy is within itself a source of instability within the marketplace. Farmers must not be left to the discretionary whims of any Secretary of Agriculture. Discretionary authority will always mean indecision and uncertainty; mandatory protection under the law means certainty and stability. The time is at hand to quit treating agricultural policy as if it were a biennial political football, to be kicked around every election year.

Effective price protection, of course, is just a foundation.

We need to develop new outlets and uses for our food and fiber. We need to learn to live with abundance, and use it wisely for the greatest good of humanity. To protect and expand areas of freedom in this world, we must think of full stomachs as well as full cartridge belts.

We need expanded international trade, but we need, at the same time, commonsense protection against certain groups of farmers having to suffer economic losses amounting to more than their fair share of the burden of maintaining our foreign trade policies. I refer specifically to the increasingly serious problem of competing barley, rye, and oat imports from Canada. I want to commend both Senators Bill Langer and MILT YOUNG for their leadership in seeking the proper use of the protective administrative devices Congress has had the wisdom to provide for such a situation, a fight in which I have given my wholehearted support.

We need assurances that production restrictions shall not be placed upon any important food commodity at any point below the total of domestic consumer need, plus normal exports and an adequate safety reserve, including a special reserve for use in strengthening our foreign policy. In acreage restrictions on wheat, we need recognition of the differentials in types and qualities, some of which are in short supply while others are in surplus. Wheat is not just wheat; it has many varieties used for different purposes. Durum is an example of a variety of which we need more, rather than less.

We need adequate incentive premiums to convert diverted acres under production restrictions to soil-building conservation practices, rather than to other competing and soil-depleting crops.

We must make greater progress in conservation. We must harness the destructive force of excess water, and convert it to constructive use. We must extend rural telephone service to farm homes of America, just as we have extended electric lights and power. We must continue our progress in research and marketing efficiency.

Obviously, there is much that can be done to improve our farm legislation—without taking away any of the advantages it now offers. It is in that spirit Congress must approach its task of writing firm, constructive, long-range farm legislation at its forthcoming session. And, it is in that spirit, I am sure, that my Senate colleagues of the great agricultural Midwest and South will stand firmly together, regardless of party.

American agriculture, at long last, has come of age.

It accepts responsibility to be concerned about the well-being of all the American people.

Farmers ask only what is rightfully theirs, by their heritage as American citizens: The right of equal treatment and equal respect, under the law of our land.

I know that is your conviction. I know it has long been mine. But it is time that all the American people recognized and accepted that right of equality for agriculture. It's time they accepted it as in the best interest of the entire Nation—not just for the benefit of farmers alone.

Tonight marks the 162d anniversary of our Nation's Bill of Rights. As a nation, we are dedicated to preservation of these rights of all the people, rights we hold to be inalienable. We guard and protect these rights zealously. They are the very cornerstone of our democracy.

But, perhaps it is time that we, as a nation, also dedicate ourselves to preservation of certain rights for the American farmer, as the custodian of the very basis of our national life.

I propose as a standard from which agriculture should never again retreat this "farmer's bill of rights":

1. The right to full equality of economic opportunity.

2. The right for improved standards of rural living.

3. The right of reasonable protection against natural hazards.

4. The right to extend agricultural free enterprise through cooperative action.

5. The right to public cooperation and assistance in saving the soil.

6. The right to preserve the social and human values of family farming.

7. The right to decent land tenure which would encourage the desirable goal of farm ownership.

8. The right to a democratic voice in his own farm programs.

9. The right to benefits of an expanding world trade.

10. The right to a long-term program of food storage to encourage abundance.

Much could be said about each of these fundamental rights for agriculture. They involve the right to a fair share of the national income for agriculture through more reasonable assurance of fair rewards and adequate incentives for those who efficiently and abundantly provide for the food and fiber needs of the Nation. They mean modern schools, roads, housing, and health facilities and services in rural areas, equal to those afforded city folks. They mean protection against forces beyond agriculture's own control, through adequate farm credit facilities geared to agriculture's needs; through crop insurance, within the farmer's ability to participate; through disaster aid when needed to protect both the public and the individual interest; and through price support programs designed to contribute stability to our entire economy, and to protect the farmer from being left at the mercy of speculators.

The bill of rights for agriculture means the right of farmers to self-help through forming cooperatives for marketing farm products, purchasing farm supplies, and providing essential services, such as extending the benefits of electricity and telephones in rural areas, with legal protection against efforts to curtail the effective functioning of such farm cooperatives. They mean the right of aid in conserving the Nation's agricultural resources—our productive lands, water supplies, and forests—so that these resources will be permanently useful for the benefit of generations to come.

They mean adequate landlord-tenant arrangements for sharing the income that the soil produces, with adequate opportunity for tenants to advance up the ladder toward farm ownership. They mean an effective voice for the farmer in his own destiny such as farmer participation in both administration and development of farm programs through democratically elected farmer committeemen, and self-determination of the needs of adjusting production to a reasonable balance with demand through voluntary farmer referendums. They mean facilitating the flow of farm exports to broaden the base of our farm economy.

The farmer's bill of rights means greater public recognition of the wisdom and necessity for maintaining at adequate levels our storage food banks of feed and food reserves safeguarding the Nation from any eventuality. They mean public policies making more effective use of the abundance farmers are capable of producing, policies enabling the farmer to see his food used wisely, rather than be wasted; to see the output of his land and his toil make its utmost contribution toward stamping out hunger and deprivation at home and abroad, and serving as the humanitarian arm of the Nation's foreign policy, in our efforts to create a better and more peaceful world.

These, I believe, are basic rights of American agriculture.

They are not new rights. They are not rights of special privilege, gained through misuse or abuse of tremendous power over the lifelines of the Nation's food supply.

Rather, they are rights of historic precedent, earned by the great and continuing contribution of agriculture to American life—the fulfillment of the Nation's needs in peace or war, in good times or bad, at personal profit or personal loss.

They are rights set forth as public policy, time after time, in the objectives of legislation enacted by the Congress of the United States.

They need reiterating now only as a guiding beacon of light, cast upon the darkness of confusion surrounding current controversy over America's farm policy.

They must be just as zealously guarded, against forces which seek to destroy them, as we guard other historic rights, privileges, and responsibilities of freedom in our democracy.

That, I believe, should be American agriculture's rallying point for unity today—and the Nation's challenge to fully exemplify the meaning of democracy as equal opportunity for all.

Mr. BUSH. Mr. President, I have listened with interest to the distinguished Senator from Minnesota. I have listened to many assaults on Mr. Benson, the Secretary of Agriculture, during the past few years. As one who has always admired Secretary Benson as a thoroughly honest and devoted public servant, I reserve the right to disagree, and do disagree, with the assaults which have been so frequently made upon him.

In order that those who may read today's RECORD and may observe the speech made by my distinguished friend, the Senator from Minnesota, may also have some idea of the agricultural accomplishments under the Republican administration from 1953 to 1960, I ask unanimous consent that a statement under that title, by the Senator from Vermont [Mr. AIKEN], be printed in the RECORD following these remarks. The Senator from Vermont is the ranking Republican member of the Senate Committee on Agriculture and Forestry.

The PRESIDING OFFICER. Is there objection?

Mr. CASE of South Dakota. Reserving the right to object—although I do not intend to object—let me say that I hope the Senator from Connecticut will permit me to observe that I listened quite closely to the remarks of the Senator from Minnesota; and I came to the conclusion that if Mr. NIXON is elected President of the United States, Mr. Benson will not continue as Secretary of Agriculture.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AGRICULTURAL ACCOMPLISHMENTS UNDER THE REPUBLICAN ADMINISTRATION, 1953–60

(By U.S. Senator GEORGE D. AIKEN, of Vermont, ranking Republican member, Senate Agriculture and Forestry Committee)

1. Total agricultural assets are at an all-time high of $208.2 billion as of January 1, 1960.

2. Owner equities on January 1, 1960, were $37 billion above January 1, 1953, and hit a new peak of $184.2 billion.

3. Farm ownership is at a record high, and there is a smaller proportion of tenants than ever before.

4. Farm foreclosures are near an all-time record low.

5. Total financial assets of farmers, including farmer cooperatives, have risen from $16.7 billion in January 1953, to $19.4 billion, January 1, 1960.

6. Farm debt amounts to only 11½ percent of the value of farm assets.

7. The standard of living on farms is the highest in history, measured in terms of electrical appliances, automobiles, and other conveniences owned by farm families.

8. Repeal of Federal taxes on gasoline used in tractors and other machinery saves farmers $60 million a year.

9. Farmers in 1954 were benefited by the largest tax reduction in history.

10. Per capita farm income rose from $838 in 1950 to $960 in 1959.

11. Well-administered emergency livestock feed programs have helped farmers and ranchers overcome effects of drought, floods, and other natural disasters.

12. Approximately $600 million a year has been extended in disaster and drought aid since 1953. Such aid enabled families to stay on the land.

13. The Water Facilities Act was amended to provide for direct and insured loans for certain soil and water conservation activities in all States to conserve the Nation's water and soil resources. Prior to this amendment, the act had applied to 17 western States only.

14. Upon the Republican administration's recommendation of July 31, 1953, Congress authorized (in the Watershed and Flood Prevention Act of 1954) State and local agencies to undertake flood-prevention work and agricultural phases of water management in watersheds.

15. Legislation has been passed which has held down the accumulation of surpluses by the Government by an amount estimated to total $14 billion through adjustment in price supports, Public Law 480, and the soil bank.

16. A major reorganization of the Department of Agriculture was effected in 1953 to improve the quantity and quality of its services to the farmer.

17. The bipartisan National Agricultural Advisory Commission was established in 1953 to review agricultural policies and work with the administration in developing and administering farm programs.

18. Social security coverage was extended to farmers in 1954, ending 19 years of discrimination.

19. The Rural Electrification Administration continues to meet the growing demand for electric and telephone service in rural areas, including the expanding needs of rural industry. More than one-third of all REA electrification loans have been made since January 1953. During this 7½-year period, about 925,000 new consumers have been added to the lines of REA-financed electric systems. In calendar year 1959, five out of six of these were nonfarm consumers. An estimated 1 million subscribers have received new or improved telephone service since January 1953 as a result of the REA telephone loan program. Electric loans in fiscal 1960 amounted to more than $200 million; telephone loans exceeded $100 million.

20. The rural development program is raising living standards of those on the lowest rung of the economic ladder through the cooperation of the Federal Government and local authorities and private leadership. Work is progressing in 30 States and Puerto Rico.

STABILIZATION

21. The payment-in-kind export program for grain and cotton came into being in 1956 and 1958. This program resulted in higher prices to producers. This also resulted in fewer commodities coming to CCC—a saving to the Government.

22. The new uniform grain storage agreement rates in effect July 1, 1960, will mean saving between $85 million and $100 million yearly. The 19-percent lower storage rates generally represent a net saving to farmers who use commercial facilities.

23. More than $20 billion worth of food and fiber was moved out of storage and into use at home and abroad in less than 7 years

through disposal programs designed for the needy and drought and storm relief and to help the free nations throughout the world.

24. More than 28 million acres of farmland have been taken out of production by the conservation reserve program of the soil bank and put to soil conserving uses. These acres would have otherwise added to surpluses, whereas participating farmers are now adding to their income, thus making unprecedented strides in the conservation of soil, water, forests, and wildlife resources.

CREDIT

25. Total credit extended farmers by the Farmers Home Administration during fiscal 1960 is estimated at $310 million, compared with $228.7 million in 1953. Arrangements were made in 1959 for FHA credit to more fully meet the needs of part-time farmers. Loans totaling $12 million will be made in rural development counties in 1960; the 1959 total was $10.2 million.

26. The agricultural credit system was made more responsive to farmers' needs. The Farm Credit Administration was made an independent agency.

EXPORTS

27. The food-for-peace program was set in motion by President Eisenhower and is enabling the United States and other food-exporting nations to better share their abundance with people in the free world. It is helping to feed hungry people, is supporting economic development of friendly countries, is providing additional outlets for U.S. farm production, and is helping to develop future markets.

28. Exports of farm commodities grew from $2.8 billion in 1953 to an all-time high of $4.7 billion in fiscal 1957, and for the past 3 years have averaged about $4 billion per year. Exports in fiscal 1960 are estimated at $4.5 billion, the second highest total on record.

29. The agricultural attaché system was returned to USDA from the State Department to make more effective efforts to expand foreign markets for farmers.

FOREST SERVICE

30. Operation Outdoors was set up to expand family recreational facilities in the national forests. In 1953, 35.4 million people visited the national forests; in 1959 the number was 81,521,000. The Forest Service has built 7,036 new family units for camping and picnicking and rehabilitated 8,973. It has also built 23 new winter sports areas, 38 new swimming places, and 10 new organization campsites.

31. A new milestone was reached by the Forest Service in 1959 when for the first time 2 billion trees were planted, double the 1958 record.

32. Timber cut in national forests is at the rate of 8.3 billion board feet, the highest on record. The yield of the national forests is being sustained and constantly increased. The income from these sales largely offsets the cost of running the national forests.

33. National forest receipts passed the billion dollar mark in 1958. It took 50 years to collect this amount from use fees and the sale of forest resources. In 1959 receipts hit $142.7 million. At this rate it will take less than 10 years to collect the second billion dollars.

34. Progress has been made in reducing forest fire losses and in 1957 they were reduced to an alltime low.

MARKETING

35. The special milk program was inaugurated in 1954. The program in 1960 operated in 83,000 schools and child care institutions, where nearly 2.4 billion half pints of milk helped improve diets of our children.

36. The school lunch program absorbs large quantities of plentiful foods and improves diets of 13 million participating children. Fiscal 1960 purchases totaled $540 million. Complete meals in 1960 were increased more than 1 billion over the 1 billion served in 1951.

37. About 60 million people in 82 foreign countries have been receiving food and fiber donated by the United States. Over 4 million American people are sharing in our abundance through donations of surplus foods.

38. In periods of oversupply, 906 million pounds of meat products, poultry, and eggs worth $388 million were bought for the school lunch program, welfare institutions, and needy people. Cattle, hog, poultry, and egg prices were thus bolstered without the Government getting into the meat business.

39. Producers of dairy products, one of the mainstays of agriculture, will receive estimated cash receipts of $4.7 billion in 1960, an alltime high.

40. A major consumer health protection measure, the Poultry Products Inspection Act, went into effect January 1, 1959. During the first year nearly 5 billion pounds of poultry were examined and certified as wholesome.

RESEARCH

41. Appropriations for agricultural research have been increased by 117 percent since 1953. Much of this has gone into successful research to find new uses for our farm abundance, and to develop new crops for current needs.

42. Research workers in 1959 discovered the mechanism of plant growth. In a major breakthrough they isolated a pigment that controls germination, flowering, and seed formation.

43. Important new facilities were established to insure future agricultural progress and livestock health. Among these is the Plum Island Animal Disease Laboratory, Long Island Sound, where diseases foreign to our country are being studied for control purposes. Native diseases will be studied at the new National Animal Disease Laboratory at Ames, Iowa. Victories have been registered in the battle against two serious livestock diseases—screw-worm infestation in cattle in the Southeastern United States and vesicular exanthema in hogs.

44. New concepts in eradication of insect pests have resulted from the successful use of radiation in the sterile-male method against screw-worms in Florida.

45. Success was achieved in the campaign to help wipe out an outbreak of foot-and-mouth disease in Mexico which, had it spread, would have meant incalculable losses for United States stockmen.

46. The drive to eradicate brucellosis from the United States passed a milestone in June 1960, when New Hampshire became the first State completely free of the disease. Twenty-four other States have almost eliminated the disease. (Brucellosis is a primary threat to the Nation's cattle; in man it is known as undulant fever.)

SOIL CONSERVATION

47. The Great Plains conservation program was established in 1956 and is operating in 351 countries. A total of 12 million acres was covered by cost-sharing contracts as of May 1, 1960. The long-range purpose is to minimize drought, flood, and wind erosion damage in the western States once embraced in the Dust Bowl.

48. The number of soil conservation districts assisted in 1959 totaled 2,865 compared to 2,493 in 1952. The land of 21 States, Puerto Rico, and the Virgin Islands is covered by soil conservation districts.

49. In recognition of the Nation's mounting need for water conservation, this Department has stressed protection of watersheds. As of June 1, 1960, 236 local watershed projects in 45 States were receiving assistance. Authorizations for planning assistance had been extended to 549 projects in 48 States.

50. The importance of water to farm and city people has been stressed by this administration. The first Soil and Water Conservation Advisory Committee was established, and meets regularly to plan for the future.

51. The internal revenue law was amended to permit farmers and ranchers to deduct from their taxes expenditures made for installing certain soil and water conservation practices.

Mr. DIRKSEN. Mr. President, I say this in the politest way and with the greatest courtesy and respect; but a fascinating fulmination of this kind by my distinguished friend, the Senator from Minnesota, on the farm issue, intrigues me no end.

When I heard that the Senator from Minnesota and I were to engage in debate today on this subject, I thought that, like two valiant gladiators, we would exchange thrusts and would parry off the blows and would shake the world with some hard and enduring truth.

But, Mr. President, I am a little disappointed.

First. The Senator from Minnesota mentioned the fact that, contrary to what the Vice President may have said, a Democratic Congress had passed five farm bills. Certainly the Vice President has taken that into account, because in his statement he said:

> Putting it bluntly, there has been a political stalemate between the administration and the Congress over the past 5 years.

Farm bills have been passed, and then they were vetoed; and then they came back to Congress, and then there were not sufficient votes to override the vetoes. That is a peculiar situation, particularly in a Congress of this kind, where there are two troops on that side for every one we have on this side. They do not need any votes from this side, but we must keep all ours and must have all of them in town all the time in order to sustain the President's veto.

So evidently these agricultural programs were not so prizeworthy or so world shaking that they could command enough support in a Democratic-controlled Senate or House to get by the President's veto.

The Vice President has justly dealt with that situation, and has not gone beyond the record.

My distinguished friend, the Senator from Minnesota, stated that the Vice President went to North Dakota, to aid a Republican candidate. Well, certainly he did not go to North Dakota to hurt him; that is for sure. But we should mention the fact that the distinguished Senator from Massachusetts [Mr. KENNEDY], who is a candidate, also went to North Dakota—unless I have misread all the contemporary press. No one quarrels about that.

My regret is that I could not disengage myself from all this business long enough to go out and help the candidate in North Dakota—assuming that he would like to have me come. I am not at all sure that he might. But assuming that he would, and assuming that I could have gotten loose, I would have been glad to go.

I am informed that the distinguished Senator from Missouri also went. So the score is 2 to 1.

We have been very modest about it; but that is all part and parcel of the political atmosphere in which we live.

The Senator from Minnesota mentioned industrial research. I have to ask my distinguished friend, the Senator from North Dakota [Mr. YOUNG], who is something of a mentor to me on matters agricultural—except when I disagree with him. But it seems to me there have been requests from the Department of Agriculture for funds for industrial research. The Senator from North Dakota serves on the Appropriations Committee and on the legislative Committee on Agriculture and Forestry. I shall ask my distinguished friend from North Dakota what happened to those requests by the Department of Agriculture for adequate funds with which to deal with industrial research.

Mr. YOUNG of North Dakota. As a frequent critic of Secretary Benson, I wish to say this to his credit: I do not believe any Secretary of Agriculture in the history of the United States has done more for research than has he. For most if not all of the last 7 years the Congress has refused to appropriate all of the funds for industrial research and other research requested by the Secretary of Agriculture.

Mr. DIRKSEN. Mr. President, there are only one or two other allusions I wish to make.

In his speech in Minot, N. Dak., the Vice President alluded to what the platform committees will do when they deal with the agricultural planks. Then the Vice President said:

> Before doing so, I should like to state my basic attitude toward this and other problems confronting the Nation today. It would be easy for me to make promises to America's farmers that I knew I could not keep, to advocate programs that I knew wouldn't work, or to put forth proposals that I was sure the Congress would not adopt.

Mr. President, if you can find for me in the English language words that could more candidly express the attitude of a candidate than those, I do not know quite where you would find them.

The Vice President went on—and I think the statement he made was a very fair and equitable one. He said:

> From a purely political standpoint, it might be enough for the Democrats to blame the program on the Secretary of Agriculture and for the Republicans to blame it on a Democratic Congress.

That is one of the niceties about this thing: We can throw our charge at Ezra Benson, or we can throw it at the other side, and they can throw it at us. After all, they are permitted to do so.

It reminds me of a story about a young private who was in a plane over the Korean front for the first time, flying his first mission, along with a tough, old sergeant. As the enemy flak began to go through the fuselage of the plane, the young boy, getting his first baptism of fire, turned white, and began to cringe, and said, "Sarge. Sarge. They're shooting at us."

The old sergeant said, "Sure; they're allowed to."

So in this business one is allowed to shoot; and I am always glad when my friend, the Senator from Minnesota, takes off on this subject. But we always have to roll him back a little and provide the record.

The Vice President said:

> I think the American farmers and the American people deserve better than patent demagogery and political fakery.

Mr. President, that is a good, rugged statement, and I stand by it. The American farmer does deserve better, because there is no question but that for years we made a political football of the farm problem.

I ask the distinguished Senator from North Dakota whether there is any politics about a bushel of wheat or corn. I do not know that any one of these bushels is either Republican or Democratic. Of course, it is neither; there is no politics about it. So we ought to spend most of our time on a keen economic approach and an analytic endeavor to find the answer, instead of scolding all up and down the line, fulminating against Benson, fulminating against the Vice President because he went to Minot, N. Dak., and then, of course, scolding a little because it would appear that we might have borrowed an idea from the other side.

I think the Senator from Minnesota ought to get up today and just praise the Vice President to the sky. He should say, "Here is a man of humility. Here is a man with candor and understanding. Here is a man of open heart, because he saw a good idea that maybe somebody advanced some time ago on this side, and suddenly we find he adopts it. That shows the breadth of his understanding. It shows the extent of his political forbearance, a man of great heart, a man of candor, eminently qualified, by every moral and spiritual yardstick, to be a great President of the United States."

Instead of that, he scolds him for having borrowed this idea. Goodness me, I go around borrowing ideas. I do not always remember the source; but if the idea is pretty good and I cannot remember the source, I borrow it, anyway.

We speak about Public Law 480. The Vice President mentions it, and what we must do in order to expand operations in this field. So that brings into view the question of who was the original parent of the old Public Law 480 idea.

You know, Mr. President, I am the modest and shy type. I do not claim much parentage over legislation. I am afraid if they ever read the RECORD on me back home and say to me, "What did you put on the law books?" the chances are I shall say, "I spent most of my time keeping bad legislation off the law books and taking off those books some that already got there." If anybody ever wants to erect a monument to me, let him do it on that basis, rather than on things inscribed on parchment for which perhaps I would have no pride some years later.

Referring to Public Law 480, I see the Senator from South Dakota [Mr. CASE] present in the Chamber. He had a great record in the House of Representatives. He is a great student. He comes from South Dakota, the neighboring State to which Mr. Symington, and Mr. Kennedy, and the Vice President, and Mr. Rockefeller all journeyed. I should say to my distinguished friend, MILT YOUNG, you are being honored in 1960. I hope you will invite me to join the galaxy. If I can find time, I shall come out there, and course up and down the great spaces of North Dakota, where the air is clear, where there are no exhaust fumes from automobiles, where, if one learns abdominal breathing, he can breathe deeply. They live longer out there.

It comes to my mind it must have been 7 or 8 years ago that the Senator from South Dakota [Mr. CASE] came up with the idea of the matter of foreign currencies in connection with a situation which existed in Korea at the time. He is a modest person, but I am going to ask him to say now what that situation was out of which the whole foreign currency idea came.

Mr. CASE of South Dakota. Mr. President, I think the Senator from Illinois probably is overly generous. The Public Law 480 idea was based on the idea of selling surplus commodities in exchange for foreign currencies. The junior Senator from South Dakota, as a member of the Armed Services Committee, early in 1953, I believe it was, heard General Van Fleet tell about the distressed conditions in Korea, where there was a shortage of food and an abundance of paper money. The price of food was skyrocketing because the Korean farmer had become a soldier. General Van Fleet said the Chinese war prisoners were being fed a better diet than the Korean soldiers were getting. It occurred to me to ask him why that was. He said it was because, under a Geneva Convention, we had agreed that prisoners of war should get a diet that was not less than what the lowest ranking soldier would get. We were seeing that the prisoners of war were well fed, and we had no responsibility in that regard toward the Korean soldiers.

I introduced a bill which proposed that we sell Korea some of our surplus commodities and take their paper money, with the idea of using the Korean money afterward to employ soldiers, after the war, to rebuild the economy of Korea by building roads, and so forth.

So far as I know and understand from research in the Congressional Library, that idea was the first proposal that surplus commodities be sold for foreign currencies. The idea was picked up and incorporated in a bill in which several members of the Agricultural and Forestry Committee joined, which was the bill that became Public Law 480.

Mr. DIRKSEN. Now I am going to ask the distinguished Senator from North Dakota whether it is or is not a fact that the Senator from Kansas [Mr. SCHOEPPEL] probably formalized these proposals out of which distribution of food surpluses for foreign currencies come.

Mr. YOUNG of North Dakota. Yes. Public Law 480 was one of the best farm programs ever enacted by Congress. The first sponsor was the senior Senator from Kansas [Mr. SCHOEPPEL], and I believe it was cosponsored by practically all, if not all, of the members of the

Senate Committee on Agriculture and Forestry, including myself.

Mr. DIRKSEN. There is no further response necessary, but I want to borrow a leaf from the page of the book of the Senator from Minnesota. His State almost became my second home, because I went up there and enrolled at the University of Minnesota. I fully intended to stay there, graduate from law school, hang out a shingle in Hennepin County, in Minneapolis, and engage in the practice of law. The war intervened and took me off the campus. So one never knows what is going to happen to him in this world. That is the reason why I have such an affinity with the Senator. It makes us kinfolks. That is why my affection for him is as high as the sky and as deep as the sea. That is why we could take a leaf out of his lesson book.

He was scolding because all this was done and had been announced to the whole wide world, and evidently the world has been niggardly in its approbation and credit. The distinguished Senator from South Dakota pioneers an idea. It points up one weakness we have. The distinguished Senator from Kansas visualizes a great idea. The distinguished Senator from South Dakota has been giving great leadership in the farm field. But, somehow, we just have not bragged about it. We have not boasted about our ideas and our achievements in that field at all. We have that necessary fecundity of imagination to pioneer a program, but we are the shy and retiring type. We are forever hiding our light under a bushel. But it seems to me there is a Scriptural admonition not to hide one's light under a bushel. So let the lights be pointed upward. Let them shine brightly so all the people can see them. Before election day they will be advised where the real imagination, the real courage, the real achievement in the whole farm program happens to be.

Then, of course, our brethren on the other side can ventilate their frustration to their hearts' content.

I think my beloved friend is a little frustrated. Think of it—five farm bills and five vetoes, and then not enough Senators, even on his own side of the aisle, to override a veto. Of course, that is likely to engrave frustration on even the most redoubtable person.

He is a humble fellow. I love him. I salute him. I trust as he goes forward he will pin the accolade on the Vice President and say, "A noble person with great grasp, deeply unselfish, because when a great idea comes along which is in the interest of the country he does not have the slightest hesitancy in applying his efforts for the good of the people and for the good of agriculture."

So, for a moment, I think we shall let the case rest. Mr. President, I yield the floor.

Mr. HUMPHREY. Mr. President, I sit here in amazement and wonderment at the unique ability of the distinguished minority leader, a gentleman for whom I have sincere affection and friendship. I cannot help thinking of what a tremendous impact he could make if he had a good case. Really, based upon the threadbare material with which he has had to work, namely, the record of this administration in the field of agriculture—he has been entertaining at least to his own political kinfolk. I have noticed the cheering section which was generously and, I am sure, carefully arranged. I noticed that the questions and answers, if not well rehearsed, at least had the appearance of spontaneity.

I feel we ought to compliment the minority leader. I have great respect and admiration for his qualities of rhetoric and elocution. He presents an argument which is smooth, soothing, and mellow—but not convincing. Were he selling some delicacy, I think he would present a master job of salesmanship. It is sweet. When one listens to it, it sounds very entrancing and it sounds very engaging. The only trouble is that when one reaches out to touch it, it is like the candy floss at the county fair—it simply is not there. It has the appearance of substance, but it fades away under careful examination.

I will say to my good friend the Senator from Illinois——

Mr. DIRKSEN. Does the Senator mind if I come to his side?

Mr. HUMPHREY. Please come over. Please come over. [Laughter.]

I will say to the Senator, there is more rejoicing in heaven over the repentance of one sinner than for a meeting of the faithful. If this is an indication of any degree of repentance of action, then in truth we are delighted. Even if it does not so indicate, we are delighted to have the Senator on our side, because he is a fine gentleman.

Mr. President, the Senator from Illinois has given us a good dissertation upon history. It was sketchy. It was not in detail. In terms of the broad sweep of history of the last decade, it had a degree of relevancy.

The Senator has gone into the parenthood of Public Law 480. I am forced to say that historically his findings are within a degree of being factual, except that there were a number who were claiming the child.

I wish to say, however, there were others of us in the fight. For example, my colleagues will recall that in 1953 I presented to the Committee on Foreign Relations a proposal for the use of soft currencies for the purchase of American surplus foods under the Mutual Security Act, at the time when Mr. Stassen was the Director of what was called the Foreign Operations Administration. I had Mr. Stassen's office prepare the amendment I suggested. When I brought it to the Committee on Foreign Relations, immediately there was a great protest that the administration opposed it. I pointed out that it had been prepared by one of the officers of the administration. There was a special meeting of the Committee on Foreign Relations, to see to it that the amendment was not attached to the bill.

This was during that short period of time when the Republicans were in control, in the 83d Congress. It was a very brief interlude in the progress of this Nation.

I wish to make it crystal clear that no Democratic bill was ever reported during that time. A Senator could introduce any bill he desired, but it was reported under the name of a member of the Republican Party, which was then the majority party. That is as it should be. I am not complaining about that. At the present time we are not quite that disciplined in our action.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. HUMPHREY. I am delighted to yield. It is a pleasure.

Mr. DIRKSEN. I may be called away from the Chamber before this fascinating dissertation comes to an end, but I always think about Ezekiel, the great missionary. After the Lord taught him to see the light he said he went among the people and, "I sat where they sat."

I am something of a missionary in this field. Of course, when I go out upon a missionary journey I have to go where there are sinners, so I came to this side of the aisle. [Laughter.]

Mr. HUMPHREY. I wish to say to this modern day Ezekiel that he did not need to leave the promised land on the other side of the aisle. There were plenty of cash customers on his side of the aisle, before he came to work these precincts. Nevertheless, we are delighted to have the companionship of the minority leader. I repeat, we respect his capability, his qualities, and his ability to do well with a limited case.

I also compliment the minority leader for another thing. I always like to listen to his stories, even when they are not pertinent. [Laughter.]

I believe that Congress needs a light touch occasionally, a demonstration of a sense of humor. The minority leader has done us a great favor. It is particularly helpful for him to tell a story when there is nothing else to say. It has a way of taking one's mind off the subject matter, if there is a subject matter. In this instance, the minority leader has done well.

We give the minority leader an "A" in history—no, a "B" in history. He did not tell all of it.

We give him an "A" in story telling. He has been superior, excellent, smooth, and soothing in elocution, in rhetoric, in diction, and in oratory.

However, when it comes to the record, he fails. Zero. The reason he fails is that the record of the administration is best described by the Vice President's own statement, which was quoted by the minority leader. I ask Senators to listen to the quotation from Mr. NIXON. He ought to know about the subject, because he and others have been the practitioners of what I am about to quote:

> I think the American farmers and the American people deserve better than this kind of patent demagogery and political fakery.

That is the epitaph which will be put upon the political tombstone of this administration, "Here lie those who were past masters of demagogery and political fakery, at least as they relate to the farmers."

Who promised at Kasson, Minn., that farmers should have 90 percent of parity? Who was it who promised not only 90 percent of parity but also 100

percent of parity, and then added, in small print, as to the 100 percent of parity, "in the marketplace"?

Who said, from the public platforms, "The Democrats are giving you too little."

Who was it who made the golden promise? I say that Adlai Stevenson was outpromised 10 percent in one afternoon before 100,000 farmers in southern Minnesota.

Who was it who broke that promise? It was this administration.

Who was it who said that Secretary Benson was one of the greatest Secretaries this country ever had?

I repeat, Mr. President, I have not been assailing the Secretary of Agriculture this afternoon. I have been praising him for pulling to his bosom the Vice President of the United States and saying, "This is one of our men. This is one of the architects"—as he said—"of the administration policies."

Mr. NIXON said in 1954 at Des Moines, Iowa, on April 21:

> I predict that the verdict of history will be that the Secretary of Agriculture Ezra Taft Benson has been one of the greatest Secretaries of Agriculture in our history, and that he was the friend of the farmer in the program he advocated and put into practice.

Mr. President, where was the Vice President of the United States when the Senator from Montana [Mr. MURRAY] was fighting for, working for, testifying for and arguing for his international food and fiber program? Where was the Vice President of the United States when the Congress put into action by law the request to the administration for a plan and legislative recommendations for a national security reserve. Where was this articulate, courageous, statesmanlike gentleman?

The minority leader said of the Vice President:

> Here is a man of humility. Here is a man of candor. Here is a man of open heart.

But was he a man who told the truth about agriculture? The Vice President has spoken up on any issue at any time he wished to. He has spoken on all sides of it. The Vice President did not lift his voice for a single one of the measures in behalf of which he now goes to the peoples of North Dakota, South Dakota, Minnesota, and all the other people of the Nation. He did not lift his voice for the World Food Bank. He did not say a word for industrial uses of agricultural commodities.

I will not let the Republican administration off the hook on this subject. They claim they have asked for greater funds for industrial use research. But the fact of the matter is that the Committee on Agriculture and Forestry and the U.S. Senate have approved legislation in this area, saying that the Research Service of the Department of Agriculture has not done an adequate job in research on the industrial uses of agricultural commodities, and the administration has opposed the legislation. Nobody knows that better than the Senator from South Carolina [Mr. JOHNSTON] who was the main author of this bill, and, may I add, the distinguished Senator from Indiana [Mr. CAPEHART], who on two occasions, I recall, has also sponsored legislation in this area, and I compliment him for it.

Mr. President, the Secretary of Agriculture of this administration has fought against strategic food reserves while talking always about surpluses, surpluses, surpluses. Now the Vice President has gone into North Dakota, where there are great farm people, and said:

> We need a year's food supply.

I say that the Vice President of the United States was mighty late in his conversion to truth. Of course, one should not be too critical. Perhaps I should be praising him. I shall praise him.

But I will also say that the United States of America cannot wait 8 years for a man to find out what he should know in the first year. The United States of America cannot wait for the next 8 years, if a Republican is put in the White House, to find out what all other people already know. The United States of America cannot afford to have a President who catches on only after a need has been written into law, ignored by his administration, and then, when he is fighting for his political life out on the hustings, talk about demagogery.

The true test of political leadership is whether one acts when he is in a responsible position.

The true test of political leadership is not the speech on the stump but the work in the office.

The true test of political leadership would have been passed by the Vice President if he had spoken out in the election year of 1954 when we were fighting for a world food bank. Did he speak out? No. He supported the administration.

Did he speak out in favor of strategic food reserves in 1956 when he was on the ticket as a Vice Presidential candidate?

No. He supported the administration's position.

What have they done about rural development in the counties of marginal agricultural production? There have been only 30 counties in the whole United States since 1955 under the program, he says it is a success that may be expanded a little.

The record speaks for itself. Any time that my Republican colleagues wish to campaign for reelection by the American people on the issue of agriculture, we welcome the challenge. What a joyful experience this will be.

And I welcome the Vice President of the United States into a belated acknowledgment of some of the economic facts of life. If he believes what he now says, then indeed he ought to apologize for what he has failed to do, because the greatest sin is not the sin of commission, but the sin of omission. At a time when American agriculture has suffered, when it has lost over $20 billion in income, when thousands of farmers have been driven from the land, when mortgage indebtedness has skyrocketed, when farm people have been put through the economic wringer, where has Mr. NIXON been? He has been supporting policies of economic oppression. He has been supporting economic injustice. Now when it looks as if he might have a chance, at least, to be on the ticket, he is out telling the people of America of the wonders of the new findings of this administration. He now says that he is going to recommend this program to the Republican Platform Committee.

All he will have to do is to take the Democratic Platform of 1956, have it copied, and sent airmail-special delivery, and we can predict the result. It will be there too late, and they will be able to do with this what they have done with other good recommendations—write it into the platform; ignore it in action.

I think the Vice President's speech has been adequately analyzed. While it had the interesting quality of being all things to all people, it had very little to offer except that which my colleagues in the Senate have already offered and which this administration has rebuked, vetoed, refused to act upon or shunted aside. That to me is not a demonstration of political responsibility; that is political fakery.

Mr. DIRKSEN. Mr. President, I believe it would be appropriate to insert the address of the Vice President made at Minot, N. Dak., on June 20 as a part of the very illuminating discussion that has been carried on by my distinguished friend from Minnesota and myself. I ask unanimous consent that the address of the Vice President at Minot, N. Dak., on June 20, 1960, be inserted in the RECORD at this point.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

> The farm problem has been kicked around like a political football for so long that we have lost sight of some truths of which we should be reminded. In talking about what is wrong about our farm problem we should not forget what is right.
>
> We should be eternally grateful to America's farmers that our problem in this country is one of plenty rather than scarcity. The productivity of our farmers is directly responsible for our being the best fed, best clothed people in the world, with the highest standard of living any people have enjoyed in history.
>
> The productivity of our farmers also is responsible for the greatest advantage we have over the Soviet Union in the economic competition in which we are engaged. Six million American farmers and farmworkers produce approximately the same amount that 50 million agriculture workers produce in the Soviet Union. Until Mr. Khrushchev is able to close this gap he will have no chance whatever to catch up with the United States in the over-all production.
>
> Having in mind those things that are right about our farm problem, let us consider those things that are wrong. Putting it in its simplest terms, our difficulties stem from the fact that we produce more food and fiber than we can consume. The net effect of our Government programs, as far as the basic crops are concerned, is to make this problem worse rather than better. The sizes of our surplus and the costs to the taxpayer continue to go up and farm income continues to go down.
>
> How did we get this way? There are two basic causes—the first generally recognized, the second often overlooked.
>
> During World War II we needed and adopted a program to increase agriculture production to meet war needs. Today the need no longer exists but the program which was adopted to meet it continues.

A second factor which has aggravated the problem is the production explosion which was brought about by the technological revolution on the farm. Today, for example, in the production of basic crops, one man can do the work that it took two to do 20 years ago. And in the same 20-year period, productivity per acre has almost doubled.

As a result, the American people have developed the capacity of feeding themselves, supplying large foreign markets and still accumulating mountainous surpluses, with a smaller percentage of the population engaged in agriculture than has been the case in any society in history.

Why haven't we been able to make more progress in solving this problem to date?

Putting it bluntly, there has been a political stalemate between the administration and the Congress over the past 5 years.

The majority in Congress has persisted in refusing to face up to the farm problem and it continues to support obsolete solutions which were conceived for an entirely different period and for different problems.

The administration, on the other hand, has sought solutions which were, in effect, a reverse of the previous policies.

The result has been that the Congress has refused to approve the administration's program but has not come forward with one of its own which the administration could accept. Consequently, America's farmers and the American people continue to be stuck with the present program which everybody agrees should be changed.

This stalemate must be broken. That is why the President sent a message to Congress earlier this year in which he indicated that within certain guidelines he would sign any bill which offered a reasonable chance to achieve a solution.

Until the Congress acts or refuses to act on the President's recommendations we will not know the exact nature of the problem that will confront the next President and the next Congress. But of this we can be sure: Whatever action the Congress takes, the farm problem is the most difficult domestic issue confronting the American people in this campaign. It will be the responsibility of both candidates for the Presidency to offer new solutions to this problem which will break the 5-year stalemate which has existed between the Executive and the Congress.

While it would not be proper for me to comment on those phases of the President's program currently being considered by the Congress, there are other areas in which there is no possibility that the Congress will act. I should like to spell out tonight some of the approaches in those fields which I have asked the Republican platform committee to consider in its deliberations.

Before doing so, I should like to state my basic attitude toward this and the other problems confronting the Nation today. It would be easy for me to make promises to America's farmers that I know I couldn't keep, to advocate programs that I knew wouldn't work, or to put forth proposals that I was sure the Congress would not adopt.

From a purely political standpoint, it might be enough for the Democrats to blame the program on the Secretary of Agriculture and for the Republicans to blame it on the Democratic Congress.

I think the American farmers and the American people deserve better than this kind of patent demagogery and political fakery. The programs I shall discuss now and during the course of the campaign will be designed not to create a good issue for the election but to find a workable solution for the problem. The American farmer deserves better than simply to be caught in the crossfire of a political name-calling contest.

There are five general guidelines that I believe we should follow in developing an agricultural program.

Because the Government shares the responsibility for getting the farmer into his present troubles, the Government must share the cost for getting him out of that situation.

The solution of the farm problem does not lie in simply doing more of what we have been doing since our present programs have aggravated rather than solved the problem.

We should reject any program which would put the farmer in a Government straitjacket in which what he plants, how much he can sell, and the price he receives is determined by bureaucrats in Washington.

While the parity price program on which we have placed such great reliance in the past has proved useful in stabilizing farm prices, we must recognize that a parity formula at its best treats the symptoms and not the cause of the farm problem.

A method must be developed whereby the farmers themselves have a greater opportunity to choose the kind of farm program they want.

Let us turn now to some of the specific proposals which I have asked the Republican platform committee to consider. I want to emphasize at the outset that these proposals are not intended to be all inclusive. For example, I shall not discuss the problem of parity at this time since it is currently before the Congress. But, the proposals I shall make are ones designed to deal with the causes and not just the symptoms of the farm problem.

To help the farmer to get out of the cost-price squeeze, we must wage an effective fight against inflation. In a period of inflation with surpluses overhanging the market, the prices of the products the farmer grows are the last to go up and they never catch up with the prices of the things he buys. There should be a sharply expanded program of research in the marketing of farm products, designed to reduce the gap between what the farmer receives for his crops and what the consumer pays for his food.

To bring supply more directly into relation with demand, we must recognize the necessity for taking acreage which produces crops in surplus out of production. In administering this program, we must take every possible precaution to avoid creating ghost towns in the traditionally agricultural areas. The rural development program, which has been so successful, should be expanded so that marginal farmers can supplement their income and not be forced to move from the rural communities in which they live.

Our major aim and our major effort must be, however, not to reduce production but to expand the markets for farm products and to increase consumption. There are three proposals in this area that I think are among those worthy of consideration.

First, Governor Rockefeller, in his recent appearance in North Dakota, proposed that a year's supply of food for the Nation be set aside against the eventuality of an atomic attack. This is a sound and constructive proposal and I would only add that because a 1- or a 2-year reserve would represent an enormous permanent storage burden in its present form, a research program should be undertaken to find economically feasible ways to convert surplus grains into storable form.

Second, I believe the amount of effort we are presently devoting to research for expanding the commercial uses of farm products is inadequate. It is an established practice in business to allot funds for basic research which bear a proper relationship to the overall magnitude of the problem to be dealt with. It doesn't make sense to spend only $16 million a year on finding new uses for agriculture products when we are spending $5 billion a year in financing and storing surplus farm products.

There is a third area which provides by far the best opportunity for making our food surpluses a national asset rather than a liability as they tend to be today. I refer to the use of our foods in the humane, as distinguished from the commercial, market abroad.

It has been estimated that a third of the world's population, approximately a billion people, go to bed hungry every night. Everybody agrees that it doesn't make sense to have huge surpluses at home and millions of hungry people abroad. How can we bring our surplus food and hungry people together?

The United States has been doing a great deal in this field. In the past 6 years, under Public Law 480, over $9 billion of surplus food has been distributed to people in other countries who could not afford to purchase this food in the commercial market.

There are two potential objections to the program. Since it is unilateral in character we do not get the credit that we might from our generosity because of the criticism in some countries that the sole purpose of the program is to further selfish U.S. objectives in the cold war.

Second, we have good friends and allies, the Canadians, Australians, French, and Argentines who produce the same foods that we have in surplus. This means that whenever our surpluses are distributed without adequate regard to the effect on the normal commercial markets, the effect is potentially disastrous as far as these countries are concerned and in the long run would be detrimental to our own interests as well.

Immediately prior to the summit conference the President, in discussions with his staff in which I participated, developed a proposal which meets these objections and which can lead to a major breakthrough in getting surplus food to hungry people abroad. He was considering presentation of this proposal for the first time at the summit conference in Paris.

The first step would have been to call a conference of all the surplus producing nations, including the Soviet Union. These nations would then work out a joint proposal for a multilateral program under which the food surpluses of all nations which desired to participate would have been turned over to United Nations agencies for distribution to the hungry people of member nations. The recipients of the United Nations food would be those unfortunate people who still are unable to supply themselves with an adequate diet either by their own agriculture efforts or by exchange of goods. The distribution would be handled in such a manner as not to disturb commercial markets.

Since Mr. Khrushchev's actions in Paris have ruled out the U.S.S.R.'s participation in such a program at this time, the only course of action left open to us is to explore with other surplus producing nations their attitude toward joining us in such a program.

Let me emphasize that I do not suggest that this proposal is a cure-all for the farm problem or for the world's problems. It does, however, have these obvious merits: It will not be harmful to our friends and allies since they will participate in the program. It will not be subject to the criticism directed against unilateral U.S. aid since it will be administered through the United Nations. It will be in the best American humanitarian tradition in expressing concern for and offering assistance to less fortunate people. It will serve the cause of peace and freedom by giving hungry people the food which will help provide them with the necessary energy to build independent, free societies which can resist foreign domination from any quarter.

The proposals that I have discussed tonight are not presented as a complete farm program. They do indicate my conviction

that we should not dig in and fight the battle over farm policy in the entrenched positions which we have occupied over the past 5 years. Beating Secretary Benson around the head on the one hand or damning the Democratic Congress on the other will not help the farmer.

This is the toughest and biggest domestic problem confronting America today. Its solution requires the most creative and imaginative thinking the Nation can produce.

If we approach the problem with that spirit, we will be able to develop a program which will command the support of the overwhelming majority of America's farmers and of the American people, regardless of their partisan affiliation.

OREGON COLLEGES

Mr. MORSE. Mr. President, recently the president of the University of Oregon, O. Meredith Wilson, spoke to the Colleges for Oregon's Future statewide committee, of which I am happy to be a member.

In this speech, President Wilson spoke dramatically of the real meaning of education to contemporary America and to our future. In order that his outstanding address may be more widely read, I shall ask unanimous consent that his speech be printed in the body of the CONGRESSIONAL RECORD.

I know that I speak for many citizens of our State in expressing regret that President Wilson will be leaving the University of Oregon shortly to become President of the University of Minnesota. We shall miss him, but Oregon's loss will be Minnesota's gain.

Mr. President, I ask unanimous consent that the speech be printed at this point in my remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

COLLEGES FOR OREGON'S FUTURE

(By O. Meredith Wilson, president of the University of Oregon and president-elect of the University of Minnesota)

All historians have taken pleasure in classifying. For convenience they overlook a great deal of contradictory detail in order to describe a period in time as the age of enlightenment, or of Renaissance; or the Middle Ages. In a similar way particular eras have been associated with the ascendancy of great states or persons. So we have Hellenic and Roman ages; a period of Spanish grandeur under Ferdinand, Isabella, and Charles V; French ascendancy under Louis the XIV, the Sun King; British rise and power during the 18th and 19th centuries, interrupted briefly by a Napoleonic era. Not until the end of World War I did anyone but an American seem to take us seriously and Russia, except by Russian historians, was generally dismissed as a matter of secondary concern, a factor of less than first rate importance in the intrigues and balances of power among Western European states, until 1917.

Today our historians, still with a penchant for classification, are searching for a name that fits our time. In the twenties we confidently thought this to be the era of American dominance. The depression shook our confidence. The Second World War restored our pride. Then, suddenly, the Soviet Union emerged. The shambles of war were less deterrent to the Russians than Stalingrad was an inspiration. In less than 10 years, by ruthless determination, they overcame handicaps of war devastation, industrial underdevelopment, a shortage of technical personnel, and our lead in atomic science. Now in 1960 half the world either accepts or fears the possibility that this is Russia's century.

Under the circumstances, it is instructive to read again Alexis de Tocqueville's amazing analysis and prophecy, written 126 years ago:

"There are at the present time two great nations in the world which started from different points, but seem to tend toward the same end. I allude to the Russians and the Americans. Both of them have grown up unnoticed; and while the attention of mankind was directed elsewhere, they have suddenly placed themselves in the front rank among the nations, and the world learned their existence and their greatness at almost the same time.

"All other nations seem to have nearly reached their natural limits, and they have only to maintain their power; but these are still in the act of growth. All the others have stopped, or continue to advance with extreme difficulty; these alone are proceeding with ease and celerity along a path to which no limit can be perceived. The American struggles against the obstacles that nature opposes to him; the adversaries of the Russian are men. The former combats the wilderness and savage life; the latter, civilization with all its arms. The conquests of the Americans are therefore gained by the plowshare; those of the Russian by the sword. The Anglo-American relies upon personal interest to accomplish his ends and gives free scope to the unguided strength and common sense of the people; the Russian centers all the authority of society in a single arm. The principal instrument of the former is freedom; of the latter, servitude. Their starting point is different and their courses are not the same; yet each of them seems marked out by the will of heaven to sway the destinies of half the globe."

Our instruction from this passage is incomplete unless we are patient enough to draw from it its more subtle lessons.

When Tocqueville viewed America, he found everywhere a restless energy, a faith in the country and its future, and an aggressive will of common men to make democracy work. None of the men he met were equal to the giants of our Revolution and our Constitutional Convention, but they better prove the power of ideas because, as common men with an uncommon idea, they were ready to move the world.

Tocqueville's observations about the Russians are less easily understood. For 60 years, their vast territory and potential power were ineffective; but then they, too, were moved by an idea; it was in 1917 that the Communist idea became the controlling force in Russian national policy. Since that date history has been a test of strength between the idea of "76" and the idea of "17". At stake has been, and is, the future of our civilization. Since the contest is essentially between two ideas, it is obvious that it is the mind of man that is the critical resource in our present struggle. But in a more particular way, the issue is one of minds.

Tocqueville contrasted the United States and Russia by saying our conquests were gained by the plowshare; theirs by the sword. In a symbolic sense this observation was true and at the time useful. But the symbolism clouds our vision now, and tempts us toward a bucolic nostalgia when what we require is a rebirth of conviction that can support both effort and sacrifice.

Seen in retrospect, the cutting edge of our plowshare has been improved by an experimental industry that hardened the steel and sharpened the blade. It was multiplied to become a gang plow and attached to a diesel driven tractor. While implement manufacturers were adding seeders, combines, cotton pickers, and a host of almost human machines to the farmer's arsenal of conquest, plant geneticists were developing hybrids to increase yield and to resist plant infestation; and chemists were transforming corn and carbons into fuels and fabrics that nature had never contemplated. In the new symbolism, Tocqueville's plowshare must be replaced by the ferrule or the classroom, for the conquests of America have been made by education.

The central role of education in American progress is clearly seen by every foreign observer. In our recent visit in Latin America it was constantly stated as axiomatic that our material progress was the result of education; and that their material progress would depend upon their ability to imitate or improve upon our example. The King of Nepal visited our campus on the sixth of May. When he spoke to our guests, his lead sentence was: "We need not tell you how important education is in making democracy more purposeful and meaningful, for your great country is an example of this meaning."

It is characteristic and good that we ask "Why Johnny can't read," for we cannot afford to be satisfied. But we have dwelt upon our faults, failing to notice that the rest of the world marvels that for every Johnny there are 99 of his friends that read very well. As a result, we have depreciated education and made our educators whipping boys while our neighbors have sought ways to emulate what our educators have done. Somehow we need to become big enough to be self-critical without becoming self-debasing. And perhaps a different view of Russia may help.

Tocqueville remarked that Russian conquests were made by the sword. This observation was also symbolic. And it may be remembered that for 70 years after Tocqueville, Russia's conquests were a precious few, and that in 1905 she was humiliated by a little known and unappreciated country, Japan. It was not until after the Communist revolution of 1917 that the Russian blade was tempered and sharpened for modern conquest. At that time the Leninist government seized control of a disorganized government, an underdeveloped economy, and an uneducated people. They thought of themselves as a peoples revolutionary government—as a 20th century parallel to our men of 1776. Quite naturally they studied our experiment to see what had made possible our success.

Initially the common Russian was not likely to deride our country, but rather asked the American traveler how our Revolution was coming, as though 142 years made no difference, and we were still brother revolutionaries. Even the leaders of doctrinaire communism had great respect for our material achievements and carefully studied our methods. They soon recognized that the proximate cause of the amazing American achievement was education. And Russia learned this lesson well. She established 5-year plans for the Kulaks, and 5-year plans for heavy industry, but she began to organize a lifetime plan of education, on the assumption that without education all her other plans must fail.

The dreadful power of the Nazi invaders that swept into the Ukraine in World War II and pushed east to the Volga before they were stopped at Stalingrad destroyed Russia's best hydroelectrical installations, reduced her most highly developed industrial area to rubble, and blackened the fields and leveled the buildings in her most productive agricultural region. Russia's economic situation in 1945 was desperate. She could well have said, "We can afford no money or time for preparation now. Every Russian must produce today!" But Russia had been completely persuaded that United States progress had been the child of education. Her response to disaster was not, "We cannot afford education," but rather "Only education can restore us to a competitive position. No

sacrifice is too great, and no other program so important that it should be permitted to interfere. We can afford nothing else until we afford education."

She did not quibble about tuition fees; rather, she paid her brightest students to go to college. Between 1945 and 1957 Russia refashioned her sword for conquest, shaped it for space flight, equipped it with an atomic warhead, powered it with rocket fuel, and made possible a thrust or parry at 9,000 miles; sent a sample to circle the sun; and this month announced that one sword can be carried undersea by nuclear engines, while another large enough to carry men patrols the immediate band of outer space. This transformation of the Russian sword, like our earlier transformation of the plowshare, has been done with the sliderule and the classroom. Today Russia's real instrument of conquest, which Tocqueville symbolized as a sword, is education.

If, therefore, we return to the historian with the penchant for classification, we may well say, "This is not the age of the United States, nor of Russia, nor the nuclear age, nor the atomic age, but rather the age of education." The angry threats of Khrushchev as he left Paris should remind us that today we can leave nothing to chance; nor can we depend on good will or the ameliorating force of natural human kindness. The present international climate is cold indeed. And we must prepare ourselves against the most grim possibilities. When we arrange for historical classification we may talk as though this were the age of education, but we must act as though it were the final hour. And we should recognize that we will never again be in a position to afford anything if we do not afford education now.

My preoccupation with international affairs is born of our present crises. However, there are other considerations that require the same prescription. This fall Oregon will present to its private and public colleges 12 percent more candidates than last year. We are entering the baby boom era. On occasions we may have tired our listeners with warnings about the capital costs and instruction costs attendant on this sudden expansion.

For the moment, therefore, consider this population explosion as a sociologic rather than an educational issue. When the students in the enlarged graduating classes walk away from high school this spring, where will they make good their commencement? What or whose jobs will they take? When the numbers have doubled (1970), will those who are given no additional training be carrying their weight or being carried? For a generation we have experienced an increase in adolescent crime. Our folkways tell us idle hands are the devil's workshop. Our experience tells us that an unoccupied mind gathers trash more quickly than classics, and that both good literature and good music are educated tastes.

If you do not face the issue of costs and provide a welcome at college for these increasing numbers, where will you entertain them? How will you finance the men who must watch them on street corners, or feed them in the additional McLaren and Hillcrest schools that we will require?

Perhaps we should reexamine our assumptions about what a society can afford. Certainly so long as we live we can afford what is necessary to survive; and this requires defense; and defense is education. But a country as well developed as ours should require more of life. We should also ask that the life we save be worth living. That would imply that the leisure hours, those beyond the 40- or 35-hour workweek, be worthy of rational men.

At this point we return to first principles and the language of our Founding Fathers. We require more than life. We require liberty and the pursuit of happiness. The first of these requires wise men, for liberty is possible only among men of sound judgment and good will. We may be born free, but we are not born wise. And the freedom with which we are born is the first casualty in a society that chooses to be ignorant. The second, the pursuit of happiness, cannot be confused with the cheap satisfaction of appetites or the idle titillation of our animal sensations.

Yet we seem dangerously bent on a life of pleasure which would make a mockery of our early high hopes. Happiness is born of achievement and is inextricably bound up with satisfactions of the mind. The pursuit of happiness from which a proud culture might emerge, depends upon man seeing the mind as that part of God's image which is born in him, as that feature which alone separates him from the rest of the animal kingdom. It is man's mind that distinguishes him as human; intellectual satisfaction is at the core of human happiness. It was this happiness that Jefferson expected us to pursue; its pursuit is the best guarantee that life will be constructive; that delinquency will be avoided. Such happiness is the product of a cultivated mind. It, too, requires education.

Much the same case could be made for Oregon in economic development as the King of Nepal has made for his kingdom. Oregon's economy is still in the process of development. Her day is in the future. Our Governor, at the university assembly on May 10, wisely identified Oregon's economy with her educational effort.

When a university is obligated to acquire a new man or to replace an old one, there is an inescapable financial obligation. The fixed figure required to fill the place with an ordinary man would be 80 to 90 percent of the cost required to fill the post with a man of distinction. The ordinary man is not nationally visible, nor does he have leverage on national foundations or other granting agencies. The experience of the university has been that expenditure of additional funds to assure quality personnel in teaching posts, when made in critical areas, has actually brought more money into the State than would be necessary to pay the additional costs of quality.

As an example, five men appointed at the university in the last 3 years were replacements or additions for whom the fixed budget item would have totaled approximately $10,000 less than we determined to pay in order to bring distinguished people to critical areas. Each of these men brought large teaching, research and training grants to the campus; one alone bringing over $500,000 worth of grants in a period of less than 18 months. Their effect on the remainder of the staff and the growing interest in research increased university grants from approximately $300,000 annually to $1,500,000 in the past year. This last figure excludes certain fixed income which makes the audited program supported by external funds in excess of $2 million.

The investment in quality, in other words, was not an expense but a distinct advantage to the State of Oregon measured only in money. A much more important consequence of search for quality in critical areas is the assurance that our young men and women are stimulated and inspired by brilliant minds. Their own appreciation of what is possible is expanded, and your and my expectation from them can be increased. The difference in the costs of run-of-the-mill and distinguished education is very small and the rewards are tremendous.

But Oregon's social, economic, and cultural development, as well as her security, are tightly bound to our national welfare. And our strength and vitality in each of these areas depends on how well we prepare the minds of our people. Ours is the age of education. We live in an hour of decision. We are engaged in a race not only between us and Russia, but also between education and disaster. Herein lies the full meaning of our discussion of colleges for Oregon's future.

INDEPENDENT OFFICES APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 11776) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices for the fiscal year ending June 30, 1961, and for other purposes.

Mr. MAGNUSON. Mr. President, I ask that the first committee amendment be stated.

The PRESIDING OFFICER. The first committee amendment will be stated.

The first committee amendment was, on page 2, line 12, after "functions;" to insert "not to exceed $6,000 for emergency and extraordinary expenses to be expended under the direction of the Director for such purposes as he deems proper, and his determination thereon shall be final and conclusive;".

Mr. MAGNUSON. Mr. President, the independent offices appropriation bill for 1961, H.R. 11776, contains funds for the regulatory commissions as well as for the Office of Civil Defense and Defense Mobilization, Civil Aeronautics Board, Federal Aviation Agency, General Services Administration, Housing and Home Finance Agency with its related corporations, National Aeronautics and Space Administration, National Science Foundation, Selective Service System, and the Veterans' Administration.

As reported to the Senate, the bill totals $8,414,412,900, which is $232,345,500 over the House and $2,984,100 under the budget estimates.

The largest increase over the House is for the National Aeronautics and Space Administration, of $88,985,000, which restores $915 million as budgeted for this important work, and in addition adds $50 million over the budget estimate for the additional amount authorized by the Space Committee for research and development.

The next largest increase over the House is for the Federal Aviation Agency, of $37,138,000, which includes $21,500,000 for new air navigation facilities and $15,638,000 to assure the operation of newly constructed facilities.

The third largest increase over the House is for the General Services Administration, of $34,517,500, which provides for new public buildings construction and for operation and maintenance of presently owned buildings and leased space.

Part of this is for projects Nos. 8, 9, and 10, in the District of Columbia.

The next largest increase over the House is for the National Science Foundation, of $31,600,000, which restores the amounts needed for the support of basic research and scientific manpower.

One further item in which the committee exceeded the budget estimates is for medical research in the Veterans'

Administration, where $9 million is added to provide medical research of $26 million.

I wish to point out that for the first time in Veterans' Administration fiscal history, since I have been handling this bill, which has been for many years, medical care for veterans in the United States has reached a sum of more than $1 billion. It is going up steadily because of the time element involved. Veterans of World War II are reaching the age where they need more medical care. The committee thought that the results from previous funds voted in this field have been very beneficial. The committee also thought that with this staggering bill for the taxpayers to pay, and the fact that research in the past has paid off substantially in the medical plan, the sum of $26 million for research in some fields of medical care was a very small amount with which to undertake such medical research.

Secondly, in the field of mental health, where we have had some fine results, both in the Health Institutes and in VA, we still find this year, as we found last year, that every other bed in the 173 veterans' hospitals in the United States is devoted to a mental case. The number is going up. That is why we added this amount, because when we have added these funds they have paid off, not only in dividends of alleviating human suffering and of mental care, but also in dollars and cents.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. JAVITS. When I appeared before the committee I made the point about the Northport, Long Island, Veterans Hospital, of which, I know, the Senator has heard a great deal. It is one of the largest neuropsychiatric hospitals in the Veterans' Administration system. It is located at Northport, Long Island. It is greatly overcrowded. We have the word of the area medical director at Boston, Francis B. Carroll, in substantiation of that statement. I laid the facts before the committee. My statement is found at page 612 of the committee hearings.

I know that the chairman is just as much interested in veterans as I am, and I am making no invidious implications of any kind. I should like to ask the chairman whether or not we may hope that the committee will cause its staff to take a long, hard look at this situation in order to see whether the Veterans' Administration should not be stirred into doing something about it.

Mr. MAGNUSON. I agree with the Senator from New York. I know how much interested he has been in this subject. There is no question at all about the conditions at Northport. There is no question about the tremendous increase in mental health cases—NP cases, as we call them—in the Veterans' Administration hospitals.

The Veterans' Administration last year set up what it calls a 12-year program for veterans' hospitals such as the one at Northport. Every year we are trying to get about one-twelfth of that program into operation. We can do only so much every year. We are behind in this activity. This year the priorities dictated that in that program we proceed with the hospital at Martinez, Calif., where there is a badly overcrowded condition, and also with the Cleveland hospital. Then there is also the one at Washington, D.C., which was supposed to have been located at Rockville, but was moved to the Soldiers' Home. Those are in the program this year. I would glean from the testimony that the hospital on Long Island would be included in the next fiscal year program. I believe that in the budget which will be submitted in September, this item will be one of the first included.

Mr. JAVITS. I am grateful to the Senator.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. CASE of South Dakota. I know the Senator's interest in this matter. In the hearings, at page 717, there is a table of the Veterans' Administration hospitals or facilities which are included in the modernization program. Included is the modernization program, phase 3, at Fort Meade, S. Dak. I should like to ask whether the bill as reported embraces that table.

Mr. MAGNUSON. Yes; it is embraced in the bill.

Mr. CASE of South Dakota. This continues the program that was undertaken under phases 1 and 2. It completes the program. In this way, one of the best NP hospitals is being created. I appreciate the Senator's statement.

Mr. MAGNUSON. The committee added $12 million under the OCDM for matching funds with State and local organizations on civil defense to cover personnel and administrative expenses. Senators are familiar with this item. We have added it to the bill on three or four occasions. The House has always voted against the program. We have voted for it again, and we expect to go to conference on it. That is what we will have to do again. It includes matching funds. The Senator from Colorado [Mr. ALLOTT] and I, who heard all the testimony, have not changed our mind from last year. We believe if we are to have a civil defense program, local participation is the guts, so to speak, of a good program. The bill is still under the total budget estimate. As Senators know, although the total amount of the bill is somewhat staggering—$8,414 million—the bulk of it is for the Veterans' Administration and the space program and the General Services Administration, which is a big organization now; it needs more money every year. It is not added money, because the administration has been assuming more responsibility every year.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. JAVITS. The Senator knows that I am very much interested in this program. My Governor, Governor Rockefeller, can be truly described as taking a very leading position in this field. I know how the Senator from Washington feels about it. I know that I do not have to back up his courage in this particular field in the negotiations in conference, because he has expressed himself very strongly before. I would rather say that I am grateful to the Senator from Washington, and I think it indicates that, although the Senator knows that this is a great deal of trouble in conference, he nevertheless is so convinced of the soundness of the program that he is willing to try again.

Mr. MAGNUSON. There may be some waste in the program on the Federal level. I do not know, of course. However, surely if the program is to be a success, the local people must participate. The Senator from Colorado, I am sure, agrees with me on that point.

Mr. ALLOTT. If the Senator will yield, I should like to say that I do feel the same way. Members of the Appropriations Committee, particularly the Senator from Florida, have expressed themselves over and over again very strongly on this point. So far as I know, at least from listening to the members of the Appropriations Committee, there is not a member who does not feel exactly as the chairman and the Senator from Florida feel about it. We are faced with a responsibility for a civil defense program. All of us feel that the only way we can make it a meaningful program is to bring it down to the local level. We have tried that several times. We tried last year. We expect to try again this year, without any diminution in determination. We are more convinced than ever, after another year's experience, that the only way to have a successful civil defense program is to bring it down to the local level.

Mr. JAVITS. I shall defer to the Senator from Florida. It seems to me that the U–2 incident, the cancellation of the Tokyo visit, the blowup of the summit conference in Paris, should certainly add tremendous arguments to the position taken by the Senator from Colorado [Mr. ALLOTT], the Senator from Florida [Mr. HOLLAND], and the Senator from Washington [Mr. MAGNUSON]. I know they will use those arguments to the full. What has been called atomic blackmail is now being rather openly and blatantly used; certainly civil defense is one of the greatest morale answers to it.

Mr. MAGNUSON. I am grateful to the Senator from New York. I yield to the Senator from Florida.

Mr. HOLLAND. Mr. President, I regret that I have a "bug," and that I may not be able to speak loud enough to be heard.

First, I think we all owe a debt to the Senator from Washington for his continued able leadership in this field. I am sorry the distinguished junior Senator from Ohio [Mr. YOUNG] is not in the Chamber. I heard his remarks aimed at this program but a couple of hours ago. I thought the most intriguing part in it was his statement that if a great disaster occurred, hundreds of thousands of volunteers would turn out, as they always have. The very gist of the matter is that unless there is someone to give some training, someone who knows what to do, and to have supplies ready in appropriate places, and to have such volunteers, who, of course, will be the body of workers in such a case, to

have them trained and organized there will be disorganized mob action, instead of the highly skilled action which is required.

I certainly support the distinguished Senator from Washington.

Mr. SALTONSTALL. Mr. President, I wish to add my support to the chairman and to the senior Republican member of the committee on the question of Federal contributions for civil defense. Although we have gone forward every year a number of years and provided funds, the House has resisted our action. I believe this is one of the items for which we should make provision in these difficult times. I hope that it will be possible to maintain the item in the House this year.

Mr. HOLLAND. Mr. President, since I am speaking in such a handicapped condition, I wonder if the distinguished Senator from Washington will let me take up another matter.

Mr. MAGNUSON. Certainly.

Mr. HOLLAND. The largely increased level of payments to subsidized air carriers was a matter of great concern to the committee, as the distinguished Senator from Washington knows. The committee dealing with this subject placed in the report, at the bottom of page 3, under the heading "Payments to Air Carriers," a statement of the committee's opinion on this subject. I feel strongly that Congress needs greater cooperation from the CAB in this matter. Too much granting of flights for feeder carriers which could not possibly carry the expense, much less make a profit, has been the rule in recent years. I think the Senate will find that sentiment very well expressed in the report.

Mr. President, I ask unanimous consent to have printed at this point in my remarks the section of the report to which I have referred.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

PAYMENTS TO AIR CARRIERS

LIQUIDATION OF CONTRACT AUTHORIZATION

Restoration of $8,984,000 is recommended by the committee, to provide the full budget estimate of $68,984,000 for payments to air carriers.

The committee continues to be concerned over the level of payments to air carriers; $68,984,000 is provided for payments to air carriers for fiscal 1961 and the Board has testified that over $81 million in carrier payments may in fact accrue.

The committee urges the Board to exert every effort to reverse the trend of increased subsidy. Where feasible, the Board should expedite suspension of trunkline carriers in local service-type markets, freeing the local service carriers from trunk competition, and should insert local service carriers into markets which would be profitable for them but which trunk carriers seek to abandon. To the extent possible, the Board should avoid duplication between subsidized local service carriers; also, to keep to a minimum those local service routes that cannot possibly be made to pay.

The committee believes that a most important contribution to reducing subsidy would be for the Board to permit local service carriers greater flexibility in operations in their assigned markets, permitting them to adjust their operations more freely to traffic volume.

Mr. HOLLAND. Mr. President, I should like to amplify the statement in the report by the further statement that the recommendation in the report is not intended as an approval of terminal-to-terminal nonstop operations by local carriers in direct competition with unsubsidized trunklines. The result of any such misinterpretation would be that the local carriers would put their energies into such markets instead of into the local markets they were created to serve.

In my judgment, the Board has been too generous in its granting of routes to local service carriers where there is no prospect of their being able to operate profitably. This is reflected dramatically in the figures given the Appropriations Committee in support of the budget request for subsidies. Estimated subsidy accruals for local service operations rose from $22,567,718 in 1955 to an estimated $37,504,832 for 1959. What is more dismaying, the estimated accruals for 1960 and 1961, respectively, are $49,771,000 and $55,434,000.

Mr. President, it is very evident that the feeder carrier subsidy has gotten clear out of hand. I hope that both the Civil Aeronautics Board and the aviation industry will give attention and strong consideration to our report, which I have sought to supplement at this time.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. ALLOTT. Mr. President, the Senator from Florida has hit this matter on the head. It has been called to the attention of the Civil Aeronautics Board several times that perhaps they were not paying enough attention to the gist, the real purpose, of why they exist, and were involving themselves in extraneous activities.

As the report shows, and as the particular paragraph which the Senator from Florida has placed in the RECORD shows, the Board transferred from carrier relations, and specially stressed this year an increased budget.

With respect to the overall appropriation for subsidies, I think we feel, for the most part, that the Board has moved too slowly in trying to cut it down.

The committee, I feel, wants local companies to have small and big cities themselves, and does not want trunklines in cities where they provide only one or two flights a day, or carry relatively few passengers.

The Board, it seems to me, should stop considering the hairline details of these cases and get at its business.

This brings up the general question with respect to all the agencies which are confronted with bigger and bigger backlogs. We provide more and more personnel each year, and still each year they show a bigger backlog. It seems to me that what we should do is to try to get them, fundamentally, to look at their own procedures, to see if they cannot get back to doing the things which have to be done, so as to clear up the backlogs which exist in every one of the agencies.

Mr. MAGNUSON. Mr. President, before discussing some of the amendments to the bill, I wish to express my deep appreciation for the help of all members of the subcommittee on the bill. As members of the Committee on Appropriations know, this is a long and difficult bill to consider. It includes many agencies and requires the hearing of complicated testimony and figures. All members of the committee worked diligently on the bill. We heard hundreds of witnesses. The bill includes funds for all the independent agencies of the Government.

I express appreciation for the help of all members of the committee during the long hearings and the marking up of the bill.

I express, on behalf of the committee, appreciation to Mr. Earl Cooper, our very efficient staff member, who handles the bill in the Committee on Appropriations.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. LAUSCHE. The chairman will recall that several weeks ago a delegation of mayors and presidents of railroads came before the Committee on Interstate and Foreign Commerce, asking for relief by way of subsidies or loans at a low rate of interest.

At that time one of them testified to the huge subsidies, on a comparative basis, which were granted to the operators of helicopters. I notice on page 73 of the hearings that there is a discussion of the amount of money Congress has paid out in subsidies for that operation.

What are the indications as to whether the helicopter operations might become self-sustaining? Or is it likely, from all appearances, that the operation will require a permanent subsidy? The figures on page 73 of the hearings indicate that the Government paid the operators of helicopters $4,613,000 in 1960, and $4,858,000 in 1959.

Mr. MAGNUSON. The committee asked the Chairman of the Civil Aeronautics Board, and the other members of the Board present, a great deal about helicopter operations, along the lines suggested by the Senator from Ohio. The Chairman of the Board pointed out that the subsidy is in about the same amount this year as it was last year and the year before, but that the helicopter operators were providing more service; their operations were bigger. Therefore, we might assume that their operations were becoming more profitable.

Frankly, I do not see much in his testimony, from what he said to us, which will make it more profitable if they continue the type of operation they have in three places. It will be difficult to eliminate the subsidy, since they are now getting new equipment in order to be able to carry more passengers.

Mr. LAUSCHE. The Senator from Washington may recall that the representatives who appeared before the Committee on Interstate and Foreign Commerce argued vigorously against the folly of expending large sums of money to provide helicopter service for a few passengers, when we were failing to do anything to aid those who provide mass transportation.

Mr. MAGNUSON. That is correct.

In the past 3 years there have been many applications for helicopter operations, but the Board has turned them down. I think some have come from Washington, D.C. These three have been allowed to operate in the three congested centers—namely, Chicago, New York, and Los Angeles.

But surely what the Senator from Ohio has said is absolutely correct—namely, that we should first be thinking of the larger problem. For instance, the airport at Chantilly, Va., will be finished and ready for operation on July 1, 1961. Instead of thinking in terms of helicopter service around Washington, we should be thinking in terms of providing increased means of ingress and egress to the Chantilly airport, so we would not need helicopter service.

Mr. LAUSCHE. Yes.

I note that at the hearing the Senator from Colorado [Mr. ALLOTT] asked questions about this matter, and, I believe, indicated his doubts about the propriety of what we were doing in this field.

Mr. ALLOTT. Mr. President, will the Senator from Washington yield?

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey in the chair). Does the Senator from Washington yield to the Senator from Colorado?

Mr. MAGNUSON. I yield.

Mr. ALLOTT. My recollection of the testimony of the Board on the helicopter service is that it still is maintained in only three places. It was initiated originally for the primary purpose of finding out how workable it was, with the idea that the air transportation development in this country was such that we would have to utilize helicopter service.

I know that when it was first begun, I was interested in it, as regards my own State. And I was told they would offer it in three places. They have now tried it for 3 or 4 years, I believe; have they not?

Mr. MAGNUSON. In Los Angeles it has been going on for 6 or 7 years; but we have had it for approximately a 4- or 5-year period.

Mr. ALLOTT. Yes, for a 4-year or 5-year period. As I recall the figures, it has not been shown that they have come any closer to finding ways and means to put it on a paying or an unsubsidized basis. All they promised, as I recall, or held out as a hope was that new developments in regard to the type of helicopter might come close to making it feasible.

I believe there is a limit to what we can do in providing this service.

Mr. LAUSCHE. The fact is that three services are operating—in New York, in Chicago, and in Los Angeles. According to the report made at the hearings, we paid them $4,858,000 in 1959, to keep them solvent. That figure appears on page 73 of the hearings.

Mr. ALLOTT. I believe the figure the Senator from Ohio has quoted is correct. At that point in the hearing I said:

So that it would be safe to say, as we now look at the helicopter picture, that it will not be expanded to any other cities, but that the three cities—Chicago, Los Angeles, and New York—are for practical purposes on a continuing subsidy basis.

Mr. GILLILLAND. I believe that New York Airways, perhaps some others, are considering some new types of equipment that we are hopeful will make some change in their requirements, so that they will be able to show a downturn.

I believe that the Appropriations Committee or the legislative committee sometime soon will have to take a hard look at this matter and decide whether the possibilities are such that it should be continued.

Mr. LAUSCHE. From the questions put by the Senator from Colorado, I judge that he is skeptical that this program of delivering passengers from the airports to the downtown cities will become financially self-sustaining.

Mr. ALLOTT. That probably correctly describes my state of mind at the moment, yes.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the committee amendments to the bill be agreed to en bloc, and that the bill as thus amended be regarded for the purpose of amendment as original text, provided that no point of order shall be considered to have been waived by reason of this order.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The amendments agreed to en bloc are as follows:

On page 2, line 12, after the word "functions", to insert "not to exceed $6,000 for emergency and extraordinary expenses to be expended under the direction of the Director for such purposes as he deems proper, and his determination thereon shall be final and conclusive;"; in line 16, after the word "travel", to strike out "$24,700,000" and insert "$25,200,000"; in line 17, after the amendment just above stated, to strike out the comma and "of which $185,000 shall be available for the Interdepartmental Radio Advisory Committee: *Provided*, That one contract for temporary or intermittent services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), for not to exceed one person, may be renewed annually at a per diem rate of not to exceed $75", and in line 22, after the amendment just above stated, to insert a colon and *"Provided*, That contracts for not to exceed four persons under this appropriation for temporary or intermittent services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), may be renewed annually, and one such contract, for the services of an expert or consultant for telecommunications, may provide for a per diem rate of not to exceed $75."

On page 3, at the beginning of line 18, to strike out "$10,000,000" and insert "$22,000,000"; in the same line, after the amendment just above stated, to strike out "of which none shall be allocated to the States pursuant to section 205 of said Act" and insert "of which not to exceed $12,000,000 shall be available for allocation to the States pursuant to section 205 of said Act", and in line 21, after the amendment just above stated, to insert a colon and *"Provided*, That expenditures heretofore made under this appropriation head in reliance upon a certification of the appropriate State official for obligations incurred or expenditures made by a State or subdivision thereof prior to the availability of the applicable Federal appropriation are hereby ratified and confirmed if otherwise proper."

On page 4, line 9, to strike out "$6,950,000" and insert "$11,400,000".

On page 5, line 11, after the word "diem", to strike out "$7,285,000" and insert "$7,500,000".

On page 5, line 17, after the word "Board", to strike out "$60,000,000" and insert "$68,984,000".

On page 6, line 10, after the word "amended", to strike out "$19,230,000" and insert "$19,580,000".

On page 6, line 21, after the word "States", to insert a comma and "and the Act of August 28, 1938 (49 Stat. 956), as amended by the Act of August 27, 1951 (65 Stat. 198), is hereby repealed".

On page 9, line 22, after the word "snowshoes", to strike out "$365,245,000" and insert "$380,883,000".

On page 10, line 13, after the word "of", to strike out "five" and insert "seven", and in line 17, after the word "appropriation", to strike out "$152,500,000" and insert "$174,000,000".

On page 13, line 8, after "(5 U.S.C. 55a)", to insert "not to exceed $172,000 for expenses of travel", and at the beginning of line 11, to strike out "$12,935,000" and insert "$13,135,000".

On page 13, line 19, after the word "vehicles", to strike out "$7,532,000" and insert "$7,795,000", and in line 23, after the word "individuals", to insert a colon and *"Provided*, That the Commission is authorized, subject to the procedures prescribed in the Classification Act of 1949, as amended, but without regard to the numerical limitations contained therein, to place six General Schedule positions in the following grades: four in grade GS–18, one in grade GS–17, and one in grade GS–16; and such positions shall be in addition to positions previously allocated to this agency under section 505 of said Act."

On page 14, at the beginning of line 13, to strike out "$7,415,000" and insert "$7,600,000".

On page 15, line 13, after "(40 U.S.C. 521)", to strike out "$160,850,000" and insert "$169,300,000".

On page 16, line 10, after the word "For", to insert "an additional amount for"; in line 15, after the word "buildings", to strike out "$144,836,000" and insert "$171,980,000", and in line 18, after the word "projects", to insert "subject to approval of any such project by resolutions adopted by the Committee on Public Works of the Senate and House of Representatives, respectively,".

On page 16, line 24, after the word "Arkansas", to strike out "$633,250" and insert "$655,050".

On page 17, line 2, after the word "California", to strike out "$37,286,100" and insert "$38,296,900".

On page 17, line 4, after the word "Connecticut", to strike out "$7,636,400" and insert "$7,816,400".

On page 17, line 7, to strike out "$1,094,000" and insert "$1,119,600".

On page 17, line 9, after the word "Maine", to strike out "$284,750" and insert "$297,550".

On page 17, line 10, after the word "Maine", to strike out "$254,150" and insert "$261,150".

On page 17, line 12, after the word "Michigan", to strike out "$874,650" and insert "$895,050".

On page 17, line 14, after the word "Montana", to strike out "$586,500" and insert "$615,600".

On page 17, line 19, to strike out "$3,224,050" and insert "$3,283,050".

On page 17, line 20, after the word "Ohio", to strike out "$3,867,700" and insert "$3,980,700".

On page 18, line 2, after the word "Tennessee", to strike out "$9,587,150" and insert "$10,167,150".

On page 18, line 5, after the word "Washington", to strike out "$282,200" and insert "$288,700".

On page 18, after line 5, to insert: "Federal Office Building Numbered Eight, District of Columbia, exclusive of laboratory and other equipment, $15,794,000;".

On page 18, after line 8, to insert: "Federal Office Building Numbered Nine, District of Columbia, $21,222,100;".

On page 18, after line 10, to insert: "Federal Office Building Numbered Ten, District of Columbia, $40,803,500; and".

On page 18, after line 12, to insert "United States Court of Claims and Court of Customs and Patent Appeals building, $6,491,000"; in line 17, after the word "exceed", to strike out "5" and insert "10", and in the same line, after the words "per centum", to insert a colon and *"Provided further,* That not to exceed $5,500,000 of the foregoing appropriation may be used for clearing the site and installing footings for the authorized public building project at Chicago, Illinois."

On page 19, line 2, after the word "otherwise", to strike out "$25,000,000" and insert "$19,500,000", and in line 3, after the word "expended", to strike out the colon and *"Provided,* That not to exceed $5,500,000 of the foregoing appropriation may be used for clearing the site and installing footings for the authorized public building project at Chicago, Illinois".

On page 19, after line 6, to insert:

"CONSTRUCTION, FEDERAL OFFICE BUILDING NUMBERED 7, WASHINGTON, DISTRICT OF COLUMBIA

"The appropriation contained in the Independent Offices Appropriation Act, 1959, under the head 'Construction, United States Court of Claims and Federal Office Building, Washington, District of Columbia' is hereby made available for expenses necessary for the preparation of plans and specifications for a building in Washington, District of Columbia, for use of agencies of the executive branch of the Government without provision of space for the United States Court of Claims."

On page 19, after line 22, to insert:

"CONSTRUCTION OF RELOCATION FACILITIES

"For expenses necessary for the construction of relocation facility projects protected against fallout, pursuant to the Public Buildings Act of 1959 (73 Stat. 479), but subject to approval of any such project by resolutions adopted by the Committee on Public Works of the Senate and House of Representatives, respectively, $3,800,000, to remain available until expended."

On page 20, line 9, after the word "for", to strike out "$3,716,500" and insert "$4,240,000".

On page 22, line 13, after the word "facilities", to insert a colon and *"Provided further,* That during the current fiscal year, there shall be no limitation on the value of surplus strategic and critical materials which, in accordance with section 6(a) of the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98e(a)), may be transferred to stockpiles established in accordance with said Act", and in line 19, after the word "sales", to strike out "or otherwise".

On page 23, after line 12, to insert:

"WORKING CAPITAL FUND

"To increase the capital of the 'Working capital fund' established by the Act of May 3, 1945 (40 U.S.C. 293), $100,000."

On page 24, line 4, after the word "exceed", to strike out "$13,000,000" and insert "$13,300,000".

On page 25, line 9, after the word "approved", to strike out "extension and conversion".

On page 26, after line 11, to insert:

"General Services Administration shall not construct any office building for any civilian agency or any Government-owned or partially owned corporation except Federal Reserve banks, nor shall any civilian agency or Government-owned or partially owned corporation, except the Federal Reserve banks, build any office building until the office building has been authorized by the Congress or its proper committees."

On page 26, after line 19, to insert:

"In disposing of surplus real estate and buildings a reasonable period of time shall be allowed for local governmental units to perfect a comprehensive and coordinated plan of use and procurement."

On page 29, line 15, after the word "only", to strike out "$19,777,000" and insert "$20,500,000".

On page 30, line 6, after the word "exceed", to strike out "$4,900,000" and insert "$5,849,000", and in line 9, after "(5 U.S.C. 2131)", to strike out "$166,500,000" and insert "$170,760,000".

On page 30, line 17, after the word "of", to strike out "forty-five" and insert "sixty", and in line 19, after the word "only", to strike out "$602,240,000" and insert "$671,453,000".

On page 31, line 1, after the word "law", to strike out "$107,275,000" and insert "$122,787,000".

On page 31, after line 8, to insert:

"Not to exceed $20,000 of appropriations in this Act for the National Aeronautics and Space Administration shall be available for scientific consultations and any emergency or extraordinary expense pursuant to section 1(f) of the legislative authorization for appropriations for the fiscal year 1961."

On page 31, after line 14, to strike out:

"NATIONAL CAPITAL HOUSING AUTHORITY

"Operation and maintenance of properties

"For the operation and maintenance of properties under title I of the District of Columbia Alley Dwelling Act, $40,000: *Provided,* That all receipts derived from sales, leases, or other sources shall be covered into the Treasury of the United States monthly: *Provided further,* That so long as funds are available from appropriations for the foregoing purposes, the provisions of section 507 of the Housing Act of 1950 (Public Law 475, Eighty-first Congress), shall not be effective."

On page 32, line 12, after the word "services", to strike out "$160,000,000" and insert "$191,600,000".

On page 33, line 13, after "(5 U.S.C. 55a)", to strike out "$8,525,000" and insert "$9,300,000".

On page 34, at the beginning of line 4, to strike out "$30,278,400" and insert "$32,778,400".

On page 35, line 9, after the word "law", to strike out "$30,000,000" and insert "$39,000,000", and in line 10, after the word "which", to strike out "$17,000,000" and insert "$26,000,000".

On page 43, line 18, after the word "exceed", to strike out "$8,141,000" and insert "$8,341,000".

On page 43, line 21, after the word "exceed", to strike out "$787,500" and insert "$800,000", and on page 44, line 18, after "12 U.S.C. 1724–1730)", to strike out the comma and "and such other obligations of said corporation shall not exceed $887,800".

On page 46, line 9, after the word "exceed", to strike out "$1,260,000" and insert "$1,400,000".

On page 47, line 3, after the word "exceed", to strike out "$477,000" and insert "$530,000".

On page 49, line 12, after the word "exceed", to strike out "$8,450,000" and insert "$8,650,000"; in line 19, after "(not to exceed $1,500)", to strike out *"Provided further,* That nonadministrative expenses of all kinds regardless of source classified by section 2 of Public Law 387, approved October 25, 1949, including all appraisal fees regardless of source or method of financing shall not exceed $50,000,000" and, in lieu thereof, to insert *"Provided further,* That nonadministrative expenses classified by section 2 of Public Law 387, approved October 25, 1949, shall not exceed $50,000,000", and on page 50, line 1, after the amendment just above stated, to insert a colon and *"Provided further,* That in addition to the foregoing limitation, there may be apportioned for use, pursuant to section 3679 of the Revised Statutes, as amended, such additional amounts (not exceeding in the aggregate 15 per centum of such limitation) as may be necessary to process workload in connection with mortgage insurance applications which the Commissioner may determine to be necessary to avoid undue inconvenience of hardship to the housing industry and the public."

On page 52, line 6, after the word "services", to strike out "committees of expert examiners and boards of civil service examiners;".

Mr. CAPEHART. Mr. President, I send to the desk a point of order statement which I ask to have read.

The PRESIDING OFFICER. The point of order submitted by the Senator from Indiana will be read.

The legislative clerk read the point of order, as follows:

I make a point of order against the language appearing in lines 12 through 19 on page 26, on the ground that it is legislation on an appropriation bill.

Mr. CAPEHART. Mr. President, will the Chair rule on the point of order?

The PRESIDING OFFICER. The Chair sustains the point of order made by the Senator from Indiana. The language does interfere with the powers of the agency.

Mr. MAGNUSON. Mr. President, another Senator was talking to me in regard to another point in the bill. The point of order relates to the General Services Administration building matter, does it?

Mr. CAPEHART. Yes; and the Presiding Officer has ruled that that provision in the bill is legislation on an appropriation bill, and has sustained my point of order.

Mr. MAGNUSON. All right.

Mr. ALLOTT. Mr. President, although I do not quarrel with the Chair's ruling on the point of order, I think this matter should not be permitted to pass without calling attention to what the committee was trying to do. Certainly, it was no idle gesture.

The fact is that the Federal Deposit Insurance Corporation, which is set up for the purpose of insurance of the banks in this country, has already made plans to construct a building downtown. The chairman of the committee [Mr. MAGNUSON] asked the agency, as did I, about this item.

Mr. Coburn said:

Mr. COBURN. Our files show that since 1940 there have been various considerations given to the authority of the Corporation to build. Mr. Crowley, the original Chairman, had it in 1940. The records show that counsel then advised that the Corporation had the right and implied authority to build a building. There was a bill, I think, in 1950. Our legal files show that the principal reason the Corporation came to Congress at that time was to avoid a provision in our present act which says that the Corporation is exempt from all taxes except local real estate taxes. The bill was to avoid the local District real estate tax. At the present time we have decided that it would be appropriate for the Corporation to pay the tax to the District, and, therefore, we see no necessity for asking for legislation.

Let me ask whether the Senator from Washington recalls the amount that was proposed to be spent for construction of the building.

Mr. MAGNUSON. $11,500,000, I believe.

Mr. ALLOTT. Both the Senator from Washington and I questioned them at some length, in connection with the type of building they proposed to construct. But we could not escape the fact that this Corporation is a Government corporation. It may call the money it uses its own money, but it is not its own money. Under a law enacted by Congress—and I believe it is a good law—the banks of the country are required to pay money into the FDIC, to secure the funds of the depositors. No one quarrels with that; it is good legislation. But when Congress places that burden on the banks, Congress is also in a trust position.

In this appropriation bill, we appropriate funds to support the FDIC. I wish to call this matter to the particular attention of my friend, the Senator from Indiana, because I think it is wrong, after Congress appropriates money to support an agency, to permit the agency to say blithely, "We get our money from our depositors all over the country, and therefore we can build any building we please."

I do not agree; and I certainly intend to call this matter to the attention of the appropriate committee, next year, so that agencies which are dependent on the Government for support, and are using the taxes that are paid by the American people, will not be able to say, "We can build any sort of building for ourselves that we want—either lush or not lush; we can do as we please, according to what we, ourselves, decide."

Certainly that is wrong, and I intend to oppose it vigorously. This is a principle which I think should be brought out on the floor and put before the Senate.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. ALLOTT. Yes.

Mr. CAPEHART. I have no quarrel with the idea of enacting legislation which requires that an agency come back to the Congress for an appropriation. My point is that I do not think Members of the Senate should permit that kind of section to be put in an appropriation bill, because the Parliamentarian rules that it is legislation on an appropriation bill.

I moved to strike it out for the simple reason that I think it would be a bad precedent to have it remain in the bill. I have no quarrel with the able Senator from Colorado, or with anyone else, that enabling legislation should be enacted to require the FDIC or any other agency to go through the Appropriation Committee if it wants to construct buildings; but I do not think we should permit this sort of requirement to be a part of an appropriation bill.

Mr. MUNDT. Mr. President, I send an amendment to the desk, and ask to have it stated.

The PRESIDING OFFICER. The amendment offered by the Senator from South Dakota will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 28, line 19, before the period, to insert a colon and the following:

Provided, That of such amount not less than $150,000 shall be available, subject to the provisions of such section 202, for a loan or loans for the provision of housing and related facilities on any Indian reservation for the benefit of elderly persons who are members of an Indian tribe.

Mr. MUNDT. Mr. President, I shall discuss this amendment very briefly. I am sure anyone who is familiar with the conditions under which our Indian citizens live fully recognizes that, of all our American citizens, none face a more dismal future in old age and none are forced to live in worse surroundings than many of our unfortunate elderly Indians. It is for that reason I ask that at least a start be made under this legislation to enable our American Indians to participate in the Government's loan program to help finance resthomes for our elderly citizens. Our Indians have no capacity to provide for themselves the proper kind of housing they will need in their advanced years. Most are Indians without funds or land.

Since this is in the nature of a pilot operation, it seems to me we might provide that on one of these reservations, or in some adjacent area, not less than $150,000 be made available to ascertain whether or not, through this plan, at long last we can take some steps in the direction of doing justice to our Indian friends. Perhaps more money can be channeled into this program for Indians but my amendment insists only that not less than $150,000 be set aside for this purpose.

I have discussed the amendment with the chairman and the ranking minority member of the subcommittee. I believe they are prepared to accept the amendment. If so, I have no desire to discuss it further.

Mr. MAGNUSON. Mr. President, the amendment is well taken. The committee had no intention of not covering anyone. If there is any question about covering elderly Indian people on Indian reservations, we shall be glad to take the amendment to conference.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from South Dakota.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. LAUSCHE. Mr. President, I send to the desk an amendment, which I ask to have read.

The PRESIDING OFFICER. The amendment offered by the Senator from Ohio will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 11, line 6, before the period, to insert a colon and the following:

Provided, That except with respect to grants under obligations incurred prior to the date of enactment of this Act, no part of this appropriation may be used as a grant with respect to any airport wherein any obscene, lewd, lascivious, or filthy book, pamphlet, picture, print, drawing, or other similar indecent or immoral article is made available for sale to the public.

Mr. LAUSCHE. Mr. President, several weeks ago the Chicago newspapers carried a story to the effect that the transit board of Chicago had notified concessionaires that their right of occupancy would be revoked in the event they continued selling lewd, lascivious, or indecent literature.

I commented on the floor of the Senate on the action taken by that commission. The objective which they sought was obtainable without interference with the rights granted by the Constitution of free speech or otherwise.

This morning, at a breakfast meeting, I listened to Rev. Billy Graham discuss the experiences which he had in Africa. He related that the good which we have done there through our financial help has, in practically all instances, been either neutralized or destroyed by the character of moving pictures and literature which has been sold to the people of those nations by mercenary interests in the United States. He raised the question of the paradoxical nature of the problem. He stated that, on the one hand, he subscribed completely to the philosophy contained in our Constitution that the right of free speech is indispensable for the proper development of a people and for the proper exercise of the faculties given to the human being by the Lord. But he went on to say that a problem confronts the people of our Nation when we find ourselves, in our desire to maintain the right of free speech, faced with mercenary interests who are using the right of free speech for the publication of literature that is breaking down the moral fabric of our youth.

I thought he was completely right. I am sure Members of the Senate are in a constant quandary as to how we are going to solve this problem.

I do not subscribe to a program of censorship. I do not subscribe to the concept that free speech should be hindered. But I deeply feel that ways and means must be found to cope with this problem, which is causing such a severe impact on the moral fabric and fiber of the young people of our country. The book "The Ugly American" has been frequently mentioned. In some degree it may be exaggerated, but the fact is that the evaluation made of the people of our country is, in a substantial degree, related to the character of the literature and moving pictures we send out which are seen by millions of people.

I have made inquiry about the means of reaching this problem in the air terminals. Either counties or cities receive financial aid from the Federal Government for the building of air terminals. Those air terminals are leased to news and magazine agencies. The concessions granted can be attached with conditions, and the leases can contain a provision that the concession shall come to an end if the lessee or concessionaire uses the premises for the sale or distribution of any obscene, lewd, lascivious, or filthy book, pamphlet, picture, printing, drawing, or any similar indecent or immoral article.

About 2 months ago we appropriated $25 million to fight juvenile delinquency. It was thought the problem was so severe that the Federal Government would

have to step in and, in a measure, declare that the parents, the ministers, the rabbis, the priests, the schoolteachers, the policemen, the prosecutors, the judges and the parole officers were incapable of handling the problem. I thought it was a serious indictment when we declared that all of these agencies were incapable of developing a moral character in our youth sufficient to face the problems which will confront our youth in life.

Upon reflection, I can well understand the feelings of the mother and father, worried about a daughter, while they are trying to build character, when they view these news agencies, magazines and moving pictures breaking down with their material the very work which the parents are trying to accomplish.

At the proper time, Mr. President, I shall call up my amendment.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. KEATING. The Senator has not yet called up his amendment?

Mr. LAUSCHE. I have not. I have sent it to the desk.

Mr. KEATING. I am very sympathetic with what the Senator has been trying to accomplish. The situation has worried me a great deal. I have spoken upon the subject on innumerable occasions on the floor of the Senate and at public gatherings.

It seems to me this may be an area in which we can really do something about the problem. I am glad the Senator has brought up the subject.

Mr. LAUSCHE. I thank the Senator very much. I do not believe the Senator was in the Chamber when I related the statement made by Reverend Graham. He said that when he was in Africa, as well as everywhere else he went, he was told that the good we do with our aid we more than break down with the indecent, lewd, and lascivious literature and moving pictures we are sending to those naive and primitive but still clean and wholesome people.

Mr. JAVITS obtained the floor.

Mr. ALLOTT. Mr. President——

Mr. JAVITS. Does the Senator from Colorado desire to have me yield to him?

Mr. ALLOTT. If the Senator will permit, I would like to reply to the Senator from Ohio.

Mr. JAVITS. I yield to the Senator.

Mr. ALLOTT. Mr. President, I wish to say to my friend from Ohio that I sympathize very greatly with what he is trying to do. I am not quite sure whether the plan the Senator has in mind is workable. Perhaps if the Senator is not offering his amendment now we can discuss it later. There are numerous steps necessary to stop what is going on. I wish to inquire whether the Senator intends to present his amendment now, or later.

Mr. LAUSCHE. I shall present it at a later date.

Mr. ALLOTT. At a later date?

Mr. LAUSCHE. At a later time.

Mr. JAVITS. Mr. President, I yield to the Senator from Ohio. I wish to be sure that I retain my right to the floor.

The PRESIDING OFFICER. The Senator from New York has the floor, and yields to the Senator from Ohio.

Mr. LAUSCHE. Mr. President, I recognize the difficulty, from the technical standpoint, of coping with the problem, in view of what the Supreme Court has said. I feel deeply that we must start giving attention to the problem. I believe under circumstances of this type, as pointed out by the Senator from New York [Mr. KEATING] we may be able to reach the problem with the language I have in mind, although if we tried to censor the moving pictures or the books the language would not be proper.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. JAVITS. I yield to my colleague.

Mr. KEATING. That was the only feature about the proposal which in any way worried me. I am in complete accord with the objective of the Senator from Ohio. I doubt whether we can accomplish it by a censorship provision. I doubt that it would be advisable or desirable to do it in that way.

The only difficulty I had in regard to the proposal was with respect to the definition of what would fall within the purview of the Senator's amendment. I hope we can do something about the matter in the bill under consideration. Has the Senator submitted the language to the legislative counsel?

Mr. LAUSCHE. The legislative counsel drew up the amendment. It was stated that my doubt about the ability to do this was not justified, because the amendment does not contemplate directly or indirectly any censorship, but would merely attach a condition to the grant of money.

Mr. KEATING. Mr. President, will the Senator yield further?

Mr. JAVITS. I yield.

Mr. KEATING. Who would make the determination?

Mr. LAUSCHE. It would be the board which allocates the money.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. JAVITS. Mr. President, I have the floor. I yield to the Senator from Washington.

Mr. MAGNUSON. Like the Senator from Colorado, I am very sympathetic with the objective of the Senator. However, this is a bill which would give to the Federal Aviation Agency the money to maintain the safety of airlines in the United States. The money would be granted under a legislative formula to the different places. I do not know whether we would want to give General Quesada the job of going out and looking at all of the magazines at every airport in the United States, to see what he thought about them. He is the Director. One man is named; that is General Quesada. The CAB would have nothing to do with this.

I think the Senator from Ohio appreciates the practical problem which is involved.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. SALTONSTALL. Like other Senators, I am heartily in favor of what the Senator from Ohio is trying to do, but I sincerely believe what is proposed is not the way to do it. What is a lewd book? We know that the Postmaster General has had cases carried to the Supreme Court.

The language would provide, as the Senator from Washington has said, that General Quesada would have to go to Cleveland, Ohio, we will say, to look at the books on the newsstand——

Mr. LAUSCHE. Or to Boston, Mass.

Mr. SALTONSTALL. Or to Boston, Mass. We find there is a great deal of difficulty with respect to differences of opinion.

No one is more sympathetic than I to the objective of the Senator. I hope the Senator will seek to attach his amendment to a legislative act, rather than to an appropriation bill. I think this provision would be incapable of administration if placed in the bill now before the Senate.

Mr. LAUSCHE. I recognize all of those difficulties. I will say, however, that we had better begin to think about the problem. We cannot keep saying, "There is nothing we can do."

I realize that all of my associates recognize the seriousness of this problem.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. JAVITS. I yield to my colleague.

Mr. KEATING. I emphatically agree with the Senator. It has been brought to my attention that some of the most terrible material which has gone through the mails has been sent as the result of a little boy or a little girl sending in a quarter for a model airplane or something of that kind. This vile material is sent through the mails, and now is being sent through carting companies and by other means. It is a national problem. It is not a local problem. Many unsavory people are fattening their pocketbooks as a result. This is a problem we must face up to.

Fortunately, many fine groups and individuals all over the country are up in arms about this Niagara of smut which is coming through the mails and being distributed on newsstands and by other means. They are complementing the vigorous efforts of the Post Office Department to wipe out this blight of pornography.

In my view, the traffic in obscene material is one of the most serious moral and social problems confronting America today. It has contributed substantially to the rise in juvenile delinquency, in spite of the unceasing war being pursued by authorities at all levels.

I doubt that the general public has any comprehension of how serious this problem has become. It is doubtful that most people realize how extensive this filthy traffic is today.

The fact of the matter is that the pornography and obscenity business in this country has become a half-a-billion-dollars-a-year enterprise. It is big business with capital "B's" and it is high time we called a halt to its filthy machinations.

Of course, as has been pointed out, one of the very real problems involved in curbing these barons of obscenity is

simply the definition of what is pornography. What may represent pornography by the standards of most decent people may not be so classed by the courts, under some recent decisions.

We in Congress must grasp this nettle. I have sponsored legislation to help alleviate this problem, and I intend to pursue actively my studies of other means to put these dirty businessmen out of business. Certainly the proposal of the Senator from Ohio deserves careful consideration by Members of the Senate in the light of the severity of the challenge posed by obscene material.

Mr. President, it is high time Congress got cracking on this whole subject. Some helpful and informative hearings have been held and a great number of legislative proposals have been considered. I hope we can come to grips with some of these ideas. Federal action should and can be taken to effectively supplement the vigorous and wonderful efforts being undertaken by so many groups and individuals on the local level all over the Nation.

Of course, on the local and individual level, it is a matter of demanding strict enforcement of existing statutes, or reporting all violations that come to light. It is a matter of supporting authorities who are trying to do something about keeping this filth out of the hands of our children. In this connection, I want to reiterate my commendation of the Post Office Department, which has spearheaded a nationwide campaign in this field.

Concerted public cooperation and further action by Congress hold the key to stemming this flood of filth which threatens to infect so many of our young people. I am not certain whether the bill before the Senate is the proper vehicle to use in this great cause. I should like to talk with the Senator about it, because he has certainly put his finger on something with which we must come to grips.

Mr. ALLOTT. Mr. President, will the Senator yield to me?

Mr. JAVITS. I yield to the Senator from Colorado.

Mr. ALLOTT. I will say to my friend from Ohio that I am sure we all have the same purpose. I do not know whether this would represent legislation on an appropriation bill or not. I think the particular amendment would not. That is simply my opinion.

The thought I am proposing to the Senator, I think, might be more effective than the language the Senator has suggested, which I believe would be terrible in effect. One day the administrator might go to the newsstand and might find only books and magazines on Christian charity, but the minute he walked out, or the next day, the newsstand might be filled up with all the trash in the world.

As the bill now reads, such language is omitted. However, I should like to suggest to my good friend for his consideration that contracts for grants under obligations might contain or should contain such a limitation as he suggested, and it seems to me that the proposal to which I refer could easily be a better and more workable way of getting at the problem.

Mr. LAUSCHE. I thank the Senator from Colorado, and I also thank the Senator from New York [Mr. JAVITS] for his consideration in allowing us to have time for this discussion.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. COOPER. I am sorry I did not hear all of the discussion of the Senator from Ohio [Mr. LAUSCHE]. Today he told me the nature of the amendment he intended to present. I do not know its full scope, but I would like to say I approve and commend the purposes of the Senator from Ohio. I think all Senators should be very much aware of the problem he has presented, not only in this particular set of circumstances, but everywhere in our country. I shall support him.

Mr. LAUSCHE. I thank the Senator from Kentucky very much.

Mr. JAVITS. Mr. President, I am going to acquaint the Senate with a situation with which I feel it my duty to acquaint the Senate. It relates to my amendment 60–20–60—B, which has been printed and is before the Senate.

To the amazement of every traveler from foreign countries to the United States and to the amazement of people from other parts of the United States, when one gets into an airport in one of our Southern States and walks through the lobby of that airport, he sees a big bronze tablet which says, "This airport was erected with the aid of funds of the United States of America." Nonetheless he finds in that airport toilet facilities which are separately apportioned for white and colored, as the saying euphemistically goes, and waiting rooms which are classified for white and colored. The arrangement is absolutely fantastic to anyone who does not live in that part of the country and he has difficulty to account for it. As a matter of law the arrangement is completely unlawful, but there it is.

We are pretty familiar with these practices, since we are having a great national struggle concerning them, but I must say it is amazing when the practices and procedures and, indeed, the written directives of a Federal Government agency tolerate the situation. It not only tolerates it but, by implication, tells the applicant for Federal funds exactly how he can get around the fact that the Federal funds are not supposed to be made available for any such facilities.

I shall not take too much of the Senate's time in going into this matter, but for the interest of Senators who are present, as well as those who are not but will want to know how consideration of the amendment will proceed, I should like to make the following statement. I do not actually intend to call up my amendment until after I have made my presentation on it. I have been informed that at that time, when the Senate floor is again available under the rules, a motion will be made to table the amendment. I hope very much the mover of that motion will allow such modest debate and rebuttal as Members may feel moved to make on the question, and I shall seek a yea-and-nay vote after the motion to table is actually made and the debate is concluded. I so state in order that the attachés of the Senate may advise Senators as to the situation and may guide themselves accordingly.

What are the facts? The Federal Government, as is well known, under the Federal Airports Act gives an opportunity to local communities—indeed, to individual operators—to build airports with Federal aid. A practice has grown up in that situation under which I believe the basic policy of the Constitution of the United States and the law of the United States is being frustrated and circumvented in utilizing these funds to build airports within which one then finds completely segregated facilities for dining, restrooms, and perhaps in some cases even other types of facilities. Depending upon whether one is white or Negro, one is allowed or is not allowed to use certain of these facilities.

There is no segregation on airplanes but there is segregation in airports. In view of the fact that this is true, as I said, right under the cover of the activities of a Federal agency, I think it is time to bring it out into the open and to put a stop to it.

How does the Agency tolerate any such situation? What it does is to make a loan for the airport building itself, and to omit in the specifications for the building certain spaces in that building, which are left completely vacant, and for which, indeed, FAA does not put up any loan. Later, or contemporaneously, the local community which is building the airport terminal with Federal aid uses its own funds for the purpose of putting in these particular structures, whether they are restrooms or dining rooms or waiting rooms, and segregates them.

Mr. President, one understands perfectly clearly that the big costs which are involved are the costs for the building. However, once the building is constructed, once the fundamental structure is erected, it does not cost very much to put in these additional facilities. Yet this trick, this practice, which is engaged in results in having local communities which believe in segregation, segregate the facilities. They are segregated in terms of national and international travel, not just in terms of the residents of the community involved.

I said that the Agency, at the very least, tolerates it, and, at the very worst, permits it. How does it do that? I suggest that Senators should look at the regulations of the FAA, the Agency which succeeded the Civil Aeronautics Administration, particularly the regulations which were issued on April 6, 1956. They are found at page 617 of the hearings. The policy statement is entitled "Airports Policy and Procedure Memorandum No. 41." It was issued by the Administrator of Civil Aeronautics originally, but is, in effect, a regulation of the FAA. It provides as follows:

"(3) No Federal-aid airport program funds will be made available for the development of separate facilities or space in an airport building when such facilities or space are

designed for use now or in the future for separate racial groups."

The purpose and intent of the policy expressed in this programing standards is to prevent the use of Federal funds to further or to increase racial segregation in airport buildings. Under this policy, Federal-aid airport program funds will not be used in the construction or reconstruction of any areas of a building which are intended for use by separate racial groups.

This is the fundamental policy and procedure. At least that is what we are told, according to the policy and procedure memorandum of the FAA.

It goes on to provide—and this is the gimmick:

It will, therefore, be required, prior to the issuance of a grant offer for any project involving a building, that the chief executive officer of the sponsor of each building project clearly state, in writing, whether or not it is the intent of the sponsor that all of the areas and facilities in the building will be available without regard to race, creed, or color, and are intended to be operated on a nonsegregated basis.

If not, it will be necessary that the written statement describe those areas and facilities within the building which are intended for segregated use.

Just think of it, Mr. President. Here is a policy and procedure which provides that no facilities are to be used in such a way as to be segregated. Yet here is a refutation of that policy. This is a refutation of the purpose and intent of the policy expressed in the programing standard, because in the same memorandum we find the statement that it will be necessary that the written statement describe the areas and facilities within the building which are intended for segregated use.

The memorandum goes on to specify just what the written statement is to describe if there is to be this exception and exclusion.

Mr. President, how brazen can one get? Here is an agency which has the fundamental policy that these facilities shall not be segregated; yet for all practical purposes it gives instructions to the individual applicant on exactly how these facilities are to be segregated, in direct violation of the Agency's own policy.

It is inconceivable to me that this should occur right under our very noses; that we should be asked to appropriate $80 million for this program, yet should be denied the opportunity of correcting this most offensive situation which is being participated in by an agency of the Federal Government.

I will say this—and everyone knows it—that this is just inertia. In other words it was the way it was done in 1955 and 1956, and it just goes on, until someone stops it. I think it is high time to stop it.

I felt it my bounden duty to bring this matter to the attention of the Senate.

I testified before the committee on this subject. Because I know very well the concerns about so-called antisegregation amendments, and how Senators feel about them, I suggested to the committee that if we could get a statement of policy from the Agency as to how they would carry out this program, it might fully meet the requirements of the situation.

That procedure has served very well with respect to other bills. One I know of particularly is the National Defense Education Act. In that case a letter was obtained from the Secretary of Health, Education, and Welfare. However, FAA has not budged on this point. Hence the only thing I felt I could do was to propose the amendment, which I will call up, as I said, when I have concluded my remarks.

I have heard arguments against preventing proper restrictions being placed on an agency which would lend itself to this practice. The arguments are, of course, that we do not generally like to offer this kind of amendment if we can avoid it. The answer is that this is such a shocking situation that we cannot avoid it.

The second point is one to which I should like to address myself for a few minutes. It is the question of whether this is the kind of amendment which is found in the Federal aid to public school construction bill as it came to us from the House of Representatives, and which aroused considerable interest here. It was felt that if we kept that amendment in the bill it would result in defeating the whole bill. I have been asked by a number of Senators in connection with my own amendment to the pending bill, "What is the difference between your amendment and the so-called Powell amendment?"

There is all the difference in the world, and it boils down to this. If we deny money in a public school construction situation on the ground that the school has not desegregated, then we are taking action which the Supreme Court has qualified in its decision on the public school desegregation cases.

The Supreme Court has qualified it by saying that desegregation of public schools shall take place with all deliberate speed. In other words, it has qualified it in point of time. Although personally my own views may have some modified application in that situation, I must agree with the Supreme Court's ruling. It is possible to make the argument that the question of all deliberate speed should be left to the courts, and that the question of all deliberate speed should not be decided by a governmental agency which has the responsibility of disbursing funds for school aid.

That is not the case in the present situation, for in the situation before us no time lag is envisioned by any Supreme Court decree or by any law.

In the situation before us, we are frontally lending the loaning power and the authority of a Federal Government agency, whether by implication or directly, to the proposition that what is now immediately unlawful shall be used to perpetuate or to establish segregated facilities within an airport, nothwithstanding the fact that they are now and immediately unlawful—not that they will be unlawful if they are not segregated with all deliberate speed, but that they are now and immediately unlawful.

As authority for that statement, I refer to the basic law itself, which is found in title 49, section 1110, United States Code, annotated, which relates to how these funds are to be loaned, and under what conditions. I shall read the first clause of the law. It is very clear on the subject:

As a condition precedent to his approval of a project under this chapter, the administrator shall receive assurances in writing satisfactory to him that (1) the airport to which the project relates will be available for public use on fair and reasonable terms and without unjust discrimination.

If that is not clear enough, in a case decided very recently in the U.S. Court of Appeals for the Fourth Circuit, the so-called Greenville case, the court unequivocally states that it is unlawful for a State, or any governmental subdivision thereof, to maintain segregated facilities specifically within an airport. It is the unanimous decision of the circuit court of appeals.

There is no question about the fundamental law which is involved. It was sustained earlier this year in a case involving a segregated airport restaurant in Atlanta, Ga. It was sustained last year in a case involving the Memphis airport. Then we have the Greenville airport case, which is very recent, having been decided only a few months ago. The full text of the Greenville decision is printed at page 618 of the Senate committee hearings. The case is entitled "Henry Against Greenville Airport Commission."

The very point that there are very recent cases, and that this practice is directly and immediately unlawful—it does not have to wait for any deliberate speed, but is immediately unlawful—is used as an argument against my amendment, on the ground that the amendment is not really essential because a suit can be started in every case which involves segregated facilities, in order to enjoin their continuance.

It seems to me that that argument would cause us, just like the rather strange interpretation of the regulations of the FAA, which I read, to be, by implication, parties to a violation of the law and a violation of the Constitution. We would be advancing money which a Government agency is affirmatively using to help—again I say, at the very most indirectly—an illegal establishment of segregated facilities. We would be lending money, but would be telling some individual to go ahead and sue if he did not like what occurred, because we were giving the money knowing it would be used for this purpose.

I think such a use of Federal funds is inexcusable and unforgivable on the part of Congress. There is a host of declarations by the highest officials of the Government that Federal funds must not be used to establish segregated facilities. The President of the United States himself, in my hearing, during one of his campaigns, in a great rally in New York, made that absolute pledge to the American people. I simply do not see how we can possibly get away from it.

When I say this is actually going to happen, I come to another argument which is very strongly urged against my amendment, namely, that my amendment reaches situations in which the Federal Aviation Agency has already

contracted for certain facilities, and that $500,000 of the $80 million appropriated by the bill will be used for a terminal building at Birmingham, Ala., and for a similar building at Tallahassee, Fla. In both of those buildings we know now there will be segregated facilities—rest rooms, waiting rooms, and perhaps dining rooms. In both instances, the FAA has already contracted to lend the money.

In respect to that argument, I say two things. It makes it very clear, beyond a peradventure of a doubt, that if we appropriate the money, we will be helping to bring about a violation of the law and the Constitution. Second, it is hornbook law that a contract which has in it an element of illegality is an invalid contract. Certainly it is a contract which, as the lawyers say, is beyond the power—ultra vires—even of an official of the United States. We have no right to enter into a contract which flies in the face of the law. There is no morality which holds otherwise, in my view.

Finally, the argument is made against my amendment that people have committed funds on the strength of loans they expect to get from the FAA, and therefore they should not be deprived of those loans at this time. That is what lawyers call the estoppal argument. I think there are two answers.

First, we are closing a Federal loophole. We are closing a loophole by which we are quite unwittingly lending ourselves to the continuation and the establishment of new segregated facilities, rather than doing our utmost to eliminate them.

Second, it seems to me very clear that the unfairness of this kind of utilization of Federal funds for this kind of segregation far outweighs the embarrassment to an individual who has put some money into this kind of proposal in the expectation of receiving a Federal loan.

Before I call up my amendment, I should like to conclude with this observation: I have been a Member of the House and Senate for about 13 years. I know of no time when the atmosphere gets quite so chilly, and when people become quite so restless and unhappy, as when this subject is brought up. Whatever may be the deep psychological reasons for it, this is one situation with which we must live in this country. I have always been the first to affirm the sincerity of the convictions of the men and women who take the very opposite view of this situation from mine. I have never hesitated to debate it with them in the public forum and on the floor of either House. But I have always respected their views.

Notwithstanding that, in this day and age, with what we have at stake in the world in terms of our relationships with the overwhelming preponderance of people having skins which are yellow, black, or brown—not white—I simply cannot understand how we can fail to scratch the bottom of the barrel, if we have to, let alone take as obvious an amendment as this one, in a situation in which a traveler to the United States on an international carrier, if that traveler is himself a person of color, coming to an airport in the southern part of the United States, will find that he cannot sit in a waiting room with Americans; he must go into a separate waiting room for black people; that he may not use the same toilet facilities; and that in some cases he may not use the same dining room. How can we possibly justify that? It would be hard enough to justify it on moral grounds if provision as to the subject were not imbedded in our Constitution and in the law of the land. It seems inconceivable to me that we can justify it when it is actually unlawful, and so declared by the courts, so declared by the law, and so declared by the policy of the FAA itself, which at the same time, in the same memorandum, instructs people how to avoid it. It is inconceivable to me; I cannot understand it.

Finally, we must in some way get at this situation. We have tried to do it. We have had long debate. We are trying to do it now on the basis of the right to vote, as our first effort in this regard. That is all to the good. I hope we will make much progress.

But when as obvious a situation as this one hits us in the face, to use a curbstone term, and when every opportunity is given to the agency itself to do something about it, but it will not move, it seems to me that the situation calls only for the kind of remedy which, in extremis, I have proposed today. There is simply no other way out, and nothing else which can be done, much as any of us would try to do something else about it.

Mr. President, it is for that reason, and on those grounds, and in view of the complete documentation on this situation, which I have submitted both to the committee and to the Senate, that I believe there is nothing else for me to do except propose this amendment.

I believe we have worked out a procedure which will be economical of the time of the Senate and, I hope, of temper, in terms of the debate.

I repeat that I am addressing myself solely to the issue: and I shall not attempt to castigate either the Agency or any individual who is approaching this matter.

But, Mr. President, after so clearly and demonstrably proving the situation, which can be confirmed by observation by any person who goes to an airport in the southeastern part of our country, I felt that, as a Senator, I must try to do something about that situation. That is why I am about to propose this amendment.

Mr. SCOTT. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. SCOTT. I am impressed by what the Senator from New York has said; and his remarks suggest to me how I would feel if I were to enter the airport at Orly, France, or North Holton, England, or at Bonn, or at Madrid, or at Ciampino, Italy, and there read on a plaque that the airport had been built by means of the use of Federal funds, but that persons of some given nationality or color or race—which might, for example, include me, as a citizen of the United States—would be required to use facilities separate and apart from those available to other persons who made use of that international airport. In that event, I believe I would get a bad impression.

Travelers in increasing numbers now come to the United States from all over the earth; and they are of many kinds and many races and many nationalities. They come from the very ends of the earth.

I must say that I agree with the Senator from New York that we should not give propaganda material to those who are hostile to what we are proud of in the American way of life. We should not affront either our visitors or our own citizens.

Although I am of the opinion that the law already is clear, and does prohibit the separation of such facilities, nevertheless I recognize the purpose of the amendment of the Senator from New York; and I am glad to announce here that I shall be happy to support it.

Mr. JAVITS. I am very grateful to the Senator from Pennsylvania.

Mr. President, I wish to call attention to the fact that there are other airports in which exactly the same situation exists, in addition to the two—the one at Birmingham and the one at Tallahassee—that are affected by the pending bill. In addition, there is the airport at Montgomery, Ala.; the airport at Meridian, Miss.; and the airport at Natchez, Miss. There may be others; but I have cited enough to indicate that this practice is by no means a limited one which has not received much attention.

Mr. President, I now call up my amendment which deals with this matter—it is identified as "6-20-60-B"—and ask that it be stated.

The PRESIDING OFFICER. The amendment submitted by the Senator from New York will be stated.

The LEGISLATIVE CLERK. On page 11, in line 6, it is proposed to strike out the period, and insert a colon and the following:

Provided, That no part of this appropriation shall be available for the liquidation of contract obligations incurred for the construction of airport terminal buildings containing racially segregated dining or other facilities.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New York.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 250]

Aiken	Byrd, W. Va.	Curtis
Allott	Cannon	Dirksen
Anderson	Capehart	Dodd
Beall	Carlson	Douglas
Bennett	Case, N.J.	Dworshak
Bible	Case, S. Dak.	Eastland
Bridges	Chavez	Ellender
Brunsdale	Church	Engle
Bush	Clark	Ervin
Butler	Cooper	Fong
Byrd, Va.	Cotton	Frear

Fulbright	Lausche	Prouty
Goldwater	Long, Hawaii	Proxmire
Green	Long, La.	Randolph
Gruening	Lusk	Russell
Hart	McCarthy	Saltonstall
Hartke	McClellan	Scott
Hayden	McGee	Smathers
Hickenlooper	McNamara	Smith
Hill	Magnuson	Sparkman
Holland	Mansfield	Stennis
Hruska	Martin	Symington
Jackson	Monroney	Talmadge
Javits	Morse	Thurmond
Johnson, Tex.	Morton	Wiley
Jordan	Moss	Williams, Del.
Keating	Mundt	Williams, N.J.
Kerr	Muskie	Yarborough
Kuchel	Pastore	Young, Ohio

The PRESIDING OFFICER. A quorum is present.

The question is on agreeing to the amendment of the Senator from New York.

Mr. JAVITS. Mr. President, now that more Senators are present than were present previously, I wish to take 2 minutes to explain the amendment. After that I shall be perfectly ready to vote, and I shall ask for the yeas and nays.

The amendment seeks to prevent the Federal Aviation Agency from making available grant funds for the construction of airport terminals, within which there will be segregated facilities—facilities within the shell furnished by the Federal grant, substantially, which may be used for segregated dining rooms, restrooms, and waiting rooms.

Mr. President, Senators will observe upon their desks a mimeographed memorandum explaining the amendment, which carries the whole argument I have made.

The law under which the agency functions says very clearly that these grants are to be made "without unjust discrimination." The Airports Policy and Procedure Memorandum of the agency specifically states the policy is not to have segregated facilities among the facilities financed by its grants, yet in the same memorandum the people are told exactly how to go about accepting some of the grants so that the facilities can be segregated. It is very blatant, Mr. President. The memorandum is to be found at page 617 of the record of hearings before the committee. It is very clear that if one wants to provide segregated facilities the Agency tells one exactly how to go about getting the grants and still providing segregated facilities.

Mr. President, it is inconceivable in this day and age that we should lend ourselves to any such illegal operation. Certainly the court will enjoin any such thing at any airport, but that means it is necessary to take each situation to court. We should not provide Federal money, in the way of grants, to perpetuate a situation which the courts would enjoin as illegal—which the courts have enjoined as illegal as recently as the case decided in April of this year, which is referred to at page 610 of the hearings before the committee upon this subject.

Mr. President, I cannot see how in good conscience we can fail to restrict the expenditure of funds of the Federal Government on grants in respect of a matter of this character, and how we can allow any foreign or domestic traveler to come into an airport, read the plaque on the front of the building which says it is built with Federal funds, go in, and find, if he is a person of color, be he an Indian or a Ghanaian, or a person from anywhere else in the world, that he is restricted as to where he may go, where he may sit, and what facilities he may use in that airport. It is for that reason, because we could not get a change in policy from the Agency, that I proposed the amendment.

Accordingly on my amendment I ask for the yeas and nays.

The yeas and nays were not ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New York.

Mr. DOUGLAS. Mr. President, I cannot let this occasion pass without expressing my approval of the amendment of the Senator from New York [Mr. JAVITS]. It seems to me that terminal buildings are organic buildings. One sees the Federal shell outside, which is supposed to be nonsegregated, and then the local or State area inside, which is segregated. This is a purely artificial method used to defeat the purpose of the law.

We remember that Solomon had a similar problem when two mothers contested for a child. Solomon's proposal was to cut the child in half and award one-half to one mother and the other half to the other, which resolved the controversy rather quickly.

A terminal building is almost as organic as a child, and this attempt to have locally segregated areas inside a building which is federally financed is equally an effort to defeat the purpose of the law. So I very much hope that the amendment of the Senator from New York will be agreed to.

Mr. MAGNUSON. Mr. President, I shall be very brief. The committee went into this subject in some great detail. It is not as simple as the description of the Senator from Illinois, because it is an appropriation bill and involves contracts that have been made previously.

The amendment should be proposed to the Federal Airport Act. I strongly favor the purpose of the amendment. This is my 24th session in Congress and I have voted for every single bill of this type. In fact, I have introduced many of them before some Senators who are sitting here today arrived. So, reluctantly, because we have had two legal opinions on this subject, I must oppose the amendment.

Lawsuits against the Government would be filed. Five small airports for which contracts were made are at present involved. I assure the Senator from New York [Mr. JAVITS] and the Senator from Illinois [Mr. DOUGLAS] and all other Senators that any amendment presented to the legislative committee involved which would require future contracts to contain clauses of the kind proposed by the amendment of the Senator from New York, would have the committee's approval.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MAGNUSON. In present contracts provision of the type suggested is included, but the amendment of the Senator from New York involves going back to a few small contracts that were made in instances in which local authorities went ahead and built airports. Sometimes the contractors were paid monthly and sometimes they waited until the airport was completely constructed to request Federal grants. In a couple of cases that happened.

No one has been more zealous in the cause of antisegregation than has the Senator from Washington, but the present bill is not the place for this type of action. The proposal should be put on the calendar of the committee considering the Federal Airport Act. As I said, under present contracts I am assured provision is made for the situation described. I brought the subject to the attention of the committee, and the committee has instructed me to move to table the amendment, which I must reluctantly do.

Mr. CLARK. Mr. President, will the Senator yield to me?

Mr. MAGNUSON. I announce that I shall move to table the amendment of the Senator from New York.

I yield to the Senator from Pennsylvania.

Mr. CLARK. I thank my friend for his courtesy in yielding to me. I will take only 2 minutes. I regret very much to conclude that this is a clear-cut moral issue and that there is no justification that I can see for the letter of Mr. Lowen representing the CAA which appears in the record at page 617 of the hearings. it seems to me that the situation described in the letter is a clear evasion of law. I regret very much that in their wisdom my colleagues have concluded that they do not wish to be recorded on this issue. I would like the record to show that I support the Senator from New York.

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my remarks two letters from Daggett H. Howard, General Counsel of the Federal Aviation Agency to the chairman of the committee, one dated May 20, 1960, and the other dated June 22, 1960, on the legal aspects of this problem.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FEDERAL AVIATION AGENCY,
Washington, D.C., May 20, 1960.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee on Independent Offices and General Government Matters, Appropriations Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This letter is in response to the questions asked by the subcommittee at the hearing on May 17, 1960, concerning a proposed amendment to H.R. 11776 offered by Senator JAVITS, and is also in response to your request that the General Counsel of the Federal Aviation Agency provide the subcommittee with his written views as to the legal implications of the proposed amendment.

We appreciate very much the opportunity to submit to the subcommittee our thoughts on some of the legal problems which may arise if the amendment to H.R. 11776 proposed by Senator JAVITS is enacted into law.

At the outset, we wish to express our sympathy with the aims of Senator JAVITS. We think those aims are highly commendable. However, it should be made clear that the Federal Aviation Agency does not now provide funds for the development of segregated facilities in airport buildings. Our policy in this respect is set out in 14 C.F.R. 550.24(i)(5) in the following language:

"(5) No Federal-aid airport program funds will be made available for the development of separate facilities or space in an airport building when such facilities or space are designed for use now or in the future for separate racial groups."

We have given considerable thought to the practical problems involved if Senator JAVITS' proposed amendment is adopted. Assuming its validity, it would have the effect of denying some important safety items to the public using airport facilities over a large part of our country. For example, the Federal Aviation Agency would be prohibited from expending funds for the construction of control towers where such towers are to be a part of an airport building falling under the restrictions in Senator JAVITS' proposed amendment. Moreover, the Agency would be prohibited from providing funds to house weather reporting and communications activities in any part of such an airport building.

Aside from the obvious fact that the proposed amendment may be substantive legislation in an appropriations act, we have more serious questions regarding its legality. The funds called for in H.R. 11776 are to meet existing contractual obligations, not obligations which may arise in the future. We believe the proposed amendment would result in lawsuits against the Federal Government on the basis that an existing valid contract is property and that property rights are protected by the Constitution whether the obligor is the United States or others. The United States is subject to the due process clause of the Constitution; and, in its contractual relations with others, the U.S. rights and duties are governed generally by the law applicable to contracts between private individuals.

Even if the proposed amendment were not objectionable on legal grounds, we feel it is inherently unfair to those who have expended their funds in reliance upon financial participation by the United States, as well as disruptive of needed airport development.

Sincerely yours,

DAGGETT H. HOWARD,
General Counsel.

FEDERAL AVIATION AGENCY,
Washington, D.C., June 22, 1960.

HON. WARREN G. MAGNUSON,
Chairman, Interstate and Foreign Commerce Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: A member of your staff has inquired as to our views on a reworded version of the proposed amendment to H.R. 11776 offered by Senator JAVITS. You will recall that I answered certain questions asked by the committee on the earlier version in my letter to you of May 20, 1960. The new language we were asked to consider reads as follows: "*Provided*, That no part of this appropriation shall be available for the liquidation of contract obligations incurred for the construction of airport terminal buildings containing racially segregated dining or other facilities."

We do not feel that the changes in language cure the proposed amendment of the defects we noted in our previous comments. It is still my considered legal opinion that the amendment, even as reworded, is of questionable legality and would result in lawsuits against the Federal Government. As I indicated in my previous letter, such lawsuits could be brought on grounds that an existing valid contract is property.

Accordingly, it is my legal opinion that the practical result of the proposed amendment would be to subject the Federal Government to costly administrative burdens and protracted litigation, without achieving the result Senator JAVITS seeks. The Federal Government would, in the end, be forced to make the payments, in the form of settlement of claims or judgments, even though normal payment from these appropriations were barred by the proposed amendment.

I am convinced that the present grant agreements are valid contracts in this respect, that they are not contracts made in violation of any law, and that it would be a futile gesture for the Federal Government to refuse payment thereunder on the grounds Senator JAVITS seeks to assert through the proposed amendment. If it is the wish of Congress to achieve the objective sought by the Senator, the most appropriate and least troublesome way to accomplish this is by direct amendment of the Federal Airport Act itself

I might add at this point a few brief words of clarification as to the present law and the policy followed under it by the Federal Aviation Agency. In my previous letter, I set forth the provisions of 14 CFR 550.24(i)(5), which are to the effect that no Federal-aid airport program funds will be made available for the development of separate facilities or space in airport buildings when such facilities or space are designed for use now or in the future for separate racial groups.

I think it might be useful to point out to your committee just how this Agency's policy on this matter works and how it does have the effect of reducing Federal grants-in-aid for airport terminal building projects in which there are racially segregated facilities. For example, let us say that an airport terminal building is to be constructed for $100,000 and that $10,000 of this is to go for construction of segregated dining facilities. This $10,000 item would be completely denied as an allowable project cost. Thus, if the Federal share is to be 50 percent, the Federal grant-in-aid would be $45,000.

On the other hand, let us assume that an identical terminal building is to be constructed for $100,000, but the same $10,000 dining facility is not to be racially segregated. In this case, the 50 percent Federal contribution would be $50,000.

This policy is strictly applied in all instances by the Agency and has the effect of reducing Federal contributions, as illustrated, whenever a racially segregated facility is involved. I wish to emphasize that we guard against any bookkeeping or other adjustments anywhere else in the program which might otherwise nullify this policy. We are extremely careful not to permit any increased participation in the remainder of the project which could convert this into a mere bookkeeping exercise. The policy has teeth and is strictly administered.

If you or your committee have any further questions, we shall be very happy to answer them.

Sincerely,

DAGGETT H. HOWARD,
General Counsel.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. ALLOTT. The Senator from New York, who made the request for the yeas and nays, is present in the Senate, as are most of the other interested Senators.

I would like to call to the attention of the Senate the statement of the General Counsel of the FAA which appears on page 126 of the hearings:

Aside from the obvious fact that the proposed amendment may be substantive legislation in an appropriations act, we have more serious questions regarding its legality. The funds called for in H.R. 11776 are to meet existing contractual obligations, not obligations which may arise in the future. We believe the proposed amendment would result in lawsuits against the Federal Government on the basis that an existing valid contract is property and that property rights are protected by the Constitution whether the obligor is the United States or others. The United States is subject to the due process clause of the Constitution; and in its contractual relations with others, the U.S. rights and duties are governed generally by the law applicable to contracts between private individuals.

I would like to say to my chairman and to my friends in the Senate that there is no Senator—and I am sure the Senator from New York will agree—who supported all measures of this kind any more assiduously than has the senior Senator from Colorado and the Senator from Washington [Mr. MAGNUSON] who is the chairman of the committee, and I shall support this type of legislation in a legislative bill. But I do not think this type of provision should be put in the present bill as a limitation on contracts which have already been created.

I followed the argument of the Senator from New York, and I would like to discuss it at greater length. But I think the law needs some beefing up. I will support him and, in fact, I will join him in such proposed legislation, but I do not think this is the place for it.

Mr. JAVITS. Mr. President, will the Senator yield to me very briefly?

Mr. MAGNUSON. I yield.

Mr. JAVITS. I will take no more than 1 minute. Whatever else my reputation may be, I do not think I have acquired a reputation for long-windedness.

I was made aware of the letter of the counsel by the chairman of the committee. I answered it. My answer is found at page 615 of the record. To make it very specific, so Senators will follow my argument, my point was that when a contract of this character was made to provide a grant, the only time the matter came to us at all, because the law now permits the agency to make these contracts, was under an appropriation bill. Therefore, this occasion was the only time I could bring the subject to the attention of the Senate. I have tried to get a change in policy in the agency, and I have been completely unsuccessful for reasons which were completely beyond me. This was the only remedy I had, and the argument as to existing contracts was answered, in my view. The point is that they are ultra vires the United States, because they are unlawful. The courts have said so, and the law says so. The statute allowing the grant says so. That completely explodes the argument and gives us no other way to get out of the situation. Any contracting party can fully

qualify for the grant by not using the subterfuge suggested by the agency itself, namely, having segregated facilities.

Mr. MAGNUSON. I will join with the Senator from New York. We can get at the situation. I know where we can get at it, and get at it in the right way.

Mr. JAVITS. Allow me to say something in fairness to the Senator from Washington and the Senator from Colorado. Those two Senators are more zealous in respect to equal rights to all Americans than they are. I respect the sincerity of their views, though I deeply disagree with them in this discussion.

Mr. MAGNUSON. Mr. President, I move to lay the amendment on the table.

Mr. JAVITS. Mr. President, I ask for the yeas and nays.

The yeas and nays were not ordered.

Mr. JAVITS. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

[No. 251]

Aiken	Ervin	McNamara
Allott	Fong	Magnuson
Anderson	Frear	Mansfield
Beall	Fulbright	Martin
Bennett	Goldwater	Monroney
Bible	Green	Morse
Bridges	Gruening	Morton
Brunsdale	Hart	Moss
Bush	Hartke	Mundt
Butler	Hayden	Muskie
Byrd, Va.	Hickenlooper	Pastore
Byrd, W. Va.	Hill	Prouty
Cannon	Holland	Proxmire
Capehart	Hruska	Randolph
Carlson	Jackson	Russell
Case, N.J.	Javits	Saltonstall
Case, S. Dak.	Johnson, Tex.	Scott
Chavez	Johnston, S.C.	Smathers
Clark	Jordan	Smith
Cooper	Keating	Sparkman
Cotton	Kerr	Stennis
Curtis	Kuchel	Symington
Dirksen	Lausche	Talmadge
Dodd	Long, Hawaii	Thurmond
Douglas	Long, La.	Wiley
Dworshak	Lusk	Williams, Del.
Eastland	McCarthy	Williams, N.J.
Ellender	McClellan	Yarborough
Engle	McGee	Young, Ohio

The PRESIDING OFFICER. A quorum is present. The question is on agreeing to the motion of the Senator from Washington [Mr. MAGNUSON] to lay on the table the amendment of the Senator from New York [Mr. JAVITS].

Mr. MORSE. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Colorado [Mr. CARROLL], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Montana [Mr. MURRAY], and the Senator from Virginia [Mr. ROBERTSON] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Massachusetts [Mr. KENNEDY], the Senator from Wyoming [Mr. O'MAHONEY], and the Senator from Tennessee [Mr. KEFAUVER] are necessarily absent.

On this vote, the Senator from Alaska [Mr. BARTLETT] is paired with the Senator from Virginia [Mr. ROBERTSON]. If present and voting, the Senator from Alaska would vote "nay," and the Senator from Virginia would vote "yea."

I further announce that, if present and voting, the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Colorado [Mr. CARROLL] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Kansas [Mr. SCHOEPPEL] is absent because of death in his family.

The Senator from North Dakota [Mr. YOUNG] is detained on official business.

The result was announced—yeas 58, nays 29, as follows:

[No. 252]

YEAS—58

Aiken	Ervin	Mansfield
Allott	Frear	Martin
Anderson	Fulbright	Monroney
Bennett	Goldwater	Moss
Bible	Green	Mundt
Bridges	Hayden	Pastore
Brunsdale	Hickenlooper	Prouty
Butler	Hill	Russell
Byrd, Va.	Holland	Saltonstall
Byrd, W. Va.	Hruska	Smathers
Cannon	Jackson	Smith
Capehart	Johnson, Tex.	Sparkman
Carlson	Johnston, S.C.	Stennis
Case, S. Dak.	Jordan	Talmadge
Cotton	Kerr	Thurmond
Curtis	Long, La.	Wiley
Dirksen	Lusk	Williams, Del.
Dworshak	McClellan	Yarborough
Eastland	McGee	
Ellender	Magnuson	

NAYS—29

Beall	Gruening	Morse
Bush	Hart	Morton
Case, N.J.	Hartke	Muskie
Church	Javits	Proxmire
Clark	Keating	Randolph
Cooper	Kuchel	Scott
Dodd	Lausche	Symington
Douglas	Long, Hawaii	Williams, N.J.
Engle	McCarthy	Young, Ohio
Fong	McNamara	

NOT VOTING—13

Bartlett	Humphrey	Robertson
Carroll	Kefauver	Schoeppel
Chavez	Kennedy	Young, N. Dak.
Gore	Murray	
Hennings	O'Mahoney	

So the motion to lay on the table Mr. JAVITS' amendment was agreed to.

Mr. MAGNUSON. Mr. President, I move that the Senate reconsider the vote by which the motion to lay on the table the amendment of the Senator from New York was agreed to.

Mr. ALLOTT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HUMPHREY subsequently said: Mr. President, with regard to the vote relating to the tabling of the motion by the Senator from New York [Mr. JAVITS] I was in an informal hearing relating to the report on the food and drug industry of the Federal Trade Commission, with the Chairman of the Commission and the staff of the Federal Trade Commission. I wish to have the RECORD show that I arrived at the Chamber immediately after the vote was announced. Had I been in the Chamber I would have voted "nay." I regret that I was unable to arrive by the time the vote was announced. I assure my colleagues that I made every attempt to be present.

Mr. JOHNSON of Texas. Mr. President, I understand that the Senator from Ohio [Mr. LAUSCHE] has an amendment, and that he is willing to have it considered under a time limitation. Therefore, I suggest that the Senator from Ohio now call up the amendment; and I ask unanimous consent that during its consideration there be not to exceed 5 minutes to each side.

The PRESIDING OFFICER (Mr. CANNON in the chair). Is there objection? Without objection, it is so ordered.

Mr. LAUSCHE. Mr. President, my amendment is as follows: On page 11, in line 6, before the period, insert a colon and the following:

Provided, That except with respect to grants under obligations incurred prior to the date of enactment of this Act, no part of this appropriation may be used as a grant for the building of any airport facility unless the contract under which the grant is made contains recitals prohibiting the sale or distribution to the public or otherwise of any obscene, lewd, or lascivious book, pamphlet, picture, print, drawing, or other indecent or immoral article; and provided further, that if such materials are so sold or distributed, the recipient of the grant shall become obligated to repay such grant to the Federal Aviation Agency.

The PRESIDING OFFICER. The Senate will be in order.

Mr. LAUSCHE. Mr. President, under these circumstances, I could not present my amendment within 5 minutes.

Mr. JOHNSON of Texas. Mr. President, I ask that the Senate be in order.

Mr. DIRKSEN. Mr. President, I reserve a point of order on the amendment.

Mr. LAUSCHE. Mr. President, about 2 months ago the Transit Authority of Chicago issued upon concessionaires an order that if they sold lewd or indecent material on the newsstands, their rights in possession of the leased property would be terminated.

This morning, at a meeting, I heard Reverend Graham make the statement that while he was in Africa he was told repeatedly that the good we have done with our aid has been more than neutralized by the damage we have done with motion pictures and indecent literature.

I do not think I need argue to my colleagues that a grave problem is confronting the people of our country with respect to mercenaries who are intent upon making profits, even though they are contaminating the moral fabric of our youth.

I recognize that there may be a parliamentary flaw in this amendment; but I suggest to my colleagues that we cannot delay dealing with this vital problem concerning the people of our Nation. We cannot hope to survive if we tolerate

mercenaries who sell materials which we know are destroying the moral fabric of our youth.

I receive many letters from mothers who write to me, "I am worried about my children. You are allowing damaging materials to be sold. Why do not you do something about it?"

There are some who will say this amendment violates the free-speech guarantee in the Constitution. But the amendment does not do so at all. It merely provides that the U.S. Government, as a condition to the making of a grant, demands that the property which will be built out of the grant shall not be used for the purposes which I enumerate in the amendment.

I have consulted the Legislative Reference Service, and have asked the drafter of the amendment whether it would collide with the decision of the Supreme Court that language of this type is uncertain, and therefore not adequate to bring into existence an intended piece of legislation. The adviser in that department said this situation is different, because in this amendment we are not dealing with the constitutional right of free speech, but we are merely attaching a condition as a prerequisite to the obtaining of a grant.

Mr. President, that is my case. I present the amendment to the Senate, for its consideration.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Ohio.

Mr. MAGNUSON. Mr. President, I believe that the minority leader [Mr. DIRKSEN] has left the Chamber. A moment ago he suggested that he reserved a point of order against this amendment. I do not know whether he is soon to return or not.

I merely wish to say that I do not suppose there is any Member of this body who has any objection to the motive behind the amendment. I am perfectly willing to take the amendment to conference. Everybody wants to attach something to an appropriation bill, and nobody wants to go to the committees and go through the regular committee procedure. That is the simple way to do it. Sometimes amendments such as the last one we voted on are offered to appropriation bills. Nobody has been more in favor of civil rights than the Senator from Washington has, and I was for it long before some of my colleagues were here; but when an appropriation bill is brought to the floor, we are subjected to embarrassment by being asked to vote on a proposal that does not belong in the bill at all.

Someone has said, "Your friends hurt you more than your enemies do." Everyone is against lewd literature, or at least that should be the case. This is a local matter, of course. Grants-in-aid are sometimes predicated upon local bonds. Airports are operated wholly by local people, and I presume there are local laws. I was once prosecuting attorney in my county. We operated an airport, and we had some laws.

This is a fine amendment. I do not know how it would be enforced, however. I am sure General Quesada will not ride around in his airplane every day and thumb through articles on the newsstands and see what is there. I do not know that I would want to trust his judgment too much in deciding whether the material was lewd or obscene. What is probably considered to be one thing in Boston might not be considered to be such in Las Vegas.

Mr. SALTONSTALL. Mr. President, will the Senator yield? I merely want to ask him which way does he mean? [Laughter.]

Mr. MAGNUSON. I think Senators know which way. That is another problem that is involved. No one disagrees with the statement that there is a problem involved. I have seen some airports where conditions are bad; but all we do is give local communities money to help them build airports. Sometimes we do not give them 50 percent. In some years we have not given them anything. But, because the Federal Government gives them money, we want to dig into their affairs and tell them how to run their airports. In the case of Federal aid to education, there would be a big hue and cry around here if an amendment were attached to the bill stating what kind of books were to be used in schools, just because Federal money is spent in that field. I do not want that responsibility. We would be talking States rights from now to Christmas on that one.

I am perfectly willing to accept the amendment. I agree with the Senator from Ohio that perhaps we ought to do something about the problem, but I do not know why we do not do something about these things in the proper place.

Mr. ALLOTT. Mr. President, will the Senator yield for a question?

Mr. MAGNUSON. Yes.

Mr. ALLOTT. Was this proposal ever presented to the committee?

Mr. MAGNUSON. No; it was not.

Mr. LAUSCHE. It was not.

Mr. MAGNUSON. The Senator from Ohio has stated it was more forcefully called to his attention only recently.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MAGNUSON. Yes.

Mr. LAUSCHE. I think no Senator could conscientiously and honestly say, "I have not worried about this problem." No Senator would dare say it. No Senator would dare go before the public, seeking support, and say he is not concerned about the problem of the sale of indecent literature.

Mr. MAGNUSON. I think everyone has been concerned about it, and I think the Appropriations Committee of the Senate started activity in this field, as relates to the Post Office Department, concerning the abuse of the mails. That activity was started in the committee of which the Senator from South Carolina [Mr. JOHNSTON] is chairman.

I am not talking about the amendment of the Senator from Ohio as such. I am talking about procedure in the Senate. Senators wait until an appropriation bill shows up, and then Senators who are in favor of the proposal presented are forced to vote against it because they want to see that orderly procedure is adhered to, and that Senate business is conducted in an orderly way.

There is no objection to the amendment on the part of the Senator from Colorado or the committee. I am willing to take the amendment to conference. I will do the best I can to have the conference adopt some wording along the line the Senator from Ohio has suggested.

Mr. LAUSCHE. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. LAUSCHE. Mr. President, has my time expired?

The PRESIDING OFFICER. The Senator from Ohio has 1 minute.

Mr. LAUSCHE. I have 1 minute.

I recognize the strength of the argument made, but I submit to the Senate the time has come when we had better start thinking of ways and means of coping with this problem.

Mr. DIRKSEN. Mr. President, I have the highest admiration and respect for my friend from Ohio. This matter is clearly legislation. It has no place in an appropriation bill. It is affirmative. It gives direction. It is legislative in character. The problem ought to be handled in another way. We seek to do it through hearings, and through the activities of the Appropriations Committee we have carried on a great program in this field. So let us follow the customary and ordinary legislative process, rather than this kind of procedure.

Therefore, Mr. President, I make a point of order against the amendment.

The PRESIDING OFFICER. The Chair rules that under rule XVI, subdivision 4, the amendment is subject to a point of order, and the point of order is sustained.

Mr. JOHNSON of Texas. Mr. President, I understand the Senator from New Jersey [Mr. WILLIAMS] has an amendment, on which he is willing to accept a time limitation.

Mr. BUSH. Mr. President, will the Senator yield to me for a brief moment?

Mr. JOHNSON of Texas. I yield to the Senator from Connecticut.

Mr. BUSH. I should like to say to the Senator from Ohio that I think he has raised an exceedingly important issue. I urge him to prepare legislation to deal with his problem in a way that will be acceptable to the Senate. I ask him to let me join him in sponsorship of such legislation.

Mr. LAUSCHE. I thank the Senator very much.

The PRESIDING OFFICER. The Senator from Texas has the floor.

Mr. JOHNSON of Texas. I yield to the Senator from Ohio.

Mr. LAUSCHE. Mr. President, the Senator from Ohio feels deeply frustrated when he is left with the impression that there is indifference in this body about this problem.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. Mr. President, I yield first to the Senator from Vermont [Mr. AIKEN]. Then I shall yield to the Senator from Colorado.

Mr. AIKEN. Mr. President, I wish to ask the Senator from Washington——

Mr. JOHNSON of Texas. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Texas has the floor. He has yielded to the Senator from Vermont.

Mr. JOHNSON of Texas. I yield to the Senator from Vermont, and ask unanimous consent that he may ask a question of the Senator from Washington.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

Mr. AIKEN. Mr. President, I should like to ask the Senator from Washington about an item under "Construction and Acquisition."

Under "Construction of Public Buildings," there is a planning item for a courthouse in Montpelier, Vt. Is that correct?

Mr. MAGNUSON. Montpelier, Vt., is included under the construction and acquisition portion of the bill, as well as Derby Line, Vt.

Mr. AIKEN. Is the amount of $120,000 provided for sites and expenses for the Montpelier project?

Mr. MAGNUSON. Sites and expenses, $120,000.

Mr. AIKEN. Can the Senator tell us what the amount is for Derby Line, Vt.?

Mr. MAGNUSON. $37,000 for sites and expenses.

Mr. AIKEN. I thank the Senator from Washington.

Mr. MAGNUSON. Mr. President, for the benefit of other Senators, I ask unanimous consent to have printed in the RECORD a tabulation of the sites and expenses and improvement costs in all the States.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Construction and acquisition

	Total		Detail of revised 1961 estimate reflecting proposed GSA amendments	
	In request to House	Revised estimate	Sites and expenses	Improvement cost
1. Construction of public buildings:				
(A) Inside the District of Columbia:				
Federal office building No. 8 (HEW) 2d and D Sts. SW	$23,840,000	$16,244,000		$16,244,000
Federal office building No. 9 (CSC) 19th and E Sts. NW		22,002,100		22,002,100
Federal office building No. 10 (Federal office building) (NASA-FAA) Independence and 6th to 9th Sts. SW	45,090,000	42,583,500		42,583,500
GPO field plant	627,000	627,000	$627,000	
U.S. Court of Claims and Court of Customs and Patent Appeals Bldg.	7,500,000	6,591,000		6,591,000
Total, inside District of Columbia	77,057,000	88,047,600	627,000	87,420,600
(B) Outside the District of Columbia:				
Decatur, Ark., post office, Federal office building	223,000	223,000	223,000	
Camden, Ark., post office, etc.	745,000	683,650		683,650
Bakersfield, Calif., Federal office building	114,000	114,000	114,000	
San Francisco, Calif., courthouse, Federal office building	43,866,000	38,996,900		38,996,900
Hartford, Conn., courthouse, Federal office building	8,984,000	7,951,400		7,951,400
Wallingford, Conn., post office, etc.	263,000	263,000	263,000

3. Unspecified projects	49,000	5,218,000	5,218,000	
Total 1961 estimate	185,000,000	196,132,000	19,500,000	176,632,000

NOTE.—Revised May 6, 1960.

GENERAL SERVICES ADMINISTRATION

Schedule 5. Projects approved by House and Senate Public Works Committees on the basis of reports submitted pursuant to sec. 11(b) of the Public Buildings Act of 1959 for which no funds are specifically provided in 1961 bill

[See explanation in Senate report]

	Total estimated cost	Site and expenses	Improvement cost
Georgia: Winder, post office, Federal office building	$659,000	$104,000	$555,000
Hawaii: Honolulu:			
Post office, courthouse	23,500,000	1,270,000	22,230,000
Quarantine station and clinic	1,887,000	157,000	1,730,000
New Mexico: Albuquerque, post office, courthouse	10,700,000	2,045,000	8,655,000
Ohio: Cleveland, courthouse, Federal office building	47,921,000	5,176,000	42,745,000
South Dakota: Pierre, Federal office building	3,415,000	456,000	2,959,000
Total (6 projects)	88,082,000	9,208,000	78,874,000

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on the question of passage of the bill.

The yeas and nays were ordered.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senator from New Jersey [Mr. WILLIAMS] may offer his amendment, that the Senate have 30 minutes to discuss the amendment, and that the time be equally divided between the Senator from New Jersey [Mr. WILLIAMS] and the Senator from Washington [Mr. MAGNUSON].

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

Mr. ALLOTT and Mr. MUNDT addressed the Chair.

Mr. JOHNSON of Texas. Mr. President, I yield first to the Senator from Colorado, and then I shall yield to the Senator from South Dakota.

Mr. ALLOTT. Mr. President, with regard to the literature, I think the chairman of the committee made the point very clear. What happens when such amendments are presented to the Senate is that Senators are put in the position of voting against some things in which they believe, but which have no place in the appropriation bill.

I say to the Senator from Ohio that my own interest—and I am sure this is true with respect to the interest of the Senator from Washington and of many other Senators—has not been confined to trying to stop the distribution of lewd literature in the last day or the last week. My interest has been evident over a period of years. There have been Supreme Court decisions, troubles in regard to drafting proposed legislation, and troubles in regard to the enforcement of the law. We have had many problems.

I think it is improper to present these amendments to the Senate and to try to attach them to appropriation bills.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to my friend from South Dakota.

Mr. MUNDT. May I have the attention of the Senator from Ohio, please? I am sure the Senator will be able to sleep better tonight when he learns of the fact that the Senate Committee on Government Operations today unanimously reported from the committee a bill dealing with the problem of obscene literature. We had before the committee two measures, one introduced by the distinguished Senator from Pennsylvania [Mr. SCOTT] and one which I introduced. One would provide for a White House conference. My bill would provide for a continuing commission to make a study of this problem and make recommendations effectively to deal with the problem across the board. The bill was unanimously reported. The Senator may be assured that we will be given an opportunity to deal with this problem in the present session of Congress.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. LAUSCHE. In closing my remarks, I was willing to present my argument in 5 minutes, but though I took such little time, while I was speaking my colleagues were yelling "Vote! Vote!" I do not think that is worthy conduct.

Mr. MUNDT. Mr. President, I join the Senator from Ohio in expressing the hope that we can all vote upon the measure before the session of Congress adjourns. The bill relating to obscene literature has been reported, and it will be upon the calendar before the end of this week.

The PRESIDING OFFICER. Does the Senator from Texas yield the floor?

Mr. JOHNSON of Texas. Mr. President, I yield the floor.

Mr. WILLIAMS of New Jersey. Mr. President, for myself and the Senator from Rhode Island [Mr. PASTORE] I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The CHIEF CLERK. On page 28, line 19, it is proposed to strike out "$5,000,000" and insert in lieu thereof "$50,000,000".

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. JOHNSON of Texas. Does the Senator from New Jersey desire the yeas and nays on his amendment?

Mr. WILLIAMS of New Jersey. Yes.

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. WILLIAMS of New Jersey. Mr. President, the amendment I have offered would raise from $5 million to $50 million the funds for the program of direct loans to private nonprofit groups for housing for our elderly citizens. I was glad to accept the limitation of time, because the Senate has already very forcefully demonstrated that it recognizes the need for this sort of program.

Last year, in recognition of the fact that those citizens in this country to whom we owe the most are getting the least, we authorized $50 million for a loan program for housing our senior citizens. This year the housing bill, as passed by the Senate, raised the authorization from $50 million for the revolving loan fund to $75 million. Notwithstanding the authorization, appropriations were not provided last year to implement the program.

This year the House passed and the Senate committee proposes $5 million, describing this as money to be used for a pilot project. I respectfully suggest that a pilot project of study and development is not needed. We know the need. We have demonstrated our recognition of these needs in many ways. The RECORD is replete with the recognition that those who have the lowest incomes, our older folks, simply do not have the money to pay the higher rents which are necessary when the housing is developed under the regular commercial interest rates.

This program, if put into operation, would provide housing with monthly payments nearly $20 less than would be possible with conventional financing.

For example, under FHA financing, a $10,000, 40-year mortgage would result in monthly payments of $54.80. Housing under this direct loan program would permit private nonprofit corporations to provide comparable facilities for $36.50 a month, or $18.30 less than under FHA.

The FHA program which we have for senior citizens is limping along because the interest rates which are charged produce rents which are out of reach for millions and millions of our older citizens.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the letter which was addressed to the Committee on Appropriations by members of the Subcommittee on Problems of the Aged and Aging, the Senator from Michigan [Mr. MCNAMARA], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Pennsylvania [Mr. CLARK], and the Senator from West Virginia [Mr. RANDOLPH]. It vividly documents the need for the amendment I am proposing.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 3, 1960.

Hon. WARREN G. MAGNUSON,
Chairman, Independent Offices Subcommittee, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: A major unmet need of the elderly is the provision of safe, sanitary and congenial housing at a rental which older persons can afford. This conclusion was reached by the Senate Subcommittee on Problems of the Aged and Aging, of which the undersigned are members, after extensive hearings in Washington and in seven cities across the country. National experts in the field of aging, local administrators working with older persons in their home communities, and hundreds of older citizens themselves were heard. The subcommittee also

conducted extensive staff studies and made personal visits to the homes of older persons: In roominghouse areas, in homes for the aged, in public housing developments, and in privately owned facilities. Everywhere the conclusion was the same. The retired aged of the Nation have common problems which include low income, a need for independent living, and meaningful social activity to avoid loneliness and frustration.

As a result of these findings, the subcommittee recommended that the Congress take action, in this session, to appropriate funds authorized by the direct loan program (sec. 202, Housing Act of 1959) to assist private, nonprofit groups to provide housing and related facilities for the elderly. After seeing the nature of the problem at first hand in the course of a year's study, the subcommittee felt that the $50 million authorization, which as not even appropriated last year, is a negligible revolving fund in relation to the need. However, it would be helpful as a stimulating demonstration. The subcommittee recommended that the authorization be raised to $100 million and that this amount should actually be appropriated for use in fiscal year 1960. It called upon the Federal agencies to act quickly on this program.

The undersigned members of the subcommittee strongly urge that the Committee on Appropriations recommend appropriation of the full $50 million authorization this year as a significant start to meet the housing requirements of many of America's low-income senior citizens.

The subcommittee invites your attention to the following:

1. There are now 16 million people over the age of 65 and in just 20 years there will be 24 million. Even more significant is the fact of a rapidly growing number of those over the age of 75. There are now almost 6 million over 75 and in 20 years there will be close to 9 million over 75, the majority of whom will be women and a very large number of them will be single or widowed. One of every three, 60–64, has a parent or close relative to be concerned about.

2. Half the couples over the age of 65 have less than $2,500 a year in income. Six million people are thus below the minimum standard of living for a couple in a city today. In addition, 2 million single, or widowed persons, have less than $1,500 a year in income. In total, there are approximately 8 million people over the age of 65 today who cannot afford decent housing and still obtain proper nutrition, adequate medical care or necessary recreation.

3. The average benefit for a person presently on social security is $72 a month. The average benefit for a couple is $120 a month. An aged widow now receiving social security must subsist on an average of $56 per month.

4. In 1959, two out of every five spending units whose head was over 65 had liquid assets of $200 or less. Two out of three had less than $2,000 in liquid assets to handle emergencies or cover daily living expenses.

5. Many elderly have health problems which create special housing needs. Although the number of people over 65 is 8.9 percent of the population, they have 40 percent of all cases of heart disease. Eight out of ten of the elderly have one or more chronic conditions as reported by the National Health Survey. They have approximately 55 percent of all the chronic conditions which limit mobility. But the millions of older citizens who no longer enjoy robust health "neither want or need the full-time attention of an institution."

6. They often own and live in houses that are too old and too big for them, or rent single rooms too small for them in roominghouses.

7. A higher percentage of older persons are found in slums, either because urban blight has covered a familiar neighborhood or because the low incomes of the elderly prohibit better housing. Slum clearance activities in turn produce other hardships as older people are forced to vacate the only housing they can afford.

As we all know, the mere citation of statistics hardly begins to portray the urgency of the need. Some illustrations from the testimony of the subcommittee may be helpful to the Committee on Appropriations in considering this matter. In its visits, the members of the subcommittee talked to an aged widow who lives in a roominghouse area. She pointed out that she and the other elderly tenants in the building were virtually homebound. She said:

"We are free to go out in the daytime, but can't even sit on the benches in the sun because of the people who are drinking, and it's dangerous for us to go out of our rooms in the evening because of the hoodlums who are around. Even the doctor won't come in the evening. He turns down calls saying that it isn't safe for a well-dressed man to come alone to our neighborhood."

A citizen in a small community told us:

"I think we need a lot of housing—something must be done about it. I know of many cases where several older folks are living in just one room—cooking, eating, sleeping—and when they get sick they have no place to go."

Older persons want to be independent, they want to live alone. A white-haired widow told us:

"Every time a social worker comes to us she tells us to go and live with our children. Our children have their own problems. No man wants his mother-in-law to come and live with him, and no woman wants her husband's mother to join the family because she wants to be mistress of her own home. Therefore, we would rather have a place of our own."

Dr. Russell Lee of the Lee Clinic, San Jose, Calif., testified before the subcommittee in San Francisco on five problems, and he put housing in first place. Dr. Lee said:

"This country can ill afford the perfectly awful facilities that are provided for older people today. Many of these are just human cesspools. They have designed some of the most magnificent facilities in the world for the care of older people and they exist now. Everybody, rich and poor, who gets older should be able to live in a home of that quality. We are amply able to do it with our financial resources."

Mrs. Marjorie Borchardt, president of the Senior Citizens Association of Los Angeles, said, "Housing in the Los Angeles area is the greatest problem." Many senior citizens have to pay more than half of their income to get housing. Describing the living conditions, Mrs. Borchardt testified:

"Many thousands of them live in light housekeeping rooms where they cook, eat, and sleep, and many of them have to use the same toilet and bath facilities. So far, private enterprise in Los Angeles County has not provided the adequate low-rent housing."

We could cite many more examples from our testimony, our letters, and from our personal visits. However, the major point that we wish to emphasize is that the housing produced under the FHA mortgage insurance program generally is so costly that it can hope to serve only a small segment of the elderly housing need and too often the least urgent segment. An effective, bold program must be undertaken to provide housing for the elderly at a rental that millions of them can afford, particularly private rental housing.

Congress recognized the necessity for expanding Federal action to meet this national problem. The Housing Act of 1959, which was finally passed after two Presidential vetoes, retained the $50 million direct loan provision, included in the two earlier bills. Nevertheless, the President did not request an appropriation for this program in his fiscal 1961 budget. The House Appropriations Committee has recommended that only $5 million be appropriated for the coming fiscal year on the grounds that only a pilot program should be initiated at this time. This recommendation ignores the statistical and human data gathered by the subcommittee showing the extent and urgency of the need. In addition, various welfare, labor, and religious groups already have plans under way for construction of special housing facilities which are being held up by the lack of capital at reasonable interest rates. (See following letter as example.) There is an immediate necessity for carrying out the $50 million direct loan program without delay.

To illustrate the potential benefits of the direct loan program and the relatively low rate of interest it produces: At the present time the rate of interest applicable to the direct loan program is 3⅛ percent. This represents a cost of $3.65 per month for every $1,000 of a mortgage over a 40-year period. Under the regular FHA mortgage guarantees of 5¾ percent, the cost would be $5.48 per $1,000 per month over a 40-year period. Thus, on a $10,000 mortgage there would be a saving to the individual in the rent that he pays of $18.30 per month. For millions of senior Americans this sum represents the difference between dignified, healthful living and a demeaning slum existence.

The difficulties involved under present high interest costs were portrayed eloquently by Monsignor W. F. Suedkamp, secretary of Catholic Charities of the Archdiocese of Detroit. In testifying on the experience of the Carmel Hall project in Detroit, he indicated that the total debt service on Carmel Hall, if it were mortgaged today, would be a 7¼ percent per $1,000 for each year on the unpaid balance. This was made up of interest at 5¼ percent, amortization expenses of 1½ percent, and FHA insurance at one-half percent. He stated:

"It does not solve the low cost housing problems. The debt service charge is so high that if a nonprofit organization was to borrow money to build housing for the aged, they would have to charge exorbitant costs to live in a newly created facility."

He added:

"I think the solution is a direct lending program from the Federal Government similar to the one used in college dormitory programs."

In his testimony before the Subcommittee on Housing of the Senate Committee on Banking and Currency in Washington, on May 17, Monsignor Suedkamp described his pioneering and nationally renowned work at the Kundig Center. Here 80 persons who might otherwise have been in public institutions continue to live in the community in the main stream of life without being public charges. They pay their own way; the maximum charge is $75 a month covering room, board, social and medical needs. Their parish facilities provide a centralized living room and dining room, giving rise to what is often called a campus residency program for low income, not completely independent elderly right in the community. Monsignor Suedkamp indicated that if the direct loan funds were actually available, the Kundig Center could replace its old wornout buildings and expand its facilities.

Another witness, Mr. Martin Fine, vice-chairman of the Miami Housing Authority and of the Governor's Advisory Committee on the Aged in Florida, testified that he had studied the applications of 300 people for low rental housing. Seventy-six percent of these people had an average monthly income of $84.35. They were living in substandard rooms with high rents or doubled up with

relatives or friends. Among the other applicants, 7 percent lived in trailers, 5 percent were facing eviction, and 4 percent required first floor accommodations for health reasons. He reported that there are now 600 applications for a 64-unit low income project in Miami. Work on other projects for the elderly could be undertaken immediately under a low interest direct loan program.

While there is no single solution to the housing needs of the elderly, the problem clearly is now of such magnitude that substantial action must be taken at this session on the direct loan program. The Congress can inspire a great nationwide effort on behalf of the poorly housed aged and solve an increasingly critical problem for many aged Americans through the appropriation of the $50 million authorized in the direct loan program.

Respectfully,

PAT MCNAMARA,
Chairman.
JOHN KENNEDY.
JOSEPH CLARK.
JENNINGS RANDOLPH.

EDINA COVENANT CHURCH,
Edina, Minn., April 29, 1960.

Senator PATRICK V. MCNAMARA,
Senate Office Building, Washington, D.C.

DEAR SENATOR MCNAMARA: In a recent conference with the Reverend John M. Mason, who is head of the social welfare department of the Evangelical Lutheran Church (now the American Lutheran Church), we have learned of the direct Federal loans for housing the elderly, a bill which was recently passed by Congress. This is to be made available to nonprofit organizations, and is explained briefly in a "Summary of the Housing Act of 1959," pages 4 and 5, copy of which I have in my possession.

We are planning to build a 40-bed home for the elderly (or nursing home), just as soon as financing can be arranged. Our organization is the Colonial Acres Homes, Inc., a nonprofit, nondenominational home, of which I am to be administrator and chaplain. Members of the corporation are from my church and family who are interested in this type of ministry.

We have purchased a 7-acre site, which has been approved by the village council for such a purpose.

We understand that this bill must be signed by the President before appropriations can be made, presumably sometime in May. We would appreciate having information as to when this might be, as we are very anxious to make formal application for such financing. Would you kindly forward to me any information regarding this that you may have? We would appreciate this very much.

Very sincerely,

A. ELDON PALMQUIST,
Pastor.
EUGENE A. HAGBERG,
Assistant Pastor.

Mr. WILLIAMS of New Jersey. Mr. President, I hope the promise which went out across the land, found in the authorization we passed, will be honored by the acceptance of an amendment which will provide money to put the program into effect, to provide the first real opportunity for the United States to provide decent housing for the millions of low-income elderly families at costs they can afford.

The increase I am proposing here is itself a very modest response to an overwhelming need. It seems to me that this is the least we can do to let the millions of our elderly families know we no longer intend to neglect their very serious needs.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield to the Senator from Minnesota.

Mr. HUMPHREY. Mr. President, it is my pleasure to rise today in support of the amendment of the junior Senator from New Jersey [Mr. WILLIAMS]. Appropriations for the purpose of providing housing for the elderly of our Nation is a must in this session of Congress. Additional public action is necessary to answer this growing problem. Stimulation of construction, taking into account the needs and capabilities of our elderly people, is necessary. The problem of housing the elderly is an acute one—especially among those of low and moderate incomes and those in need of some form of physical assistance.

Today there are 16 million Americans over the age of 65. This represents 9 percent of our population. With each passing year, this total increases, both absolutely and in relation to the total population.

Medical research has resulted in an increase in the length of life of the average person. With this increase in life span have come new and pressing problems which must be faced up to and answered.

The immediate popularity of smaller sized residences has made it less likely that families today have space for their parents in their own apartments and homes. Thus, fewer and fewer older persons live with other people, and more are required to live by themselves. Detailed statistics show that in housing a disproportionate number of our older citizens live in one room, while at the other end of the curve, an approximate number live in units of eight and more rooms. Large houses draw immensely on the strength and incomes of the elderly, both of which are declining in this segment of our population. The conditions under which the elderly live are generally poor. These are, it must be noted, the people who maintain their own homes.

The conditions under which almost one-third of the rest of the older people of our Nation live are certainly not better. Most of them live with their families or friends in a household of limited size or with younger people, resulting in physical or psychological problems for all concerned. Conditions of contemporary urban living are not conducive to a three-generation household.

Older persons have their own special housing needs. Architects and housing constructors have found that less steps, low bathtubs which are easier to get in and out of, handrails, and so on, are essential to the well-being of these people. The physical and social needs of older people have long been ignored. Commendable efforts to correct this situation are being made by private groups and certain States, but much more remains to be done.

Under the Housing Act of 1959, authorization for direct loans to nonprofit groups for rental housing for the elderly was set at $50 million. Under the bill being discussed today, only $5 million would be appropriated to this revolving fund. In the light of the pressing needs of the elderly, this amount is far too little. I am therefore more than happy to lend my support to the amendment of the Senator from New Jersey. I hope it will be agreed to.

Mr. WILLIAMS of New Jersey. I am grateful to the Senator from Minnesota for his remarks.

Mr. MCNAMARA. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield to the Senator from Michigan.

Mr. MCNAMARA. Mr. President, I congratulate the distinguished junior Senator from New Jersey on the amendment which he has offered to appropriate the full authorization for direct loans to nonprofit groups to provide housing for the elderly.

The Senate Subcommittee on Problems of the Aged and Aging received eloquent and urgent testimony in Washington, and in seven cities across the country, from experts, from administrators, and from older persons themselves as to the need for decent housing for senior citizens at a rental which they can afford.

I could quote at great length from our testimony with respect to the low incomes of our senior citizens, the desperate living arrangements which so many of them are forced to accept, and their health problems and the kind of housing which is suitable for them.

But I shall only take the time now to stress as emphatically as I can that after seeing the problem at firsthand I know $50 million for direct loans at low rates of interest is a tiny figure in relation to the need. It is the least that we can do now.

There are many religious and other groups throughout the country which would apply immediately for funds to build suitable, respectable housing for the senior citizens of this country at rentals they could afford if the interest charges were not prohibitive, as is the case today.

The Congress can take a great step forward on behalf of the poorly housed aged of this Nation by appropriating, at this session, at least the $50 million authorized in the Housing Act of 1959.

Mr. WILLIAMS of New Jersey. I thank the Senator from Michigan.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield to the Senator from Rhode Island.

Mr. PASTORE. Mr. President, I am indeed privileged and proud to be a cosponsor of the amendment. I think the committee is to be congratulated for recognizing the principle involved.

I say this most respectfully, Mr. President, the amount of $5 million is a mere mockery compared to the needs of the aged and aging in this country today. After all, we are not appropriating money for public housing as such. All we are seeking to do is to allow the sincere people who are dedicated to the welfare of the aged and aging to borrow money to build houses to accommodate these elderly people in reasonable comfort. We are asking for an interest

rate which is comparable to the interest rate on college housing.

If we recognize the needs, and properly so, of our students attending our colleges, why should we turn our backs on the aged who cannot help themselves? The proposed amendment is an encouragement to people in private industry who will build these homes, and it provides the opportunity to borrow the necessary money at reasonable rates of interest to accommodate aged people.

When we consider the vast and increasing elderly population in this country, $5 million is a meager amount when compared to the need. We desperately need more money, and I urge Senators to pour out their hearts on this amendment, recognize the need, support and vote for it.

Mr. WILLIAMS of New Jersey. I thank the Senator from Rhode Island. I say also that the Subcommittee on the Aged had ample authority and evidence that there are groups throughout the country who are ready to apply now for money under this proposed loan program if we appropriate the money into the revolving fund.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. CLARK. Mr. President, as a member of the Subcommittee on Problems of the Aged and Aging, and as a member of the Subcommittee on Housing of the Banking and Currency Committee, I would like to add my support to the amendment of the Senator from New Jersey, which is cosponsored by the Senator from Rhode Island. Both of those committees have made studies of the problem, and I am confident that their recommendation that this appropriation should come up to the amount of the authorization is sound. I hope the Senate will support the amendment.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. MORSE. I wish to join with the Senator from New Jersey [Mr. WILLIAMS] and the Senator from Rhode Island [Mr. PASTORE] in the arguments made this afternoon. I think they are unanswerable. Last Saturday afternoon I spoke to several thousand elderly people in the Civic Auditorium in San Francisco, Calif., at a conference of the aged, and I wish to report to the sponsors of this amendment that during this conference there was considerable discussion of the problem of finding adequate housing for the aged. A deplorable condition exists in Portland, Oreg., the largest city in my State, with regard to the housing condition of the aged.

A survey has been made, and the survey shows that we are forcing or requiring many of our aged people to live in such conditions that it is a disgrace to us as a free people that we permit such conditions to exist. I hope the chairman of the committee, who I know is one of the strongest supporters we have for the aged and aging of this country, will see fit to take the amendment to conference.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I will be glad to yield to the Senator from Texas, though I promised to yield first to the Senator from Delaware.

Mr. FREAR. Mr. President, I understand that the amendment offered by the Senator from New Jersey provides resources for the building of homes for the aged.

Mr. WILLIAMS of New Jersey. Exactly.

Mr. FREAR. Is it proposed that the loans should be in the form of mortgages?

Mr. WILLIAMS of New Jersey. Loans would be provided to nonprofit groups which, of course, would have the security.

Mr. FREAR. How much is the Senator requesting?

Mr. WILLIAMS of New Jersey. The amendment calls for $50 million to go into a revolving fund.

Mr. FREAR. Is the money to be appropriated on a repayment basis?

Mr. WILLIAMS of New Jersey. On a repayment basis; and I am sure the experience will be the same as it is under the college housing program, where every penny on every loan has been paid back.

Mr. FREAR. I think I must agree with the Senator from Rhode Island that this is a most worthy amendment that the Senator from New Jersey has offered, although perhaps it is not in a very large amount for the number of aged that we have and the deplorable conditions under which they live scattered throughout the United States. However, I must compliment the Senator from New Jersey on a good beginning.

Mr. WILLIAMS of New Jersey. I thank the Senator from Delaware.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I am happy to yield to the Senator from Texas.

Mr. JOHNSON of Texas. Mr. President, I wish to commend the Senator from New Jersey for the active interest he has manifested in this subject ever since he came to the Senate, and, for that matter, I presume, since he was a Member of the House of Representatives. I think this is a very constructive step. In view of the fact that we have $18 billion or $19 billion of loans on housing, $50 million is a mighty small amount for this group of people which represents a large percentage of the population in this country. There is no one in the Senate who is more diligent or more effective in his work for the aged people than is the distinguished chairman of the subcommittee, the Senator from Washington [Mr. MAGNUSON], and I wonder if we could get the chairman's consent to take the amendment to conference, and to fight for it in conference. I ask him if we could not have the committee accept the amendment, waive the yeas and nays, and go on to the passage of the bill.

Mr. MAGNUSON. I should be more than glad to accept the amendment. I wish to put it in the bill. The committee approved a bill authorizing $50 million, and the Director of the Housing Administration, who has been against this proposal, set up some other loan features for so-called elderly housing, so that they would not have to go after this provision. All that has been done, as the Senator from New Jersey has said, in all this time is to provide approximately 4,000 units in the whole country for these people.

So the House of Representatives suggested that we start with $5 million to make a pilot plant study, so that the program could get under way. The House inserted such provision in the bill, which Congress passed.

Mr. Mason appeared before the committee and said, "I want you to take out that provision. I don't believe in it."

The Senator from Washington asked him:

> Senator MAGNUSON. And you say the administration does not believe in that?
>
> Mr. MASON. That is right.
>
> Senator MAGNUSON. Well, who are you working for?
>
> Mr. MASON. Well, we work for both the Congress and the executive branch of Government.

I said, "Congress has passed a law, has it not?"

> Yes; but I do not believe in it.

So I am glad to take the amendment to conference. I think we should. It is well pointed out that the money will be placed in a revolving fund. I can tell the Senate why the provision is not liked. These loans are provided at a lower interest rate than what lenders can receive now, and it is spread over a longer period of time for elderly people. That is why it is not liked.

Mr. WILLIAMS of New Jersey. Will the Senator agree that it is the only practical interest rate at which we will get a housing bill?

Mr. MAGNUSON. I agree.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. JOHNSON of Texas. Will the Senator from New Jersey agree to my suggested procedure?

Mr. WILLIAMS of New Jersey. I agree.

Mr. JOHNSON of Texas. Will the Senator from Washington also agree?

Mr. MAGNUSON. I agree.

Mr. JOHNSON of Texas. Mr. President, I ask that the order for the yeas and nays be vitiated.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the order for the yeas and nays is rescinded.

The question is on the amendment of the Senator from New Jersey. [Putting the question.]

The amendment was agreed to.

Mr. JOHNSON of Texas. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. FULBRIGHT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed,

the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Virginia [Mr. BYRD], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Louisiana [Mr. ELLENDER], the Senator from Tennessee [Mr. GORE], the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon [Mr. LUSK], the Senator from Montana [Mr. MURRAY], the Senator from Virginia [Mr. ROBERTSON], and the Senator from Georgia [Mr. RUSSELL] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska [Mr. BARTLETT], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Louisiana [Mr. ELLENDER], the Senator from Tennessee [Mr. GORE], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon [Mr. LUSK], the Senator from Montana [Mr. MURRAY], the Senator from Missouri [Mr. HENNINGS], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Virginia [Mr. ROBERTSON], and the Senator from Georgia [Mr. RUSSELL] would each vote "Yea."

Mr. KUCHEL. I announce that the Senator from Kansas [Mr. SCHOEPPEL] is absent because of death in his family.

The Senator from Kansas [Mr. CARLSON] and the Senator from North Dakota [Mr. YOUNG] are detained on official business. If present and voting, the Senator from North Dakota [Mr. YOUNG] would vote "yea."

The result was announced—yeas 75, nays 8, as follows:

[No. 253]

YEAS—75

Aiken	Douglas	Johnson, Tex.
Allott	Dworshak	Johnston, S.C.
Anderson	Eastland	Jordan
Beall	Engle	Keating
Bible	Ervin	Kerr
Bridges	Fong	Kuchel
Brunsdale	Frear	Lausche
Bush	Fulbright	Long, Hawaii
Byrd, W. Va.	Green	Long, La.
Cannon	Gruening	McCarthy
Capehart	Hart	McClellan
Carroll	Hartke	McGee
Case, N.J.	Hickenlooper	McNamara
Case, S. Dak.	Hill	Magnuson
Church	Holland	Mansfield
Clark	Hruska	Martin
Cooper	Humphrey	Monroney
Dirksen	Jackson	Morse
Dodd	Javits	Morton
Moss	Randolph	Stennis
Mundt	Saltonstall	Symington
Muskie	Scott	Talmadge
Pastore	Smathers	Wiley
Prouty	Smith	Williams, N.J.
Proxmire	Sparkman	Yarborough

NAYS—8

Bennett	Curtis	Williams, Del.
Butler	Goldwater	Young, Ohio
Cotton	Thurmond	

NOT VOTING—17

Bartlett	Hayden	O'Mahoney
Byrd, Va.	Hennings	Robertson
Carlson	Kefauver	Russell
Chavez	Kennedy	Schoeppel
Ellender	Lusk	Young, N. Dak.
Gore	Murray	

So the bill (H.R. 11776) was passed.

Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. MAGNUSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MAGNUSON. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. CANNON in the chair) appointed Mr. MAGNUSON, Mr. HILL, Mr. ELLENDER, Mr. ROBERTSON, Mr. HOLLAND, Mr. ANDERSON, Mr. ALLOTT, Mr. SALTONSTALL, and Mr. YOUNG of North Dakota conferees on the part of the Senate.

MESSAGE FROM THE HOUSE— ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

S. 2822. An act for the relief of Low Wing Quey (Kwai);

S. 2886. An act for the relief of Nikolija Lazic;

S. 2918. An act for the relief of Boris Priestley;

S. 2942. An act for the relief of Eugene Storme;

S. 2964. An act for the relief of Kang Sun Ok;

S. 2991. An act for the relief of Ah See Lee Chin;

S. 3016. An act for the relief of Walter F. Beecroft;

S. 3038. An act for the relief of Jung Hi Pak;

S. 3049. An act for the relief of Oh Chun Soon;

S. 3091. An act for the relief of Pasquale Mira;

S. 3130. An act for the relief of Anne-Marie Stehlin; and

S. 3235. An act for the relief of Cecilia Rubio.

GENERAL GOVERNMENT MATTERS APPROPRIATIONS, 1961

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1673, H.R. 11389, the general Government matters appropriation bill.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 11389) making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1961, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill which had been reported from the Committee on Appropriations with amendments.

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on the passage of the bill.

The yeas and nays were ordered.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I announce that the Senate will still have for consideration the State, Justice, and judiciary appropriation bill; the civil functions appropriation bill; the military construction appropriation bill. Do I correctly understand that this bill was marked up this afternoon?

Mr. MAGNUSON. Yes.

Mr. JOHNSON of Texas. There will also be the mutual security appropriation bill, and a supplemental appropriation bill. That makes five appropriation bills to be considered in the next 2 weeks.

JOHN R. BARKER

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside and that the Senate proceed to the consideration of Calendar No. 1670, S. 2388, a bill relating to the separation and retirement of John R. Barker.

The bill is noncontroversial. One of the most beloved, able, and respected Members of this body is desirous of having the bill passed today, because he is leaving on an official mission of the Senate. The leadership is always glad to cooperate with the distinguished junior Senator from Iowa [Mr. MARTIN], because he has always cooperated with the leadership.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

The bill will be stated by title.

The LEGISLATIVE CLERK. The bill (S. 2388) relating to the separation and retirement of John R. Barker.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

Mr. WILLIAMS of Delaware. Mr. President, may we have an explanation of the bill?

The PRESIDING OFFICER. Without objection, the Senate will proceed to consider the bill.

Mr. WILLIAMS of Delaware. Mr. President, may we have an explanation of the bill?

The PRESIDING OFFICER. Without objection, the bill is passed.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. MORSE. Mr. President, a point of order. The Senator from Delaware was on his feet, asking for an explanation of the bill.

Mr. WILLIAMS of Delaware. Mr. President, I asked for an explanation of the bill. I thought we might have an explanation before its passage. I think the Senate should reconsider the vote by which the bill was passed.

Mr. JOHNSON of Texas. Yes.

The PRESIDING OFFICER. Without objection, the vote by which the bill was passed will be reconsidered.

Mr. JOHNSON of Texas. Mr. President, an explanation of the bill is as follows:

Mr. Barker was employed in the postal service from 1914 to 1918, as a rural carrier; from 1920 to 1922, as a substitute carrier; from 1922 to 1934, as postmaster; from 1934 to 1936, as substitute clerk. He was removed from duty on July 18, 1936, for alleged political activities. He was charged with transporting persons to the polls on election day and with being elected a delegate to a county political convention.

With respect to the first charge, the facts are that Mr. Barker did transport members of his own family to the polls and in addition five other elderly folks who were unable to walk and who had requested transportation of him. As to the second charge, Mr. Barker has stated:

> I did not attend the caucus which selected the delegates and after the caucus I did not attend the convention to which elected.

The removal action in his case occurred prior to the enactment of the Hatch Political Activity Act of 1939. Both the Post Office Department and the Civil Service Commission state that Mr. Barker's removal "for political activity" would not be warranted under that act as it stands today so certainly was not justified prior to its enactment.

Correction of the reason for his removal will carry with it entitlement to the benefits of the civil service retirement law which would otherwise be denied to him. On the basis of his verified service, enactment of this measure would accord Mr. Barker an annuity of $54 per month commencing the first of the month in which the bill is enacted. The Civil Service Commission indicates that he may have some additional creditable service which if true would increase his annuity accordingly.

I do not have any more information on which I can plead guilty to the Senator from Delaware. When I was asked to have the bill considered, I thought the beloved Senator from Iowa [Mr. MARTIN] would be here to explain it. But he must leave tonight on an official mission at the request of the Senate. Today is the last day he will be in attendance in the Senate. I thought the request was very reasonable. I was advised there was no opposition to the bill.

No Member of the Senate has worked more faithfully and courteously with the leadership, both in the Senate and in committee, than the distinguished Senator from Iowa [Mr. MARTIN].

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Civil Service Retirement Act, John R. Barker, who served as an employee of the Post Office Department from August 15, 1920, to July 19, 1936, shall be considered to have been involuntarily separated from such service for reasons other than removal for cause. Notwithstanding any other provision of law, the benefits payable pursuant to this Act shall be paid from the civil-service retirement and disability fund. No annuity shall be paid, by reason of the enactment of this Act, for any period prior to the first day of the month in which it is enacted.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. ALLOTT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MRS. BETTY L. FONK

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside and that the Senate proceed to the consideration of Calendar No. 1616, H.R. 4964.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 4964) for the relief of Mrs. Betty L. Fonk.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. JOHNSON of Texas. Mr. President, the purpose of the proposed legislation is to pay to Mrs. Betty L. Fonk, of Bloomington, Ind., the sum of $5,000 as compensation for personal injuries and expenses resulting from an accident involving a United States Army vehicle in Frankfurt-am-Main, Germany, on June 22, 1955.

Mrs. Betty L. Fonk, the dependent wife of Sgt. Alvin Fonk of the United States Army and then herself a civilian employee of the Army, was struck and injured by a United States vehicle on June 22, 1955, at Frankfurt, Germany. The vehicle was assigned to the United States Army and Air Force European exchange system and was driven by an employee of that organization in the scope of his employment. The report of the Department of the Army to the committee on the bill indicates that subsequent investigation established that the proximate cause of the accident was the negligence of the driver of the vehicle.

The measure was reported unanimously by the Committee on the Judiciary. It was introduced at the request of one of the most able, respected, and popular Members of this body, the distinguished Senator from Indiana [Mr. HARTKE].

The PRESIDING OFFICER. The question is on the third reading and passage of the bill.

The bill was ordered to a third reading, read the third time, and passed.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to consider executive business.

Mr. JOHNSON of Texas. Mr. President, I give notice that, if it is agreeable to other Senators, we may proceed to the nominations in the Civil Aeronautics Board, the Federal Maritime Board, and the Federal Communications Commission before the Senate adjourns this evening.

Meanwhile, I ask that the Executive Calendar be called beginning with routine diplomatic and Foreign Service nominations.

ROUTINE DIPLOMATIC AND FOREIGN SERVICE NOMINATIONS

The PRESIDING OFFICER. The clerk will state the nominations in the routine diplomatic and Foreign Service.

The legislative clerk proceeded to read sundry nominations in the diplomatic and Foreign Service.

Mr. JOHNSON of Texas. Mr. President, I ask that the nominations in the routine diplomatic and Foreign Service administration be confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations are confirmed en bloc.

UNITED NATIONS

The legislative clerk proceeded to read sundry nominations to the United Nations.

Mr. JOHNSON of Texas. Mr. President, I ask that the nominations to the United Nations be confirmed en bloc; but before they are confirmed, I call attention to the fact that two most distinguished Members of this body, highly experienced in the field of foreign relations, the beloved Senator from Vermont [Mr. AIKEN] and the respected Senator from Oregon [Mr. MORSE], are on the list; as also is our friend, Francis O. Wilcox, who served so intelligently on the staff of the committee on Foreign Relations before he was advanced to the position of Assistant Secretary of State.

The PRESIDING OFFICER. Without objection, the nominations to the United Nations are confirmed en bloc.

GOVERNOR OF GUAM

The legislative clerk read the nomination of Joseph Flores, to be Governor of Guam.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

NOMINATIONS TO THE CIVIL AERONAUTICS BOARD, FEDERAL MARITIME BOARD, AND FEDERAL COMMUNICATIONS COMMISSION

Mr. MAGNUSON. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. MAGNUSON. With respect to the nominations to the Civil Aeronautics Board, the Federal Maritime Board, and the Federal Communications Commission, reports were filed only last Monday. Although I have no objection to their consideration now, I understand that members of the Committee on Interstate and Foreign Commerce wish to make some remarks.

Mr. JOHNSON of Texas. If the Senator from Washington will notify the Senators that we desire to consider the nominations, we will take them up this evening, because I am getting inquiries as to why I am delaying them.

Mr. MAGNUSON. But they have not been on the calendar more than a couple of days.

Mr. DIRKSEN. The nomination of Vice Admiral Wilson to the Federal Maritime Board has been on the Executive Calendar for almost 2 weeks.

Mr. JOHNSON of Texas. That nomination was reported on June 10.

Mr. DIRKSEN. Today is June 22.

Mr. JOHNSON of Texas. The nomination of Robert E. Lee to be a member of the Federal Communications was reported on June 15.

Mr. DIRKSEN. Some of the nominations have been here for 10 days, some for 12 days.

Mr. MAGNUSON. Ten days is a very short period of time for nominations to be on the calendar in the Senate.

Mr. DIRKSEN. Mr. President, is there any objection?

Mr. MAGNUSON. No; but I am speaking for some of the members of my committee. Some of them wish to make some remarks.

Mr. JOHNSON of Texas. I am giving notice for the benefit of all.

The Senator from Wisconsin is interested in some of the nominations. Is he ready to proceed?

Mr. PROXMIRE. Yes; at any time.

Mr. JOHNSON of Texas. Very well.

First, let us pass the General Government matters appropriation bill.

Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDING OFFICER (Mr. McGEE in the chair). Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

THE HOUSING RECORD OF THE REPUBLICAN ADMINISTRATION

Mr. SCOTT. Mr. President, recently the Senate passed the 1960 housing bill. I should like to call the attention of my colleagues to the progress in this important field during the past 7½ years, as reported by the senior Senator from Massachusetts [Mr. SALTONSTALL].

The housing record under our Republican administration reveals that more families now own or are buying their homes than at any time in our history. It is of particular significance to note the great progress also made in urban renewal, slum prevention, and better housing for elderly people.

I ask unanimous consent that this fine report be printed at this point in the body of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE HOUSING RECORD OF THE REPUBLICAN ADMINISTRATION, 1953–60—A STATISTICAL REVIEW IN SUMMARY FORM

(By U.S. Senator LEVERETT SALTONSTALL, Republican, of Massachusetts)

More houses built than during any similar period in history—nearly 9 million new dwellings, 25 percent more than in the preceding 7 years.

More people now own their own homes than at any similar period in history—three out of every five American families are homeowners compared to slightly more than one out of two, 10 years ago.

More housing for elderly people, and more done to house elderly people than any similar period in history—more than 20,000 private or public units especially designed for the elderly built or started in the last 3 years.

More housing for college students than any similar period in history—more than 37,000 dormitory units for students, teachers, and nurses in training, financed with loans, compared to 13,000 units before 1953.

More American cities engaged in urban renewal than any similar period in history—436 communities—more than double the previous number—have 750 renewal projects under way—four times as many as before 1953.

More done to help localities plan for sewers, water systems, schools, than any similar period in history—advances made to plan 1,300 public works projects involving a total construction cost of nearly $2 billion.

More cities and metropolitan areas engaged in planning for the future than any similar period in history—with grants made for comprehensive planning in 90 metropolitan areas and urban regions and in 1,140 smaller towns throughout the country.

HOUSING RECORDS BROKEN

During this administration, the Nation has experienced an amazing growth of homeownership—more families now own, or are buying their own homes than ever before, 62 percent—compared to 55 percent in 1950. The number of homes owned by their occupants has risen to more than 30 million in the past decade, an increase of over 30 percent.

Since January 1, 1953, until April 30, 1960, housing records have been broken in all directions, testimony to a dynamic as well as well-ordered, well-balanced economy.

Since the beginning of 1953, the number of homes and other dwelling units (apartments, etc.) constructed or started is close to 9 million—compared to 7,100,000 in the 7 postwar years before 1953.

Value of this construction since the beginning of 1953 totals $133 billion, nearly double the dollar value of new homebuilding in the preceding years. Another $45.5 billion has been spent on home maintenance and repairs.

The Federal Housing Administration alone insured more than 2¼ million mortgages on homes to a value of $24.3 billion and, in addition, insured more than 9 million FHA property improvement loans.

Turning to the field of federally assisted low-rent housing, the number of (PHA) units started was 127,000.

The administration's anti-inflation policies have paid off in housing. Construction costs in the last 7 years have risen only 16 percent, compared to 66 percent in the preceding 7 years.

During the 7 years of the Republican administration, construction was started on well over 1 million new dwelling units annually, reaching the near record of 1,553,000 units in 1958 under the revised, more complete census system of reporting.

NINETEEN HUNDRED AND FIFTY-NINE A RECORD HOUSING YEAR

These figures cover a 7-year period. But how about the recent past? 1959 was a big year for housing.

More money—$23⅓ billion—was spent on home construction than ever previously recorded, which does not include a further $7 billion spent for maintenance and repairs.

The Federal Housing Administration in 1959 wrote insurance on 549,600 housing units—the highest number for any year since FHA was established.

HOUSING FOR THE ELDERLY

One of the proudest achievements of the present administration is that it inaugurated the first Federal measures to help elderly people to get good housing.

In his state of the Union message in 1956, President Eisenhower asked the Congress to revise Federal housing laws "to meet the needs of the growing number of older people." From his proposals came a three-part program written into the Housing Act of that year.

One part of the program that is having spectacular acceptance relates to the provision of private rental housing for elderly persons by nonprofit groups such as churches, labor unions, fraternal groups, and similar associations.

As a result of President Eisenhower's recommendations, and the implementing action by the Congress in the Housing Act of 1956, such nonprofit groups have been able to obtain attractive FHA-insured mortgages—and applications have been rolling in.

In 1959, the administration carried the program a step further by sponsoring legislation to facilitate building FHA housing for elderly rental projects on a profit basis as well as the previous nonprofit basis.

As a result of these two developments, we find beautiful projects being constructed in all parts of the country.

Consider this abbreviated list of projects now in being:

Royal Oaks Manor (Presbyterian), California; Carmel Hall (Roman Catholic), Detroit, Mich.; Michigan Christian Home Association, Grand Rapids, Mich.; OEA Senior Citizens, Omaha, Nebr.; Bethel Methodist Home, Ossining, N.Y.; Evangelical Lutheran Good Samaritan Society Home, Hobart, Okla.; St. James House of Bayton (Episcopal), Bayton, Tex.; Douglas Gardens (Jewish), Miami, Fla.; Vine Court, Church Homes, Inc., Hartford, Conn.

As of April 30, 1960, more than 71 projects with nearly 9,000 living units were either completed or on the road to completion. Meanwhile, scores more were moving up into the pipeline and the number of applications coming in can be counted in the hundreds.

However, this is only one part of the program.

Other changes were made. For example, low rent public housing projects were opened to single elderly persons, 65 or older. Ever since 1937 single persons had been denied admission to such projects.

Further, elderly families were given priority of admission; and the Public Housing Administration was authorized to help local authorities build or remodel dwellings specifically designed for the elderly.

As a result, more than 12,000 units of public housing designed especially for the aging have been added to the public housing supply in 3 years—in addition to the housing of many thousands of elderly families in standard units.

NURSING HOMES

In 1959, the administration sponsored legislation to make FHA insurance available for the first time for nursing homes.

This proposal had been long in preparation. Shortly after its passage, hundreds of applications were being received by Housing Agency field offices. Unofficial sources report 2,000 or more interested sponsors hope to use the program aids to expand skilled nursing care throughout the country to provide care for the aging and for other invalid or semi-invalid persons.

URBAN RENEWAL

Before the Eisenhower administration, the term "urban renewal" was unknown. It is a new concept for solving the longstanding problem of urban deterioration and decay of our urban areas through combined use of public and private efforts in the urban community. This is not just clearing slums—it is also restoring and preserving good areas and preventing new slums from developing.

More than 1,000 towns and cities throughout the country now have comprehensive local plans, known as workable programs for community improvement, to solve their major housing, planning, traffic, and land use problems through a coordinated attack. No such total community programs existed before 1954.

At the President's recommendation, the Congress has authorized since 1953 $1½ billion in Federal grant funds to aid towns and cities to redevelop and rehabilitate their slum and blighted areas—three times as much as was authorized before 1953.

Under the present administration, the number of towns and cities carrying out renewal projects has more than doubled, totaling 436, and the number of projects is more than 750—four times the number initiated before 1953.

SLUM PREVENTION AS WELL AS CURE

Federal assistance on these earlier projects, moreover, was provided only for clearing slums already in existence.

There were no provisions for preventing slums from coming into existence. So the battle was a losing one from the beginning. It was as if we had built a hospital filled entirely with operating rooms, but with no place for patients to get well and forestall an operation.

A Republican administration and Congress in the historic Housing Act of 1954 initiated an entirely new approach to the slum blight problem—the total approach.

This total approach included the following:

Special provisions for mortgage insurance under FHA.

Section 220 for new building or rehabilitation in urban renewal areas.

Special provisions for mortgage insurance under FHA section 221 to provide low cost housing for families displaced from urban renewal areas.

Special grants for urban planning assistance.

Special grants for demonstration projects that would enlarge our fund of knowledge on urban renewal problems.

Since the problems connected with slum blight are all-inclusive, the approach to them to be effective must also be all-inclusive. Any integrated campaign must be based on a "workable program" initiated by the local community. Such a program should cover all aspects leading to urban decay—the enforcement of local housing and building codes, the rehabilitation of housing and neighborhoods, the upgrading of municipal services, the effective planning for the orderly growth and development of the community.

Communities adopt a workable program as a condition of receiving Federal financial assistance in the urban renewal field.

NEW SOLUTIONS FOR OLD PROBLEMS

Among studies made during 1959 was a survey in depth of the relocation housing program (sec. 221), designed to provide privately built housing for moderate and low income families displaced from their homes by urban renewal, code enforcement, and other forms of public action.

Since its inception in 1954, a total of 105,378 units has been certified as eligible for section 221 FHA mortgage insurance; in 1959 the number certified was 17,915. No such relocation housing assistance existed before 1954.

A search for solutions of another type took place in 18 locations throughout the country by way of the "test tube" demonstration grant program. No such grants were authorized before 1954.

The purpose of this program is to create practical "know-how" in the field of urban renewal. Through assistance given to carefully selected pilot projects, its aim is to enlarge our fund of knowledge and produce practical information of use to cities everywhere.

SUBURBAN SPRAWL

Another farsighted program introduced by this Administration in 1954 is the planning program designed to help metropolitan areas combat the new phenomenon in American life known as "suburban sprawl."

This was the first such constructive Federal legislation of its kind, and at the end of 1959 there were 94 urban and metropolitan areas receiving planning assistance.

In addition, through another provision of the 1954 Housing Act, more than 1,000 small municipalities were also receiving assistance.

THE TREATY WITH JAPAN—STATEMENT BY SENATOR MORSE

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a radio statement I made on the Japanese treaty.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RADIO BROADCAST OF SENATOR WAYNE MORSE, JUNE 22, 1960

Fellow Oregonians, as a member of the Senate Foreign Relations Committee, it has been my duty to study carefully the recent events in Japan which led to the cancellation of the President's visit to that country.

Actually, the riots and demonstrations which have been so widely publicized were not aimed at the President himself, but at the mutual defense treaty negotiated by our State Department and the Japanese administration headed by Premier Kishi.

The Senate Foreign Relations Committee has had this treaty under consideration for some time. On the face of it, and viewed from the time several months ago when it was negotiated, it would be hard to see why anyone in Japan would be opposed to it.

The treaty puts an end to the American status as conqueror of Japan in World War II. Unfortunately, this important aspect of it has been almost ignored both in Japan and in the United States. But under the treaty which is presently in effect and which remains in effect until the new one is ratified, the United States keeps military bases in Japan not so much because of the free choice of that nation, but because we are occupying Japan as a result of her defeat in World War II. That is where our present right in Japan comes from—the right of conquest.

As a matter of fact, under the existing treaty, our troops in Japan even have the power to put down riots and insurrections of the very kind the world has witnessed there in the last month. Of course, we have not exercised that power, because to do so would return Japan to the status of an American military satellite in much the way Hungary was kept under the Russian thumb in 1956.

The new treaty puts an end, however, even to the right to use American forces in that way. It puts an end, also, to the earlier requirement that Japan must depend upon the United States for its military defense, a requirement we had imposed because we wanted to root out Japanese militarism once and for all.

What we are ready to do now is to restore Japan to full sovereignty and equality among the nations of the world. It is quite true that we want to continue our military bases in that country. We also want to continue stationing troops there. But we are now ready to enter into an agreement for this purpose which will be an alliance between equals. The rights we would have in Japan under it would be the same as the rights we have in Western European countries, not rights gained by conquest but by mutual agreement.

That is why I say that taken alone, it would be hard to see why anyone in Japan should object to this treaty, particularly since the old system remains until the new one is ratified.

But something important happened between the time the treaty was negotiated in January and the time for its ratification. That something was the U–2 spy plane episode.

For the first time, the nations around the perimeter of the Communist world, nations whose territory we wish to use for American military outposts, learned that America was using them for purposes which were unknown and unsuspected by the people of those nations, and possibly even by their governments. They were being used for a type of nonviolent invasion of Communist territory.

Beyond that, the Soviet Union threatened immediate retaliation against those bases if they were ever used that way again. This threat put every country with which we have a military treaty right on the spot with its own people. It was a powerful blow in the war of nerves. America has been telling these nations which lie on the edges of the Communist world that they are in danger of being overrun by Communist aggression, and that they need our help in their defense. Now, the Communists were telling them that they are indeed in danger and will be the first to feel the missiles and bombs if they continue letting themselves be used as American military outposts.

This turn of events had particular impact in Japan. Since the end of World War II, American occupation of that country has had for a major objective the elimination of the warlike militaristic class in Japan which embarked on the conquest of Asia in the 1930's and 1940's.

We wrote into Japan's new Constitution a renunciation of war as a means of gaining a foreign-policy objective. We literally drummed into the Japanese people the idea that war was wrong, that it was futile, and that Japan should renounce it.

Reports to our Foreign Relations Committee indicate that we were remarkably successful in that educational campaign. Public opinion in Japan, and I do not mean opinion whipped up by Communist demonstrations, but opinion generally is highly pacifistic.

After the U–2 spy flight, therefore, this new treaty no longer looked like an advance for the Japanese, so much as it looked like a 10-year commitment to assume the risks of American actions taken in our own defense. Of course, we say, with truth, that what we do in our own defense is also in defense of the entire free world. But Japan and these other countries have been threatened with taking the consequences. That puts an entirely different light on the treaty, so far as they are concerned.

Of course, it was most unfortunate that ratification of the treaty coincided with the President's plans to visit Japan. Had the full extent of the opposition to the treaty been realized, his visit should have been planned later, or not at all. Having to cancel it at the very last minute gave the appearance of a great diplomatic setback, and it is being so interpreted all over the world.

But the treaty itself has been ratified by the constitutional processes of both parties, and has become effective. In supporting and voting for the treaty in the Senate, I pointed out, however, that it leaves much undone and unsettled. In the first place, many powerful groups in Japan are already urging that it be renegotiated. The Government headed by Premier Kishi is an ultraconservative group within a conservative party in Japan. It was a rightwing group with which we have been dealing. There is much opposition within his own party to Kishi, and it did the United States and our new treaty no good to be associated with his domestic liabilities. It is doubtful that he will remain in office much longer, and, under a new government, we may well be faced with demands that the treaty be revised. So there is that reservation as to its reliability to keep in mind.

A second reservation to keep in mind is the fact that it is simply one more element in our military containment policy. It deals with a link in our military defense perimeter around the Communist world. It is purely military. It makes no specific provision for the peaceful handling of disputes which might lead to war. It says nothing about trade or cultural relations with this most powerful non-Communist nation in all of Asia. Being purely military, and depending upon leadership in Japan which may not long be in power, it is a treaty which leans upon a weak reed, in my opinion, and should not be burdened with too much confidence that it will promote American interests in Asia.

A third reservation I have about it is the fact that it is bilateral. It involves only ourselves and Japan, and outlines what this country would do in case of an attack upon Japan. But what about all the other nations which would be affected by an attack upon Japan? What about our other allies in Asia, whose vital interests would be hurt by an attack upon Japan? There is no mention of them in the treaty. The only obligation is upon ourselves.

Of course, toward the close of World War II, our allies passed to us their power of attorney, in effect, and gave the United States the right to speak and act for them in all matters affecting the occupation of Japan. We have assumed their functions to the point where we do not even know for certain what their views and reactions are to this bilateral military treaty we have entered into with Japan.

A fourth reservation regarding it is the fact that it makes no mention of the status of Formosa. Never, in any negotiations we have conducted with Japan, have we touched upon the sovereignty of Formosa. Keep in mind that Japan was the last nation to hold formal sovereignty over Formosa. As a practical matter, it is now the home of the refugee government of China. But its status and its future are by no means settled. I continue to believe that should be done by international conference, preferably through the United Nations. Before long, Red China will be a nuclear power. When that day arrives, we will be in a very precarious position if we are still assuming the unilateral task of defending an area whose sovereignty has never been established by international law, but which territory certainly does not belong to the United States.

Finally, I regret that the treaty does not bring the United Nations directly into situations that could lead to war in the Far East. It recognizes the general responsibility of the U.N. but does not provide that the U.N. shall have direct participation in a dispute which threatens to bring about war.

In my opinion, these repetitious mutual defense treaties—and we are now involved in them with a total of 46 countries—do not promote peace. They are war treaties, not peace treaties. They make no provision for avoiding war, they only assure that if another country gets involved in war, we will come in on their side. I would prefer to see these treaties include sections outlining the steps that would be taken to prevent war, before they come to the part about the United States coming to the defense of someone else.

GENERAL GOVERNMENT MATTERS APPROPRIATIONS, 1961

The Senate resumed the consideration of the bill (H.R. 11389) making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that during the further consideration of this bill there be allowed not to exceed 10 minutes on any amendment and not to exceed 30 minutes on the bill, with the available time to be equally divided.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, this bill provides funds for the Executive Office of the President, which includes the White House office, the Bureau of the Budget, the Council of Economic Advisers, the National Security Council, and the President's Advisory Committee on Government Organization. The bill also includes funds to be appropriated to the President for the emergency fund for the President, national defense, and funds for the expenses for management improvement, and funds for the American Battle Monuments Commission, the Foreign Claims Settlement Commission, and the Subversive Activities Control Board.

A new agency, added this year, is the Advisory Commission on Intergovernmental Relations, which was authorized last September.

The bill, as reported to the Senate by the Senate Appropriations Committee, calls for appropriations in the total amount of $14,397,500, which is $610,000 more than the amount voted by the House of Representatives, but is $230,000 under the budget.

Three amendments are recommended.

One amendment would restore $200,000 to the Bureau of the Budget, for its full budget estimate.

Another amendment would add $310,000 for expenses of management improvement, to bring that fund up to $470,000. The fund is used to study and bring about solutions to management problems and to make administrative improvements in the legislative branch, a matter on which a study is now in progress.

The third amendment is for the President's Advisory Commission on Intergovernmental Relations. That Commission began last year with $50,000, under the supplemental appropriation bill. It requested $175,000 this year; but the committee felt the Commission should start conservatively, and therefore the committee provided for $100,000, by means of an amendment. The House has not yet considered this item.

I know that my friends in the Senate who are members of this Commission will submit an amendment, and will have something to say about it.

Frankly, the committee did not know a great deal about the new organization, and is a little gun shy of new items. So the committee proposed that we let the Commission get started. The committee did not have the benefit of a great deal of testimony about the Commission; and the House committee has not had any testimony at all about the Commission.

So I am sure the Senate will be glad to hear from these members of the Commission.

Mr. MUSKIE. Mr. President, on behalf of the Senator from North Carolina [Mr. ERVIN] and myself, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The committee amendments are first to be considered.

Mr. ERVIN. Mr. President, it may be that our amendment is in the nature of a perfecting amendment to one of the committee amendments. So I suggest that the chairman of the committee ask that that committee amendment be subject to this amendment.

Mr. MAGNUSON. First, Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc and that the bill as thus amended be considered as original text, for the purpose of amendment, provided that no point of order be considered to have been waived by reason of this order.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The committee amendments agreed to en bloc are as follows:

Under the heading "Title I—Executive Office of the President—Bureau of the Budget—Salaries and Expenses", on page 3, line 24, after the word "exceed" to strike out "$50" and insert "$75", and in line 25, to strike out "$4,900,000" and insert "$5,100,000".

Under the heading "Funds Appropriated to the President—Emergency Fund for the President—Expenses of Management Improvement", on page 6, line 9, after the word "branch", to strike out "$40,000" and insert "$350,000".

On page 6, after line 12, to insert:

ADVISORY COMMISSION ON INTERGOVERNMENTAL RELATIONS

Salaries and expenses

For expenses necessary to carry out the provisions of the Act of September 24, 1959 (73 Stat. 703–706), $100,000.

Mr. MAGNUSON. Mr. President, I am glad to have the amendment submitted by the Senator from Maine considered at this time.

The PRESIDING OFFICER. The amendment submitted by the Senator from Maine [Mr. MUSKIE], on behalf of himself and the Senator from North Carolina [Mr. ERVIN], will be stated.

The LEGISLATIVE CLERK. On page 6, in line 18, it is proposed to strike out "$100,000" and to insert in lieu thereof "$175,000".

Mr. MUSKIE. Mr. President——

The PRESIDING OFFICER. How much time does the Senator from Maine yield to himself?

Mr. MUSKIE. Two minutes.

The PRESIDING OFFICER. The Senator from Maine is recognized for 2 minutes.

Mr. MUSKIE. Mr. President, this amendment relates to one of the subjects touched upon by the distinguished Senator from Washington [Mr. MAGNUSON].

The purpose of the amendment is to increase the appropriation for the Advisory Commission on Intergovernmental Relations from the committee's recommendation of $100,000 to the amount requested by the Commission and approved by the Bureau of the Budget; namely, $175,000.

I wish to make two points, briefly, in order not to consume too much time, and to leave the maximum amount of time for any questions which Senators may have.

The first point is that the Commission was created last year, by the Congress. The field of intergovernmental relations is an extremely broad one. In submitting its budget, the Commission bore in mind that it would be impossible to cover this entire field. So its objective has been to select within this broad field an area with which it could conceivably deal in the coming year.

The Members of the Commission include three Governors, three Members of this body, three Members of the other body, and a large number of distinguished public officials and public representatives from all over the country.

Within the last 2 weeks the Commission met in Washington, with almost a full attendance, and approved a program for the coming year.

The Commission proposes to do the necessary work in three ways:

First of all, by soliciting private research organizations for such assistance as they can provide without governmental expense.

Second, to employ consultants on a part-time basis, from time to time, for special projects.

Third, to develop a very small staff, consisting of only three professional people, relative to the Commission's work, to work on a continuing basis.

The PRESIDING OFFICER. The time the Senator from Maine has yielded to himself has expired.

Mr. MUSKIE. I yield myself 1 more minute.

The PRESIDING OFFICER. The Senator from Maine is recognized for 1 more minute.

Mr. MUSKIE. I point out that the budget which has been recommended is a minimum one, not a maximum one in any degree whatsoever.

If the Commission's funds are cut to $100,000, it is very unlikely, in my judgment, that the product of its work over the next year will be worth even the $100,000. I consider the $175,000 a minimum.

We have distinguished Governors and Senators and outstanding people from all over the country serving on the Commission; and I believe we should give them the minimum tools they will require.

The other point I wish to make is that the House of Representatives has not had an opportunity to consider this item. So the figure which we shall send to conference will be the maximum one the conference can consider.

Therefore, I suggest that the $175,000 figure is the minimum which we should send to conference.

I have discussed this with the chairman of the committee, and he has agreed to accept the amendment for that purpose.

The PRESIDING OFFICER. The additional time the Senator from Maine has yielded to himself has expired.

Two minutes remain available to the proponents of the amendment.

Mr. ERVIN. Mr. President, I should like to concur in all that the distinguished Senator from Maine has said.

The three Members of the House of Representatives and the three Members of the Senate who are members of the Commission agree that $175,000 is the minimum requirement for the efficient functioning of this Commission.

Therefore, I urge the Senate to adopt this amendment, as offered by the Senator from Maine [Mr. MUSKIE] and myself.

The PRESIDING OFFICER. Is the remaining time in opposition to the amendment yielded back?

Mr. MAGNUSON. Mr. President, I yield back the remainder of the time available to those in opposition to the amendment.

The PRESIDING OFFICER. The question now is on agreeing to the amendment of the Senator from Maine.

The amendment was agreed to.

Mr. SPARKMAN. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 8, in line 11, it is proposed to strike out "$260,000", and to insert "$410,000."

Mr. SPARKMAN. Mr. President, I yield myself 5 minutes, which I believe is the maximum time available to the proponents. However, I do not intend to use all that time.

The PRESIDING OFFICER. The Senator from Alabama is recognized for 5 minutes.

Mr. SPARKMAN. Mr. President, the purpose of the amendment would be to increase the amount of funds made available to the Foreign Claims Settlement Commission by $150,000.

When the committee held hearings on the provision, the amount requested was $260,000, which was exactly the amount the committee allowed; but on June 1, a supplemental request was submitted of $150,000, and that amount was not added by the committee.

The Commission is in the final stage of negotiations, or perhaps negotiations have been completed—I believe they have been—whereby Poland is making a large foreign claims settlement.

The effect of the $150,000 would be to enable the Foreign Claims Settlement Commission to function at its present level. No new employees would be provided for.

I believe, in view of the great load being thrown on the Commission as a result of the Polish settlement, the Commission is entitled to this amount.

I point out this amount does not represent $150,000 that the Federal Government ultimately will have to pay. Poland, in its settlement, agrees that this much will be a charge against the Polish Government. In other words, this amount is a part of the claim itself.

The additional money will enable the Commission to function effectively and efficiently, and carry on with its present staff. I think, by all means, the amount should be allowed.

I hope the chairman will agree to take the amendment to conference, because when the bill passed the House this estimate was not available, and the House had no opportunity to pass upon it. As a matter of fact, when the hearings were held, the information was not available.

Mr. ALLOTT. Mr. President, will the Senator yield for a question?

Mr. SPARKMAN. I yield.

Mr. ALLOTT. Is there any reason why this request could not be submitted in the regular way, and provided for in a supplemental bill?

Mr. SPARKMAN. This is the regular bill. It was submitted to the committee in time to get into the bill. It seems to me this is the time to do it.

Mr. ALLOTT. I do not recall any testimony on it.

Mr. SPARKMAN. On page 118 of the hearings will be found a statement submitted by the chairman after the testimony had been received. The subject was before the committee. As a matter of fact, when the testimony was had before the committee originally, it was stated that this settlement was likely to happen; that it was imminent. The committee was warned it was imminent. Then, on June 1, the point was reached where it was necessary to handle the large claims settlement.

Mr. President, the Polish settlement will be a large one. The Commission needs the staff. If the Commission does not get this additional money, it will have to disband its staff. Most likely we shall be called on later to provide a staff.

Mr. MAGNUSON. The Commission will not have to disband the staff.

Mr. SPARKMAN. It will have to cut it in half.

Mr. MAGNUSON. I know that staff pretty well. They do not have to disband at all. They are going to add to the staff.

Mr. SPARKMAN. No. The $150,000 will not be used to add any more employees to the staff. It will merely provide the Commission with funds to carry on with its present staff.

I ask the chairman of the committee to take it to conference, so the House and Senate conferees can decide it.

Mr. MAGNUSON. We have the Chairman of the Commission, in this case, Mrs. Pace, before the committee every year, and every year they keep telling us they are going to complete their work, and every year they want more, and every year they keep coming back.

Mr. SPARKMAN. I am sorry I cannot tell the Senator what the Polish claim amounts to. There is a figure running in my mind, but I do not know how much it is.

Mr. MAGNUSON. $9 million.

Mr. SPARKMAN. I believe it is more than that. It is a big claim, and one that certainly ought to be settled.

Mr. MAGNUSON. The Czechoslovakian claim is $9 million.

Mr. SPARKMAN. Yes. I think the Polish one is much bigger than that.

Mr. MAGNUSON. The Polish claim is not mentioned.

Mr. SPARKMAN. The item is presented on page 118 of the hearings.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. SPARKMAN. Yes.

Mr. ALLOTT. The Senator has referred to a letter from Mrs. Pace. I should like to read from that letter:

> Faced with the foregoing facts and probabilities, the Commission feels that a reduction in its present skilled staff would not be in keeping with orderly good government and efficient administration. Should any or all of these programs come into being, the maintenance of our present staff would suffice to no more than enable the Commission to provide for the preparation of appropriate notices, regulations, claims applications and instructions, and to provide for their dissemination to roughly 150,000 potential claimants.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MAGNUSON. Mr. President, I yield some time to the Senator from Alabama [Mr. SPARKMAN].

Mr. SPARKMAN. Mr. President, I think what the Senator from Colorado has just read bears out the statement that it is not contemplated to add personnel, but to maintain the present personnel.

It seems to me the reasonable thing to do is to take the amendment to conference. In the meantime the committee staff can verify the facts. I think I can truthfully say that there has been a large claim settlement negotiated with Poland which ought to be handled by the Commission. Providing the additional sum of $150,000 will enable the Commission to maintain the present staff.

Mr. MAGNUSON. Every year this group is supposed to get to the end of its business. I do not have time to refer to the testimony given in previous years, but every year they say they are going to get closer to completing their business. Every year they come back and want to keep the present staff. One year the staff got down to 200. We thought they were going to complete their work, but then they said there was more business and they wanted to keep the existing staff.

The effect of this amendment would be to add employees to the staff, because the Commission was supposed to reduce the number on the staff. Now they are supposed to get out of business in 1962, but if the Senator will read the testimony, he will see that they are not sure they can make it by then.

Mr. SPARKMAN. My understanding is that the present staff is only 59. It is not a big staff.

Mr. MAGNUSON. It is bigger than necessary.

Mr. SPARKMAN. Now the Polish claim is going to be added to the work.

Mr. MAGNUSON. It does not require any more employees.

Mr. SPARKMAN. We are collecting millions of dollars for American citizens.

Mr. MAGNUSON. That does not require a big staff. Forty could handle it.

Mr. SPARKMAN. It would be cut to 29.

Mr. MAGNUSON. Parkinson must have been thinking about this place when he wrote his book. He must have had this place in mind.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. SALTONSTALL. As one who has considered these matters for a number of years, I can state that the agency always wants more money and always wants to extend its work. There always seems to be more and more work coming in. If we give them a reasonable amount this year, the claims may be settled. If we provide them with a large personnel, while I am not a betting man, I have the feeling that next year they will try to hold some of their people and say they still have a great deal of work to do.

Mr. KEATING. Mr. President, will the Senator yield 2 minutes to me?

Mr. MAGNUSON. I yield 2 minutes to the Senator from New York.

Mr. KEATING. Mr. President, I support fully the amendment offered by the Senator from Alabama to provide additional funds for the Foreign Claims Settlement Commission. It is my firm conviction, based on my study of problems in this field, that there is ample justification for giving the Commission the full amount it has requested.

I am sympathetic to the view expressed by the committee in its report that this $150,000 should not be added "until more definite need may be shown later in the fiscal year." I realize that it is impossible to predict with complete certainty what will happen with regard to pending legislation and agreements in this field.

However, I feel that the evidence is sufficient, and the need so great, that we can take the little chance involved here and provide these additional funds. If we do not do so, it is possible that much of the vital work of the Commission will be delayed and the claims of many worthy people endangered.

Mr. President, according to the evidence presented to me, there are two principal reasons why this additional $150,000 is urgently needed by the Commission.

First, the workload estimate for the Czechoslovakian program has turned out to be inaccurate. Twice as many claims have been filed as were anticipated.

I ought to point out that the Czechoslovakian claims program is not financed by public funds. It is financed with proceeds of vested Czech property. Originally, it was anticipated that some 1,500 to 2,000 claims would be filed under this program. In actual operation, nearly 4,000 claims have been filed, but the magnitude of the original underestimation was not realized until the budget request for fiscal 1961 was completed.

The work of the Commission on the Czechoslovakian claims has been made doubly difficult by the failure of the Czech Government to cooperate in providing needed information and documentary evidence. As a result, the Commission has had to follow other roundabout processes to get this data—processes which have been long, slow, and difficult.

Mr. President, I am quite familiar with the very real human problems involved in these claims. Many fine people would be deprived of expeditious settlement of just claims if the already expanded workload of the Commission were further complicated by a lack of personnel and funds to pursue this work.

A second reason why these additional funds are needed is that three additional claims programs requiring immediate action by the Commission may soon come into being.

First. It appears highly probable that the Polish lump-sum settlement agreement will be signed within the next few weeks. Unfortunately, this will be too late for the Commission to make a supplemental request for funds to carry out this extensive program.

Already some 17,000 potential claimants have registered with the Commission in anticipation of the completion of the agreement. Obviously, many more claims will be filed in the future when the treaty with Poland is actually included.

Under the terms of the International Claims Settlement Act of 1949 the Commission is authorized to begin work upon the signing of an agreement without the need for further enabling legislation. Thus, although the Commission would have the authority to proceed expeditiously on these claims, they will be unable to do so if they do not have the personnel and staff to do the job.

In other words, the failure of the Congress to provide sufficient wherewithal will mean the postponement for some time of the restoration to thousands of Polish-American citizens of money to which they will become entitled. I certainly do not wish to be party to any such delay of justice.

Second. A second contingency upon which the need for more money rests is congressional approval of pending war claims legislation. Such legislation has already passed the House of Representatives and is under active consideration

right now by the Trading With the Enemy Act Subcommittee of the Senate Judiciary Committee, of which I am a member. I am hopeful—and confident—the Senate will be given an opportunity to complete action on this vital legislation before the end of this session.

It is reliably estimated that from 30,000 to 50,000 claims will be filed when this bill becomes law. That will constitute the largest claims program in history and obviously will require an expansion of the Commission staff.

The long legislative delay in approving this program makes it imperative that we avoid any undue administrative delay in processing the claims which will be filed. The job cannot be done adequately and with justice to all concerned unless operating funds are available immediately for the Commission to use. If we do not provide the needed funds now this work may be delayed for a year—which is precious time in view of the many years during which this legislation has been stalled.

Again, Mr. President, I do not wish to be party to any such delay of justice.

Third. We must also remember that proposed legislation to place the administration of the supplemental payment of Philippine War Damage Commission awards in the Foreign Claims Settlement Commission is on its way through Congress. H.R. 12378 has been reported favorably by a subcommittee of the House Foreign Affairs Committee and may in the near future gain the approval of Congress.

It is understood that many thousands of payees may be involved as a result of this legislation.

Mr. President, all the evidence I have studied indicates that the Foreign Claims Settlement Commission has done an efficient and effective job with limited personnel and limited funds. At the present time only 47 persons are employed, including the Commissioners.

It is my understanding that under the original budget request the Commission would be forced to reduce the present staff from 47 to 20 by the end of the fiscal year. The Commission feels that if it is given the additional funds included in this amendment, it can retain its present staff of 47 and carry on adequately with its work until the 87th Congress has an opportunity to provide additional assistance.

Mr. President, the work of the Foreign Claims Settlement Commission should be of great interest to every Member of this body, because it involves principles of simple justice and human problems which concern thousands of American citizens. In many cases these people cannot afford to have the settlement of their claims delayed. In other cases, delay may mean that justice will be denied for various reasons.

Because there is ample evidence that the workload of the Commission will be increased a great deal in the near future and because a clear case has been made of the need for proper personnel and funds to meet these new demands, I feel this amendment should be adopted. By adding these funds, we can insure that fair treatment will be accorded thousands of Americans in obtaining money which is rightfully theirs.

Mr. McNAMARA. Mr. President, this amendment would add $150,000 to the appropriation for the operations of the Foreign Claims Settlement Commission.

I understand that this amendment has the approval of the Bureau of the Budget.

There are a number of reasons why the Commission budget should be increased if the Commission is to efficiently carry out the duties expected of it.

In the first place, the original budget request would require the Foreign Claims Settlement Commission to reduce immediately its staff of 47 to 29.

This would be understandable if the work of the Commission was similarly decreasing.

On the contrary, however, the workload facing the Commission will be increasing, rather than decreasing.

Within the very near future it is expected that the United States and Poland will sign a war claims agreement to reimburse Americans for losses in Poland.

Already about 17,000 potential claimants have registered with the Commission in anticipation of this program.

Unless the Commission is able to keep its well-trained staff and to hire necessary additional help the processing of these claims probably would have to wait another year or until a supplemental appropriation bill can be passed next year.

The Polish claims alone can mean reimbursement of $60 million to American citizens. Certainly $150,000 is a small amount to help process these claims.

In addition, two other war damage claims bills are progressing rapidly in Congress, and these would add many more thousands of claimants to the workload.

The Commission is expected by the public to process all claims speedily and efficiently.

It seems to me only common sense that the Congress give the Commission the tools it needs to do the job we ask of it.

A little foresight now in providing the needed $150,000 will permit the Commission to keep its trained staff intact and ready to perform.

The PRESIDING OFFICER. All time on the amendment has expired.

Mr. MAGNUSON. Mr. President, I understand the Senator from Alabama desires to modify his amendment.

Mr. SPARKMAN. Mr. President, I modify the amendment to change the amount to $100,000, it being my understanding that the chairman is willing to take the amendment to conference.

The PRESIDING OFFICER. The Senator has a right to modify his amendment.

The question is on agreeing to the amendment of the Senator from Alabama, as modified. [Putting the question.]

The amendment, as modified, was agreed to.

Mr. DOUGLAS. Mr. President, I wonder if my good friend from Washington is willing to yield to me so that I may ask a few questions?

Mr. MAGNUSON. I am glad to yield.

Mr. DOUGLAS. Am I correct in my understanding that the appropriations for the White House Office have been increased by $177,500 over the last year?

Mr. MAGNUSON. The Senator from Illinois is correct.

The PRESIDING OFFICER. The time is being yielded by whom to whom?

Mr. DOUGLAS. Mr. President, I am not proposing an amendment. I simply wish to ask some questions.

Mr. MAGNUSON. This is from the time on the bill, Mr. President.

The PRESIDING OFFICER. How much time is yielded on the bill?

Mr. MAGNUSON. As much time as the Senator desires.

Mr. DOUGLAS. I thank the Senator from Washington.

Mr. MAGNUSON. The Senator is correct. The budget for the White House was $2,221,000 in 1960, and it is $2,398,500 this year, an increase of $177,500, plus $100,000 for alterations and repairs.

Mr. DOUGLAS. Plus $100,000 above the 1960 figure for the so-called management improvement?

Mr. MAGNUSON. No. The management improvement goes with the Bureau of the Budget, for the studies and projects within the agencies.

I did not provide all of the figures, but the amount has been steadily increasing year after year.

Mr. DOUGLAS. The Senator from Illinois invited attention last year to the fact that the budget has gone up year after year after year. I wished to ask these questions to indicate that the budget for the White House Office is still going up.

Mr. MAGNUSON. Yes.

Mr. DOUGLAS. I should like to ask some questions about the right arm of the President, the Bureau of the Budget. Do I correctly understand that the Bureau of the Budget requested for itself an increase of $435,000?

Mr. MAGNUSON. It did.

Mr. DOUGLAS. The committee has granted that amount?

Mr. MAGNUSON. The committee granted the increase upon the basis that the Bureau of the Budget made a case as to extra workload and things of that nature. The budget for the Bureau of the Budget, like that for the White House, has been gradually going up.

Mr. DOUGLAS. Not too gradually.

Mr. MAGNUSON. The Senator is correct.

Mr. DOUGLAS. It has been going up quite rapidly.

Mr. MAGNUSON. That is correct.

Mr. DOUGLAS. The request is for the hiring of 22 more people, is that correct?

Mr. MAGNUSON. That is correct.

Mr. DOUGLAS. I noticed, in the Independent Offices appropriation bill for 1961 which has been passed, that the General Accounting Office, which is the agency of the Congress corresponding to the Bureau of the Budget, which is the agency of the President, has an appropriation for the coming year of $600,000 less than its appropriation for last year.

Mr. MAGNUSON. That is correct. The budget for the General Accounting

Office is smaller. Mr. Cooper reminds me that the General Accounting Office is the only agency covered in the entire bill which will receive a smaller appropriation.

Mr. DOUGLAS. Does the distinguished chairman of the submittee have the same high opinion of the General Accounting Office and of the Comptroller General, Mr. Joseph Campbell, as the Senator from Illinois.

Mr. MAGNUSON. I have a very high opinion of him.

Mr. DOUGLAS. Is it not necessary that we have an agency such as this to check upon the waste within the executive departments?

Mr. MAGNUSON. I think the General Accounting Office does a fine job in this respect. It has saved us a great deal of money.

Mr. DOUGLAS. It seems to me the General Accounting Office has saved us many times its appropriations in the amounts recovered from excessive contract prices.

Mr. MAGNUSON. If we have an opportunity, some day we should analyze those figures. I think the figures would be somewhat startling as to the amount of money the General Accounting Office has saved the Government, and the amount we have spent to keep the agency operating.

Mr. DOUGLAS. I am very glad the Senator from Washington has made that statement. I hope, when the next appropriation bill comes before the Senate, we may have a better sense of proportion and that we may build up the General Accounting Office, the head of which was appointed by the present President, because of its fine work. Personally, I am distressed by the increase in the appropriation for the Bureau of the Budget.

Mr. SALTONSTALL. Mr. President, will the Senator yield for a question?

Mr. DOUGLAS. I am glad to yield.

Mr. SALTONSTALL. I am not sure the Senator from Washington mentioned this, but the budget would permit the hiring of 33 additional employees by the Bureau of the Budget, and would provide a complement of 468 employees, which represents a 27 percent drop since 1947. In other words, the Bureau of the Budget today has 27 percent less staff than it had in 1947.

Mr. DOUGLAS. There have been some redistributions of functions. I believe it is true that certain groups connected with the Bureau of the Budget have been split off. If we consider the record from 1952 on, since 1952 there has been an increase.

Mr. MAGNUSON. The budgets have been going up ever since 1952.

Mr. DOUGLAS. So the figures which the Bureau of the Budget may have supplied to our good friend from Massachusetts I think are disingenuous. Those figures go back to 1947. That is a comparison of horse and apples, rather than the same Bureau of the Budget.

I believe the record shows that so far as the present Bureau of the Budget is concerned the increases have been very great from year to year, exactly as have been the expenditures for the White House Office and for certain other items.

Mr. President, I shall not offer any amendment. I shall not make any fight with respect to the bill or with respect to these items. I simply say that I am distressed by the increase in expenditures both for the Bureau of the Budget and in connection with certain other functions of the White House, particularly in view of the constant cry for economy which comes from both. It seems to me it might be appropriate if a symbolic protest, at least, were made.

I thank the Senator from Washington for yielding.

Several Senators addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Washington yield; and, if so, to whom?

Mr. MAGNUSON. Mr. President, I yield to the Senator from Nevada.

Mr. CANNON. Mr. President, I am also concerned about the constant increase in the expenditures of the Executive Branch, particularly the Bureau of the Budget, as mentioned by the Senator from Illinois. One point the Senator did not raise is it appears from a study of the bill that there will be an increase in the per diem for members of the Bureau of the Budget. The increase requested is from $50 to $75.

I know that many other agencies have a rather high limit of $50 per diem, including the National Security Council, the President's Advisory Committee on Government Operations, and others. I am somewhat at a loss to understand why the representatives of the Bureau of the Budget require an additional $25 per diem to carry out their duties, particularly when it represents an increase of 50 percent in the authorized per diem from last year, in addition to the tremendous increase in the budget.

Mr. MAGNUSON. I will say to my friend from Nevada that I thought the Bureau of the Budget made a very good case in that regard. This is for payments of consultants. The request is to change the per diem from $50 to $75. Most of the Government agencies provide $75. Actually we should have a uniform provision.

In this particular case reference was made to some expert consultants. The committee agreed that these consultants should receive such an amount of money.

They do not anticipate paying all consultants $75, but to get the quality of people needed, $50 is not enough and they will pay the maximum only when it is fully justified.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. SALTONSTALL. To supplement what the Senator from Washington has said, 17 agencies of our Government pay between $75 and $100; 52 agencies pay up to $56.56. When the Bureau of the Budget asks for an increase from $50 to $75, they are simply asking for the same authority that 17 agencies of the Government now have.

May I point out that we talked about the number of positions. In 1947 the Bureau of the Budget had 599 positions; in 1952 it had 515; they now have 435. The bill will increase the number to 468, which is still under the 1947 and 1952 figures.

Mr. MAGNUSON. But the amounts have gone up.

Mr. SALTONSTALL. The amounts have gone up.

Mr. MAGNUSON. I think, rightly so, they have farmed out some.

Mr. SALTONSTALL. I will not deny that.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield such time as I have remaining to the Senator from Colorado.

Mr. ALLOTT. I would like to say to my friend from Wyoming and others that I wish to reunderline and underscore the statement made by the Senator from Massachusetts [Mr. SALTONSTALL]. Since 1947 the Bureau of the Budget has dropped 27 percent in its number of employees. It is true that the cost has gone up, but I think so far as I am concerned, because I felt that this matter had to be approached critically, I was satisfied with the statement that was made. I think the chairman was also, as he has indicated.

I thank the chairman of the committee, the Senator from Washington [Mr. MAGNUSON], and the Senator from Massachusetts [Mr. SALTONSTALL]. I think the chairman should be complimented on the very fine job he has done with these two bills. It is an extremely complicated area. Many different commissions and bureaus are involved, and his great knowledge, gained from many years of experience, and his constant attention to it, has resulted, I think, in a rather good bill.

Mr. McGEE. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. McGEE. I have been much interested in this particular point in the discussion of the bill, for the reason that I have been in correspondence in the last few days with the Director of the Bureau of the Budget. I commented on June 17 on the increases of the salaries of the Bureau's employees at the same time that the administration was taking a dim view of raising the salaries of other Federal employees. In a letter today, I discussed the question of his total budget figure and the bureaucratic proliferation which caused it to be so large.

The fact remains, as the committee has discovered, that the costs of running the Bureau of the Budget have gone up. The chairman has wisely observed that these are necessary increases. But that is the point some of us have been making for months, that the necessary costs of meeting our responsibilities have gone up in many other areas of government. I cannot put up with the one-eyed bookkeeper who uses one standard of judgment for his own house and tries to exercise quite a different set of standards for the rest of the agencies of the Government. For that reason I think the RECORD should show that the exchange between myself and the Director of the Budget Bureau on a matter of his Bureau appropriations shows a double standard.

Mr. President, I ask unanimous consent that my correspondence with the

Director of the Bureau of the Budget on this particular facet of the problem be included at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C., June 17, 1960.

Hon. GALE W. MCGEE,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR MCGEE: The UPI wire service quotes you as saying, during the debate on the Federal employees pay bill today, that Bureau of the Budget employees had received since 1953 "nearly double" the amount of pay raises as employees in four other agencies of Government.

While the Bureau of the Budget has no information as to the identity of the other four agencies to which the Senator refers, you seem to have been misinformed.

The employees classified under the general schedule of the Classification Act had an average grade of GS 10.2 in fiscal year 1953. By fiscal year 1960 this average has risen only to 11. This rise reflects promotions made under the provisions of the Classification Act and the rules of the Civil Service Commission. Causing this rise are such factors as the additional numbers of supergrade positions granted by the Congress, new Civil Service Commission qualification and hiring standards (e.g., increases in college entrance level grades and secretarial grades), and the hiring of higher level specialists in the accounting and management fields. Moreover, the Civil Service Commission has periodically inspected the personnel management practices of the Bureau and has approved them.

Another factor should not be overlooked. While the grade average was increasing by only this small amount, the size of the Bureau's staff has dropped from 485 in 1953 to 435 in 1960. This in itself has necessitated a change in the composition of Bureau staff if we were to perform adequately the functions assigned to us with the reduced staff.

Finally, the Bureau's own internal standards for eligibility for grade promotions are considerably more restrictive than even the Whitten amendment would require. That amendment sets a minimum standard of 1 year for professional grade to grade promotions, whereas the Bureau's internal standard in the intermediate and higher grades is from 1½ to 3 years.

We hope that these facts will correct any misunderstanding which may have been responsible for your remarks during the Senate debate.

Sincerely yours,

MAURICE H. STANS,
Director.

JUNE 21, 1960.

Hon. MAURICE H. STANS,
Director, Bureau of the Budget, Executive Office of the President, Washington, D.C.

DEAR DIRECTOR STANS: Your letter of June 17 has aroused my curiosity. In the first place and in order that you may consider the full text of my address on the Bureau of the Budget, I am enclosing the appropriate clipping from the CONGRESSIONAL RECORD. As you will understand when you have read my remarks, the facts which you cite in your letter have not only failed to correct what you term "any misunderstanding which may have been responsible" for my comments but have raised new questions.

My statement was the result of a comparative study of the actual expenditures for 1953, as printed in the 1955 budget, and the proposed expenditures in the 1961 budget. I was interested to find out whether the agency which had been responsible for so many economies in important programs was setting the spartan example which one would expect.

In 1953, the Bureau of the Budget had $3,492,140 with which to operate. Its employees were among the highest paid in Government with an average civil service grade of 10.2 including typists and clerks. This is the agency that supposedly puts the others on the rack and forces fund requests down to reasonable levels. The following table represents the hard fact of the Bureau's record:

Bureau of the Budget—Budget

	1953	Proposed, 1961	Percent increase over 1953
Personal services	$3,215,385	$4,319,500	34
Other expenses	276,755	780,500	183
Total	3,492,140	5,100,000	46

At the outset, I wish to recognize that there have been well-deserved increases in the pay scales for Federal employees. According to the sources I have consulted, the average number of employees officially charged to this Bureau will be approximately the same in 1961, 458, as it was in 1953 when it was 464.

While this figure has remained static on paper, there has been a vast increase in duplicating personnel in the Executive Office of the President.

In addition to the Bureau personnel, we now have two new offices which are performing Budget Bureau work: The Advisory Committee on Government Organization with a $50,000 budget, and a Special Projects Group with a $1,500,000 budget. Together these agencies have 114 employees. The Organization group's function is to identify major organizational and management problems and suggest corrective action. The Special Projects Group's purpose is to give the President staff assistance on problems which cannot be considered the responsibility of an existing agency. Examples cited are coordination of the Nation's scientific effort, foreign economic policy, and coordination of public works planning.

Since this work has for years been done in the Bureau of the Budget, I wonder what the reasons are for this proliferation?

As further proof of the extent of the Bureau of the Budget's spending spree in its own interest, I cite the 183 percent increase in expenses other than salary, and call particular attention to the substantial increases in items such as travel and other contractual services and equipment. The following table illustrates my point:

Items with major increases	1953	1961	Percent change
Travel	$28,719	$120,000	319
Communication service	43,281	60,000	39
Other contractual service	2,662	45,500	1,600
Equipment	11,114	63,000	466
Total	85,776	288,500	235
Grants, subsidies, and contributions		278,800	(1)
Other	190,979	213,200	11
Total	276,755	780,500	183

[1] Contributions for Federal retirement fund.

While I am not a budget expert, I am unable to see why there should be an increase in cost averaging 235 percent in the items I have enumerated separately.

To further inform myself as to the need for vastly increased funds, I looked carefully at the Bureau's budget analysis by divisions. The following tabulation shows the changes in division costs:

	1953	1961	Percent change
Field service	$206,408	(1)	
Office of Accounting	(2)	$248,700	
Budget review	376,130	534,300	+42
Legislative reference	145,404	207,000	+42
Management and organization	320,707	616,500	+92
Statistical standards	380,022	441,400	+16
Program divisions:			
Commerce and finance	343,269	433,500	+26
International	196,367	334,700	+71
Labor and welfare	364,962	453,500	+24
Military	382,662	578,700	+51
Resources and civil works	347,241	538,200	+55
Administration	428,968	710,500	+66
Obligations, prior years		3,000	
Total	3,492,140	5,100,000	+46

[1] Abolished fiscal year 1954.
[2] Estimated fiscal year 1956.

It is my understanding that the new Office of Accounting was created by expanding a group previously in the Management and Organization Division of the Bureau of the Budget. This is of interest because the Management and Organization group cost has increased by 92 percent, even after giving birth to a new division.

The President also seeks $50,000 for the special Advisory Committee on Government Organization in addition to the Bureau of the Budget expense of $616,500 to perform a like function. I do not know of one substantial reorganization plan of more than a routine housekeeping nature that has emerged in the last few years.

This shows a mutation in bureaucratic breeding; evidently in accordance with Parkinson's law. The division with the responsibility has 92 percent more money to operate than it had in 1953, and it is shorn of its accounting improvement work and has the help of a new and special executive agency.

The International Division has its budget up 71 percent from 1953. In keeping with the administration's outlook on labor and welfare, that division has not fared so well. At least here I see something representative of the administration's philosophy. The Resources and Civil Works Division's budget is up 55 percent, and this I can only presume is to assure that less will be spent on resource development.

I call particular attention to the 66 percent increase for administration. Compared with the total agency budget for the respective years this item, which was previously 12 percent of their total expenses, now accounts for 14 percent. Is it not supposed to be true that with the growth of an agency, its cost of administration as a percentage of overall costs decreases?

Wherever one turns there is evidence that Parkinson's law is in operation.

Historically, the Congress has given the President the funds he believes he needs for the agencies composing the Executive Office of the President. I do not for a moment contend that the role of Government is unimportant or that the President should be denied adequate staff. The record of administration stewardship seems to reveal, however, painful economy in the important programs upon which the health of our economy depends and substantial increases in expenditure elsewhere.

Counting the Bureau of the Budget and its two duplicating executive office agencies, there is a 90-percent increase in their cost of operation. As I said on the Senate floor on June 17, salaries that have been increased by Congress have been given another 100 percent padding by back-door grade increases. In addition, back-door increases

totaling 22 percent have been made in the number of personnel.

What happened to the administration's crusade for economy? Where is it being practiced? Is it in less schools for our children, less roads to transport the products of private enterprise, less meaningful defense from our enemies, or less resource development for our people?

In my recent floor statement I characterized the Bureau of the Budget's record as "one-eyed bookkeeping." I did so because I believe it is the job of the Bureau to perform its functions with one eye on the national interest and the other on the ledger. The light of comprehension has long since vanished from the eye which should have been fixed on the national interest during this administration. The result has been budgets which starved and stultified programs which were in the public interest while encouraging a byzantine bureaucratic proliferation in such staff agencies as the Bureau of the Budget. One-eyed bookkeeping may contribute to the kind of record this administration wants, but I don't think it fools the people.

I would be grateful if you would comment on the questions which I have raised; and I promise to give your reply very careful attention.

Sincerely,

GALE W. MCGEE,
U.S. Senator.

Mr. McGEE. In my letter I have pointed out that, in addition to the very large pay increases granted to Bureau of the Budget employees by the process of high grade level increases, the Bureau has also indulged in forms of bureaucratic proliferation which brings some of the "facts" which Mr. Stans has cited in his letter into question.

In the first place, a comparison of the actual expenditures for 1953 and the proposed expenditures for 1961 reveals that there has been an overall increase of 46 percent in the expenditures of the Bureau. The increases in expenses not related to high salaries have been even more startling than the salary increases. These additional expenses have increased 183 percent since 1953.

In addition to these rather dramatic changes in the size of the appropriations sought for the Bureau itself, we now have two new offices which are performing work previously performed by the Bureau. These are the Advisory Committee on Government Organization with a budget of $50,000, and the Special Projects group with a budget of $1,500,000. Together these two agencies employ 114 persons. Since their functions seem to be very similar either to those previously performed by the Bureau or to functions still performed by the Bureau, it is interesting to note that the addition of 114 persons to the work force of the Bureau of the Budget itself makes it apparent that there are many more persons doing the work of the Bureau of the Budget than there were in 1953. If we added the budget for these two new agencies to that of the Bureau, there has been a 90-percent increase in the cost of operation since 1953.

Congress has usually been rather lenient with the President's requests for funds which he desires for the agencies which make up his Executive Office. Certainly this is as it should be because it is very important that the President have an adequate staff. My complaint about the two central facts that the Bureau pays larger salaries than other agencies and that it has indulged in a very substantial proliferation is that this has all occurred during what the administration has chosen to call a crusade for economy.

I think the Bureau of the Budget ought to perform its function with one eye on the national interest and the other on the ledger, but it seems that the light of comprehension has long since vanished from the eye which should have been fixed on the national interest during this administration. The result has been budgets which starved and stultified programs which were in the public interest while encouraging this byzantine bureaucratic proliferation in such agencies as the Bureau of the Budget. This is one-eyed bookkeeping. It is all the more ironic to find that it has occurred in the very agency which has the task of putting other agencies on the rack and forcing their fund requests down to reasonable levels.

The Bureau of the Budget performs a staff function. Certainly its function is necessary, but I think this administration deserves to be asked whether we have to pay so much more to have this function performed when we are so consistently asked to economize in the areas of education, defense, and resource development.

Mr. CANNON. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. CANNON. The Senator from Colorado stated that since 1947 the personnel had been reduced by 27 percent. I wonder if he has the figures as to the percentage of cost increase during that same period?

Mr. ALLOTT. I do not have them with me. All I have before me are the hearings. I repeat these figures from page 4 of the hearings.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. Do both sides yield back all remaining time?

Mr. MAGNUSON. I yield back whatever time I have remaining.

Mr. KUCHEL. I yield back whatever time we have remaining.

Mr. MAGNUSON. The yeas and nays have been ordered.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Virginia [Mr. BYRD], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Connecticut [Mr. DODD], the Senator from Tennessee [Mr. GORE], the Senator from Rhode Island [Mr. GREEN], the Senator from Alabama [Mr. HILL], the Senator from Oregon [Mr. LUSK], the Senator from Montana [Mr. MURRAY], and the Senator from Virginia [Mr. ROBERTSON], are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS], is absent because of illness.

I further announce that the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Wyoming [Mr. O'MAHONEY], are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska [Mr. BARTLETT], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Connecticut [Mr. DODD], the Senator from Tennessee [Mr. GORE], the Senator from Rhode Island [Mr. GREEN], the Senator from Missouri [Mr. HENNINGS], the Senator from Alabama [Mr. HILL], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Oregon [Mr. LUSK], the Senator from Montana [Mr. MURRAY], the Senator from Wyoming [Mr. O'MAHONEY], and the Senator from Virginia [Mr. ROBERTSON], would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Kansas [Mr. SCHOEPPEL] is absent because of death in his family.

The Senator from Connecticut [Mr. BUSH], the Senator from Kansas [Mr. CARLSON], the Senator from New York [Mr. JAVITS] are detained on official business. If present and voting, the Senator from Connecticut [Mr. BUSH], the Senator from New York [Mr. JAVITS], the Senator from Kansas [Mr. SCHOEPPEL] would each vote "yea."

The result was announced—yeas 81, nays 1, as follows:

[No. 254]

Dodd	Kefauver	Schoeppel

So the bill (H.R. 11389) was passed.

Mr. MAGNUSON. Mr. President, I move that the Senate insist on its amendments and request a conference thereon with the House of Representatives, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. MAGNUSON, Mr. HILL, Mr. ELLENDER, Mr. ROBERTSON, Mr. ALLOTT, Mr. SALTONSTALL, and Mr. YOUNG of North Dakota conferees on the part of the Senate.

Mr. MAGNUSON. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. JOHNSON of Texas. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

RETIREMENT OF SENATOR MARTIN, OF IOWA

Mr. JOHNSON of Texas. Mr. President, I remind the Senate that today is the last day in the Senate for TOM MARTIN, our colleague from Iowa.

He is leaving us, by retirement, after a long and dedicated career in Congress—16 years in the House of Representatives and 6 years with us here in the Senate.

During his long career he has repeatedly demonstrated devotion to his constituents in Iowa and to the principles which he espoused early in life. He has proved to be a loyal and hard-working public servant.

In his trip overseas with the American Battle Monuments Commission and later to work in Europe for the Committee on Aeronautical and Space Sciences, and in the days that lie ahead, we wish him the best of luck, health, and happiness. [Applause, Senators rising.]

Mr. YARBOROUGH. Mr. President, I extend to the distinguished Senator from Iowa, who is retiring, a sincere welcome to Texas. If he should ever change his residence from Iowa, we invite him to come to Texas.

In World War I Senator MARTIN attended the first Officers Training Camp at Leon Springs, in Texas, and became one of the first commissioned officer graduates of that camp. He served with distinction in World War I, and frequently attends the Leon Springs Officers Training Camp graduates' annual reunion in Texas.

Senator MARTIN owns two fine farms in Brazoria County, Tex. This is in the historic area where Stephen F. Austin, the father of Texas, planted the first Anglo-American colony in Spanish Texas in 1821. Senator MARTIN's farms are on some of the grants made to Stephen F. Austin's "Old Three Hundred," being the first 300 Anglo-American families to settle in Texas.

With his interest in this area of the first Anglo-American colony in Texas, in the westward expansion of the American people into Texas, Senator MARTIN has an interest in historic ground in our State. So we welcome him whenever he visits our State; and should he ever decide to change his residence, we will welcome him to Texas even more cordially.

Mr. ENGLE. Mr. President, California has more islands than Iowa has. If TOM MARTIN should decide, after retirement, that he would like to come to California, we will welcome him there, because we are certain, in the light of his retirement, that he will not run again for the U.S. Senate.

He has been a great Member of the House of Representatives and is a great Member of the Senate. I know he is retiring in order to have an opportunity to go home to Iowa and visit with his family.

But, TOM, if you decide you want to come out to California, come right along. You can join the Iowa Society of California, because its membership exceeds the total population of Iowa. [Laughter.]

Mr. JOHNSTON of South Carolina. Mr. President, in the first place, we do not like to have Senator TOM MARTIN leave us. However, now that he has seen fit to leave us, we are glad to look back upon his past record. He has been an excellent Senator. He was a member of my committee. I wish he were back there now.

Wherever he goes in the future, I know he will continue to do good work, as he has done in the Senate.

If he decides to come to South Carolina, he knows, without my telling him, that he will be welcome. We will give him sunshine and a pleasant beach upon which to play at the same time.

INCREASED PAY FOR POSTAL AND CIVIL SERVICE EMPLOYEES

Mr. JOHNSTON of South Carolina. Mr. President, information continues to pile up in support of the action taken by Congress last week to increase the pay of our postal and civil service employees.

The latest data in support of a pay raise came to the committee from the National Civil Service League. As everyone knows, the league is nonpartisan in its views; its membership is representative of private industry; its purpose is better government at the national and lower levels.

The data presented to the committee by the league is startling, to say the least. For example, in comparing present salaries with those of 1939, it shows that a GS–5 has fallen 13.7 percent behind, a GS–9 is 28.9 percent behind, a GS–11 is 32.4 percent behind, and a GS–15 is 67.1 percent behind. Other figures are just as shocking.

In view of these figures the 7.5-percent increase Congress approved last week is modest indeed.

Mr. President, I invite the attention of those in the administration who are presently engaged in reviewing the pay bill for and on behalf of the President to the data to which I have just alluded. In order that it may be available for all to see and study, I ask unanimous consent that it be printed in the body of the RECORD immediately following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JOHNSTON of South Carolina. Mr. President, I am confident a careful review of these data will serve to alert even the most doubtful to the justification of and need for an upward adjustment in the pay of Federal employees as provided in the bill now on the President's desk.

EXHIBIT 1

ANALYSIS OF TABLES RELATING TO PURCHASING POWER OF GOVERNMENT SALARIES 1939 AND 1960

The attached chart describes the purchasing power value of classified and certain statutory salaries of the Federal Government in 1960 in comparison with corresponding schedules in 1939. The "stable" year 1939 is often referred to for such purposes since immediately thereafter salary structures, along with many other elements of the economy, were disrupted by the war. They have not since been brought into even the limited degree of balance that obtained in 1939.

A somewhat similar comparison of salaries in general was made recently by the National Industrial Conference Board and presented in their series, Road Maps of Industry, No. 1267, April 8, 1960. It was titled "The Two-way 'Squeeze'—1960" and describes the impact of Federal income taxes and inflation on income between 1939 and 1960. The attached chart does not go quite as far as the NICB comparison in that the latter includes social security taxes. This chart reflects only changes in the Consumer Price Index of the Bureau of Labor Statistics and Federal income taxes. Inclusion of State and local income taxes, social security or equivalent deductions, and the like, would enlarge the indicated gaps still further.

For reference as to what has been taking place in wage board salaries, which are designed to keep pace with business and industrial practice at comparable levels, a comparison is included of the schedule median wage board rate of 1960 and 1943. Approximately half of the wage board employees are above and half are below this point. Hence it is commonly used as a general indicator. A comparable figure for 1939 was not available. The wage board increases reflect the general sharing of blue collar employees in the growth of national productivity beyond merely holding even with the increases in the cost of living.

Among the points apparent from the chart are:

1. GS grades 1 and 2 have had increases which give them slightly more purchasing power today than they had in 1939. However, they seem to have fallen behind what has been taking place in wage board schedules for blue collar workers. This may in part explain the difficulty of recruiting at the GS–1 and GS–2 levels.

2. From GS–3 to 15 there is progressive deterioration percentagewise as well as in dollar terms, with most of the grades falling behind their corresponding 1939 positions by 20 to 60 percent. For equivalence, a civil servant at the beginning of CAF–14 in 1939 would have to be paid midway between GS–17 and 18 today.

3. A precise comparison cannot be made of the supergrades 16, 17, and 18 for 1939 and 1960 because they were not authorized until 1949. However, since there was a rough equivalent to a supergrade in 1939 with a salary level of $9,000 the comparison of today's supergrades is made with that. The 1960 supergrades have much less purchasing power than did their 1939 counterpart.

4. Congressmen have come within 12 percent of holding their own between 1939 and 1960, although it is rather generally recognized that their 1939 level was too low. Assistant Secretaries on the same basis have fallen behind substantially but have also fared better than many levels of the classified service.

TABLE 1.—*Purchasing power of Government salaries, 1939 and 1960*

1939				April 1960							
Grade or title	Classification Act starting rates	Federal income taxes [1]	Income after taxes	Grade or title	Classification Act starting rates	Increase since 1939		Lost through price increases since 1939 [2]	1960 Federal income taxes [3]	Income needed in 1960 to equal 1939 purchasing power	Percent discrepancy of 1960 salary with 1939 schedule
						Amount	Percent				
CAF-1	$1,260	0	$1,260	GS-1	$2,960	$1,700	135	$1,417	$4	$2,681	+9.4

[1] Family of 4. 10 percent deduction allowed.
[2] Increase in Consumer Price Index 1939 to April 1960 was 112.45 percent; from June 1943, 68.5 percent.
[3] Family of 4. Standard deduction allowed GS-1 to 11; 10 percent deduction allowed for persons above that level. $3,000 additional deduction for Congressman, as authorized by law.
[4] Schedule median wage board rate; equivalent to GS-4. Data not available for 1939; 1960 comparison is with June 1943.

AMENDMENT OF MINERAL LEASING ACT OF FEBRUARY 25, 1920

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1612, H.R. 10455; with the understanding that there be 20 minutes of debate, the time to be equally divided between the Senator from New Mexico [Mr. ANDERSON], the author of the bill, and the distinguished minority leader [Mr. DIRKSEN].

The PRESIDING OFFICER. The bill will be stated by title.

The CHIEF CLERK. A bill (H.R. 10455) to amend the Mineral Leasing Act of February 25, 1920.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Interior and Insular Affairs with an amendment to strike out all after the enacting clause and insert:

That this Act may be cited as the "Mineral Leasing Act Revision of 1960".

SEC. 2. Sections 17, 17(a) and 17(b) of the Act entitled "An Act to promote the mining of coal, phosphate, oil, oil shale, gas, and sodium on the public domain", approved February 25, 1920, as amended (30 U.S.C. 226), are further amended to read as follows:

"SEC. 17. (a) All lands subject to disposition under this Act which are known or believed to contain oil or gas deposits may be leased by the Secretary.

"(b) If the lands to be leased are within any known geological structure of a producing oil or gas field, they shall be leased to the highest responsible qualified bidder by competitive bidding under general regulations in units of not more than six hundred and forty acres, which shall be as nearly compact in form as possible, upon the payment by the lessee of such bonus as may be accepted by the Secretary and of such royalty as may be fixed in the lease, which shall not be less than 12½ per centum in amount or value of the production removed or sold from the lease.

"(c) If the lands to be leased are not within any known geological structure of a producing oil or gas field, the person first making application for the lease who is qualified to hold a lease under this Act shall be entitled to a lease of such lands without competitive bidding. Such leases shall be conditioned upon the payment by the lessee of a royalty of 12½ per centum in amount or value of the production removed or sold from the lease.

"(d) In the event that the issuance of oil and gas leases becomes consistent with the military use of San Nicolas Island within a twelve-year period following the determination that has been made with respect to that island in accordance with the provisions of section 6 of the Act of February 28, 1958 (Public Law 85–337), the applicants whose applications for oil and gas leases on San Nicolas Island are presently pending before the Secretary shall be entitled to leases without competitive bidding, upon payment of the costs of retaining their applications in active status as determined by the Secretary, and provided that San Nicolas Island has not been classified as a part of any known geological structure of a producing oil or gas field.

"(e) All leases issued under this section shall be conditioned upon payments by the lessee of a rental of not less than 50 cents per acre for each year of the lease. Each year's lease rental shall be paid in advance. A minimum royalty of $1 per acre in lieu of rental shall be payable at the expiration of each lease year beginning on or after a discovery of oil or gas in paying quantities on the lands leased.

"(f) Competitive leases issued under this section shall be for a primary term of five years and noncompetitive leases for a primary term of ten years. Each such lease shall continue so long after its primary term as oil or gas is produced in paying quantities. Any lease issued under this section for land on which or for which, under an approved unit or development plan, actual drilling operations were commenced prior to the end of its primary term and are being diligently prosecuted at that time shall be extended for two years and so long thereafter as oil or gas is produced in paying quantities.

"(g) No lease issued under this section which is subject to termination because of cessation of production shall be terminated for this cause so long as reworking or drilling operations which were commenced on the land prior to or within sixty days after cessation of production are conducted thereon with reasonable diligence, or so long as oil or gas is produced in paying quantities as a result of such operations. No lease issued under this section shall expire because operations or production is suspended under any order, or with the consent, of the Secretary. No lease issued under this section covering lands on which there is a well capable of producing oil or gas in paying quantities shall expire because the lessee fails to produce the same unless the lessee is allowed a reasonable time, which shall be not less than sixty days after notice by registered or certified mail, within which to place such well in producing status or unless, after such status is established, production is discontinued on the leased premises without permission granted by the Secretary under the provisions of this Act.

"(h) Whenever it appears to the Secretary that lands owned by the United States are being drained of oil or gas by wells drilled on adjacent lands, he may negotiate agreements whereby the United States, or the United States and its lessees, shall be compensated for such drainage. Such agreements shall be made with the consent of the lessees, if any, affected thereby. If such agreement is entered into, the primary term of any lease for which compensatory royalty is being paid, or any extension of such primary term, shall be extended for the period during which such compensatory royalty is paid and for a period of one year from discontinuance of such payment and so long thereafter as oil or gas is produced in paying quantities. The Secretary shall report to Congress at the beginning of each regular session all such agreements entered into during the previous year which involve unleased Government lands.

"(i) If, during the primary term or any extended term of any lease issued under this section, a certified statement is filed by any mining claimant pursuant to subsection (c) of section 7 of the Multiple Mineral Development Act of August 13, 1954 (68 Stat. 708), as amended (30 U.S.C. 521), whether such filing occur prior to this Act or hereafter, asserting the existence of conflicting unpatented mining claim or claims upon which diligent work is being prosecuted as to

any lands covered by the lease, the running of time under such lease shall be suspended as to the lands involved from the first day of the month following the filing of such verified statement until a final decision is rendered in the matter.

"(j) The Secretary of the Interior shall, upon timely application therefor, issue a new lease in exchange for any lease issued for a term of twenty years, or any renewal thereof, or any lease heretofore issued in exchange for a twenty-year lease, such new lease to be for a primary term of five years and so long thereafter as oil or gas is produced in paying quantities and at a royalty rate of not less than 12½ per centum in amount or value of the production removed or sold from such leases, except that the royalty rate shall be 12½ per centum in amount or value of the production removed or sold from said leases, as to (1) such leases, or such parts of the lands subject thereto, and the deposits underlying the same, as are not believed to be within the productive limits of any producing oil or gas deposit, as such productive limits are found by the Secretary to exist on the effective date of this Act, and (2) any production on a lease from an oil or gas deposit which was discovered after May 27, 1941, by a well or wells drilled within the boundaries of the lease, and which is determined by the Secretary to be a new deposit; and (3) any production on or allocated to a lease pursuant to an approved unit or cooperative agreement from an oil or gas deposit which was discovered after May 27, 1941, on land committed to such agreement, and which is determined by the Secretary to be a new deposit, where such lease, or a lease for which it is exchanged, was included in such agreement at the time of discovery, or was included in a duly executed and filed application for the approval of such agreement at the time of discovery.

"(k) For the purpose of more properly conserving the natural resources of any oil or gas pool, field, or like area, or any part thereof (whether or not any part of said oil or gas pool field, or like area, is then subject to any cooperative or unit plan of development or operation), lessees thereof and their representatives may unite with each other, or jointly or separately with others, in collectively adopting and operating under a cooperative or unit plan of development or operation of such pool, field, or like area, or any part thereof, whenever determined and certified by the Secretary of the Interior to be necessary or advisable in the public interest. The Secretary is thereunto authorized, in his discretion, with the consent of the holders of leases involved, to establish, alter, change, or revoke drilling, producing, rental, minimum royalty, and royalty requirements of such leases and to make such regulations with reference to such leases, with like consent on the part of the lessees, in connection with the institution and operation of any such cooperative or unit plan as he may deem necessary or proper to secure the proper protection of the public interest. The Secretary may provide that oil and gas leases hereafter issued under this Act shall contain a provision requiring the lessee to operate under such a reasonable cooperative or unit plan, and he may prescribe such a plan under which such lessee shall operate, which shall adequately protect the rights of all parties in interest, including the United States.

"Any plan authorized by the preceding paragraph which includes lands owned by the United States, may, in the discretion of the Secretary, contain a provision whereby authority is vested in the Secretary of the Interior, or any such person, committee, of State or Federal officer or agency as may be designated in the plan, to alter or modify from time to time the rate of prospecting and development and the quantity and rate of production under such plan. All leases operated under any such plan approved or prescribed by the Secretary shall be excepted in determining holdings or control under the provisions of any section of this Act.

"When separate tracts cannot be independently developed and operated in conformity with an established well-spacing or development program, any lease, or a portion thereof, may be pooled with other lands, whether or not owned by the United States, under a communitization or drilling agreement providing for an apportionment of production or royalties among the separate tracts of land comprising the drilling or spacing unit when determined by the Secretary of the Interior to be in the public interest, and operations or production pursuant to such an agreement shall be deemed to be operations or production as to each such lease committed thereto.

"Any lease issued for a term of twenty years, or any renewal thereof, or any portion of such lease that has become the subject of a cooperative or unit plan of development or operation of a pool, field, or like area, which plan has the approval of the Secretary of the Interior, shall continue in force until the termination of such plan. Any other lease issued under any section of this Act which has heretofore or may hereafter be committed to any such plan that contains a general provision for allocation of oil or gas shall continue in force and effect as to the land committed, so long as the lease remains subject to the plan: *Provided,* That production is had in paying quantities under the plan prior to the expiration date of the term of such lease. Any lease hereafter committed to any such plan embracing lands that are in part within and in part outside of the area covered by any such plan shall be segregated into separate leases as to the lands committed and the lands not committed as of the effective date of unitization: *Provided, however,* That any such lease as to the nonunitized portion shall continue in force and effect for the term thereof but for not less than two years from the date of such segregation and so long thereafter as oil or gas is produced in paying quantities. The minimum royalty or discovery rental under any lease that has become subject to any cooperative or unit plan of development or operation, or other plan that contains a general provision for allocation of oil or gas, shall be payable only with respect to the lands subject to such lease to which oil or gas shall be allocated under such plan. Any lease which shall be eliminated from any such approved or prescribed plan, or from any communitization or drilling agreement authorized by this section, and any lease which shall be in effect at the termination of any such approval or prescribed plan, or at the termination of any such communitization or drilling agreement, unless relinquished, shall continue in effect for the original term thereof, but for not less than two years, and so long thereafter as oil or gas is produced in paying quantities.

"The Secretary of the Interior is hereby authorized, on such conditions as he may prescribe, to approve operating, drilling, or development contracts made by one or more lessees of oil or gas leases, with one or more persons, associations, or corporations, whenever, in his discretion the conservation of natural products or the public convenience or necessity may require it or the interests of the United States may be best subserved thereby. All leases operated under such approved operating, drilling, or development contracts, and interests thereunder, shall be excepted in determining holdings or control under the provisions of any said Act.

"The Secretary of the Interior, to avoid waste or to promote conservation of natural resources, may authorize the subsurface storage of oil or gas, whether or not produced from federally owned lands, in lands leased or subject to lease under this Act. Such authorization may provide for the payment of a storage fee or rental on such stored oil or gas, or, in lieu of such fee or rental, for a royalty other than that prescribed in the lease when such stored oil or gas is produced in conjunction with oil or gas not previously produced. Any lease on which storage is so authorized shall be extended at least for the period of storage and so long thereafter as oil or gas not previously produced is produced in paying quantities."

SEC. 3. Section 27 of said Act, as amended (30 U.S.C. 184), is further amended to read as follows:

"SEC. 27. (a) (1) No person, association, or corporation, except as otherwise provided in this subsection, shall take, hold, own, or control at one time, whether acquired directly from the Secretary under this Act or otherwise, coal leases or permits on an aggregate of more than ten thousand two hundred and forty acres in any one State.

"(2) A person, association, or corporation may apply for coal leases or permits for acreage in addition to that which is permissible under paragraph (1) of this subsection, but the additional acreage shall not exceed five thousand one hundred and twenty acres in any one State. Each application shall be for forty acres or a multiple thereof and shall contain a statement that the granting of a lease or permit for the additional lands is necessary to enable the applicant to carry on business economically and that it is believed to be in the public interest. On the filing of such an application, the coal deposits in the lands covered by it shall be temporarily set aside and withdrawn from all forms of disposal under this Act. The Secretary shall, after posting notice of the pending application in the local land office, conduct public hearings on it. After such hearings the Secretary may, under such regulations as he may prescribe and to such extent as he finds to be in the public interest and necessary to enable the applicant to carry on business economically, permit the applicant to take and hold coal leases or permits for additional acreage as hereinbefore provided. The Secretary may, in his own discretion or whenever sufficient public interest is manifested, reevaluate a lessee's or permittee's need for all or any part of the additional acreage and may cancel any lease or permit covering all or any part of such acreage if he finds that cancellation is in the public interest or that the coal deposits in said acreage are no longer necessary for the lessee or permittee to carry on business economically or that the lessee or permittee has divested himself of all or any part of his first ten thousand two hundred and forty acres or no longer has facilities which, in the Secretary's opinion, enable him to exploit the deposits under lease or permit. No assignment, transfer, or sale of any part of the additional acreage may be made without the approval of the Secretary.

"(b) (1) No person, association, or corporation, except as otherwise provided in this subsection, shall take, hold, own, or control at one time, whether acquired directly from the Secretary under this Act or otherwise, sodium leases or permits on an aggregate of more than five thousand one hundred and twenty acres in any one State.

"(2) The Secretary may, in his discretion, where the same is necessary in order to secure the economic mining of sodium compounds leasable under this Act, permit a person, association, or corporation to take or hold sodium leases or permits on up to fifteen thousand three hundred and sixty acres in any one State.

"(c) No person, association, or corporation shall take, hold, own, or control at one time, whether acquired directly from the Secretary under this Act or otherwise, phosphate

leases or permits on an aggregate of more than ten thousand two hundred and forty acres in the United States.

"(d)(1) No person, association, or corporation, except as otherwise provided in this Act, shall take, hold, own or control at one time, whether acquired directly from the Secretary under this Act or otherwise, oil or gas leases (including options for such leases) on land held under the provisions of this Act exceeding in the aggregate more than two hundred forty-six thousand and eighty acres in any one State other than Alaska. In the case of the State of Alaska, the limit shall be three hundred thousand acres in the northern leasing district and three hundred thousand acres in the southern leasing district, and the boundary between said two districts, shall be the left limit of the Tanana River from the border between the United States and Canada to the confluence of the Tanana and Yukon Rivers, and the left limit of the Yukon River from said confluence to its principal southern mouth.

"(2) No person, association, or corporation shall take, hold, own, or control at one time options to acquire interests in oil or gas leases under the provisions of this Act which involve, in the aggregate, more than two hundred thousand acres of land in any one State other than Alaska, or in the case of Alaska, more than two hundred thousand acres in each of its two leasing districts, as hereinbefore described. No option to acquire any interest in such an oil or gas lease shall be enforcible if entered into for a period of more than three years (which three years shall be inclusive of any renewal period if a right to renew is reserved by any party to the option) without the prior approval of the Secretary. In any case in which an option to acquire the optionor's entire interest in the whole or a part of the acreage under a lease is entered into, the acreage to which the option is applicable shall be charged both to the optionor and to the optionee, but the charge to the optionor shall cease when the option is exercised. In any case in which an option to acquire a part of the optionor's interest in the whole or a part of the acreage under a lease is entered into, the acreage to which the option is applicable shall be fully charged to the optionor and a share thereof shall also be charged to the optionee as his interest may appear, but after the option is exercised, said acreage shall be charged to the parties pro rata as their interests may appear. In any case in which an assignment is made of a part of a lessee's interest in the whole or part of the acreage under a lease or an application for a lease, the acreage shall be charged to the parties pro rata as their interests may appear. No option or assignment hereafter made, or renewal thereof hereafter granted, shall be enforcible until notice thereof has been filed with the Secretary or an officer or employee of the Department of the Interior designated by him to receive the same. Each such notice shall include, in addition to any other matters prescribed by the Secretary, the names and addresses of the parties thereto, the serial number of the lease or application for a lease to which the option is applicable, and a statement of the number of acres covered thereby and of the interests and obligations of the parties thereto and shall be subscribed by the holder of the option or his duly authorized agent. An option which has not been exercised shall remain charged to both parties until notice of its expiration, relinquishment, or surrender has been filed, by either party, with the Secretary or any officer or employee of the Department of the Interior designated by him to receive the same. In addition, each holder of any such option shall file with the Secretary or an officer or employee of the Department of the Interior as aforesaid within ninety days after the 30th day of June and the 31st day of December in each year a statement showing, in addition to any other matters prescribed by the Secretary, his name, the name and address of each grantor of an option held by him, the serial number of every lease or application for a lease to which such an option is applicable, the number of acres covered by each such option, the total acreage in each State to which such options are applicable, and his interest and obligation under each such option. The failure of the holder of an option so to file shall render the option unenforcible by him. The unenforcibility of any option under the provisions of this paragraph shall not diminish the number of acres deemed to be held under option by any person, association, or corporation in computing the amount chargeable under the first sentence of this paragraph and shall not relieve any party thereto of any liability to cancellation, forfeiture, forced disposition, or other sanction provided by law. The Secretary may prescribe forms on which the notice and statements required by this paragraph shall be made.

"(e)(1) No person, association, or corporation shall take, hold, own or control at one time any interest as a member of an association or as a stockholder in a corporation holding a lease, option, or permit under the provisions of this Act which, together with the area embraced in any direct holding, ownership or control by him of such a lease, option, or permit or any other interest which he may have as a member of other associations or as a stockholder in other corporations holding, owning or controlling such leases, options, or permits for any kind of minerals, exceeds in the aggregate an amount equivalent to the maximum number of acres of the respective kinds of minerals allowed to any one lessee, optionee, or permittee under this Act, except that no person shall be charged with his pro rata share of any acreage holdings of any association or corporation unless he is the beneficial owner of more than 10 per centum of the stock or other instruments of ownership or control of such association or corporation, and except that within three years after the enactment of this Act no valid option in existence prior to the enactment of this Act held by a corporation or association at the time of enactment of this Act shall be chargeable to any stockholder of such corporation or to a member of such association so long as said option shall be so held by such corporation or association under the provisions of this Act.

"(2) No contract for development and operation of any lands leased under this Act, whether or not coupled with an interest in such lease, and no lease held, owned or controlled in common by two or more persons, associations, or corporations shall be deemed to create a separate association under the preceding paragraph of this subsection between or among the contracting parties or those who hold, own or control the lease in common, but the proportionate interest of each such party shall be charged against the total acreage permitted to be held, owned, or controlled by such party under this Act. The total acreage so held, owned, or controlled in common by two or more parties shall not exceed, in the aggregate, an amount equivalent to the maximum number of acres of the respective kinds of minerals allowed to any one lessee, optionee, or permittee under this Act.

"(f) Nothing contained in subsection (e) of this section shall be construed (i) to limit sections 18, 19, and 22 of this Act or (ii), subject to the approval of the Secretary, to prevent any number of lessees under this Act from combining their several interests so far as may be necessary for the purpose of constructing and carrying on the business of a refinery or of establishing and constructing, as a common carrier, a pipeline or railroad to be operated and used by them jointly in the transportation of oil from their several wells or from the wells of other lessees under this Act or in the transportation of coal or (iii) to increase the acreage which may be taken, held, owned, or controlled under section 27 of this Act.

"(g) Any ownership or interest otherwise forbidden in this Act which may acquired by descent, will, judgment, or decree may be held for two years after its acquisition and no longer.

"(h)(1) If any interest in any lease is owned or controlled, directly or indirectly, by means of stock or otherwise, in violation of any of the provisions of this Act, the lease may be canceled, or the interest so owned may be forfeited, or the person so owning or controlling the interest may be compelled to dispose of the interest in any appropriate proceeding instituted by the Attorney General. Such a proceeding shall be instituted in the United States district court for the district in which the leased property or some part thereof is located or in which the defendant may be found.

"(2) The right to cancel or forfeit for violation of any of the provisions of this Act shall not apply so as to affect adversely the title or interest of a bona fide purchaser of any lease, interest in a lease, option to acquire a lease or an interest therein, or permit which lease, interest, option, or permit was acquired and is held by a qualified person, association, or corporation in conformity with those provisions, even though the holdings of the person, association, or corporation from which the lease, interest, option, or permit was acquired, or of his predecessor in title (including the original lessee of the United States) may have been canceled or forfeited or may be or may have been subject to cancellation or forfeiture for any such violations. If, in any such proceeding, an underlying lease, interest, option, or permit is canceled or forfeited to the Government and there are valid interests therein or valid options to acquire the lease or an interest therein which are not subject to cancellation, forfeiture, or compulsory disposition, the underlying lease, interest, option, or permit shall be sold by the Secretary to the highest responsible qualified bidder by competitive bidding under general regulations subject to all outstanding valid interests therein and valid options pertaining thereto. Likewise, if, in any such proceeding, less than the whole interest in a lease, interest, option, or permit is canceled or forfeited to the Government, the partial interests so canceled or forfeited shall be sold by the Secretary to the highest responsible qualified bidder by competitive bidding under general regulations. If competitive bidding fails to produce a satisfactory offer the Secretary may, in either of these cases, sell the interest in question by such other method as he deems appropriate on terms not less favorable to the Government than those of the best competitive bid received.

"(3) The commencement and conclusion of every proceeding under this subsection shall be promptly noted on the appropriate public records of the Bureau of Land Management.

"(i) Effective September 21, 1959, any person, association, or corporation who is a party to any proceeding with respect to a violation of any provision of this act, whether initiated prior to said date or thereafter, shall have the right to be dismissed as such a party upon showing that he holds and acquired as a bona fide purchaser the interest involving him as such a party without violating any provisions of this act. No hearing upon any such showing shall be required by the Department unless evidence prima facie in its files indicates a possible violation of the Mineral Leasing Act on the part of the alleged bona fide purchaser.

"(j) If during any such proceeding, a party thereto files with the Secretary a waiver of his rights under his lease (including particularly, where applicable, rights to drill and to assign) or if such rights are suspended by the Secretary pending a decision in the proceeding, whether initiated prior to enactment of this act or thereafter, payment of rentals and running of time against the term of the lease or leases involved shall be suspended as of the first day of the month following the filing of the waiver or suspension of the rights.

(k) Except as otherwise provided in this Act, if any lands or deposits subject to the provisions of this Act shall be subleased, trusteed, possessed, or controlled by any device permanently, temporarily, directly, indirectly, tacitly, or in any manner whatsoever, so that they form a part of or are in anywise controlled by any combination in the form of an unlawful trust, with the consent of the lessee, optionee, or permittee, or form the subject of any contract or conspiracy in restraint of trade in the mining or selling of coal, phosphate, oil, oil shale, gas, or sodium entered into by the lessee, optionee, or permittee or any agreement or understanding, written, verbal, or otherwise, to which such lessee, optionee, or permittee shall be a party, of which his or its output is to be or become the subject, to control the price or prices thereof or of any holding of such lands by any individual, partnership, association, corporation, or control in excess of the amounts of lands provided in this Act, the lease, option, or permit shall be forfeited by appropriate court proceedings."

SEC. 4. (a) Upon the expiration of the initial five-year term of any noncompetitive oil or gas lease which was issued prior to the enactment of this Act and which has been maintained in accordance with applicable statutory requirements and regulations, the record titleholder thereof shall be entitled to a single extension of the lease, unless then otherwise provided by law, for such lands covered by it as are not on the expiration date of the lease, withdrawn from leasing. A withdrawal, however, shall not affect the right to an extension if actual drilling operations on such lands were commenced prior to the effective date of the withdrawal and were being diligently prosecuted on the expiration date of the lease. No withdrawal shall be effective within the meaning of this section until ninety days after notice thereof has been sent by registered or certified mail to each lessee to be affected by such withdrawal.

(b) As to lands not within the known geologic structure of a producing oil or gas field, a noncompetitive oil or gas lease to which this section is applicable shall be extended for a period of five years and so long thereafter as oil or gas is produced in paying quantities. As to lands within the known geologic structure of a producing oil or gas field, a noncompetitive lease to which this section is applicable shall be extended for a period of two years and so long thereafter as oil or gas is produced in paying quantities.

(c) Any noncompetitive oil or gas lease extended under this section shall be subject to the rules and regulations in force at the expiration of the initial five-year term of the lease. No extension shall be granted, however, unless within a period of ninety days prior to the expiration date of the lease, an application therefor is filed by the record titleholder or an assignee whose assignment has been filed for approval or an operator whose operating agreement has been filed for approval.

(d) Any lease issued prior to the enactment of this Act which has been maintained in accordance with applicable statutory requirements and regulations and which pertains to land on which actual drilling operations were commenced prior to the end of its fixed term and are being diligently prosecuted at that time shall be extended for two years and so long thereafter as oil or gas is produced in paying quantities.

SEC. 5. The Act of February 25, 1920, as amended (30 U.S.C. 181 and the following), is amended by adding a section 42 thereto to read as follows:

"No action under the Administrative Procedure Act to review a decision of the Secretary involving the application for, issuance, cancellation, or forfeiture of or title to any oil and gas lease shall be maintained unless such action is commenced or taken within ninety days from and after the final decision of the Secretary relating to such matter. No such action to review such a decision of the Secretary heretofore rendered shall be maintained unless the same be commenced or taken within ninety days from and after the effective date of this Act."

SEC. 6. The last sentence of section 30(a) of the Act of February 25, 1920, as amended (30 U.S.C. 187a), is amended to read as follows: "Upon the segregation by an assignment of a lease issued after the effective date of this Act held beyond its primary term by production, actual or suspended, or the payment of compensatory royalty, the segregated lease of an undeveloped, assigned, or retained part shall continue for two years, and so long thereafter as oil or gas is produced in paying quantities."

The provisions of this section 6 shall not be applicable to any lease issued prior to the effective date of this Act.

SEC. 7. (a) Section 1 of the Act of February 25, 1920, as amended (30 U.S.C. 181), section 2 of said Act (30 U.S.C. 182), and section 21 of said Act (30 U.S.C. 341) are amended by the insertion of the words "native asphalt, solid and semisolid bitumen, and bituminous rock (including oil-impregnated rock or sands from which oil is recoverable only by special treatment after the deposit is mined or quarried)" immediately after the words "oil shale," in the first sentence of each section. The provisions of section 21 of said Act (30 U.S.C. 241) shall be applicable to leases issued under this section, except that no person, association, or corporation shall acquire or hold more than seven thousand six hundred and eighty acres in any one State.

(b) If an offer for a lease under the provisions of section 21 for deposits other than oil shale is based upon a mineral location, the validity of which might be questioned because the claim was based on a placer location rather than on a lode location, or vice versa, the offeror shall have a preference right to a lease if the offer is filed not more than one year after the date of approval of this Act.

(c) A lease under the multiple use principle may issue notwithstanding the existence of an outstanding lease issued under any other provision of this Act.

SEC. 8. No amendment made by this Act shall affect any valid right granted under the law as it existed prior to such amendment.

Mr. ANDERSON. Mr. President, I yield myself 3 minutes.

I take this time primarily to pay tribute to two members of the committee. The preparation of the bill has been a long and tedious process. It involves the amendment of the Mineral Leasing Act of 1920.

Much of what is contained in the House bill, which is now before the Senate, was in S. 2983, which was originally introduced by the distinguished senior Senator from Wyoming [Mr. O'MAHONEY].

In my opinion, for a long period of time—in fact, practically since 1935—Senator JOSEPH O'MAHONEY has been the great authority in the United States on the subject of mineral leasing. He was the author of a mineral leasing bill as far back as 1935.

During the many years that he has been a member of the Committee on Interior and Insular Affairs, there has never been a time when he has not been interested in the subject of mineral leasing. Therefore, we were desirous to complete work on the bill while we might still have the advantage of his great knowledge and technical skill in the drafting of mineral leasing legislation.

I would certainly be remiss if I failed not only to mention his authorship of the bill which we have used as a model on which to build, but also to pay tribute to the fidelity with which he has worked on it.

I think it worth reminding the Senate that Senator O'MAHONEY, as a very young man, worked with the late Senator Kendrick on the original oil leasing bill passed by the Senate. It is rare that an individual should live through a whole cycle of legislation, as the Senator from Wyoming has been able to do. I pay high tribute to him.

Mr. President, I take this opportunity also to thank the able Senator from Colorado [Mr. ALLOTT] for the part he played in the drafting of the bill. It is always possible for a minority to cause trouble, if it desires to do so. The able Senator from Colorado worked steadfastly in trying to report a good bill. He did not agree with everything in it, and I did not agree with everything in it. But we tried to find a meeting place. We took time to make certain that the final bill was satisfactory. I compliment the Senator from Colorado sincerely on the part which he played in the preparation of the bill.

Mr. President, the bill involves some new developments. There is a title provision on tar sands. There is a possibility that tar sands may become more important. The rules and regulations which have been applied on oil and gas may become usable in the field of tar sands.

So we shall have a 10-year lease, instead of a 5-year lease and a 5-year extension.

We shall have some increases in rentals, which will be of benefit to the reclamation fund, the public school funds, and so forth.

The members of the Committee on Interior and Insular Affairs who worked upon this measure are indeed grateful for the fine work which has been done.

Mr. ALLOTT. First, Mr. President, I desire to thank the Senator from New Mexico [Mr. ANDERSON] for his very kind remarks. Only those who have worked in this field can comprehend, I am sure, how extremely complicated it is.

The Senator from Wyoming [Mr. O'MAHONEY] introduced the original bill, I believe, and he was very active. After he became ill, earlier in the year, it was my privilege to work with him on occasion, and also to work with the Senator from New Mexico [Mr. ANDERSON].

I believe this bill will bring new revenue to the United States, and I believe the bill is a step forward.

I have forfeited what I believe should be one feature of future legislation—namely, a recording act to be applicable to this field. I had offered such a measure. But because of the complication involved in working it out, I decided that rather than prejudice the overall good to be gained by the bill, I would withdraw my amendment; and I have done so.

I express my appreciation to the Senator from New Mexico [Mr. ANDERSON] and to the Senator from Wyoming [Mr. O'MAHONEY] for their extremely fine work on the bill.

Mr. LAUSCHE. Mr. President, will the Senator from Colorado yield?

Mr. ALLOTT. I yield.

Mr. LAUSCHE. On page 2 of the report, paragraph 3 states, in effect, that the bill substitutes a fixed 10-year lease term for the present 5-year term with automatic right of renewal for a second 5-year term. Will the right to renew carry with it the identical rental that is set forth for the first year of the 10-year term; or if a 5-year renewal is required, will there be a restudy, with the intent of ascertaining whether the rent should be raised when the renewal is made?

Mr. ALLOTT. To some extent paragraph 3, on page 2 of the report, from which the Senator from Ohio has been reading, is in error. If the Senator from Ohio will examine page 6 of the report——

Mr. ANDERSON. Mr. President, I question whether it is in error. I believe it is misleading.

Mr. ALLOTT. Yes; let us say it is misleading.

If the Senator from Ohio will examine page 6, he will see there has been a substitution of a single 10-year primary lease term.

Mr. LAUSCHE. Where on page 6?

Mr. ALLOTT. At the bottom of the page.

I now read that part of the report:

> Lease terms: Substitution of a single 10-year primary lease term in the case of noncompetitive leases (i.e., leases held on lands which are not within the known geological structure of a producing field) for the present 5-year term with right of renewal will, it is believed, simplify administration and reduce costs both to the Government and the industry.
>
> Similarly, allowance of an added 2-year term for existing and future oil and gas leases, if actual drilling is being diligently prosecuted at the end of the primary term, will provide impetus toward exploration for oil and gas and reward those who do so diligently.

To answer the second part of the Senator's question, let me say that the Senator from New Mexico, who is now on the floor, has very, very consistently taken the position, since this began—and perhaps he would like to discuss it—that the United States was not getting sufficient rentals from these properties, for which the rentals are prorated back to the States, for the purpose of education and roads. As a consequence, there is a new paragraph on minimum rentals. It is dealt with on page 6 of the report, beginning in the middle of the page, under the subhead "Minimum Rentals."

Mr. ANDERSON. Let me say to the Senator from Ohio that instead of a 5-year lease and an automatic 5-year extension, there is now to be a single 10-year lease, but no extension of that 10-year lease. The total periods, in short, are identical.

The amendment merely means that there will be one 10-year period—not 5 years followed by a second period of 5 years, with the result that additional bookkeeping would be required.

Mr. LAUSCHE. In other words, the bill does not provide for a 10-year lease and then a 5-year extension; is that correct? Of course, the act originally provided for a 5-year lease and a 5-year extension.

Mr. ANDERSON. That is correct; there is not to be a 5-year extension of the 10-year lease.

Mr. LAUSCHE. In other words, the lease is to be 10 years, and no 5-year extension.

Mr. ANDERSON. Yes; and I am very glad the Senator from Ohio has called attention to that point, because in the absence of this legislative history, someone might have construed this measure as meaning that there would be a 10-year lease and a 5-year extension. However, there will be no such extension.

Mr. LAUSCHE. How about the increase in the rents?

Mr. ANDERSON. The original provision was for 50 cents the first year, nothing the second year, nothing the third year, 25 cents the fourth year, and 25 cents the fifth year.

This measure provides for a substantially higher rental than the old one, and it should substantially increase the receipts. But in the opinion of the members of the committee, the increase represents only the drop in the value of the dollar.

Mr. LAUSCHE. Can the Senator tell me what motivated the proposal to change the law?

Mr. ANDERSON. The Department of the Interior had all kinds of troubles; and therefore a study had been made as to the desirability of changing the law.

The Department of the Interior wanted to establish higher rentals; and in dealing with the whole thing, we arrived at this measure.

Mr. LAUSCHE. Does the Department of the Interior approve this proposal?

Mr. ANDERSON. Yes; all of it.

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute.

The amendment was agreed to.

The PRESIDING OFFICER. The question now is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read the third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question now is, Shall it pass?

The bill (H.R. 10455) was passed.

Mr. ALLOTT. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. GOLDWATER. Mr. President, I move to lay on the table the motion to reconsider.

Mr. ANDERSON. Mr. President, I move to lay on the table the motion to reconsider.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider the vote by which the bill was passed.

The motion to lay on the table was agreed to.

Mr. ANDERSON. Mr. President, I move that the Senate insist upon its amendment, request a conference thereon with the House of Representatives, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. O'MAHONEY, Mr. ANDERSON, Mr. GRUENING, Mr. DWORSHAK, and Mr. ALLOTT conferees on the part of the Senate.

RELEASE OF RECAPTURE PROVISIONS IN CONVEYANCE OF CERTAIN REAL PROPERTY TO THE CITY OF LITTLE ROCK, ARK.

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1632, Senate bill 3319.

The PRESIDING OFFICER. The bill will be stated by title, for the information of the Senate.

The CHIEF CLERK. A bill (S. 3319) to authorize the Administrator of General Services to release the recapture provisions contained in the conveyance of certain real property to the city of Little Rock, Ark., and for other purposes.

Mr. MANSFIELD. Mr. President, this bill is being taken up with the concurrence of the leadership, at the request of the distinguished Senator from Arkansas [Mr. MCCLELLAN], who has informed us that the prior objection entered to the measure by the Senator from Oregon [Mr. MORSE] has now been removed, and that the Senator from Oregon is perfectly willing to have the bill brought up at this time.

Mr. LAUSCHE. Is this the Stella School District bill?

Mr. MANSFIELD. No.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. MCCLELLAN. Mr. President, I believe it was on yesterday that the distinguished Senator from Oregon came to me and stated he would not interpose any objection to this bill.

All agencies of the Government favor the bill. It is simply a bill in aid of progress. If this reservation is released, the city will be able to, and plans to, issue bonds for the improvement of the airport.

I trust that the bill will be passed.

The PRESIDING OFFICER. If there be no amendment to be proposed, the

question is on the engrossment and third reading of the bill.

The bill (S. 3319) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subparagraph numbered (2) of the concluding paragraph of the first section of the Act entitled "An Act making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1937, and for other purposes", approved May 15, 1936 (49 Stat. 1292), is hereby repealed.

(b) The Administrator of General Services is authorized and directed to execute and deliver to the city of Little Rock, Arkansas, without consideration, such instrument as he shall determine to be required to release effectively to that city all right, title, and interest heretofore reserved to the United States or any department or agency thereof in or with respect to the land described in section 2 of that Act (49 Stat. 1292–1293) in compliance with the condition imposed by that subparagraph.

Mr. MORSE subsequently said: Mr. President, a few minutes ago the Senate passed Senate bill 3319, Calendar No. 1632.

I ask unanimous consent that at the appropriate point in the debate a memorandum I had prepared on S. 3319, showing it does not violate the Morse formula, be inserted in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORSE

S. 3319 proposes to authorize the General Services Administration to release the recapture provisions contained in the 1936 conveyance of certain airport property by the Federal Government to the city of Little Rock, Ark., pursuant to Public Law 598 of the 74th Congress.

The 1936 conveyance contained the following reversionary clause:

"In time of national emergency, upon request of the Secretary of War, the municipality shall turn over complete control and operation of the entire Little Rock Municipal Airport and the property thereon, without rental or other charge, to the United States of America, for such use and for such length of time as the emergency shall require, in the discretion of the Secretary of War."

During World War II, the Army recaptured the land in question and in 1951, the General Services Administration transferred the land back to the city of Little Rock by quitclaim deed subject to the above-quoted reversionary provision.

The Little Rock Municipal Airport Commission now desires to develop the airport and to finance the development through the issuance of revenue bonds. However, bond attorneys have advised the commission that they cannot issue a legal opinion approving airport revenue bonds for Little Rock because of the national emergency recapture clause mentioned above.

S. 3319 proposes to release the reversional clause without consideration.

COMMENTS

In a letter dated June 8, 1960, the Department of the Air Force states:

"The Department of Defense has no foreseeable future requirement for that portion of Adams Field described by Public Law 598, 74th Congress, and accordingly has no objection to the release of the recapture provisions on the area conveyed by that public law. If an unforeseen requirement for an airfield should develop, it is believed that Little Rock Air Force Base could accommodate the mission."

The release of the recapture provision of the 1936 law and the improvement of Little Rock Municipal Airport pursuant to the issuance of revenue bonds will be in the interest of the Federal Government and of national defense. Because of this important benefit to the Federal Government the proposed release is not objectionable under the Morse formula.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to consider executive business, to consider the nominations on the Executive Calendar.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. If there be no reports of committees, the nominations on the calendar will be stated.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Montana will state it.

Mr. MANSFIELD. In view of the fact that the chief opposition, as I understand, will be directed against the nomination to the Civil Aeronautics Board and the nomination to the Federal Maritime Board, would it be possible to have the Senate consider both of them, en bloc?

The PRESIDING OFFICER. Without objection——

Mr. GRUENING. I object.

Mr. McCARTHY. Mr. President, reserving the right to object——

The PRESIDING OFFICER. Objection is heard.

Mr. MANSFIELD. Then, Mr. President, we now have before us the nomination of John S. Bragdon, of the District of Columbia, to be a member of the Civil Aeronautics Board for the remainder of the term expiring December 31, 1960. We have not acted upon that nomination.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for a quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on the confirmation of the nomination of John S. Bragdon, of the District of Columbia, to be a member of the Civil Aeronautics Board for the remainder of the term expiring December 31, 1960.

Mr. ENGLE. Mr. President, the Committee on Interstate and Foreign Commerce, to which was referred the nominations of Vice Adm. Ralph E. Wilson, of Maryland, to be a member of the Federal Maritime Board for a term of 4 years expiring June 30, 1964, vice Clarence G. Morse, and the nomination of John S. Bragdon, of the District of Columbia, to be a member of the Civil Aeronautics Board for the remainder of the term expiring December 31, 1960, vice James Durfee, considered the same, reported favorably thereon, and recommended that the nominations be confirmed.

Mr. President, the nominations were reported jointly by the Committee on Interstate and Foreign Commerce. The report is dated Friday, June 10, 1960. In connection with the report at that time I filed my individual views, dissenting to the confirmation of the nominations of these two gentlemen.

Though I agree with the majority view that Adm. Ralph E. Wilson and Gen. John S. Bragdon have distinguished military records and were competent witnesses before our committee, I cannot concur with the recommendation that their nominations be confirmed. This administration, and others before it, have found it easier to tap retired career officers for public service than to search further for qualified civilians. There is no doubt in my mind that in this country's great maritime and aviation industries there are many outstanding men who would be willing and honored to hold appointments on these Boards—men who have spent their lives in the business, who know it intimately, and who have the respect and confidence of their associates.

In a famous 1948 letter President Eisenhower dwelt upon the importance of keeping civilian power in the hands of civilians. He said:

It is my conviction that the necessary and wise subordination of the military to civil power will be best sustained and our people will have greater confidence that it is so sustained when lifelong professional soldiers, in the absence of some obvious and overriding reasons, abstain from seeking high political office.

The President was, of course, talking about running for political office but in its true meaning any high appointive office is also a high political office. The President went on to say:

In the American scene I see no dearth of men fitted by training, talent, and integrity for national leadership.

Mr. President, it must be perfectly plain to everyone that the great maritime industry of this country and the great aviation industry of this country do not have to look to retired military men, to men who have spent 30 or 40 years in a military office, in order to fill the civilian regulatory agencies.

Mr. President, the gravamen and the basis of my complaint against both of these nominations is that I do not believe we ought to fill these civilian regulatory agencies with retired military men. I am against that practice. I assert that these great industries have talent enough to provide the kind of leadership needed by the civilian regulatory agencies. The President of the United States was correct when he said that we should not select men who have spent their lifetimes in the military service to serve in these high political offices.

Mr. President, this letter clearly appreciates the distinction between both the civilian and military mind and the role than mind should play in our form of government.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. ENGLE. I am glad to yield.

Mr. CARROLL. I say to the able Senator from California that I am willing to hear much more of the individual views of the Senator from California and I am perfectly willing to wait if the Senator desires to express himself further, but it seems to me that this is not solely a question of whether a man should come from the military or from the industry to be regulated.

I read from the Senator's individual views:

> There is no doubt in my mind that in this country's great maritime and aviation industries there are many outstanding men who would be willing and honored to hold appointments on these Boards.

In my opinion it is not a question of whether men may have a military background or whether these men should come from the industry which must be regulated under law. It seems to me the basic issue is: Who will really protect the public interest?

In some cases a man who has devoted himself, for example, to service in the Navy, who may be an admiral, may not know much about the public welfare. If he has devoted his life to Annapolis and to the Navy, he may not know much about the public interest or economics of maritime States as it affects the public interest.

I hope the Senator from California will not base his argument upon that thesis. I agree with the Senator that in a civilian economy we should not appoint too many of our retired military officers. Rather than to say the appointments should come from the industry or from the military, I hope the Senator from California will direct his remarks to those qualified people who ought to be appointed to serve in the public interest.

Mr. ENGLE. The Senator from Colorado makes a good point. We should not send the foxes to guard the henhouses. That is what we have done time and time again. We have selected men from the industries to be regulated and have sent them to serve on the boards which do the regulating. We have sent the foxes to guard the henhouses.

I am dealing tonight with the philosophy of selecting military men to serve on civilian regulatory agencies. I protest that upon the same ground the President of the United States expressed in his letter in 1948.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. ENGLE. I am glad to yield to the distinguished majority leader.

Mr. JOHNSON of Texas. Mr. President, I have conferred with the Senator from California. I understand if we can work out n agreement to vote tomorrow at a specified time we can proceed with the debate this evening, giving Senators assurance that there will be no rollcalls this evening.

As I understand the situation, the Senator from California and those who are associated with him desire to have yea-and-nay votes on the two nominations; is that correct?

Mr. ENGLE. That is correct.

Mr. GRUENING. Three yea-and-nay votes on three nominations.

Mr. ENGLE. The Senator from California would like to have a yea-and-nay vote on the confirmation of the nominations of the two military men. These nominations were reported en bloc by the committee. They are in one sack. I would be willing to vote on the nominations together, but I understand that some Senators wish to separate the nominations, and that is perfectly all right with me. That would require two yea-and-nay votes.

Mr. JOHNSON of Texas. I am trying to take this proposal one step at a time. I thought that was what the Senator told me, and I simply stated what I believed the Senator told me.

Mr. ENGLE. The Senator is correct.

Mr. JOHNSON of Texas. The Senator from Alaska apparently states another position.

I have talked with the Senator from Wisconsin [Mr. PROXMIRE], who is downstairs eating dinner. The Senator says he would like to have about 5 minutes on the nomination, which especially interests him and would be willing to have action without a rollcall.

If the Senator wishes a yea-and-nay vote, that will be perfectly all right with me. All I am trying to do is to ascertain what is in the minds of the Senators so I can relay that information to their colleagues. Some have engagements, and some wish to leave.

What I would like to do at this time, so far as the Senator from California and those associated with him are concerned, is to ask unanimous consent that when we conclude our session today, that we stand in adjournment until 9:30 tomorrow morning, and that at 9:30 tomorrow the Senator from Montana be recognized for not to exceed an hour and a half, in order to enable him to make a very important speech on foreign policy that he plans to make; that following that speech there be 10 minutes allotted to each side in connection with the two nominations in which the Senator from California has manifested an interest.

As I understood, he would be willing not to have any debate tomorrow, but I think if we had 10 minutes to each side, we could then proceed to a yea-and-nay vote on the first two nominations shown on the calendar.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. ENGLE. I yield.

Mr. CARROLL. In order that we can have an understanding of the parliamentary situation, as I understand there are nominations of two military men on the executive calendar. Other appointments are coming up for consideration. I think one is that of Robert E. Lee. Are there more than that?

Mr. JOHNSON of Texas. I am not aware of anymore. I do not know what will be reported tomorrow, but there are no others on the calendar now.

Mr. CARROLL. That is the point. In other words, what we shall consider are the military appointments, if I may use that expression, and the appointment of Robert E. Lee. Are there other appointments?

Mr. JOHNSON of Texas. What I am speaking of now is the appointment to the Civil Aeronautics Board and the appointment to the Federal Maritime Board. I am carrying out what I thought was agreeable to the Senator from California, that we have whatever discussion Senators wish to have tonight, as late as they wish to have it, and that in the morning we call up these nominations. The Senator from California [Mr. ENGLE] said he would be prepared to vote without any discussion. I thought we should have 10 minutes to each side, so that all Senators would know they should be prepared to vote, by, say, 11:30.

Mr. CARROLL. The able Senator from Texas made some reference to the Senator from Wisconsin [Mr. PROXMIRE].

Mr. JOHNSON of Texas. The Senator from Wisconsin [Mr. PROXMIRE] said before he left that he did not want a rollcall vote on the nominations in which he was interested, but that he would like to have 5 minutes to speak. I told him we were ready to proceed, and he said he would speak later tonight or early tomorrow. He is not here. I will speak to him as soon as he comes or as soon as I can reach him.

Mr. ENGLE. As I understand, the agreement is 20 minutes for each nomination, 10 minutes to each side for the three?

Mr. JOHNSON of Texas. I do not wish to get into the third nomination until the Senator from Wisconsin [Mr. PROXMIRE] is present. He is representing himself. I have sent word to him. He is unable to be here at this moment.

Mr. ENGLE. The Senator from Texas proposes an agreement of 20 minutes on each nomination with 10 minutes allotted to each side?

Mr. JOHNSON of Texas. Twenty minutes on each nomination, to be equally divided between the proponents and the opponents.

Mr. CARROLL. Reserving the right to object, I think it is perfectly clear, at least in my own mind, that we shall pass upon the nomination of the two nominees this evening; if not, we will vote tomorrow upon them, if necessary. But the question in my mind is whether there will be action on any other appointments on the Executive Calendar tonight, or will we discuss that subject tomorrow?

Mr. JOHNSON of Texas. I never intended that other appointments be considered tonight.

Mr. CARROLL. The majority leader has made it very clear.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ENGLE. I yield.

Mr. GOLDWATER. As I understand, it is proposed that there be allotted 20 minutes on each nomination?

Mr. JOHNSON of Texas. Yes, a total of 40 minutes.

Mr. GOLDWATER. With 10 minutes to be allotted to each side.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. ENGLE. I yield.

Mr. KEATING. Is it intended that there should not be a morning hour tomorrow?

Mr. JOHNSON of Texas. No, we shall have a morning hour after we have disposed of the nominations.

For any of those who are still in doubt, we shall have a morning hour after we have disposed of the Executive Calendar, which is normal routine.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. ENGLE. Yes, I yield.

Mr. GRUENING. I should like to address myself to what seems to me a very important principle, which does not refer to the qualifications of any of the candidates. I am not opposing them as individuals. It is—or should be—a democratic principle that the Congress, 2 weeks before adjournment, a few months before a national election should not confirm men who will thereby be fastened on the next administration for a period of years.

The next President might be from the majority party in Congress. I do not wish to see him tied down to an appointment that has been made by the present administration. I should like to free the majority from the responsibility of having to keep in office a Commission member who has been appointed by the outgoing administration. I believe it is sound principle of democratic procedure that such appointments should not be confirmed at this time. The President should have the opportunity to make interim appointments 2 weeks from now after this Congress adjourns. And when the new Congress convenes and we have a new President, the new President will be able to make such appointments as he desires and not be committed to the appointments of his predecessor, of appointees who will remain in office for 5, 6, or 7 years.

Mr. JOHNSON of Texas. The Senator from Alaska [Mr. GRUENING] has made a very persuasive argument in expressing his viewpoint. I just wish to be sure other Senators who desire to speak will have the privilege to do so tonight. I am sure that no Senator wants a quid pro quo. I am not trying to get votes. Senators are for or against the nominations. I am trying to arrange the program so that every Senator can express his views.

The Senator from Wisconsin said he may not need but 2 or 3 minutes, but overnight we may have some others who would like to discuss the nominations.

I would like to modify my request by including the third nomination on the calendar in the agreement, subject to the same consideration—namely, that we have 20 minutes for the nomination, to be equally divided, 10 for and 10 against.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Is it my understanding now that the arguments for and against these nominations will be made tonight?

Mr. JOHNSON of Texas. They will be made whenever the Senators wish to make them. I will keep them here all night if they wish to remain.

Mr. LAUSCHE. But tomorrow we will have 20 minutes, to be equally divided on each of the appointments?

Mr. JOHNSON of Texas. That is correct.

Mr. CARROLL. That is, on each of the appointments in the three categories. The agreement has nothing to do with the appointment of Mr. Murphy, which may come up later.

Mr. JOHNSON of Texas. I speak of the program for tomorrow. Under the rule another nomination could not be considered.

The PRESIDING OFFICER. The question is on the proposed agreement as modified by the Senator from Texas [Mr. JOHNSON]. Is there objection? The Chair hears none, and the proposed limitation is agreed to.

The unanimous-consent agreement reduced to writing is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That effective on June 23, 1960, at 9:30 o'clock a.m., when the Senate convenes, the Senator from Montana [Mr. MANSFIELD] be recognized for 1½ hours to address the Senate.

Provided further, That, following the above address, during the further consideration of the nominations of John S. Bragdon, to be a member of the Civil Aeronautics Board, Vice Adm. Ralph E. Wilson, to be a member of the Federal Maritime Board, and Robert E. Lee, to be a member of the Federal Communications Commission, debate shall be limited to 20 minutes on each nomination, to be equally divided and controlled by the majority and minority leaders.

Mr. JOHNSON of Texas. Let it be understood that we shall come in at 9:30 in the morning. The Senator from Montana will be recognized for not to exceed an hour and a half. Then we shall proceed to the three nominations referred to, and we shall have a maximum of 60 minutes of debate, which may or may not be used, 20 minutes on each nomination. Then we will have a morning hour, and then we will proceed to other subjects which I have listed.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. ENGLE. I yield.

Mr. MANSFIELD. As I understand what the majority leader has just said, there will be no more yea-and-nay votes tonight?

Mr. ENGLE. That is the understanding the Senator from California has, and I am certain that is what is intended.

The PRESIDING OFFICER. That is the understanding of the Chair.

Mr. ENGLE. That is precisely what the Senator from California understood, in order that Senators who have other engagements may attend to them and that this debate may proceed.

Mr. President, I wish to thank the distinguished majority leader, who proceeded with his usual fairness and his usual expedition in this matter.

INDIVIDUAL VIEWS OF MR. ENGLE

As I have stated, the letter from President Eisenhower clearly appreciates the distinction between the civilian and the military mind, and the role that mind should play in our form of government, and yet we are called upon to confirm for high political office a professional military man, Adm. Ralph E. Wilson, and at the same time as head of the Maritime Administration, a retired admiral.

I ask the Senate to think of this. We have a retired admiral as chief administrator of the Maritime Board. Now they want to appoint another admiral to the Board and to make him the Chairman of the Board. I assume that if one cannot salute, he had better not go down to that Board, because after the admiral is appointed, he will have all of his friends, his old executive officers and others, in his office. They will come in. They will be there. They will be helping him. They may be competent people in the military.

Here again we will have transferred out of the Pentagon and into the civilian regulatory agency the personnel of the Pentagon. As I have said before, it is plain that we will have a little Pentagon in the civilian regulatory agencies of this Nation. I am against it. I assert that the time to stop it is now. We should not have retired military officers operating civilian regulatory agencies. That is the reason I filed the minority views. That is why I propose to ask the Senate to vote on whether or not it intends to support this kind of procedure.

We are called upon to confirm the nomination of General Bragdon to be a member of the Civil Aeronautics Board while at the same time the head of the Federal Aviation Administration is another retired general. In other words, we will have an admiral as the chief administrator of the Maritime Administration. We will have an admiral as the Chairman of the Maritime Board. We have a lieutenant general of the Air Force operating the Federal Aviation Administration. Now we are asked to put a retired major general on the CAB.

Mr. McGEE. Mr. President, will the Senator yield?

Mr. ENGLE. I am delighted to yield to the distinguished Senator from Wyoming.

Mr. McGEE. As the Senator knows, we stood together on this matter in committee. He is rendering a great service in calling the attention of not only our colleagues but of the public in general to the emerging importance of this very serious question.

It brings into focus our whole concept of public service. It is not a new matter at all to raise the point that it is becoming more and more difficult to attract competent people from private life into public service. Therefore, it seems to me that there has been a growing tendency—even in the brief time that I have been here—to pick up castoffs as a matter of convenience, who are willing to come into public service. I do not make that characterization in a disrespectful sense.

Here we have a group of men who are retired military personnel. They receive retirement pay, upon which they can depend for their income. Therefore, they are in a position to accept Government service at a very questionable level of pay. The result is that with

those of us in Congress who are asked to select this kind of personnel, with the pressure on us from the Bureau of the Budget to save money and save more money and save still more money, it becomes a matter of convenience to turn more and more civil branches of our Government over to retired military personnel.

Mr. ENGLE. Mr. President, will the Senator yield there for just a moment? The Senator is making a very significant point. This is what has happened. We set up a retirement system for the military. They get out at a very young age. They are full of vigor and full of beans. They want to go to work. They have retired, but they do not want to sit around. They are fairly competent people. They have been in the military for 30 or 40 years. So they go into the civilian regulatory agencies. They do not know anything about those agencies. I have talked with the distinguished Senator from Mississippi [Mr. STENNIS], and I have suggested to him that the Committee on Armed Services of the Senate should review this retirement practice, because these people are getting out too early. They receive good retirement pay as military officers, and they are able people, and they are still fairly young. So we turn them loose. Naturally, they are standing around in squads, and they are being picked up and sent into the regulatory agencies, and those agencies are given a military orientation, which we ought not to have in the Government.

How do we stop it? We can stop it by changing the retirement system and utilizing the services of these people longer in the place where they are trained to serve their country. I am for that.

I am not against the military people. I think they are competent men. However, I believe in utilizing them in the field in which they have been trained, and for which the taxpayers have paid thousands of dollars to give them the kind of training that makes them valuable in these fields. So the Senator from Wyoming has stated the case precisely. These retired men are standing around waiting to be appointed.

I yield further to the Senator from Wyoming.

Mr. McGEE. While we are speaking about the encroachment on the public life of retired personnel, I believe it is only fair that we should note on our national horizon at the moment a situation which a House committee has already noted, namely, that the same encroachment is also occurring in the private sector of American life.

I do not have the figures with me tonight, but it is my recollection that the House committee's study of this same question disclosed that more than one out of four retired military personnel have now entered into boards of control and governing positions with civilian corporations. So whereas we might take certain risks as less than a serious invasion, nonetheless, it represents a pattern which the Nation will have to face up to in the judgment of the junior Senator from Wyoming. That pattern is the encroachment of military men in all elements of the American economy, of the American social strata, and of the American capital structure at the present time.

That is why I think it is an especially astute performance by the Senator from California to bring this matter to our attention. Nothing is more sacred in our constitutional framework than the way in which our founding fathers leaned over backward to make sure that there would be a separation of military influence from our civilian government, and provided for an exception only in the event of extreme national emergency; and then, of course, as we know, the President becomes the active Commander in Chief of the military.

Unless we rise with vigilance, we will surrender the civilian function of our Government for reasons of convenience, or because we have become too busy with our other concerns. The pressure to get away before the July conventions of the two political parties is merely another surface case in point of what we are doing in the name of convenience or expediency despite our responsibility as national legislators.

I need only remind my colleagues of what happened in Germany in the 1920's, where one by one the people surrendered more and more functions to the military. From this tendency the Germans harvested nazism. The same thing happened in Italy in the 1920's, which is another case in point. A similar parallel is shown by what happened in Japan with the rise of the war lords, and by the situation which prevails in Russia today. I need only remind Senators of what happened in those cases to show the danger to which the Senator from California is directing his attention tonight.

It is time for our country to become mindful of the danger, though it may be inconvenient, though it may be time-consuming, though the hour is late in the evening, though the sacred hour of adjournment may be near.

I join with the Senator from California, with all the sincerity I can command, to point out to our countrymen the danger of idle surrender to the military mind the civil functions of our Government.

Mr. ENGLE. I appreciate the statement of the Senator from Wyoming. We have a further problem with retired military personnel. I have already referred to the fact that they are getting out of the military at a very early age and are heading all over the country. The Senator from Wyoming has pointed out that they are going into private industry. They have gone into private industry in great numbers.

I have no objection to their making a living wherever they can, after they have retired from the military. But they go into the defense industries. Within recent months, in hearings held before the House Committee on Armed Services, and also the Senate Committee on Armed Services, a question has been raised about the propriety of a general getting out of the Pentagon and walking into a major defense industry having contracts with the Federal Government. The question which has been raised is whether the particular general, captain, or admiral would be talking across the line to his old comrades, who still remain in the Pentagon, and improperly influencing the decision of the Government with reference to matters vital to the national defense.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ENGLE. I will yield in a moment.

This is a problem which is hard to handle. I grant that. However, I think something should be done to make certain that there is a hiatus between the time a man leaves his uniform in the Pentagon and the time he takes a job with a major defense contractor, in order to handle their business, when their major business is with the Federal Government in defense contracts of one kind or another. However circumspect that officer may be, the implication of impropriety may exist. There is no way to avoid it. We ought to have a period of time in which that cannot occur. I hope the committees of Congress will recommend that kind of legislation. It bears directly upon the question raised by the distinguished Senator from Wyoming [Mr. McGEE].

Now I am glad to yield to the Senator from Arizona.

Mr. GOLDWATER. I merely wanted, more or less, to keep up with this subject. From the colloquy I have heard this evening, I am prompted to become of the opinion that a retired officer's pay continues when he takes a civilian job. It has been my understanding that General Quesada, for example, gave up his retirement pay when he entered the civilian service of his Government.

Mr. ENGLE. That is correct; he did; but not all retired officers do that. Further than that, let me tell the Senator about General Quesada.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ENGLE. The Senator brought up the name of General Quesada as an example of propriety. Let me put this statement plainly on the RECORD. General Quesada resigned his commission in order to take the position he now has, because the law under which he was appointed provides that no retired officer ever could serve in that civilian post. So he resigned his commission and received the appointment to the position he now holds.

Then in came a bill to reinstate him in his retired position and his retirement pay. I did not object to it. But that is what happened.

Mr. GOLDWATER. Mr. President, will the Senator from California yield?

Mr. ENGLE. I will yield further; I merely wish to say that General Quesada is an example of what happens in this kind of situation.

Mr. GOLDWATER. I was afraid that that was at the root of the Senator's objection.

Mr. ENGLE. No, it is not. It is not at the root of my objection at all. When the nomination of General Quesada was before the Senate for confirmation, I voted to confirm it. However, I said at the time that I had grave misgivings about Congress violating the law it had enacted in confirming the very first time

the nomination of a retired military officer to fill that civilian position. I raised that question then, but I have no personal animus toward General Quesada. I have cited his case only as an example of what has happened. I will deal further with it in a minute.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ENGLE. I am delighted to yield.

Mr. GOLDWATER. Will the Senator from California tell me how many retired officers or retired military personnel, who are serving on Government commissions, boards, and bureaus, are at the same time receiving retirement pay?

Mr. ENGLE. I do not know; I have not made inquiry about that.

Mr. GOLDWATER. Would the Senator say that the great majority of them are, or would he say that very few of them are?

Mr. ENGLE. As I say, I do not know; I have not checked into it.

Mr. GOLDWATER. I wanted to eliminate, if I could, point by point, the objections. If the Senator does not know how many retired military personnel are receiving retirement pay and at the same time are receiving pay in civilian posts of the U.S. Government, we must assume, then, that the fact that they might be receiving such pay does not enter into the Senator's objection.

Mr. ENGLE. I would have to say that General Quesada's appointment to the Federal Aviation Administrator would enter into it. He receives a very substantial salary.

Mr. GOLDWATER. That is beside the point. I believe the Senator would agree that men who serve their Government should be paid. In fact, I think the Senator voted, the other day, for an increase in Federal pay on the basis that we should pay more in measure with what civilian employees are receiving in comparable positions.

I remind the Senator that probably more former Representatives and former Senators than retired admirals, generals, and colonels are filling bureau posts. I have never heard any great hue or cry raised because a man who has been unsuccessful in seeking reelection is appointed as the head or a member of a commission.

Mr. ENGLE. There is one thing that can be said. The Republicans always take care of their lame ducks.

Mr. GOLDWATER. Unfortunately, in the past 30 years we have not had as many lame ducks as have the Democrats.

Mr. ENGLE. That is certainly true. When you had them, you had them in droves.

Mr. GOLDWATER. We have imposed regulations on duck hunting and issued duck hunting stamps. If ducks are to be protected, I think lame ducks should be taken care of, too.

Mr. ENGLE. I am not against that. I would not have voted against any of them. However, those who have served for years in Congress are probably the most competent men in these fields. They are much more competent than the businessmen who are brought in to fill the offices and who stay for 2 years. There are three schedules working in civilian jobs in the Pentagon today: one coming, one working, and one going.

One thing is certain. When men like Dewey Short are brought in, they serve for many years. Dewey Short, a Republican, served on the House Committee on Armed Services. He knows his business. He has been to the wars for a long time. He knows the problems of his particular agency, the Department of Defense. I think there is a great difference between civilian employees and military employees. Dewey Short is a civilian, too. He is one illustration; I could cite others.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ENGLE. I yield.

Mr. GOLDWATER. In the colloquy between the junior Senator from Wyoming [Mr. McGEE] and the Senator from California, a question was raised, and I think very properly so, as to why the Government cannot attract people from the civilian walks of life to these posts; or, to put it another way, why we cannot attract an abundant number.

The Senator from California has just expressed the main reason in his seeming contempt for businessmen—and I would have to include professional men in that category. I do not know where we are going to get all the civilians who are needed.

Mr. ENGLE. I never said that. Do not charge that to me; do not put those words in my mouth.

Mr. GOLDWATER. If the Senator from California will read the RECORD tomorrow, he will understand what I am talking about. This has been a source of much trouble. I may say that the Republicans will probably resort to the same tactics the Democrats have. The trouble has been that many of them do not like to give up their private lives and earnings to make a contribution to their Government and become servants of the people.

Can we not clear up this question by agreeing that most Americans are honest, whether they are civilians, whether they are politicians, whether they are a part of the military?

I believe that one of the big troubles in getting this type of men, men whom the Senator and I would like to see in the important Government posts, is that they do not want to have their lives brought into it. They do not want to give up the things for which they have worked hard throughout their lives. They do not want to be made the subject of ridicule. They do not want to come into a situation in which they get no help. Chiefly, they do not want to be subjected to the constant attacks on them which indicate that they might not be honest.

I think the Senator from California, in his colloquy with the Senator from Wyoming, was getting at the heart of the trouble we are experiencing in getting such persons to come to Washington.

They simply do not want to come here and take all of this guff. They do not want to give up what they have worked for all their lives in order to come here to work.

Mr. ENGLE. Mr. President, I did not yield to the Senator for a speech.

Mr. GOLDWATER. If the Senator does not wish to yield further, I will take my seat and wait. I will make my own speech.

Mr. ENGLE. That will be fine.

Mr. GOLDWATER. I thought the Senator from California might be willing to engage in debate. If he is not, I will take my seat. I have nothing else to do.

Mr. ENGLE. If the Senator from Arizona has a speech to make, he can make it when I have finished. I will be finished in due time.

What I am seeking to do is to have businessmen and civilians appointed to these positions. That is what I am trying to have done.

Mr. GRUENING. Mr. President, will the Senator yield for a question?

Mr. ENGLE. I yield.

Mr. GRUENING. When the Senator said he would like to have businessmen fill these posts, he meant that he would like to have businessmen who will stay on the job and show a little dedication and devotion to it, and not come here for 1 or 2 years and then go back to their own businesses, as they have under this administration.

Mr. ENGLE. That is correct.

The Senator from Arizona implied that I was making some reflection on businessmen because I said there was one squad coming, one squad working, and one squad going.

There has not been a Secretary of Defense during this administration, except the present one, Secretary Gates, who had any real training for the position.

Mr. Gates has had training, and I respect him for it.

But we have not had the kind of service we should get from the business community, if we wish to call it that, because most of those who have been appointed do not remain long enough.

I was dealing with the matter of military officers in the civilian jobs. My objection is that after nearly a quarter of a century or half a century of military service, these men do not have the training and they do not have the mental orientation to take on these civilian regulatory agency jobs and run those agencies as they should be run. That is the basis of my objection.

I like military men, including my distinguished friend, the Senator from Arizona [Mr. GOLDWATER], who is a brigadier general in the Air Force Reserve. I like them, and I think they do good jobs in places where they should be.

But, again, I say the Federal Aviation Agency presents a good illustration of a government agency in which military men have moved into the key, control positions. A brigadier general has been named Assistant Administrator of the Agency's Office of Plans and Requirements, with the responsibility for "advising the Administrator of the FAA on matters of aviation policies and objectives, and long-range Agency plans and operational capabilities."

I am saying that as soon as a general is brought into such a position, he brings in his old executive officer, who has also

retired, or perhaps is in a military post, somewhere; and very soon the agency is loaded with military officers.

I know it will be said, "Just compare the numbers; there are not very many of them"—less than 200, or something of the sort.

But the point is that they sit at the top, just like the brigadier general who has the responsibility for advising the Administrator of the FAA on matters of aviation policies and objectives, and long-range Agency plans and operational capabilities.

Will someone tell me why a brigadier general out of the Air Force should be holding that job—in a civilian regulatory agency—which is dealing with civilian flying and civilian aviation in this country?

In the Office of the General Counsel, the chief attorney for general law, in the General Legal Services Division, is a colonel. The Deputy Chief of the FAA Office of International Coordination is a Navy captain; in the same office the head of the Aviation Intelligence Branch, International Field Service Division, is a lieutenant colonel. In the Technical Assistance Division of the same organization there are a commander and a lieutenant colonel. A colonel is Deputy Chief of the Accounting Division of the Federal Aviation Agency.

They are at the top, and they give the orders; and when they go to see General Quesada, every morning, they say, "Yes, sir."

Key positions in the Office of Personnel and Training are held by a brigadier general, a colonel, and a lieutenant colonel.

Again, I ask, why should a military officer hold a key position in the Office of Personnel and Training in the Federal Aviation Agency, which deals with civilian and commercial aviation in the United States? I will tell you why: There is a retired lieutenant general up there running the shop; and he wants fellows who understand the structure of military command at the head of his various departments; and he wants no argument from them. He wants a "yes, sir" and a "how are you this morning, General?" and all that.

That is why we are getting the kind of administration down there that we are getting.

The very important Office of Plans and Requirements has, in addition to the brigadier general mentioned above, a Navy captain—which is a pretty good title—four colonels, and three lieutenant colonels.

These fellows are not sitting down at the bottom. Instead, they are at the top of the pyramid.

The Bureau of Research and Development, a most important bureau, is almost completely under military domination, I am informed. The Bureau of Flight Standards has two lieutenant colonels, and the Bureau of Air Traffic Management has a brigadier general, a Navy captain, seven colonels, and a lieutenant colonel.

This is the Bureau of Flight Standards for this civilian regulatory agency; and these jobs are not routine jobs. They are key positions in what Congress intended to be an essentially civilian agency. These men influence and mold policy in the field of civilian aviation.

Why do I bring up this issue? Here is an illustration of it: We put in a lieutenant general as head of the Federal Aviation Agency; and he called in his old comrades at arms, and they are running that agency today. Today in the Federal Aviation Agency we have a "little Pentagon."

Mr. GOLDWATER. Mr. President, will the Senator from California yield for a question?

Mr. ENGLE. In a moment.

Mr. GOLDWATER. Excuse me.

Mr. ENGLE. Mr. President, why do I bring this up? I bring it up because now an admiral is nominated to be Chairman of the Federal Maritime Board, and because we have a major general nominated to go on the Civil Aeronautics Board, and because there already is an admiral who is the Maritime Administrator. I assert that if this program continues, we shall have military men spread throughout all these civilian regulatory agencies, because the pattern is plain; it is clear to see. Can there be any dispute about it?

Now, I yield to the Senator from Arizona, for a question—but not for a speech.

Mr. GOLDWATER. My question will be very short. The Senator from California is a pilot, and he has a good understanding of the problems of aviation. Will the Senator say the Federal Aviation Agency, as it is now constituted, is not doing a better job than the job done before the FAA, as it is now constituted, came into being?

Mr. CARROLL. Mr. President, will the Senator from California yield?

The PRESIDING OFFICER (Mr. LONG of Hawaii in the chair). Does the Senator from California yield to the Senator from Colorado?

Mr. ENGLE. I yield.

Mr. GOLDWATER. But the Senator from California has not answered my question.

Mr. CARROLL. I should like to have the Senator from California yield now, because I wish to help answer the question—although I know the able Senator from California can answer it.

The question is not whether those now in that Agency are doing a good job.

I can say that in all respects General Quesada's service appears excellent. I can say the same for his staff.

But I now go back to the grassroots of democracy in my own State. I do not want retired military men running the public utility commissions of my State. I do not want generals at the head of the regulatory bodies of my State—not because there is something wrong with the military, but because we did not train them for that work. They are fine Americans, but we trained them for a specific purpose. They have served that purpose by the time they retire.

Ours is not a military government.

So we prefer the policy of having civilians who understand our problems exercise their prerogatives in our grassroots democracy in our interest. I repeat, in my State we do not want retired military men to be at the head of the public utilities commission or other public agencies. We do not want generals or other military men in our regulatory bodies. They were not trained for that purpose. They were trained to serve in military capacities, not to serve in civilian agencies close to the economic and political problems of our people. These military men were trained to serve in military capacities for the defense of the Nation. We salute them for this service and provide adequate and abundant provisions upon retirement.

My relations with the Federal Aviation Agency have been satisfactory with General Quesada. I would be willing to pat him on the back. Perhaps we may need here and there a general or an admiral for some extraordinary civil function.

But the real issue here is the supremacy of the civilians over the military.

I wish to say to the able Senator from California that I do not wish to indulge in a personal discussion about specific generals and admirals.

Indeed, this is a philosophical discussion. In a democracy such as ours, where the power is vested in the people—under the Constitution of the United States and, in my State, under the constitution of Colorado—all power is vested in all the people, not solely in the military.

If I may refer to the administration—either the present administration or any administration: There seems to have been too much influence by the military, since World War II. I served in both wars—as an enlisted man in the First World War, and as an officer in the Second World War. But there appears to have been much influence by the military; and I think the time has come—as the able Senator from California is now arguing—to effect a change. The Senator from California is not arguing against particular individuals. But he is arguing against the nomination and the predominance of the military in the civilian agencies of the Government. I commend the Senator from California for it.

Mr. ENGLE. I thank the distinguished Senator.

Now I will proceed to answer the question of the Senator from Arizona. I think in the field of commercial aviation the FAA is doing a fair job. But it ought to, considering the financial help we are giving it at the present time. I think in the field of private aviation that agency has not done as good a job, and the private pilots of the country will say so.

Mr. GOLDWATER. Mr. President, will the Senator allow me one sentence.

Mr. ENGLE. I yield for one sentence.

Mr. GOLDWATER. It will be a short one. I agree with the Senator that safety in the air has vastly improved under the FAA. I disagree with him that the FAA is unfair to the private pilots, but I shall deal later with that subject.

Mr. ENGLE. I am delighted to have the remarks of the Senator from Arizona. I have proposed some changes in the operations of the Federal Aviation Agency in the field of regulation of private and business aviation. I applaud

the effort to secure air safety. I support it. I support it with reference to commercial aviation. I support it with reference to private aviation. But there is no use having a bull in a china shop; and whenever we have a general operating an agency, that is what we get.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. ENGLE. I yield.

Mr. CARROLL. Is it not a question of whether a general runs an agency or a general runs the country? This is what some of us warned in 1952. We have had a general running this country since. There were generals running many countries throughout Latin America. What has happened? We can now look back 7 or 8 years. It is not because they are unpatriotic. It is not because they are not men of ability. It is because they are compartmental-minded and do not fully understand the workings of democracy. All one has to do is look at history in Latin America, where general after general has fallen. Who can deny that democracy has suffered many setbacks?

I think the able Senator from California, perhaps even more than he fully understands, is making a splendid argument tonight to strengthen our own Government by urging us to return to sound historic constitutional government, that is civilian supremacy over the military.

We do not mean there is some insidious inference by reason of his being an admiral or a general. They are all fine Americans. That is not the question. A question of age-old philosophy is involved. The question at issue is whether the citizens of this Nation shall fully control their civilian government.

May I say to the able Senator from California, because I know his time is limited, this same decision had to be made at one time, in 1951, when a President of the United States had to remove a general who was trying to set a policy that might lead the Nation into war. It was a very difficult decision, but again, the supremacy of civilians in our form of government was the issue.

I think the Senator from California has now again emphasized it. It is not that we could not take an admiral here or a general there on some emergency occasion, but we cannot have a pattern where the military begin to support and appoint one another. Why? Because they are not fully qualified for much of anything else. They were never associated with individuals in political and economic life. Military life is primarily what they have known. May I say to the Senator from California this is why generals take colonels. This is why colonels take lieutenant colonels. That is why lieutenant colonels take majors. They do not know anyone else. They never have associated much with anyone else. They have been brought up by the American people to serve the Nation, and they have served it well, but not in this particular capacity.

I thank the Senator from California for yielding.

Mr. GOLDWATER. Mr. President, will the Senator yield so I may clear up one point?

Mr. ENGLE. I yield for a question.

Mr. GOLDWATER. The Senator from Colorado has the Senator from Arizona a little puzzled when he says that in 1951, which I think is the year he mentioned, a President had to relieve a general because he might lead us into war. Which general was that?

Mr. CARROLL. The Senator knows what general he was. Why does the Senator ask that question?

Mr. GOLDWATER. I would like to have the Senator state it.

Mr. CARROLL. Was the Senator here at that time?

Mr. GOLDWATER. No, I was not.

Mr. CARROLL. What country was the Senator in?

Mr. GOLDWATER. I was in Arizona.

Mr. CARROLL. The Senator was in this country.

Mr. GOLDWATER. That is correct.

Mr. CARROLL. The Senator knows what happened in that case.

Mr. GOLDWATER. Yes. Who was he?

Mr. CARROLL. General MacArthur.

Mr. GOLDWATER. We were in a war.

Mr. CARROLL. Yes, we were in a war, but we were not going to let that general determine the scope of the war.

Mr. GOLDWATER. I thought we were in a war. The Senator from Colorado may think it is something else, but when people are shooting at us and we are shooting at them, it is a war. If the Senator is referring to General MacArthur leading us into war, I point out that we were already in a war. That general won it once, and we denied him that victory.

Mr. CARROLL. The Senator is talking like a general now, and not like a Senator.

Mr. ENGLE. Mr. President, I refuse to yield further.

Mr. CARROLL. Will the Senator get time on his own so I can answer?

Mr. GOLDWATER. I do not have any time.

Mr. ENGLE. Mr. President, I refuse to yield further.

Mr. CARROLL. The Senator from California cannot leave it here. Someone must have control of the time in opposition.

Mr. ENGLE. I have a right to talk until I wear out, and I may do it.

Mr. CARROLL. This is very important——

Mr. ENGLE. I do not want this discussion to get into a row over whether President Harry Truman was right in firing General MacArthur. I think he was, but I do not want to get into that argument. I want to stop any more generals getting into civilian agencies.

Mr. CARROLL. Will the Senator tell me who has control of the time in opposition?

Mr. ENGLE. They will have time after I get through, and that may be midnight.

Mr. CARROLL. Will the Senator yield, if there is no control on time? He cannot let this end where it is. If the Senator will permit me 1 or 2 minutes, I understand——

Mr. ENGLE. Mr. President, I am going to be forced to say to my dear friend from Colorado that I would prefer not to have the argument about MacArthur interspersed into my statement. If he will let me complete my remarks, which will take about 10 minutes, I will be glad to yield to him, and then he and the Senator from Arizona can thresh this out to their hearts' content.

Mr. CARROLL. Will the Senator from California permit me 1 or 2 minutes to answer the Senator from Arizona?

Mr. GOLDWATER. Go ahead.

Mr. ENGLE. I yield to the Senator from Colorado.

Mr. CARROLL. I understand the natural affinity one general has for another, but what I tried to get through to the Senator from Arizona—I am sure he was in Arizona at the time, and therefore knew what was happening—was that the constitutional question involved at that time was whether a general could determine foreign policy, under the Constitution. The issue was raised by the President of the United States, who dismissed him, because, as he said, the civilian leadership in our form of government was supreme. I leave it to history as to whether or not we avoid world war III because of President Truman's decision.

We cannot have generals running us, under the Constitution, and we cannot have generals running the public regulatory bodies of this Nation. I was under the impression that was the point the Senator from California was trying to make.

It is my own personal opinion that there are too many colonels and too many brigadier generals in the U.S. Senate coming out of World War II, because they also have a strong affinity with the military.

I thank the Senator from California for yielding.

Mr. GOLDWATER. The Senator is talking to a colonel, I am sure he knows.

Mr. ENGLE. Mr. President, there is no denying that men who achieve high rank in our armed services are with few exceptions well qualified for certain positions. Industry has recognized this fact by employing many of them in responsible positions as soon as their retirements become effective.

I approve of that. Nevertheless, career officers have been trained for almost all of their adult lives in the military ideals of discipline, obedience, fulfillment of a specific mission, and arbitrariness of decision essential to maintain their hierarchy. While these qualities are virtues in the Armed Forces, they are likely to be handicaps when the nominee is called upon to perform the quasi-judicial, promotional, and regulatory functions of the agencies. The professional military man has had little or no training or experience in the economics of intensely competitive industries.

In fact, Mr. President, the military men do not know anything about it. They do not know anything about politics, either. Someone may write an

editorial, and though it may be a kindly editorial it may contain a little criticism. These military men would jump 40 feet.

General Quesada, to whom reference has been made, appeared before our committee not long ago. He was livid about some editorials. He handed them to the committee members, in high dudgeon with indignation. I read them. They were very mild editorials. They said that he was a fine man, that he had good intentions, that he was trying to do the best he could, but that he was making a mistake. He said, "These are pressure groups. These are terrible people." He denounced them.

I said to the general, "There is not a man sitting around this table, either Republican or Democrat, who has run for public office who would not be willing to reprint these editorials in his campaign literature."

But the general did not like them. He had not been told that to his face as a military officer. He could not stand it. He was thinskinned.

The military man has never had sufficient exposure to business and its practices to form any sort of personal philosophy so that he can carry out his intended role or so that Congress and the Executive can evaluate his ability to perform that new role. Not at all. It is very different and very strange for a military man to serve in an agency, since he may be battered on this floor. We stand up and tell them off. We will knock the brass until it litters the Chamber. They do not like it. They cannot take it. They are not used to it.

For 40 years these men have been in their command positions. They said "Yes, sir" to the captains when they were lieutenants. They said "Yes, sir" to the majors when they were captains. They said "Yes, sir" to the "light" colonels or lieutenant colonels when they were majors. They said "Yes, sir" to the colonels when they were "light" colonels. And they said "Yes, sir" to the generals when they were colonels. And so on up the line. There was no argument and no backtalk.

In these great civilian agencies, when men have to exchange and barter opinions, when ideas have to stand on their own, they did not like it and they cannot take it.

So they should not be asked to serve in these positions. They will not be, with my consent. I propose to oppose, as I have said before, every one of these nominations, unless there is overwhelming and clear evidence that the man is uniquely qualified for the position.

The Senate is being called upon to give its advice and consent to appointees who will be responsible for regulating multimillion dollar civilian industries in the civilian public's interest.

The committee majority in its report agrees in general with the statements which I have made and expresses concern regarding the nomination of retired military officers to head up civilian regulatory agencies. The committee refused to vote down these nominations on the ground that although we should stop, this was not the place to stop. There was a feeling, I suppose, that picking out Admiral Wilson and General Bragdon as a stopping place would cast some sort of reflection upon them personally. I do not wish to cast any reflection upon either man. On the other hand, I believe that the way to stop is to stop, and that the Senate should simply refuse to give its advice and consent to the appointment of any more military officers unless, as the President said—I am referring to President Eisenhower—in his 1948 letter, there are "some obvious and overriding reasons." I can find no such reasons in this instance. I believe that the aviation and maritime industries can produce many civilians of long experience in those industries who are thoroughly capable of taking these appointments. I believe that the President should seek out such civilians.

I believe that the Senate should refuse to confirm the nominations of any retired military officers as heads of civilian agencies unless there are some obvious and overriding reasons, and should insist as a matter of principle that the appointments go to competent and recognized civilians.

Mr. President, the report filed by the majority in this instance is a unique report, one of the strangest I have seen in over 17 years of service in the Congress of the United States. The committee report is a report of three paragraphs.

The first paragraph says that the committee reports the nominations favorably.

The second paragraph says:

> While we recommend to the Senate favorable action on the nomination of Admiral Wilson to be a member of the Federal Maritime Board and the nomination of General Bragdon to be a member of the Civil Aeronautics Board, we believe it necessary to express some substantial doubts on the wisdom of repeated appointments of retired military officers to high civilian positions, particularly in the administrative and regulatory agencies. Admiral Wilson's military record as well as his appearance before your committee show him to be a man of competence and leadership who has served his country with distinction both in war and peace.

I agree with that statement, Mr. President. Admiral Wilson made a very fine appearance before our committee.

I continue to quote from the report:

> The same holds true with respect to General Bragdon. Accordingly, we cannot agree with the individual views that if a line has to be drawn it should be drawn here.

Those were the individual views I filed.

The committee continues to belabor the point:

> However, an appointment to an agency is not an honorarium for services performed in the past. Rather, such an appointment should be based on expected future performance in the highly sensitive area of balancing and adjusting competitive forces in the public interest.
>
> Furthermore, and perhaps most important, one of the basic principles of our society is that the control of government, including the policymaking function, should be vested in civilians with the military subordinate. Continued appointments of career officers could destroy the symbol of civilian government as well as promote the unfortunate practical effects associated with almost dominant military influence.

This is not a quotation from my views, Mr. President. This is taken from the report of the majority. This is what the majority said. They said, "You should not do it. It is wrong." They advocated the best reasons why it should not be done. For two-thirds of their report they bewailed the practice. They bemoaned it. They lamented it. They condemned it. They denounced it. They said, "It should not happen again."

I assert, Mr. President, it should not happen now. I ask the Senate to stop it by voting against the confirmation of these nominations at this time.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. ENGLE. I yield to my distinguished friend from Alaska.

Mr. GRUENING. Mr. President, I wish to commend highly and unqualifiedly the very able expression of an important point of view by the distinguished junior Senator from California.

The situation which he exposes cries for relief. He has pointed out that the regulatory agencies—the Federal Maritime Board and the Federal Aviation Agency—are being loaded with military men. It might be argued that there is some relation between civil aviation and military aviation, between the Navy and merchant marine shipping. But what about such agencies as the Immigration Service, which has been loaded by the present administration with generals from top to bottom? What earthly relationship is there between a military career and immigration? Yet the administration has followed this policy all through.

However, I wish to address myself to another principle which I think is deeply involved, and is, I think, independent of partisanship. I deem it is entirely wrong on the eve of the end of an administration for the Senate to approve appointments that will handcuff and tie the succeeding administration for an indefinite period of years. I say that regardless of whether the retiring administration is a Republican administration that may be succeeded by a Democratic administration or whether the reverse is the case.

There is a certain philosophy about an administration. The philosophy of the Republican administration in its regulatory agencies is different from that of the Democratic administration. As the distinguished junior Senator from California has pointed out, the Eisenhower-Nixon administration has set the foxes to guard the chickens. The principle of having the regulatory agencies protect the public interest has been completely abandoned during the last 7 years.

We have before us, in addition to the appointments to which the distinguished junior Senator from California has addressed himself, the appointment of General Bragdon to the Civil Aeronautics Board, and the appointment of Vice Admiral Wilson to the Federal Maritime Board and other appointments, another appointment to the Federal Communications Commission of Mr. Robert E. Lee. That appointment is a reappointment, to be sure, but it is effective for 7 years.

Mr. ENGLE. Mr. President, will the Senator yield?

Mr. GRUENING. I yield.

Mr. ENGLE. What the Senator is emphasizing is that the present administration is a dying administration.

Mr. GRUENING. That is correct.

Mr. ENGLE. It is like a piece of ripe fruit. It is ready to fall off the tree. So what are they undertaking to do? They are attemping to put their men into office. For how long? Through the administration of the next President of the United States.

Mr. GRUENING. That is correct.

Mr. ENGLE. Whether the appointee belongs to the Democrats, our side, or belongs to the side of the Republicans. So the practice of which I speak would prevent the newly elected President of the United States, regardless of his party, from choosing his own appointees. The appointees will have been chosen. They will remain for 7 years. That is 4 years plus 3.

I am against the practice. I think it is wrong. I think we ought to turn down every one of them and say, "Let us wait until the people speak, and if they throw this crowd out, we will appoint someone else."

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. GRUENING. I am happy to yield to the Senator from Arizona.

Mr. GOLDWATER. President NIXON will not object to any of these Republican appointments.

Mr. GRUENING. I am sure he will not.

Mr. GOLDWATER. I believe the Senator is touching on a principle which, regardless of which party finds itself in power, is of the utmost importance. One of the weakening factors of the Republican administration during the last 8 years has been the fact that we were saddled with appointees to schedule 16 jobs, without examinations, by the former President of that administration. Legislation was offered in this body very early in the Republican administration to remove those jobs under this, I think, very valid political assumption that if a man is to be given the job of running the country, if he is to be given command of the executive branch, he should have command of the policymaking levels.

I have been considering seriously legislation to be introduced into the next Congress that would make the schedule-16-and-above jobs subject to the will of the executive branch. I wonder if the Senator could give any expression as to how much support a Republican might gain from the Democratic side on a bill such as that?

Mr. GRUENING. I agree that policymaking positions should be changed with a change of an administration. I would not agree that people who are career people under the Civil Service Commission should necessarily change. But we are dealing here with high officials of regulatory agencies who make policy. I think very definitely, regardless of whether it is the Republican Party coming in or the Democratic Party going out, the principle is important. I think this principle should apply to both parties.

Mr. GOLDWATER. Mr. President, will the Senator yield further?

Mr. GRUENING. I yield with pleasure.

Mr. GOLDWATER. I agree with the Senator. I am not advocating for one moment that the administration be allowed to disrupt the Civil Service. I do not know whether the GSA rating today that does not require an examination is 16, 17, or 18, but, as I recall, there were a vast number of appointments made just prior to the dying days of the last Democratic administration in the field of GSA–16, without examination. Certainly many people were appointed who were competent, and certainly many people were appointed who did not and do not now reflect the views of the present administration. As I said at the outset, it is a very weak position to find oneself in when one does not find the support of the policymaking, policyforming level.

I think the Senator is touching on a very important point in American politics. I may be old fashioned, but I believe that to the victor belong the spoils, because if the victor is to be successful, he must have the ability to make decisions and have those decisions carried out, not necessarily in these regulatory agencies, because they are appointive and have always been appointive. I refer now to the thousands and thousands of jobs at the policymaking level. If the country is unfortunate enough to wake up the day after election and find itself saddled again with a Democratic administration, then it will have to face up to the same problems that the Republicans had to face when they woke up after election and found themselves in power with thousands of people who hinder their policy decisions.

I think the Senator is making a valuable contribution, and when he wishes to get ready to stop the practice, I would be very happy to help him in the general policy field.

Mr. GRUENING. I would like to modify the dictum of the distinguished junior Senator from Arizona which he has derived from ancient Roman history, that to the victor belong the spoils, by saying that I believe: "To the victor belongs the responsibility."

Mr. GOLDWATER. I think if the Senator does not recognize the first dictum, he cannot enjoy the second, with which I certainly agree.

Mr. GRUENING. I should like to cite, pursuant to these remarks, a very brief paragraph that recently appeared in one of our weeklies, the New Republic, which is entitled, "Why Come to Washington?" I think it is pertinent to the discussion, to the turnover, to the rapid change in personnel here, which is a serious problem. I read from the article:

> If anyone wonders why effective members of Federal regulatory agencies are so scarce in this administration, he need look no farther than two recent statements by the President on the departure of agency members.
>
> The first was addressed to the man departing. The President wrote: "You have served tirelessly, loyally, effectively—and with dedication. For your public service over many years * * * you have earned the appreciation of your fellow citizens and of the administration."
>
> The second comment was made by the President when he was asked why he was not planning to reappoint an agency member. In a tone of annoyance he said: "I think I can get a better man, that's all."
>
> The first statement was addressed to John C. Doerfer, who would be high on any informed person's list of the worst Chairmen of the Federal Communications Commission. Mr. Doerfer made no secret of the fact that he did not believe in regulation of television and more or less openly voted to give valuable channels to those he considered friendly to his party and himself. He quit after taking favors from a broadcaster and being caught in a lie to reporters about the episode.
>
> The man who rated the President's rude dismissal was William R. Connole, said to have been the most effective—indeed the only effective—member of the Federal Power Commission for the last 5 years. Mr. Connole fought alone to stop the rapid rise of natural gas prices, and in two major cases his solitary dissents were vindicated by a unanimous Supreme Court.

Subsequently, when the President was questioned at a press conference as to why he did not appoint Mr. Connole, he said that this man had only one interest, the public interest, and that was the President's indictment against him. So Mr. Connole was not reappointed. He was guilty of the heinous crime of being for the public interest, and that proved unique in this administration. Obviously that could not be tolerated.

Mr. ENGLE. Mr. President, will the Senator yield?

Mr. GRUENING. I yield.

Mr. ENGLE. We divide these commissions up.

We have them so arranged in such a way that only half of them, plus one, can ever represent one party. Under the present regime, on some of these commissions there would be seven Republicans and six Democrats. Of course, the Republicans represent the big corporations, and the Democrats represent the people. Apparently they made a mistake, and they got one of them on a commission who represented the people, so they threw him off.

Mr. GRUENING. That is precisely correct. That goes to the point that there is a basic difference in the philosophy of the two parties. I happen to believe in one. I have no doubt that our good friend from Arizona believes in another. We are entitled to our opinions.

The issue is this. Here at the close of an administration—the junior Senator from California has referred to it as a dying administration, but I would not say it was necessarily dying; perhaps it is just fading away, because old soldiers—generals—do not die; they just fade away—it seems highly proper that we should not continue to saddle the next administration with an appointee of this administration. It is entirely possible that a Member of the Senate—one of our colleagues—may be the next President of the United States. It may be the distinguished majority leader, the Senator from Texas [Mr. JOHNSON]; it may be the distinguished junior Senator from Massachusetts [Mr. KENNEDY]; it

may be the distinguished junior Senator from Missouri [Mr. SYMINGTON].

I think it would be most unkind to them to compel any of them to live with an appointee of this administration for 7 years, to have as a policymaking member of his administration an official whose point of view would be clearly different from his.

Therefore, I think it should be a matter of policy that at this late stage of the administration we should not confirm any of these appointees. Not to do so would not impair the functions of these agencies, because in 2 weeks or less, when Congress adjourns, the President would have the right to make recess appointments. That would enable the agencies to carry on until January, when a new President will have taken office, and when the 87th Congress will be in session. At that time it will be possible to judge the appointees on their merits and whether their views are in harmony with those of the new administration and confirm their nominations if it seems wise to do so.

Therefore, I shall vote against the confirmation of any of these June appointees, not because I object to them individually—they may be excellent men—but because of the basic principle involved, which goes to the very root of our democratic system.

Mr. ENGLE. Mr. President, I ask unanimous consent to have included in my remarks at this point in the RECORD an editorial published in Labor entitled, "ENGLE Is Right: 'The Time To Stop Is Now'."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ENGLE IS RIGHT: "THE TIME TO STOP IS NOW"

A lively debate in the Senate last week raised the question whether "the military" are taking over the country and, if so, should this be stopped? That subject, in the opinion of this newspaper, is so important that the American people should be thinking seriously about it.

The debate began when Senator CLAIR ENGLE, Democrat of California, acting for the Senate Interstate Commerce Committee, reported on two nominations made by President Eisenhower, approved by a majority of the committee, but opposed by ENGLE.

The nominations were those of Gen. John S. Bragdon to be a member of the Civil Aeronautics Board, and Adm. Ralph R. Wilson to the U.S. Maritime Board. ENGLE emphasized he had nothing against either of them personally, but felt that Eisenhower, a military man himself, was appointing too many professional Army, Navy and Air Force officers to high Government posts.

"Can't we find anyone to serve on the boards and commissions except military men?" Senator JOHN A. CARROLL, Democrat of Colorado, asked. ENGLE said he welcomed that question, and he went on to say:

"If we are not careful, we shall have a little Pentagon in the regulatory agencies. The time to stop is now."

CARROLL pointed out that the regulatory agencies which Ike has "packed" with military men and others not renowned as defenders of the public interest "handle billions of dollars worth of cases affecting the the rights and pocketbooks of the American people." "Yes," ENGLE said, "they have the foxes watching the henhouses."

"If retired military men are the best public servants available," CARROLL commented, "we have come to a strange pass in American history." ENGLE added that "I object to retired military officers taking these positions, because I do not believe that a lifetime of military service qualifies a man to handle these great civilian regulatory agencies."

Senator GALE W. MCGEE, Democrat, of Wyoming, reminded the Senate that, in addition to the Government, big corporations also are hiring more and more generals and admirals for high and well-paid positions. One reason for all this, he said, is that military officers can retire at ages as young as 45, with good Government pensions. Thus they still are "full of beans" and look for civilian jobs which pay high salaries on top of their pensions. MCGEE said it would be better for them to stay on the military jobs for which they were trained at the taxpayers' expense.

ENGLE named some of the generals, admirals and other high-ranking officers with whom, he said, Government agencies are "bristling." He added that this is largely due to the fact that Eisenhower is bringing his "old buddies" into the Government and they, in turn, provide civilian jobs for their old military buddies.

"It may well be," CARROLL commented, "that the present general will be the last one to become President of the United States. I hope so. The people have had a chance to look at the situation. The time has come to put the military in their place."

ENGLE served notice that from now on, when the President's nominations of military men for civilian posts come up for confirmation in the Senate, he will demand rollcall votes which will put the Senators on record for and against.

Many professional military officers have high character and ability, but they should not be allowed to take over a country which, as the Constitution provided, has always been run by civilians. All history proves that, when military rule comes in, democracy goes out the window.

Mr. GOLDWATER. Mr. President, I shall be as brief as I can in my remarks. I wish to preface my remarks by saying that I share with every American, including the military, the historic concern of the military becoming supreme over the civilian. This was written into our basic laws from the Anglo-Saxon law. There has never been a free people who have not recognized the danger of the military eventually becoming superior to the civilian. In fact, if I recall correctly, in his treatise on the decline and fall of the Roman Empire, Gibbon lists as one of five or six points contributing to that downfall, the fact that the military were gaining power in the government.

However, I cannot allow any discredit to fall upon the military of this country. I cannot bring myself to believe that a military man is first and foremost and always a military man. I believe that he is first and foremost and always a citizen of the United States. I was trying to get through the entire section of our directory this evening, but time did not allow it. I did get through to the State of Connecticut. I find among the Senators of those States 24 men who have served in various branches of the military.

I do not believe anyone will deny that when legislation affecting the Marine Corps comes on the floor a Member of the Senate who has served as a marine feels a little inclined to favor the Marine Corps; or that anyone who has served in the Army, when legislation affecting the Army comes on the floor is a little concerned in that direction. I must admit that when legislation comes on the floor that pertains to the Air Force, I incline in that direction. I do not say that we have sold our souls to our particular branch of the military.

However, if the argument is to prevail that military men cannot serve their country after they are no longer serving in the military service, I suggest that down through the State of Kentucky there are 24 of us that should not be here. I do not hold with the idea that a military person cannot be of great value to his country.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. GRUENING. I agree absolutely with the statement the Senator from Arizona has just made. I believe that when a retired general or other officer is elected to Congress, he has earned the position, he has gone through the political mill, he has sought the approval of his countrymen at the polls; he has not been in the position merely of commanding support, but he has had to win it, and he has earned it. It is extremely fortunate that we have a retired general of the Air Force Reserve with us in the Senate.

Mr. GOLDWATER. I am not a retired general. I am not looking for retirement for many years. Being a Reserve officer is a little different from being a member of the Regular Establishment.

Mr. ENGLE. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. ENGLE. That is exactly the point. The Senator spoke about going through the Congressional Directory. The Senator does not equate the position of men who were civilian soldiers at some time in their lives with men who spend their lifetime as professional solders, does he?

Mr. GOLDWATER. The Senator has been in this body long enough to observe the rightful loyalties of Members of this body to their parent organization. I have watched ex-Marine officers and ex-Marine enlisted men in the Senate vote for Marine programs that I did not agree with. I have watched former Army personnel support the Army. The Senator knows the argument that we have had over the B–70 program. Support for that has been difficult to get because I must admit that the Air Force in the Senate is on the low end of the totem pole.

I say that there is no difference in allegiance between a one-time civilian soldier and a one-time professional soldier.

I wish to read a few names that I have jotted down, without straining my intelligence too much at this late hour, because I must admit that straining it would show many inadequacies.

Winston Churchill was a military person. Franklin D. Roosevelt used to sign himself as "that naval person." Harry Truman has always been very proud of his military background, and rightly so, because he served his country with distinction.

The other Roosevelt, probably one of our greatest leaders, came out of the ranks of the civilians into the ranks of

the military and went back into the ranks of the civilians.

Gen. Charles De Gaulle is giving the world an example of leadership the like of which we have not had in many a year.

As I say, many of our colleagues in the Senate have been members of the military, and I do not believe it affects their ability to legislate, even though those of us who have been in the service may lean a little bit in the direction of our own service.

What is a military person? A military person is first a citizen of the United States. He has spent 18 or 20 or 21 years of his formative years being inculcated with the traditions of America. He goes to the Military Academy or to the Naval Academy or to the Air Force Academy, and is further imbued with these ideas of basic Americanism.

Among my wide acquaintanceship in this country I have found a no more dedicated group of men and women than I have found among professional military men. I find more deep concern in the Pentagon about what is going on in domestic politics than I find among people generally. These men are secondarily military people. Why? Why do some men become ministers? They have a purpose in life. They want to be ministers. It is not to get rich. Some people become politicians. Why? Because some of us feel we can contribute our service better in this direction than we can in any other, certainly not toward becoming materially strong. A soldier or airman or marine or sailor joins his service because he feels that that is the way in which he can serve his country. He serves as a dedicated American. The fact that these persons are getting out of the military service at a younger age than in past years speaks well for the American military system. I would like to see us devise some way of keeping these older heads in for a longer time, perhaps until they are 64 or 65 years of age. However, in the type of military that we have today, possibly the younger age is more desirable.

Mr. President, let us look a little further at those persons. Let me emphasize that I do not know General Bragdon. I do not know whether he was in the Air Force or the Army. I certainly do not know who Mr. Wilson is, or what his rank was in the service. However, generally speaking, in the field of education I do not believe we can find better educated people than we find among the officer personnel of the Armed Forces. Many of those men have attended not only one institution of higher learning, but other institutions of higher learning, as well. Among them are many doctors of philosophy, and many who have studied further in other institutions, so that their education might be broadened. Many of them speak more than one language. They have bilingual or trilingual abilities. Their experience has been very broad.

I do not agree that the career of a military man is narrow any more. I think it was prior to World War II; but since World War II, when military men have been assigned to represent the military in industry, or have been assigned to colleges, they certainly have had a very broad experience, the like of which it is very difficult to find in industry.

I know a little about the industrial side. I have been engaged in business all my life. It is no wonder to me that industry seeks men from the military. It is not the general rule, but when industry finds a competent man in the military service, he is equally competent with a similarly situated man on the civilian side, if not more competent. We have lost to industry, to our detriment, many fine personnel from the military forces, because industry recognizes their value.

It is difficult for me to understand whether the fear is of the effect which might be felt upon the spending of military funds for this company or that company, or an actual fear that a retired officer, or a number of retired officers, might be able to build up, in effect, a military regime which at some time could charge out on white horses and take over the country. I do not fear that happening, so long as we have the protection of civilians in the Department of Defense and the diligent observation and protection provided by Congress.

The other question that arises—and I know that none of us believe this—is, Is a man honest or dishonest? It has been inferred, certainly by statements coming, not from this body, but from some Members of the other body, that some military appointments might actually constitute dishonesty; that the appointees are motivated by dishonesty. I do not believe they are. I think we will find the same percentage of dishonesty in the military group as will be found in veterans' organizations, in this body, or in any other body. On the whole, by far, the great majority are perfectly honest persons.

I am sorry the Senator from Colorado [Mr. CARROLL] has left the Chamber. Earlier he said that citizens should run our agencies; that citizens want well-run agencies. I dislike to disagree with the Senator because we agree on so many points, but this may be one on which we will disagree for some time.

I think a perfect example of what can be done by, not necessarily the military personnel, but a person who is disciplined, is in the FAA. I can imagine the chaos which would exist if the same type of discipline were applied to bureaus and organizations which did not need it. However, speaking as one who has had 30 years of experience in flying—I have said this before on the floor, and I dislike to repeat it—until General Quesada took charge of the FAA, I can describe the flying conditions in this country as almost chaotic. Why thousands of persons have not been killed on the airlines, I do not know. I have observed infractions of the rules which would take me hours to relate. I have observed insufficient systems and inadequate systems. But under the chairmanship of General Quesada in the FAA, I think we have a new program which will lead to greater safety.

I well know that many private pilots disagree with me, but I believe the steps which General Quesada took were necessary steps. He had to take them. I would have agreed with him had he been an admiral, a doctor, a lawyer, or a merchant. When a man has flown, as I have, for 30 years, and has never been asked to show, first, his license; second, his medical certificate; third, a certificate of proficiency in the aircraft he is flying; or fourth, an instrument ticket indicating his proficiency to fly on instruments, I say it is time for some kind of strong action.

I do not like Government regulations. I do not like to have the Federal Government interfering. But this is one good example. The Constitution provides that the Federal Government shall have the power to regulate commerce between the States.

Mr. ENGLE. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. ENGLE. How much safer would the Senator have been while flying if he had to show a private pilot's license, if he had to show a medical certificate, if he had to show a certificate of competency in the aircraft he was flying, and if he had to show an instrument ticket?

Mr. GOLDWATER. I think I would have been a much safer pilot. I can remember times when I have flown aircraft in which I had not been for a year or two. It is not that I would not have been safe, but I had not been in the aircraft for a long period of time.

I have friends who fly under instrument conditions but who do not have an instrument ticket. They have trained themselves. On occasions, I have known persons who obtained a medical certificate merely by picking up the phone and saying, "George, my time is up. Send me a card." One can get a card for a few dollars. But such a person might have had diabetes or a heart attack in the meantime.

I maintain that while these requirements are just as distasteful to me, as a pilot, they will nevertheless promote safety; and particularly in the minds of the people there will be instilled a desire for safety.

We are seeing in this country today a rather unusual thing. I have no better friends than those who fly the airlines of the Nation. But I am in complete disagreement with them when they strike over the matter of whether a check pilot is to look over the shoulder of the pilot or the shoulder of the copilot. To me, that is like bank presidents striking over the question of the kind of pen they will use. This step was taken in the interest of safety. No pilot likes to be checked. None of us likes to take an examination for a driver's license. But we must do it. I think this is a step in the right direction.

Today we have a new type of flight procedures for flying across the country. I am amazed, on every flight I make, at the ease with which we can report our positions with complete accuracy. The agencies know where we are located in the air.

Mr. ENGLE. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. ENGLE. Does the Senator know that at present there is one Federal employee in some phase of this business, whether in the FAA, the Federal Communications Commission, or elsewhere, for every airplane there is in the United States?

Mr. GOLDWATER. I was not aware of that; but if the Senator wants to make an issue of it, I point out that there are almost 13,000 Federal employees to take care of 400,000 Indians. The Senator is pointing out a practice which is wrong. I agree that there are too many employees.

Mr. ENGLE. All the Indians are not up in the air.

Mr. GOLDWATER. This condition exists throughout our Government.

No; some of our Indians are not up in the air; but some Indians would be better in the air than some pilots.

I conclude by stressing again the point that there is no reason to become upset when it is suggested that retired military personnel be appointed to Federal positions. Most of them are young men, excellently trained. There is no reason why they should not be assigned to such positions if their country has need of them. I think they are highly competent persons. I would be the first to raise a question about their assuming appointive positions if they indicated a strict adherence to military discipline and could do damage to the Government. But the men I know—and there are many of them—are interested, first, in the United States. Perhaps, far down the line, they are interested in the military.

Mr. President, I hope that tomorrow, when we vote on these nominations, we will vote on them as being primarily the nominations of devoted citizens, not the nominations of persons who might have been members of this service or that service at one time or another.

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, I announce the possibility that the following bills may be considered tomorrow:

Calendar No. 1553, H.R. 2565, to promote effectual planning, development, maintenance, and coordination of wildlife, fish and game conservation, and rehabilitation on military reservations.

Calendar No. 1588, S. 2692, to advance the marine sciences, to establish a comprehensive 10-year program of oceanographic research and surveys; to promote commerce and navigation, to secure the national defense; to expand ocean resources; to authorize the construction of research and survey ships and facilities; to assure systematic studies of effects of radioactive materials in marine environments; to enhance the general welfare; and for other purposes.

Calendar No. 1580, H.R. 8229, to amend the Internal Revenue Code of 1954 to provide an exemption from income tax for supplemental unemployment benefit trusts.

Calendar No. 1415, S. 2581, to amend the act of June 1, 1948 (62 Stat. 281), to empower the Administrator of General Services to appoint nonuniformed special policemen.

Calendar No. 1267, S. 2131, to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

Calendar No. 1178, H.R. 4251, to amend the Internal Revenue Code of 1954 with respect to the limitation and the deduction of exploration expenditures.

Mr. President, I ask that the clerk read the unanimous-consent agreement which already has been entered.

The PRESIDING OFFICER. Without objection, the agreement will be read.

The Chief Clerk read as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That effective on June 23, 1960, at 9:30 o'clock a.m., when the Senate convenes, the Senator from Montana, Mr. MANSFIELD, be recognized for 1½ hours to address the Senate.

Provided further, That, following the above address, during the further consideration of the nominations of John S. Bragdon, to be a member of the Civil Aeronautics Board; Vice Adm. Ralph E. Wilson, to be a member of the Federal Maritime Board; and Robert E. Lee, to be a member of the Federal Communications Commission, debate shall be limited to 20 minutes on each nomination, to be equally divided and controlled by the majority and minority leaders.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, June 22, 1960, he presented to the President of the United States the following enrolled bills:

S. 762. An act for the relief of Manuel Alves de Carvalho;

S. 2089. An act for the relief of Henry K. Lee (Hyun Kui);

S. 2106. An act for the relief of Emiko Nagamine;

S. 2528. An act for the relief of John Lipset;

S. 2639. An act for the relief of Mo Tong Lui;

S. 2646. An act for the relief of Lloyd C. Kimm;

S. 2681. An act for the relief of Yi Young An; and

S. 2768. An act for the relief of Frederick T. C. Yu and his wife, Alice Siao-Fen Chen Yu.

RECESS UNTIL 9:30 A.M.

Mr. MANSFIELD. Mr. President, I move that the Senate take a recess until 9:30 a.m., tomorrow.

The motion was agreed to; and (at 10 o'clock and 1 minute p.m.) the Senate took a recess until tomorrow, Thursday, June 23, 1960, at 9:30 o'clock a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate June 22, 1960:

ROUTINE DIPLOMATIC AND FOREIGN SERVICE

The following-named Foreign Service officers of class 2 and secretaries in the diplomatic service, to be also consuls general of the United States of America:

To be consuls general

Herbert P. Fales, of California.
Frank Snowden Hopkins, of the District of Columbia.
W. Garland Richardson, of Nevada.

B. Winfred Ruffner to be Foreign Service officer of class 2, a consul, and a secretary in the diplomatic service of the United States of America.

The following-named Foreign Service officers for promotion from class 5 to class 4:

Zachary P. Geaneas, of New York.
Henry Hunt McKee, of the District of Columbia.
Arthur V. Metcalfe, of California.

The following-named persons for appointment as indicated:

To be Foreign Service officers of class 4, consul, and secretary in the diplomatic service of the United States of America

Lee F. Dinsmore, of Maryland.
John Eaves, Jr., of New York.
John Godlove Kormann, of Florida.
Elias C. Rodriguez, of Texas.
Royal J. Wald, of California.

To be class 5 and to be also consul of the United States of America

Gori P. Bruno, of New York.
Robert G. Cox, of New Mexico.

To be class 5, consul, and secretary in the diplomatic service of the United States of America

Chester J. Pavlovski, of Washington.
Miss Elsie M. Quick, of North Carolina.
Francis X. Ready, of Massachusetts.
Herman A. Washington, of New York.

The following-named Foreign Service officers for promotion from class 7 to class indicated:

To class 6

John P. Blane, of Alabama.
Michael Calingaert, of the District of Columbia.
Jack M. Carle, of Colorado.
Theodore B. Dobbs, of Virginia.
George B. Lambrakis, of New York.
Gerald Floyd Linderman, of Ohio.
Miss Elaine Diana Smith, of Illinois.

To be Foreign Service officers of class 8, vice consul of career, and secretary in the diplomatic service of the United States of America

Robert E. Armstrong, of Illinois.
Thomas F. Barthelemy, of Ohio.
Charles F. Brown, of Nevada.
Robert B. Duncan, of New Jersey.
Thomas P. H. Dunlop, of North Carolina.
J. David Gelsanliter, of Ohio.
Robert V. D. Griffin, of California.
Philip E. Heron, Jr., of California.
R. Allen Irvine, of Pennsylvania.
Dee Valentine Jacobs, of Utah.
Jay K. Katzen, of New York.
Moorhead C. Kennedy, Jr., of Maine.
Arturo S. Macias, of Wisconsin.
Howard M. McElroy, of New York.
André J. Navez, of Massachusetts.
Patrick T. O'Connor, of New York.

The following-named Foreign Service officers for promotion from class 8 to class indicated:

To class 7

Frederick H. Lawton, of New Jersey.
Francis Terry McNamara, of New York.

To be Foreign Service officers of class 7, vice consul of career, and secretary in the diplomatic service of the United States of America

Hypolite F. Breard, Jr., of Louisiana.
Harry M. Carter, Jr., of Virginia.
Robert J. Corcoran, of Florida.
William J. McGovern, Jr., of California.
George J. Stanger, of New York.
Miss E. Ursula Wallace, of Georgia.
Miss Anne Pinkney, of California.
Jose L. Romero, Jr., of Virginia.

To be Foreign Service officers of class 7, vice consul of career, and secretary in the diplomatic service of the United States of America

Richard C. Scissors, of Missouri.
Nathaniel B. Thayer, of Massachusetts.
Thomas M. Tracy, of Massachusetts.
John A. Warnock, of California.

To be consuls of the United States of America

Robert J. Clarke, of Connecticut.
Lawrence R. Devlin, of California.
Lion Gardiner, Jr., of Ohio.
Wilbur L. Garges, Jr., of Virginia.
Fitzhugh Green, of the District of Columbia.
Carl O. Hawthorne, of California.
William F. Keyes, of New York.
Frank A. Kierman, Jr., of Massachusetts.
Joseph Yoshio Kiyonaga, of Maryland.
James F. Shea, of Maryland.

Foreign Service Reserve officers to be vice consuls of the United States of America

Kenneth C. Cathey, of the District of Columbia.
Raymond H. Close, of New Jersey.
Charles O. Coudert, of Connecticut.
Martin C. Hawkins III, of Arkansas.
John H. Kenney, of Massachusetts.
F. Lamar King, of Maryland.
Cornelius A. McCauley, of Virginia.
John J. Reagan, of Virginia.
Arthur G. Wiley, Jr., of Virginia.

Foreign Service Reserve officers to be vice consuls and secretaries in the diplomatic service of the United States of America

Frank Ahmed, of Massachusetts.
Timothy J. Burke, of New York.
Duane R. Clarridge, of New Hampshire.
Robert Chin, of the District of Columbia.

Foreign Service Reserve officers to be secretaries in the diplomatic service of the United States of America

Robert N. Dahlgren, of California.
Sidney H. Fine, of California.
John T. Flynn, of Maryland.
Robert M. Fulton, of California.
Philip A. Heller, of New York.
James E. Hoofnagle, of Virginia.
Miss Sara Jane Jamison, of Pennsylvania.
Gordon L. Jorgensen, of the District of Columbia.
Edward Macauley 3d, of Rhode Island.
Robert J. Myers, of Indiana.
Brian T. Moran, of Texas.
Walter R. Roberts, of New York.
Richard D. Tucker, of Virginia.
John R. Wood, of Georgia.
Howard V. Bennett, of West Virginia.

Foreign Service staff officers to be consuls of the United States of America

Blake Cochran, of Maryland.
Joseph I. Krene, of California.
Reinhard W. Lamprecht, of Illinois.

Vinton Chapin, of New Hampshire, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Dominican Republic.

Leland Barrows, of Kansas, now Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Cameroun, to serve concurrently and without additional compensation as Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Togo.

UNITED NATIONS

The following-named representatives of the United States of America to the 15th session of the General Assembly of the United Nations to serve no longer than December 31, 1960:

Henry Cabot Lodge, of Massachusetts.
GEORGE D. AIKEN, U.S. Senator from the State of Vermont.
WAYNE MORSE, U.S. Senator from the State of Oregon.
Francis O. Wilcox, Assistant Secretary, International Organization Affairs, Department of State.
Mrs. Oswald B. Lord, of New York.
Mrs. Zelma Watson George, of Ohio.
Arthur F. Lamey, of Montana.
Frederick Blake Payne, of New York.
Charles Rosenbaum, of Colorado.
Miss Frances E. Willis, Ambassador Extraordinary and Plenipotentiary of the United States of America to Norway.

GOVERNOR OF GUAM

Joseph Flores, of Guam, to be Governor of Guam for a term of 4 years.

HOUSE OF REPRESENTATIVES

WEDNESDAY, JUNE 22, 1960

The House met at 12 o'clock noon.

Rev. William F. (Billy) Graham, D.D., Montreat, N.C., offered the following prayer:

Our Father and our God: We come to Thee recognizing our dependence and our need of Thee at this hour of our history. We bless Thee and praise Thee that Thou hast been with us these many years. Thou wast with our Founding Fathers and Thou hast been with this Nation through difficult days and through days of peace and prosperity; and now we come to Thee humbly confessing our sense of need of Thee more now than any time in many years.

We need Thy wisdom. We pray that Thou wouldst give to this body of men supernatural wisdom in dealing with the problems that they face. We pray that Thou wouldst give to them courage, courage to stand for that which is morally right regardless of consequences. Give to them faith, faith to believe that Thou art in the shadows watching, directing, and leading, that Thou art the Lord of history, and that history is in Thy hands.

Bless this Nation, we pray, and bless these men that lead us; for we ask it in the name of Jesus Christ, our Lord. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H.J. Res. 765. Joint resolution making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes.

The message also announced that the Vice President had appointed Mr. BRIDGES, Mr. SPARKMAN, and Mr. HENNINGS as the members on the part of the Senate of the Joint Committee on Arrangements for the Inauguration of the President and Vice President-elect on January 20 next.

CONVEYANCE OF CERTAIN PROPERTY TO THE VILLAGE OF HIGHLAND FALLS, N.Y.

The SPEAKER. The Chair recognizes the gentleman from Georgia [Mr. VINSON].

Mr. VINSON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 6479) to provide for the conveyance of certain real property of the United States to the village of Highland Falls, N.Y., with a Senate amendment thereto and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 1, lines 3 and 4, strike out "50 per centum of the".

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

AMENDING CIVIL SERVICE RETIREMENT ACT

Mr. MURRAY. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 8241) to amend certain provisions of the Civil Service Retirement Act relating to the reemployment of former Members of Congress, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 1, strike out all after line 2 over to and including line 3 on page 2 and insert: "That (a) subsection (1) of section 1 of the Civil Service Retirement Act is amended by striking out the words 'in the case of an employee separated or transferred to a position not within the purview of this Act before he has completed five years of civilian service or a Member separated before he has completed five years of Member service' and inserting in lieu thereof 'in the case of an employee or Member separated or transferred to a position not within the purview of this Act before he has completed five years of civilian service'.

"(b) Subsection (f) of section 6 of such Act is amended by striking out the words 'Member service' where they first appear in such subsection and inserting in lieu thereof the words 'civilian service'.

"(c) Subsection (b) of section 8 of such Act is amended by striking out the words 'Member service' in the first sentence and inserting in lieu thereof the words 'civilian service'.

"(d)(1) So much of subsection (b) of section 9 of such Act as precedes the first proviso is amended to read as follows:

"'(b) The annuity of a congressional employee retiring under this Act shall be computed as provided in subsection (a) except that with respect to so much of his service as a congressional employee and his military service as does not exceed a total of fifteen years, and with respect to any Member service, the annuity shall be computed by multiplying 2½ per centum of the average salary by the years of such service:'.

"(2) Clause (1) of the second sentence of such subsection is amended by inserting after the words 'congressional employee' the words 'or Member, or any combination of such service'.

"(e) The first sentence of section 9(c) is amended to read as follows:

"'(c) The annuity of a Member, or of a former Member with title to Member annuity, retiring under this Act shall be computed as provided in subsection (a), except that if he has had at least five years' service

as a Member or a congressional employee, or any combination of such service the annuity shall be computed, with respect to (1) his service as a Member and so much of his military service as is creditable for the purposes of this clause, and (2) so much of his congressional employee service as does not exceed fifteen years, by multiplying 2½ per centum of the average salary by the years of such service.'"

Page 2, line 4, strike out "(b)" and insert "(f)".

Page 2, line 5, strike out "(5 U.S.C. 2263 (c))".

Page 4, after line 3, insert:

"SEC. 2. Section 403 of the Civil Service Retirement Act Amendments of 1956 (70 Stat. 760; 5 U.S.C. 2251 note) is amended by adding at the end thereof the following sentence: 'In the case of any Member separated from service before October 1, 1956, with title to a deferred annuity, the deferred annuity may begin at the age of sixty years if the Member had completed at least ten years of Member service, but no annuity shall be paid under this sentence for any period prior to the first day of the first month which begins after enactment thereof.'"

Page 4, after line 3, insert:

"SEC. 3. (a) Section 2(2) of the Act of June 25, 1958 (Public Law 85–465; 72 Stat. 219), is amended to read as follows:

"'(2) who (A) died before February 29, 1948, or (B), if retired under the Alaska Railroad Retirement Act of June 29, 1936, as amended, or under sections 91 to 107, inclusive, of title 2 of the Canal Zone Code, approved June 19, 1934, as amended, died before April 1, 1948; and'.

"(b) Section 4 of such Act of June 25, 1958, shall apply to annuities authorized by this section.

"(c) An annuity provided by this section shall commence August 1, 1958, or on the first day of the month in which application therefor is received in the Civil Service Commission, whichever occurs later."

Page 4, line 4, strike out "2" and insert "4".

Page 4, lines 5 and 6, strike out "the first section of".

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

Mr. MURRAY. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. MURRAY. Mr. Speaker, as passed by the House, H.R. 8241 would facilitate the reemployment of retired Members of Congress whose services are desired in some other Federal position by amending the requirement that annuity be discontinued during such reemployment.

This discontinuance-of-annuity requirement would be retained as regards the retired Member reemployed in another regular full-time or part-time salaried Federal position. Under the bill, however, the retired Member reemployed, first on a full-time or substantially full-time basis without compensation or, second, on a paid intermittent basis will continue to receive his annuity. The Member reemployed intermittently will have his reemployment salary reduced by an amount equal to annuity allocable to the intermittent time actually worked. These provisions are necessary and desirable and place the reemployed Member of Congress under requirements similar to those which apply to reemployed annuitants generally.

The House-passed bill contained further provision—also approved by the Senate—to permit a Member of Congress who performs non-Member service, subject to the Retirement Act, after he leaves Congress to credit such service—under the non-Member formula—in the computation or recomputation of his Member annuity.

The Senate has added six amendments to the House-passed bill.

First. Section 1(a) of the Senate amendments permits Members of Congress to be credited with prior service in other Federal positions to qualify under the 5-year minimum service requirement for annuity benefits upon reaching age 62. Present law requires refund of retirement contributions in the case of any Member separated before completing 5 years of Member service. The refund is mandatory, even though the Member may have rendered other Federal service which, if added to his Member service, would give him 5 years or more of total service. On the other hand, any Federal employee who completes 5 years of service—even though several different positions are involved—is credited with all such service to qualify for annuity benefits. The amendment, in effect, grants equal treatment to Members.

Second. Under section 1(b) of the Senate amendments a Member could retire with an immediate annuity at age 62 with 5 years' civilian service, whereas 5 years of Member service are now required. This would also be in line with the existing provision applicable to employees generally.

Third. Section 1(c) would amend existing law so that a Member separated with 5 years of civilian service will be entitled to an annuity beginning when he reaches age 62. Previously, 5 years of Member service were required. This amendment will apply to Members the same titular requirement as for employees generally.

Fourth. Subsections (d) and (e) of section 1 amend the annuity formulas for congressional employees and Members.

A congressional employee's annuity is presently computed at 2½ percent of average salary for all congressional employee and creditable military service not exceeding 15 years. Annuity for any remaining service of any type is then computed independently, as follows: (a) 1½ percent of average salary for years of other service up to 5; 1¾ percent for years of other service between 5 and 10, and 2 percent for years of other service over 10.

Similarly, the annuity of a Member is now computed at 2½ percent of average salary for years of Member service, any congressional employee service—not exceeding 15 years—and creditable military service. Any other service is then considered independently under the 1½ percent, 1¾ percent, and 2 percent method.

Under subsections (d) and (e) each formula would be amended to require application of the regular three-step formula for employees generally to the total service of the retiring congressional employee or Member, with the 2½ percent formula to be used in lieu of the regular formula in respect to any years of service as indicated. In other words, for service not covered by the 2½ percent factor, 1¾ percent would be applied to years of total service between 5 and 10, and 2 percent would apply to total service in excess of 10. Retiring congressional employees would also have the benefit of the 2½ percent formula for any prior Member service, which is not true under present law.

Fifth. Section 2 of the Senate amendment amends section 403 of title IV of Public Law 84–854, which continues without change the rights acquired under prior laws by employees and Members retired or otherwise separated prior to October 1, 1956, the effective date of the Civil Service Retirement Act Amendments of 1956. This section would add an exception to afford a Member of Congress separated before October 1, 1956, with title to deferred annuity which would otherwise begin at age 62, an annuity commencing at age 60 if he has at least 10 years of Member service—as is the case for Members separated on or after October 1, 1956.

Sixth. Section 3 amends Public Law 85–465, which was intended to grant survivor annuities to unremarried widows and widowers of employees and retirees who died after 10 years of service, either in service or after retirement, prior to February 29, 1948.

Subsequent check revealed that Public Law 85–465 did not close all the gaps in survivor protection that the Congress intended. Two actual cases have arisen of pre-1948 Canal Zone and Alaska Railroad retirees who died between February 29 and March 31, 1948, without survivor protection. The amendment would place them, and the few other cases which may arise, on an equal footing with similar cases already covered.

The Chairman of the U.S. Civil Service Commission has submitted a report favoring enactment of this legislation and pointing out that, since in general the number of individuals affected will be very few, the cost involved is not material. The report also contains a detailed explanation of the provisions of H.R. 8241, as passed by the Senate.

Mr. Speaker, under unanimous consent I include at this point in the RECORD the report of the Chairman of the U.S. Civil Service Commission, dated June 1, 1960, on H.R. 8241:

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., June 1, 1960.

Hon. TOM MURRAY,
Chairman, Committee on Post Office and Civil Service, House of Representatives, Old House Office Building.

DEAR MR. MURRAY: This is in response to your request for a report on H.R. 8241 as passed by the Senate.

An explanation of the bill by sections, with attendant comment, follows:

SECTION 1

Subsection (a) relates to refund rights of Members. Section 1(1) of the present act authorizes refund of retirement deductions with interest to those employees separated or transferred to a position not covered by the act before completing 5 years of civilian service or to Members of Congress separated before serving 5 years as Member. Subsection (a) would place both in the same category so that an employee or Member separated or transferred to a position not under the act with less than 5 years of civilian service would receive a refund.

Subsection (b) would amend section 6(f) of the act so that a Member could retire with an immediate annuity at age 62 with 5-years civilian service, whereas 5 years of Member service are now required. The change would not alter the existing requirement in section 6(f) that 10-years Member service is needed for retirement at age 60 nor does it alter any of the other age-and-service retirement combinations stated therein.

Subsection (c) would amend section 8(b) of the act so that a Member separated from service on or after January 1, 1956, with 5 years of civilian service may be paid an annuity beginning upon attainment of age 62. Previously, 5 years of Member service were required. Thus, employee service can be added to the Member service to satisfy the service requirement. No change is proposed in the present requirement for 10 years of Member service at separation to support title to deferred annuity at age 60.

Public Law 85–772, approved August 27, 1958, amended the survivor annuity provisions of the Retirement Act so that survivor annuity would be payable if a Member died after completing 5 years of civilian service (rather than 5 years' Member service as theretofore). Subsections (b) and (c) of section 1 of the bill extend the same principle to the age-62, 5-year Member retirement provisions and thus make the act more uniform.

Subsections (d) and (e) would amend the annuity formulas for congressional employees and Members.

Under present law, a congressional employee's annuity is computed at 2½ percent of average salary for all congressional employee and creditable military service not exceeding 15 years. Annuity for any remaining service of any type is then computed independently as follows: (a) 1½ percent of average salary for years of other service up to 5; 1¾ percent for years of other service between 5 and 10; and 2 percent for years of other service over 10.

Similarly, the annuity of a Member is now computed at 2½ percent of average salary for years of Member service, any congressional employee service (not exceeding 15 years), and creditable military service. Any other service is then considered independently under the 1½, 1¾, and 2 percent described above.

Under the bill, each formula would be amended to require application of the regular three-step formula for employees generally to the total service of the retiring congressional employee or Member, with the 2½-percent formula to be used in lieu of the regular formula in respect to any years of service for which the special 2½-percent factor is authorized. In other words, the step or steps of the regular formula to be applied would be determined, not by the length of the service for computation under it, but by the total service of the retiring congressional employee or Member. Thus, for service not covered by the 2½-percent factor, 1¾ percent would be applied to years of total service between 5 and 10, and 2 percent would apply to total service in excess of 10. Retiring congressional employees would also have the benefit of the 2½-percent formula for any prior Member service, which is not true under present law.

Amendment to each formula would operate prospectively, applicable only to congressional employees and Members separating on or after enactment date of the bill.

These two annuity formulas were established by the Civil Service Retirement Act Amendments of 1956. We can find nothing in the legislative history of the amendments to indicate whether their design was deliberate or resulted from inadvertence. We do know that any computation formula which, for example, affords 2½ percent of average salary for each of the first 15 years of service and then provides a lesser return for additional years served is at variance with one of the generally accepted principles of a staff retirement plan. The objective of retaining experienced and valuable employees is best served by a formula of the sort applicable to employees generally, which provides increasing incentive for the middle and later years of a full career.

Subsection (f) amends the Retirement Act provisions relating to reemployment of former Members of Congress who are retired or have title to deferred Member annuity.

Present provisions, in effect since October 1, 1956, require discontinuance of Member annuity during any period of employment in an appointive Federal position, with resumption of the annuity at the same rate when the employment terminates. The bill retains these general requirements but adds new features, as follows:

1. New provision is made for computing or recomputing any former Member's annuity, at his option, to include credit for any non-Member service, subject to the Retirement Act, performed after the separation upon which Member annuity title is based. Annuity so computed or recomputed would start (a) the date Member annuity commences, (b) the first of the month after final separation from non-Member employment, or (c) the first of the month after the bill's enactment, whichever is latest.

This new provision would treat the described reemployment service as if performed prior to separation as a Member, with computation or recomputation under the terms of the law in effect at time of Member separation, and subject to the terms of the annuity election made by the Member at time of his retirement.

Present law credits non-Member service performed before, but not after, Member service. Member annuitants may be reemployed with Retirement Act coverage the same as any other appointees and when so appointed may serve to acquire title (or add to benefits under preexisting title) to a separate and additional employee annuity. However, without such separate employee annuity title, non-Member service performed after leaving Congress now produces no added retirement income for the former Member.

2. New provision is made for continuing Member annuity, with no resulting increase, during reemployment after December 31, 1958, in an appointive civilian position on an intermittent-service or when-actually-employed basis, or on a full-time or substantially full-time basis without compensation. During reemployment on an intermittent-service or when-actually-employed basis, the employing agency would be required to reduce the salary by the annuity allocable to periods of actual employment and to transfer to the retirement fund the amount so withheld.

Under existing discontinuance-of-annuity provisions, a Member annuitant accepting employment of this sort now loses his annuity over the entire period covered by his appointment even though he may draw only an occasional day's pay, or none at all in without-compensation situations. The bill would eliminate unwarranted loss of benefits where, as often occurs, the executive branch wishes to appoint a retired Member to a position (on a board or commission, for example) to serve intermittently or without compensation.

In the total of 44,514 employees and Members retired in fiscal year 1959 were 97 congressional employees and 55 Members whose annuities were computed in whole or in part under the 2½-percent formula. Since the number is only one-third of 1 percent of the total, and since not even all of these would be affected by the proposal, its cost in relation to total retirement costs would be minor.

SECTION 2

This section amends section 403 of title IV of Public Law 84–854, which provides in general for continuation of rights acquired under prior laws to employees and Members retired or otherwise separated prior to October 1, 1956, the effective date of the Civil Service Retirement Act Amendments of 1956.

The bill would add an exception to section 403 to afford Members of Congress separated before October 1, 1956, with title to deferred annuity which would otherwise begin at age 62, an annuity commencing at age 60 if the former Member has at least 10 years of Member service. While the retirement date might be moved up to age 60 in each affected case, payment of the annuity could not commence earlier than the first of the month following enactment of the bill.

Under the Member provisions of the Retirement Act prior to October 1, 1956, the deferred annuity provided at age 60 after 10 years' Member service (available now only to Members separated on or after April 1, 1954) is a reduced annuity. The reduction is one-fourth of 1 percent for each full month the Member lacks of being age 62 at retirement date. Annuities afforded under this amendment would be so reduced. Since retirement date in each case would be age 60, the age reduction in each instance would be 6 percent.

The number of former Members who will benefit is not known, but will doubtless be very limited. Cost is not material.

SECTION 3

This section amends Public Law 85–465 to extend the widow-and-widower annuities provided therein to certain overlooked cases.

The purpose of the survivor annuity provisions of Public Law 85–465 (see H. Rept. No. 1211 of August 21, 1957) was to give "annuity title to unremarried widows and widowers of employees and retirees who died after 10 years of service, either in service or after retirement, prior to February 29, 1948. Widows and widowers of retirees who died on or after February 29, 1948, already are receiving annuities under 1948 amendments to the law."

Subsequent analysis of Public Law 85–465 (and related prior legislation) revealed that it did not close all the gaps in survivor protection that the Congress intended. A legislative discrepancy resulted in no survivor protection in cases of pre-1948 Canal Zone and Alaska Railroad retirees who died between February 29 and March 31, 1948. Two actual cases in this category have arisen to date. This provision would place them, and the few other cases which may arise, on an equal footing with the similar cases already covered by Public Law 85–465.

Since the number of eligibles will be few, the cost of this provision is negligible.

SECTION 4

This section provides for payment of benefits authorized by the bill from the civil service retirement and disability fund, notwithstanding any other provision of law. Such provision would circumvent the advance appropriation requirement contained

in the paragraph headed "Civil Service Retirement and Disability Fund" in section 101 of title I of the act of August 28, 1958, Public Law 85-844, 72 Stat. 1064.

In line with Commission policy, we make no recommendation on the merits of sections 1 and 2 of this bill, since their provisions affect Members of Congress and congressional employees only. However, we may comment that the objectives of section 1 harmonize with provisions applicable to employees in general. Section 2 retroactively liberalizes certain rights vested under prior laws.

Section 3 embodies a legislative proposal initiated by the Commission. We favor enactment of its provisions into law.

The Bureau of the Budget advises that there would be no objection to the submission of this report to your committee.

By direction of the Commission.

Sincerely yours,

ROGER W. JONES,
Chairman.

Mr. WALLHAUSER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. WALLHAUSER. Mr. Speaker, the distinguished chairman of the Post Office and Civil Service Committee, the gentleman from Tennessee [Mr. MURRAY], has made a very clear, extensive, and understandable report and explanation of the provisions of H.R. 8241 to the Members. This legislation will correct longstanding inequities of the Retirement Act. I wish to compliment the chairman personally, the members of the subcommittee and full committee that considered the bill, and the efficient members of the committee staff on their willingness to understand the problem, the fair manner in which it was evaluated, and the achievement of the final successful result of their efforts.

SPEAKER EMPOWERED TO DECLARE A RECESS ON JUNE 29, 1960

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that it may be in order at any time on Wednesday, June 29, 1960, for the Speaker to declare a recess for the purpose of receiving in joint meeting his majesty, the King of Thailand.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Obviously a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 140]

Alford	Carnahan	Fisher
Barden	Diggs	Frazier
Blitch	Durham	Jackson
Brewster	Edmondson	Lafore
Buckley	Evins	Latta
Burdick	Fenton	McSween
Milliken	Saylor	Teague, Calif.
Mitchell	Schneebeli	Wampler
Morris, Okla.	Steed	
Mumma	Taylor	

The SPEAKER. On this rollcall 403 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SOCIAL SECURITY AMENDMENTS OF 1960

The SPEAKER. The Chair recognizes the gentleman from Indiana [Mr. MADDEN].

Mr. MADDEN. Mr. Speaker, by direction of the Committee on Rules I call up House Resolution 562 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution, it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12580) to extend and improve coverage under the Federal old-age, survivors, and disability insurance system and to remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system; to provide grants to States for medical care for aged individuals of low income; to amend the public assistance and maternal and child welfare provisions of the Social Security Act; to improve the unemployment compensation provisions of such Act; and for other purposes, and all points of order against said bill are hereby waived. That after general debate, which shall be confined to the bill, and shall continue not to exceed four hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Ways and Means, the bill shall be considered as having been read for amendment. No amendment shall be in order to said bill except amendments offered by direction of the Committee on Ways and Means, and said amendment shall be in order, any rule of the House to the contrary notwithstanding. Amendments offered by direction of the Committee on Ways and Means may be offered to any section of the bill at the conclusion of the general debate, but said amendments shall not be subject to amendment. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. MADDEN. Mr. Speaker, House Resolution 562 provides for consideration of H.R. 12580, a bill to amend the Social Security Act. The resolution provides for a closed rule, waiving points of order, with 4 hours of general debate.

H.R. 12580 will, among other improvements, make it possible for the States—under a Federal-State grant-in-aid program—to provide medical care for low-income aged who are otherwise self-sufficient but whom the States determine need help on medical expenses; remove the age-50 eligibilty requirement in the disability insurance program; liberalize the eligibility requirements for old-age, survivors, and disability—OASDI—benefits; extend coverage under the program to additional groups; make certain improvements in the social security benefit protection for children; make eligible for benefits certain additional widows; effectuate certain improvements in the administrative financing and solvency provisions of the unemployment compensation system as well as to extend its coverage; increase authorizations for maternal and child welfare programs; to make it possible for the States to improve medical care under their old-age assistance program; and so forth.

A new title of the Social Security Act is established which will initiate a new Federal-State grant-in-aid program to help the States assist low-income aged individuals who need help in meeting their medical expenses. Participation in the program will be at the option of each individual State and will only be effective after June 1961 upon the submittal of a plan which would meet the general requirements specified in the bill.

Persons 65 years of age, whose income and resources—taking into account their other living requirements as determined by a State—are insufficient to meet the cost of their medical services will be eligible. Persons eligible for payments under this program are not eligible under the other Federal-State public assistance programs.

The scope of benefits provided will be determined by the States. The Federal Government, however, will participate under the matching formula in any program which provides any or all of the services up to the limits specified.

The Federal Government will provide funds for payments for benefits under an approved State plan in accordance with an equalization formula under which the Federal share will be between 50 percent and 65 percent of the costs depending upon the per capita income of the State.

Contingent upon a showing of an improvement in their medical programs, States would get somewhat more favorable Federal matching, effective October 1960, for up to an additional $5 in medical payments. Over 2 million persons could be affected by this change. The cost in a full year of operation will be about $10 million to the Federal Government and about $7 million to the States.

An estimated 250,000 people—disabled insured workers under age 50 and their dependents—would qualify for benefits for the second month following the month of enactment of the bill through removal of the age-50 qualification for benefits in present law.

The bill would liberalize social security work requirements so that, to be eligible for benefits, a person would need one quarter of coverage for every four calendar quarters beween January 1, 1951, and the beginning of the calendar quarter in which he reached retirement or died, whichever first occurred.

It is estimated that this provision will make about 600,000 additional persons eligible for benefits beginning January 1961.

The bill would increase the benefits payable to children in certain cases and will provide benefits for certain widows

and children who are not now eligible for benefits. Other than as noted below, these changes would be effective for benefits for the month following the month of enactment.

Survivors of workers who died before 1940, and who had at least six quarters of coverage, would qualify for benefit payments. About 25,000 people, most of them widows aged 75 or over, would be made eligible for benefits for the first time.

Approximately 150,000 self-employed physicians would be covered on the same basis as other self-employed professional people, such as lawyers and dentists are now covered. This coverage would be effective for taxable years ending on or after December 31, 1960. Coverage would at the same time be extended to services performed by medical and dental interns.

The bill would make certain changes in the investment provisions to make the bond interest earnings of the funds more nearly equivalent to the rate of return being received by people who buy Government obligations in the open market.

These changes are generally in line with the recommendations of the Advisory Council to the Secretary of Health, Education, and Welfare on Social Security Financing.

The improvements which the bill would make in the old-age, survivors, and disability insurance system will not require any social security tax increases. This is because provision is made for modest additional receipts from interest payments on trust fund investments and since the other OASDI provisions of the bill result in either relatively negligible increases or decreases in cost. Also, it should be observed that no change is made in the taxable earnings base of $4,800.

This bill, in my opinion, is wholly inadequate to effectively legislate proper care and protection for about 16 million of our pioneer citizens who are and will be unable to get sufficient medical, surgery, and hospital care. I opposed this bill in the Rules Committee as being a feeble effort to solve a major national health problem for our older people.

Mr. Speaker, I do not oppose a rule for debate on this bill but I do hope that the legislation can be expanded and changed when it reaches the other body for consideration and enactment. The Nation needs health, medical, and hospital relief for the aged now and I hope, before final enactment, this bill will be amended so we can get an adequate program started.

Mr. Speaker, I have no further requests for time and I now yield 30 minutes to the gentleman from Illinois [Mr. ALLEN].

Mr. ALLEN. Mr. Speaker, I know of no one who is opposing the rule. I have no requests for time on this side. I reserve the balance of my time.

Mr. MADDEN. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. MILLS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12580) to extend and improve coverage under the Federal old-age, survivors, and disability insurance system and to remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system; to provide grants to States for medical care for aged individuals of low income; to amend the public assistance and maternal and child welfare provisions of the Social Security Act; to improve the unemployment compensation provisions of such act; and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 12580, with Mr. ZABLOCKI in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. MILLS. Mr. Chairman, I yield myself 15 minutes.

Mr. Chairman, the social security bill, H.R. 12580, which is now before the Committee, represents the careful and considered judgment of the Committee on Ways and Means as to changes and additions that should be made at this time in the opinion of the committee to the Social Security Act.

Mr. Chairman, as Members of the House will readily agree, the soundness and effectiveness of the programs that we have under the Social Security Act are extremely important to every American family. Perhaps, and I think I can say without fear of successful contradiction, no other single piece of legislation concerned with domestic policy touches more people than the Social Security Act at the moment. Decisions with respect to changes and additions to that act, therefore, must not be made by the Congress lightly. The Committee on Ways and Means considers it has a very heavy responsibility and an obligation to Members of this House and to the American people to treat these various programs which are encompassed by the Social Security Act with the utmost care and thought with the overriding consideration always being the actuarial soundness of the system.

It was in this spirit that the Committee on Ways and Means went about its work in considering all the various proposals which had been suggested by Members of this body and others. The committee had before it over 500 bills covering all titles of the Social Security Act—public assistance provisions, OASDI provisions, unemployment compensation provisions, maternal and child welfare provisions, and so on.

Mr. Chairman, in many areas there was substantial agreement among Members of the committee as to what should be done with respect to proposals which had been made and changes which had been suggested. Likewise, Mr. Chairman, with respect to other areas there were sharp differences of opinion as to how far the committee should go and precisely what action should be recommended at this time. This was particularly true with respect to the area of health care for the aged.

In just a moment I shall describe what the committee recommends with regard not only to this important area but also with respect to other areas of the Social Security Act. However, Mr. Chairman, with respect to both medical care for the aged and other titles, let me reiterate that there were those in the committee who felt that the committee had not gone far enough; there were others in the committee who perhaps felt that the committee should not have gone quite as far as it did. This is not unusual in the committee process. The bill which is before this body represents the best thought of a majority of the committee. It represents meritorious and beneficial legislation which, if this body acts favorably upon it, should prove to be of great benefit to millions of Americans.

The bill makes a number of improvements in the existing programs under the Social Security Act, including old-age and survivors insurance, disability insurance, unemployment compensation, public assistance, and maternal and child welfare. In addition, the bill includes a new title XVI to be added to the Social Security Act, which will initiate a new Federal-State grant-in-aid program of medical services to the low-income aged.

THE NEW TITLE XVI

Mr. Chairman, let me first briefly summarize for you the proposed new title XVI on medical care for the aged.

This title of the Social Security Act will, as the gentleman from Indiana [Mr. MADDEN] said, in presenting the rule, initiate a new Federal-State grant-in-aid program to help the States assist low-income aged individuals who need help in meeting their medical expenses. Participation in the program will be completely at the option of each individual State and will only be effective after June 1961, upon the submittal of a plan which would meet the general requirements specified in the bill, and which would be approved by the Secretary of HEW.

This arrangement follows the historic Federal-State approach which is embodied in the public assistance and other titles to the Social Security Act. It is purely voluntary with the States. It does not involve a "payroll" tax. The costs would be paid from general funds. Each State will determine the extent and character of its own program.

ELIGIBILITY

Persons 65 years of age, whose income and resources, taking into account their other living requirements as determined by a State, are insufficient to meet the cost of their medical services, will be eligible, that is, people 65 years of age and over who are determined by the State to be in need of assistance with respect to medical problems and medical care. Those people who are presently

receiving medical care or who are presently in title I, the old age assistance program, will not be eligible to benefit under this new title.

SCOPE OF BENEFITS

The scope of medical benefits and services provided will be determined by the States. We say, however, in this bill, the extent to which the Federal Government will go in participating with the States in the cost of certain aspects of these medical care programs and needs. Of course, the State can exceed these limits if it wants to pay the full costs beyond them.

For example, we say that we will only participate with the State in taking care of an individual otherwise eligible under this program to the extent of 120 days of in-patient hospital service. We say that we will help the States on costs only to the extent of $200 in taking care of prescribed drugs that might be needed by one eligible under the program. We say that we will only go to the extent of $200 in helping to take care of the cost of laboratory and X-ray services that might be needed under the program. In addition, the Federal Government will participate under the matching formula for skilled nursing home services, physicians services, outpatient hospital services, organized home care services, private duty nursing services, therapeutic services, and major dental treatment, as further specified in the bill.

The Federal Government will match with the States the costs of these programs as determined by the States on the basis of a formula that is presently applicable in titles I, X, and XIV of the Social Security Act to that amount of money that is spent under these programs between $30 and $65 a month. That formula is known as a variable grant formula depending upon the per capita income of the State. We may match on a 50-percent basis in some instances—$50 out of $100—and we may put up $65 out of $100 in some other instances—65 percent in States with the lowest per capita income.

The program under the new title cannot be more liberal in providing medical care than the medical care program already in effect, under title I, Old-Age Assistance. We also provide that the title I program cannot be reduced by a State in order to establish this new program. If we are going to have the new program, if the States are to set it up, they must do this in addition to what they are already doing in taking care of medical needs of people who are under the old-age assistance programs.

COST AND NUMBER OF PERSONS AFFECTED

There is a great deal of uncertainty, I might say very frankly, Mr. Chairman, as to the cost of such a program. There is a great deal of uncertainty as to the exact number of people that might participate or would be eligible under the program. It is entirely possible that the States may include as eligibles under this program, if all of them participate, some 10 million elderly people, 65 years of age or older. Out of those 10 million people, it is generally estimated by those who are in a better position to know than I that from half a million to 1 million each year become sick or need some medical attention the entire cost of which they otherwise cannot meet themselves. It is that group of people that this new title is aimed to assist, provided, of course, that the States themselves desire to establish such a program. That is a weakness, I might frankly admit, Mr. Chairman, as contended by those who would have us do something other than this. Here we are making possible a program which will succeed only on the basis of the individual wishes of each and every State. But I remind you, Mr. Chairman, that we did the same thing with respect to four other titles of social security years ago. It has developed that to some varying extent practically all States in the Union and most of the territories and possessions have set up not just one but all of the programs which are involved in those four titles and four categories.

OLD-AGE ASSISTANCE MEDICAL PROGRAM

Mr. Chairman, there is another integral part in this bill in the area of medical care, and I refer to the action taken by the committee in proposing language that is calculated to induce the States to do more in some instances, where more is thought to be needed or required, with respect to the medical care program under title I, or the old-age assistance program.

Under the bill we are making possible the addition of money, perhaps $10,500,000 of Federal money, to the title I program when it is demonstrated by the State that the State is making better provision for the medical care of these people 65 years of age and older under the OAA program.

Contingent upon a showing of an improvement in their medical programs, States would get somewhat more favorable Federal matching, effective October 1960, for up to an additional $5 in medical payments. Over 2 million persons could be affected by this change. The cost in a full year of operation will be about $10 million to the Federal Government and about $7 million to the States.

As I have previously noted, the medical provisions of a State plan approved under title I must be at least as broad as those of the State plan approved under title XVI. States with no medical care plan in their old-age assistance program, accordingly, will need to develop such a plan before they can have a plan approved under title XVI. The incentive provisions contained in the bill are intended to encourage this development.

In addition to these provisions, Mr. Chairman, the bill instructs the Secretary of Health, Education, and Welfare to develop guides or recommended standards as to the level, content, and quality of medical care for the use and information of the States in evaluating and improving their public assistance medical care programs and their title XVI programs, and the Secretary is also required to secure periodic reports from the States on the items included in, and the quantity of, medical care for which expenditures are made under these programs. The first report under these provisions is to be submitted to the Congress not later than March 15, 1962.

There are a number of other provisions contained in the bill. I want to allude to some of them very briefly.

CHANGES IN THE DISABILITY INSURANCE PROGRAM

Mr. Chairman, this bill would make changes in the disability benefit provisions of title II of the Social Security Act.

One of these changes recommended will provide protection to a substantial number of additional individuals—an estimated 250,000—by extending the disability benefit provisions to disabled insured workers under age 50 and their dependents.

The disability benefit program has become one of the important areas of title II of the Social Security Act. This is the section that provides a disability benefit for the individual who becomes totally disabled and unable to engage in substantial gainful employment.

It will be recalled, Mr. Chairman, that at the request and suggestion of the Committee on Ways and Means in 1956 this program was initiated by the Congress. It was not a request from the administration but a decision reached with the Committee on Ways and Means, that here were a group of people who have lost opportunities for employment income to the same extent, perhaps, as those people who were at that time covered under social security, and lost income because of retirement from the work market. Here is that individual who is totally and permanently disabled. We said at that time, however, in connection with eligibility, that person had to be not only totally and permanently disabled in order to draw a benefit but he also had to be 50 years of age or older.

In 1958 we provided that this individual 50 years of age or older not only could draw a benefit but those of his dependents otherwise eligible under the law could draw a benefit, just as though he had retired under other provisions of the Social Security Act.

This year we are suggesting to the Congress that the 50-year age requirement be eliminated entirely. We also recommend that there be provided a more liberal basis for rehabilitation than we have in existing law; namely, that we not confine this trial work period of rehabilitation to those under a formal Federal-State rehabilitation program but extend the trial work period for all disabled workers who attempt to return to work.

Moreover, Mr. Chairman, the bill provides that the disabled worker who regains his ability to work and then within 5 years again becomes disabled will not be required to wait through a second 6-month waiting period before his benefits will be resumed, as is now required.

With regard to repeal of the age 50 provision, we feel, Mr. Chairman, that there is just as great a need on the part of the individual who may be 40 years of age who becomes disabled but is otherwise eligible as there is at the age of 50. We are cognizant of the fact, Mr. Chairman, that the younger the worker may be who becomes totally and permanently disabled the greater is the possibility that he has young children who are depend-

ent upon him and who cannot enter the labor market to replace wages he is losing as a result of total and permanent disability. As I indicated, there are about 250,000 people who will be immediately eligible under this provision of the bill for benefits who are not now eligible for those benefits.

CHANGES IN THE OASI PROGRAM—INSURED STATUS REQUIREMENT

Mr. Chairman, one of the important provisions in the bill has to do with the insured status requirement. As Members of the House will recall, generally present law requires, for an individual to become eligible for benefits, that the worker must have one quarter of coverage for each two quarters elapsing after 1950 and before retirement, disability or death. Under the bill, this requirement is liberalized so that individuals need have only one quarter of coverage for each four quarters so elapsing.

Let us take the case of the person who becomes 65 years of age during this year and, therefore, eligible to retire. It is necessary for him to have some 18 or 19 quarters of coverage under existing law. Mr. Chairman, we are recommending a change in that provision so that one can be eligible for benefits with one quarter out of every four quarters of employment being covered under social security. That will mean people 65 and over can establish eligibility this year with about nine quarters of coverage. It will be a very decided advantage to those people who are not quite able to establish their eligibility at the moment. It will be a benefit to those people who are about to reach retirement age. There are approximately, Mr. Chairman, 600,000 people who will have eligibility immediately under social security under this provision who would not otherwise qualify, and by January 1, 1966, there will be 1,400,000 people who will enjoy benefits who would not enjoy benefits under the provisions of existing law. The amendment would be of particular importance to the 600,000 people whose jobs would be covered for the first time under the Committee's recommendations, since it would enable them to become insured much sooner than they could under present law. It would also be important for people for whom coverage is possible under the law but who have not yet been brought under the program. Some 2½ million employees of State and local governments, and additional employees in several smaller groups, would be able to attain fully insured status under the program in a relatively short time if they now come under the program.

EXTENSION OF COVERAGE

The bill now before the Committee contains provisions to extend the coverage of the OASDI program to some approximately 300,000 additional people. These additional groups are as follows:

First. Self-employed doctors of medicine: As Members will recall, the OASDI program now covers members of all self-employed professional groups except doctors of medicine. During the past several years, the Committee on Ways and Means has received many requests from doctors for coverage. The Committee was aware, in addition, that many State medical societies have gone on record in behalf of extension of coverage to doctors. At the same time, we recognized that there were other State societies—and I may say that my own State society in Arkansas is included in this latter group—which still oppose coverage. While I voted against coverage of self-employed doctors, the majority of the Committee felt that coverage should be extended to this additional professional group on the same basis that it has been extended to other professional groups, such as lawyers, dentists, and so forth. Approximately 150,000 self-employed doctors would be brought into the system effective for taxable years ending after December 31, 1960.

Second. Additional domestic workers in private homes and others who perform work not in the course of the employer's business: The committee bill liberalizes the existing provision relating to coverage of domestic workers. Under present law, the earnings of domestic workers in private households—other than those on farms operated for profit—are covered only when they amount to at least $50 in a calendar quarter from one employer. The committee bill would cover such earnings if they amount to at least $25 from one employer. At the same time, the bill would set a lower age limit so as to exclude from coverage on earnings of domestic workers who are under age 16. It is estimated that this provision of the bill would bring into the program about 100,000 additional domestic employees, and it also would improve the situation, by including additional earnings, of others in this category who are already covered. At the same time, the lower age limit of 16 would substantially eliminate casual or intermittent workers such as lawn cutters, and so forth.

Third. Provisions relating to coverage of employees of State and local governments: The bill recommends several changes designed to facilitate the coverage of State and local government employees as follows:

(a) Retroactive coverage: In order to assist workers in improving their protection, the committee has made it possible for these groups to obtain extended retroactive coverage beginning as early as January 1, 1956. The retroactive coverage provision extending this far back expired after the end of 1959 under existing law. Whether such coverage will be utilized, of course, remains completely at the option of the States. The committee bill also contains provisions designed to add flexibility in determining the beginning date for coverage for different political subdivisions by making it possible, when a retirement system is covered, for the State to provide different beginning dates for different political subdivisions.

(b) The bill contains additional provisions designed to facilitate coverage, or to solve problems which have arisen in a variety of State and local coverage situations. For example, the State of Virginia has been added to the list of States which may, if they so choose, extend coverage to policemen and firemen covered by retirement systems; provisions relating to delegation of certain ministerial functions by the Governors, to solve administrative problems, are included; provisions to facilitate coverage of employees of municipal and county hospitals are included; and other State and local provisions are included.

Fourth. Miscellaneous additional coverage provisions: In addition to the above, the bill includes provisions to bring in workers in Guam and American Samoa; to facilitate coverage of additional employees of nonprofit organizations and to validate certain erroneous returns already filed; provisions to give ministers an additional 3 years in which to obtain coverage; provisions to cover services of parents in the employ of their sons or daughters in a trade or business; provisions to extend coverage to American citizens employed in the United States by foreign governments and international organizations; and other miscellaneous provisions.

IMPROVEMENTS IN THE BENEFIT PROTECTION FOR WIDOWS, CHILDREN, AND SO FORTH

Mr. Chairman, the Committee on Ways and Means believes there are several respects in which the protection available to the dependents and survivors of insured workers should be improved, and the bill before you would make the following improvements:

First. Increase in benefits to certain children of deceased workers—under present law the amount payable to a child of a deceased worker is equal to one-half of the benefit amount the worker would have been paid if he had lived, plus one-fourth of that benefit amount divided by the number of children. The committee bill would make the benefit for each child of a deceased worker equal to three-fourths of the amount the worker would have been paid had he lived subject to the maximum limits. About 400,000 children would get some benefit increase as a result of this.

Second. Benefits for survivors of workers who died before 1940; the committee bill recommends that benefits be paid to the survivors of workers who acquired six quarters of coverage and died before 1940. The vast majority of these are widows. About 25,000 of these would be covered.

Third. Miscellaneous benefit provisions: In addition to the above, the bill provides for benefits in certain situations where a marriage is legally invalid, although entered into in a bona fide manner; certain additional benefits for a child based on his father's earnings record even though the child is supported by a stepfather; and a reduction in the length of time needed from 3 to 1 year to acquire the status of wife, child, or husband for benefit purposes.

ADDITIONAL MISCELLANEOUS PROVISIONS DESIGNED TO MAKE IMPROVEMENTS IN COMPUTING BENEFITS, ADMINISTRATION, AND TO SIMPLIFY THE ACT

Mr. Chairman, the bill before us contains so many provisions which are designed, in one way or another, to improve the benefit structure or to facilitate payments or to facilitate administration of the act that it is not feasible,

within the time available to us, to discuss all of these provisions in detail. I should simply like to emphasize to this House that this bill does contain a large number of very valuable and beneficial provisions along these lines.

For example, there are provisions in this bill which are designed to improve the method of computing benefits. Under the present law, a person's average monthly wage on which his benefit is based is computed over a span of time that may vary with the time when he files an application for benefits or for a benefit recomputation. A person who does not understand the complicated provisions of the law or who does not know what his earnings will be in future years may find that he has not applied for benefits at a time most advantageous to him. The committee bill would substitute for the present complicated provisions on computation a provision for computing the average monthly wage, in retirement cases, on the basis of a constant number of years, regardless of when the person started to work or when after age 65 he files application for benefits. I will not go further into this provision but simply say that it should prove beneficial in many, many thousands of cases.

We have included in this bill now before you provisions to change the present law governing payment of the lumpsum death benefit; we have included provisions to eliminate a large number of obsolete recomputations; we have included provisions which should be of assistance to claimants where they have filed cases in court; and we have included a large number of other meritorious provisions.

MATERNAL AND CHILD HEALTH PROVISIONS

Mr. Chairman, I shall return shortly to a discussion of the financial status of the OASI and DI Trust Funds, but before doing so I wish at this point to briefly summarize additional changes made in other titles of the Social Security Act.

First, I refer to changes made in title V. The bill now before you would increase the amounts authorized to be appropriated for maternal and child health services, crippled children's services, and child welfare services under title V, as follows:

	Current authorization	Recommended authorization
Maternal and child health services	$21,500,000	$25,000,000
Crippled children's services	20,000,000	25,000,000
Child welfare services	17,000,000	20,000,000

A provision is also included to facilitate research projects by providing that grants may be made to public or other nonprofit institutions of higher learning for special projects of regional or national significance and for research and demonstration projects in the field of child welfare.

UNEMPLOYMENT COMPENSATION PROVISIONS

Mr. Chairman, the bill now before us contains extensive provisions making improvements in the titles of the Social Security Act relating to the unemployment compensation program. These provisions may be very briefly summarized as follows:

Title V(1) raises the net Federal unemployment tax—the tax that may not be offset by a credit for taxes paid under a State program—from three-tenths to four-tenths of 1 percent on the first $3,000 of covered wages; second, provides that the proceeds of this higher Federal tax covering the administrative expenses of the employment security program will be available to build up a larger fund for advances to States whose reserves have been depleted; third, makes adidtional improvements in the arrangements for administrative financing; and fourth, improves the operation of the Federal unemployment account by tightening the conditions pertaining to eligibility for and repayment of advances.

Title V also extends the coverage of the unemployment compensation programs to several groups not presently covered. It is estimated that from 60,000 to 70,000 additional employees would be brought under the unemployment compensation system by this extension.

Title V, in addition, provides that Puerto Rico will be treated as a State for the purposes of the unemployment compensation program.

TRIBUTE TO AIME FORAND

Mr. Chairman, before going further with the final thought I had to express to the committee, I want to take this moment to call attention to the fact that one of those who has made a major contribution over the years in the Committee on Ways and Means looking to the improvements in the social security program, one who has always had in mind a desire to bring about such changes that would be a benefit to people, one who has always been one of the strong advocates of the actuarial soundness of this program, and of the necessity of maintaining it, some time ago announced that this would be his last session in the Congress. He is retiring—far too young, I think, to make such a decision—but he has decided that he will not be a candidate for reelection. I want my friend, the gentleman from Rhode Island, to know I will miss him far more in the future in the deliberations of the Committee on Ways and Means than he can possibly imagine. I know of no friendship that has been more beneficial to me, than that which I have enjoyed with the gentleman from Rhode Island. He now sits next to me on the Committee on Ways and Means where we have served together for a number of years. His suggestions and recommendation have always been most helpful. One of the really great disappointments that I have experienced since I have been a Member of the Congress was his decision to retire at this time from the Congress.

Mr. BOGGS. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Louisiana.

Mr. BOGGS. I want to reiterate what my distinguished chairman has said with reference to our friend and colleague, Mr. FORAND of Rhode Island. In my judgment, his leaving the House is a great loss not only to the State of Rhode Island but to our country.

Mr. MILLS. It is, indeed, a great loss to Rhode Island, but an even greater loss to the country.

Mr. MASON. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Illinois.

Mr. MASON. I want to add my tribute and also my regret that our colleague has decided not to remain in the Congress. He served as chairman of a subcommittee that I have served upon. Personally, we disagreed on some things, but we got along wonderfully well. I, too, am deeply—well, shall I say sorry—and I regret that AIME FORAND is not going to be with us next year in our deliberations on the committee.

Mr. CANFIELD. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I shall be glad to yield to the gentleman from New Jersey.

Mr. CANFIELD. Mr. Chairman, I want to associate myself with the remarks that have been made here on the floor today in a hearty salute to AIME FORAND. Yesteryear he was a great secretary to a great Congressman, and he has had a tremendous amount of on-the-job training. He has proven himself a great American legislator and most certainly a loyal friend. We shall miss him immeasurably.

STATUS OF OASI AND DI TRUST FUNDS

Mr. MILLS. Mr. Chairman, I alluded earlier in my expression of thoughts to the need, in my opinion, of keeping the social security program actuarily sound. Whatever we do we must ever keep firm in our minds the requirement that there must be revenue in the fund in time and over a period of years to pay for those benefits that we think our people are entitled to receive.

Mr. Chairman, I do not know whether all my colleagues realize it or not, but at the present time we are spending around $11 billion a year to pay benefits under the social security system. I wonder, however, if Members realize that if we should stop collecting taxes and thus stop receipts of the funds as of now, and if we should discontinue making any more people eligible for benefits and pay only those benefits which we feel ourselves committed to pay to those who are presently in retirement or drawing benefits, that we would lack around $65 billion of having enough money in the fund to take care of those needs. This will not occur but if it did this would be the result.

Mr. Chairman, we are not discussing small matters when we discuss amendment of the Social Security Act; we are discussing terrifically large matters because of their application to so many people, and because of the great number of important policies that are involved in carrying on this program. It is therefore essential, and those who are most interested in social security have always pointed out, that it is most important, absolutely essential, that we keep this system as actuarily sound as possible.

Mr. Chairman, we do not do certain things in connection with this bill that many want done because of the unwill-

ingness of the committee, as I take it, to impose upon those presently working, to impose upon those presently employed, additional taxes over and above the taxes which they are already going to have to pay by 1969. At that time, Mr. Chairman, the tax on a self-employed person under this program, as it stands today, will be 6¾ percent; the tax on an employed person will be 4½ percent, and the tax on the employer will be 4½ percent—a total of 9 percent.

Mr. Chairman, I do not know what the point is at which people will begin to have great resistance to increases in social security taxes, but I think when this scheduled tax is finally fully effective in 1969 we are going to find that there is unwillingness on the part of a great number of people to see this tax go higher. We may be wrong, but until this full tax does actually go into effect in my opinion we should not bring about, as a part of social security, very great increases in the scheduled rates of tax. It is all right for us to say we can enjoy this benefit today because we will raise the tax in 1972, but we must also take into consideration what the reaction to that tax is going to be in 1972. What I am trying to say is that we must not carry this program beyond the point of willingness of the American people to support it. That has happened with respect to some of our retirement systems that are now not sound. There are those on the floor who are quite well aware of that.

Mr. BYRNES of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield.

Mr. BYRNES of Wisconsin. It is not only the rate of tax with which we should be concerned but we should also recognize that this is a gross income tax, that we do not have the deductions and exemptions that are available to relieve undue hardships that exist in the income tax.

Mr. MILLS. The gentleman is correct.

Mr. BASS of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Tennessee.

Mr. BASS of Tennessee. Mr. Chairman, I notice on page 13 of the report under paragraph 3 that there is recommended a change in the waiting period for benefits to those whose difficulties recur. I would like to ask the gentleman if anything was done about eliminating this waiting period in the initial case?

Mr. MILLS. No; we did not make that change.

Mr. BASS of Tennessee. I would like to say to the gentlemen of the Committee on Ways and Means and to Members of the Committee of the Whole that this is a provision of the social security law that I think should be given serious consideration.

Mr. MILLS. Perhaps so, but I hope my friend will admit with me, one of the ways you distinguish between a permanent disability and a temporary disability is the duration of the disability.

Mr. BASS of Tennessee. May I say to the gentleman I am not recommending the elimination of the 6-month waiting period in order to establish disability. What I am recommending is that after the fact of disability has been established the payment then should start at the initial date of disability.

Mr. MILLS. I remind the gentleman there are more tests with respect to eligibility for disability benefits than merely the doctor saying this person is totally disabled. One of the additional tests is the inability to rehabilitate, to engage in substantially gainful activity. Another test is that he be disabled, following the other two determinations, for a period of 6 months before his benefit can begin.

Mr. BASS of Tennessee. Once that disability has been established, the first 6 months of the disability are the most costly and burdensome on the insured. I am of the opinion it should be retroactive to the date of actual disability.

Mr. MILLS. There might be some such action taken in the future; I cannot of course give assurance at this time.

Mr. FINO. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from New York.

Mr. FINO. Do I understand that the committee amendment recommends in this bill elimination of the so-called work clause?

Mr. MILLS. No. The reason we did not change that, I will say to the gentleman from New York, is that it would require an immediate increase in the payroll tax of 1 percent. The dollar cost of the elimination of the "work clause" is $3 billion.

Mr. FINO. And the elimination of the $1,200 work amount?

Mr. MILLS. Yes. At this point, if the gentleman will bear with me, I am constrained to make the following comments. Many of the changes which have been suggested in some of the bills before the committee and which have been pressed upon us from various other sources would have deeply and adversely affected the actuarial soundness of the trust funds unless substantial, and in some cases very substantial, increases in social security taxes were made to accompany the change. The committee has felt that changes which require increases in the social security tax rate should be approached with the utmost caution and constraint. We do not want this system to get out of hand and we do not want the system to become actuarially unsound. Let me give you a few examples of the cost of some of the changes which have been suggested.

First. There are those who urge across-the-board increases in benefits. Even a modest increase of 5 percent, with a $2.50 minimum, would cost about one-half of 1 percent of payroll and require that much increase in taxes; a benefit increase of 10 percent would cost nearly a full percentage point of payroll and therefore would require a one-half of 1 percent increase each on employer and employee. There are others who would urge even a larger benefit increase, perhaps as much as 25 percent. Members of this House should realize that such an increase would cost nearly 2½ percent of payroll and thus would require a drastic increase in social security taxes.

Second. There are those who have urged an increase in the exempt amount in the retirement test or an elimination of the retirement test. I doubt seriously if all Members of the House realize that to eliminate this retirement test would cost a full percentage point of payroll, as I indicated a moment ago, and therefore would require a substantial increase in taxes. Under this, the benefits would go to those who are past retirement age and who are still working and a heavy increased burden would be placed upon the younger workers to pay for this. Even to increase the $1,200 amount substantially would require an increase in social security taxes.

Third. Proposals have been made to reduce the retirement age. Some examples of costs of this are as follows: Full benefits at age 62 for all women—0.33 percent of payroll; full benefits at 62 for men and women—0.76 percent of payroll; full benefits at 60 for all women—0.84 percent.

Mr. Chairman, we cannot have it both ways; if we are to act responsibly and are to keep this system on a sound basis so that it may effectively serve its basic purposes, we must face our responsibilities and enact tax increases when we make substantial changes in the system.

Mr. Chairman, I will include at this point more detailed figures on changes in the OASDI program:

Estimated level-premium costs as percentage of payroll, according to intermediate-cost estimate, for various changes in OASDI system

CHANGE AND COST	Percent
Uniform benefit increase:	
5 percent ($2.50 minimum)	0.47
10 percent ($5 minimum)	.93
15 percent ($7.50 minimum)	1.40
20 percent ($10 minimum)	1.86
25 percent ($12.50 minimum)	2.33
Increase of minimum primary benefit:	
From $33 to $40	.06
From $33 to $45	.17
From $33 to $50	.23
Increase in exempt amount in retirement test:	
From $1,200 to $1,500	.11
From $1,200 to $1,800	.24
From $1,200 to $2,400	.49
Elimination of retirement test	1.00
Reduction in minimum retirement ages:	
Full benefits at 62 for all women	.33
Full benefits at 62 for men and women	.76
Full benefits at 60 for all women	.84
Increase in maximum earnings base:	
From $4,800 to $5,400	[1]—.24
From $4,800 to $6,000	[1]—.38

[1] Reduction in cost.

(Prepared by Robert J. Myers, Chief Actuary, Social Security Administration, Department of Health, Education, and Welfare, June 20, 1960.)

This was one of the most important considerations in the minds of members of the committee, I am confident, when we approached consideration of the various proposals to include a health care program under the OASI system. As I have indicated, the majority of the committee felt that we should not include such benefits under this program, with the accompanying tax increase which would have been required.

Mr. Chairman, the bill now before us is a sound proposal; it is a meritorious proposal; and it is a beneficial proposal. It makes considerable improvements in practically all phases of the Social Security Act.

I hope we dispose of it today, and send it on to the other body so that it can give further consideration to the matter.

I trust the bill may enjoy your support, and I commend it to you.

Mr. MASON. Mr. Chairman, I yield myself such time as I may use.

Mr. Chairman, I am opposed to this bill, H.R. 12580. I am particularly opposed to the medical care section which is called title 16.

In my opinion, the whole program is unsound and for that reason I opposed the bill in the committee. You have listened to a clear and sound explanation of the principal items of this bill which involve 180 pages by the Chairman of the Committee on Ways and Means. He has given you a clear, sound explanation of the principal provisions of the bill. But there are many things in this bill that I do not understand, and many things in the bill that I believe are not sound. For that reason, when the time comes I shall offer a motion to recommit the bill. I am serving that notice now.

Mr. Chairman, I am opposed to the bill, H.R. 12580, which is known as the social security amendments of 1960.

I recognize that this legislation makes meritorious improvements in our social security structure. However, these improvements are to an underlying system which in my judgment is unsound actuarially and inequitable in the discriminatory and arbitrary way it makes benefits available.

The unsoundness of the program is briefly alluded to in the separate views filed by my colleague the gentleman from California [Mr. UTT] and the gentleman from Texas [Mr. ALGER] and myself, set forth on page 334 of the committee report. In these separate views we point out how, based on a maximum contribution of approximately $2,000, a benefit claim in excess of $30,000 results. We point out how a person who has paid as little as $36 into the Trust Fund may have a benefit claim in excess of $8,000.

Someone is going to have to pay taxes to make up these deficiencies between the tax contributions and benefit payments. It is no secret where this money will come from. It will inevitably come in large measure from the young people in their twenties and thirties who are relatively new additions to America's working force; it will come from the pay-roll taxes imposed on generations not yet born.

In our separate views we cite the fact that the existing unfunded obligations of the OASDI System are approximately $300 billion. We have a trust fund of $21 billion, and yet the present value of *future* benefit obligations owed to existing beneficiaries is $85 billion; notice that this $85 billion figure is attributable to the present beneficiaries and assumes the entrance of no new beneficiaries as they reach retirement age or achieve survivorship status. Assuming that we were to use the trust fund only to pay off the future benefit obligations owed to current beneficiaries, it would still be necessary for the present working population to pay additional pay-roll taxes in the neighborhood of $60 billion just to defray the benefit obligations owed to current beneficiaries and this payment of $60 billion would not be qualifying the payors for protection under the system.

Mr. Chairman, that is the essence of the unsoundness of the system. These are the facts that make it urgently necessary that the Congress immediately address itself to the undertaking of putting the OASDI program on a sound basis that justifies the expectations of our people that the Social Security System does in fact provide a semblance of real security and not just political security.

The discrimination and arbitrary features of the program arise from the fact that some of our citizens with only token payments into the trust fund qualify for benefit claims whereas others who have paid more into the trust fund are denied benefit eligibility. Some of our present beneficiaries achieved eligibility status by paying as little as $6 into the trust fund whereas others who have contributed considerably more are told they cannot receive benefits. I submit that the inflation of the last 30 years has struck all our citizens regardless of whether or not they worked or are working in an occupation covered by social security. This inflation has deprived the savings of all our citizens of purchasing power regardless of whether or not the savers were covered by social security. We have established in the social security program a sham and fiction which prescribe fallacious criteria to determine whether or not a person is to be privileged to receive social security benefits.

Mr. Chairman, these are the major shortcomings of the presently conceived OASDI program. It is actuarially unsound. It is discriminatory in providing benefits to our aged citizens. A program that is improperly conceived cannot be made stronger and cannot be made more adequate by more of the same. It is because I am opposed to the lack of actuarial soundness and because I reject the philosophy that some of our citizens are second class Americans who can be denied Social Security benefits while they are given to others, and I am opposed to this bill. I favor an adequately financed program that is soundly conceived and fairly available to our citizens.

My criticism of the OASDI program is not to say that there is no merit in some of the provisions of the bill that is before us today. Merit is found, for example, in the provision that would remove the age 50 eligibility requirement for disability benefits. It cannot be doubted the young man of 30 who becomes totally disabled needs the protection of the social security system at least as much as a man who has passed his 50th birthday when misfortune strikes him in the form of total disability. Therefore, the provision of the bill that removes this age 50 requirement is a desirable change. The bill also would extend benefit eligibility to survivors of workers who died prior to 1940; the bill would increase children's benefits—both of these are desirable changes in the law.

The unemployment compensation program of the Social Security Act would be strengthened by improving the administrative and financing features of this important protection against unavoidable periods of unemployment.

Mr. Chairman, H.R. 12580 would establish a new title 16 in the Social Security Act. The purpose of this title 16 is to institute statutory authority for the Federal Government to join with the States in the creation of a new program on a Federal-State matching basis to provide medical care for our aged citizens who may need governmental assistance in meeting their medical expenses. My beloved colleague and distinguished chairman, the gentleman from Arkansas [Mr. MILLS], has ably described the features of this new program. I will not take the time of the membership of the House to reiterate the details of the program. Instead, I would comment in this way—during the 3 months that the Committee on Ways and Means has devoted to the consideration of social security legislation in executive session we considered a wide range of legislative proposals dealing with the problem of providing medical care within the framework of the Social Security Act. The program that is contained in the committee bill is superior, in my judgment, to any of the other proposals presented to the committee. The program proposed in the bill would provide a broad scope of benefits so that the physician could prescribe the most efficient and economical medical treatment for his patient without being arbitrarily restricted to prescribing hospitalization, surgery, or nursing home care. This broad scope of benefits will enable our great medical profession to concentrate its endeavors to the prevention of serious illness rather than the cure of such illness once it has set in. The medical program contained in the bill will interfere less with existing methods and means of health care within the framework of free enterprise procedures than is true of any of the other proposals before our committee.

Another superior feature of the medical care proposal in the bill is found in the fact that the program will be State and locally administered and would as a result lessen the danger of further Federal bureaucratic encroachment. Mr. Chairman, I happen to believe in States' rights in fact as well as in words. I am convinced that our local community governing bodies and our State governments can more effectively meet the needs and desires of our citizens than can the Federal Government in regard to social legislation. For these reasons, briefly stated, I assert with sincerity and conviction that the medical care program contained in H.R. 12580 is better than the other proposals offered to the committee on the subject of medical care.

In somewhat commending this medical care program to my colleagues I must

in candor state that I did not in committee advocate its inclusion in this bill. My reasons for withholding approval are set forth in the separate views beginning on page 332 of the committee report. I will not restate those views at this time except to say that more adequate and more sufficient information should have been developed to determine the character and extent of need for a Government program before we undertook to recommend to the House the adoption of such a program. It is only in this way that a proper legislative remedy can be developed. We do not have that information before us at this time. As a consequence I fear that the decision to be reached will be a political decision rather than a decision as to what is best for the American people. A social program once undertaken tends never to be reversed. This program will cost in the neighborhood of $350 million annually of Federal and State revenues, but we must remember that when we talk about spending, we are not spending the dollars of Federal and States Governments. Instead, we are spending the dollars of our taxpayers. Government can give nothing to the people that it has not first taken from them, and we have in this legislative body a responsibility to spend only that which is well spent for a program that is urgently needed.

Mr. Chairman, in expressing these thoughts I realize that I expose myself to the charge by the demagogs that I am unmindful of the needs of our senior citizens. The truth of the matter is that I am genuinely interested in the problems of our aged, just as I am genuinely interested in the opportunities of our youth and in the needs and requirements of all our citizens. It is my view that the American people look to us for leadership in providing soundly conceived legislative programs dealing with the national issues confronting our polity. We can responsibly discharge this obligation to the American people only by courageous recognition of the facts and by a motivation that is not solely politically inspired. In this period of trial and challenge, we must disdain the expedient and cherish the principles that are basic to responsible government. I submit, Mr. Speaker, that if we ignore the need to strengthen our social security system we will not be fulfilling that obligation.

Mr. Chairman, I yield 15 minutes to the gentleman from Missouri [Mr. CURTIS].

Mr. CURTIS of Missouri. Mr. Chairman, before I begin discussing the bill I want to pay my personal respects and tribute to the gentleman from Rhode Island [Mr. FORAND]. He is a real student. He is a pleasant person to deal with. He and I have had many disagreements, but it has always been, I thought, on a high plane. I think the Congress will continue to need men like AIME FORAND, and I am very sorry to learn that he will not be with us, because he has been a real contributor in the cause of good legislation.

Mr. Chairman, I was disappointed in the committee report, because I do not believe that it has presented the work that the Committee on Ways and Means has done in this area in the full context that it should have been presented. And, one reason we have this out of balance is because so much emphasis, political emphasis, outside the Congress has been devoted to one aspect of the bill that is before us today on social security amendments of 1960.

One has to read the report quite carefully to understand that there was a subcommittee and is a subcommittee on social security of the Committee on Ways and Means, and that this subcommittee did quite extensive work last fall and presented a report to the full committee on March 9, 1960, which was a unanimous report based on the studies, and everything in this bill, with some exceptions, of course—some new things were developed, but essentially this bill, except for this very disputable item in regard to health care, were the recommendations, the unanimous recommendations, of the subcommittee on which I have the honor of being the ranking minority member. The tragedy is, in my judgment, the legislative situation is such that we are endangering a very fine piece of work on the part of the Committee on Ways and Means and its subcommittee by including in it this controversial—and an honest controversy—this controversial subject in regard to health care. But, I think the House should know that everything except the subject of health care has received the kind of study that I feel it should receive before we report a matter to the House for your consideration.

Mr. Chairman, I must take particular exception to the committee report on page 6 under III, "General Discussion of Medical Care Provisions." The statement is this:

> Your committee has given careful consideration to the subject of medical care for the aged. This has included not only public hearings on certain health care proposals which have been advanced, but also study and consideration in executive session of a great deal of information which has been brought to the attention of the committee.

I do not believe that it is a fair or accurate statement to say that this committee gave careful consideration to the subject of medical care for the aged. Indeed, our subcommittee was specifically—I would not say instructed, but it was the understanding, at any rate, that our subcommittee would not go into this subject of health care for the aged.

And the reason was a very clear one. This House passed—and I want to remind the House that it did pass almost unanimously—the Fogarty resolution which created the White House Conference on the Problems of the Aged. I want to refer if I may, for the sake of the RECORD and anyone interested in the Fogarty bill, H.R. 9822, to the debate that was held on July 29, 1958, and which will be found in the CONGRESSIONAL RECORD, volume 104, part 12, pages 15476–15481; and particularly to the statements of the gentleman from Rhode Island [Mr. FOGARTY], as to why this subject needed study and why we had to bring before us—I should not say "us"; not necessarily the Congress, because in this instance it was the executive department—but before the Federal Government the information that we needed. Mr. FOGARTY said:

> It is my thought that these recommendations from all of the States should be brought together in a national conference on aging and molded into a total program for the guidance of the Federal Government, State governments, local communities, and the hundreds of national and local voluntary associations and agencies which are involved in this matter of aging.

Then Mr. FOGARTY went on to make this very significant point, and a point that needs to be thought about and in my judgment has not been thought about properly. Do we have a health program in our society today? And, of course, the answer is yes. We have the greatest health program that any society has ever had in history, and the results show it. Mr. FOGARTY said:

> I do not wish to suggest, Mr. Speaker, that we have ignored the needs of our older citizens. We have created a system of social security and have extended its benefits to cover nearly 10 million of those who are now retired and to apply to 90 percent of those who are currently employed. We have provided steadily increasing sums for research on aging and on the chronic diseases which afflict the majority of our older citizens. We are supporting programs for the discovery and control of cancer, heart disease, tuberculosis, diabetes, and other diseases common to this age group. We are assisting the States and communities in building hospitals, health centers, and geriatric treatment and rehabilitation facilities. We have provided funds to enable the States to purchase medical care for those who are receiving public assistance. We are helping to provide special counseling for older workers in public employment offices and we have recently increased the amount of assistance to organizations and communities which are providing special housing for the elderly.

In just the last session of Congress in August, we took another big, affirmative step forward in implementing this program by extending the FHA-type of guarantee to private nursing homes, which is one of the great needs in this area. So the question is not, as so many people outside of the well of the House have been putting it, whether we are going to do nothing, or cast out the aged; indeed that is not the question. The question is, How can be improve what we are doing, how can we make it better? And indeed, Where can we move in and do things that we are not now doing?

But this approach through ignorance, this approach through lack of study, I suggest to you, and I think you will all agree, is the very thing that can damage what we have today.

I wish the debates on the Fogarty resolution that became law were read; and when we get back into the House, Mr. Chairman, I am going to ask permission to put in at this point of my remarks, a fact sheet prepared by the Department of Health, Education, and Welfare on the law, on the act of Congress that created the White House Conference on Aging, and reports the progress that has been made to date. Also, a special report of the White House Conference on Aging dated March 24, 1960, which gives further information on this subject.

FACT SHEET—WHITE HOUSE CONFERENCE ON AGING

THE LAW

By act of Congress, the first White House Conference on Aging was authorized, and President Eisenhower signed the measure into public law September 2, 1958. The act specifies that the Conference will be held in Washington, D.C., in January 1961.

DIRECTION

Under the direction of Health, Education, and Welfare Secretary Arthur S. Flemming, the HEW Special Staff on Aging is laying the foundation for the Conference in cooperation with the Federal Council on Aging, which is composed of Cabinet-level representatives of interested Federal departments and agencies, and local and State government agencies and private groups and organizations interested in the field of aging.

Secretary Flemming has announced the appointment of an Advisory Committee to the White House Conference on Aging. This Committee, which is representative of a wide variety of interested groups concerned with aging, will have overall direction of the planning, preparations and conduct of the White House Conference.

Former Congressman Robert W. Kean, of New Jersey, has accepted chairmanship of the National Advisory Committee.

The Advisory Committee has recommended that the White House Conference on Aging be held January 9 through 13 at Washington, D.C. The Committee also recommended that the number of delegates to the Conference be fixed at 2,800, with 2 out of ever 3 delegates selected being nonprofessionals in the field of aging to insure that the Conference will be a true national citizen's forum.

PLANNING

Congress has authorized and appropriated funds to provide grants from $5,000 to $15,000 to the States to help them finance the collection of facts about aging, conduct State and local conferences and develop recommendations and reports for discussion at the 1961 Conference. States will qualify for grants on submission of a plan for participation in the 1961 Conference.

The White House Conference will be preceded by a series of forums, meetings and conferences at local, State, and territorial levels. These State and local activities are expected to stimulate interest and considerable action and program development prior to the 1961 Conference in Washington, D.C.

RECOMMENDATIONS

The White House Conference on Aging will make recommendations for a course of positive action in dealing with the problem of aging. The congressional act requires the submission of a final report containing recommended action to the President no later than 90 days following the conclusion of the Conference.

OBJECTIVES

In authorizing the White House Conference on Aging, Congress declared "that the Federal Government shall work jointly with the States and their citizens to develop recommendations and plans for action which will serve the purposes of:

"1. Assuring middle-aged and older persons equal opportunity with others to engage in gainful employment which they are capable of performing, thereby gaining for our economy the benefits of their skills, experience and productive capacities; and

"2. Enabling retired persons to enjoy income sufficient for health and for participation in family and community life as self-respecting citizens; and

"3. Providing housing suited to the needs of older persons and at prices they can afford to pay; and

"4. Assisting middle-aged and older persons to make preparation, develop skills and interests, and find social contacts which will make the gift of added years of life a period of reward and satisfaction and avoid unnecessary social costs of premature deterioration and disability; and

"5. Stepping up research designed to relieve old age of its burden of sickness, mental breakdown and social ostracism."

NUMBERS INVOLVED

Between 1900 and 1950, the number of those aged 45 to 64 in the United States roughly tripled to 31 million and those aged 65 and over quadrupled to 12 million. Present estimates are that today there are 15 million Americans 65 years and older and that by 1975 this figure will climb to more than 20 million. Those aged 45 and older will be affected directly by the White House Conference since their employment, health, housing, and retirement problems will be given consideration. Also, the findings and recommendations of the Conference will have an impact on younger Americans since they inevitably share in the responsibility, directly or indirectly, of supporting the programs designed to add purpose and usefulness to the lives of senior citizens. They, too, eventually will grow older and benefit from programs recommended as the result of the White House Conference.

PREPARATION

A National Leadership Training Institute for the White House Conference on Aging, sponsored by the Special Staff on Aging of the Department of Health, Education, and Welfare, to help States, communities and national organizations in their planning for and in advance of the 1961 Conference, was held in June at the University of Michigan at Ann Arbor, Mich. At this institute, a guide for State surveys on aging and a preliminary handbook of national organizations were presented for use in the plans and preparations at community and State levels for the White House Conference on Aging.

(NOTE.—As plans for the White House Conference develop and progress, additional information will be made available by the White House Conference staff and the Special Staff on Aging of the Department of Health, Education, and Welfare. William C. Fitch is director of both staffs, room 4361, HEW Building, Washington, D.C.)

WHITE HOUSE CONFERENCE ON AGING, JANUARY 9–12, 1961—"AGING WITH A FUTURE—EVERY CITIZEN'S CONCERN"

STATE ACTIVITIES

Fifty-three States and territories are now actively participating in White House Conference on Aging preparations. Fifty-two have received Federal grants for Conference work.

Indiana has developed a statewide program for aging without requesting Federal funds. Guam has decided not to participate.

Governors have shown a great deal of personal interest, and all have appointed councils, committees, or commissions on aging. One official Governor's designee in each State is responsible for White House Conference on Aging action.

Many local and statewide surveys and fact-finding projects are underway. Forty-four States have already held local forums. Periodic newsletters on aging have been developed and are being published in the States.

Fifty States and territories have scheduled dates for State conferences on aging. Most will be held during the summer.

State factfinding reports on aging (for submission to the White House Conference on Aging) are due in Washington June 30; State recommendations, following State conferences, are due October 5.

NATIONAL ADVISORY COMMITTEE

One hundred and fifty men and women from all of the United States have been appointed to a bipartisan advisory group, under Chairman Robert W. Kean. They met June 9–10, 1959, in Washington; next scheduled meeting is May 12–13.

National Advisory Committee is organized into 20 planning committees responsible for 20 different conference subject matter areas (see attached list).

Planning committee chairmen met July 30 in Washington; next scheduled meeting is April 13.

Technical directors, assigned to each planning committee, provide professional staff service.

Ninety consultants, selected from outstanding experts are providing special professional assistance to planning committees.

Each planning committee has prepared a background paper on its particular subject to provide helpful information for the State conferences. (Two papers have been combined, reducing total to 19.)

Summaries and outlines of background papers have been distributed through regional representatives for aging in the nine regional offices of the Department of Health, Education, and Welfare to all Governor's designees.

Individual National Advisory Committee members are actively participating in program planning.

NATIONAL VOLUNTARY ORGANIZATIONS

A "Handbook of National Organizations" has been compiled and published listing all national organizations having identification with this area of interest.

These organizations have been queried about Conference participation and their wish for delegate representation.

Monthly newsbulletin Aging has been made available to participating organizations. They have been asked to contribute news material for Aging's nationwide readers.

Several have held national or regional conferences devoted exclusively to aging. Through their local affiliates many are taking active part in State and community fact-finding projects.

Representatives of major national organizations serve as members of the National Advisory Committee.

Some have held special White House Conference on Aging forums with congressional and Department of Health, Education, and Welfare speakers. Many are using house organs and other media to outline to their membership White House Conference on Aging plans and preparations.

FEDERAL COUNCIL ON AGING

President Eisenhower, in establishing this interagency group at Cabinet level on March 7, 1959, directed members to "cooperate and assist the Secretary of Health, Education, and Welfare, as may be appropriate, in planning and coordinating the White House Conference on Aging."

Members are the Secretaries of Agriculture, Commerce, Labor, Treasury, and Administrators of the Housing and Home Finance Agency and of Veterans Affairs. Secretary of Health, Education, and Welfare, Arthur S. Flemming, is chairman.

Council has prepared and published a special report to the President, "Programs—Resources for Older People," reviewing and analyzing all Federal activities in the field of aging.

Liaison officials in 12 departments and agencies have been designated to work with the Special Staff on Aging.

Regional and field representatives of council members have been helping actively in State and local planning. They are available as resource people for further program planning.

DELEGATES AND CONFERENCE PROGRAM ARRANGEMENTS

Total is 2,800 delegates, of which 1,740 have been apportioned to States and territories.

Governors will name State delegates. State quota is determined according to number of congressional districts.

National organizations with well established programs in the field of aging will be represented by 660 delegates.

Additional 400 delegates will include National Advisory Committee consultants, and others.

After February 15 meeting of National Advisory Committee's Special Subcommittee, the tentative structure for the White House Conference on Aging was developed.

Three plenary sessions to be held at Constitution Hall, one with active participation by older people.

Conference headquarters at Statler-Hilton Hotel. Two thousand hotel rooms have been reserved throughout the city.

Each subject matter planning committee will plan individual group meetings. Section meetings are to be informative and specifically to provide for decisionmaking.

Workshop and exchange meetings are also planned, to discuss topics and proposals for recommendations and to consider matters of common interest to several planning committees.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, SPECIAL STAFF ON AGING

Mr. Robert H. Grant is the Director of the Special Staff on Aging.

Dr. James Watt, Director of the National Heart Institute, is Special Assistant to Secretary Flemming for Aging.

Regional representatives have been appointed in each of Department of Health, Education, and Welfare's regional offices (see attached list).

Publications available from or through regional offices include: Flyer on the White House Conference on Aging, Selected References on Aging, an Annotated Bibliography, White House Conference of Aging Act (Public Law 85-908), Motion Pictures—Recordings on Aging, Enriching the Added Years (16-page folder), Handbook of National Organizations, Guide for State Surveys on Aging, Aiding Older People, and Aging (monthly).

PLANNING COMMITTEES AND COMMITTEE CHAIRMEN

1. Population Trends and Social and Economic Implications—Mr. John B. Martin, Jr.
2. Income Maintenance (including medical care costs)—Dean Charles I. Schottland.
3. Impact of Inflation on Retired Citizens—Mr. G. Warfield Hobbs.
4. Employment Security and Retirement—Mr. Dwight S. Sargent.
5. Health and Medical Care (including institutional)—Dr. Leonard W. Larson.
6. Rehabilitation—Dr. Howard A. Rusk.
7. Social Services—Mr. Joseph P. Anderson.
8. Housing (including congregate living)—Mr. Walter C. Nelson.
9. Education—Dr. George E. Davis.
10. Roles and Training of Professional Personnel—Dr. Wilma Donahue.
11. Family Life, Family Relationships, and Friends—Mrs. Margaret A. Ireland.
12. Free Time Activities: Recreation, Voluntary Services, Citizen Participation—Mr. Joseph Prendergast.
13. Religion—Very Rev. Msgr. R. J. Gallagher, Rabbi Marc H. Tanenbaum, the Reverend William J. Villaume.
14. Research in Gerontology: Biological [1]—Dr. Hardin B. Jones.
15. Research in Gerontology: Medical [1]—Dr. Ewald W. Busse.
16. Research in Gerontology: Social Science and Psychological—Dr. John E. Anderson.
17. Local Community Organization—Mr. Robert H. MacRae.
18. State Organization—Mr. Bernard Crihfield.
19. National Voluntary Services and Service Organizations—Mrs. Charles Hymes.
20. Federal Organizations and Programs—Mr. Harry G. Haskell, Jr.

Regional representatives for aging, Department of Health, Education, and Welfare

Name	Region	States	Regional office
James C. Hunt	I	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.	120 Boylston St., Boston, Mass.; Hubbard 2-6550.
Stanley Fioresi	II	Delaware, New Jersey, New York, and Pennsylvania.	42 Broadway, New York, N.Y.; Whitehall 3-2424.
H. Burton Aycock	III	District of Columbia, Kentucky, Maryland, North Carolina, Virginia, West Virginia, Puerto Rico, and Virgin Islands.	700 East Jefferson St., Charlottesville, Va.; 3-5181.
Miss Virginia Smyth	IV	Alabama, Florida, Georgia, Mississippi, South Carolina, and Tennessee.	50 Seventh Street NE., Atlanta, Ga.; Trinity 6-3311.
Miss Verna Due	V	Illinois, Indiana, Michigan, Ohio, and Wisconsin.	433 West Van Buren St., Chicago, Ill.; Wabash 2-8550.
Miss Amelia Wahl	VI	Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.	911 Walnut St., Kansas City, Mo.; Baltimore 1-7000.
Clarence M. Lambright	VII	Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.	1114 Commerce St., Dallas, Tex., Riverside 8-5611.
Dr. William T. Van Orman	VIII	Colorado, Idaho, Montana, Utah, and Wyoming.	621 17th St., Denver, Colo.; Keystone 4-4151.
Donald T. Sutcliffe	IX	Arizona, California, Nevada, Oregon, Washington, Alaska, Hawaii, and Guam.	447 Federal Office Bldg., Civic Center, San Francisco, Calif.; Klondike 2-2350.

GOVERNORS' DESIGNEES

Alabama, Montgomery: Mr. Alvin T. Prestwood, 64 North Union Street.

Alaska, Juneau: Mr. Paul L. Winsor, Commissioner of Health and Welfare.

Arizona, Tucson: Mrs. Donald E. Schell, Route 6, Box 317-W.

Arkansas, Little Rock: Mr. Gus Blass II, Office of the Governor.

California, Sacramento: Mr. Louis Kuplan, 722 Capitol Avenue.

Colorado, Denver: Hon. Robert L. Knous, Lieutenant Governor of Colorado.

Connecticut, Storrs: Dr. Donald P. Kent, University of Connecticut.

Delaware, Smyrna: Dr. C. J. Prickett, Care of State Welfare Home.

District of Columbia: Dr. Jack Kleh, Briggs Montgomery Building.

Florida, Tallahassee: Mr. B. R. Fuller, Jr., Florida Development Commission.

Georgia, Atlanta: Dr. John T. Mauldin, Georgia Baptist Professional Building.

Hawaii, Honolulu: Dr. Richard K. C. Lee, Box 3378.

Idaho, Boise: Mr. Bill Child, Department of Public Assistance.

Illinois, Chicago: Mr. Peter W. Cahill, 160 North La Salle Street.

Indiana, Lafayette: Dr. George E. Davis, 109 Memorial Center, Purdue.

Iowa, Des Moines: Hon. Herschel C. Loveless, Governor of Iowa.

Kansas, Topeka: Mr. Harold Smith, Kansas Department of Labor.

Kentucky, Frankfort: Mr. Jo M. Ferguson, Department of Economic Security.

Louisiana, Baton Rouge: Mr. J. W. Bateman, Post Office Box 4282, Capitol Station.

Maine, Augusta: Mr. Robert C. Russ, Treasurer, State of Maine.

Maryland, Baltimore: Mr. Gerald Monsman, 408 State Office Building.

Massachusetts, Boston: Mr. George P. Davis, room 27, State House.

Michigan, Detroit: Mr. James E. Brophy, 850 National Bank Building.

Minnesota, St. Paul, Mr. Morris Hursh, 117 University Avenue.

Mississippi, Jackson: Mr. Travis McCharen, Box 1698.

Missouri, St. Louis: Mr. Emil E. Brill, Box 396, Main Post Office.

Montana, Helena: Mr. R. B. Richardson, Western Life Insurance Co.

Nebraska, Lincoln: Mr. Frank M. Woods, Box 161 State House Station.

Nevada, Reno: Mrs. Barbara C. Coughlin, Box 1331.

New Hampshire, Concord: Mrs. Dexter O. Arnold, 6 Dearborn Road.

New Jersey, Trenton: Mrs. Eone Harger, in care of Department of State.

New Mexico, Santa Fe: Mr. Murray A. Hintz, Box 1391.

New York, Albany: Mrs. Marcelle G. Levy, in care of State Department Social Welfare.

North Carolina, Raleigh: Dr. Ellen Winston, in care of State Board Public Welfare.

North Dakota, Bismarck: Mr. Carlyle D. Onsrud, North Dakota Public Welfare Board.

Ohio, Columbus: Mrs. Mary Gorman, 85 South Washington Avenue.

Oklahoma, Norman: Dr. George L. Cross, University of Oklahoma.

Oregon, Eugene: The Rev. W. G. Nicholson, Box 5197.

Pennsylvania, Harrisburg: Mrs. Ruth G. Horting, Secretary of Public Welfare.

Puerto Rico, San Juan: Dr. Guillermo Arbona, Secretary of Health.

Rhode Island, Providence: Mrs. Roberta B. Brown, Roger Williams Building, Room A.

South Carolina, Columbia: Mrs. Martha T. Fitzgerald, South Carolina Legislature Committee on Aging.

South Dakota, Pierre: Mr. Charles Feeney, State Director of OASI.

Tennessee, Nashville: Mr. Edward J. Boling, State Capitol.

Texas, Austin: Mr. Jesse M. Irwin, Sr., Governor's Office.

Utah, Salt Lake City: Mr. Delbert L. Stapley, Office of the Governor.

Vermont, Montpelier: Mr. John J. Wackerman, Commissioner of Social Welfare.

Virginia, Richmond: Mr. John E. Raine, 511 Virginia Building.

Virgin Islands, Charlotte Amalie: Mr. Macon Berryman, Department of Social Welfare.

Washington, Olympia: Mr. George C. Starlund, State Department of Public Assistance.

West Virginia, Charleston: Mr. F. Duane Hill, Department of Employment Security.

Wisconsin, Madison: Miss S. Janice Kee, 217 North, State Capitol.

Wyoming, Cheyenne: Dr. John W. Sampson, State Office Building.

[1] Background Papers No. 14 and No. 15 have been combined.

Mr. CURTIS of Missouri. That Conference is going to meet in January. But already a great deal of work has been done. Our subcommittee did nothing in this area. We made no studies. The extent to what the full committee did was to hold rather limited, in fact, quite limited, hearings on one particular bill which was the bill the gentleman from Rhode Island [Mr. FORAND] introduced, popularly known as the Forand bill.

There were some limited public hearings held on that subject, but all the work that was done in the committee in the past 3 months when the rest of the House was reading the press reports and probably talking to some of us on the committee about "What are you doing in this area of health care?" there was no new information being brought in. Constantly I asked the committee time after time when we would reach a point where it was obvious that we did not have information on this subject, "For heaven's sake, let us get the people in here who know something about this." We did not call one State administrator before us in all these 3 months of talking to each other, and that is about what we were doing. Let me quote from the supplemental views of MASON, CURTIS, UTT, ALGER, and LAFORE appearing on page 332 of the report:

> We respectfully submit that in our judgment the House membership cannot act in an informed manner on the legislation because the Committee on Ways and Means has not developed sufficient information pertaining to the nature of the need for Government health care, the effectiveness of present day programs in meeting that need, and the ability of the proposed program to fulfill its intended purpose. This information cannot be available in the absence of comprehensive public hearings in which testimony from informed individuals would be received. The emphasis in such hearings should be directed to the development of information from State and local health and welfare administrators, religious and social welfare leaders, and authorities from the professions dealing with the sociomedical problems of the aged. We regret that such hearings have not been held and the legislation recommended by the majority cannot be evaluated as a result.

We were "examining" a minutiae of information you could say with some accuracy. As the committee report states on page 6, we were doing a lot of examining or considering in this sense, if that is consideration in executive session, but we were limited to the very limited information we had. We did not even gather together much of the information that was readily available, which I tried when I saw the way the course of events was going in the Committee on Ways and Means to bring to the attention of the House.

I made a series of speeches on the floor of the House to point out some of the problems in this area and some of the information that we did have but were not considering and where we needed further information. On March 22, 1960, I placed a speech that I made before the American Academy of General Practice Physicians in the RECORD on page 6320. On March 24, 1960, I took an hour to discuss the problem of medical and health care for the aged. That is on pages 6537–6541. On March 26, 1960, medical and health care for the aged, an insertion on this subject April 20, 1960, page 8454, medical and hospital care for the aged. Then on May 2, 1960, I took the floor again for an hour's speech on lobbying and reporting, because I felt that the reporting by the media of this country on this subject was really so bad that I just wondered that someone within the reporting profession itself has not done something to correct this situation. That is on pages 9144–9146. And on May 11, 1960, "Medical Care for the Aged," pages 10095–10096. On May 12, 1960, "Present Federal Old Age Medical Program," page 10219. On May 26, 1960, "The Voluntary Approach to Health Insurance," pages 11313–11322.

There are two particular documents that were available to our committee if we had wanted to get facts instead of just getting ourselves into a political position. I say that applying to people on both sides of the aisle, people who felt this was going to be a campaign issue this fall, and it probably will. These 3 months were almost a matter of jockeying back and forth, it seemed to me, as to which side, the Republicans or Democrats, might get some advantage from the voters on how they handled this problem.

The point I tried to make then and am trying to make now is that this is not a matter to be thrown into partisan politics at this point. It is entirely possible that the two political parties should take sides on an important issue like this if there is a fundamental disagreement, but let us get the information before us, at least before our committee, the committee of the House which is responsible to this membership, so that the debate will be on firm ground.

One of the documents, "Voluntary Health Insurance in the United States," prepared under the direction of the American Enterprise Association by Rita R. Campbell and W. Glenn Campbell, who had been, and I think it is Mrs. Campbell, a staff member of one of our first social security subcommittees back in 1953, is an excellent document and is a matter that, in my judgment, we well might have held hearings on simply to find out how accurate was the information in it. I think it is quite accurate, but no student no matter how sincere or objective can have all the answers. So this, in my judgment, was a subject for committee examination and discussion. This was not even before us. Incidentally, I placed this in the CONGRESSIONAL RECORD because I thought it was that important, for the benefit not only of Members of the House but of the other body and to people throughout the country who might be interested in this important subject.

Then a very fundamental document which was not even referred to in the 3 months that we were discussing or so-called considering this matter—"Source Book of Health Insurance Data of 1959." This gives the data of what is being done in this area.

The most significant document we have available to us just came out in the past 3 or 4 weeks but was still available to us while we were in executive session process is this background paper on health and medical care prepared by the White House Conference on Aging. The date is April 1960, but, as I say, it was not available until about 3 or 4 weeks ago. But this is a very fundamental document discussing the very problem that we are supposed to be discussing, on this subject of health care for the aged.

My position on this, I wish to advise the House, is that I do not think there should be anything in this bill—there should be no title 16 on this subject of health care for the aged because we are not in a position in the Committee on Ways and Means—the Committee on Ways and Means is not in a position to advise the House with any intelligence as to what would be really good in this area. I happen to think the proposal in this bill that is before us is ill-considered in the true sense of the phrase mainly because we do not have the information. It may be the right answer—I do not know. I do know this, though, that at least it does not do violence to the fundamental system we presently have. I, frankly, think it is inconsequential. I doubt very much that many States will avail themselves of it, and if there were any way of eliminating this from the bill, I would seek to do so. But, on balance, and this is what all of us are faced with from time to time—on balance it is my recommendation that this bill be voted up, and I am going to vote for it because I believe that. Although this one aspect of health care for the aged should not be in here, it essentially follows the format of our present OAA program, that is, the old-age assistance program and is beefing it up in that area. Actually, the real studies of this subject will show that that is the area we probably need the least help in. What we need the most help in in this problem of the aged is facilities, and then, secondly, we need techniques for those who are not indigent but who might become indigent if faced with catastrophic illness. And by techniques I am referring to forms of insurance. In that sense, the Forand bill is hitting the area where we need to do something. But, the Forand bill is unfortunately a backward step, if you follow this reasoning—and this is an argument, I think, the gentleman from Rhode Island has not perceived. When we switched to the OASI, the insurance program, from old age assistance, it was done largely on this philosophy and, in my judgment, a good philosophy that we do not want to have to budget the old people. We do not want to go in and tell them how much for rent and how much for recreation and how much for clothing and how many times a week they can go to the movies. We went on the theory of giving them cash and not getting into their budget problems. We wanted them to have the dignity of making up their own budgets. The Forand bill is a backward step. It reverses that process. It says, "We are going to give you cash for everything except to meet your health problems, and there we are going to budget you and we are going to see to it that this is what is spent here."

To do this, the Forand bill provides that the Federal Government will enter into contracts with doctors, hospitals, and other purveyors of health services to set fees and schedules. Herein lies the denial to the individual to select his own doctor and hospital, in spite of the language in the Forand bill which states the individual's choice shall be preserved, because if one's doctor or hospital does not reach an agreement with the Federal Government on fees and sched-

ules their services may not be retained. Furthermore, if the pressures upon the doctors and hospitals to reach agreements with the Federal Government are so strong that the individual's choice is preserved, then we have federally regimented health service professions.

The many other detailed objections to the Forand bill have been set out in my previous speeches on the floor of the House. Let me point up two major objections. The Forand bill leaves out all the older people not on OASDI, many of whom are those facing the greatest problems in the health care field. These are people who were born too soon to be employed in covered employment as the social security coverage developed, teachers, farmers, selfemployed and their widows, and so forth. Nor can a distinction be made between them and the people who would immediately receive benefits under the Forand bill on the grounds that those left out paid nothing for the benefits. Those receiving the new benefits would pay nothing for them. Indeed, if a distinction were to be pointed out it would be this, the present OASDI beneficiaries scheduled for more benefits have been receiving almost $100 for every $1 they as a group and their employers paid in social security taxes.

Second, many of the higher income bracket older people, and there are many in this category who are not faced with problems in this area, are OASDI beneficiaries and would be recipients of a pure windfall.

Furthermore, I would point out that the need expressed by a sizable percentage of the older people in the way of social security liberalization lies in the work clause limitation of $1,200 a year. These people say, we are able to work longer, yet we are forced out of the labor market because of this limitation. If we could earn more, they reason, they could make a go of things. Liberalizing the work limitation clause certainly is in accord with increased health care for the aged for many basic reasons. Yet, strangely, it is the Forand proponents, the COPE of the AFL–CIO, which for years has fought this socially progressive liberalization.

If the older people need the additional money in this area of health care, let us figure out what that cash increase should be and give it to them; not use their problems as an entering wedge to federally regulate the dynamic health professions or, worse still, remove the socially desirable privilege of personal choice of one's own physician or hospital. But I suggest it is not essentially that; that is not the problem of income as much as it is the lack of facilities, nursing homes, home care facilities, and such things which enable the health dollar to buy more health. The recent reports to which I referred and the techniques we are now developing may reveal something further that the Federal Government might be doing in this area. I am not sure just what it might be, but my mind is certainly receptive to any constructive suggestion.

The only thing that disturbs me is that apparently we are preparing to just pass this bill and send it over to the Senate which will not study it at all; there will be no hearings. Time in the session precludes this. They may add some amendments and then it will go to conference. That is the situation that concerns me.

Mr. Chairman, that is not in the interest of the aged people. This cannot help in the problem of the aged, and I am very much disturbed at the suggestion of some that the House be a party to such a deplorable process.

GENERAL LEAVE TO EXTEND

Mr. MILLS. Mr. Chairman, I ask unanimous consent that all Members desiring to do so, may extend their remarks on the pending legislation at that point in the consideration of the bill just before the Committee rises.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. MILLS. Mr. Chairman, I yield to the gentleman from Rhode Island [Mr. FORAND] 30 minutes.

Mr. FORAND. Mr. Chairman, first of all, let me express my sincere thanks to the chairman and other Members who have been so kind and have said so many nice things about me today. When I leave this Congress it will be with mixed emotions, but I do plan on having a little statement to make to you before the end of the session; so for the moment just simply accept my thanks.

Mr. Chairman, we are taking up today a bill that is a disappointment to many, many of our colleagues. It is a disappointment to many of them, in fact to the point where many have approached me and suggested that we should vote down the rule or should vote against the bill.

My answer then was and now is that we should support this bill because it contains some improvements in the existing social security law. In fact, while they are minor improvements they mean much to perhaps a good-sized number of people.

I agree with my colleague from Missouri that the medical section of the bill should not be in it. However, it will not do any harm, but it will not do any good. For that reason I say let us vote for the bill. Personally, I think it is a sham, I think it is a mirage that we are holding up to the old folks to look at and think they are going to get something. I say that because they have to depend upon 50 State governments to enact legislation to authorize them to handle the program that is listed there. I am sure all of you know enough about legislative bodies to realize that the list of items the States could provide under the plan just would never be realized.

If any of you have ever done any welfare work you will agree with me that this is a sham.

Mr. Chairman, for many years now the question of health care for the aged has been given a lot of study and a great many words have been spoken on the subject. I might say to the gentleman from Missouri who made a statement a few moments ago that no State administrator had come before the committee, that the State administrators have been on record for a long time in favor of placing health care under the social security law. The chairman read a telegram received during the course of our deliberations from administrators supporting the proposal I advanced in my bill.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. FORAND. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. The point I was making is that a telegram means nothing in studying a very difficult subject of this nature. We needed to have those gentlemen before us so that we could interrogate them as to why they reached their conclusion, if some of them did not agree. There was considerable disagreement in this area.

Mr. FORAND. There is no question about that, but a majority of them have gone on record, and their organization is in support of the proposal I advanced.

Mr. CURTIS of Missouri. I believe that is true.

Mr. FORAND. In fact, I believe that the introduction of my bill in the 85th Congress really was the spark that lit the flames that have been burning now for quite some time. It seems to have awakened America to the great need that exists in reference to the real problem that is faced by the aged of this country. Up to the time the bill was introduced, as I said before, there was a lot of talk but very little action. Today, it seems all of us are agreed that the need exists, that some action must be taken, something must be done to relieve these aged people; yet, when we considered this subject in the committee a majority decided that either it was going too far or for some other reason they did not agree with it. In fact, the committee took practically the same position that some groups seem to be taking today. They realize the need is there, but they want to approach it by different methods to obtain the same goal. I venture to say, Mr. Chairman, that if the provisions of my bill are not enacted into law now, that next year or the year after you are bound to get it, because it is the only sound approach to this important problem.

Mr. Chairman, do not think for a moment that when I introduced that bill it was something I grabbed out of the air. Far from that. I had a group of experts working for at least 2 years trying to develop an approach to taking care of this need of the aged, and when I introduced the bill in August of 1957, from the well of this House, I made the statement that this was a base from which to work. It was introduced in the closing days of the session and, therefore, the bill was printed and made available at that time so that all interested Members, individuals, or groups would have an opportunity to study this proposal. I invited them to come in at the beginning of the next session either with alternatives or with constructive criticisms so that we could work out a decent bill and have it pass the House and become effective. Instead of that, the administration—and I say this deliberately—stalled and stalled and stalled when we asked them for assistance. It

was in 1958, about June or July, when we asked the Department of Health, Education, and Welfare to prepare a report for our committee, and we were told that it could be ready about the first of the following year when Congress was to reconvene. I kept prodding them every week or every other week, and finally in April of 1959 we got that report, and that report contains a wealth of information. If you have not read it, I beg you to read it, because you, too, will be convinced that we have got to take some action in this area.

Since that time it was possible to give some consideration to my proposal during the hearings on social security during 1958, and in July 1959 the committee granted me 5 days during which he had hearings on my health insurance bill, the Forand bill. The hearings were printed and they are available and contain, again, a wealth of information on my proposal known as the Forand bill.

Mr. Chairman, one thing I do not seem to be able to understand is how come so many Members of this Congress, and the administration from the President down, seem to prefer to take the suggestions or subject themselves to the pressure of the American Medical Association. The AMA seems to be in the saddle. The administration proposal that finally came to us after a lot of pressure was of no value; it afforded no benefits. Yet, what we have in this bill today as a medical care section is a watered-down version of a no-good bill that came from the White House. You will remember, I am sure, that the administration proposal was that people over 65 years of age could get into this new program by paying a $24 enrollment fee. Then, what benefits they would get would come only after they had paid the first $250 of their medical bills, and anything over $250 they still would have to pay 20 percent of. Then they suggested an insurance program where the Government would pay part of the premium. And, what did that amount to? The benefits were very meager. It meant practically a goose egg to the people that joined that system, but it was a bonanza for the insurance companies. The committee frowned on that. We disposed of it in very short order, although I regret to say what they have in this bill now is a watered-down version of that administration proposal.

Now, how come that some 150,000 or 200,000 members of the AMA could thwart the will of a population of 180 million or so? I just do not know. I cannot understand it, and I hope somebody can tell me how they do it. In the first place, the AMA is not representative of the medical profession as such, and I have some proof right here in this envelope. The AMA does not speak for the average doctor. I have a file of correspondence perhaps a foot high from individual doctors telling me that my bill is the proper approach; and although they are members of the AMA, the AMA is not speaking for them.

Let me cite one example of just what I mean when I say that the AMA is not representative of these doctors. The Suffolk District Medical Society of Massachusetts put out a letter to its 3,000 or so members urging them to come out to a meeting on the 9th of December last, a very important meeting, where they were to discuss the Forand bill and that a resolution was to be adopted at that time. I have that letter right here to show you how important they thought it was.

The notice was titled, "Subject: Discussion of Forand Bill—Date, December 9, 1959—Time, 4:30 p.m.—Place, 32 The Fenway, Massachusetts Medical Society Headquarters." It read:

> There will be a panel discussion of this very important legislation. The Massachusetts Medical Society has urged each district society to take action regarding this bill. It is essential that as many members as possible be present to discuss this question. At the conclusion of the meeting a resolution will be offered representing the views of the Suffolk District Medical Society. The meeting will start promptly at 4:30 p.m.
> (Signed.)

It was signed by the president and the secretary. Mr. Chairman, at that very important meeting there were exactly 28 persons present out of a membership of 3,000. There were three speakers, only one of whom had read the bill. There were two or three others in the audience who had read my bill. After their discussion the resolution was offered, to the effect that the Suffolk District Medical Society was going on record in opposition to the Forand bill. The vote was taken. It was 27 in favor and 1 against. The record shows that the AMA was notified that the Suffolk District Medical Society overwhelmingly was on record in opposition to the Forand bill. Twenty-eight members out of a membership of 3,000.

There are so many things that I would like to talk about here, but time is running so fast, I will have to skip along.

There was a great argument regarding whether or not any program for the aged should be on a voluntary or compulsory basis. Mr. Chairman, I admit that under my proposal it would be compulsory. Any tax is compulsory. But I deny that the administration plan was voluntary. The only voluntary part of it was that the individual involved was free either to take it or to leave it. But I question the constitutionality of any such proposal where I could say, "I am going to take advantage of this plan but you are going to pay the tax." That is just what it amounted to. That is how voluntary the administration proposal was.

Also, in trying to discredit my bill it was said that this would be a Government-paid bill. The newspapers, television and radio, referred to it as a Government-paid bill. I have tried to straighten them out on that a number of times. It would be administered by the Federal Government but it would be paid for by the workers and by the employers. And when I say by the employers you know that the payment is deductible as a business expense. Therefore, it would be the consumer who would be paying the bill and not the Federal Government; because not one penny under my plan would come out of the general funds of the Treasury. It would come out of the social security trust funds into which these social security taxes would go.

They talk about the cost of the plan. It was supposed to cost about $1.2 billion. I was told by the Department of HEW at the outset that that would be sufficient to meet the cost. But in later days I was told that the quarter of 1 percent tax on the employer and the employee would not be quite sufficient. I agreed that I would increase that tax to three-eighths instead of one-quarter percent because the people who will pay this tax are anxious and willing to do so, for two reasons: In the first place, they would be prepaying their own insurance so that when they reached retirement age they could get the benefit. They are willing to do that. They are willing to give up the price of a pack of cigarettes each week in order to provide for themselves at a later age. In the second place, many of those same people who would be paying this tax today have to take care of the expenses of their aged parents, who would be beneficiaries under this bill anyway.

They talked about some 4 million not being covered by my proposal. That is true. Out of 16 million my proposal would cover about 12,600,000. Of the other 4 million, I would say half of them at least are on public assistance. You could not charge them to the social security trust fund without disrupting the fund completely. You have all the military retirees and the veterans who are all getting medical attention in one form or another. Therefore, the number that would be left out is not 4 million but a few thousands.

Under this medical care plan in the bill we are considering today we are leaving it up to the States to enact legislation to take care of implementing the proposal, but I say to you that at one time in our committee when we were trying to find out how the States were handling the money we had authorized a couple of years ago as an increase in the public assistance funds for medical attention they told us there were 15 States that have not yet developed a program of medical assistance under the public assistance program. What will they do with this kind of bill?

The American Medical Association has led the fight against my bill. I want to pay tribute to the AMA for the great assistance they have given me in publicizing this bill of mine. They have done more than I ever could have done. They have spent thousands and thousands of dollars. In fact, you go to the Clerk's office today and you will find that for the first quarter of this year their lobbying expenses are higher than that of any other organization. So if they can afford to spend so much money lobbying trying to work against the welfare of the aged people in this fashion, I say to them, "Come on, loosen up, help us take care of this proposition." It was medical science that has made possible the addition of years of life for many of our aged. I say to the AMA, "Now, you have helped to give these people additional years, help us find a way to make these

years pleasant and agreeable to these old people. You have a responsibility to them."

They say my bill is socialized medicine. I wonder if they have considered just what socialized medicine is. I asked Dr. Larson, representing the AMA when they were before the committee, "Does the AMA have a definition of the term 'socialized medicine?'" After consulting with some of his colleagues he admitted they did not.

I asked him if the veterans' medical program was socialized medicine. He said it was. Was the workmen's compensation program? Yes; that is socialized also. Maybe I should have asked also, as I did one doctor that came down from New York, if he accepted fees from the Public Welfare Department. Is that socialized medicine? Is not that Federal and State funds? They accept fees not only from the welfare groups, but they also get fees from the Blue Cross and Blue Shield. The program I propose would be handled practically on the same basis. Was it socialized medicine when they accepted their schooling in the free public schools and free high schools? Is it socialized medicine when they use hospitals and the facilities of hospitals without having to pay for them? I say it is absurd.

Mr. Chairman, another thing that might be of interest is the cost of administration. When we were considering the administration proposal, we finally got down to the point of asking what would be the cost of administration of this program. Ladies and gentlemen, we were told that the administration program would cost $17 per capita per year to administer. After pressing and pressing for a comparative figure as to the cost of administering the Forand bill, I was told that the administrative costs would not be $17 per capita but $6 per capita.

One thing that is of great importance is the way that doctors have been raising money for the Republican Party. I have a letter here and on this one again I go to the State of Massachusetts, but I have several similar letters from other States, letters in the same vein. The letter is as follows:

(Curtis C. Tripp, M.D., New Bedford, Mass.; Charles C. Lund, M.D., Boston, Mass.; Archibald J. Douglas, M.D., Westfield, Mass.; David W. Wallwork, M.D., North Andover, Mass.; Lawrence R. Dame, M.D., Greenfield, Mass.; Spencer C. Flo, M.D., Greenfield, Mass.; Bancroft C. Wheeler, M.D., Worcester, Mass.)

NOVEMBER 6, 1959.

DEAR DOCTOR: The threat of socialization of medicine is more imminent today than in 1948 when Congress was considering the Wagner-Murray-Dingell bill. Congressional hearings on the Forand bill have been adjourned with no action taken; however, strong support for this legislation was indicated by many Democratic Congressmen. Labor's influence was so strong that there is every indication that medical and hospital benefits for all social security recipients will be a major issue in the 2d session of the 86th Congress and in the 1960 elections.

The Republican administration testified against this bill and all Republican members of the House Ways and Means Committee stood firm against it.

The 1960 congressional and presidential elections are crucial to medicine. We must do all in our power to see that the Democrats and the AFL–CIO do not dominate the 87th Congress. The political action arm of the AFL–CIO is well financed and is contributing millions of dollars in support of the Democratic candidates.

Doctors can and should help stem the tide toward socialism by supporting the Republican Party with dollars as well as their votes. An editorial in the July 27, 1959, AMA News stated: "One way the physician can and should support his party is through contributing to its financial support. Costs of political campaigning are far greater than even a few years ago, and the costs can no longer be met by a relatively few individuals * * * Support of the party of your choice is as much an obligation as support of the Community Fund, Red Cross or any other civic organization to which you regularly contribute."

The Massachusetts Republican Finance Committee is the official fund-raising arm of the party in this State. The income of the committee is derived solely from contributions. We urge you to support this fund.

Please fill in the contribution form enclosed, and return it immediately with your check to the Massachusetts Republican Finance Committee. An official receipt will be forwarded to you.

Sincerely,

BANCROFT C. WHEELER, M.D.

Another word regarding the cost of hospitalization. I have here an article that I cut out of the Boston Traveler where three doctors predict that by the year 1970 the cost of hospitalization will run between $65 and $70 a day. Now how can these people whom we are trying to help take care of these heavy medical expenses when it has been shown that the incomes of three-fifths of them amounts to less than $1,000 a year and it has been shown that the incomes of another one-fifth of them runs to about $2,000 a year.

Now they say that we should take care of only those who have catastrophic diseases and the question of the length of stay in hospitals has been a very prominent question. Here are the figures taken from the report of the Department of Health, Education, and Welfare. These figures show that 81.9 percent of people over 65 who are hospitalized stay in the hospital anywhere from 1 to 30 days—and no more than 30 days.

The figures show that 12.4 percent stay in hospitals from 30 to 60 days.

Three and two-tenths percent in the hospitals from 61 days to 90 days.

And only 2.5 percent remain in hospitals more than 90 days.

Those are the figures as to the number of days spent in hospitals by patients over age 65.

Another point I would like to make here is the fact that out of the 12 or 13 million aged people now receiving OASI benefits there are 1 million who receive the minimum payments of $33 a month.

Do you realize there are 700,000 OASI beneficiaries whose benefit is so low that it does not even meet their budgetary needs as figured out by the Welfare Department, and are given supplemental aid from the welfare departments of their respective communities? How can those people take care of medical expenses today?

Another thing I want to remind you of is this: It has been broadcast that the American Hospital Association is lined up with the AMA and that they are opposed to the Forand bill. I say to you that perhaps they are, because of the pressure being brought on them, but I have had any number of hospital administrators tell me: "Do not mention my name, but we want the Forand bill; we want something along that line to help us out of our dilemma."

The insurance companies have been fighting the bill. They fought the original social security law, too. And what do they sell you? Read the policies. The first part of it in large print gives you the world, but when you get down to the fine print you find there are so many exceptions that you get nothing. That is just what they are doing with the oldsters here. I have copies of policies issued by most of these companies, supposed to be decent policies to take care of these aged people. I wish I had the time to go into all the details, but I have already taken too long.

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. FORAND. I yield.

Mr. ROOSEVELT. I want to commend the gentleman from the bottom of my heart for the very courageous fight which he has made on behalf of the aged. I just wish he might be here next year to see final victory, for I am convinced final victory is coming.

Mr. FORAND. I thank the gentleman.

Mr. ROOSEVELT. Mr. Chairman, the House has been presented with a measure that would never be before us had it not been for the clamor of public opinion. There can be no question that Congress is moving in the area of health care for the aged because 16 million senior citizens of our Nation have become politically active and have demanded our help.

I do not say this in criticism. By acting, we are again proving that we are responsive to the needs of the people. This is all to the good.

Unfortunately, we are not moving in the right direction. The best that can be said is that at long last we are at least recognizing the problem. Unfortunately this is not the Forand bill.

Not once, in all the debate over the Forand bill and similar proposals, have I heard a truly valid argument against incorporating such a program into the social security system.

The opponents have cried "socialized medicine," they have insisted that health care for the aged is only a political demand of organized labor, they have argued that expenditures for health care would be inflationary. These are the same arguments that were raised against the Social Security Act in the 1930's; they were baseless then, and they are baseless today.

Providing health care for the elderly under our social-security system can—by no stretch of the imagination—be termed "socialized medicine." Nothing in this proposal would deprive any patient of the right to select the doctor of his choice. Nothing would limit or restrict the present rights of the medical

and associated professions. All that is involved is an equitable way to provide our senior citizens with the means by which they can afford the high cost of medical attention.

Nor can this issue be characterized as something sponsored only by organized labor. Leading newspapers, religious leaders, and other prominent public spokesmen have called for meaningful action in this field. The New York Times, the Washington Post and Times Herald, and numerous other nationally read newspapers have called for a health care plan based upon social security. Both the Times and the Post and Times Herald, in editorials, ridiculed charges that the Forand bill would bring compulsion and socialism. As the Post pointed out, financing the health care needs of the aged through social security "is no more likely to socialize the medical profession than Federal provision of polio vaccine for children."

The Group Health Association of America, an organization that understands health care problems, also has spoken out in favor of a program financed through the social security system. Referring to State—rather than National—programs, this association asserted that most States are in such financial difficulty that they could not make needed contributions and "most aged people would never receive any benefits."

Even an insurance company—Nationwide—has announced its support of a Federal program based upon the social security system. Some of the data released by Nationwide in support of its position merits close attention.

According to this prominent and well-respected company, at the beginning of 1960 more than half of all Americans who are 65 or older had no health insurance protection. In addition, Nationwide stated, even those with some form of coverage are inadequately protected. The company claimed that while slightly under half of the aged can pay premiums of $100 per year, that this amount "cannot cover more than a fraction of the aged medical care needs."

Other statistics revealed by the company showed: 9 percent of aged couples receiving social security benefits had medical expenses exceeding $800 annually in 1957 and 16 percent had medical expenses of more than $500; 86 percent of couples receiving social security in 1957 had none of their medical care costs met by insurance; and nearly half of the family spending units with the head of the household over 65 had total financial assets of less than $500.

These statistics indicate the immense problem faced by our senior citizens—those Americans who are supposedly enjoying their golden years.

The bill reported out by the Ways and Means Committee contains no answer to these awesome statistics. It merely shifts responsibility to the States, when Congress knows that the States are unable to provide a remedy.

The committee proposal offers no hope to America's older citizens. These citizens must now rely upon the other body if they are to get the meaningful assistance to which they are entitled. I can only hope, along with the Nation's elderly, that the other body will come forth with the necessary amendments that will provide a firm foundation for the solution of this national problem. If not, may the people this November demand that candidates for Congress make clear their intentions to support such legislation next year.

Mr. HOLTZMAN. Mr. Chairman, will the gentleman yield?

Mr. FORAND. I yield.

Mr. HOLTZMAN. The gentleman has propounded the question: How can such a small group in AMA control so many millions of people? I want to tell you that the fight against this plan was begun in the 82d Congress when HEW was created under a reorganization plan and a sop was offered at that time to the AMA by placing a doctor of wide nongovernmental experience between Mrs. Hobby and the Executive, in direct contravention to the Hoover Commission recommendation. We are reaping the results of that action today in connection with the gentleman's bill which I support and for which I commend the distinguished gentleman from Rhode Island.

Mr. FORAND. I thank the gentleman.

Mr. SANTANGELO. Mr. Chairman, will the gentleman yield?

Mr. FORAND. I yield.

Mr. SANTANGELO. I want to commend the gentleman from Rhode Island for his courageous stand on this bill. I was one of the cosponsors with him of more liberal legislation. I share his disappointment in regard to the provisions on medical care and likewise his disappointment over certain other omissions in the bill, but I want to associate myself with the gentleman's remarks and shall support the bill.

Mr. FORAND. I thank the gentleman.

Mr. HALPERN. Mr. Chairman, will the gentleman yield?

Mr. FORAND. I yield.

Mr. HALPERN. I wish to compliment the gentleman from Rhode Island on his perceptive, well-thought opinion and observations in regard to this legislation. I am pleased to associate myself with his views on the bill before us and with the health care legislation with which he is so laudably identified, and in which I joined as a sponsor.

I intend to vote for H.R. 12580, but I do deplore its shortcomings. It is at most a step forward, but unfortunately woefully inadequate in terms of the needs to be met.

I particularly regret its failure to realistically meet or provide means for alleviating serious problems facing our senior citizens. Its omissions are glaring.

Outside earnings ceilings have not been raised to allow older people to continue gainful employment without suffering loss of social security benefits which they have earned during a lifetime of labor.

Primary benefits have not been increased to a level proportionate to today's high cost of living.

Its extended coverage fails to include many categories and services that should reasonably be contained within the scope of the act.

Numerous other aspects of the program have been left unchanged despite their incongruity with the realities of today's living.

Of special significance is the absence of provisions in the bill establishing a broad program for health care for the aged under the social security system. A golden opportunity has been let slip by. The provisions of the bill establish a medical care program which, in my opinion, does not afford assistance compatible with the needs of the aged and does not reflect the human factors involved, the maintenance by our older people of their dignity and self-esteem.

The meagerness of the program suggested, its limited application to some 1 million of our aged at the outset, the "pauper's test," and the necessity for the establishment of State plans before the provisions of the bill can become operative, are factors which, in my opinion, seriously militate against its effectiveness.

As a cosponsor with the gentleman from Rhode Island of legislation to provide for the payment, through the social security system, of the costs of certain medical expenses for those eligible for social security benefits, I cannot emphasize enough how dismayed I am at the inadequacies of the suggested plan.

Mr. Chairman, only a program based on the social security system can provide broad coverage to 70 percent of our aged now, 90 percent later on, contain adequate standards commensurate with the need and with human dignity, and be financed by the working people of the country during their productive lives.

This is not to say that there are not many commendable features in the bill. The removal of the age 50 eligibility requirement for disability insurance, the liberalizing of the provisions for insured status, the extension of coverage to additional persons, and improved benefit protection for dependents and survivors of insured workers, that is, widows, wives, and children particularly, are concrete advances.

Unfortunately, the bill does not go far enough. And since we will not be able to amend H.R. 12580, I intend to accept its provisions only as a start. I shall continue to work for an adequate program that will provide realistic assistance to the greater proportion of our older citizens.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. FORAND. I yield.

Mr. COHELAN. Mr. Chairman, I congratulate the gentleman from Rhode Island [Mr. FORAND] for his comprehensive statement on the problem of medical care for the aged, and for his long-enduring efforts to bring this issue to the floor of the Congress.

I rise in support of the omnibus bill before us today, not because it is satisfactory in its present form, but because it offers the only opportunity for starting legislative action which I hope can result in enactment of an adequate medical care measure this year, specifically by means of amendment in the other body. Were amendments possible under

the rule, I would support a program whereby health benefits would be provided for the aged through the old-age, survivors, and disability insurance system. Should the other body amend this measure to provide such a program, I will support the conference report.

As it now stands, this omnibus bill, H.R. 12580, does improve medical care available to recipients of old-age assistance, but does not assist the great majority of the aged to meet their medical bills. Furthermore, it establishes virtual poverty as a requirement for eligibility, which means it cannot allay the older citizen's haunting fear that an expensive illness will come along to consume a lifetime's savings. Indeed, this plan only offers an alternative anxiety: the humiliation of declared poverty.

Still again, workers under the social security program are not given the opportunity to participate in a self-help, contributory insurance program to give them paid-up medical-care protection in retirement years. Instead, what assistance that would be provided would be paid for by the general taxpayer.

The many, many constituents who have written to me to express their support for a program of medical care for the aged have made it quite clear that they have in mind a contributory social insurance program. They are fully aware that only that kind of program will be genuinely adequate to the needs of the country's older people.

I am in full agreement with the recent editorial in the Washington Post entitled "Adequate Health Care," which urges a medical-care program that is "a facet of social security and can best be financed, in our judgment, through an enlargement of the social security tax, and goes on to say:

> It ought to be available, like the retirement benefits of social security, to all persons of retirement age as a matter of earned right and not on the humiliating basis of a proof of indigency. If such a measure is adopted by the Senate and if the House is given a chance to vote on it, there can be little doubt that it will be be passed in preference to the piddling bill fashioned by the Ways and Means Committee.

There is another section of the omnibus measure before us today with which I am equally concerned; namely, title V having to do with unemployment insurance.

Here is another area that needs strengthening and it is my hope that the other body will act favorably on an additional amendment to establish new unemployment compensation standards. I have specific reference to the kind of program proposed in H.R. 3547 and H.R. 3548 by the gentleman from Missouri [Mr. KARSTEN] and the gentleman from Michigan [Mr. MACHROWICZ], and in my own companion bill, H.R. 4064.

Title V of this omnibus measure opens up the problem of unemployment compensation, but does not then proceed to take up the matter of standards nor the matter of extension of benefits, except in certain very limited areas.

Enactment of an adequate medical care program based on contributory social insurance would make the final bill a major accomplishment. Enactment of this amendment and an additional amendment to provide much-needed unemployment compensation standards would make it a landmark twice over.

Mr. MASON. Mr. Chairman, I yield 20 minutes to the gentleman from Texas [Mr. ALGER].

Mr. ALGER. Mr. Chairman, I should like to depart from the remarks I intend to make and shall come back to them. While I shall not endeavor to make a rebuttal, I would like to dwell very briefly on the remarks just presented to us by the gentleman from Rhode Island.

However, I, too, want to pay my respects to the gentleman from Rhode Island [Mr. FORAND]. As one of the newer members of this committee I wish I knew as much about this field as does the chairman. I try to do my homework but I am bewildered by the complexity of it. I trust I can stay away from those areas where ignorance could be the reason for my viewpoint.

I wish to bring up some things that to my knowledge cannot be rebutted. Before I do so I would like to point out with regard to the statement that was just made that I am among those on the committee who voted against the Forand bill. It failed by a substantial amount, 17 to 8. I am among those who do not believe that the administration has stalled. Far from it. This is a complicated field, and the very fact that the Fogarty resolution was passed to get the facts with which we can grapple with this big problem is an indication of the complexity of it. I point out that this is not stalling, this is searching for the truth, getting the facts and trying to determine which is the best. Nor shall I consider whose lobbying technique is the best, whether it be the AFL–CIO or the AMA. I think the AMA and businessmen have too long failed to lobby the Government. At best, the AMA is far behind the AFL–CIO in lobbying on legislation.

As far as socialized medicine and its definition is concerned, if no one has one, I will give mine: The Forand bill is something that would result in the registration of all medical services and people, the regulation of everybody, the control of everybody, setting fees, auditing books and providing criminal penalties for failure to live up to the law. The law once passed has to be followed. That is socialized medicine.

I recall, by the way, the head of the UAW, Mr. Reuther, and I had a go-around on this. It is in the record for anybody's perusal.

I have not begun to cover the Forand subject, of course, because I shall leave that to others. I would like to be the one to offer rebuttal to that particular solution or alleged solution to the so-called tremendous problem, if there is a problem. Rather, it seems we are going to make it a problem. We have not yet even analyzed the area of need, nor how our medical services are being provided and meeting the need. Many of you, I am sure, recognize that your own State, perhaps, does not take Federal money in some of the public assistance fields. In my own State we have fine medical aid for the needy, if you please, or free medical facilities, that are not reflected in any Federal figure at all. The HEW cannot give those figures. Why? Because they do not have them.

Yet, we, of the Ways and Means have come before you and say we want to give you a choice of voting on various solutions to the problem, while we cannot tell you what are the medical services that are provided in this country as a basis for the proper solution. As a matter of fact, the statement was made before our committee many times that no person in the United States is denied medical service on account of lack of money, and that has never been contradicted before our committee.

To get on with my subject: This is troublesome. I must divulge what I have learned. I am going to tell you what I think because my responsibility as a member of the Ways and Means Committee permits no less. I cannot pretend I do not know what I do know about the present social security program. These are not just my views. I am relaying to you what I learned from studies made by the advisory council, the trustees, and others, and I will try to present it to you on that basis.

I am opposed to the social security system as it is now constituted because it is actuarially unsound. Frankly, I am confounded by the clash of facts with our legislative action. If anyone will set me straight I will be glad to pause at the end of my statement for that purpose.

We have a moral obligation not only to today's citizens, of course, but to the folks who are going to foot the bill, the following generations. Who will foot the bill? What are the factors which make social security actuarially unsound? I hope you understand what I mean when I say that social security is unsound. The matter before us today should be as elemental as this, Can we secure the future of our people through social security? I cannot get to that one, but I can grapple with the actuarial unsoundness part of it.

What are the factors? I direct your attention to page 334 of the minority views. It is a three-page statement if you want to refer to it. Furthermore, I direct the attention of my colleagues, whether you agree or disagree, to some studies I put in the RECORD on this question, the field of actuarial soundness and what this means to the social security program.

I have the page numbers here to offer anybody that wants them. The statements were inserted in the RECORD on pages 11629–11630, 13502–13503, 13504, 13505–13506, and 13507.

Mr. Chairman, this program has been called actuarial anesthesia by some. We have set up a fiction, a fictitious actuarial basis, and then we have done our actuarial work within that framework, so we say it is actuarially sound. But, now, what are the facts? First of all, the entire program is computed on our highest earnings, into the infinite future; not on a bad or a moderate year but on the best year. The high cost, the low cost, and the intermediate cost estimates made by the actuary of HEW are computed only using high earnings, at a level of 1959. You do not allow for

any income cutback at all. We are all for high income. Fine. We want income always to be high.

But when we build a program where you have to have high income, and actuarial figures all thus figured what happens to its economic soundness if you do not have it? Further, this becomes an invitation to inflation, increased spending, and so on. Secondly, and this is the most damaging, more than just a matter of high income. Social security now is based on increasing population or new entrants into the program, because, as our chairman pointed out, we are not paying as we go. Let me quote him as best I can. Those people who are now beneficiaries will draw down without having paid in to the total of $65 billion. You and I and our children will have to dig this up. That is what the folks who are beneficiaries are owed by us until the time they die. But, how about the rest of us not yet beneficiaries, just contributors? It is estimated that this program is between $300 billion and $600 billion behind in not taking in enough money against the payout to present contributors when they become beneficiaries. But, I am ahead of myself. The point is, we make up this gap within this fictitious actuarial framework by saying we will have more tax contributions from future salaries. But, that is not the whole story. Our population is constantly getting older. We are growing older together. The average age is getting older, so more of us progressively will fall into the beneficiary class. Further, it seems that every 2 years we add new measures and more and more people are covered as beneficiaries. But, we have nothing to offset this by taxation. For the last 2 years we have run a deficit, and we are falling behind all the time rather than correcting it.

I want to read from the 20th annual report of the board of trustees. They say:

> The cost of benefits to aged persons, which constitute almost 90 percent of the total cost, will rise for several reasons. The U.S. population cannot continue to increase indefinitely; births cannot indefinitely exceed deaths. When a balance is reached or a reversal in the present trend occurs, the population as a whole will have become relatively much older.

That is what I have been trying to say:

> Another reason for the increasing cost is that the proportion of the aged population will increase.

That is the other point I was trying to make.

Then the Advisory Council in 1958 said, as any Member of this body could say, and I say now, because I am concerned, and I know you are concerned. The Council said this:

> The Council believes that the trusteeship is so large and the number of people involved so great that the defeat of beneficiaries' expectations through inflation would gravely imperil the stability of our social, political, and economic institutions.

Mr. Chairman, as our chairman has earlier said, this touches more of our citizens than any other program. It is not just the beneficiaries that will lose. It could rock the entire financial system in this country.

How about the tax burden and actuarial soundness? Mr. Chairman, I am trying to be as fair as I can. Let me cite a couple of examples—and you can criticize if you chose—actuarial examples showing the payin against the payout.

Case No. 1 is that of an employed individual who received maximum taxable earnings since the inception of the program in 1937 and he paid through 1959. He will have had a cumulative employer-employee maximum total tax contribution to the OASDI funds of $2,292. That is how much he would have paid in. Now, assuming this individual and his wife reached the age of 65, on January 1, 1960, the total amount of benefits that would be paid out, with respect to this benefit claim of $2,292, would be $31,200.

Case No. 2: Another individual who qualified for a minimum benefit entitlement on January 1, 1960, could have paid, with his employer, as little as a total of $36 into the trust funds. And, assuming that he and his wife reached the age of 65 on January 1 of the current year, the total amount of benefits that would be paid out with respect to his benefit claim is $8,600; there it is from $36 paid in to $8,600 paid out. Sure, these may be somewhat extreme cases; I do not know whether these are the most extreme. I cannot even tell you how many cases there are like these. But these are the kind of examples that ought to make all of us pause to think about this matter. We have paid in about $85 billion. We have on hand $21.8 billion. That makes a deficit of about $63 billion, which I mentioned earlier. And I mentioned the $300 billion cost that we are also behind. It is possibly even more than that. And all this deficit is in the interest of securing our future socially, if it can be done. This is the problem that needs to be faced. We are now going into a political campaign and this is a political legislative effort, every 2 years. What I am saying here probably is going to be forgotten. Probably I am not going to influence even one man here. But this is the way I see it. I am a member of the Committee on Ways and Means. I have to tell you what I think and I urge you to join me in exploring this matter.

What I am saying is that this is a little bit like Parkinson's laws, but working perhaps, in a little different direction. Bureaucracy increases and expenditures rise to meet income. It is a very interesting thing to think about. Politics is the motivating force.

Now, as to the cost of making the program sound, I cannot give you the answer. But if we are $63 billion behind in present beneficiaries and $300 billion to $600 billion behind in unfunded future benefits to be paid, our kids are going to have to pick up this cost. Of course they could vote to kill the program. If we agree that we should actually make the program pay-as-we-go, then I urge you to think about these costs. Could we pay the necessary taxes? I do not know, but we should face up to the problem.

Now, whether it is unconstitutional is something that has not been tested. I have put statements in the RECORD with regard to a number of questions, that I do not have the time to bring up today.

I am not talking about specific provisions of this bill—this would be skirting the issue. I had to oppose, in the committee, amendments that were offered which tended to increase the benefits and the coverage; not because I was against any one particular item, but rather because we were imposing these added costs on future generations, on our kids, and future taxpayers, who are not here to speak for themselves. Fortunately, they can vote to kill social security and if they do, where will our older citizens be?

It has also been said that this system is incompatible with free enterprise. It is something to think about.

It has also been pointed out that if an individual for 40 years put in $210 a year into a savings account, and left the interest in, he would have on hand $35,000 and the interest. Income from interest would be $2,000 on which to live. That is the way this country grew. That is the way this country can continue to grow. And if we do not do that, everybody is going to come to Uncle Sam with hands outstretched for support. There is not sufficient money to go around to do it that way. There's the plain truth, lack of morality of the whole thing notwithstanding.

Of course, I feel very strongly about this. I went back through all of the views that have been submitted on social security. Of course, I could not detail them all here, nor can I remember them all offhand. But I did my best to study them. Let me give you several quotations from earlier Congresses, from some of the men present on both sides and some of the men who have gone beyond.

This is from the 74th Congress:

> This bill is not to be considered a cure-all, nor a complete measure for economic security. * * * While humanely providing for those in distress, it does not proceed upon the destructive theory that the citizens should look to the Government for everything. On the contrary, it seeks to reduce dependency and to encourage thrift and self-support.

This was in the 74th Congress. I wonder if these views are true today. I think they are.

Further, the minority report went on to say they were opposed to title II providing for compulsory old-age annuities, and title VIII, providing the method by which the money was to be raised. The minority declared:

> Neither of these titles is constitutional. The Federal Government has no power to impose this system upon private industry.

By the way, I do not believe it has ever been tested.

The minority in the 81st Congress said this:

> We believe that such a form of compulsory social insurance, which unnecessarily takes from the individual funds which he would invest or otherwise use for building his own security, is incompatible with our free enterprise system. Accordingly, we do

not conceive it to be a proper function or responsibility of the Federal Government either to compensate individuals for all types of losses in earning capacity or to provide a scale of benefits which pay substantially higher amounts to those with higher income.

That reminds us we are getting into a graduated income tax on the present social security basis. I think you know about that. That brings me to the minority views in 1954 in which the gentleman from California [Mr. UTT] said:

It is my fearful belief that the social security tax is fast shaping up to become a secondary graduated income tax upon wages and salaries, a tax which, when its full impact is felt, will shake our social security system to its very foundation.

What do you think your constituents are going to say when they pay a higher social security tax, and know it, than they pay in income tax? And the amount on which the tax is payable is raised from $4800 to $6,000 or higher? The social security tax is based on first dollar earned. There are no deductions. It catches the fellow with the least income of all with the heaviest tax.

In 1955, which brings us up to the present, these were the minority views:

The tax on wages is a tax on gross wages without any allowance for personal exemptions, dependents, or other deductions. The tax on self-employment income only permits certain business deductions, such as depreciation. It is, in effect, a tax on adjusted gross income * * * the tax, as a percentage of net income, is substantially higher than the actual rates would indicate. In fact, the eventual 6½-percent rate on the self-employed would be the equivalent of a net income tax in the neighborhood of 20 percent and higher in many cases.

Then they give this example, and those of you from the farm areas ought to be particularly interested, because I know your farmers will be.

Let us take the example of a farmer with a net income from self-employment of $4,200 in 1975. Assuming that he has a wife and two children and uses the standard deduction, his Federal income tax, under present rates, will be $276.

By the way, the figure in 1975 is used because we will then have the maximum social security rate.

His social security tax, on the other hand, will be $283.50. The social security tax would be in excess of 20 percent on net taxable income. If the same individual had three children his income tax would be cut to $156 but his social security tax would still be $283.50, the equivalent of a net income tax of 36 percent.

That is the law, and that is the direction in which we are going.

In 1975, our payments out of the Social Security Fund, if we have the money to pay it, will be $20 billion, whereas, as the chairman pointed out, this year it is running at the rate of $11 billion. Where is the money coming from?

Mr. MILLS. Mr. Chairman, I yield 15 minutes to the gentleman from Virginia [Mr. HARRISON].

Mr. HARRISON. Mr. Chairman, on yesterday when I asked the distinguished chairman of the Committee on Ways and Means how much time he could give me to discuss this measure he said he would give me enough time within which I could hang myself. I have been thinking that over. I realize that anyone who undertakes to cross swords with him is in serious danger of hanging himself.

Mr. MILLS. Mr. Chairman, will the gentleman yield?

Mr. HARRISON. I yield to the gentleman from Arkansas.

Mr. MILLS. I think for the sake of posterity the RECORD should reflect that the gentleman is being facetious in that last remark.

Mr. HARRISON. No, I am being very serious. At the risk of hanging myself I have to go ahead and say that I do not like the medical provisions of this bill. In my judgment, they are completely unworkable.

If I may be allowed to comment on that a little, the distinguished gentleman from Rhode Island has said that this bill holds out a mirage to the older people of this country under which they will believe that they are going to get something, which they will not get. I certainly do agree with that statement. It seems to me, the bill undertakes in a number of ways to blow the horn through the wrong end. It starts out and gives—or, apparently, gives hospital services not exceeding 120 days, and skilled nursing home services without any limitation. We would gather from reading this bill that these hospital beds and these nursing home beds are right there ready with nice clean white sheets and that the old people do not have to do anything but to crawl into them. But, Mr. Chairman, according to the Department of Health, Education, and Welfare in the year 1959, there were 653,000 hospital beds available, of which only 587,000 were acceptable. The number of beds needed to meet the existing demands is 761,600 hospital beds. I ask the question, Should we say to people that we are going to give them hospital beds without making any provision as to where those beds may be found?

With reference to the nursing home beds, the same statistics show the existence of 245,000 beds, of which 133,000 or about half are acceptable while the need exists for 385,000 beds.

This year the distinguished gentleman from Rhode Island [Mr. FOGARTY], in connection with the report on the Hill-Burton appropriations from his committee on the appropriation bill for the Department of Health, Education, and Welfare, says:

The bill includes $150 million, an increase of $23,800,000 above the request, and a decrease of $36,200,000 below the amount appropriated for 1960. Any doubts concerning the complete inadequacy of the budget can easily be resolved by a simple review of the statistics regarding this program.

As of January 1, 1960, plans submitted by the State agencies show need for 845,402 additional hospital beds and 257,030 additional nursing home beds or a total of 1,102,432. The funds requested in the budget, when combined with funds used for hospital and nursing home bed construction outside the program will produce an estimated 43,628 beds, or less than 4 percent of the additional beds which States indicate are needed.

State agencies report that if there were no limitation on Federal funds they would have, during 1961, sufficient State and local matching funds to start work on 1,020 projects costing a total of $1.2 billion which would require Federal matching funds in the amount of $489 million.

While the amount recommended by the committee is not aimed at filling all the existing needs it will certainly do a better job than the woefully inadequate budget presented to Congress.

There is a promise in this bill of physicians services without limitation. Everybody knows there are not enough physicians. Also, we promise nurses without limitation. But, according to the American Nursing Association, there is a shortage of 56,000 nurses to meet the existing needs.

There is a promise in this bill for dental treatment which any dentist says "has seriously affected, or may seriously affect" general health. If this promise is kept, no one will get in a dentist's office within 6 months, toothache or no toothache.

There is a very interesting table in connection with this measure on page 11 of the report, in which it is estimated that the total cost of this bill will be $325 million of which $165,500,000 will be from Federal contributions. I submit that no one knows what this bill is going to cost. I submit no one knows how many States will go under this bill. The report says 10 million people could be taken care of under this bill. These figures are not based on that figure and no one seems to know what the figures are based on. But, if we assume that the table in the report is right, we come up with some remarkable results.

Four States will get over half of the money. Six States will get 68.36 percent of the money. The State of New York gets more than 30 percent and 9 times as much as 28 other States and the District of Columbia combined. But you need not worry about that because the Governor of the State of New York says the $50 million required in State contribution by New York is not available and that the State of New York will not be under this program.

The needs test in this bill is that if the income and resources taking into account other living requirements, is determined by the State to be insufficient to meet the cost of medical service, the person is eligible. Under this provision, even if a man's income were $25,000 a year and the State said he met the above requirements he would be qualified and I assume would have to be provided for. If you want to get under this program you place yourself under a doctor's care whom you select. If he certifies you are to be kept at home with three nurses a day and he comes to see you every day there can be no question by any governmental agency, State, Federal, or local.

Finally, this program has seeds in it of very dangerous expansion. All that any succeeding Congress would have to do to expand it would be to lower the State contribution, lower the age, and it would be completely financed out of the Federal Treasury without any contribution by any beneficiary.

Mr. Chairman, I submit that any plan for Federal participation in medical programs must meet the problem and meet it foursquare. Any such plan must provide for adequate beds and adequate

personnel to administer it. That is not done in this bill; it is not done in the Forand bill. It should provide for catastrophic illness only. The Forand bill does not do this at all; and this bill includes items that the person can and should pay for himself.

In addition it should have sufficient standards and machinery to protect the system from fraud and imposition. This is not done.

Also if gone into, it should be financed by contributions from the beneficiaries and those able to make contributions.

Frankly, I think we need not worry that this program will ever be in operation. The bill provides it shall not go into operation until July of next year. By that time the Congress will have opportunity to give proper consideration to a workable plan. Before we went into the social security program initiated by the late great President, Franklin D. Roosevelt, there were 2 years of study by a committee of experts from every avenue of life. It was considered by the executive departments for over another year, and it was studied by the Congress for over a year before the legislation was put into operation. Here, however, we are going into a program much more technical in nature and in an equally revolutionary field with a study by a committee of only 3 months, and the only specialist we have heard on the subject is that great specialist and expert on cranberries, Dr. Arthur Flemming.

Mr. Chairman, there is a great deal in this bill besides title XVI, the medical aid provision, which I have been discussing. There are many liberalizing provisions of the Social Security Act which can be financed without any tax increase and which will keep the system actuarily sound.

Let me discuss some of these changes.

The Subcommittee on Social Security, of which I have the honor to be chairman, has conducted a very thorough study of the operation of the disability insurance program. Over a period of months, our staff prepared and published a very excellent fact book. This was done under the direction of the subcommittee counsel, Mr. Fred Arner, and his work has met the approval of experts in government, medicine, labor, and industry. The subcommittee conducted 2 weeks of public hearings and took the testimony of experts from all walks of life. We received answers to an elaborate questionnaire from the administrators of all the States. We were greatly aided in our studies by the assistance of the General Accounting Office and we submitted a preliminary report in which the administration of the disability program was thoroughly analyzed.

As a result of these studies, I introduced a number of bills which have been included as a part of the measure now before the House.

I do not think the people of the country, or the Congress either, realize what a vast program the disability program is. Its beneficiaries as of today number some 750,000 people and the Social Security Administration is deciding 30,000 new applications per month.

We found when a person under the age of 50 became totally and permanently disabled, he was just as totally and permanently disabled as he would be if he were 50 years old. But very often in the case of a younger man the disability struck at a time when he had young children to support and the denial of the benefit to him because of age impressed us as a very arbitrary and indefensible standard. Therefore, finding that there is surplus in the disability fund, we have been enabled to wipe out that age distinction.

In addition, the bill before us includes a bill introduced by me to extend the 12-month trial work period to all beneficiaries who seek to rehabilitate themselves. Under present law, a disabled person is permitted to engage in substantial gainful activity for a 12-month period without termination of his benefits by reason of such work, provided his work is under a State-approved rehabilitation plan. In operation, this provision has worked a hardship upon many, particularly in rural areas, who are endeavoring to rehabilitate themselves. This proposal has the endorsement of the Comptroller General, the Commissioner of Social Security, the Director of the Office of Vocational Rehabilitation, and many others.

The measure before us also provides for the elimination of the 6-month waiting period for disability insurance beneficiaries who had a prior period of disability. We have found that the present provision requiring a second 6-month period is discouraging to a disabled person who has made a sincere effort to rehabilitate himself but finds that he has not sufficiently recovered to do so.

There are a number of other very significant provisions in this measure. One of them introduced by me extends for an additional 2 years the period in which ministers may elect to be covered. This will enable 60,000 ministers who, because of misunderstandings of provisions of the law, have failed to avail themselves of it.

Another bill introduced by me and included in this measure will extend coverage to widows whose husbands died prior to 1940. Under the 1939 amendments, survivors' benefits were payable only to the survivors of workers who died after 1939. This provision of the bill before us will enable about 25,000 widows, mostly over the age of 75, to become eligible for benefits.

There are many other salutary changes in the social security law covered in this measure. One of these is to increase the benefits to a child of a deceased worker to three-fourths of the worker's benefits. Another is to provide benefits for the widow and children of a marriage entered into in good faith though invalid in law. Another important change is to correct the existing injustice to parents employed in the business of their sons or daughters who henceforth will be permitted to contribute to the social security system and draw benefits therefrom, when eligible.

Not the least of the salutary changes made under the existing bill is the one that provides an improvement in the rate of return on trust fund investments so that the social security trust fund should receive interest more nearly equivalent to that paid by the Treasury and long-term money it borrows from other investors.

Mr. LENNON. Mr. Chairman, will the gentleman yield?

Mr. HARRISON. I yield to the gentleman from North Carolina.

Mr. LENNON. The State of North Carolina has a Medical Care Commission. I assume that most of the other States of the Union have organizations comparable to the Medical Care Commission in North Carolina. The question I would like to ask the gentleman, who is a distinguished member of the Committee on Ways and Means, is this: How many States having Medical Care Commissions or comparable organizations such as that put statements in the hearing record favoring this medical care to the aged?

Mr. HARRISON. I do not know. Can the chairman of the Committee on Ways and Means answer the question?

Mr. MILLS. The only thing that we can refer to as representing the position of State administrators or any commission that may be working with them is the fact that in the course of a hearing we had on Mr. FORAND'S bill it was stated that these people favored Mr. FORAND'S approach to taking care of the medical problems of the aged. The organization as such had been on record for some time in support of his views.

Mr. LENNON. Then the chairman of the committee cannot say that at least a majority of the States through their representatives came to Washington and appeared before the Committee on Ways and Means asking to participate in such a program as this?

Mr. HARRISON. The committee had no public hearings on this.

Mr. LENNON. The committe held no public hearings.

I note on page 154 of the bill that the States must submit plans to the Secretary of HEW in order to have such a plan approved in the respective States. There are, I believe, 17 different categories or plans that the State must submit to have it approved by the Secretary of HEW.

Mr. HARRISON. Seventeen different categories?

Mr. LENNON. Seventeen different categories that the State must list or set out in its application to the HEW for approval of the plan.

Mr. HARRISON. Is the gentleman talking about title 1 or title 16?

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. MILLS. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. LENNON. Does the gentleman have a copy of the bill?

Mr. MILLS. Mr. Chairman, will the gentleman yield?

Mr. HARRISON. I yield to the gentleman from Arkansas.

Mr. MILLS. There are 17 different paragraphs referring to things that would be contained in the plan submitted by the States, but I would call the gentleman's attention to the fact

that practically every one of them, not all of them, is already in the law with respect to plans submitted under title 1, under title 10, under title 14, and under title 15.

Mr. LENNON. Mr. Chairman, if the gentleman will yield further, on page 158, section 15, the State shall submit a plan "include methods for determining," and then in subsection (B), "schedules of fees or rates of payment for other medical services."

Now, does that mean that the States must make the determination as to what the maximum fees are that may be charged for medical services?

Mr. HARRISON. Yes.

Mr. MILLS. It does not mean that.

Mr. HARRISON. That is what it says.

Mr. MILLS. Well, it does not mean that.

Mr. HARRISON. It says that whether it means it or not. I think there is a lot in here that does not mean what it says.

Mr. LENNON. Would the chairman of the committee then be kind enough to tell me what that does mean?

Mr. MILLS. It means simply this, that the States have to show, in accordance with the plan, how they arrive at the payment of these things; not that they are going to fix any unreasonable limits. I call the gentleman's attention to the fact that this provision is very similar to the provision that applies at the moment with respect to the medical care programs under title I. If the gentleman will turn to page 158 of the bill, line 9, it reads "include methods for determining." That is all we are talking about. It is the method. We want some degree of understanding as to how these things are determined.

Mr. HARRISON. I understand the chairman contends that the State plans will not fix the rate of fees to be charged by doctors. Do they have to pay whatever the doctor says?

Mr. MILLS. Oh, no.

Mr. HARRISON. Then, what is the situation?

Mr. MILLS. I think the gentleman knows that the State would not be required to fix the rate of pay under this at all. What they have to do is to show the method that they arrive at in making these payments.

Mr. HARRISON. Well, but they have to file a schedule.

Mr. MILLS. I think the gentleman fails to understand this provision.

Mr. HARRISON. Either they fix a schedule or the doctor can charge whatever he wants.

Mr. MILLS. I suggest the gentleman read page 130 of the report, the technical analysis of this thing.

Mr. HARRISON. Page 130 of the report says that the State plan must "include methods for determining rates of payment for institutional services, and schedules of fees or rates of payment for other medical services, for which expenditures are made under the plan."

Mr. MASON. Mr. Chairman, I yield 5 minutes to the gentleman from Tennessee [Mr. BAKER].

Mr. BAKER. Mr. Chairman, I sincerely believe in the social security system. In my second term as a Member of this body I became a member of the Committee on Ways and Means. I was fortunate enough to become a member of the Subcommittee on Social Security. We held extensive hearings. Many revisions were suggested, but none were put into effect in that particular time. Since that time I have carefully studied the social security system and, I repeat, I believe in it.

Now, down to the bill. There are 184 pages of it. It is the result of weeks and weeks and weeks of study on the part of this committee of which I am proud to be a member. It is a great improvement over existing law. It will be of benefit to millions of people.

Mr. Chairman, I do not claim it is perfect. No law is perfect. As time goes on, we will study and continue to study what is best for those people in the twilight zone of their lives that each and every one of us will soon approach.

Now, the controversial feature is title XVI. It is said that it is socialism to grant from public funds medical care for the aged. I say it is not. We have granted money for food, clothing, and lodging, a pittance, yes, for these old citizens. Is it any more socialism to grant medical care, something for the body and the brain and peace of mind for these elderly citizens than it is to grant the substance from which to obtain food and clothing from the public Treasury or from the taxpaying section—and I say that advisedly—for the medical care of these aged people?

Mr. Chairman, I support the bill in its entirety. There are many different ways to approach medical care for the aged. I do not have a closed mind. We must further study this complex problem. The committee will do so. The Forand bill is not socialism, and I care not who hears me say that, even though I voted against it in the committee.

The gentleman from Rhode Island is a fine loyal American who believes in the free enterprise system. We all regret his retirement.

This entire problem needs to be further looked into. We are making a step in the right direction. Replying to my beloved friend from Virginia, when he referred to Secretary Flemming as the "Cranberry King," I know that Mr. Flemming has worked sincerely and wholeheartedly and efficiently to solve this important problem. We have made a great, big step in the right direction, in my judgment. I support the bill in its present form in its entirety.

Mr. MILLS. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. IKARD].

Mr. IKARD. Mr. Chairman, I should like to clarify one particular section of the bill.

Section 531 of the bill—pages 143–146 of H.R. 12580—extends coverage under the unemployment compensation program to employees of certain Federal instrumentalities. The extension will make subject to the Federal unemployment tax any Federal instrumentality which is neither wholly nor partially owned by the United States unless it is exempt from the tax by a specific provision of law. The same section authorizes the legislature of any State to subject employment by such Federal instrumentalities to the State's approved unemployment compensation tax laws. Examples of the Federal instrumentalities thus to be covered are given on page 55 of the committee report on the bill—House Report No. 1799.

My purpose is to make it clear that there is no intention to extend coverage to an organization which is now exempt as a charitable corporation but which also is a Federal instrumentality neither wholly nor partially owned by the United States. The American National Red Cross has for many purposes been regarded as an instrumentality of the Federal Government. However, its exemption from Federal unemployment taxes is presently based on that provision of the statute which specifically exempts service performed in the employ of certain charitable corporations from such taxes. H.R. 12580 continues the exemption from unemployment taxes for such charitable corporations; hence the bill is not intended to remove the Red Cross' current exemption. Similarly, it is not the intention of the bill to remove the present exemption of Red Cross employment from State unemployment taxation.

Mr. MILLS. Mr. Chairman, will the gentleman yield?

Mr. IKARD. I yield to the gentleman.

Mr. MILLS. The gentleman has very clearly stated, may I say, the understanding that I have of the bill in this respect. Certainly his statement is a very clear reflection of what was intended as far as I am concerned.

Mr. IKARD. I thank the Chairman very much.

Mr. MILLS. Mr. Chairman, I yield 6 minutes to the gentleman from Missouri [Mr. KARSTEN].

Mr. KARSTEN. Mr. Chairman, at the outset I should like to pay tribute to the distinguished gentleman from Rhode Island [Mr. FORAND], who has devoted many years to a diligent study of the social security system. This is not a new subject with him. He has worked at it all his life. The fact that we are not voting on his bill today is perhaps a disappointment, but I think he has rendered the country and the Congress a great service in introducing the Forand bill, H.R. 4700, and bringing to public attention, the important matter of health care.

All of us regret he has decided to return to private life. Whatever may be his future plans I would not want to let this opportunity pass without wishing him success in his new endeavors.

I am going to support the pending social security bill, which contains within its framework, a very limited beginning in the field of health legislation. Admittedly, this is a difficult area in which to legislate. In the 5 years I have been a member of the Committee on Ways and Means I know of no problem that has been more difficult than this one.

The first decision, of course, is whether we shall enter the area of health legislation at all. The Committee on Ways and Means, in reporting this bill, has made the decision that legislation is not only desirable but necessary. After

reaching that conclusion, the next decision is how shall we proceed. It was at this point the committee encountered wide differences of opinion amongst ourselves, the administration, the medical and allied professions, and other quarters.

During the public hearings last year and the executive sessions this year, which extended over a period of 3 months, we considered a variety of plans and proposals which included the Forand bill, the administration program and many variations of both. These various proposals differing in details, benefits, costs, and financing, divided themselves into two general approaches to the problem of health legislation.

The medicare plan, proposed by the Department of Health, Education, and Welfare, represented one approach. The distinguishing feature of this proposal was the payment of outright grants to the States from the General Revenue of the Federal Government. States desiring to participate would be required to match the Federal grants and limit the benefits to those whose incomes did not exceed $2,500 for a single person and $3,800 for a married couple. In addition, it provided for the payment of a nominal fee by the individual upon enrolling in the program. Before the schedule of benefits would become available to the individual, however, he would be obliged, in the case of a single person, to pay the first $250 of his annual medical expenses. In the case of a married couple the deductible amount would have amounted to $400.

While the medicare approach may have some desirable provisions, it has two principal objections: First, it calls for the taking of money from the Treasury without providing taxes to finance its cost; second, it embodies a needs test—highly refined—but nevertheless a needs test in every sense of the word. Rather than getting the Federal Government out of the relief business, the medicare plan would set up firmly in the Federal Government a large medical relief program.

There are many other features of the medicare plan about which serious questions could be raised but because of these two fundamental objections I opposed the plan in the committee. The medicare proposal was defeated by a vote of 15 to 10.

The other broad approach might be described simply as the Forand bill. This provides a system of health benefits, financed in a manner similar to the social security program. Under this approach, the employee and employer would pay about one-half of 1 percent additional social security tax and the program would be financed as it went along. It calls for no grants from the Treasury, or State matching funds, and would include all of those under the Social Security system. A prepaid insurance program of this type, of course, eliminates the undesirable needs test, or the "income" test if you prefer that term, and enables the individual to receive benefits on the basis of his contributions. The committee's efforts to include a social security health program in the pending bill were not successful and this approach was defeated by a vote of 17 to 8.

Thus, there was not a majority of the members of the committee in favor of either approach, the social security health program or the medicare proposal. The committee, therefore, was obliged to depart from both theories in order to bring the pending legislation to the House.

About all that can be said in favor of the medical provisions of this bill is that they are needed now for those in the extremely low-income brackets who would not benefit under either a social security health bill or the medicare proposal.

For myself, I confess, I am disappointed in the committee bill and I know many Members of the House share this disappointment. Under our legislative and parliamentary system, however, this bill is not in final form. Rather, it is in the nature of an incomplete document which is going to another body when it leaves the House of Representatives.

While, of course, no one can predict what will be done in the other body, one thing is certain. It would be impossible to further weaken the medical provisions of the bill without destroying them entirely. In my opinion, the course for the House to take is to pass this measure in the hope that when it reaches the other body, amendments will be added to provide a social security health program adequate to meet the needs of the people and the times.

Mr. MILLS. Mr. Chairman, I yield such time as he may require to the distinguished majority leader, the gentleman from Massachusetts [Mr. McCORMACK].

Mr. McCORMACK. Mr. Chairman, I want to announce for the information of the Members that the next order of business today will be the continuation of the consideration of the farm bill. If we are going to adjourn sine die, and it is a remote possibility still, we can do so if we do the things we are capable of doing and have to do. We will have to meet earlier, and we will have to run later in the evenings. When we are in the House, I am going to ask that the House meet at 10 o'clock tomorrow morning. I wanted to make this announcement so the Members would know what the next order of business is. I know the membership will cooperate most effectively so that we may dispose of our business so that we may adjourn sine die. I still say it is a remote possibility, but it is a goal worth striving for.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Indiana.

Mr. HALLECK. As far as I am concerned, it is perfectly all right to come in at 10 o'clock tomorrow morning.

Mr. McCORMACK. I am going to ask for that when we are in the House.

Mr. HALLECK. I understand. But as to the legislative program for tomorrow, if the supplemental appropriation bill is ready; is it expected that that will come ahead of the continuation of the farm bill, if we do not complete the consideration of the farm bill tonight?

Mr. McCORMACK. I think we ought to continue with the consideration of the farm bill until it is disposed of. Then the supplemental appropriation bill will be the next order of business.

Mr. HALLECK. I thank the gentleman.

Mr. MASON. Mr. Chairman, I yield myself such time as I may require, and I do this because I want to ask the chairman of the committee some questions.

The first question is: Is this a medical care plan for the needy aged within the framework of our free and competitive system of private enterprise, and will it interfere with our free enterprise system?

Mr. MILLS. I would have to answer the gentleman's first question in the affirmative. I would have to answer the gentleman's second question in the negative.

Mr. MASON. Then the second question I want to ask is this: Does the "plan" preserve the beneficiary's freedom in choosing a physician or hospital and in the purchase of prescription drugs and medicine?

Mr. MILLS. It certainly does.

Mr. MASON. Under the proposed legislation, would the individual States be empowered to limit "plan" beneficiaries to the purchase of their prescriptions from certain relatively few retail drug stores, and, thus, exclude all other drug retailers from participating in the business?

Mr. MILLS. That is certainly not intended and I do not believe it is included within the purpose of this program. There would be wide discretion in the selection of dispensaries of drugs.

Mr. MASON. Would it be fair to say that the author and sponsors of the bill do not intend to sanction in any way the establishment of either Federal or State Government drug dispensaries to be operated in competition with the Nation's independent retail pharmacists?

Mr. MILLS. There is nothing in the world in this program that is intended to lead to such a development. In fact, just the contrary is intended.

Mr. MASON. My last question is as follows: On the matter of prescription drug prices, physicians' fees, and hospital charges, the Federal law will permit each State to work out its own drug pricing schedule just as it will do for physicians' fees and hospital charges. Is that correct?

Mr. MILLS. That is entirely up to the States—yes.

Mr. MASON. I thank the gentleman.

Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. KNOX].

Mr. KNOX. Mr. Chairman, I rise in support of H.R. 12580. It does not, however, in my opinion, have the broad coverage that should have been given consideration by the Congress. It is my belief, nevertheless, that it is a step in the right direction to help those who are financially unable to help themselves.

In the deliberations of the Committee on Ways and Means we had three distinct proposals offered to assist our elder citizens in the field of medical care. One was the bill introduced by my distinguished colleague Mr. FORAND, which

would have provided hospitalization and surgical care to all those eligible to receive social security benefits. The program was to be financed by a 1 percentage increase in the social security tax. However, this legislation discriminated against approximately 4 million aged citizens who have been denied the right to participate under the Social Security Act because of the fact that Congress never provided for their coverage. I believe the large majority of these 4 million citizens are in greater need of assistance in the field of hospitalization and medical and surgical care because they are not eligible to receive social security benefits, and it is doubtful as to any other income they may have outside of what little work they do in their particular field of endeavor in the remaining days of their sunset life. This proposal was defeated by the committee.

The second proposal was the plan recommended by the Secretary of Health, Education, and Welfare. This proposal offered a potential solution to the health need problems of our senior citizens within the framework of a voluntary approach. It offered comprehensive health and medical services protection while at the same time encouraging individual self-initiative to guard against the heavy economic burden of long-term illness. It would have limited Federal administrative intervention and vest principal administrative responsibility to the States with the costs being shared by the individual and the Federal and State governments. Every aged person who needed Government help to secure himself against medical costs would have been eligible for this protection and it was designed to concentrate the use of Government funds on those elderly persons who have the greatest need for protection. This proposal was also defeated by the committee.

The final proposal is the one that is before us today, which I believe is a step in the right direction, and I support its passage.

Mr. MILLS. Mr. Chairman, I yield 10 minutes to the gentleman from Michigan [Mr. MACHROWICZ].

Mr. MACHROWICZ. Mr. Chairman, I would like to join with the other members of my committee who paid tribute to the gentleman from Rhode Island, who has decided not to be with us this next session of Congress, and I want to say honestly this: That if this Nation today is aware and cognizant of the tremendous importance of the problem of adequate medical care for the aged, if the administration has finally shown some interest in this program, and if we are considering it today, it is due in great measure to the very, very hard work the gentleman from Rhode Island and his subcommittee have done. There will be a Forand-type bill passed by Congress, if not at this, then at some other session; and when it is passed I think the credit for the bill should go to him, because he was the originator, the sparkplug, responsible for the initiation of the program.

I want to pay tribute also to our chairman, who has been most fair and considerate throughout the hearings.

Mr. Chairman, this bill that is before us today must be judged, in my opinion, by its omissions as well as by its contents. I voted to report the bill out, and I intend to vote for the bill and support it today, but I also signed the concurrent views deploring the bill's inadequacy insofar as medical care for the aged is concerned.

Mr. Chairman, 1960 is the 25th anniversary of the enactment of the Social Security Act. It was in 1935 that the Congress under the leadership of the House Ways and Means Committee wrote into law the recommendations of Franklin Delano Roosevelt, a great Democratic President who declared:

> It is my hope that soon the United States will have a national system under which no man or woman within our borders will lack a minimum old-age pension that will provide adequate food, adequate clothing, and adequate lodging, to the end of the road, and without having to go to the poorhouse to get it.

The Ways and Means Committee and the Congress were not impressed then by the charges of bureaucracy, regimentation, compulsion, and socialism that were used to oppose the provisions for a contributory social insurance system that would entitle Americans to benefits as a matter of right instead of charity. The purpose of these provisions was summed up by Justice Cardozo in the decision he wrote upholding the act's constitutionality.

> The hope behind this statute—
>
> He said—
>
> is to save men and women from the rigors of the poorhouse as well as from the haunting fear that such a lot awaits them when journey's end is near.

It is unfortunate, in my opinion, that the majority of the Ways and Means Committee has rejected any program that would build upon the existing social security system and would make available to people health benefits on the basis of an earned entitlement rather than as public charity based on a needs test. It is particularly unfortunate that this body does not, today, have the opportunity to stand up and be counted on this basic issue. Nevertheless, I urge passage of this bill, because I hope that the passage of the H.R. 12580, inadequate as it is to do the job, will furnish to the other body the vehicle for the enactment of a program which will use the social insurance mechanism to provide medical care for our aged. I hope that such action will be taken and that this House will then have the opportunity to demonstrate its belief in our social security system.

On this crucial issue the American people are waiting for a decision. I know they will not be disappointed.

There are at least three major respects in which this bill falls far short of an adequate package to be offered the people of the United States on the 25th anniversary of the enactment of the Social Security Act.

It fails utterly to meet the problems of the great majority of the aged in paying for health care. It does nothing to improve benefit provisions of unemployment insurance through either minimum Federal standards or reinsurance grants to States. And, while leaving a heavy burden to public assistance, it does pathetically little to assure decent levels of living and health care.

The most grievous omission is that of health benefits for the aged through social insurance. The tremendous growth of public demand for such benefits reveals the crying need for their enactment. Letter after letter tells the tragic details of older people who had maintained their independence and managed to save for their retirement, but whose hopes as well as health have now been shattered by expensive illnesses.

I regret that only nine members of the committee have placed themselves on record as supporting the use of the social insurance system for helping the aged pay for health care. But I am proud that all nine are members of the Democratic Party.

In contrast, the Republican members of the committee voted to postpone any action on any kind of health care this year, 5 of the 10 advocated postponement in a minority report, and 3 of these have indicated their opposition to enactment of even this feeble bill because, according to them, it "compounds the weakness and actuarial unsoundness of the existing program."

It is shocking that after a quarter century of successful operation of our old-age insurance system there are those who still question its basic soundness and would still have us rely on relief and assistance, with a means test, as the only governmental approach to meeting the major economic hazards of heavy medical costs which threatens our 16 million aged citizens.

Eight members of the Ways and Means Committee, including myself, joined in "Supplemental Views on Health Benefits for the Aged" which explain the basic advantages of adding payments for health care to the OASDI system.

To quote the report:

> We believe that the 70 million workers covered under social security should be given the opportunity to contribute now, while working, toward paid-up medical-care protection in old age for themselves, their wives, and widows, so that the greatest threat to the economic security of the retired aged would be met on a planned and orderly basis—without cost to the general revenues of Federal, State, and local governments and in a way that supports the rights and dignity of the individual citizen * * *.
>
> The problem of insecurity arising from the high cost of medical care during the years of retirement is not primarily the problem of the very poor. The objective should be to remove for all the aged the haunting fear that an expensive illness will wipe out a lifetime accumulation of savings, threaten the ownership of a home, force dependence on children, or make one, after a lifetime of independence, submit to the humiliation of a test of need.
>
> Our goal is, so far as possible, to prevent dependency rather than to deal with it at the expense of the general taxpayer after it has occurred. By contributing additional small amounts from their earnings to the nearly universal social security system, workers could gain insurance protection

against medical care costs in retirement and their possible future dependency could be prevented.

Since eventually about 95 percent of the American labor force, including farmers and self-employed, will get retirement benefits under the self-financed contributory social security program, and since the wives and widows of workers are also covered, the addition of this type of protection to social security would mean that in the future almost all elderly people would be protected.

Persons already retired would receive the new health benefits, following the past pattern that when the Congress has added to cash benefits, it has made increases available to current beneficiaries.

Contributory social insurance has been applied with great success to the need for income maintenance in retirement, for survivors after the death of the chief breadwinner in the family, and for the family after the disability of the worker. The general taxpayer has been saved billions of dollars a year, and the self-respect and independence of American workers have been greatly strengthened by this approach to the problem of security planning.

There is every reason to take the same approach with regard to the expenses of medical care after retirement. The cash benefit alone is not enough to provide security. The monthly amounts paid under social security are quite modest—the average worker's benefit is now $73 a month—and most retired people have barely enough to meet everyday living expenses. The cash benefit, which in many cases scarcely serves its purpose of meeting everyday living expenses, needs to be coupled with protection against the unforeseeable costs of illness. The retirement plan cannot give security if retired persons have no protection against the cost of medical care and have to face the costs currently at a time when their incomes are greatly reduced and the incidence and cost of illness greatly increased.

The Forand bill, H.R. 4700, would give protection to young widows with surviving children as well as to the aged. It would meet substantial hospital, skilled nursing home and surgical costs, as a matter of right, and on a practical basis, with optional use by the Secretary of voluntary nonprofit plans, such as Blue Cross, in its administration.

The committee also considered other proposals for adding health benefits through the old-age, survivors, and disability insurance program. Alternatives explored included: a broad range of benefits with a large deductible; hospital benefits accompanied by skilled nursing home care and home nursing care provided through community agencies, such as visiting nurse services; the option of a supplemental cash benefit that could be chosen instead of the proposed health benefits; and limitation of eligibility to persons 68 years of age and older.

Cost estimates submitted by the agency indicated that H.R. 4700 would cost about one-half of 1 percent of payrolls in early years, with a level premium cost of about eight-tenths of 1 percent of payrolls. More modest proposals would have provided substantial protection at a level premium cost of about one-half of 1 percent of payrolls. A broad spectrum of benefits—with a large cash deductible—identical to those in the administration proposal, was estimated to cost 1.09 percent of payrolls if provided through social insurance.

It is clear, therefore, that a modest increase in the contribution rate, ranging from a few tenths of 1 percent each up to one-half of 1 percent each by employers and employees, would finance a significant amount of protection for the present aged beneficiaries as well as for almost all the aged in the years ahead.

Whatever the scope of benefits, the social insurance approach would assure that they would definitely be available, that the individual could count on eligibility for them, and that they would be supported by adequate, advance financing.

Insofar as individuals have the resources to purchase private insurance, they would then be able to build such individual protection around the basic social insurance program. Contrary to fears that have been expressed, the development of social insurance has not interfered with the growth of commercial insurance. On the contrary, a tremendous growth of private protection has accompanied the development of the old-age, survivors, and disability insurance system.

The social insurance approach can thus permit substantial flexibility in the protection obtained. It can be voluntary as to benefits if the choice of a cash equivalent is included. The tax would be compulsory, but no more than other taxes, such as those that will be required to finance title XVI or any other program paid for from general revenues. Individuals would continue to exercise whatever choice they now have in regard to the persons or institutions from whom they obtain care.

Physicians would have freedom to practice as they choose. They would still have responsibility for recommending and certifying that a given type of care is necessary, whether in a hospital, a skilled nursing home, or the patient's own home. On both physicians and hospitals would continue to rest responsibility for developing improved methods of caring for aged persons, utilizing less expensive forms of care when they would prove constructive, and speeding rehabilitation so as to avoid permanent invalidism. The alleged danger that patients would be "herded into institutions" is not valid under social insurance any more than it is under private insurance policies.

We have again heard the bogey cry of "socialized medicine." This echoes the charge of socialism which Republicans made against the original social security system, against the TVA, and other essential programs for the welfare of the people. It is the same charge which the American Medical Association has made in the past against workmen's compensation, against the voluntary health insurance plans when they were first inaugurated, against veterans' hospitals, and against other programs which are accepted as essential by the great majority of Americans.

These bogeys have been exposed recently by statements from conservative sources which support addition of health benefits for the aged through social insurance. These sources include the Washington Post, Business Week magazine, Life, the New York Times, and, most recently, Walter Lippmann, the well-known columnist. It is worth quoting three paragraphs from Mr. Lippmann:

> Among the opponents of medical insurance there seems to be a vague and uncomfortable feeling that it is a new-fangled theory, alien to the American way of life and imported, presumably, from Soviet Russia.
>
> The Founding Fathers were not subject to such theoretical hobgoblins. In 1798 Congress set up the first medical insurance scheme under the U.S. Marine Hospital Service. The scheme was financed by deducting from seamen's wages contributions to pay for their hospital expenses.
>
> If that was socialized medicine, the generation of the Founding Fathers was blandly unaware of it.

The Eisenhower administration still opposes the addition of health benefits for the aged through the old-age, survivors and disability insurance program. This opposition has been expressed by President Eisenhower, by Vice President Nixon, by Secretary Flemming, and by congressional leaders of the Republican Party.

This opposition was translated into long-continued delays in presenting an alternative plan to the Ways and Means Committee.

In 1958 the committee requested the Secretary of Health, Education, and Welfare to report on methods of providing insurance against the cost of hospital and nursing home care for old-age, survivors, and disability insurance beneficiaries. A substantial report on the matter was submitted to the committee on April 3, 1959. Testimony from a wide variety of witnesses was heard in 1958 and in July 1959. On July 13, the Secretary of Health, Education, and Welfare assured us that he would continue studying possible approaches and would report the results of his studies as soon as possible. No recommendations were received from him, however, until May 4, 1960. The committee had by then been considering health problems of the aged and other social security amendments for more than a month.

The proposals of the administration were discussed by the committee at some length but did not win its support, nor were they ever embodied in legislative language. Indeed, after the administration proposals of May 4 were given to the committee, it became clear that important aspects of their administration had not been solved. Much time was spent, for example, in considering the practicality of the income test, but it was never clear that the Bureau of Internal Revenue could effectively supply essential information on gross income that would make the approach of an income test either equitable or enforceable,

even if one were willing to accept it as a substitute for benefits as a matter of right.

Major defects in Secretary Flemming's plan of May 4 are set forth in our supplemental views. I shall not attempt to repeat them here.

What has emerged from the committee in regard to health care of the aged is not the proposal of the Eisenhower administration but a form of public assistance, called title XVI. No fine words can change this product from its essential character of welfare based on a means test with all its drastic limitations and its potential for undermining the dignity, self-respect, and self-reliance of the American people.

Public assistance is a form of social security but the least desirable form. It should be the last resort, available to those who cannot be reached by social insurance or private aid, but held to a minimum in terms of the number of people who must seek it when all else has failed.

As commonly used by Americans today, the term social security does not mean public assistance but old-age, survivors and disability insurance, the basic program on which the great majority of Americans have come to rely.

The new program added by title VI of the bill to be called title XVI of the Social Security Act, has the following in common with the older form of public assistance for the aged embodied in title I of the act:

First. It is based on Federal matching grants to the States, which will decide for themselves whether to enact the program at all, how much money to appropriate, and how strict and onerous the eligibility requirements should be. The general requirements for State plans are much like those under public assistance except that (a) no lien may be imposed against the property of any individual before his death and that of his surviving spouse, and (b) no resident of the State may be excluded. These exceptions, included as Federal standards for the State plans, are desirable but they certainly do not alter the basic welfare nature of the program.

Second. A means test must be applied and its strictness is determined by the State. The bill says that an eligible individual is one who is 65 years of age or over and "whose income and resources, taking into account his other living requirements as determined by the State, are insufficient to meet the cost of his medical services." Such a clause cannot be applied except through a series of questions and continuing investigation, presumably by the staff of the same welfare offices that administer the title I program.

Americans want the kind of security that is based on contributions during working years and avoids the necessity of applying to a welfare agency. From the point of view of the community, it is far better to have health benefits protect the savings and health of the aged so that they are not reduced to the low levels of income which mean dependency and resort to aid from general revenues.

Third. The services paid for need not include all forms or even basic forms of health care. They can be as few and meager as the State decides, with the single exception that some noninstitutional care must be included.

A broad potential scope of services is listed, with Federal matching available for them, but this is nothing new. Indeed one of the provisions specifies that a program under title XVI cannot be more liberal than the medical program under old-age assistance matched under title I, and that there can be no reduction in any of the public assistance programs to finance title XVI. These safeguarding provisions are only fair to the low-income people now dependent on assistance, but they will greatly limit the number of States, the number of people, and the kind of services which will be covered under title XVI.

It is desirable for the Congress to improve and expand public assistance, and title XVI will probably do some good in some places. But let us not deceive ourselves into thinking that it will result in generous State programs, except perhaps in a few instances.

Inherent disadvantages of the public assistance approach will be aggravated by the present fiscal problems of the States. If a progressive State is considering establishing an adequate program under title XVI, the usual arguments will be made that higher taxes will drive business elsewhere and that high payments will attract dependent people. Many States, like my own, have encountered these arguments, which have proved influential with State legislatures regardless of their conformity with the facts. The same barriers to adequacy under a State-by-State approach will be encountered as in other social welfare programs.

Many States have had to expand their services substantially and are having great difficulty raising sufficient revenues. The same is true of many local governments. State and local debts for schools and other functions have increased tremendously and so have State and local outlays and taxes.

According to estimates in the committee report, States and localities would have to provide almost $160 million a year in order to receive $165 million of Federal funds under title XVI. If they do not find such funds, then even fewer persons would be helped than the one-half million to 1 million aged estimated by the Department of Health, Education, and Welfare.

The Department's estimates as to how many persons will be aided and what Federal funds States will receive naturally involve many judgments on political, fiscal, and social factors. But it may well be true, as the Department's table on page 11 of the committee report shows, that 3 States would get 51 percent of the total Federal funds and that 16 States—including the 3—would get 95 percent. The remaining 5 percent would be split among 34 States, many of which in practice would receive little if anything.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. MACHROWICZ. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. I congratulate the gentleman on the effective speech he is making. I have listened with particular interest to his reference to the original Social Security Act. It happens that I was one of those who drafted the original Social Security Act, because I was a member of the Committee on Ways and Means at the time. I served on that committee for 10 years, at least. I remember well the cry of "socialism" that was made, and the gentleman is stating history correctly. I also remember that the insurance companies were saying that the passage of the bill would destroy the insurance business in this country. We all know now that it has been an impetus in strengthening the insurance companies by making the people of our country insurance minded. That argument "socialism" against the Forand bill is just as fallacious as it can be. There is nothing socialistic about that bill. It simply uses its provisions as an avenue for the employer and the employee to pay the expenses. They can select their own doctors; they can select their own hospitals. There is absolutely nothing socialistic about it. When the gentleman recalls the cry of "socialism" against the original Social Security Act, which included unemployment compensation and other important provisions, the gentleman is absolutely correct. It is one of the soundest bills that ever passed any Congress, and legislation now along the line of the Forand bill should be enacted into law. And, I hope that the constructive vision of the House conferees, under the chairmanship of our friend, the gentleman from Arkansas [Mr. MILLS], will prevail and that when the bill comes out of conference, the Senate improving it considerably, we will have a real, effective bill.

Mr. MACHROWICZ. I thank the distinguished majority leader. I want to say that his contribution to the establishment of the social security system and its development are well known to this Congress and the entire Nation.

Mr. Chairman, the proposed improvements in title I, the present old-age assistance program, are desirable but all too limited. They make additional Federal funds available if States expand their own appropriations. The 27 States that now pay an average of at least $65 a month to old-age assistance recipients will be able to get 25 cents more per person per month for medical care; other States may get up to $3.50 a month more Federal matching funds looking to a total extra expenditure of $5 a month. Since many recipients are very old and ill, these sums will not remedy the grave inadequacy of medical care under many State programs today.

Congress has already made substantial Federal matching grants available to the States for public assistance, and much money is spent each year from general revenues to help dependent people. But 24 States do not now take advantage of all the Federal matching funds available to them.

The Advisory Council on Public Assistance, created by the social security amendments of 1958, reported to us at

length on "the serious gaps and inadequacies that still remain in coverage, inadequacy of public financial assistance, and in availability of high-quality services." I recommend that report to those who think that a new public assistance title, such as is proposed, plus other changes in public assistance will meet the great health needs of the aged in a satisfactory manner. The report points out, for example, that "not many States provide assistance for comprehensive medical care. Some pay only for a single item."

If the great majority of the aged, including the 12 million who have old-age, survivors, and disability insurance protection, can receive health benefits through the social insurance system, then the load on public assistance will be smaller and States and localities will be able to do a better job for persons dependent on this program of last resort.

A two-pronged approach is necessary, and this bill deals with only one: public assistance, based on a means test.

Surely our Nation with a gross national product of more than $500 billion can do better by our aged citizens.

I hope this bill will pass, because otherwise the other body will have no vehicle through which to exercise its will on this issue, but I hope also that there will be in that body a sufficiently adequate improvement of the bill to meet the urgent needs of the people of our country.

Mr. MILLS. Mr. Chairman, I yield 2 minutes to the gentleman from Colorado [Mr. ROGERS].

Mr. ROGERS of Colorado. Mr. Chairman, I should like to propound a question to the chairman of the Committee on Ways and Means.

The State of Colorado has an old-age assistance program which also provides for medical care to those who are eligible to receive old-age assistance. My question is, will this bill, when enacted into law, permit the State of Colorado to set up a separate plan to provide for the aged and those whose income may be such that they are not eligible under the old-age assistance program? Could the State of Colorado set up such a plan?

Mr. MILLS. The gentleman has described the purpose of title XVI, to enable his State and all other States desiring to do so to set up such a plan.

Mr. ROGERS of Colorado. What could be the extent of the plan by the State? For example, as to anyone who is past the age of 65 and whose income is less than $200 a month, could the State say that he would be entitled to participate in the State program and then the Federal Government would match it?

Mr. MILLS. Yes, sir; it is entirely up to the State. The State is given the greatest latitude here in determining who is eligible when it comes to medical needs just as it is under the other public assistance titles. The program is designed to meet these needs of low income aged who are otherwise self-sufficient.

Mr. ROGERS of Colorado. Am I to understand, also, that the State could not give more under the plan provided in this legislation than is provided in the old-age assistance medical plan that is now in operation?

Mr. MILLS. The gentleman is correct.

Mr. ROGERS of Colorado. And if the State of Colorado, for example, wants to increase the benefits for medical care to those on old-age assistance, it may do so?

Mr. MILLS. It may do so.

Mr. ROGERS of Colorado. But this plan would not permit the State to pay more than they give to those who now receive old-age assistance or will receive old-age assistance in the future?

Mr. MILLS. The gentleman is correct.

Mr. ROGERS of Colorado. I thank the gentleman.

Mr. MILLS. Mr. Chairman, I yield 2 minutes to the gentleman from Kentucky [Mr. PERKINS].

Mr. PERKINS. Mr. Chairman, the social security amendments of 1960, as reported by the Ways and Means Committee, in addition to other changes, make two very important forward steps by, first, removing the requirement that applicants for disability benefits must be age 50 or over; and, second, recognizing that the States will require more Federal help if they are to meet more adequately the heavy and unpredictable costs of providing health care for those of our older men and women, otherwise self-sufficient, who are in need when they become ill.

All of us are agreed, I am sure, that the vast improvements in medical care which have occurred even within the last decade, must be made more widely available to all of our people. The resulting change in life expectancy—which has made the astonishing increase from only 47 years in 1900 to nearly 70 years today—is but one of the reasons why we must make better provision for the health needs of our older men and women.

Complicating the problem is the fact that the cost of this improved medical care has greatly increased. In a very graphic way this is illustrated by a recent article in the U.S. News & World Report which shows that, while the cost of living across the board in the United States has increased 24.8 percent in the last 10 years, by comparison medical costs have skyrocketed. For example, medical costs in general have increased by almost twice this amount to 47.5 percent, a semiprivate hospital room is up 88.3 percent, and the cost of hospital insurance premiums has spiraled to 108.1 percent. Now are there any indications that these costs will not continue to rise.

Another change in our pattern of medical care which we have not fully recognized as a nation is the paradox that our successes in modern medicine tend to bring about a demand for more medical services since, obviously, there is more reason for buying services if they can do some good. Doctors' visits now average about five a year per person whereas, as recently as the 1920's, they averaged a little over two per person. Hospital admissions have also climbed. In the 1920's, 1 out of 17 persons in the population went to a hospital during a year whereas today 1 out of 8 enters a hospital during a year.

The appalling tragedy which faces us is that older persons in our country still generally have incomes so low that they cannot afford to meet the staggering costs which can arise from a prolonged illness. In spite of the fact that aged persons drawing benefits from social security and related public programs has increased from 20.2 percent in 1948 to around 70 percent today and despite the vast increase in the amount of benefits now being paid there were still 8.8 million aged persons in 1957 with cash incomes of less than $1,000. This, we can be sure, is one reason why the 1957 survey of social security beneficiaries showed that only 14.4 percent of married couples and 9.2 percent of unmarried beneficiaries had some of their medical costs met by insurance. The simple truth, which we must recognize, is that too many of our senior citizens simply do not have the money to buy the kind of comprehensive insurance coverage which they need. The minimum payments under social security should be raised from the present $33 so that they will be no less than $50 per month. This can be done without increasing the social security tax and it certainly cannot be considered inflationary.

A very important point appearing in the "Summary of Findings and Recommendations of the Kentucky Commission on Medical Care for Indigent Persons in Kentucky" is that, while free services are provided for many of these people, by certain hospitals and physicians, this does not always meet the need. In the words of the report:

> Physicians and other persons frequently are willing to give of their time and professional skills to the indigent without compensation. However, this burden falls heavily on some and lightly on others.
>
> In order to avoid deficits which free services to the indigent would create, hospitals must pass the costs of such services on to hospital patients who are able to pay. It is not fair for the patients who are able to pay their hospital bills to carry the burden of financing the care of indigent persons. It adds to the paying patient's burden at a time when he is already facing heavy medical care costs.
>
> Although physicians and other professional people and general hospitals provide a considerable amount of free service for the indigent, other groups of suppliers, including operators of proprietary nursing homes, registered nurses, druggists, and some physicians and dentists are unable to provide free service.
>
> Thus it is clear that the present arrangements are not equitable; they place an unjust burden on some suppliers of medical care and on the nonindigent sick in the hospitals.
>
> Furthermore, under this system many thousands go without needed medical care because through pride or ignorance they fail to ask for free services.

I am proud to say that Kentucky will inaugurate a new and better medical care program beginning with the calendar year 1961. The Kentucky Medical Assistance Act, which was passed this year, provides for vendor payments for medical care not only for people on public assistance but also to include care for those people who are not receiving payments for subsistence but who need help in meeting their medical care costs. The

new legislation is, indeed, roughly comparable to the new title XVI which is established by the bill before the House today in that it specifies that the kind of medical care to be provided shall include but not necessarily be limited to, first, hospital care, including drugs and medical supplies and services during any period of actual hospitalization; second, nursing home care, including medical supplies and services and drugs during confinement therein on prescription of a physician or dentist; and third, drugs, nursing care, and medical supplies and services during the time when a recipient is not in a hospital but is under treatment and on the prescription of a physician or dentist.

The scope of medical benefits, as determined by the States, in the committee bill would permit the Federal Government to participate, through an equalization formula favorable to low-income States, in any or all of the following services—where limits are applicable they are specified—provided both institutional and noninstitutional services are available: (a) Inpatient hospital services up to 120 days per year, (b) skilled nursing-home services, (c) physicians' services, (d) outpatient hospital services, (e) organized home care services, (f) private duty nursing services, (g) therapeutic services, (h) major dental treatment, (i) laboratory and X-ray services up to $200 per year, and (j) prescribed drugs up to $200 per year.

It is important to note, too, that the bill gives incentives, particularly to the low-income States, to improve their medical programs for people on old-age assistance.

Kentucky cannot easily pay for the cost of its new program already scheduled to go into effect next year. We have hard times in our State as I have frequently pointed out. But I believe our experience shows that, when the true dimensions of the medical problems facing older people are studied thoroughly and understood—as has happened in Kentucky—most States will be willing to follow the same course. The legislation before us today will encourage such a development and I can assure you that the increased assistance in Federal money provided by the bill will be a source of further encouragement to my State.

I want also to congratulate the Committee on Ways and Means for expanding the scope of what I have always believed to be one of the most important segments of our social security plan—our disability insurance system. Although I would make other changes in the plan in the direction of liberalizing the very strict definition of disability in existing law, I want the record to show that I am in complete agreement with the provision in the committee bill which removes the present requirement that people must be at least 50 years of age before they are entitled to these benefits.

You will recall that the original disability benefits program established in the 1956 amendments was described as a "conservative" program because of the limited experience under the disability freeze, or waiver of premium, provision adopted in 1954 and also because of the lack of definitive information on the costs of paying disability benefits. All evidence now seems to indicate that we have now had ample experience with the program to make it possible for us to extend it to the younger workers. This was amply demonstrated during the course of hearings conducted last fall by the Harrison Subcommittee on the Administration of the Social Security Laws with respect to the disability insurance plan. According to the report issued by this subcommittee, the evidence before it is:

First. There is no administrative or other justification for continuation of this purely arbitrary distinction.

Second. The distinction can be eliminated without an increase of the tax or impairment of the soundness of the trust fund, according to the Department of Health, Education, and Welfare.

It is good to know that an estimated 125,000 disabled workers and an equal number of their dependents would qualify for benefits immediately upon the removal of the age 50 restriction, effective for the second month after the enactment of the law. For, as the Committee on Ways and Means report points out:

> The need of younger disabled workers and their families for disability protection is, in some respects, greater than that of older workers. They are more likely to have families dependent upon them than is the case with respect to workers aged 50 and over. Many who would be eligible for disability benefits except for the age limitation are now receiving payments under the public assistance programs. With insurance benefits available to them and their dependents, some of these individuals would no longer need assistance payments. As a result, the first-year saving in public assistance funds is estimated at $28 million and it is expected that more would be saved in later years.

I also applaud the change in the disability plan, which stresses the rehabilitation aspects of the program by continuing benefits for 12 months to all disabled workers who seek to rehabilitate themselves or be rehabilitated through private or other governmental agencies. This provision should not be limited, as under existing law, only to those who are seeking rehabilitation through a State-approved vocational rehabilitation plan.

I am aware that there are a number of problems in the disability program. Some very distinguished members of the Kentucky bar have written to me as to the necessity of providing proper representation for the average applicant who is sick and often destitute. They also emphasize the problem facing lawyers and claimants in understanding the standards which govern the determination of disability under the act. I am aware of the fine work which the Subcommittee on the Administration of the Social Security Laws has done in this area. Their recommendation that the Department expand their regulations so as to spell out in some detail the criteria—hitherto unavailable to claimants or their representatives—which govern determinations of disability and give increased attention to protecting claimant's rights at all stages of the disability determination and appeal process, is an important forward step. Failure of the Department to act in this regard will leave the Congress no alternative but to lay down more explicit legislative guidelines.

In conclusion let me say that I am glad to see that the concern which all of us have for providing adequate protection under the social security plan for our widows and children is also reflected by two changes contained in the bill. The first would increase benefits for about 400,000 orphaned children of workers who have died, or for the dependent children of retired workers, to 75 percent of the primary benefit, subject to the family maximum of $254 a month. The second would give new protection to some 25,000 people, most of them widows aged 75 or over, who are the survivors of workers who died before 1940 but had at least 6 quarters of coverage. The bill would make them eligible for benefits for the first time.

I am convinced that the bill before us represents a good base of operations upon which we can build the program of the future. Moreover I believe it will enable us to obtain more and better information with regard to the amount and kind of medical care now available in this country for our older men and women. I am sure that when we have these facts, as we found them in Kentucky, ways will be found to provide our senior citizens with their proper share of medical care. Even though it does not accomplish all of the improvements I had hoped for, therefore, I am happy to support the committee bill and urge its immediate passage.

I would like to ask a question concerning the minimum benefits that are paid to social security retirees in this country today where the vast majority have no income other than their social security benefits. I wonder if the committee took into consideration raising the minimum benefits from $33 up to some realistic figure, such as approximately $50, which could have been done, in my judgment, without jeopardizing the fund in any way; and certainly it would not have been inflationary.

Mr. MILLS. The committee did give consideration to the gentleman's suggestion and discussed it for several hours at different times. The fact is all of us would have liked to have done this but it would require an increase in the payroll tax of .23 percent.

Mr. PERKINS. For increasing the minimum benefits only?

Mr. MILLS. Yes, sir; to $50.

Mr. PERKINS. I should like to ask the gentleman another question in connection with the administration of the disability provision that was enacted in 1956. At that time it was estimated by the Social Security authorities that there were more than 400,000 disabled people who would become eligible when that law was enacted and would be eligible by July 1, 1957. As the gentleman well knows much evidence has been brought before his committee to the effect that many disabled people have not been able to get benefits, and then maybe on the second and third try on reconsideration, some have been granted

benefits. I am asking whether or not the committee considered any guidelines for the Administration to follow in considering these applications such as redefining or attempting to liberalize the definition of disability?

Mr. MILLS. Let me point out to the gentleman that we did not make changes with respect to eligibility except the elimination of the 50-year age limitation. We did include a slight amendment, but it had a very limited application. However, I want the gentleman to recognize that in spite of what we said in 1956 there are 750,000 now drawing disability benefits.

The CHAIRMAN. The time of the gentleman from Kentucky has expired

Mr. MILLS. Mr. Chairman, I yield 2 minutes to the gentleman from Michigan [Mr. DINGELL].

Mr. DINGELL. Mr. Chairman, I rise in support of the legislation. I think it is unfortunate in that the legislation is grossly inadequate to meet the desperate need that it seeks and purports to meet.

Mr. Chairman, I rise to address myself to one phase of this legislation, one which in my opinion has high priority among the people of this country, and which is not adequately treated in the bill before us.

I refer to the health needs of our senior citizens—those who are 65 or older.

I hope there is no one in this House who denies the existence of this problem. For that matter, I do not know of anyone who denies it. Even the American Medical Association does not deny it.

But the AMA says to us, "Don't do anything about it. If you just let us alone, we will work it out."

I am sorry to see the attitude of the AMA reflected in the legislation adopted by the Ways and Means Committee.

If the Congress had taken the advice of the AMA over the last 25 years, we would not have much to show in the way of social welfare legislation.

Frankly, Mr. Chairman, I sometimes get impatient on this question. We know that our old folks, the men and women who have earned the right to honorable retirement, cannot afford to be sick—cannot afford to be hospitalized—in view of today's medical costs.

In my own district and my own State, there are pensioners who not only receive social security benefits, but are also protected by supplementary pension programs negotiated by their unions. They might be called the aristocrats among the retired workers. Their income does not approach that of the retired executives, but it is far higher than they would get from social security alone.

I know these people. I go to their meetings. I talk with them about their problems. And I can assure you, one serious, prolonged illness would wipe them out. They would lose everything they own—everything they have worked for—their homes, their cars, their TV sets, all the hard-won possessions they have slowly accumulated through years of toil and years of thrift.

Is this what we mean by "social security"? I do not think so.

I submit, Mr. Chairman, that this issue is a very simple one in basic concept. We as a nation are committed to the principle of social security; if, as in this case, a problem is standing in the way of achieving this principle, we need to find a solution. It is obvious to me that the solution must arise through the social security system itself.

That is why I gladly introduced in the House a bill identical to that of my distinguished colleague the gentleman from Rhode Island [Mr. FORAND] and supplemented this with other proposals of my own.

There are those who have said, on this floor and elsewhere, that the Forand bill goes too far. I do not claim the Forand bill is perfect, but I have a different kind of complaint—it does not go far enough.

Very frankly, Mr. Chairman, I am not terrified by those who raise the cry of "socialized medicine." I am interested in preserving and improving the health of the American people, old and young alike. If, in order to do this, we must resort to measures that AMA calls "socialized medicine"—or, to use the latest slogan, "political medicine"—then I say, so be it. And I predict that these measures would not only be good medicine for the country, but good political medicine for those of us who support them.

Let me turn to the so-called health program for the old folks that is contained in the bill before us.

What does it amount to?

First of all, it rejects the social security approach. It rejects the proposal that this should be truly a national and universal program. It rejects the conception of health care for the aged as an insurance program, paid for over the working life of the beneficiaries.

Instead, it proposes to set up an enlargement of the public assistance program. It proposes to spend $325 million a year out of the Public Treasury; out of the budget, if you will.

And for what purpose? What is the great good that will be accomplished?

The whole achievement of this program will be to give a certain amount of help to perhaps a million old folks—or perhaps only half that many—concentrated in a few States, provided they are willing to meet a means test. And even this much will only come about where the States are willing to match or almost match the Federal funds.

So all together, counting State and Federal funds, we will spend some $600 million a year to help a million people. And we will do it by enforcing conditions that in some States may require that those who are helped must first be paupers.

What a bargain. If this is an economy measure, I do not know a nickel from a dollar.

Let me remind the House that the Forand bill, the plan that was supposed to be so extreme and so radical, would have made help available to more than 11 million people, at a cost of only a little over $1 billion. And all the money would have been raised through a small increase in the social security tax. There would have been no cost to the Treasury whatever.

I am well aware, Mr. Chairman, like all of us, that this bill cannot be amended from the floor. I am not quarreling with the wisdom of a closed rule on legislation of this kind. Too often, on some matters, the passions of the moment have prevailed over the considered wisdom of committees when bills have been offered under an open rule.

Nevertheless it is unfortunate that a weak and unworkable program on health care for the old folks should have been written into the general social security bill. I have no doubt, Mr. Chairman, that a majority of this House would stand up and be counted in support of applying the social security principle to this area. I regret to say that in some respects the absence of that principle from this legislation is an indictment of our committee system, worthy though it may be in other respects.

However, I am not without hope. It is my hope that the other body, in its wisdom, will correct the error in the bill before us, and return it to this House for further consideration. I would have much preferred that the credit should be given to us, for we in this House conceived and refined this great social advance. But I am less concerned with credit than with results. I am sure I express a majority opinion of this honored House when I look forward to the help of the other body in making health care for the aged within the social security system a reality this year.

Mr. MILLS. Mr. Chairman, I yield such time as he may desire to the distinguished gentleman from Rhode Island [Mr. FOGARTY].

Mr. FOGARTY. Mr. Chairman, the decision of our distinguished colleague and my good friend, AIME FORAND, to retire from public life upon the conclusion of this session of the Congress has left me with a feeling of personal loss. For almost 20 years we have worked side by side here in the House attempting to effectively represent the good people of our great State of Rhode Island. In all these years, I have looked upon AIME FORAND as a source of experienced knowledge and a fountain of good commonsense. We have shared many moments of triumph and some of defeat. Through it all, he has kept his good disposition and humor, and has never lost sight of our common objective—good government for all the people of this Nation. He has forged ahead with a patience and diligence that has truly been an inspiration to me as, I am sure, it has been to all of you.

I think we can all profit from his good example. I know that I and all the citizens of Rhode Island take great pride in his outstanding record of achievement in public office. I note, of course, that AIME was born in the Bay State—right in JOE MARTIN'S district, at Fall River, Mass. But upon attaining the age of reason, he followed the path of Roger Williams, and came to our great State, which he was destined to represent so nobly here for many years.

Following overseas service in World War I and subsequent business pursuits, he acquired valuable House experience as the secretary to several of his prede-

cessors, Congressmen Jeremiah O'Connell and Francis Condon, both of whom became outstanding jurists on the Rhode Island supreme court. The lessons he learned then he learned well. It was not long before AIME had a chance to demonstrate their practical application because on November 3, 1936, he was elected to the 75th Congress. Were it not for the countrywide landslide in 1938 which cost him his seat in the 76th Congress by a handful of votes, he would now have a record of 24 consecutive years in the House instead of the still impressive record of 22 years broken by that one gap.

I will not attempt to detail the record of his service on the Ways and Means Committee. Many of you who have served on that committee with him can recount it much more intimately than I can. But the hours, days, and months which he has devoted, with painstaking care, to the complicated and important measures in that committee are beyond computation. In this task he has brought to bear a sound, wise, and sympathetic outlook on legislation as it affects the average man and woman in this country. He has always been ready to champion a just cause—and to lead it well.

One facet of his character that has always impressed me is his true humility. He has never sought acclaim for his many achievements and he has performed his duties in a quiet, effective manner—like the valuable ballplayer on the team who makes the hard plays look real easy. In recognition of his services as an outstanding legislator, in 1951 Providence College bestowed on him the honorary degree of doctor of laws, noting in that citation his integrity as a gentleman and his virtues as an elected official.

Over the years, our fellow citizens in Rhode Island have returned him to the House again and again, with ever-increasing pluralities. There is no doubt that he could reasonably expect to go on for many years to come. He has merited such confidence and given so much of his time and labor to the affairs of Government that his services could be deemed by most of his constituents as indispensable.

His knowledge of the intricate procedures of this House and his coherent sense of impartiality has made him an outstanding presiding officer of this body on the frequent occasions when our distinguished Speaker has called upon him to serve in such capacity. I need not mention the courtesy and kindness that he has always extended to his colleagues, young and old, who have been privileged to serve with him. So it remains for future history to write his name high on the scroll of those who have served in the Congress of the United States. As for me, I write it now in the top echelon.

AIME FORAND has long had a particular interest in the welfare of the aged. Perhaps the greatest push toward national prominence for our esteemed colleague was his sponsorship of a proposal to do something about the medical needs of our older citizens. The Forand bill, which he fought for so ably and with such devoted effort will alone assure him a very special place in the minds and hearts of all the elderly throughout the country. He will rightfully take his place among the great protagonists of social legislation such as President Roosevelt and Senator Wagner. Truly he has deserved the reference which is often made to him as "the champion of social security."

However, he has now made a free and uninfluenced choice to return to private life. With deep regret we respect the reasons which dictated that decision. Yes, we will all miss AIME FORAND tremendously—and I, in particular, will feel his absence keenly. May he enjoy the rich rewards that flow from a sense of having discharged a public trust to the full measure of his great ability—discharged it well and honestly. And may he and his gracious and charming wife, Gertrude, have years of health, happiness, and success in the pleasant road of private civic life that lies ahead.

So, I say to my dear friend, AIME FORAND—Dr. AIME FORAND—hail and farewell, the people of this great Nation will never forget you.

Mr. ALBERT. Mr. Chairman, I desire to join the distinguished gentleman from Rhode Island [Mr. FOGARTY] in his tribute to our beloved colleague, AIME J. FORAND. Congressman FORAND has been a tower of strength in this House ever since I have been a Member. There is no finer representative in this or any other legislative body. His service here has been characterized by devotion to the best interests of the people. He is a great, progressive Democrat and a loyal American.

AIME FORAND is also a gentleman. His courteous consideration of others at all times, his helpful attitude, his friendly smile, have brought joy to every person who has ever had any association with him.

We wish him well as he leaves us. We hope he will have a long and useful life in the years ahead. We hope also that he will be a frequent visitor to this chamber during the years of his retirement.

Mr. McCORMACK. Mr. Chairman, Representative AIME FORAND's retirement will leave a gaping hole in our ranks. Ever since his election to the 75th Congress in 1936, AIME FORAND has epitomized devotion to duty. His foremost concern, at all times, was people—not rich and influential people, but average people, people who needed help. It is a fitting tribute to Congressman FORAND that his name has become and always will be inextricably intertwined with the hopes and prayers of our Nation's elder citizens. Those whose voices are no longer strong, those who can no longer scream and shout at the top of their lungs, know that in AIME FORAND they had the most steadfast champion in Congress that they have ever had.

The gentleman from Rhode Island already had a distinguished record of service to his fellowmen when he came to Washington. He had been a newspaperman, a veteran of World War I who had seen action in France, and Chief of the Rhode Island Division of Soldier's Relief as well as commandant of the State soldiers' home.

As a Member of this House, he contributed immeasurably to the achievements of every Congress since 1937. His service on the Democratic Steering Committee and on the all-important Ways and Means Committee was outstanding.

The people of the First Congressional District of Rhode Island have given us a colleague who will serve as an inspiration for every Member of Congress for generations to come. He, in turn, has given them incomparable representation in Washington. I am immensely grateful to the voters of Rhode Island's First District for having sent AIME FORAND to Congress in 1937 and for having kept him here for an uninterrupted period of 23 years. I am even more grateful to AIME FORAND himself for his invaluable contribution to the achievements of the U.S. Congress. I am certain that I express a unanimous sentiment when I say that all our best wishes go with him as he prepares for retirement.

Mr. MASON. Mr. Chairman, I yield such time as he may desire to the gentleman from Michigan [Mr. BENNETT].

Mr. BENNETT of Michigan. Mr. Chairman, one of the most pressing problems in our Nation today is the plight of approximately 16 million Americans, or 9 percent of our total population, who have reached the normal retirement age of 65 and over. They are faced with problems of major proportions with respect to health, finances, housing, and employment.

These persons have the usual diseases associated with age, diseases which are long in duration and frequently require expensive medical care in hospitals and nursing homes. By and large, they do not have the income to pay for such care. Taking all aged individuals including those fully employed, almost 60 percent had less than $1,000 in money income in 1958. Another 20 percent had income between $1,000 and $2,000 in that year. The average income for a retired family is about half of that of all families.

Equally pressing are the problems faced by several million American citizens who are about to retire on pensions which are completely inadequate to maintain a decent standard of living.

There are many retired people today in every State of this Union whose social security pensions are so small they must seek assistance from various welfare and charitable organizations to maintain the barest type of existence. No sound reason has been advanced for permitting this lamentable situation to continue any longer.

There are those who argue that we cannot afford to increase social security pensions and liberalize other benefits because of the great cost. But I feel certain most working men and women throughout the country would be willing to absorb a part of this cost if they were assured they would receive a pension at the time of retirement which would enable them to live decently and comfortably without other assistance.

We have been very generous in our aid to foreign countries to enable them to improve their economies and provide better living conditions for their people. We can ill afford to neglect those at

home to whom we owe our first and primary duty.

Basically our social security system is one of the soundest in the world. It is consistent with our free enterprise system where the worker, the employer, and the Government all join together in contributing to a plan which will assure a high standard of living for those who are no longer able to pursue gainful employment. Congress has made many improvements in this basic law since it was first adopted about 25 years ago. But the program cannot stand still. It must be geared to changes in our economic growth and progress in order to meet constantly changing conditions and particularly to keep pace with increased costs of living. The last pension increase in January of 1959 averaged only about $4.20 per month and was completely inadequate. That is the reason it is so desperately important for Congress to take action now to make further increases and adjustments before the adjournment of this session.

It is all very well to discuss the matter and present theories for a solution—but this is a slow and tedious process. The time has come when we must do something practical about the problem. Let us look to those affected by this law.

As of the beginning of this year, 13-704,000 individuals were receiving social security benefits; 7,526,000 were old-age beneficiaries; 2,160,000 were wives or dependent husbands of retired workers; 1,394,000 were widows or dependent widowers; 35,000 were parents of workers who have died; 1,753,000 were fatherless children; 376,000 were the widowed mothers of these children; 334,000 were disabled workers aged 50 to 64 years; and 126,000 were the wives and children of disabled workers.

The amount of benefits paid to all of the above classes of beneficiaries in December 1959 amounted to $845,100,000, and this amount is increasing monthly by an average of $7,100,000. For the calendar year 1959, the benefits paid amounted to approximately $9,700,000,-000.

Expenditures under this program will continue to grow in future years because of the growth of the labor force, the higher benefit rates at which people come on the benefit rolls, and because of the disability benefits provided under the 1956 amendments. Furthermore, the proportion of older people in our population is increasing, and when the insurance program has been in operation longer, more individuals who reach retirement age each year will be able to qualify for benefits.

Our social security system is based on the sound principle that workers and their employers should contribute a share of earnings each year during their working life toward a source of income when they can no longer work. It recognizes that, for most American families the paycheck represents a place to live, adequate food and clothing, and necessary medical care. When that paycheck stops—because of death, retirement, or disability—the social security benefit indeed becomes the difference between a life of dignity and self-respect and one of humiliating destitution.

Because I am concerned with maintaining a sound and fair social security system I introduced H.R. 8442 on July 29, 1959, providing principally for hospital, nursing home and surgical services to all those eligible for old-age and survivors insurance benefits, facilitating retirement at an earlier age, and increasing benefits. My bill has seven principal points which I now wish to explain.

First. Add a program which will provide for the costs of hospitalization, surgery, and nursing home care for the retired worker and his wife, whose total family income is inadequate within the income limitations specified in the bill.

Second. Reduce the retirement age to 62—now 65—for men and to 60—now 62—for women, paying full benefits at these ages, thus eliminating the present reduced benefits for wives and women workers who elect to apply at age 62. An additional one-half million women and three-fourths of a million men could immediately become eligible to draw benefits as a result.

Third. Widows who have remained at home to care for their minor children and who presently become ineligible for a mother's benefit after the children have reached the age of 18 years, would become eligible at age 50—now 62—so that they can qualify for benefits at an earlier age.

Fourth. Raise the minimum benefit from $33 to $50 to help reduce the need for supplementation of social security benefits through the "needs test" public assistance program. Over 2 million people would be affected by this change.

Fifth. Increase present benefits generally, by 5 percent. The increase for those getting the minimum would be from $33 to $50, or approximately 50 percent. The new maximum benefit would be $155.40, but this would not become effective for several years to come because a person would have to have an average monthly wage of approximately $500 to receive the maximum benefit.

Sixth. Raise the wage base for tax and benefit purposes from $4,200 to $6,000 per year.

Seventh. Liberalize the definition of total and permanent disability and the qualifying period in present law so more people can qualify for benefits under this program.

1. MEDICAL, NURSING, AND HOSPITAL CARE

One of the most important features of my bill is a provision for medical, nursing, and hospital care for those people who are on the social security retirement rolls.

The rising cost of medical care, and particularly hospital care, over the past decade has been felt by everyone, but especially by older people. They have larger than average medical needs. As a group, they use approximately 2½ times as much hospital care as the average for persons under 65 years of age, and many have special needs for long-term institutional care. Their incomes are generally much lower than those of the working population, and in many cases are either fixed or declining in amount. They have less opportunity than employed persons to spread the cost of medical and hospital care through health insurance. A large number of our older citizens must, therefore, turn to public assistance for payment of their medical and hospital bills. It is imperative that a satisfactory solution to this pressing problem be found.

My bill recognizes the inability of numerous retired people to pay for the cost of medical care associated with hospitalization on meager pensions which are now available to them. My plan would pay the cost of hospital care and surgical services provided in the hospital up to 60 days for people eligible for social security benefits. If further care in a nursing home is indicated by the physician, additional costs up to 120 days of combined hospital and nursing home care would be provided.

The method of confining payments to those hospital services where cost schedules have already been tested by Blue Cross plans, also preserves the professional independence of doctors. It is designed simply to provide a form of insurance protection for those people on social security whose income is so limited that they cannot afford to pay the premiums for this kind of prepaid care.

We must make this forward step because I am convinced our older people are not getting their share of the modern but increasingly costly miracles of medical care. The high cost of medical care is felt more acutely by older people, moreover, because their illnesses are usually of longer duration.

According to the most recent nationwide survey of medical needs and costs, conducted for the Health Information Foundation in 1957 to 1958, the average annual cost for private care for people 65 and over was $177 as compared with $94 a year for the general population. Of the total of over $16.2 billion spent for private personal health services, 17 percent, or $2.7 billion was required for these older people. In other words, men and women 65 years of age and over were faced with charges 88 percent greater than was the general population.

The wider application of preventive measures which we are setting today will lead to less infirmity in older years in the future. This is one of the reasons why I am not persuaded by the argument sometimes presented that my proposal would lead eventually to excessive medical costs. Another is that I am confident the doctors of this country are competent enough, and honest enough, to insure against any abuse of this provision.

While progress is underway toward the goal of providing better voluntary prepayment coverage for older people, the fact still remains that although 71 percent of our people under 65 have some form of prepayment insurance, only 40 percent of people 65 and over are now insured. Moreover, among these older people, the proportion with insurance declines with advancing age so that fewer than 30 percent are insured among those aged 75 and over.

Many older people are without adequate medical care protection not because of negligence. It is simply because it is not available to them at a price they can pay. Thus, my plan is

designed specifically to meet the medical care needs of people with a low retirement income who would otherwise be self-sufficient. We will not only be preserving individual self-respect, but we will also be helping hospitals to meet the mounting costs of providing the best kind of medical care for people who cannot now afford it.

Mr. Chairman, at this point in my remarks I would like to digress for a moment to comment on the provisions for a medical care program proposed in the bill reported by the Committee on Ways and Means, H.R. 12580. The majority of that committee urge a new Federal-State grants-in-aid program to help the States assist low-income, aged individuals who need help in meeting their medical expenses. Participation in this program would be optional with the States, with each State determining the extent and character of its own program, including standards of eligibility and scope of benefits.

While I agree that such a program would be helpful to the medically indigent in those States which eventually adopt such a program, I am strongly of the opinion that the better approach to the problem of hospitalization and medical care for our senior citizens is through the social security program as provided for by my bill. My approach would make unnecessary the humiliation of a need test contemplated by the bill reported by the Committee on Ways and Means and the cost of health benefits under my bill would be financed by small contributions of employees during their working lives rather than by taxes levied upon the public generally, which is contemplated by the committee bill.

2. REDUCTION OF RETIREMENT AGE

My second change—reduction of the retirement age from 65 to 62 for men and from 62 to 60 for women—is also one of the most important features of my bill. It will reach down to provide social security benefits for millions of men and women today who have been arbitrarily retired from their jobs and must now wait months and often years, a period during which savings are depleted, assets are liquidated, and often charity must be solicited from friends, relatives, or public funds, until they can qualify for their social security benefits. For the truth of the matter is that, even under the present law, less than 10 percent retire voluntarily to qualify for social security benefits. Most people retire because of company retirement provisions or because of ill health.

Too often the eligibility age for social security is confused with a compulsory retirement age. Yet almost 25 years of experience with the system has shown us that the man or woman who is able to work beyond retirement age—and is allowed to work beyond that age—will almost invariably continue on the job. The fact that the average social security benefit for the retired worker today is $73 a month is one understandable incentive.

Another compelling reason for lowering the retirement age is the tragic fact that older workers, who are the special victims of plant relocations and retooling operations, find it almost impossible to secure new jobs or the opportunity to develop new and marketable skills. It is an anomaly of our times that the new machines which add so greatly to our productivity as a nation are viewed with fear and apprehension by older men and women who, after a long working life, find their jobs threatened by the age of electronics. One necessary way of adjusting to this fact is by lowering the floor for eligibility so that the displaced workers of our modern productive plant can begin to receive benefits at an earlier age if they have been forcibly retired before they are 65.

3. ELIGIBILITY OF WIDOWED MOTHERS

My third proposal—to make widowed mothers eligible at age 50, instead of requiring them to wait until they are 62 as in present law—will round out the purpose of the 1939 amendments which took special account of the fact that the widows and orphans of workers who die prematurely are entitled to protection against wage-loss caused by the death of the family breadwinner. Under this provision each child was made eligible for a benefit during his minority and the widowed mother received her own benefit until her youngest child reached the age of 18. The purpose of the amendment was to make it possible for the widowed mother to remain in the home and care for her children—in the same way she would have done had her husband not died—by providing social security benefits in lieu of his wages. This is, indeed, a laudable purpose and one which I heartily endorse. But it does not go far enough. Too often, I am afraid, the cancellation of the benefit check because the children are grown works a cruel hardship on the mother who, having raised her family, finds herself, in middle age, thrown off the social security rolls. According to the most recent figures available—for the end of the year 1958—approximately 40 percent of the women receiving mother's benefits were between the ages of 40 and 50. After age 50, as could be expected, the number of eligible mothers tapered off abruptly.

My proposal would accomplish two purposes:

First. For those mothers who are 50 or over when the youngest child reaches 18, the benefit would be continued for the rest of their lives.

Second. For those mothers who are younger than 50 when the youngest child reaches 18, the waiting period for benefits would be cut by 12 years because they would be eligible for benefits at age 50 instead of age 62.

Mr. Chairman, I submit that all evidence shows it is extremely difficult for women without work experience to find a job after 50. Over 46 percent of the women age 45 to 54 are in the labor force today and of those who have jobs, the great majority are in the low-pay service jobs in private households, business establishments, and industry. Therefore, this change is of the most urgent importance.

4. INCREASE MINIMUM BENEFIT

The fourth improvement I propose would increase the amount of the present minimum benefit from $33 to $50 per month—a change which would be of particular importance to those people who can qualify for social security only on the basis of low wages—especially domestic workers and those agricultural workers who do day work. Obviously the present minimum benefits of $33 a month cannot even be described as a subsistence income in our high-cost economy of today, yet about 10 percent of the people now receving social security benefits receive this minimum amount. Because this benefit is so low, it is necessary for the public assistance agencies to supplement these social security benefits to bring them up to the barest minimum required for existence. As of March 1959, 27 percent of people on old-age assistance were receiving social security benefits so small they required such supplementation, and this figure has been rising over the years.

5. CHANGING BENEFIT FORMULA

The fifth provision would make a related increase in benefits for all people now receiving benefits and those who will apply for them in the future.

As I have previously stated, the minimum under my proposal would be $50, or a 50 percent increase over the present minimum of $33. This percentage would gradually decrease until those who are now receiving $48 and over would receive a 5-percent increase. Moreover, since my bill would credit earnings up to $500 a month—instead of $400 under present law—the maximum old-age benefit which eventually could be paid when the new $6,000 annual wage base goes into full effect would be $155.40 per month instead of the present maximum of $127.

This revision in the benefit formula recognizes the fact that social security benefits must reflect the increases that have taken place in the cost of living since January 1, 1959, when the last increase in benefits was made. I am sure I do not need to emphasize the fact that a cost-of-living adjustment is urgently needed by our older people. For they are the special victims of the sharp rise in the price of meat, and milk, and medical care. They are trying to exist on a fixed income which buys less and less with each passing day.

6. INCREASE IN SOCIAL SECURITY WAGE BASE

The sixth change proposed in the system is to bring the social security wage base, for benefit and tax purposes, more closely in line with modern price and wage levels. The original wage base of $3,000 covered the full earnings of 97 percent of all workers in covered employment in 1939. For the wage base of $4,200 the figure was only 72 percent, and for the present wage base of $4,800, the figure is 75 percent. Of men with earnings during the whole year, only 47 percent have all their earnings covered under the present ceiling of $4,800. Thus, for a majority of men who are regularly employed, the present ceiling puts a dead stop to further benefit increases no matter how much their earnings rise. Under my proposed $6,000 wage base, 90 percent will have their entire wages covered.

7. LIBERALIZATION OF PERMANENT AND TOTAL DISABILITY

My seventh proposal would establish a more liberal definition of permanent and total disability for the benefits which were authorized by the 1956 amendments and modify the stringent length of service requirements. These more realistic provisions would not only apply to the benefits payable to people aged 50 and over, but also to the disability freeze which applies to workers at any age.

I presume that every Member of Congress has received mail from people who have considered themselves qualified for these payments but have been rejected by the Social Security Administration. The definition of disability in the law is strict and it is even more strictly administered.

This conclusion seems to be borne out by the facts. In September 1956, right after the Act was passed, it was estimated that about 400,000 people would qualify the first year. The President's budget message in January 1957 dropped the figure to 380,000 and later in the year the Bureau of Old-Age and Survivors Insurance issued a revised estimate of 275,000. Actually as of December 1959, some 460,000 disability beneficiaries were on the rolls.

The change I propose would modify the requirement in present law that the disabled person must be unable to "engage in any substantial gainful activity" by stating that he must be unable to "engage in a substantial gainful activity which is the same as or similar to the occupation or employment last performed by him on a regular basis before the onset of such impairment." This latter terminology is closer to what Congress really intended in passing the 1956 amendments and will insure administration of the Act in a way that will give the American worker real protection against crippling injury or disease.

My bill will also reduce the quite stringent requirements that an individual to qualify, must have 20 out of the last 40 quarters of coverage before he is disabled. I propose that this period be reduced to 15 out of the last 30 quarters. Such a revision, I believe, will take care of some of the tragic cases of middle-age workers who are incapacitated in the early years of their coverage under this system.

Another bill which I introduced, H.R. 10955, would further improve the administration of the social security disability program and eliminate certain discriminatory provisions in the present law.

First, the bill provides that a disabled individual could qualify for disability benefits at any age—not at the arbitrary age of 50 as required under present law—if he meets all other requirements of the law. There is no logical reason for granting disability benefits to a disabled employee who is 50 years of age or older and denying such benefits to an employee similarly disabled who is under age 50. Both individuals may be equally in need of benefits. In fact, the younger man often has the greater need for disability benefits because he usually is the sole support of a growing family whereas the older man is likely to have fewer dependents.

Second, the bill would eliminate the requirement of a second 6-month waiting period before disability benefits may be paid again in cases where the disabled person, who has unsuccessfully tried to return to work, is coming back on the disability rolls. Hearings before the Committee on Ways and Means have disclosed that the present requirements in this respect are discouraging people who are on the disability rolls from taking the step toward rehabilitation. This provision should, therefore, be repealed.

Third, the bill provides for an extension of the 12-month trial work period for individuals drawing disability benefits to workers under all types of rehabilitation programs. Under present law, the 12-month trial work period is only available to workers under the State-Federal Vocational Rehabilitation Act programs. Thus, a strong incentive for achieving rehabilitation is denied a disabled worker who attempts such a rehabilitation program on his own or with the assistance of his family and friends.

In conclusion, let me say that we must keep our social security system up to date because we believe in the inherent dignity and worth of each individual.

If the welfare and security of our social security beneficiaries is to be properly protected, the Congress must no longer postpone action on these vital matters. My bills embody the much-needed changes presently required in our social security program. I sincerely hope the Members of this Congress will enact this program into law.

Mr. MASON. Mr. Chairman, I yield such time as he may desire to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, I rise in support of this bill, and wish to comment particularly on the new title establishing a Federal-State program, based on the historic principle of Federal-State cooperation, to assist elderly persons who do not have sufficient means to pay their medical bills when illness occurs or continues.

The costs of good medical care continue to rise. Despite widespread opinion to the contrary, the fees of doctors have not risen as rapidly in the last two decades as have the charges of most other groups providing personal services for people. During the same period when the general level of prices, including the costs of food and clothing, has more than doubled, the fees of general practitioners have risen only 73 percent. The fees of some specialists, such as obstetricians, have risen more; while those of others, such as general surgeons, have risen less.

Other medical costs have risen more steeply. Hospital costs are up sharply. Wages paid to hospital employees were long substandard. More than 70 percent of the charge per hospital day now goes to labor. Obviously hospital rates cannot be substantially reduced.

Other reasons for the increased costs are the more extensive use of costly drugs and of expensive laboratory, X-ray, and other specialized examinations. Also, under the various private insurance plans there has been a marked increase in use of hospitals for diagnosis and for prolonged convalescence as well as for treatment.

PEOPLE LIVING 20 YEARS LONGER

The success of doctors and researchers in inventing new cures and perfecting old ones has also increased the number of years during which people need medical care. People on the average have 20 years more to live than was the case half a century ago. Unfortunately the additional years have to be added at the end of life, most of them after retirement. Even if the elderly are able to work, where can they get jobs? How are they to make a living? What are they to do to keep their minds and bodies active and healthy? How can they avoid increasing anxiety as they see the value of their savings, their insurance, their pensions, their social security benefits, gradually shrinking because their own Government has not succeeded in keeping stable the value of the dollars on which they were counting to live in deserved security and serenity during their declining years?

Again, they often have more illnesses, and longer ones, in these additional decades.

How are the steadily increasing total costs of medical care to be met?

There are many who do it by saving systematically for illnesses just as they save for purchase of a home or an automobile. Almost half of those over 65 years today have private health insurance. They recognize that they must pay higher rates for health insurance and prepare for it—just as they recognize they must pay higher rates for their automobile insurance.

The medical profession has been promoting an overall program to improve the situation:

First. More extensive and noncancellable insurance policies by private companies.

Second. Reduction by doctors of their fees to elderly patients—urging reduction by one-third to one-half.

Third. Reduction of medical costs by improving nursing homes and expanding home care programs as alternatives to the more expensive hospital care.

Fourth. Better education in health maintenance—by doctors, nurses, and employers—of those approaching or already in retirement.

But there still is a large number of retired persons whose total resources simply are not sufficient to enable them to get good medical care when expensive sickness occurs. It is estimated that somewhere between 500,000 and 1 million each year will have illnesses whose costs they will have to have outside help to meet. It is for these that this bill will make provision through Federal-State financing.

WHAT THIS BILL WILL DO

The main services authorized include, when determined by a physician to be necessary: Hospitalization up to 120 days a year; physicians' services; major dental services; nursing-home services; organized home care services; outpatient hospital services; private duty nursing services; laboratory and X-ray services up to $200 a year; and prescribed drugs up to $200 a year. It will assure some 10 million retired persons that they have

such protection each year in case they should have to have assistance.

Under this bill it can be said that no person in our country above 65 years of age will be denied good medical care because of inadequate financial resources. It does not pretend to be a complete solution to the problem. But it is a reasonable and fair beginning. It will take considerable experience in this field to be sure just what more or just what different should be done. It is hoped that out of the White House Conference on the Aging scheduled for next January will come solid information and data to guide future steps.

INADEQUACIES OF FORAND BILL

Various other proposals have been studied conscientiously by the Committee on Ways and Means. Each has some advantages and some disadvantages. The greatest pressure has been for adoption of the bill sponsored by our distinguished colleague, the gentleman from Rhode Island [Mr. FORAND]. Millions have been led to believe that enactment of the Forand bill would give all retired persons full and free medical care all the rest of their lives. It is not so. To begin with, it would provide no benefits at all for about 4 million retired persons who are not on social security, which includes the million and a half who have least resources and need help most.

Second, it would give no help at all with such important items as costs of physicians' services, drugs, laboratory and X-ray services, home-care services. Many older people do not have to go to a hospital but they do have to make frequent calls on their doctor or have home-nursing services or buy expensive medicines.

Among the 12 million for which the Forand bill provides only hospital, nursing home, and surgical benefits, it gives the same benefits to all, to those who do not need outside help as well as to those who do.

Again, the Forand benefits begin the first day of hospitalization, thereby inevitably inviting pressure on the doctors to send patients to the hospital when they do not need to go or to keep them in the hospital when they do not need to stay. This same defect existed in some Blue Cross plans and led to excessive costs and almost prohibitive premiums to pay for the costs. If a conscientious doctor will not recommend hospitalization just because the patient, having paid for hospitalization, wants it, the patient goes to a less good doctor who will recommend it. A veritable racket develops. The patient uses up more money out of the fund but gets poorer care. And the more of the total funds that goes to those who do not need help, the less there is for those who do need it.

When confronted with a difficult problem like this, the temptation is to grab the first bottle of medicine available or the one with the most glowing promises on the label. But the problem is too complicated and too important to too many of our citizens for the Congress to adopt hastily some plan that may not work as intended. This bill is a good first step and I trust something carefully worked out can be adopted in the next Congress.

UNABLE TO GET $1,200 LIMIT INCREASED

Mr. Chairman, there is one other point I should like to mention. My proposal to increase from $75 a month to $1,200 a year the amount a person on social security can earn without losing benefits was adopted in the 1954 amendments. I introduced in 1957 a bill to increase the ceiling on earnings to $1,800 a year and have hoped for its adoption. But it has not been possible to get favorable action because the experts say that it would take one and a half to two billion dollars more a year out of the social security fund which is already not quite in balance. It would require an immediate additional tax on all covered workers and employees of one-half of 1 percent each. The committee believes that is too great an additional load to impose on the gross earnings of all workers. I am sorry, because it would be a better and sounder way to help more retired people, if it were feasible.

Mr. MASON. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. BALDWIN].

Mr. BALDWIN. Mr. Chairman, I rise in support of H.R. 12580. This bill makes a number of improvements in the Social Security Act which are highly desirable. It removes the limitation of 50 years for those who would otherwise qualify for benefits on the grounds of total disability. It extends the coverage of the program to an additional 300,000 people. It increases the benefits payable to children in certain cases and would provide benefits for certain wives, widows, widowers and children of insured workers who are not now eligible for benefits.

There is some question as to whether the medical care provisions go far enough. However, this bill recognizes that this problem is extremely important and should be solved. The provisions of the bill on medical care are a step in the right direction.

Mr. MASON. Mr. Chairman, I yield 8 minutes to the gentleman from Wisconsin [Mr. BYRNES].

Mr. BYRNES of Wisconsin. Mr. Chairman, it is not my purpose to discuss this bill in detail. Most of the provisions have been covered during the course of this debate. I rise, however, to express my support for the legislation. In fact, at the time the chairman introduced the bill, H.R. 12580, I introduced a companion bill to it. No program of the Government can ever be static. We know that times change. We know, in the first instance, we can never expect to write perfect legislation. Therefore, our objective always must be in any governmental program to improve the program and to remove inequities and to keep the legislation in tune with the times, consistent always, of course, maintaining the soundness of the legislation and not interfering with the basic objectives of the fundamental program with which we are dealing. Mr. Chairman, the provisions contained in this bill are in general sound provisions. They move in the direction of trying to remove inequities that have come to our attention. Certainly, nobody will contend the pending bill is a perfect piece of legislation and that we will not have to have any more amendments to the act. I think there are some things in this bill that may not stand the test of time and which are going to prove to be not only aggravations but which will create problems. Generally speaking, however, I think the committee in its endeavor through these long weeks showed a splendid determination to try to write a sound and reasonable bill taking into consideration all the divergencies of opinion that one runs into in any committee composed of 25 members.

One very good thing that I think this bill does is to move farther along the road of trying to get universal coverage. It seems to me there is still one basic defect in our general social security system, and that is we still do not have a situation where all of our people can be considered as eligible for coverage under it. It seems to me, Mr. Chairman, if the program is a good program, we must move in the area of making certain that all of our people are eligible to come under it.

I would like to call attention, Mr. Chairman, to one of the things I think is the most serious defect in the present social security system in our treatment of the aged, and that is the fact that today in the age group over 72 years of age, there are approximately 2 million of our older people, who we could either say were born too soon or Congress acted to late to give them the benefits that other people have under this program. I have proposed that we cover these people—at least those over the age of 72. I take the age 72 because it is at this point that the social security system, in effect, becomes an annuity system rather than a retirement system; it is at this age that we do not look to any work clause as a limitation on their rights to receive benefits. The committee did not see fit to provide for coverage of these people. It is still my hope, Mr. Chairman, that in the not too distant future, the committee and the Congress will deem it proper on the basis of justice and equity that these people who have been forgotten be given the consideration they deserve and that they be given at least the minimum benefits of the OASI program.

Mr. Chairman, let me address myself briefly to the matter of health care which is the item on which we experienced, I suppose, the greatest controversy and the greatest uncertainty as the committee considered this legislation. Let me suggest to the Members and to all who might hear my voice that they should bear a degree of tolerance toward the committee and its efforts in this area.

The original social security proposals received a great deal of study before it was enacted into law. Those in the Congress and also people out of the Congress and people in the Federal Government spent over 2 years working out the basic social security system. It certainly was anything but perfect, even after 2 years of intensive effort. But in that effort, Mr. Chairman, they were dealing with dollar benefits which is cer-

tainly a much more simple matter than trying to provide services for people. The ramifications of the problem of providing medical service are almost unlimited. So I would ask the Members of Congress and of the House to be tolerant of those who have been wrestling with the problem. We have much to learn and much to know about this area of either insuring against medical catastrophe or methods of meeting medical costs. We have much to know about that subject but I think the committee in title 16 has come up with a program that should warrant the support of every Member of this House. This can be said about this new title: if the States act to carry out the objective of title 16 providing medical care for the aged it can be said that no older person needing medical care will be denied that care by reason of his inability to pay for the required medical treatments. By enactment of this bill we express on the part of the Federal Government a willingness of the Federal Government to assume from 50 to 65 percent of the cost of such medical care for such people, and by this action I think we carry out to a very high degree any responsibility that can properly be attributed to the Federal Government in this particular area.

I think it is a sound step; I think it is a reasonable step, and I think, frankly, that the committee is to be complimented for coming forth with this proposal to meet the most crying need as far as medical care and assistance of the old people are concerned.

I could not close, Mr. Chairman, without paying tribute to the gentleman from Rhode Island [Mr. FORAND]. I feel this personally; I would like him to know that I personally feel that it is a great loss to the Congress and to the Nation that he will not be back. We differed, and differed violently, for instance, on the bill relating to the medical insurance under the social security system, but let me say, Mr. Chairman, he is a man always to be admired, a man of sincere conviction, a man with whom one can differ who respects the differences on the part of others without holding it as a personal affront. I certainly want to express to him my hope for a most pleasant and well-deserved rest as he retires from the Congress of the United States.

Mr. MASON. Mr. Chairman, I yield 3 minutes to the gentleman from North Carolina [Mr. JONAS].

Mr. JONAS. Mr. Chairman, I asked for this time in order to propound a question of the distinguished chairman of the Ways and Means Committee.

On page 5 of the committee report the statement is made that no new social security taxes are incorporated in the bill and that even with increased benefits the trust fund will remain actuarily sound.

Mr. MILLS. Is the gentleman referring to this language with the figure "7" at the beginning of the paragraph?

Mr. JONAS. Yes.

Mr. MILLS. The gentleman will notice we say there are minor increases in cost with these improvements. There are also minor increases on the plus side and it is possible for us to bring to the House this recommendation without a percentage increase in the payroll tax. I would not want the gentleman to believe that in the process we are making the program more actuarily sound because that is not the case. I can say to the gentleman that the program is, according to our actuaries, actuarily sound and after this bill is enacted it will be the same as it was before the bill was enacted.

Mr. JONAS. Am I to understand the gentleman is saying that the increased benefits provided in the bill and the other liberalizations are adequately financed within the framework of the existing payroll tax?

Mr. MILLS. I can assure the gentleman that the best information obtainable by the committee convinces me that that is the case.

Mr. JONAS. Another question: I understand that the medical care program is not to be financed by social security taxes or paid for out of the social security trust fund, but out of the general funds in the Treasury?

Mr. MILLS. The general funds and the State.

Mr. JONAS. Matching?

Mr. MILLS. Yes.

Mr. JONAS. The estimated Federal share is $165 million per year plus $160 million each year from the States.

Mr. MILLS. I tried to explain in the course of the remarks I made that this is a very difficult area for estimation. I doubt that these figures are going to prove correct. They may be on the high side, and they may be somewhat on the low side; but, whatever it is, the relationship between the Federal and State money is pretty close.

Mr. JONAS. I have one other question. Will the financing of the medical care program follow the so-called backdoor approach to the Treasury and bypass the budget and appropriation processes?

Mr. MILLS. No. I appreciate the gentleman from North Carolina raising that question. This authorization contemplates an appropriation each year by the Appropriations Committee. The Appropriations Committee under this program is not bypassed at all.

Mr. JONAS. If the States submit plans which are approved by the Federal Government, is that a contract that we are obligated to carry out?

Mr. MILLS. There can be no payments made under any circumstances out of the general funds of the Treasury without an appropriation enacted by the Congress.

Mr. JONAS. I thank the gentleman.

Mr. MASON. Mr. Chairman, I ask unanimous consent that the gentleman from New York [Mr. BOSCH] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois

There was no objection.

Mr. BOSCH. Mr. Chairman, I rise in support of H.R. 12580. This bill, in my opinion, omits several items which I had hoped would be included. The retirement test, I am convinced, should be liberalized so that our citizens who have paid for protection under social security could continue to engage in more realistic partial employment after they reach age 65. The present limitation of $1,200 is ridiculous and unrealistic and should have been increased, if not completely removed. There were more than 175 bills before the Committee on Ways and Means to liberalize the retirement test so as to allow beneficiaries to earn more than the $1,200 yearly without loss of benefit entitlement. The AFL–CIO opposed this liberalization and, in my opinion, is responsible for the fact that no such liberalization is included in H.R. 12580.

Medical care for the aged has been one of the most talked about issues before our committee. We have had to deal with the issue of Government intervention in the health care of our senior citizens. In considering this matter, I have had to take into account not only our creditable accomplishments in this area in New York State but also the circumstances and conditions existing in other areas of our Nation. I have had foremost in my mind a determination to protect and preserve the free enterprise concept under which the standard of quality for health care in our Nation has reached a preeminence not equaled anywhere else in the world.

It is my considered judgment that the Federal-State program contained in the legislation before us is the most satisfactory solution to the matter that could be found at this time. It is a compromise between the approach advocated by the supporters of the Forand bill, H.R. 4700, and the plan proposed by Secretary Flemming of the Department of Health, Education, and Welfare. The present proposal does not go as far as many would have us go in this all-important field of medical care for our senior citizens. It must be recognized however that there is still very much information which is necessary and essential to deal intelligently in this field. It is my hope that such studies will be conducted and we will in all probability have constructive recommendations made as a result of the White House Conference on the Problems of the Aged scheduled for January 1961. By vesting administrative responsibility in the States we have minimized Federal bureaucratic intervention in the physician-patient relationship. By providing a wide range of benefits we have given to the physician the opportunity to prescribe for his patient the type of medical service that is most economical and most efficacious from the standpoint of producing a curative or preventive effect.

I would have liked to see the monthly benefits increased, coverage for Federal employees if they desire it—they are now about the only large group of employees not under social security—and reduction of the retirement age to 60 years. All of these proposals were fully considered but the actuary experts of the Social Security Administration felt that none of these could be done without substantial increase in the rate of tax, effective immediately. Under these circumstances, it was deemed necessary to give this further consideration in the next Congress rather than further extend the coverage offered in this legislation.

Primarily, this legislation corrects many of the inequities in various phases

of social security and will perfect this legislation to the benefit of the beneficiaries under the social security system and in that respect deserves the support of this Congress.

Mr. SISK. Mr. Chairman, early this month, many of us greeted with great pleasure the news that our colleagues on the Ways and Means Committee had at last been able to bring their social security struggles to an end and that we would shortly have a social security bill before us. This bill has a number of commendable features, including the elimination of the age requirement for disability benefits, and some strengthening of the medical care program for public assistance recipients and for the so-called medically indigent.

But how long, Mr. Chairman, how long must we wait until we, the Members of this House of Representatives, are given the opportunity to vote for a program to help the great majority of America's aged with their health needs—to help our older people cope with their medical expenses before their staggering medical bills make them eligible for the committee's program, by driving them into medical indigency or onto the public assistance roles?

How much more evidence of the need for Government help to the aged must we pile up? We have heard from the people—the aged and the young—through their letters, their telegrams, their post cards, their mass rallies in New York, in Detroit, in Hartford. They ask us, very simply, why cannot the Government provide the means whereby we can contribute during our working lifetimes for paid-up health insurance when we retire? We have heard from the public welfare and the social work organizations: Use the social security system, they say, to help the aged finance their health care. Use the social security system, says the immediate past president of the national organization of Blue Cross plans, Dr. Basil MacLean.

Here is what Dr. MacLean wrote, and I quote:

> A lifetime's experience has led me at last to conclude that the costs of care of the aged cannot be met, unaided, by the mechanism of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these the scope of care that is required, nor do the stern competitive realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged.

Those are the words of a respected expert. And more recently, Mr. Chairman, comes word from an insurance company, Nationwide Insurance, an insurance company which is itself offering health insurance policies to the over-65 group, that basic hospital and medical care for people over 65, according to a vote of its board of directors, can best be provided through legislation using the social security system.

The need is clear enough. And it has been proven beyond a reasonable doubt that the need can be met only through the use of the social security mechanism for financing benefits. Let us speed the bill before us on its way to the other body, in the hope that it will be returned to us with the necessary amendments so that before this Congress adjourns, we shall have met our responsibility to add a greater measure of dignity to the lives of many millions of Americans.

Mr. DENT. Mr. Chairman, in line with the expressions offered by my colleague, Congressman AIME J. FORAND, I will support this legislation in order that we can give the Senate a House bill upon which they can operate to bring forth a more worthwhile piece of legislation.

In my humble opinion, the medical care provisions hold forth but an empty promise in our fight for a realistic program of medical care for the aged.

This must not be the ending, but perhaps it can be a significant beginning in our admission that aid along this line is needed now and tomorrow.

Mr. DANIELS. Mr. Chairman, although I rise to support this legislation, I regret that its coverage is limited.

I am well aware, Mr. Chairman, that we cannot vote on the Forand bill at this time. We must take this legislation as it is, in the hope that the other body will give us an opportunity to make amends.

There is not the slightest doubt in my mind that if the opportunity were offered to this House, the vote in favor of the Forand bill would be overwhelming.

I doubt that the differences between the Forand plan and the proposals contained in this bill need further examination from a technical point of view. But to keep the record clear, I will try to state them in layman's language.

The Forand bill offers to all social security pensioners, as a matter of right and not of charity, a degree of protection against the overwhelming costs of long and serious illness. And this protection would be provided through a Federal insurance program.

The proposals contained in the bill before us wold protect more than 10 percent of the aged, in only a handful of States, provided they first exhausted their own modest resources and were reduced to utter poverty. And the cost would be borne by all the taxpayers in all the States.

There you have it.

I say that social security based on a means test is no security at all.

Our Federal pension program covers all wage earners because our Nation decided it was in the national interest to do so.

Disability benefits were extended to all workers on the same basis—the national interest.

It is time we added health protection for the aged on the same basis and for the same reason.

Mr. Chairman, it is obvious that we must vote for the omnibus social security bill as it stands. But let us urge our friends in the other body to do what we ourselves would do today if it were possible, and incorporate a health plan for the aged into the social security structure itself.

Mr. KOWALSKI. Mr. Chairman, I rise to join my colleagues in expressing—in the strongest words at my command—my earnest belief that this Congress will be derelict in its duties if it does not enact a real form of health care for the aged that will make them first-class citizens of this Nation.

It seems strange indeed that we should find ourselves at a legislative juncture where those who oppose improvement of our social security machinery to provide for medical care have temporarily stilled the voice of a majority of the Members of this House, who are anxious to enact such legislation.

It seems strange indeed that there should be such a frightening campaign being waged by opponents, who seek to discredit the proposal advanced by my good friend from Rhode Island—and who, at the same time, attack the entire social security structure—by their reckless charges that this is socialism and that it involves a compulsion that is alien to America.

It seems strange indeed that these same opponents, forced by the overwhelming evidence of real need, have conceded that something must be done—but who offer nothing to meet that need.

But the strangest spectacle of all, Mr. Chairman, is that offered to us by those who somehow believe that Government-paid medical care for the members of our Armed Forces or our Government is perfectly proper, but that the financing of medical care for the aged through social security taxes is strangely indecent and un-American.

I am appalled, Mr. Chairman, at the substitute proposals that have been offered in an effort to block passage of the Forand bill. One of these would grant Federal and State subsidies to the private insurance carriers. The other would give Federal grants to State welfare programs—but only for the most impoverished of the Nation's elderly. And both of them have a basic, irremediable fault—for they depend on added State revenue which would have to be appropriated by State legislatures which the record shows are either unwilling or financially unable to make such appropriations.

Our aged have asked for bread—these proposals would give them nothing but a stone.

The American people will not be fooled, Mr. Chairman. They are watching us—their elected representatives—and they demand of us that we act responsibly and without further delay.

This body is temporarily deprived of the chance to act. It is up to the other body, therefore, to amend the social security bill, attach provisions similar to those of the Forand bill, and send it back to this body for its concurrence. There can be no doubt that we have the votes necessary to insure this concurrence, and I trust the opportunity will be afforded to us.

Mr. BURKE of Massachusetts. Mr. Chairman, I rise to express my regret that adequate health insurance provisions have not been included in the social security legislation and to indicate my hope that they will be included before this act finally leaves the Congress.

I think it is obvious that elderly people are more likely to have serious illnesses or accidents than young people. The expense of medical attention, hospitals, and nursing care has risen astronomically. Retired persons on limited

and often static incomes are not able to meet these extra costs. Sixty percent of them have total incomes of less than $1,000 per year. They have no room in their budgets for health disasters.

These well-recognized dangers produce a chain reaction that leads to other mental and physical defects. By that I mean that the risk of illness without money leads to worry. This strain—this fear—can itself cause illness or aggravate chronic illness or an injury or disease.

We all loved F.D.R.'s saying that "there is nothing to fear but fear itself," but this is only partly true for the aged person. He knows that although his fear is poison itself, it is also not groundless. He knows that his own physical and financial resources are not equal to an emergency. He cannot help being afraid.

For example, an older person knows that someday he is likely to fall. He may trip over a rug, or lose his balance, or get his feet mixed up. Or a leg may give way. Whatever the cause, the result is usually a broken hip. That is a major disaster. It means weeks in the hospital and months in bed. This may bring on other problems such as bedsores, incontinence, frozen joints, and general atrophy. It may be the beginning of the end.

Of course, if it is not a fall, it may be an accident. Decreased hearing, eyesight, and alertness make all accidents more likely. Or it may be the attack of a disease, the faltering of body organ, or the developing of some deficiency that brings trouble.

The aged person fears not only the physical impairment but also the bills that come with it. Doctors' bills, nurses' bills, drug bills, hospital bills, consultants' bills, laboratory bills. They all seem unbelievably high. A few days in the hospital for a checkup can cost $50. Longer confinements run into the thousands. Most aged persons know that they cannot meet such expenses. They will have to go without some of the services, or reduce themselves to poverty, or pile up debts for their children to inherit.

An older person is naturally more cautious and that is perhaps desirable or unavoidable. But fear can turn normal caution into worry or even terror. This is what is unnecessary.

In our great country, with its riches and progress in the physical and social sciences, it is not necessary for an aged person to fear that he will be helpless and abandoned when emergency illness strikes. He can have insurance. If he cannot afford adequate private insurance—and most people cannot—the Government can utilize its own experience and organization to enable him to purchase protection through the social security system.

We do not want to rely on handouts. We cannot rely on State matching. We can act in this Congress to limit disability expenses and thus to reduce fear, one of the most terrible of all impairments.

Mr. PELLY. Mr. Chairman, I may be bending over backward unnecessarily, but it could be as a stockholder in a company providing health and medical protection that I have a personal conflict of interest with parts of this bill.

Therefore, when the vote on passage of H.R. 12580 is taken I shall feel constrained under clause I of rule 8 of the House rules to answer "present" when my name is called.

Mr. DOOLEY. Mr. Chairman, the bill H.R. 12580, while by no means a perfect solution to the problem of medical care for the aged, is at least a step in the right direction.

The bill contains several improvements in the social security law. Fortunately the measure does not place too heavy a burden on the social security fund, which annually is dispensing $11 billion to its beneficiaries. The fund must be kept in balance, not only because of current demands, but because of the impact which the requirements of future years will have on it.

In order to implement the provisions of H.R. 12580, if enacted into law, it will be necessary for a State to take affirmative action. To participate in the program and receive Federal matching funds for health care for the aged, a State must volunteer.

There is some doubt as to how many States will participate, in view of the requirement that they provide matching funds.

The need for assistance to the aged, in the field of medical care, is so obvious that there is no need to belabor the point. But much study is needed before all the points of dispute can be clarified and resolved, and before a sound, equitable and economical program can be developed.

The White House Conference on Aging which will hold its sessions in January of 1961 will undoubtedly develop data useful in arriving at a proper solution to the problem.

H.R. 12580 is not the complete answer by any means. It does firm up and advance the efforts to help the aged without unbalancing the social security fund, and for that reason I will support it.

Although it is an irrefutable fact that much is already being done for the health of our aging population, much more must be done. Today, millions upon millions of dollars are being poured into research on cancer, heart disease, arthritis, et cetera, which plague so many of the aged, but the struggle to solve medical enigmas is an unending one. In the meantime the Government is helping the States to build hospitals, clinics, nursing institutions, et cetera.

Mr. PORTER. Mr. Chairman, I rise in support of H.R. 12850 as it has been approved by the House Ways and Means Committee. There are serious omissions to this bill, but it does provide us with certain improvements among them removal of the requirement that a disabled worker must be 50 years old in order to receive benefits. I have long felt that requirement was unjust. I am glad the committee has eliminated it.

I am sorry the committee did not take the major step so many of us have advocated. I refer to adequate health benefits through social insurance.

Earlier this year I sent a questionnaires to 131,000 residents of the Fourth Congressional District, which I have the honor to represent. More than 20,000 persons participated in the poll.

I asked several questions. One of them was: Do you favor legislation as proposed in the Forand bill which provides medical care for social security retirees?

The endorsement of the legislation as proposed in the Forand bill was overwhelming. By a vote of 13,410 to 5,028 my constituents said "yes." The percentage vote was 73 percent in favor, 27 percent opposed. There are seven counties in the Fourth Congressional District of Oregon. Voters in each county favor medical care for social security retirees. Let me quote the vote:

	Yes		No	
	Number	Percent	Number	Percent
4th district	13,410	73	5,028	27
Coos County	1,597	81	364	19
Curry County	420	79	114	21
Douglas County	1,608	70	676	30
Jackson County	2,038	70	888	30
Josephine County	999	76	311	24
Lane County	5,526	72	2,147	28
Linn County	1,212	70	528	30

I cite these statistics to prove that medical care for social security retirees is not the figment of the imagination of humanitarians such as my friend and colleague, the gentleman from Rhode Island [Mr. FORAND].

Statistically it would be possible for a man to pay now for the medical care he will need in his later years. As I said on this floor June 13 the greatest objection I have to the medical care plan proposed in the bill we are considering today is the pauper approach whether you call it a needs test or an income limitation or medical indigency. Because of the rising costs of medical care it is necessary, morally, socially, and economically that we help people help themselves. We cannot wait for the millenium before we act. Millions of people desperately need, want and deserve action.

The Harvard Business Review for January–February 1960, carried an article by Gaston V. Rimlinger entitled "Health Care of the Aged: Who Pays the Bill?"

Author Rimlinger writes, in part:

> The question of what can be done to provide adequate medical care for retired employees is a nagging problem to businessmen.

His impartial discussion of the factors involved deserves careful attention.

I believe Walter Lippmann probed to the core of the problem recently when he asks in his column:

> What is so wrong about its being compulsory that a man should insure himself against the needs of his old age? What is so wonderful about a voluntary system under which a man who doesn't save for his old age has to have his doctors' and his hospital bills paid for by his children or public welfare funds?

Let us therefore today approve H.R. 12580, realizing as we do that it is truly only a small step toward what is part of our national purpose. And let us hope

that the other body, tied by no closed rule such as we are working under today and which precludes amendments, will make further improvements to bring this bill closer to the Forand proposals.

Mr. KARTH. Mr. Chairman, I am aware that no amendments can be made on the bill submitted to the House by the Ways and Means Committee regarding amendments to the Social Security Act. Nevertheless, I wish to express my considered opinion of that part of the amendments dealing with medical services for the aged.

I will not take up the time of my colleagues in order to document in detail the need for truly special—and truly effective—action on the health problems of our aged population, which now numbers 16 million if we use the age of 65 and over. A reading of the special reports prepared by the experts within the Department of Health, Education, and Welfare, by the various schools of public health in the universities across our country, and especially by the Senate Subcommittee on Problems of the Aged and Aging, headed by Senator PAT MCNAMARA—all of these extensive studies would suggest how hollow—how mocking—is the proposal now before the House. The hopes of the millions of senior citizens and their families to remedy this travesty now lie in the Chamber on the other side of the Capitol Building, since they are not hog-tied by the rule against amending the present bill on the floor.

I want to take this occasion to point out to my colleagues here just what are the glaring defects and tragic implications of this legislative farce.

First. The program provided in the bill actually would result in virtually no program at all, since its implementation hangs on the scrawny, flimsy reed—or should I say weed—of State matching funds. Even for the piddling numbers of elderly men and women theoretically eligible for benefits under this bill, there is no firm assurance that every State would vote the funds for even the minimum level of medical benefits cited in the bill.

Second. Some of the States will never vote any appropriation to come under the Federal-State matching program contemplated in this shameful amendment.

Third. Many States will delay action on their part for several years to come.

Fourth. Few States, if any, will legislate funds necessary to provide the full complement of health benefits theoretically available through this callous paper gesture. Nearly one-half of our States still do not take full advantage of the Federal funds available now for old-age assistance programs.

Fifth. Like the other forms of old-age assistance, the States would not necessarily appropriate each year the required funds to make the program work. Each year, such programs would run the risk of getting the short end of the stick.

Sixth. The eligibility requirements consist of miserly and almost punitive conditions regarding not only the income of the elderly applicant for this degrading charity medicine, but also his other living arrangements. As a matter of fact, each State can set up its own criteria of need as it sees fit.

Seventh. To me the most disheartening aspect of the proposed amendment is that it requires no improvement of standards now existing in old-age assistance medical care—and offers help to a limited number of senior citizens only after such men and women become pauperized, instead of creating conditions for the financing of medical care which would prevent such inhuman medical indigency.

Eighth. While there are many other serious objections to this empty posture of problem-solving, the one simple but overriding fault is the bill's disappointing rejection of the genuine use of the social security principle—although the authors of the amendment call it an amendment to the Social Security Act. Actually it is a betrayal of the ethical principle involved in the original Social Security Act of 25 years ago, when Democrats were proud and anxious to advance such legislation.

What I mean is the contribution of working men and women, during their years of employment when they could afford it, to a fund that would provide paid-up benefits—as a right and not as charity—when they are retired from the labor force. Such a simple, but efficient and rational method insures a sound method of financing basic medical costs—including costs for much of preventive medical services. Such a simple and practical approach places no burden on Federal, State or local, or private resources. Such a simple but profoundly just solution to the problem would relieve the anxieties of the total population about their health protection in future years when they join the ranks of the increasing population of older citizens.

What frigid irony lies in the fact that under this current proposal, elderly citizens will still be required to pay taxes, on a Federal and State level, in order to finance the program.

Ther are now 16 million so-called older Americans today; nearly 6 million alone are over the age of 75. In 10 years, there will be at least 20 million persons over 65. Pitifully few will share in the benefits supposedly made possible by this particular legislation. Pitifully few can afford the premiums for truly adequate private health insurance—read the record of the Senate Subcommittee on the Aged.

All of them, however, are over the age of 21. Most of them have become sophisticated, informed citizens on the issue of how best to arrange for the financing of their medical needs in retirement.

For example, when the Minneapolis Star and Tribune conducted a recent poll in Minnesota concerning medical care for the aged, 55 percent of those interviewed preferred to pay higher social security taxes to care for sick people over 65 while 40 percent wanted to keep social security as it is. Despite the emphasis in the survey questions on the costs involved the majority of Minnesotans who were polled wanted medical care for the aged as part of their social security.

I should like to close my remarks by referring to the attached table, indicating certain population statistics of selected States around the country. They show the percentage that the over-65 population is, relative to the total population, as of 1958, and also their proportion of the population aged 21 and over. I close my remarks with the question, How well are we truly responsible to the emerging needs of our constituents? What do we intend to do, here in the House of Representatives, when the issue completes its round trip to and from the floor of the Senate?

Senior citizens, as percentages of total population, and of population 21 and over, in selected States (as of July 1, 1958, Census Bureau estimates)

State	65-plus population as percent of total population	65-plus population as percent of 21 and over population
Arkansas	10.8	18.6
California	8.4	13.9
Florida	10.2	16.8
Illinois	9.2	14.5
Kentucky	8.9	15.4
Louisiana	6.8	12.3
Michigan	7.6	12.8
Minnesota	10.0	16.7
Missouri	11.0	17.4
Montana	9.4	16.2
New York	9.4	14.4
Ohio	8.8	14.4
Pennsylvania	9.4	14.7
Rhode Island	10.0	15.5
Tennessee	8.0	13.6
Texas	7.2	12.6
Virginia	6.8	11.9
Wisconsin	9.7	16.0

Mr. FRIEDEL. Mr. Chairman, there are many reasons for us to regret the absence from this bill of the Forand proposals to include medical, hospital, and nursing home payments in the benefits or our social security legislation. I wish to emphasize one of those reasons.

We Americans have always been proud of our traditional desire to improve upon the present, to seek something better and to raise our living standards even higher.

This opportunity exists today in the field of medical services for the aged. With the pioneering and creative work that Johns Hopkins does in medicine and surgery, I hope it is appropriate for a Representative from Baltimore to call this to your attention.

In the past it was believed that mental vagaries, senility and many physical disorders were an unavoidable part of the aging process. But now we know that most of the mental disturbances are due to physical breakdowns. Consider, for example, the effects upon the brain from inadequate blood circulation, or from blood that accumulates poisons because of kidney or prostate problems.

Research indicates that many physical disorders, previously considered inevitable, are amenable to treatment and sometimes to prevention if caught in time. For example, unattended glaucoma may develop to the point of blindness, undetected diabetes may lead to vascular complications and amputation of a limb, protracted abdominal pain may be diagnosed as a metastic cancer, and a neglected cardiac condition may lead to disabling secondary complications.

There are about 500,000 people living in America's nursing homes and homes for the aged. Most of them are just vegetating. By that I mean that they are sitting in their chairs—sometimes tied—or lying in their beds without any hope of recovery. They are waiting, waiting, waiting for their bodies to atrophy and decay until some vital organ stops functioning. There is nothing more depressing than to walk through the rooms of such institutions and to visit with the patients, knowing in your own mind that "this is a death house."

In my own State of Maryland and more particularly in Baltimore city, the medical capital of the world, the majority of the inhabitants of nursing homes are welfare patients. Because they are welfare patients the fee paid for their care is the bare minimum and consequently they can be given only the minimum essentials of food, medical attention and rehabilitation. They need something to occupy their long days—some kind of occupational therapy—something to give them purpose. And these are only the ones who can qualify for public welfare. God knows how many exist who cannot.

But the Senate subcommittee report on the problems of the aging finds that nearly half the patients in the nursing homes could be largely rehabilitated.

Why are these people so cruelly abandoned to protracted decay? Because there is not enough money available in this rich country of ours to give them the needed medical facilities. It is as sample as that. Nearly half of the skilled nursing home beds are considered substandard. Payments for patients under old-age assistance are insufficient to cover registered nursing services, routine medical care, rehabilitative and recreational activity.

Consider for a moment the progress that we all know about and the cost involved. Not too many years ago, people with mental disorders were locked in padded rooms, tied down with ropes or even chains. Now, thank God, we can give them tranquilizers. But this takes money. I know of one tranquilizing pill that is taken once every day at a cost of $0.20 each. A drug bill of $40 per month is not unusual. Even the rather common vitamin pill, multecebrin, costs over $0.04 each at the ordinary retail outlet.

While I recognize that the Forand bill is no panacea, it is a step in the right direction for the salvation of some of our fellow human beings. Furthermore, they provide a method by which all of us may contribute, while we are working, to a fund for better care and happiness when we have passed into retirement. With a quarter of a million "human vegetables" now in our institutions unnecessarily, it is time for us to take action.

Therefore, in deploring the unfortunate decision of the Committee on Ways and Means, I am speaking in behalf of humanity, rather than in terms of a political issue. It is without reflection upon the intentions of the committee that I hope the other body gives this House a chance to reconsider the matter and reach a sounder conclusion.

Before concluding, I would like to call to the attention of the Members of the House a most timely article printed in the Baltimore Evening Sun of June 20, 1960, pointing up the very real and growing problem of Baltimore city's sick, aged and homeless. And I'm sure this same problem is duplicated in every major city in the country. Surely the conclusion is inescapable that legislation in the nature of the Forand bill is called for to aid this unfortunate segment of our population.

Mr. LANE. Mr. Chairman, this is a "shotgun" health insurance bill for the aged. Either we vote for it, knowing that it will provide very little medical security for the 16 million Americans over 65, or do absolutely nothing for them at this session.

Confronted with this very narrow choice, we have no recourse but to vote for H.R. 12580, in the hope that it will become the entering wedge for a genuine health insurance bill in the next Congress.

We believe that the whole approach of H.R. 12580 to the problem of health insurance for the aged is wrong. The humiliating means test merely increases somewhat the number of those who would qualify as medically indigent, thereby placing health insurance on a charity basis, rather than a dignified insured right, through the Federal old-age, survivors, and disability insurance system.

This is not primarily the problem of medical care for the very poor, who are cared for under welfare and old-age assistance programs. The purpose we had in mind was to remove for all the aged the dread fear that an expensive illness would wipe out a lifetime of slender savings, threaten the ownership of a home, force dependence on children, or make one, after a lifetime of independence, submit to the bureaucratic test of pauperism.

Almost $400 million a year is now being spent by Federal, State, and local governments for medical care under the old-age assistance program. The committee bill will inevitably increase this amount, placing an unfair burden on State and local governments. This would put off for years, in some States, the implementation of health insurance for the aged, even on the restricted "public assistance" definition.

This bill is in the nature of a delaying action, and one that might beguile wishful thinkers into the belief that it is a bargain-basement method of securing health insurance when in fact, because it is financed from general revenues, it would compel some of the aged to pay for health insurance they would be ineligible to receive.

Bear in mind that, under existing old-age assistance provisions, 24 States fail to match all the Federal funds at their disposal. Only the social security system can provide medical care insurance for the aged on a sound, contributory foundation, financed by the payment of modest amounts on the part of employer and employee during the beneficiary's working years.

Eventually, we must come to this solution: 1960 was the year to make a real beginning instead of a false start. If put to the vote of the American people, they would overwhelmingly agree to fractional payroll deductions in order to finance health insurance in their old age as a matter of right and not as charity.

Because this bill will improve unemployment compensation provisions, extend coverage under the Federal old-age, survivors, and disability insurance system, and provide disability benefits to additional individuals, I shall vote for it.

However, I am very much disappointed because it takes only a feeble step toward providing health insurance for the aged.

The solution to this problem is a major responsibility that cannot be postponed much longer.

Mr. RIVERS of Alaska. Mr. Chairman, I rise to add my voice to those of my distinguished colleagues in impressing upon this chamber the urgency of action to alleviate the financial burdens of the elderly through improving our system of social insurance.

Coming as I do from the Union's last great frontier, and representing as I do the pioneering spirit of all of Alaska's brave citizens, I would urge my colleagues to show the same pioneering spirit in developing a bold new program that would help to insure to the older citizens—to the pioneers of another day—the type of medical care which they need but which they presently cannot afford.

Here in the Congress we have one of the greatest opportunities ever presented to a governing body in the 20th century to pioneer in this medical care field. This is no place for weakness or timidity—not when we stand here on this frontier and gaze at a promised land in which our senior citizens will have an opportunity to live out their days in good health and personal dignity.

The Forand bill, Mr. Chairman, is an outstanding example of the pioneering spirit of which I speak. By using the social security system as the vehicle for financing old-age insurance for medical and hospital care the element of self reliance is maintained, and the concept of doles postulated on demonstrable pauperism is abandoned. At this point I cannot be sure of all the details, and the extend to which the employed people of America and their employers are willing to be taxed under the Forand-type of legislation, but I do feel sincerely that it is the right approach. I do not see that there would necessarily be a deprivation of freedom of choice in the selection of doctor or medical institution. The Government's role could be kept at the job of collecting and disbursing the funds, and otherwise administering the program for those who are eligible. Afterall, the social security system has demonstrated its worth through 25 years of insuring an honorable retirement for millions of our citizens. On the other hand I do not think that we can solve the medical problems of the aged by Federal subsidies to State welfare programs, except on a temporary basis pending effectiveness of the Forand-type program, which should be initiated and

put into operation as soon as possible, for it will be many years before all of the persons to become eligible for benefits under the program will have paid their respective shares of the tax involved. Neither do I think that any general or adequate solution of this problem can be attained by Federal and State payments to insurance companies in the form of partial payments of premiums upon health insurance policies.

Although our hands are largely tied under the committee bill presently under consideration, I hope that the other body can add the Forand bill's principles to the social security amendments embodied in the bill before us and send it back for our approval.

Mr. PUCINSKI. Mr. Chairman, I wish to associate myself most forcibly with the views already expressed in this Chamber concerning the need for prompt action to alleviate the financial burdens of our senior citizens through enactment of social security medical care.

It is most regrettable, Mr. Chairman, that as of this date the Members of this House are not in a position to record their support for health care legislation that would become a part of our social security system—for it is my earnest belief that there is overwhelming sentiment in this body for such legislation.

No issue in modern times—certainly not since the enactment of the great social legislation of the 1930's—has inspired the imagination of the American people as has the health care bill introduced by our distinguished colleague, the gentleman from Rhode Island and cosponsored by many us, of including myself. Each Member of this House must be acutely conscious of that fact, for the proof that this issue has aroused the American people is nowhere more evident than in the volume of mail which has poured into each of our offices expressing concern on this issue. And the tenor of this mail has been overwhelmingly in favor of prompt action by the Congress in adopting health care legislation which would be a broadening of the social security program of which we are so justly proud.

The American people are not indifferent to the needs of our senior citizens. They are watching us, they are depending on us, to discharge our obligations as their elected representatives. They will not be placated by stopgap plans; they will not settle for a program that, even if it were in effect ratified by each of the 50 States, nevertheless would provide health care for the most medically indigent. The American people will not accept halfway measures—indeed, they should not be asked to settle for anything less than the maximum in medical care which we, as the richest nation on the face of the earth, can in our wisdom devise.

We in this distinguished body should be proud, indeed, of the gentleman from Rhode Island [Mr. FORAND] for the excellent program which he has devised and so carefully shepherded through 3 difficult years. It is indeed regrettable that, despite the fact that this very sound plan for health care for the aged originated in this Chamber, we in the House cannot be the first in the Congress to vote on this issue because of the parliamentary situation we find ourselves in.

Because of the situation, those of us who believe in the principle of medical care for the aged as part of our social security system—and I submit, Mr. Speaker, that a majority of this body supports this principle—are temporarily foreclosed from voting on this issue. It is our sincere hope that the Members in the other body of the Congress will substitute a more effective health care program for the pitifully inadequate provisions of the bill now before this body. When that happens, I am confident their amendment will receive a warm reception in this House.

I have said repeatedly that we should not compel the senior citizens of America—the people who built this wonderful country of ours—to be reduced to a pauper status before a greatful nation will provide them adequate hospital and surgical care in their advanced age. There is another aspect of the Forand bill which is not included in the bill now pending before us. This is the provision that would have permitted hospital and surgical benefits to widows and underaged children receiving social security benefits when the family's breadwinner has died. These children should be provided better than pauper's care.

I know that the Ways and Means Committee has worked very hard in trying to find a solution to this difficult problem of hospital or surgical care for our aged citizens. I believe the committee deserves our commendation for its sincere effort. Since the committee in its wisdom believes it has gone as far as it can, I do hope the other body will write in the necessary amendments to make this a really effective program and I shall support such amendments when they are returned here for our consideration.

Mr. THOMPSON of New Jersey. Mr. Chairman, after months debate in committee and throughout the country, the House of Representatives is now preparing to vote on a bill which supposedly includes a program to provide the Nation's aged with health care.

The program before us, however, does not meet—nor does it seriously attempt to meet—the needs of America's elderly. Under the guise of doing something for our older folk, it seeks to reap political rewards while at the same time stifling the only type of program that can do the job in this important area.

Congressional testimony has proven—without a shadow of a doubt—that our older citizens are unable to meet their health needs. No one, on either side of the aisle, would attempt to claim that our 16 million people aged 65 and over do not need help if they are to maintain their health.

So shocking and unshakable has this testimony been, that even an indifferent administration was forced to call for some type of legislation in this field. As might have been expected, the administration proposal was grossly inadequate. It may have contained political benefits for the Republican Party, but it would have produced few benefits for the elderly.

Many of us hoped that the program adopted by the Ways and Means Committee would be of a different nature. As proponents of the Forand bill, we had long recognized that any aid-to-the-aged health care program—to be effective—would have to be based on the social security system. The Ways and Means Committee, apparently, did not grasp the importance of this essential prerequisite.

After studying the committee proposals in this area, I can only conclude that the great weight of this testimony presented to the committee has been in vain. And I can only conclude that the many meetings of senior citizens that have been held throughout the country also have been in vain.

The committee's plan provides no health care for the aged. In simple terms, it provides charity and nothing but charity. Even this charity, I might point out, is contingent upon the action of the separate States.

I do not believe for 1 minute that this proposed legislation will fool the American people. Surely the elderly will quickly realize that their needs have not been met. Even worse, while this bill gives verbal support to the health problems of the aged, in practice it denies to those 65 or over any hope of obtaining effective assistance while they are still capable of benefiting from it.

I am convinced that should this bill be enacted into law, it will prove to be inadequate. By placing health care needs solely on the foundation of relief, rather than social security, this measure could create a near-insurmountable obstacle, possibly blocking passage of future—and more practical—legislation.

Every thinking Member of the House must recognize that this proposal will confuse public opinion and—at worst—will tragically delay the chances of the aged to obtain the care they desperately need.

America's aged do not seek charity. They are not down on bended knee begging for the opportunity to go on relief rolls. Nor do they look forward to taking a pauper's oath, declaring themselves poverty-stricken and wards of the State.

No one likes to be poor. No one likes to be old. Certainly, no one likes to be both. But statistics show that a substantial percentage of our elderly cannot afford the high cost of medical care. Living on small pensions, sometimes solely on social security, and sometimes only on painfully gathered life savings, it is little wonder that those who have reached retirement age are in constant fear of serious illness

These are the people asking us for help. They are not asking for a means test. They are asking for legislation that will permit them to live out their years free from the threat of penury caused by ill health.

When I was a young boy, I remember seeing the many Civil War veterans who were living out their lives with no place to go. They sat in the parks and sunned themselves, they sat on the front porches of their children and they sat on benches in front of neighborhood grocery stores. In many ways, they were honored and respected, but even then they belonged

to another era and their usefulness had past. They were honored, but for the most part they were dependents. They had lost the freedom they fought for.

The Civil War veterans are no longer with us. And something else has changed. Our people no longer accept the philosophy that once man has become full of years, he has no further purpose. Today, we believe that when our older citizens retire after making their contribution to society, they are entitled to enjoy their "golden years" in dignity and independence.

We believe that men and women of 65 and more have the right to lead constructive lives, to enjoy their retirement, to hold up their heads with pride.

Medical science has played a major role in making this humane concept possible. It has developed the medicines and the drugs that prolong life, ease its miseries and make possible happy and healthy years of retirement. Unfortunately, social science has not kept up with physical science. While we have learned how to cure physical ailments, we have not—as a nation—learned how to cure social ailments.

We have provided medicines to alleviate heart trouble, blood diseases and other physical infirmities, but we have provided no relief against insecurity and indignity. It is these social problems that we are attempting to solve through health-care-for-the-aged legislation.

All of us know that the miracles of modern science are not cheap. We recognize that the availability of the new wonder drugs is often conditioned by a high price tag. Sometimes I wonder who is in a more pitiful position—the man who is dying from a yet-incurable disease, or the man who knows that the drug that could save him is available, but is beyond his means.

If all of us—on both sides of the aisle—did not recognize the seriousness of this health care problem for our senior citizens, I would not be talking about humanity; I would be talking statistics. But all of us do recognize the problem—even, I might add, if some of us only see it in a political context.

The bill now before the House clearly avoids our social responsibilities to the aged ill.

Not only is it grossly inadequate in the amount of aid proposed, but the mechanism for granting this aid runs completely contrary to the desires of the people the measure is supposed to help.

If enacted, America's elderly would only find that they have been given one more category under which they can apply for relief.

If enacted, those too old for gainful employment would only find that their health needs must forever be secondary to their financial needs.

If enacted, even those senior citizens eligible for assistance—the majority would not be eligible—would find their needs further subjected to individual State budgets.

If enacted, all of our citizens would be denied the opportunity of contributing to their old age health insurance coverage while employed and would be forced to rely upon charity after their working days are over.

While I will, of course, vote in favor of this legislation as part of the omnibus bill, let me make it clear that I do so only in the hope that the other body will recognize the real problems faced by the elderly and come forth with an amendment that solves these problems rather than ignoring them through a bald and hypocritical political maneuver.

Mr. Chairman, a further problem which will be caused by the enactment of this bill is set forth in the following statement by the New Jersey Education Association and the New Jersey Civil Service Employees Association:

If H.R. 12580 is enacted in its present form it will reduce the retirement allowances of approximately 2,130 New Jersey teachers and 1,300 other New Jersey public employees. The average cut in allowance will be approximately $1,300 per year for retired teachers and approximately $960 per year for other retired public employees.

The people affected by this legislation are members of the New Jersey Teachers Pension and Annuity Fund and the New Jersey Public Employees Retirement System. They have retired under a plan which permits the State of New Jersey to reduce the retirement allowance payable by the State pension fund if the employee earned a social security benefit through New Jersey public employment. Any social security benefit earned in this way is used to relieve the State of all or a portion of its obligation to pay a pension to retired public employees.

Many of the persons affected by this legislation have purposely advanced the dates of their retirement in order to avoid earning a social security benefit through public employment in New Jersey. If H.R. 12580 is enacted in its present form section 204(a) will reduce the number of quarters of coverage required to attain fully insured status to such a degree that all of these people will be considered as having earned their social security benefits through New Jersey public employment.

The effect on these people will be a substantial reduction in income through loss of pension from the State of New Jersey.

When teachers were asked to accept integration of their pension fund with social security, many older teachers were hesitant to go along. Some of these were already entitled to social security benefits in addition to State pensions as a result of work in private employment or as dependents of social security beneficiaries. The argument which convinced many of these people to vote "yes" for integration was that under the terms of the proposal anyone who wanted to avoid integration could do so by retiring from New Jersey public employment before earning fully insured social security status.

The New Jersey Education Association and the New Jersey Civil Service Association are not asking for any extension of social security benefits for these people. We are asking that the benefits they were promised when they retired will be paid.

We are not asking that regulations be changed specially for these people. We are asking that the requirements for attaining fully insured status which existed when these people retired be preserved for them.

Mr. FARBSTEIN. Mr. Chairman, although I am going to vote for this bill, I do so because I have no choice. I favor the amendment to the social security measure as represented by the Forand bill rather than the amendment presently before us. It is my earnest hope that the Senate will amend the present bill in keeping with the Forand bill.

Home, hospital, and medical care for those on social security as represented by the Forand bill is a must so far as I am concerned. It will assist those who need help most and can afford the expense least. It is my opinion that the 70 million workers presently covered by social security should be permitted to contribute, while they have the opportunity, for paid-up medical care protection for themselves and their dependents when their years of productive earning capacity have ceased, especially when they clamor for the opportunity to do so. In this fashion, a planned and orderly basis without cost to the general revenues of Government can take care of the cost.

The administration plan and the plan presently proposed by the Committee on Ways and Means and incorporated in the social security bill depends upon the States passing legislation to effectuate any plan of assistance to the aged insofar as home, hospital, and medical care is concerned. It is put on the basis of a means test rather than on actuarial or insurance basis. This I do not think is a salutary basis for this great need of our senior citizens. The program of assistance under the bill before us differs very little from old-age assistance and it would place a burden on some of the States which are financially unable to meet this new obligation. The result of this would be that there will be no legislation whatsoever to aid those who we feel should be assisted in certain areas of the country.

The official estimate of cost to the Federal Government is about $185 million and approximately $140 million to the States. This, I understand, is based on providing medical service for only an estimated one-half to 1 million persons during the year.

Experience under our present public assistance programs indicates that Federal matching grants, along either the old or new lines, will not make good health care generally available even for the small minority of the aged theoretically being aided.

The problem of insecurity arising from the high cost of medical care during the years of retirement is not primarily the problem of the very poor. The objective should be to remove for all the aged the haunting fear that an expensive illness will wipe out a lifetime accumulation of savings, threaten the ownership of a home, force dependence on children, or make one, after a lifetime of independence, submit to the humiliation of a test of need.

Our goal is, so far as possible, to prevent dependency rather than to deal with it at the expense of the general taxpayer after it has occurred. By contributing additional small amounts from their earnings to the nearly universal social security system, workers could gain insurance protection against medical care costs in retirement and their possible future dependency could be prevented.

Only the social security system can provide medical care insurance for the

aged in a satisfactory manner. If medical care costs are not met by social insurance, increasingly they will be met through relief. Almost $400 million a year is now being spent by Federal, State, and local governments for medical care under the old-age assistance program; the committee bill would increase this over three-quarters of a billion dollars, and this would be just the beginning. In the absence of social insurance protection this drain on general revenues will more than double in the next several years.

Under the Forand bill health benefits, added to old-age and survivors insurance would next year provide benefits to approximately 12 million of our senior citizens; this is a goal for us to pursue.

Mr. MULTER. Mr. Chairman, much has been said emphasizing the wisdom of devising a meaningful health care program for our millions of retired citizens within the framework of the social security system, and I wish to associate myself with these views.

A quarter century ago, when the Congress first enacted the social security system, President Roosevelt made it abundantly evident that we were at the beginning—not at the end—of the program of caring for those citizens who had contributed so much to their country during their productive years. The Congress has many times endorsed this view by constant reappraisal and improvement of the social security system.

Now we come to the point where we can make perhaps the greatest improvement since the system was first founded—the incorporation into its provisions of a plan to underwrite those medical expenses which come more frequently with advancing age and weigh so cruelly on our senior citizens, whose financial resources are still only at a marginal level despite the great advances we have made in our social security program these last 25 years.

It is regrettable, in the light of the great public interest in this program, that we in this body should find ourselves at a point where we are temporarily without the power to stand up and be counted on this great issue. It is even more regrettable when it appears, as it does to me, Mr. Chairman, that there is overwhelming support in this Chamber for exactly the kind of program that our senior citizens want and deserve. This is brought about by the parliamentary situation prohibiting any amendments by the House to the bill before us.

It is now up to the Members of the other body to rectify the situation in which we find ourselves. They can do this through the simple process of amending the social security measure which we shall shortly send to that body. In doing so, it is my fervent hope that there will be no attempt to satisfy the needs of the millions of retired citizens by adopting little more than a Madison Avenue slogan wrapped around a billion dollar subsidy for the insurance companies. In doing so, it is my hope that the other body will not attempt to degrade our older citizens in their golden years by forcing upon them a cruel program that would compel them to take "paupers' oaths" before they can receive the medical care they deserve.

There is a simple solution to the problem: The other body need only substitute, for the totally inadequate medical care provisions now in this bill, a program of the type sponsored by the gentleman from Rhode Island and by so many other Members of this distinguished body. If that is done, Mr. Chairman, I know this House will not be derelict in discharging its responsibilities. If then we are given legislation of the type offered by the gentleman from Rhode Island, this body will swiftly and overwhelmingly add its stamp of approval.

I am supporting the bill in its present form for the reasons stated.

Mrs. GREEN of Oregon. Mr. Chairman, it is my intention to vote for H.R. 12580, in spite of the fact that the rule prevented the Committee of the Whole from amending it so as to make more adequate provisions. My vote for the rule and for the bill are to be interpreted only as giving voice to my opinion that the bill should be passed to the other body where, it is to be hoped, meaningful medical care amendments will be added to it.

The question of medical care for the Nation's senior citizens, Mr. Chairman, is not one which can much longer be left in the realm of "things to do tomorrow, or next year, or in the next Congress." The aged are not getting any younger, they are not becoming less numerous, their health problems, despite smug assurances from some private insurance companies, are not becoming less acute.

Mr. Chairman, the distinguished gentleman from Rhode Island [Mr. FORAND] will soon leave the service of this House, after a long and distinguished career, typified by concern for the welfare of the people of this Nation. The medical care bill which bears his name is only one proposal among many of great merit which were presented to the Ways and Means Committee. Yet this crusade has been led so ably by the gentleman from Rhode Island that this whole issue has become identified by his name. "Are we or are we not going to have some kind of Forand bill?" This is the way in which most of us think about this issue. It is my earnest hope that the 86th Congress will not adjourn without sending to the President some kind of Forand bill, no matter whose name is attached to it. Such action, will be, I trust, a fitting climax to the distinguished career of the able and dedicated gentleman from Rhode Island.

Mr. Chairman, the senior citizens of this Nation have been waiting for the Congress to act for many years now. This is not a new issue. The Ways and Means Committee has studied it, the Special Subcommittee on Problems of the Aged of the Labor and Public Welfare Committee of the other body has studied it with great care. Private organizations have studied it. Individual members have studied it. This subject has been studied in every way, from every angle and by every group which could possibly have an interest. Even the administration has given the problem careful attention. Yet the best the Ways and Means Committee can come forth with is the present bill, while we are urged by the AMA to "wait until the White House Conference can study the problem." Mr. Chairman, there has been plenty of study. What we need now is action.

The Forand bill, Mr. Chairman, would give the senior citizens of the Nation much-needed assistance with the insurmountable costs of health care; it would give to those not yet ready for retirement a means of helping themselves to prepare for the time when high medical costs and low income will simultaneously loom before them. We have been told in the same breath that this bill would "ruin the moral fiber of the American people" and that, "if they cannot afford to pay the costs, they can always get a doctor's help, just by asking." Mr. Chairman, which is more ruinous to a nation's moral fiber—setting up a way by which the people themselves can pay for future medical costs, or urging them to accept the charity which most Americans are too proud to accept? The Forand bill takes the former approach—one which is, I think, more in keeping with the very American traditions of self-reliance that we all believe in.

The Ways and Means Committee has reported to the House some medical care provisions. But these provisions are far from what is needed to meet the challenge. Under the committee's bill, the States may—if the individual States so choose—institute a program of what amounts to medical public assistance. The decision to leave the problem to the States will, undoubtedly, be defended as showing devotion to "States rights." But just to make sure that "States rights" are not used to help too many people, the State is forbidden to make its medical care available to people who, in the judgment of the State, have adequate funds available. "States rights" here, as in so many places, seems to be largely a device to make sure that we don't give too much aid to too many people. A State, under this bill, has the right to be conservative, even stingy. But it is denied the "right" to be liberal, to throw away means tests, and to make medical care available on a broad basis.

The administration, led by the President and the Vice President, urges that health care for the aged ought to be voluntary rather than compulsory.

I suppose what we have in the bill before us is also voluntary in that sense. Perhaps it is more so, because there is no assurance that anyone will get any help at all.

What is compulsory about the Forand bill, and similar proposals to place old-age health care under the social security system?

What is compulsory is the social security tax. All persons who will some day have a right to draw benefits must pay premiums, which might be as high as $12 a year. That is compulsory. As far as the benefits are concerned, they are voluntary. No one has to apply for them or accept them.

Now let us look at the so-called voluntary plans. They are not under the

social security system; they are paid for out of general tax revenues, collected from all Federal taxpayers. Does anyone who refuses the benefits get a rebate on his taxes? Not at all. Can anyone foreswear benefits in the future in return for lower taxes? Not a chance.

Then what is voluntary about these plans? Only that no one has to apply for benefits.

What is the difference? In both cases, taxes are compulsory—except that under the Forand bill, everyone who paid the taxes would be entitled to benefits if he wanted them. In both cases, benefits are voluntary, except that under the administration and committee plans everyone who sought benefits would have to be dead broke first.

Where is the real difference? Is one approach really voluntary and the other compulsory? Of course not.

Neither one is voluntary when it comes to paying the bill. Both are "voluntary" when it comes to refusing benefits.

The real difference is that the Forand bill is voluntary when it comes to drawing benefits. Under a Forand-type plan, tied in with social security, the benefits would be ready and waiting for those who needed them. Under the phony substitutes, it would be voluntary with the States and the communities whether benefits were available at all.

These are just a few of the weaknesses I can see in this bill, Mr. Chairman. There are others, the chief of which is its inadequacy. I shall vote for the bill, as I said before, but solely in order to speed it on its way to the other body where, I hope, it can be turned into legislation of the epochal kind we need to meet this crisis.

Mr. MEYER. Mr. Chairman, I am going to support the social security amendments bill in hopes that it can be improved before it becomes law. However, I would have preferred to support the Forand bill with some strengthening additions and changes. I also want to commend the gentleman from Rhode Island [Mr. FORAND] for his great effort in behalf of medical care for elderly people.

Mr. STRATTON. Mr. Chairman, I intend to vote for the committee bill, although there are several aspects on which I believe the bill is inadequate, particularly with respect to its provisions for medical care for our senior citizens. The provision included in this bill in no way meets the real need of our people for a satisfactory system of medical insurance which they can make use of with dignity. Instead, it requires the most glaring kind of means test—virtual financial destitution—before the funds provided can be utilized. Hundreds of thousands of our retired citizens in need of health care would go without it first because they would be too proud to go to this extreme to get the medical and hospital care they really required.

After careful study I am convinced that the Forand kind of approach to this great problem—that is, making this insurance available through an expansion of the existing social security system—is the only adequate way to deal with the problem. Because of the gag rule under which this bill has come before us to the floor, it is impossible, of course, for those of us who feel as I do, Mr. Chairman, to make our views known.

I am supporting the bill notwithstanding that fact, however, in the hope and expectation that when it goes over to the other body, with their less restrictive rules of procedure, a Forand-type of plan will be substituted for the one contained in this bill. Then a revised and improved bill will come back to this House, and I will certainly support such a new bill, and feel confident that a majority of my colleagues will do likewise.

Mr. HALPERN. Mr. Chairman, earlier in this debate I pointed to the glaring inadequacies of this bill. Among these I cited its failure to provide a realistic health care program for the aged. With the indulgence of the House I would like at this time to express in more detail my views on this subject.

Everyone, Mr. Chairman recognizes the need for some form of health protection for our elderly citizens.

Everyone admits that the aged are more subject to illness than younger persons, and that they are less able to meet the costs of their ailments and hospitalization. The Department of Health, Education, and Welfare has put this general conviction into figures. The Department says that, on the one hand, the medical requirements of persons over 65 are two and a half times that of the average person. And, at the same time, 74 percent of the aged have no income at all or receive less than $1,000 a year; 11 percent of those over 65 have between $1,000 and $2,000 a year.

These figures tell a tragic story. They represent sad facts—the facts of elderly couples who have to struggle to exist on meager incomes, but who are anxious to maintain their dignity, who do not want to have their lifetime savings wiped out by the cost of extended illness, who fear having to go on relief.

We cannot desert these old people. We cannot abandon them, nor delude them with tragically false promises. We cannot proffer plans that we know will not work, plans that depend upon approval by others, and that would not relieve the old folks of the financial burden of their illness. Furthermore, we should not make these elderly citizens the victims of political warfare.

It is for these reasons that I introduced a companion bill to that offered by my good friend and colleague from the other side of the aisle, Congressman FORAND. This cosponsorship is a means of eliminating politics from an issue that I think is too important and too urgent for party divisions. I introduced a bill identical to that of Congressman FORAND for another reason—because I believe that the social security approach to the problem is the most logical, the most direct, the most economical.

My bill would provide insurance against the cost of hospitalization, nursing home care and surgical services. It would provide up to 60 days in a hospital; it would provide an additional 60 days in a nursing home, a total of 120 days if that is necessary. And it would not require that these old folks pay for this insurance out of their meager funds during the years of their retirement. Instead, the cost of the insurance would be spread over all the years of contribution to the social security trust fund, with those who have retired today being immediate beneficiaries of the insurance if and when they need it.

The cost will be light, but the sum would be adequate because it is contributed over many years. The very most that anyone would pay for this protection would be 25 cents a week. That would be for persons whose wage base is $4,800 a year or more. For those who make less, the cost would be less. For instance, for those whose wage base is $2,400 a year, the cost would be half as much as for those who make $4,800.

I support the principle of coverage under the social security system because this country has accepted this means of meeting our individual social needs. We use it now to pay old-age pensions. Why not include old-age health insurance? I see no logical reason for using any other than an established and proven means.

I know that many who oppose using the social security system take this stand because they never did like this principle. They have fought against every advance made in social security. Could it be that some of these persons do not want health insurance for our elderly citizens at all? That they offer a substitute only to obscure or defeat the issue?

The organized groups of doctors are among those who oppose health insurance under the social security system. I do not believe, however, that the organized groups reflect the views of the average doctor. I say this sincerely because I have talked with many of them. I have listened to many doctors as they testified before the Ways and Means Committee. I have read many of their views. And I am thoroughly convinced that the average doctor is convinced that the stand of his association is not good for his profession, but that the social security approach would be good for his profession, and for America.

Some of those persons who oppose the social security approach charge that it would be socialistic. This is a wild phrase and grossly misapplied in this instance. The fact is that the social security means of providing health insurance for retired persons is far from being socialized medicine. There is complete freedom of choice of doctors under this system. Anyone who gets such health insurance can choose any doctor he wishes, including, of course, the family doctor known and trusted for so many years. The rates are not fixed by the Government. They are decided by the doctors themselves through their societies and associations. The doctor assigns persons to a hospital, if he believes that advisable. The doctor decides when a person should leave a hospital, when he should go to a nursing home, if necessary.

Approval of health insurance for elderly persons under the social security system will enhance the medical profession because it will make the public more cognizant of their health problems. They will seek medical advice and medical care where heretofore the lack of

funds and the lack of available facilities have prevented it. I think passage of this bill will be the greatest boon to the free medical profession.

What is more, approval of health insurance for recipients of social security old-age benefits will give the people of America what they demand. I know this is the case not only from the mail that pours into my office from my constituents and people all over the Nation, but because of the answers to a questionnaire that I sent to the people in my district. I sent out 100,000 questionnaires to my constituency. It represents a good cross section of American thinking. Urbanites who have moved to Queens in the population shift that takes place in all large metropolitan centers are in my district. People of low, middle, and high income are in the district. A cross section of ethnic and religious groups, the small home owner, the owner of a large home, the man who pays high taxes and the one who pays an average tax, are all among my constituents.

Of the 100,000, I received returns from 15 percent, and my advertising friends tell me that is remarkably good. Ten percent is high. I asked the 100,000 about the bill that the gentleman from Rhode Island has offered and which I also introduced. I asked not just in general terms. I broke down the features of the bill. And 78 percent, about 4 in every 5, were in favor of the bill unqualifiedly. Only 10 percent were opposed. About 10 percent were undecided.

Mr. Chairman, I am convinced that the Congress must meet a need that all of us admit exists, that we should adopt the most logical, most direct, and most economical means—using the facilities of the social security system—and that we should not delay our action. It is evident that there is powerful opposition to this measure, but I say that those who are blocking the way are not heeding the demands of the people. And therefore I hope that this bill will be amended in the other body, so as to put health care for the aged into the social security system, where it belongs.

Mr. BOLAND. Mr. Chairman, I rise in support of H.R. 12580, the Social Security Amendments Act of 1960, which, among other improvements, will make it possible for the States, under a Federal-State grant-in-aid program, to provide medical care for low income aged persons who are otherwise self-sufficient but whom the States determine need help on medical expenses.

FAVORS SOCIAL SECURITY CONTRIBUTIONS SYSTEM

However, I am convinced that eventually the means of providing adequate health, hospitalization, and surgical benefits for elderly citizens living on small, fixed incomes will have to be met through the framework of the social security tax system. Contributions during years of earnings, matched by employer payroll taxes, would provide an assured method of financing, without placing a burden on Federal, State, or local revenues.

Mr. Chairman, I do not believe that this would lead to socialized medicine. All of the testimony and evidence I have studied in the printed hearings published by Senator MCNAMARA's Subcommittee on Problems of the Aged and Aging clearly and emphatically show that private insurance companies cannot provide low premium policies to meet the medical needs of America's senior citizens of low fixed income. Such a program can be provided only within the framework of the social security contributions system.

NEW YORK TIMES ENDORSED PLAN

The New York Times editorially endorsed such a plan on May 10 when discussing alternate proposals. Said the Times:

We believe that the arguments for using social security are overwhelming. Governor Rockefeller has done well to say that the administration plan could result in a very serious fiscal situation, very high costs, and cumbersome administration, and to urge that medical care for the aged be an added health feature of the social security system, with those who benefit contributing to their own protection.

Mr. Chairman, my colleagues are fully aware that this is an issue which has generated volumes of mail from the people back home, pleading with their Congressmen and Senators to do something to help resolve the prospects of burdensome hospital and medical costs when illness strikes. I would like to read just two of the hundreds of letters I have received on this subject:

NORTHAMPTON, MASS., *April 16, 1960.*
Congressman EDWARD P. BOLAND,
Congressional Office Building,
Washington, D.C.

DEAR CONGRESSMAN BOLAND: Now that you are considering some sort of medical care for the aged I would like to tell you that we both live on the lowest scale of social security payments. It is impossible for us to continue our present Blue Cross and Blue Shield payments much longer.

We believe that we are among the many in our age group (78 years) for whom an illness would be a financial disaster. In this matter as old people, we wonder if a little foreign aid money couldn't be best spent at home.

We hope that you will let us know what your feelings are in this matter and will watch to see how you vote on such a bill.

Sincerely yours,

Mrs. EMILY DONOVAN.
DANIEL J. DONOVAN.

SPRINGFIELD, MASS.

Hon. EDWARD P. BOLAND,
Washington, D.C.

DEAR CONGRESSMAN BOLAND: I am a senior citizen of 68 years old. My husband will be 70 years old in November.

Since he has retired at 65 years old our problems have been getting worse every day. With the high cost of living upon us such as food, fuel, rent, clothing, medicines, and sickness, which we are having a lot of lately, as my husband is in the doctor's care at the present time, we absolutely cannot get along with the amount we receive from the social security checks which is $147 monthly.

Our living expenses are much more than we receive in social security income. We had a small life savings which is all gone now.

So, my dear Congressman, you can easily see that the future is not very bright for us. We have no children to go to for help which makes it more difficult for us. It makes us very unhappy to have to beg, and complain to you and our country for help for the aged and feeble. So, in you we trust that you may succeed in getting help for the poor old people of this country in your official duty.

I hope I have not taken too much of your time in reading about my problems.

Thanking you for your kind attention, I am,

Sincerely,

Mrs. FRED GOYETTE.

ELDERLY DESIRE TO PAY THEIR WAY

Mr. Chairman, many of America's senior citizens unfortunately become indigents at a time in their lives when their earning capacity is nil, and they are trying to live in dignity principally on the benefits of private or social security pension plans. They do not ask anyone to pay their way in retirement. Hundreds of them in my congressional district have told me personally that they worry about the day when they might require hospitalization, the cost of which would wipe out their savings of a lifetime, or put them deeply in debt. The Washington Post editorially expressed the same concern on February 20 in these words:

Everywhere in its travels around the country, Senator MCNAMARA'S Subcommittee on Problems of the Aged and Aging heard anxiety expressed by older citizens as to how they would pay for medical care in their retirement. How can anyone with foresight, old or young, fail to be anxious about this problem? While a man is employed, he can enjoy the protection of some sort of group or private insurance program to cover medical and hospital bills if he becomes ill. The chances are, however, that when he retires he will no longer enjoy such protection; yet this is the time, obviously, when he will need it most—when, indeed, he is certain to need it sooner or later, which is what makes the cost of such private insurance prohibitively high for the aged.

The McNamara subcommittee came to the conclusion that this problem "should have top priority for legislative consideration in 1960" and recommended in its report an expansion of the system of old-age, survivors, and disability insurance to include health service benefits for all persons eligible for OASDI. We think this conclusion is inescapable. The essence of it is embodied in the Forand bill which would cost about $1 billion a year to be financed with one-fourth of 1 percent increase in social security taxes. Like other old-age benefits, this would be paid for by a citizen throughout his wage-earning years, with a matching contribution by his employer. It would relieve retirement of one of the worst of its nightmares.

And, again on March 24, the Washington Post editorially pointed out:

Old age is the time of life when, generally, income is lowest and potential and actual illness is at its highest. Why should it be called socialistic for Americans to provide for the health hazards of their retirement years by paying insurance premiums through taxation during their wage-earning years? This is not socialism; it is simple commonsense. It is a practical scheme for enabling citizens to face old age with confidence and self-respect—to know that they need not depend upon the charity of doctors and hospitals for whatever medical care they may require. This is no more socialistic than any other form of social security.

Mr. Chairman, the distinguished columnist, Mr. Walter Lippmann, went to the heart of the issue in his article appearing in the Washington Post, on June

16. I would like to read Mr. Lippmann's column to my colleagues:

MEDICAL CARE FOR THE AGED

(By Walter Lippmann)

Almost everyone realizes that a great mass of the old people do not have the savings, and cannot depend upon their children, to pay for the doctors, hospitals, nursing homes, and drugs which, because they are aging, they need more than do younger people.

There are a few eccentrics, professing to be conservatives, who think that in a truly rugged individualism these ailing old people would do without medical care if they can't pay for it, or would make their children mortgage the future to pay the medical bills.

But the country is not that ruggedly obtuse to the facts of life, and accordingly both the administration and the Democratic opposition are agreed that the need, which is obvious and urgent, must be met by Government measures.

Thus, this administration has prepared a program which the Director of the Budget, Mr. Stans, says will cost $1.5 billion by 1964 and $2.5 billion by 1970. For the Democrats, Senator MCNAMARA and some 19 Senators, including KENNEDY, SYMINGTON, and HUMPHREY, have introduced a bill that would add medical insurance to the existing old-age insurance. After the first year, the cost of this program would be $1.5 billion. Thus the two programs are approximately of the same size.

But between the two programs there is a basic issue of principle. On one side are the President and his advisers. On the other side are the preponderant mass of the Democrats and also a considerable minority of the Republicans led by Governor Rockefeller. They differ essentially on how the program shall be financed.

Shall it be financed by compulsory insurance, which means that throughout a person's working life he and his employer will be taxed to provide an insurance fund for his medical needs when he is retired and is no longer earning an income? This is the principle of the McNamara bill in the Senate, as it was of the Forand bill in the House, and it has the support of the leading Democrats and of Governor Rockefeller.

Or shall the program be financed, as the administration proposes, by charitable doles to the very poor, paid for out of compulsory taxes collected by the National and State Governments?

For reasons which he has never explained, the President regards compulsory social security taxes as unsound, socialistic, and rather un-American; on the other hand, he regards compulsory taxes to pay for doles based on a means test as somehow more "voluntary," sounder, more worthy of a free society, and more American.

Under the McNamara bill, medical insurance would be added to the existing old-age insurance system. During his working life, each person covered by the social security system would contribute an additional amount, as would also his employer, to supplement his retirement income to include medical services.

It is true that during the first few years benefits would be received by persons who had not contributed because the system did not exist when they were earning their living. These benefits would be paid for by the younger people. But as the younger people would be buying their own insurance, there is little inequity in this. Nobody will lose anything although those who are already too old to have been contributors to an insurance plan will benefit. In a few years everyone receiving the benefits will have paid his share.

Why does the President feel so strongly opposed to the principle of compulsory insurance for medical care to supplement the insurance, which already exists, for old age? What is wrong about its being compulsory that a man should insure himself against the needs of his old age? What is so wonderful about a voluntary system under which a man who doesn't save for his old age has to have his doctors and his hospital bills paid for by his children or public welfare funds? There is nothing un-American in the principle that the imprudent shall be compelled to save so that they do not become a burden to their families and the local charities, so that they can meet the needs of their old age with the self-respect which comes from being entitled to the benefits because they have paid the cost out of their own earnings.

The President has been led to think, he says, that compulsory insurance is "a very definite step in socialized medicine." Why? In a system of compulsory insurance the Department of Health, Education, and Welfare, which would administer the program, could and should use as its agents private organizations like the National Blue Cross Association in negotiating with hospitals and nursing homes and in dealing with claims and complaints. The system would be financed as insurance. But it would be worked not by a new Government agency but by the kind of private voluntary association which the President otherwise believes in.

In this connection it is interesting to remember that in the early 1930's when voluntary health insurance plans were inaugurated, our old friend, the American Medical Association, was declaring that they were communism and socialism and socialized medicine. Today, the American Medical Association is pointing to these same voluntary insurance plans as the solution of our present need and the proper alternative to compulsory old-age medical care insurance.

Among the opponents of medical insurance there seems to be a vague and uncomfortable feeling that it is a newfangled theory, alien to the American way of life and imported, presumably, from Soviet Russia.

The Founding Fathers were not subject to such theoretical hobgoblins. In 1798 Congress set up the first medical insurance scheme under the U.S. Marine Hospital Service. The scheme was financed by deducting from seamen's wages contributions to pay for their hospital expenses.

If that was "socialized medicine," the generation of the Founding Fathers was blandly unaware of it.

Finally, Mr. Chairman, Business Week has endorsed the principle of medical assistance for the aged with the framework of the social security contributing system. Certainly no one can accuse this highly respected magazine of advocating something socialistic. Let me read you the Business Week article of April 16, entitled "A Challenge That Can't Be Ducked":

Health insurance for the aged is fast becoming the No. 1 issue facing Congress this year. And there's political dynamite in it: Any candidate suspected by the millions of old people (and those concerned about their health problems) of taking a cold or know-nothing attitude toward the issue is likely to be in serious trouble this election year.

One thing about the issue is clear: Although plenty of politicians may see it as a vote-catching device, there is nothing synthetic or phony about the problem. Everyone who has seriously studied the situation has concluded that the provision of better health care for the aged is a serious—and growing—problem. Thanks to medical progress, the number of aged is increasing rapidly. In 1930, there were 6 million people over 65 in the United States; today there are 16 million.

For far too many of these, long life has meant shrunken incomes, increased sickness, loneliness, and the shame of being a candidate for a handout from society. Health, Education, and Welfare Secretary Flemming, in his thorough report to the House Ways and Means Committee last year, concluded that three out of every four aged persons would be able to "prove need in relation to hospital costs." That is to say, they would be able to prove that they simply could not afford to pay for the care they needed when taken seriously ill.

The issue, then, is not whether there is a problem but rather how to meet the problem.

TWO APPROACHES

Representative AIME FORAND, Democrat, of Rhode Island, has proposed to deal with it through a system of compulsory Federal insurance within the framework of the Social Security Act. The Forand bill would provide insurance covering 60 days of hospital care, or 120 days of combined hospital and nursing home care, together with surgical services, to all those eligible for old-age insurance benefits. It would be financed, initially, by boosting social security payroll taxes one-half percent—divided equally between employees and employers.

The Forand bill has been attacked for a number of reasons by various groups, especially the American Medical Association, which sees it as the camel's nose of socialized medicine coming under the tent.

But the main weakness of the Forand bill, as specialists in the health field see it, is not that it does too much but too little. They condemn it as too narrow and as an encouragement to "hospitalitis"—the tendency, inherent in many of our present voluntary insurance programs, to put the sick into hospitals because there are no provisions for covering treatment at home or in doctors' offices.

The bill sponsored by Senator JAVITS, Republican, of New York, strikes at this weakness. As JAVITS points out, though hospitalization costs comprise a large part of an aged person's annual medical bill, the average older couple spends $140 a year on health costs unrelated to hospitalization. "One out of every six persons 65 years and older," says JAVITS, "pays over $500 in medical bills annually." Yet 60 percent of the old people have annual incomes under $1,000 and can't afford home or office care that might cut down the length of hospitalization or eliminate it altogether.

JAVITS would deal with the problem by a voluntary program that would combine Federal and State subsidies, contributions scaled to income by the aged themselves, and both commercial and nonprofit insurance companies such as Blue Cross and Blue Shield. The program would not become operative in any State until the State put up the money, arranged with the insurance carriers, and agreed to certain standards for the program.

Although the Javits bill makes a hard effort to provide a voluntary (and heavily subsidized) program, it does not appear to meet the test of practicality. The program would take a very long time to negotiate with 50 individual State governments and with the insurance carriers—assuming that it would be possible at all to get them involved in a program whose costs are unpredictable.

Indeed, after studying Flemming's able report, and the arguments on all sides of this issue, we are forced to conclude that the voluntary approach simply will not do the job.

The problem basically is that the aged are high-cost, high-risk, low-income customers. Their health needs can be met only by themselves when they are young or by other younger people who are still working. The only way to handle their health problem, therefore, is to spread the risks and costs widely. And that can best be done through

the social security system to which employers and employees contribute regularly. By comparison with the heavily subsidized schemes, this approach has the advantage of keeping old people from feeling that they are beggars living off society's handouts.

Wo do not pretend to know all the answers to the problem of enlarging the social security system to include a health insurance program for the aged. Even a modest study of the problem immediately convinces anyone of its difficulty and complexity. At this point, we don't think that the complete answer to it has emerged.

Nevertheless, no democratic government can refuse to grapple with a problem of such demonstrated urgency and importance. The issue cannot be evaded and, before it becomes a political football, the politicians of both parties should accept responsibility for finding the best possible answer in the shortest possible time.

Mr. METCALF. Mr. Chairman, providing medical and health insurance for our elderly citizens is a must for this session of Congress. We have delayed too long already in facing up to the tragic fact that our elderly citizens have doctor and hospital bills which they cannot meet. We must no longer avoid our responsibility to our retired constituents. I am sorry indeed that the bill we are voting on at present does avoid this responsibility.

We should not try to meet this problem half way. We should not go at it piecemeal. We should go all the way. We should, of course, see that the recipients of social security old-age pensions should get insurance covering hospital and nursing home costs, but we should also cover the 6 million persons 65 and over who are not covered by the social security program. They, too, are in difficult financial straits. They, too, must be considered.

I believe that the quickest, surest, and most economical way to meet the problem is to enact a bill along the lines of the Forand bill with the addition of a program to take care of the elderly outside the social security program. Basically, however, the Forand bill is the answer.

I say this because our social security structure is sound and proven. It is solvent. The money within the fund is in excess of what we are paying out. In fact, we can undertake to put health insurance for our retired people under the system by providing for only a little additional tax.

There is a trend in many sections of the Nation toward the metropolitan centers where there are more jobs and where there is more income. This is understandable, but when these people leave the farming and economically marginal areas, they make the problems of these regions more acute.

Most of those who leave are the young. Those left behind are the elderly. I do not mean that they are all 60 or 65 years of age, but employment drops when the youngest go. Income chances are cut for those who remain. Those who get social security old-age benefits have little or no chance of supplementing their social security checks. They are by no means likely to earn anywhere near the $1,200 allowed to them each year. And so, for the most part, they must subsist on the checks they get from social security.

Let us take an example of one such couple. They are receiving, say, $150 a month in security checks as husband and wife. They probably have their home paid for. I am talking about the average elderly couple. They do not have any savings. They have to get by on their social security check of $150 a month, $150 for husband and wife.

They find that if they stretch the $150, they can buy food, they can buy clothing, they can buy their fuel, they can pay their taxes on their property—but let some sickness come along and they are in dire straits. Suppose the husband or wife is hospitalized for 2 weeks, or a month, or 2 months, and they run up a doctor bill of say $500 or $600, a hospital bill of $300 or $400. That couple will be ruined. They cannot get the money they need out of their social security check of $150 a month. They need that to live on. It is only enough for them to exist.

It is evident that these people can be helped only by a complete program of hospital and medical care. I do not see any other way out. And for the life of me, I cannot understand why the American Medical Association opposes such a program. Recently a doctor in my district told me, "So and so can't afford to pay his bill. I know his situation. He's only getting a social security check of $70 a month; his wife is getting a check of $35 a month. That's only $105 a month. They need that for their food, their fuel, their clothing, their taxes. In fact, I don't understand how they get by. And they owe me a doctor bill for $300. I don't know how I'm going to get it."

I do not think the American Medical Association speaks for all the doctors. I do not think the American Medical Association speaks for all the doctors when it comes out against another proposal—social security for doctors. I find in talking to my doctors that the AMA as such has never taken a poll to find out if doctors want to be included under the social security program. I have talked to doctors, and 9 out of 10 doctors in my district want to come under social security.

Let me say one more thing: The cost of the administration of most of the programs proposed—except for the social security principle plans—would be enormous. A lot of additional taxes would be drained from the people and the people would not be directly benefitted. Most of the money would be lost in the administration of the program.

On the other hand, making health insurance for the elderly a part of the social security system is ideal. The cost of administration would then be minute. In fact, one of the most striking features about the social security program is its low cost of administration. Less of the social security funds are paid for administration than in any other program of our Federal Government. Ninety-nine percent of the money we collect for social security goes to benefit the people, and I think the program of hospital and medical care would work in the same way.

On May 25 I introduced a bill, H.R. 12418, which provided basic health benefits as a matter of right to all persons aged 68 or over. This bill sought to answer the objection to the Forand bill that many people in between the public welfare group and the social security group were not covered.

The Republican proposal, the so-called Medicare program did take care of this middle group but at a high cost to the Federal Government, to the States and to the people affected.

My proposal was founded on the principle of social security but the people who were left out of the Forand bill were included in the coverage and at the same time costs were held down. My bill would have provided for the 9 million persons aged 68 or over who are eligible for old-age survivors and disability insurance monthly benefits, medical and institutional care, or, if they preferred, a $4 increase in their monthly cash payments. The benefits would accrue as a matter of right without a means test. Persons aged 68 or over, not eligible for old-age survivors disability and insurance benefits would receive identical treatment through a parallel program financed out of general revenue.

By adding this latter proposition to the Forand bill we can achieve coverage for all the persons in the retired age group and at the same time utilize tried and tested techniques which we have found to be fiscally responsible.

I am deeply disappointed, therefore, in the proposal before us. I do not think it makes sense. It is an evasion. What we ought to have before us is a Forand-type plan.

We should enact such a program in this session of Congress. I do not know of any greater domestic problem facing the people of the United States, and I hope that before this Congress adjourns, the other body will give us a chance to incorporate in this measure something like the Forand bill, a bill that uses the principle of social security, and I would also hope it would take care of those not under the social security program. This is the best, most practical, most economical answer to a problem of real importance to the Nation.

Mr. HOLLAND. Mr. Chairman, there are many changes in the social security laws contained in this bill which are needed by recipients of social security payments. However, it does not begin to settle the problem of bringing health to those in their elder years who need health and medical care.

The men and women of America who have grown old in their labor to make this country the richest nation in the world are shunted aside and are told by our Government "You must meet the requirements of those who are receiving public assistance before you can secure hospitalization and medical care."

In our State of Pennsylvania at the present time, we are taking care of our indigents by supplying them hospital and medical care, and in some cases, nursing home care. These are individuals who under our constitution have proven they have no other source of income, and are paupers, in order to secure this help.

The State's bills for these services amount to $38,100,000.

In the county in which I live—Allegheny County—we pay out of local taxes $6,582,311 to take care of indigent people. It is estimated that over 70 percent of these patients are 65 years of age and older.

One of the most pitiful sights which has come to my attention is to see an old man over 65 who has lived all his life, paying his own way, being forced to beg for hospital and medical attention. I have had men and women come to me and state they wish the good Lord would take them before they are forced to beg for help.

Some of the letters I have received in connection with the Forand bill, and some of the editorials appearing in the newspapers, spoke about the Forand bill increasing taxes, while at the same time they favored the Federal Government and the State government joining together and paying into the insurance company large payments to cover the aged. The aged are not asking to be paid out of current taxes. They are willing to pay their own way by increasing social security deductions. They do not want to be a burden to the county, or the State or the Nation, or even to their own families. They want to maintain their dignity and pay their own way.

These recipients would have no portability, for if they moved out of the State, they would have to return to Pennsylvania to receive help.

The complicated plan contained in this bill to give hospital and medical care to the aged is unworkable. It would require millions of dollars to administer. When it is compared to the social security proposal under the Forand bill, it is not acceptable to the States—and above all, it is not acceptable to the aged who would resent being investigated and investigated as to their eligibility.

The only economic way that this can be arranged is through the social security system. The social security system of giving medical help and hospitalization to our aged is preferable and has the following advantages: First, simple administration—already basically established; second, collection during years of employment when payment is easy; third, no drain on general tax revenue; fourth, continued coverage even if the recipient moves to another State; and, fifth, preservation of dignity—no means test.

This, Mr. Chairman, is what we want for the aged. I am voting for this bill for the many improvements pertaining to the social security program which it contains. I am also in hopes that the Senate will amend this bill properly and place the medical and hospital care under social security where it belongs.

In mutual aid to foreign countries we appropriate millions of dollars to help better the health of people throughout the world. Let us help our own.

Mr. RHODES of Pennsylvania. Mr. Chairman, while I intend to support this bill to improve the social security program, I am disappointed in the inadequacy of the proposal in meeting the needs of our retired aged and handicapped citizens.

It seems to me that there should have been an increase in social security benefits. This is particularly true of the present $33 minimum, which is unrealistic and shameful.

I was, however, pleased that the proposal which I made for removing the age 50 requirement for disability benefits was approved by the committee and is a part of the present bill.

But I was disappointed that my proposal for lowering the age requirements was not included in the bill. The difficulty of aged persons in finding gainful employment indicates the need for lowering present age requirements from 65 to 62 for men and from 62 to 60 for women.

The approach in the present bill to meeting the needs of health and hospitalization is inadequate and unrealistic. I fear, along with many of my colleagues, that this will lead to a great deal of confusion and do little or nothing in helping our aged citizens to cope with costly medical and hospital services.

Even though the bill is inadequate, I will support the proposal, which we must accept if there is to be any advance in the social security program this year. It leave us little choice—we either vote for an inadequate bill or no bill at all.

It is my hope that the House bill will be improved by the Senate so that when the final decision is made we will have a chance to vote for something better than the proposal now before us.

We cannot, in good conscience, ignore the need for substantial improvements in our social security program. We owe this to the people. If we pass no other major legislation before this Congress adjourns, passage of an adequate and realistic social security bill would be a constructive and real achievement.

Mr. KEOGH. Mr. Chairman, I join in expressing regret that my colleague on the committee and my friend, AIME FORAND, has made a decision to retire. We will miss sorely his advice and counsel on the committee. I know of no one who has had a deeper concern for humane and sound social legislation or who has contributed more to the improvements which have been made over the years in the Social Security Act. We will miss his warm friendship, his wise counsel, and his great contributions to the work of the committee.

Mr. ZABLOCKI. Mr. Chairman, I wish to join with my colleagues in extending my sincere congratulations and commendation to our distinguished friend from Rhode Island [Mr. FORAND] for his untiring efforts in support of legislation to promote the welfare and to solve the health problem of our people, and particularly of our elder citizens.

In introducing the Forand bill to provide medical care insurance under the social security system, and in championing other constructive measures, our distinguished colleague from Rhode Island has won a special place in the hearts of the American people.

We receive his decision to retire upon the completion of the work of this Congress with deep regret. His experience, his sage advice, and his leadership in social welfare legislation will be missed in these Halls. I want to take this opportunity, however, to extend to him my best wishes for a happy, restful retirement in the circle of his family and of his many friends.

Mr. Chairman, I want to add that I was honored when the gentleman from Rhode Island invited me in 1957 to join him in sponsoring legislation to provide medical care insurance on a prepayment, funded basis for our older citizens. I became a cosponsor of the Forand bill, and I had hoped that it would be reported to the full House for consideration and a vote. The medical care provisions of the bill before us, containing the Social Security Act amendments of 1960, fall considerably short of the proposal outlined in H.R. 4700. I will, however, support this legislation for two reasons: First, because the medical care needs of our older citizens are pressing, and we must make a start somewhere and in some way in meeting those needs; and, secondly, because I have hope that the House conferees, led by the able chairman of the committee, Mr. MILLS, and with the assistance of Mr. FORAND, guided by the expressions made here today, will bring back to the House a more effective program for helping our elder citizens to secure needed and adequate medical care.

I know that my good friend from Rhode Island [Mr. FORAND] and many of my colleagues will support this position. To me, there is little alternative in view of the facts which confront us.

It is a fact, for instance, that 80 percent of our 16 million citizens over 65 years of age have incomes of $2,000 or less and cannot afford adequate medical care.

It is a further fact that the majority of our elder citizens are not covered by any type of hospitalization or medical care insurance.

It is a still further fact that the cost of medical care has continued to rise at a sharp rate, and that our older citizens—spending, on the average, twice as much per year for medical care as the average spent for this purpose by our population as a whole—cannot look forward to meeting their needs in this area through their own effort.

Because of these facts, I feel that we must continue to seek a comprehensive and effective solution to this problem, beyond the very limited provisions in the bill before us. I intend to continue to work to this goal. It is my hope that this Congress will enact legislation which will meet the needs of the aged. Such legislation would be a lasting tribute to the efforts of our beloved colleague from Rhode Island [Mr. FORAND].

Mr. VANIK. Mr. Chairman, although I am completely dissatisfied with the inadequacies of H.R. 12580, as reported by the Ways and Means Committee, I will support this legislation, because it appears to be the only opportunity this year to provide medical care for the aged and to improve the social security laws by removing the age 50 eligibility requirement for disabled insured workers and their dependents and to provide an increase in children's benefits.

The provisions made in this legislation to provide for a Federal-State

grant-in-aid program to help the States assist low-income aged individuals who need assistance in meeting their medical expenses is certainly desirable for those who can qualify. However, we face a critical problem in the widening gap between medical services and care available to the indigent as distinguished from the low income or near indigent.

This widening gap destroys highly desirable incentives for low-income families to try to "go it alone" on their low incomes. Thousands of these families in my community, unable to qualify under public programs which provide health and medical care, struggle along without necessary services to the detriment of family and community health.

The only sound approach to this problem can be found in the principles of the Forand bill which would make it possible for the average worker to provide medical and health care for his family during his working years as a matter of earned right. Thus the payment of premiums during the period of good health would build up a reserve to cover such medical and hospital care as he and his family may need in later years when income is reduced or completely eliminated in retirement.

In observing thousands of families in my community, who live on social security and other pensions, I am constantly impressed by how well they get along, even receiving a partial social security payment. If these families own their own modest homes the pension program usually produces enough income to permit these families to continue living in the family homestead without outside help either from the family or any public agency. However, when critical and extended and prolonged illness, particularly the illnesses of old age, involve one of the members of these families, the entire family unit is plunged into a hopeless catastrophic financial dilemma from which there is no chance of survivorship. These are provident working people who have contributed to the growth and to the strength of America and who cannot under any circumstances meet the tremendous medical burdens that are imposed by the diseases of old age. These people must not be cast upon a social trash heap or be permitted to die prematurely for lack of decent medical care.

It is of these families we must also think in terms of this legislation. It is my hope that this shortcoming in the House legislation can be corrected in conference, so that this positive and necessary step forward in social security can be accomplished in this session.

Mr. SANTANGELO. Mr. Chairman, I support H.R. 12580, the Social Security Amendments of 1960, which is designed to extend and improve the coverage under the Federal old-age, survivors, and diability insurance system and to remove hardships and inequities, and for other purposes. I support this bill because on balance it removes inequities in our social security system, but I am sorely disappointed in what the Committee on Ways and Means has submitted to the Congress without opportunities to amend the bill and to improve its provisions.

This bill provides for a program of medical care for the aged and establishes a new title of the Social Security Act, title 16, which would initiate a new Federal-State grants-in-aid program to help the States low-income aged individuals who need assistance in meeting their medical expenses. This proposal is not the Forand bill, which 16 million aged persons were looking forward to with anxiety and with anticipation. The bill known as the Forand bill, H.R. 4700, and which I cosponsored, was in essence rejected by the committee. The rejection of the Forand bill is a sad blow to all of us who were seeking an effective program upon trustworthy machinery, the social security trust fund. The failure to pass the Forand bill is a disappointment to me. The medical care program which the committee submitted for consideration provides for a Federal-State program and is completely optional with the States, with each State determining the extent and character of its own program, including standards of eligibility and scope of benefits. The State sets forth the eligibility requirements, and those persons 65 years of age and over whose income and resources—taking into account their other living requirements as determined by a State—are insufficient to meet the cost of their medical services, will be eligible under the program. Persons on public assistance will not be eligible under the provisions of the instant bill.

The scope of medical benefits and services provided for will be determined by the States. The Federal Government will participate by matching funds with the State in accordance with a formula which runs along the lines of Federal contributions to States for the administration of public welfare. The States may provide institutional and noninstitutional services. The services which the State program must provide if it is to meet the Federal standards will provide 10 major items: First, inpatient hospital services up to 120 days per year; second, skilled nursing-home services; third, physicians' services; fourth, outpatient hospital services; fifth, organized home care services; sixth, private duty nursing services; seventh, therapeutic services; eighth, major dental treatment; ninth, laboratory and X-ray services up to $200 per year; and, tenth, prescribed drugs up to $200 per year.

Experience discloses that in the administration of the old-age assistance program as opposed to the old-age and survivors insurance program, 15 States have failed and neglected to set up programs for medical assistance for the aged people on public welfare. In those programs, the Federal Government provides most of the moneys with little contribution from the States, and yet 15 States have failed to make any provisions for the granting of medical services to the aged people receiving public assistance. If 15 States refuse to contribute at least 10 percent of the funds for providing medical care for those receiving public assistance, is it reasonable to expect that these 15 States will provide 50 percent of the cost for senior citizens who are not on public assistance and who cannot afford to pay for their medical care?

This bill improves upon the 1958 amendments as to persons who are disabled and who cannot pursue any gainful occupation. This bill eliminates the age requirement which was fixed at 50 years and provides that if a person of whatever age has the necessary period of employment, he may receive benefits if he is permanently disabled and cannot work at any gainful occupation. This bill also reduces for some people the number of quarters to become eligible for benefits. This bill extends coverage to self-employed doctors and interns, certain domestic help and certain State and local government employees. This bill increases the benefit provisions for children of widows who are entitled to benefits under the social security system.

This bill provides also that a disabled worker who regains his ability to work and then within 5 years again becomes disabled will not be required to wait through a second 6-month waiting period before his benefits will be resumed as is now required by law. This bill also provides that survivors of workers who died before 1940 and who had at least six quarters of coverage would qualify for benefit payments.

I have been disappointed in the medical care program and benefits which this bill provides for. The effectiveness of this program will depend upon the State governments availing themselves of the opportunity. In my opinion, this program is a mirage and vanishes when we seek to reach it. I trust that the States will take the opportunities provided for, but in view of past history, I doubt very much that State governments will embark upon this humane program.

I have been disappointed in two other major respects. These are defects of omission and failure to act rather than defects of commission. I am disappointed that the committee did not recommend an increase in the permissible earnings which a retired worker may earn before losing retirement benefits. The law at present provides that retired workers may not earn in excess of $1,200 per year. If they do earn in excess of $1,200 per year, they lose a proportionate part of their pension benefits. If they earn in excess of $2,400, retired workers lose entirely their pension benefits. Experience has disclosed that with the high cost of living, pensioners must supplement their pension benefits by obtaining employment. Many of them earn in excess of $1,200 per year and are penalized by reason of their diligence which has brought to them gross earnings in excess of $1,200. It is my hope that the committee would raise the limitation to at least $1,800 per year or to any other reasonable figure. This the committee failed to do.

I was also sorely disappointed in the failure of the Committee on Ways and Means to correct an inequity affecting thousands of service workers, such as waiters, beauticians, taxicab drivers, porters, pin boys, maritime service employees, who depend upon tips as part of their wages. Under the present law,

tips which these service workers receive are not included in the computation of social security benefits, notwithstanding the fact that these tips are included for purposes of income tax. It is unfair that the tips should be subjected to taxes and yet not be included in the basis for determining pension benefits. The Committee on Ways and Means rejected the provisions of my bill which would have provided for contributions on tips by the employee as well as the employer. The committee also rejected to grant service employees to pay on their tips on a voluntary basis without joint contribution by the employer. This failure on the part of the committee has not only disappointed me, but millions of persons throughout the United States. I shall continue my efforts to correct this inequity in future congressional sessions provided I have the opportunity of representing my district.

I wish to commend several members of the Committee on Ways and Means, especially my colleague, Mr. EUGENE J. KEOGH, in his support to include a provision to cover service workers with respect to their tips as part of wages in the computation of social security benefits. I also commend Mr. AIME J. FORAND, the Representative from Rhode Island, who is retiring at the end of this session and whose bill has brought to the attention of the Nation the crying need for a solution of the problem concerning medical care for the aged of our country.

I, therefore, am voting for this bill and trust that it will pass with an outside hope that the Senate in conference with the House Members will embody those features which are lacking and will improve upon those features which attempt to solve the program, but which, in my opinion, do not adequately do so.

Mr. REUSS. Mr. Chairman, of all the civilized democracies under the sun, we are the only one that has failed to act publicly on a national basis to meet the problem of health care for the aged. Yet, America's senior citizens are no less subject to the ills the flesh is heir to than are older persons elsewhere in the world. The medical and hospital needs of people over 65 are several times greater than those of the average American. And retired people, living on social security or other pensions, are less able than at any time in their adult lives to pay even modest hospital or doctor bills.

What is often overlooked is that an adequate system of health care for the elderly, financed under the social security system by the contributions of workers and employers, would benefit many people other than the direct recipients of such assistance.

If my mail received in Washington is an indication—and I am sure that it is—the great majority of Milwaukeeans recognize the serious financial difficulties which confront retired persons in time of illness, and favor the establishment of a national program to underwrite basic health care costs. The signs point clearly to the wisdom of using our social security system as the foundation for assuring adequate health care for our senior citizens in a dignified way. We now have 25 years of experience with the social security system, and although it has inadequacies and imperfections, the system works.

I hope the parliamentary course of H.R. 12580 will permit amendments so as to set up the kind of health program for the aged that this country needs.

Mr. RABAUT. Mr. Chairman, I join in the remarks which my good friend, the Honorable AIME FORAND, has made on the floor today in connection with medical care for aged individuals. I have expressed to him personally that he should enlarge upon his remarks under his request to extend them. He should make known the attitude of certain groups toward this humane and beneficial legislation.

At this point, I would like to express my deep regret that he is leaving us. His absence from this body will be a major loss to many of his colleagues, to his congressional district, to his fine State of Rhode Island, and the Nation as a whole. He has been an inspiration to me. He is not only humble and sincere but has a great devotion for his fellow man. And, although he is retiring from public service, I am sure that in his retirement his efforts to assist others in need will continue.

Mrs. DWYER. Mr. Chairman, I support the pending legislation because I believe it makes an important contribution toward updating and improving our social security system and permitting that system to be as useful and helpful as possible to the elderly, the retired, the disabled and the dependent.

The economic and social circumstances which affect the lives of our people are constantly changing. It is essential that Congress keep up with these changes, understand the way in which they affect the people concerned, and act accordingly so that social security laws and regulations reflect these changes and are adapted to the real needs of real people.

To a great extent, the present bill does this:

By removing the age 50 eligibility requirement of the disability insurance program, we shall bring badly needed help to an estimated 250,000 insured workers and their dependents who—despite their disability—have not been allowed to qualify for the benefits they need and deserve.

By providing a 12-month period during which benefits are continued for all disabled workers who attempt to return to work, we shall strengthen the rehabilitation features of the disability program and encourage, rather than discourage, workers to overcome their handicaps and resume their places as constructive and productive forces in our national life.

By eliminating the 6-month waiting period for disabled workers who have returned to work and then become disabled again, we shall ease these workers over a particularly trying time when they need help the most.

By liberalizing the insured status requirement, about 600,000 persons will be eligible for minimum social security benefits immediately, and ultimately about 1.4 million will be eligible who would not otherwise have qualified. This liberalization will help especially the older workers who come under the program in the later years of their working lives.

A number of amendments will remove inequities in the present law which have worked to the disadvantage of widows, especially those over 75, and the children and other survivors of insured workers.

The bill will also extend coverage, and protection, to about 300,000 additional people who do not now participate in the Social Security System, including self-employed doctors and domestic workers, thereby making it possible for them to provide necessary survivorship and disability protection for themselves and their families.

In a related field, the bill would provide the authorization for increased appropriations in the important maternal and child welfare programs, including services for crippled children.

The legislation also would improve the existing Federal-State program of employment security by, among other things, building up the fund from which advances to States are made when their reserves have been depleted in times of heavy unemployment. This will further strengthen the whole unemployment compensation program.

In the vital field of medical care, the legislation is designed to encourage States to make improvements in their medical payment programs for old age assistance recipients.

Of all the changes and improvements made by this bill, unquestionably the most important and controversial is the proposed new program of medical services for the aged. The committee has recommended a voluntary program, similar in many respects to the kind of program envisaged in legislation I introduced earlier this year. Ten million persons over 65 with relatively low incomes would qualify for assistance in the event they incur extensive medical expenses. This program would be voluntary, with Federal and State Governments sharing the cost under an equalization formula in which the Federal share would range from 50 to 65 percent. The medical services which would be included in the program are especially designed for older persons. An estimated 1½ million people over 65 each year require the kind of medical services specified in the bill.

The committee's recommendation of such a program, Mr. Speaker, marks a major step ahead in helping older people meet the often catastrophic impact of serious illness. The problem is universally acknowledged to be one of the most serious which our country faces. The controversy exists only in relation to the best means to meet the need.

Proponents of the plan to make medical care for the elderly an integral part of the social security system will not be satisfied by the committee recommendation. Yet, the House must either accept or reject this program, at this time, as it is. Whatever may be one's views about the Forand bill, the present proposal is a constructive and forward-looking one. For this reason, I support it.

Mr. DONOHUE. Mr. Chairman, unfortunately it is quite evident there is much fear and distressing doubt, in the minds of a goodly number of Mem-

bers here that this proposal, H.R. 12580, the Social Security Amendments of 1960, is as reasonable and realistically responsive as it could and should be, to the needs and the desires of the great majority of American citizens. Under such circumstances we are, unhappily, because of the closed rule under which we are operating, permitted to vote only for or against the whole bill, without modifications.

Being restricted, then, to these two choices, I intend to support the bill because it does provide an extension and expansion of a limited number of benefits to those people whose needs are most urgent.

For instance, the bill removes the age 50 eligibility requirement for disability benefits; it liberalizes the eligibility requirements of old age, survivors and disability benefits; it makes certain improvements in the social security benefit protection for children and extends benefit eligibility to more widows; it effectuates certain improvements in the administrative financing and solvency provisions of the unemployment compensation system, as well as extending its coverage; it extends coverage to groups that were not before included. All these improvements are good and they have already been carefully and thoroughly explained by the distinguished chairman of the House Ways and Means Committee.

Unfortunately, the committee has not seen fit to recommend other advances and improvements which a great many of us have been advocating with the earnest hope that they would be included in this measure. Chief among these would be provisions to reduce the retirement age, especially for women, and particularly for widows; to increase the minimum benefits in accord with rising living costs; and realistically raise the outmoded and outdated basic income limitations.

Of course, the major fears and doubts about the substantial worth of this measure are concentrated on the most controversial new title XVI, which would initiate a new Federal-State grants-in-aid program to help the States assist low-income aged individuals who need help to meet their medical expenses. In my own opinion this title, and its provisions, fall far short of adequately and equitably assisting our older citizens in the desperate financial distress they tragically encounter from the ills and the sicknesses so common in the later stages of life.

It is my earnest hope, that after this measure is considered, and probably changed, in the Senate, we may yet have the opportunity to repair and strengthen this title so that a far more equitable and effective program of medical service and hospitalization treatment assistance may be granted to the millions of aged Americans so desperately and despairingly in need of it.

Mr. GALLAGHER. Mr. Chairman, as we have taken up H.R. 12580, Social Security Admendments of 1960, it is apparent that the need for a liberal medical care for the aged bill is clearly and strongly supported by factual statistics that highlight the plight of so many of the country's senior citizens.

I vote for this bill despite the fact that I do not feel the provisions of the bill go far enough in attempting to give relief and a feeling of security to elderly citizens. Defeat of this proposal would kill off any chance of a medical care bill being enacted this year. I am hopeful that the Senate will amend and liberalize the provisions.

The following statistics highlight and emphasize the seriousness of the problem and the need for a more adequate program:

Persons over 65 have two to three times as much chronic illnesses as the remainder of the population.

The average hospital patient over 65 stays 15 days, twice the national average for all age groups.

The cost of medical care has increased 49 percent, since 1947. Hospital costs are up 300 percent since before World War II.

Four out of every five persons over 65 are not employed.

Half of those over 65 have incomes of less than $1,000 per year.

Only 40 percent of persons over 65 carry some form of commercial health insurance as compared to the national average of 70 percent.

We have come to a critical juncture in this tremendously important matter, either this Congress is going to provide necessary assistance to our senior citizens, who certainly have earned the right to such aid, or we are going to ignore the plight of the elderly.

I introduced a bill early in the year to amend the social security laws to make health benefits part of the social security system.

Mr. CARNAHAN. Mr. Chairman, the Social Security Act is of importance to millions of Americans today. It is for this reason that I am highly gratified that the Committee on Ways and Means has spent these past several months giving close study to many proposed amendments aimed at improving and strengthening this act. While this bill may not incorporate some of the features many of us might have liked to have seen presented to the House, it does recognize the fact that laws dealing with social security need almost constant attention in order to determine whether or not in these changing times the law meets the basic needs for which it was originally designed. I believe that there are some good proposals in this bill.

However, I am frank to admit, Mr. Chairman, that I was disappointed to have the committee fail to report favorably the Forand bill which would have placed the problem of medical assistance for the aged under our social security system. I wish to put myself on record as still favoring such an approach to this most pressing problem.

One significant amendment to the present law is the removing of the requirement that disabled workers must be at least 50 years old to receive benefits. This would be removed and although the present strict definition of eligibility would remain it does liberalize the law with respect to disability eligibility.

I for one am tired of having the threadbare cliche of "socialized medicine" thrown into the picture every time the problem of America's senior citizens and their medical problems are discussed. I seem to recall that something of the same bogeyman was thrown up as a diversion way back in the days when the first social security law was enacted. The Washington Post in an editorial of February 20, 1960, rather effectively demolished this alarm cry of socialized medicine when it says in part:

> That the American Medical Association would offer its usual doctrinaire opposition to this proposal was as much to be expected as a bill from a doctor after a visit to his office. Senator MCNAMARA has observed that the American Medical Association had nothing to offer but tired abuse. This is not, by the wildest flight of the most neurotic fancy, socialized medicine or political medicine. It is simply a system, if the AMA could but calm its nerves long enough to realize it, which like Blue Cross or Group Hospitalization or any other insurance program, would enable a patient to go to the doctor and the hospital of his choice and pay the bills resulting from the care he needs in old age. It would help doctors, hospitals and medicine in general. And it would enable American men and women to retire in their old age with more security and self-respect.

There are other reasons why I favor the placing of this program within the framework of the Social Security Act. By placing this program under social security most older persons would benefit and could be assured of hospital care, additional skilled nursing care, and surgical benefits. Around 13 million men and women would get lifetime protection—all of those eligible for old-age benefits under social security. By placing this program under social security it would mean that old people not entitled to old-age benefits would be helped indirectly if they turn to public assistance for, since smaller numbers would be forced to seek such aid, each one could be given more adequate assistance from the limited funds available to existing welfare agencies.

By placing this program under social security young workers would gain, since their aging parents would be protected at once and they and their families would have similar protection on retirement or if the wage earner dies leaving young children. The most any employed person would have to pay in the early years would be a dollar a month or 23 cents a week—one-fourth percent of earnings up to $4,800. For farmers and other self-employed people, the maximum contribution would be 35 cents a week.

Mr. Chairman, few persons over 65 have now nor can they afford good health insurance protection through any other means than within the framework of the social security setup. According to Government published figures only about two out of five have any such protection now and much of that is inadequate, can be canceled, has lifetime ceilings and is very costly. The best-known policies cost from $6.50 to $8.50 a month per person and pay only part,

perhaps not even half, of hospital costs for up to only 31 days.

It is my firm contention that by approaching this problem of medical aid for the aged from the angle of our social security setup, we would actually strengthen our welfare agencies, hospitals and Blue Cross. Such an approach would relieve these agencies of the high-cost load of the aged. Many hospitals today have large and growing deficits. Blue Cross keeps raising rates partly because it includes retired people without charging them more than the community rate. As a result, Blue Cross is increasingly threatened by competition from commercial companies selling such insurance. Public welfare agencies now spend $300 million a year for health care for the aged. In many communities a large part of the old-age assistance costs are for medical care, which is an ever-growing burden. A dependable system of financing health costs for the aged, such as would be provided through the social security system, would help these community agencies to improve and extend their services. High quality, skilled nursing homes would be assured of revenues. A speedy return to independence and home care could be stressed.

Now the costs of all this would be very moderate. According to the Secretary of Health, Education, and Welfare the cost would be only about $1 billion the first year and these new benefits can be financed on a sound basis through the social security payroll tax and without endangering present cash benefits. The Secretary of Health, Education, and Welfare estimates that the long-range cost of such a program under social security would be only about four-fifths of 1 percent of taxable payrolls. Therefore, it seems to me, Mr. Chairman, that insurance through the social security system is the best insurance buy available.

When over 10 million Americans—and the estimate runs as high as 16 million oldsters—stand in need of big medicine, it is no time to come up with an aspirin tablet. To use the standing joke of the veteran of the past war, an APC—all purpose capsule—is not the solution to specific and pressing medical needs for these elderly citizens and we of the Congress should not hold this out to these people.

While I shall vote to enact the provision in H.R. 12580 concerning medical care for the aged, I must state that I am not at all satisfied with it. This dissatisfaction points up sharp differences now existing in the approach to the health problems our senior citizens are facing. This proposal in H.R. 12580 would leave the elderly liable to heavy outlays. Also, instead of being operated by one agency as would be the case under social security, this plan would be either operated by those of the 50 States which adopted it, or by commercial insurance companies which the States paid to do the job. Not only would such an administrative program be expensive and relatively inefficient, but the plan would require adoption by the individual State legislatures, and many feel that there would be heavy pressure from various quarters against such adoption. It is further recognized that many States are already in critical financial condition and would be extremely hard put to pay their share of the program. In addition, this program under consideration by us here today is designed to cover only about one-half million to one million persons—leaving ignored the millions who need such insurance and who would be eligible under social security arrangements. Let us hope, Mr. Chairman, that the Senate will see fit to incorporate into its consideration of this bill the social security approach to this matter.

I support the other amendments to the Social Security Act and believe these changes are in the direction of liberalization and that in spite of the limitations I have discussed the bill deserves support.

COMMENDATION OF CHAIRMAN MILLS, HOUSE WAYS AND MEANS COMMITTEE

Mr. DERWINSKI. Mr. Chairman, the purpose in my remarks this afternoon on the subject of the 1960 social security bill is not to reiterate the words that were uttered by many Members during the discussion of the legislation, but I feel that it is proper to pay tribute to the distinguished chairman of the Ways and Means Committee, the Honorable WILBUR D. MILLS, whose dedication to the soundness of the social security system protects the citizens of this country from the irresponsible measures advocated each election year, which if enacted would bring actuarial ruin to the social security fund.

Mr. Speaker, I especially wish to commend the chairman and the members of his committee on the soundness of the provision which eliminated the disability benefit provision to disabled insured workers 50 and over, since statistics show us that wage earners under 50 who are disabled very often have families in need, and actually are more in need of this legislation than only those who had been previously covered.

And surely, the provision for medical care for older folks in need is a practical approach to a problem designed to assist those needing this protection without impairing, as I indicated earlier, the basic strength of the social security fund. All of us recognize the responsibility of our society to provide for people truly in need, but we must resist the attempts of the socialistically inclined Members who would force compulsory Government regimentation upon our medical profession and our citizens, to the detriment of all concerned.

Mr. Chairman, may I repeat that Chairman MILLS is entitled to our respect and admiration for his constant interest in maintaining the fiscal integrity of the Federal Government.

Also, I would be remiss at this point if I did not remind one and all of our obligation to point out to the citizens we represent that you never get something for nothing from Government.

Mr. MILLS. We have no further requests for time.

Mr. MASON. I have no further requests for time.

The CHAIRMAN. Under the rule the bill is considered as having been read for amendment. No amendments are in order to the bill except amendments offered by direction of the Committee on Ways and Means. Are there any committee amendments?

Mr. MILLS. Mr. Chairman, there are no committee amendments.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. ZABLOCKI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill—H.R. 12580—to extend and improve coverage under the Federal Old-Age, Survivors, and Disability Insurance System and to remove hardships and inequities, improve the financing of the trust funds, and provide disability benefits to additional individuals under such system; to provide grants to States for medical care for aged individuals of low income; to amend the public assistance and maternal and child welfare provisions of the Social Security Act; to improve the unemployment compensation provisions of such act; and for other purposes, pursuant to House Resolution 562, he reported the bill back to the House.

The SPEAKER. Under the rule the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that if a rollcall is asked for on a motion to recommit or on the passage of this bill, that it be postponed until tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. MASON. Mr. Speaker, reserving the right to object, may I inquire if we can make a motion to recommit tomorrow?

The SPEAKER. Yes.

Mr. MASON. Then, I have no objection to it going over until tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, my request was "if." Mr. Speaker, I think under the unanimous-consent request, the gentleman ought to offer his motion to recommit now.

The SPEAKER. The gentleman may.

Mr. MASON. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. MASON. I am, Mr. Speaker.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. MASON moves to recommit the bill H.R. 12580 to the Committee on Ways and Means.

Mr. MILLS. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. BYRNES of Wisconsin. Mr. Speaker, on that I demand the yeas and nays.

The SPEAKER. Under the unanimous-consent agreement, the rollcall will go over until tomorrow.

AUTHORIZING AN EXCHANGE OF LANDS BETWEEN THE UNITED STATES AND THE MASSACHUSETTS PORT AUTHORITY

Mr. VINSON submitted a conference report and statement on the bill (H.R. 5888) to authorize the Secretary of the Navy to transfer to the Massachusetts Port Authority, an instrumentality of the Commonwealth of Massachusetts, certain lands and improvements thereon comprising a portion of the so-called E Street Annex, South Boston Annex, Boston Naval Shipyard, in South Boston, Mass., in exchange for certain other lands.

HUMANE SLAUGHTER OF LIVESTOCK

Mr. JENNINGS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 12705) to delay for 60 days in limited cases the applicability of certain provisions of law relating to humane slaughter of livestock.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

Mr. HALLECK. Mr. Speaker, reserving the right to object, and I shall not object, the matter has been cleared with me. As I understand, it is simply a 60-day extension of the time within which the processors may get the machinery with which to comply with the law that was recently passed.

Mr. JENNINGS. That is correct, I will say to the gentleman, except it is applicable only to those processors and packers who have heretofore made application and through no fault of their own the equipment has not been delivered.

Mr. HALLECK. I withdraw my reservation of objection, Mr. Speaker.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the first sentence of section 3 of the Act entitled "An Act to establish the use of humane methods of slaughter of livestock as a policy of the United States, and for other purposes", approved August 27, 1958 (7 U.S.C. 1903), during the period from June 30, 1960, to August 30, 1960, any agency or instrumentality of the United States may contract for or procure livestock products produced or processed by a slaughterer or processor which slaughters or handles for slaughter livestock by methods other than those designated and approved by the Secretary of Agriculture if such slaughterer or processor has contracted for the purchase of the equipment necessary to enable him to adopt such methods but such equipment has not been delivered to him. The last sentence of such section shall not apply in the case of such a slaughterer or processor until August 30, 1960.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EXTENSION OF REMARKS

Mr. FOGARTY. Mr. Speaker, I ask unanimous consent that I may revise and extend the remarks I made in Committee of the Whole on the retirement of our colleague, the gentleman from Rhode Island [Mr. FORAND], and that all Members may be permitted to extend their remarks at that point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

HOUR OF MEETING TOMORROW

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 10 o'clock tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

SUBCOMMITTEE ON INDIAN AFFAIRS

Mr. HALEY. Mr. Speaker, I ask unanimous consent that the Subcommittee on Indian Affairs be allowed to sit tomorrow during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

CALL OF THE HOUSE

Mr. ARENDS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 141]

Alford	Fisher	Mumma
Bailey	Frazier	Powell
Barden	Gavin	Saylor
Blitch	Hess	Schneebeli
Buckley	Jackson	Smith, Miss.
Burdick	Kearns	Smith, Va.
Diggs	King, Calif.	Steed
Durham	Lafore	Taylor
Edmondson	McSween	Zelenko
Evins	Milliken	
Fenton	Morris, Okla.	

The SPEAKER. On this rollcall 400 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

COMMITTEE ON EDUCATION AND LABOR

Mr. WIER. Mr. Speaker, due to the 10 o'clock meeting of the House tomorrow morning and a regular meeting of the Committee on Education and Labor, I ask unanimous consent that the Committee on Education and Labor may have permission to sit during general debate tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

PUBLIC WORKS COMMITTEE

Mr. FALLON. Mr. Speaker, I ask unanimous consent that the Public Works Committee may have permission to sit in executive session tomorrow during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

COMMITTEE ON BANKING AND CURRENCY

Mr. SPENCE. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may have permission to sit tomorrow during general debate in the House.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

COMMITTEE ON HOUSE ADMINISTRATION

Mr. BURLESON. Mr. Speaker, I ask unanimous consent that the Committee on House Administration may have permission to sit during general debate tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

COMMITTEE ON AGRICULTURE

Mr. COOLEY. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may have permission to sit during general debate tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

FARM SURPLUS REDUCTION ACT OF 1960

Mr. COOLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House

on the State of the Union for the further consideration of the bill H.R. 12261, with Mr. IKARD in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday the Clerk had read through section 101, ending in line 24, page 2 of the bill.

Mr. QUIE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. QUIE: Page 2, line 1, after the words "of producers", strike out the balance of line 1; and on page 2, line 2, strike out "of wheat" and insert in lieu thereof the words "eligible to vote under subtitle A of this title."

Mr. QUIE. Mr. Chairman, the amendment which I am offering will enable all producers who would be subject to quota under subtitle A to vote in the referendum on whether they desire to be under subtitle A or subtitle B. The effect of this amendment would allow about 70 percent of the wheat farmers to vote who are not allowed to vote under the present wording of the bill.

According to the present wording of the bill all farmers who would be subject to quotas under subtitle A could vote on whether they wanted to be under the quotas if subtitle A won in the first referendum, but only 30 percent of the wheat farmers would have the right to vote in deciding whether they wanted subtitle A or B.

Mr. Chairman, in all fairness every wheat farmer who would be subject to the control imposed under subtitle A ought to have the right to vote. Out of fairness I cannot see how we could deny him that right to vote.

Previous to this time we only allowed the farmers who were subject to quotas to vote.

Previous to this bill, under the present law, anyone who produced more than 15 acres is subject to the quota and therefore could vote, while those who produced less than 15 acres had a choice of coming under or staying out. So, we never gave them a right to vote. Now, if we are going to be consistent with the past, I think that every wheat farmer who would be subject under this bill should have his franchise. This is a very simple amendment, and for that reason I will not take any longer time to explain it, since I think you all understand it.

Mr. JONES of Missouri. Mr. Chairman, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Missouri.

Mr. JONES of Missouri. Under the present law, the farmers who have an allotment and who are growing less than 15 acres can still vote and vote in this referendum already without your amendment.

Mr. QUIE. If a person raised less than 15 acres and stayed within the allotment, he could.

Mr. LEVERING. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Minnesota [Mr. QUIE], my colleague on the committee. In fact, I have an amendment at the desk to accomplish the identical objective sought by the gentleman's amendment—that of giving a majority rather than a minority of the wheat growers of the Nation the right to decide by vote in a referendum which of the alternative plans provided in the bill shall be adopted.

Mr. Chairman, the existing provision in the bill to which the amendment is directed, in my opinion, discriminates against thousands of small farmers in my district. Because I believe they should have the right to be heard on matters that affect their interests, I shall vote for the amendment.

Mr. JONES of Missouri. Mr. Chairman, I rise in opposition to the amendment.

In reply to my inquiry, the gentleman from Minnesota stated that under the present law, people who have allotments and who stay within those allotments, although it is under 15 acres, can vote, and they would be able to vote in this referendum. Under this 15-acre allotment, the 15-acre grower was given a bonus, so to speak. While we have a very severe control program for the production of wheat, and impose those controls on the people who have reduced their production of wheat, who were depending on wheat for their livelihood, we were permitting anybody who wanted to grow 15 acres to have that minimum without complying with anything, and in addition, they were getting the benefit of the support.

Mr. BELCHER. Mr. Chairman, will the gentleman yield?

Mr. JONES of Missouri. I yield to the gentleman from Oklahoma.

Mr. BELCHER. Did I understand the gentleman to say that under the present law as it now exists the farmer who has an allotment of less than 15 acres is permitted to vote?

Mr. JONES of Missouri. If he has an allotment and stays within the allotment, he is eligible to vote. The gentleman from Minnesota just confirmed that a minute ago.

Mr. BELCHER. Anybody that has less than 15 acres is not permitted to vote?

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. JONES of Missouri. I yield to the gentleman from Minnesota.

Mr. QUIE. Coming back and checking with the committee clerk, I find that my statement was not correct. Those under 15 acres would not have the right to vote.

Mr. JONES of Missouri. I was just depending on the answer the gentleman gave.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. JONES of Missouri. I yield to the gentleman from Oklahoma.

Mr. ALBERT. The present law is that anyone subject to marketing quotas and marketing penalties is permitted to vote. If your allotment is less than 15 acres, you are not subject to marketing penalties. If you plant less than 15 acres, you are not subject to marketing penalties. The right to vote is based upon the penalty angle. We could not penalize a farmer without giving him the right to vote, and that is the very basis of the privilege. Now, the theory of this bill and the soundness of this bill is based on the fact that those who are subject to marketing penalties cast the first vote, and then they make it possible for those under 15 acres to subject themselves to marketing penalties, after which time they have the right to vote. The procedure in this bill is sound; it is consistent with the practice that has been in effect ever since the allotment program started, the marketing program started. That is the basis, as I see it, for the legislation as it exists, and it is a sound basis.

Mr. JONES of Missouri. I thank the gentleman from Oklahoma for explaining that. We have gone into this in committee, and as I was saying a minute ago, what we have done with the 15-acre grower, he has been getting a bonus, and what we have tried to do is to give an opportunity to the wheat producers to determine whether they want to accept the Farm Bureau plan without any limitation and with low-support prices or whether they want to have a strict limitation which would bring the supply in line with the anticipated demand and give an adequate or at least a higher price support than they now have and which they would have under the Farm Bureau plan. So there is nothing wrong with the bill as it is written and I think for that reason the amendment should be defeated.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. JONES of Missouri. I yield.

Mr. QUIE. At the present time it is recognized that those who are subject to marketing penalties have the right to vote, and only if a person certifies that he will produce more than 15 acres will he be under marketing penalties. Under this bill, under subtitle A, all wheat farmers would be subject to marketing penalties no matter what, because all would have a quota, which would be the highest of his acres planted to wheat in the last 3 years, if he was under 15 acres. So under subtitle A of this bill all wheat farmers would be subject to marketing penalties where now only those over 15 acres are subjected. If we are going to continue under the present theory of letting all who are subject to marketing penalties vote we ought to allow all these farmers to vote.

The CHAIRMAN. The time of the gentleman from Missouri [Mr. JONES] has expired.

Mr. ALBERT. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, in answer to the statement made by the gentleman from Minnesota [Mr. QUIE] with respect to giving those having allotments of less than 15 acres a vote in the first referendum, may I point out that if program A is adopted, those having allotments of less than 15 acres then will have the right to vote before they can be subjected to marketing penalties. The program must be adopted by two-thirds of all those subject to marketing penalties which includes not only those who are now subject to marketing penalties, but those who would be subject to marketing penalties under plan A. That includes all

wheatgrowers. We cannot subject these people to marketing penalties without giving them the right to vote, either under this bill or under the present law.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. ALBERT. I yield.

Mr. QUIE. What the gentleman has said is correct. But does he not believe that all these farmers who raise wheat, if subtitle A were adopted, have an interest in both programs, whether they raise more or less than 15 acres?

Mr. ALBERT. I think they have an interest, but the right to vote has always been based upon the fact that we do not want to subject anyone to marketing penalties without giving him the right to vote. This bill preserves that principle.

Mr. QUIE. That is right. But this bill goes one step further. This gives farmers who raise wheat a choice, whether they want to have one type of program or another. It is the first time we would really have a clear-cut choice and in doing this we are letting a majority vote decide. Does not the gentleman believe that the 70 percent who raise less than 15 acres have an interest in this and should be allowed to choose?

Mr. ALBERT. I think they do. But I think their main interest, those who raise less than 15 acres, is not as between these two programs; because, if they do not like plan A, they can throw the program out and plant as much as they want to plant. I do not see where the choice is jeopardized materially by keeping the franchise exactly as it is in the bill.

Mr. QUIE. If the gentleman will yield further, under subtitle A, if more than one-third of the farmers do not choose to come in under the quotas they would not get any support at all, which would be 50 percent of parity, if they did not stay within their allotments.

Mr. ALBERT. That would be almost as much as they would get under program B, anyway.

Mr. QUIE. But if they planted outside their allotments, which they could do under program B, they would get supports; but under program A, they would not get the 50 percent of parity for the crops that they raise unless they stayed within their allotments even though they would have previously voted against quotas.

Mr. ALBERT. That is true, but it seems to me if we are going into this business of letting everybody vote whether he is subject to marketing penalties or not, we might as well let everybody vote that might ever grow any wheat. We need some basis upon which to predicate the referendum right. I think the theory in the bill is a sound one. I do not think it will injure anyone, because no wheatgrower, large or small, under this bill or under present law, can be subject to marketing penalties unless he has the right to vote.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. ALBERT. I yield to the gentleman from North Carolina.

Mr. COOLEY. Was not this proposition thoroughly discussed in the House Committee on Agriculture before we reported the bill?

Mr. ALBERT. I think it was thoroughly discussed.

Mr. Chairman, I think the amendment should be defeated. I think we are going far afield if we adopt this amendment, and I ask for its defeat.

Mr. HOEVEN. Mr. Chairman, I rise in support of the amendment.

It seems to me that every wheatgrower has the right to vote in both referendums. There is no discrimination as far as the cottongrowers are concerned. They all vote.

In the first place, the bill prevents the small wheatgrowers from voting in the first referendum, but they are permitted to vote in the second referendum but have nothing to say about the format or the substance of the question that is presented to them in the second referendum. This means that approximately 70 percent of the wheat farmers in the United States will be ineligible to vote. The bill limits voting to those farmers subject to quotas on the 1960 crop. Last year according to the Department of Agriculture there were an estimated 3,020,000 farmers who raised wheat. Of this total, 886,000 farmers actually voted. Of those voting 169,000 favored quotas and 41,000 opposed quotas. When these figures are applied to the bill before us we clearly see the tail wagging the dog. The 169,000 eligible wheat farmers voting for quotas would only be 5 percent of the wheat farmers of America. Only 30 percent would even be eligible, and only 5 percent would decide upon a sweeping program involving millions of dollars and affecting thousands of other farmers and consumers.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I yield to the gentleman from Oklahoma.

Mr. ALBERT. The gentleman mentioned the fact that all cotton farmers are entitled to vote, but all cotton farmers are subject to marketing penalties if I am correctly informed. If program A is adopted, all wheat farmers will be subject to marketing penalties. The marketing quota program cannot be put into effect unless all farmers subject to marketing penalties are allowed to vote and unless two-thirds of those voting approve the referendum.

Mr. HOEVEN. That may be true, but I cannot quite see why a small group of large wheat producers, 5 percent of them, can get together and formulate a proposal to be submitted in a referendum in which all growers later would have the right to vote. It seems to me that a lot of growers are being disenfranchised.

Mr. ALBERT. They are not disfranchised because they have a privilege which is an exception under the law.

Mr. HAGEN. If the gentleman will yield, all cotton farmers are not subject to that. There is a 10-acre limit on that.

Mr. ABBITT. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, we have heard a lot of talk in this body about the right to vote. This bill deprives approximately 60 percent of the wheatgrowers of the right to participate in the referendum which decides which of the two programs is to be put into effect. The bill states that the first referendum if they decide on program A will deprive two-thirds of the wheat farmers east of the Mississippi of the 15-acre limit they now have. Even those who raise less than 15 acres have no right to vote. It seems to me that some of the people over here on the left may be interested in referring this proposition to the Civil Rights Commission to see whether or not civil rights are being denied.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. ABBITT. I yield to the gentleman from North Carolina.

Mr. COOLEY. The people you are talking about have the right to vote now.

Mr. ABBITT. What this bill does is it takes from them the 15-acre exemption that they have.

Mr. COOLEY. It does not. It provides for a reduction in the 15 acres and puts it in line with other reductions.

Mr. ABBITT. You will not have any 15-acre farms.

Mr. COOLEY. If all these people vote that you want to vote, you will not have any program.

Mr. LATTA. Mr. Chairman, will the gentleman yield?

Mr. ABBITT. I yield to the gentleman from Ohio.

Mr. LATTA. I concur in everything that the gentleman has said. I would point out that in the State of Ohio, we have 153,000 wheatgrowers and 123,000 of them are now operating under the 15-acre exemption, which means that automatically if this bill passes and under the present law, 123,000 out of the 153,000 wheatgrowers will be disenfranchised and will not be entitled to vote. The last time we held a referendum, 3,000 out of the 70,000 who were eligible to vote actually voted. So there will only be a handful of large wheatgrowers telling the Nation what kind of a wheat program we are going to have. I suggest that it is absolutely wrong. This Congress went on record for the civil rights bill and I think we ought to give the right to vote to the wheat farmers of the Nation.

Mr. ABBITT. Maybe I ought to get some of the people in the minority group from my district to write to the Civil Rights Commission to see if they cannot get the right to vote.

Mr. Chairman, this is actually a big growers' bill and it will deprive the vast majority of my wheat farmers not only of the right to vote but the right to have the years of planting of 15 acres of wheat for their own use taken into consideration.

Mr. Chairman, I hope the amendment is approved.

Mr. AVERY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I hope the Members of the Committee this afternoon will take stock to see who is in support of what side of this issue. I do not think it would be entirely inappropriate, either, to take into account the remarks made in respect to the Civil Rights Commission. There is just about as much justification for bringing the Civil Rights Commission into this issue this afternoon as there is for bringing the cotton

farmers of Virginia and the tobacco farmers of North Carolina and the corn farmers of Iowa and the new wheat farmers, if you please, in Ohio. That is what has gone wrong with this whole wheat program. In the first place, somebody sold the Wheat Belt down the river and I mean probably down the Mississippi River, and back up the Ohio River. Now they are raising wheat all over the United States and they have preempted the wheat production that historically belongs in the Middle West.

Mr. BELCHER. Mr. Chairman, will the gentleman yield?

Mr. AVERY. I yield to the gentleman from Oklahoma.

Mr. BELCHER. I am certainly glad to have you join me against the 15-acre exemption.

Mr. AVERY. That will be determined immediately when we vote and I hope the gentleman will be pleasantly surprised. The justification for the provision in the present law is this. Virtually every grower of wheat in the historical wheat-producing area has a marketing allotment, and, therefore, is entitled to vote. There is just as much justification to enfranchise the wheatgrowers to vote in the next cotton referendum as there is for bringing the new wheatgrowers in Mississippi, Ohio and all the other States that traditionally have not raised wheat into the wheat referendum.

Mr. Chairman, this amendment should certainly be voted down in the interest of stabilizing and retaining what is left of the wheat producing market for the great States of the Middle West.

Mr. COOLEY. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment, and all amendments thereto, do now close.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. QUIE].

The question was taken, and on a division (demanded by Mr. QUIE) there were—ayes 50, noes 68.

Mr. QUIE. Mr. Chairman, I demand tellers.

Tellers were refused.

So the amendment was rejected.

Mr. THOMSON of Wyoming. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. THOMSON of Wyoming: Beginning on page 1, line 6, strike out all of section 101.

Mr. THOMSON of Wyoming. Mr. Chairman, yesterday when the rule was under consideration, I announced my intention of amending H.R. 12261 to strike everything except subtitle B of title I. The parliamentary situation that prevails is such that this cannot be done by a single amendment. It is necessary, under the parliamentary situation prevailing at this time, to strike each section in turn. This amendment proposes to strike section 101, the first substantive section of the bill. If it prevails, subsequent amendments will be offered to strike the other sections. Therefore, the vote on the pending amendment is really a vote to determine whether or not all other provisions of the bill should be eliminated except for the provisions of subtitle B.

Mr. Chairman, in the first place we should recognize that wheat is our major agricultural problem. We should do something constructive to solve that problem in this session of Congress. The chances for doing this should not be jeopardized by including in the same bill provisions such as the feed grain proposal of title II or the food distribution plan of title III. The reasons which make these sections objectionable have been adequately covered. I will therefore confine my remarks to the provisions of the bill relating to the wheat sections.

The wheat problem is a problem of overproduction and surpluses. We now have on hand in Government storage over 1,300 million bushels of wheat and the amount continues to grow year by year. The cost to the taxpayers of storage on this alone is over $1¼ million per day. The cost of the wheat price stabilization program is over $600 million per year. Yet with all of this expenditure of money, the effect has actually been to harm, rather than to help, the individual wheat farmer in the wheat-producing area.

Price supports were set high to encourage production, and the result was exactly that. Stimulated by these high price supports, farmers all over the Nation began to grow wheat for delivery to the Government. Production reached the point that acreage controls were imposed. Primarily because of the 15-acre exemption, production continued to increase outside of the historic wheat producing area. This shifted wheat allotments from the historic wheat producing areas and imposed further acreage cuts on the wheat farmer in the historic producing area. Our wheat farmers in historic areas have had imposed upon them acreage cuts of almost 40 percent, while production increases. They cannot divert to other crops. Net income is price times production, less expenses. No law can change that. This cut in production has meant a cut in their net income to the point that it threatens to put them out of business.

This has been particularly harsh on wheat farmers in the State of Wyoming. They followed good soil conservation practices and summer fallowed their land. As a result of the law and regulations, their land that is actually in production in any given year is substantially less than half. This simply does not allow them to earn a living.

With the surplus production of wheat confronting the Nation, the 55-million-acre minimum cannot be continued.

The farmers themselves realize that if they are going to have high price supports, then they must accept tight production controls with strict cross-compliance to hold production in line. The other choice open to them is no controls and a price support which would be sufficiently low to keep production in line with demand.

If the committee bill actually provided such a choice to the farmers, then I would wholeheartedly support it. The fact is, though, that it does not.

The first and perhaps most important reason that the committee bill does not present such a choice is that the provisions of subtitle A are such that the bill could never become law, and therefore the farmer would never be given the opportunity to vote on anything.

The wheat farmer has already been misled too often, to his detriment. The provisions of the committee bill, it is argued, would reduce wheat production by 25 percent. Experience proves that such definitely would not be the fact. By increasing the support price to 85 percent, they further stimulate the incentive to raise more wheat on the acres left in production. Growers in the more humid areas will simply put on more fertilizer and take other steps to further increase their yields. This is further encouraged by the fact that the payment-in-kind is based on the annual yield per harvested acre. It is estimated that the actual reduction in wheat production would be 17 percent or less.

Furthermore, the domestic consumption of wheat is only 629 million bushels. As to the more than 400 million bushels which we have been exporting, the subsidy is already over 50 cents per bushel. The effect of this increase in price support would be to increase that by 50 percent. The increased cost to the taxpayers, assuming that we were to continue to export it at the same level, is estimated at $115 million. There are already complaints with regard to this subsidy. The effect could very well be to reduce the exports, and thereby further increase the surplus.

Further, there is no effective cross-compliance.

All this could ever hope to accomplish would be to delay the day of really facing up to the wheat problem. There has already been too much delay. The result is only to make the situation more difficult.

Under these circumstances, I think that Congress should face up to its responsibility and legislate a sound wheat program that will be in the long-term best interests of the wheat farmer, agriculture in general and the taxpayer.

That is what this amendment and those to follow would accomplish, if adopted.

By adopting these amendments, only the provisions of subtitle B of the bill would remain. The program provided therein is the one that has been proposed by the American Farm Bureau Federation. It is a plan that has been developed in conformity with the manner of operation of this fine organization—by farmers themselves, meeting at community level, district level, State level, and then in national convention. I think that this farm organization and the farmers who belong to it are to be congratulated for proposing a realistic long-term solution to the wheat problem, based upon sound economic principles, and one which will be in the long-term

best interest of wheat farmers and agriculture in general.

I will review for you the provisions of this proposal. First, all acreage allotments and marketing quotas would be eliminated, effective with the 1961 crop of wheat. This would leave the farmer free to manage his own business, rather than to be dictated to by bureaucrats from Washington. This would permit each wheatgrower to determine for himself the acreage of wheat on his farm which would make the most efficient use of his land, labor, and machinery. The traditional wheatgrower would be able to regain his markets.

Second, price supports for wheat, beginning with the 1961 crop, would be based on the support level for corn, with upward adjustments to reflect differences in weight, nutritional value, and buyer preference. However, for the 1961 crop of wheat the price support would be not less than 120 percent of the price support for corn. This would result in a wheat price support for 1961 of at least $1.27 per bushel, with corn supported at $1.06 per bushel. This price support policy would restore the pricing of wheat to supply-demand conditions as reflected in the marketplace. This does not mean that market prices of wheat would fall into the exact relationship indicated by differences in feeding value. The relative market value of corn and wheat are affected by domestic and foreign demand for milling wheat, which normally price wheat higher than corn, and by the fact that wheat is produced in areas where corn prices reflect substantial transportation costs. Good milling wheat would bring a substantial premium over its feed value.

Determining price supports in this way would expand the use of wheat for livestock feed, without creating unfair subsidized competition for the producers of corn and other feed grains.

The incentive for further expansion of wheat production in the humid areas, where alternative crops can be grown successfully and more economically, would be removed. The incentive for these producers to increase yields through heavy use of fertilizer would be reduced.

Growers in traditional wheat areas would regain their markets. Export markets would be increased.

A third provision of the proposal would provide adequate protection for all farmers from competition of the Commodity Credit Corporation sales from accumulated wheat stocks. No wheat could be sold for domestic use from surplus at less than 150 percent of the effective support price, plus reasonable carrying charges. Foreign sales of wheat from surplus stocks under Public Law 480 would be restricted. There would be no limit on foreign donations of Commodity Credit Corporation wheat for famine and disaster relief. Domestic prices would be free to rise with market demand, unhampered by competition from surplus Government stocks.

Fourth, the total amount of land in the Conservation Reserve would be raised to 60 million acres at the end of 3 years. This would cushion the adjustment of the grower who is farming marginal land in traditional wheat areas and the grower who has become a wheat producer under the 15-acre exemption and who may choose not to grow wheat under the new program, as well as the effects upon the producers of all feeds.

Adoption of this amendment would restore the wheat economy of this Nation to a firm economic basis. It would restore the wheatgrower to a position in the free enterprise system. It is in the best interests of the wheat farmer, agriculture in general, and the taxpayer. As such, it is in the public interest. I urge its adoption.

Mr. MICHEL. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Wyoming [Mr. THOMSON] to strike everything in H.R. 12261 except subtitle B. By this action we would free up the acreage of wheat and extend the conservation reserve program. Both of these proposals are sound.

I would like to review briefly the recent history and the current situation with regard to corn, feed grains, and hogs. This program is vital to my area of Illinois, and I think we should keep the record straight.

Corn producers are now operating under a new program which provides for price support, without production controls, at the higher of (a) 90 percent of the average price received by farmers in the 3 preceding calendar years, or (b) 65 percent of the parity price.

This new program came into effect as a result of a November 1958 referendum in which farmers were given a choice between the new program and the old allotment program. More than 71 percent of the 357,169 farmers who voted favored the new program.

I supported the principles of the legislation that authorized the present corn program and I continue to do so. I opposed the provisions for a 65 percent of parity floor under corn supports, as such a floor is inconsistent with the idea of basing price supports on a percentage of average market prices.

Those who want to keep farmers subject to Government control programs, and those who lack faith in the ability of farmers to prosper in a market economy, have been attempting to smear the new corn program.

It is being said, first, that corn production reached a record high in 1959 because farmers boosted production to make up for lower prices; second, that the removal of corn allotments created the greatest corn surplus in history; and, third, that the new program has depressed the price of hogs.

Here are the facts:

First. The support price was raised not lowered, in 1959 for approximately 90 percent of all corn produced in the United States.

In 1958 there were three support prices—$1.36 per bushel for commercial area farmers who complied with acreage allotments; $1.06 for those who did not comply; and $1.02 for the noncommercial area. Only about 12 percent of the corn produced in the commercial area was eligible for the compliance rate of $1.36. Since the commercial area accounted for about 82 percent of the total crop, less than 10 percent of the 1958 crop was eligible for support at a rate in excess of $1.06. In 1959 all corn was eligible for support at an average rate of $1.12.

Second. The removal of corn allotments did not create the greatest corn surplus in history. The great bulk of our present corn surplus was created before corn allotments were removed. In evaluating what happened to corn production in 1959, the following facts should be considered:

A. In 1958 approximately 6.7 million acres of land allotted to corn were held out of production under the acreage reserve program. With the expiration of the acreage reserve, most of this land presumably was returned to corn in 1959.

B. Support price for grain sorghums, barley, oats, rye, and soybeans—all of which compete with corn for acreage—were reduced substantially in 1959.

If farmers were inclined to increase acreage to offset lower prices, they should have increased the acreage seeded to sorghums, oats, barley, rye, and soybeans, rather than acreage seeded to corn in 1959. Actually, there was a small increase in barley acreage, but a net reduction of at least 4.5 million acres in the total acreage devoted to grain sorghums, barley, oats, rye, and soybeans. The acreage released from the acreage reserve, plus the reduction that took place in the acreage devoted to crops for which support prices were lowered, more than accounts for the increase that took place in corn acreage.

It is also interesting to note that prices of barley, oats, rye, and soybeans have been well above support levels during the current marketing year. Prices of oats, rye, and soybeans have actually been higher than a year earlier—when price supports were at a substantially higher level—even though soybean prices have been held down by CCC sales. This must be a great surprise to those who predicted that prices of the coarse grains and soybeans would drop to the new support levels.

C. The removal of allotments had little or no effect on the total acreage of cropland planted to corn, other coarse grains, and soybeans. The principal effect of the old allotment program was to force some farmers to shift land from corn to other crops that are used primarily for feed. With the expiration of allotments, growers were able to allocate acreage to corn, other feed grains, and soybeans on the basis of their own best judgment.

D. Weather contributed to the achievement of the record 1959 corn yield. Farmers have made great progress in overcoming natural hazards, but they have not yet completely isolated crop yields from the effects of wind, hail, drought, floods, and unseasonable freezes. None of these was a serious problem over an extended area in 1959.

E. The ultimate effect of the new program will be affected by utilization as much as by production.

The utilization of corn declined in the early 1950's when prices were supported at 90 percent of parity. Utilization has increased in recent years as support prices have been lowered. Here are the figures:

Crop year beginning Oct. 1—	Support price per bushel	Utilization (million bushels)		
		Domestic	Export	Total
1949	$1.40	3,095	112	3,207
1950	[1] 1.47	3,064	117	3,181
1951	1.57	3,097	82	3,179
1952	1.60	2,866	145	3,011
1953	1.60	2,957	103	3,060
1954	[1] 1.62	2,841	103	2,944
1955	[1] 1.58	2,981	120	3,101
1956	[1] 1.50	3,017	184	3,201
1957	[1] 1.40	3,175	199	3,374
1958	[1] 1.36	3,513	229	3,742
1959	1.12	[2] 3,602	[2] 240	[2] 3,842

[1] Compliance rate for commercial corn-producing area only. Noncompliance rates were $1.25 in 1956, $1.10 in 1957, and $1.06 in 1958.
[2] Estimated on the basis of the latest information available from the U.S. Department of Agriculture.

The utilization of corn in the 1958–59 marketing year was larger than our total production for any year prior to 1958. Utilization in the 1959–60 marketing year will exceed our production for any year prior to 1959. The disappearance of corn from all storage positions during the October-to-December quarter of 1959 was 1,067 million bushels in comparison to 985 millions bushels in the final quarter of 1958. This indicates an increase of 8.3 percent in utilization in the first quarter of the current marketing year. Although we still have some problems with corn, our real problem is the stocks accumulated under past programs—not what has happened since the program was changed.

Third. The lowest monthly average farm price thus far recorded in the present downward phase of the hog cycle was $11.20 per hundredweight in mid-December 1959. This is 60 cents per hundredweight higher than the average price of $10.60 per hundredweight reported at the bottom of the last downswing in December 1955, when corn acreage allotments were still in effect.

The hog price cycle is well understood by hog farmers and adjustments are already underway. The fall pig crop was 2.1 percent larger in 1959 than in 1958, although earlier surveys of farmers' intentions had indicated a 9-percent increase. The December 1959 pig crop survey indicated that the spring pig crop would be 11 percent smaller in 1960 than in 1959. The latest report of the Department of Agriculture, dated Tuesday, June 21, actually showed there were 16 percent fewer pig farrowings this spring than last spring and the price of hogs yesterday on the Chicago market brought a top of $18.35.

We are demonstrating once again that livestock is the balance wheel of American agriculture—a mechanism that can be used to adjust our output to the capacity of our markets.

Mr. POAGE. Mr. Chairman, I rise in opposition to the pending amendment.

Mr. Chairman, I wanted to ask the gentleman from Wyoming when he felt he could not yield as to whether he believed in giving the option which he described—a choice between controls with a relatively high support, on the one hand, and no controls and a low support on the other hand.

Out of my time, I will ask the gentleman if he believes it is sound policy to give the farmer that choice.

Mr. THOMSON of Wyoming. I think it is a sound policy provided it is not loaded in one direction or another. I think the committee bill does tip it. It offers the wheat farmer something on a temporary basis which cannot endure, and he will end up as he has in the last 4 or 5 years, in a worse condition. Furthermore, it, in my opinion, gives him no choice at all, because the bill could not become law.

Mr. POAGE. Then the gentleman now suggests that instead of giving the farmers any choice this Congress should decide what is good for the farmer without giving him any choice. When he complains that the committee proposes a temporary basis, nothing could be more temporary than the Farm Bureau bill he proposes. The Farm Bureau bill proposes to give him $1.27 for his wheat this coming year and something less than that every year thereafter.

You talk about temporary. There is only a 1-year price support in the bill, and that is $1.27. After that it is $1.15 the next year, and something less than $1.15 the next year.

A good many years ago—and I am not going to say how many—I used to run a bundle wagon at the thresher. I had my own team. I got $3 a day for myself and team. If you did not have a team you got $1 a day. Wheat was selling at $1 a bushel.

Now, it is perfectly true that when wages are down to $1 a day, the farmer can operate on $1-a-bushel wheat, but when wages are $8 a day—and I want to see them stay there—you cannot grow $1 wheat and sell it at a profit anywhere in the United States. The gentleman suggests that we should lower the price of wheat to $1 a bushel, for that is the ultimate result of his amendment. That is exactly what it proposes, $1.27 the first year, $1.15 the next, and something less every year thereafter. It soon reaches $1 a bushel, and when it gets down to $1 a bushel, what can you expect in regard to farm wages?

This House will shortly be discussing a bill for farm labor. How are you going to pay decent farm wages out of $1 wheat. It cannot be done. When you pass this bill, you are voting for wages of $1 a day all over the farm country of the United States, because there is not any money to pay any more. This is just the plain economics of things.

The gentleman suggested that he believed in giving the farmers an opportunity to make a choice. So did his candidate for President. So did Mr. NIXON in his political speech night before last. I read it yesterday, and I will read it again: "A method must be developed whereby the farmers themselves have a greater opportunity to choose the kind of farm program they want." That is what the Republican Party is running on. At least that is what you are telling the farmers. Now, let us see if you agree with your candidate. Let us see how many of you are going to stand with your candidate for the Presidency. Let us see how many of you are going to back the pronouncement which was made in North Dakota night before last. We are putting it up to you square.

Someone says "Louder." I am glad you hear me over there, because I sure want you to remember this. Here is the issue, a clear-cut issue of letting the farmers make one of these decisions which your candidate for the Presidency says they should make. And, in this instance, I agree with Mr. NIXON. I just want to see how the NIXON followers are going to vote when it comes down to voting like he talks. Now, you are either for your candidate or against him. I want to see the color of your eyes by the way you vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wyoming [Mr. THOMSON].

The amendment was rejected.

The Clerk read as follows:

SEC. 102. Notwithstanding any other provision of this title, any program herein authorized for wheat shall terminate with the 1965 crop.

Mr. CARNAHAN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I support H.R. 12261 as a step in the proper direction for bolstering the farm economy, reducing Government holdings of farm commodities, and bringing down the cost of farm programs. On April 19, 1960, I introduced H.R. 1180, a bill to accomplish these purposes. I congratulate the distinguished chairman of the House Committee on Agriculture for the most commendable job this committee has accomplished this session in studying this most serious problem and in reporting this bill to the House.

This is probably one of the most acute domestic problems facing America today. Faced with mounting surpluses of farm commodities, increased storage costs, higher farm operations cost, and lower farm income, the Congress is faced with the compelling need to tackle this problem and come up with a solution designed to alleviate this problem. There is one at least very important element of our national life seriously involved in this matter and that is the small farmer. He is hanging precariously in the balance at this very moment. Many of these small operators who have been tilling relatively small acreages have been forced to cease production and turn elsewhere to seek ways and means to make a living.

I believe, Mr. Chairman, that the program as outlined in H.R. 12261 will most certainly be a giant step in the right direction by helping to restore family farm living as a satisfying and profitable way of life. It will undoubtedly avoid some of the burdensome and costly expenditures of the past. This bill will go a long way toward eliminating one real danger confronting American agri-

culture today as it seeks to operate under our present program—namely, that the free enterprise system of farming we have developed might be lost to some giant corporation-controlled method of farming.

The three major parts of this bill deal respectively with wheat, feed grains, and the distribution of protein foods.

Under the wheat section of the proposal, farmers would have an opportunity to express their preference for one of two programs: First, a revision of a program approved by both Houses of Congress and vetoed by the President last year, which would provide for a level of price supports at 85 percent of parity, payment-in-kind of 55 percent of the average yield per acre for wheatland taken out of production, including the "15-acre" producers who would be given allotments and the privilege of voting in the referendum; and, second, the wheat program proposal which would repeal all acreage allotments and marketing quotas, and set the price support at about $1.27 per bushel in 1961 and about $1.15 in 1962.

It seems to me, Mr. Chairman, that this choice would give farmers an opportunity to express themselves on the two most widely divergent views, and would actually give farmers their first opportunity to make a real choice.

In addition to the wheat section, the section of this bill dealing with grain—including corn—authorizes the election of a farmer committee to develop, with the assistance of the Department of Agriculture, a program of feed grains which would bring production in balance with demand, return feed producers between 85 and 100 percent of parity, and authorize the retirement of up to 50 percent of cropland on the farm in return for payment-in-kind in feed grains. A salient feature of the feed grain section of the bill is that it would prohibit any program entailing Government purchase or storage of grain and would limit the overall cost of such program to not more than 10 percent of the value of the crops involved.

The third section of this bill authorizes a substantially increased program for distribution of dairy, poultry, and meat products to the needy, to charitable institutions, and through the school lunch program. This proposed program would be carried out under the general direction of the Secretary of Health, Education, and Welfare, but supplies would come from the Commodity Credit Corporation or from purchases made by the CCC as the agent of HEW.

Mr. Chairman, this bill does not deal as broadly with the supply and price problems of agriculture as I would like but I do agree with the statement of the distinguished chairman of this committee that it "establishes the guideposts on the road back to farm stability, by providing the means for dealing with the crops which occupy more than 60 percent of all cultivated crops in the United States, and which account for a much larger part of our farm surplus stocks."

I feel confident, Mr. Chairman, that if this bill is passed it will definitely, first, reduce surplus stocks which are costing more than a million dollars a day for storage; second, reduce costs of administering the present program, and, third, improve the economic position of these farmers who produce wheat and feed grains. Perhaps this provision of payment-in-kind will provide the most sensible solution to the problem of surpluses and that once we get these surpluses reduced to a manageable reserve, then the Congress can move to enact an effective overall farm bill. At that time perhaps we can move in the other vital areas affecting four other basic commodities—rice, cotton, peanuts, and tobacco.

I urge favorable action on this bill.

Mr. LAIRD. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LAIRD: Page 3, line 2, after the word "crop" insert the following new section:

"SEC. 103. Notwithstanding any other provision of this title the Soil Bank Act is amended as follows:

"(a) Section 108(b) is amended by adding at the end thereof the following:

" 'Effective beginning with 1961, the Secretary shall give special consideration to those States and regions where it is desirable for soil conservation or production adjustment purposes to discourage the production of wheat and other surplus crops as determined by the Secretary.'

"(b) Section 109 is amended:

"(1) by amending subsection (a) to read as follows:

" '(a) The Secretary is authorized to formulate and announce programs under this subtitle B and to enter into contracts thereunder with producers during the eight-year period 1956–1963 to be carried out during the period ending not later than December 31, 1972, except that contracts for the establishment of tree cover may continue until December 31, 1977.'

"(2) by amending subsection (c) to read as follows:

" 'In carrying out the Conservation Reserve Program, the Secretary shall not at any time enter into contracts which together with contracts then in effect cover more than 65 million acres. The Secretary shall not at any time enter into contracts which together with contracts then in effect cover more than 25 percent of the cropland in any county or community.'

"(c) Effective beginning with contracts entered into after the date of this Act, Section 107(b)(2) is amended by adding at the end thereof the following:

" 'The Secretary is authorized to provide for payment of the annual payment through the issuance of certificates which the Commodity Credit Corporation shall redeem in wheat or feed grains in accordance with regulations prescribed by the Secretary. Notwithstanding any other provision of law, no producer shall be paid an annual rental payment, or its equivalent in such certificates, of more than $7,500.' "

Mr. LAIRD. Mr. Chairman, the amendment which has just been read would make changes in the existing law applicable to the conservation reserve program as follows:

First. It would extend for 3 additional years the authority for entering into and the carrying out of contracts under the conservation reserve program.

Second. It would increase the amount of obligations which may be incurred under the program to an amount sufficient to cover 65 million acres.

Third. It would provide specific authority for giving special consideration to those States and regions where it is necessary or desirable to discourage the production of wheat and other surplus crops for the purposes of soil conservation, in distributing the National Conservation Reserve goal, and allocating the funds to the States.

Fourth. It would provide authority to use wheat and feed grains for making payments in kind under the conservation reserve program.

Fifth. It would provide a limitation of $7,500 on the payment to any one producer.

Sixth. It would provide that no more than 25 percent of the land in any community or in any county could be devoted to the conservation reserve program.

Mr. Chairman, the conservation reserve program for the past 2 years has been very effectively directed by Mr. Tom Hamilton, of Westfield, Wis., in my congressional district. I am proud of the work he has done to get this program back on a sound basis.

The conservation reserve program has proven to be an effective attack on the source of the surplus problem. Much excellent cropland is now on a standby basis. Experience with this program has shown that farmers will voluntarily cooperate in bringing about needed production and land-use adjustments.

In 1960 over 28 million acres of our producing cropland will be in the conservation reserve and devoted to protective soil, water and wildlife-conserving uses. All of this land otherwise would have been adding to our already burdensome surplus. In my State of Wisconsin over three-fourths of a million acres of fine producing cropland will be out of production for the 1960 crop year.

Land held in reserve, with its value and production potential preserved against the eventual time of need in our dynamic expanding economy, is a good investment for all our people.

Under this sound, sensible program, over 8 million acres in 423 problem Great Plains counties, which produced wheat needed for the winning of two wars, have been returned to the native grasses of the plains. Small rental payments have made it possible for farmers to make this desirable shift leading toward a better use of land often subject to periods of wind erosion.

In the Southeast States, tree planting ranks highest among the conservation uses of the program. Here we find that trees can be grown faster and more profitably than in any other part of the country. The conversion of large acreages of cropland in the old Cotton Belt to forest trees provides a sound, long-lasting, land-use adjustment. Another section where tree planting has had much attention is in the Great Lakes area. In Wisconsin, over 27,000 acres were planted through 1959 with more to be added this year. Nationwide, over 2 million acres of producing cropland is now being planted to this long-time crop of trees. This is a diversion for a very long period from crop production

and to another very desirable use. The future forests will provide a continuing income starting at the expiration of the conservation reserve contract period.

Practices designed especially for wildlife protection have gained wide acceptance by participating farmers and have won the general approval of sportsmen and wildlife organizations. Over 225,000 acres have been planted to specific wildlife uses, such as food patches, and cover, which will give better protection to birds and animal life. Some rather spectacular results have drawn much attention to this phase of the program.

Both urban and rural people are concerned with our future water supply. We are all alarmed with falling water tables, silted streams and floods caused by unimpeded water runoff. The millions of acres of trees and grass, together with the thousands of water storage structures under the conservation reserve, are trapping our valuable water where it falls and retarding the runoff. They also provide expanded recreational opportunities for both rural and urban folks of all ages.

Studies made of the production history of the estimated 28 million acres of cropland under contract in 1960 indicate that 4.6 million acres were formerly devoted to corn; 3.1 million acres to wheat; 4.1 million acres to oats; 3.8 million acres to sorghum grain; 1.6 million acres to barley; 1.1 million acres to soybeans; 660,000 acres to cotton; 600,000 acres to flaxseed; 148,000 acres to peanuts; 15,000 acres to tobacco, and 5 million acres to cropland hay and pasture. The 28 million acres in the 1960 conservation reserve will retain in the soil, instead of bins, the fertility elements otherwise used for the production of these crops.

Approximately three-fourths of the land in the reserve is on farms where owners placed all their eligible acres in the program. On those farms, all the cropland is out of production—including the allotted acres of major surplus crops.

When all eligible land on a farm is placed under contract, the farm usually goes out of production entirely. Livestock is often sold and much of the pastureland and other noncropland is retired voluntarily at no cost to the Government. As a matter of fact, of the 9,536 conservation reserve contracts in Wisconsin through 1959—82.8 percent are whole-farm units. Since the use of cropland on a farm is normally required in connection with a livestock or dairy enterprise, such enterprise is also closed out or drastically reduced upon retiring all the cropland on the farm into the conservation reserve. Dairy cattle numbers in Wisconsin dropped approximately 34,000 head in 1959, compared to 1958, and total milk production in 1959 for the State was reduced by 275 million pounds during the last year, as compared to the total milk output in 1958.

From a national point of view, for the same period, dairy cow numbers dropped 451,000 and total milk production was reduced by 487 million pounds. Preliminary findings of a study of whole-farm conservation reserve contracts in Wisconsin on farms which had a dairy operation, prior to the land being placed in the conservation reserve, reveal that there has been approximately an 85-percent reduction in dairy cow numbers on these farms. In analyzing participation in many other leading dairy States, we find a high percentage of conservation reserve contracts are for whole-farm units. Undoubtedly, the same livestock reduction trends are taking place in these States. It appears evident that the present conservation reserve is a significant factor and has contributed to improving the production situation in the dairy industry. This points up the fact that the impact of the conservation reserve goes beyond crop reduction and land-use change by bringing about desired adjustments in all aspects of agricultural production.

Mr. Chairman, several questions have been raised in this debate which have gone unanswered. I shall attempt to answer those on the conservation reserve program at this time.

1. QUESTION

Is it true that the conservation reserve is not having any effect upon agricultural production?

ANSWER

It is not true. Cropland which has been producing substantial quantities of surplus crops in recent years is being held out of production under conservation reserve contracts. Of the 28.4 million acres expected to be under contract in 1960, it is estimated that 4.6 million acres were formerly devoted to corn; 3.8 million to grain sorghums; 4.1 million to oats; 3.1 million to wheat; and nearly 14 million acres to other crops, cropland hay and pasture and special uses.

At recent average yields appropriate for the quality and location of the land under contract, the conservation reserve acres in 1960 would produce about as much corn as the annual crop of the State of Ohio; nearly as much wheat as Oklahoma produces in a normal year; more cotton than the annual crop in North Carolina; and substantial quantities of other surplus crops, such as peanuts, tobacco, oats, barley, soybeans, sorghum grain, and flax.

Particularly effective in checking crop surpluses is the retirement of whole farms—including all eligible cropland on the farm—which is encouraged by annual payment rates that may run as much as 10 percent higher than regular rates. Approximately 70 percent of the 1960 conservation reserve acreage is in the form of whole farms. Production adjustment is assured under whole farm contracts since it removes the possibility of intensifying production on a part of the farm.

The average conservation reserve contract covers a period of 6 to 7 years, thus the land put into the reserve will not be producing any crops for that length of time on the average. This helps in holding down surpluses and also reduces price support expenditures, since the volume of crops eligible for price support is reduced.

2. QUESTION

How true is the charge by the General Accounting Office that nearly one-fourth of the land placed in the conservation reserve is not cropland and therefore one-fourth of the funds are being wasted?

ANSWER

As the General Accounting Office states in its report, the congressional language on eligible land is extremely broad. The act says that land must have been "regularly used in the production of crops" and specifically directs that land devoted to such crops as "tame hay, alfalfa, and clovers" is to be eligible.

In administering the act, land which is in a regular crop rotation on the farm is regarded as being "regularly used in the production of crops" and eligible for the conservation reserve even though it may have been in summer fallow, temporary pasture, tame hay, or other normal crop-rotation use at the time the contract began. Such cropland is part of the regular cropping pattern of the farm and would unquestionably produce crops during the contract period if it were not in the conservation reserve.

It is not logical to exclude such land from a program of this type, nor to exclude land which is customarily cropped but suffers crop failure in 1 or more years because of drought, flood, or a similar disaster.

3. QUESTION

Are farmers placing only their poorest land in the conservation reserve?

ANSWER

Nearly 70 percent of all the land now under contract was placed in the conservation reserve in 1959 and 1960, through a procedure which tends to bring average quality land under contract.

At least three factors contribute to this tendency:

First, the procedure for entering into contracts provides for the establishment of a basic rate which is related to the quality of the land. Since the payment rate per acre is thus related to quality, there is no particular advantage in placing poor land in the reserve as the payment rate is lower for the poor land.

Second, the program during 1959 and 1960 has included incentives for placing whole farms under contract. When all the eligible land on the farm is placed in the reserve the good land and the poor land are both included. Consequently the land under contract cannot be far from average. During 1959 and 1960 over 70 percent of all the contracts were for whole farm units.

Third, it has been found that most contracts are with older farmers who are withdrawing from farming because of advanced age, physical condition, or because of a wish to retire. It is logical to assume that these farmers own average quality land for their area and as a result the land being offered is average land.

It is worth noting in this connection that one factor in the law acts in a manner to bring somewhat better than aver-

age land into the reserve. The law requires protection of tenants and sharecroppers and because of this protection the program has been more attractive to owner-operators of farmland. Owner-operator farms are normally the better managed, more productive farms and to some degree this has tended to bring farms into the reserve that are even better than average.

4. QUESTION

Has the conservation reserve developed a major weed problem?

ANSWER

The Soil Bank Act itself contains a requirement that the Secretary include provisions in all conservation reserve contracts relating to control of noxious weeds. It is a violation of the contract for a producer to fail to take the steps prescribed by the county committee for the control of noxious weeds. We are confident that the county committees have exercised the best possible judgment in requiring all contract signers to control noxious weeds when this is required. While there have been a few weed control violations, this has not been widespread.

While neither the law nor the regulations require control of weeds other than those listed as noxious weeds in each State, the State and county committees have generally required mowing of the conservation reserve when this was needed to maintain the approved cover. This requirement has been conducive to controlling the spread of all weeds.

A good grass-legume cover once established upon the reserve, will crowd out the annual weeds which normally spring up when land is left idle. In the long run we believe that the ecologic succession of perennial grasses will crowd out most annual weeds and within a few years, the conservation reserve will be more weed free than the surrounding land. In carrying out the weed control measures, the Department has at all times, attempted to do this with the least possible adverse effect upon wildlife.

5. QUESTION

Is paying farmers for doing nothing contrary to the normal American concepts?

ANSWER

The opinion that farmers are being paid for doing nothing under the conservation reserve program is erroneous. Basically, the farmer diverts land from the production of crops to conservation purposes. It is in the public interest to achieve these crop adjustments and conservation objectives. Federal payments for conservation are an accepted use of Government funds. The farmer receives an annual payment in lieu of the crop or the normal rent which he might receive from another farmer for the cropping use of his land. For this annual payment, he foregoes the use of the land. He also must control weeds, keep his fences in repair and maintain the conservation cover on the designated acreage.

6. QUESTION

Is the conservation reserve having an adverse effect upon business?

ANSWER

In the long run, the achievement of parity of income for the Nation's farmers will tremendously improve the welfare of farmers, of businessmen dealing with farmers, and the national economy. The unsatisfactory prices farmers have received for their products is a result in a large part from too many farmers producing too much. The achievement of stability in agriculture requires the removal of some of the inputs of land, labor and material in order to reduce production.

The conservation reserve provides a means for farmers to voluntarily remove land from production and to reduce their labor and material inputs. As they do so there will be a reduction in the amounts of things they buy for production, including things such as farm machinery, fertilizer, gas and oil. As a result of this there will be a reduction in production which will reduce the amount of farm produce to be handled by local elevators, cotton gins, creameries, and so forth.

To lessen any impact this may have upon a local economy, the Department has placed a ceiling upon the amount of land which may be placed in the reserve in any county or community. Within a short period of time, however, the reduced production will tend to stabilize prices. The improved economic condition of farmers will inevitably make them more prosperous, better customers for local businessmen and, in the final outcome, all segments of the economy will benefit.

7. QUESTION

Has the conservation reserve program caused a breakdown in the smaller communities with resultant unemployment?

ANSWER

There is little evidence that the Conservation Reserve is having any direct effect upon churches, schools, employment, or labor supply. The long-term trend has been toward consolidation of farm units and rural-to-urban movement of people as the result of the mechanization of agriculture. The Conservation Reserve has speeded up this trend slightly but it is worth noting that by far the majority of participants in the program are farmers with a physical problem or farmers of advanced age, who are retiring from agriculture but not moving to urban centers and entering the labor market. A study by the Department shows the following preliminary findings. The average age of contracting farmers is 58. A total of 94 percent of the farm building on Georgia farms placed in the reserve are still occupied. The annual payments permit these farmers security and gives them the opportunity to continue to live in their home community and take part in the affairs of the locality. While some may seek employment in the vicinity, it is usually in the type of jobs for which it is difficult to secure adequate labor force. There is no evidence of a large-scale unemployment problem having developed in urban centers which can be correlated with the conservation reserve program.

8. QUESTION

What effect has the conservation reserve program had upon land availability and prices?

ANSWER

Since the purpose of the program is to divert land from agricultural production to conservation purposes, it is true that there is less land available for agriculture now that over 28 million acres are under conservation reserve contract. That is the purpose of the program. It is not true, however, that the conservation reserve has had any effect upon land prices. The price of agricultural land has been increasing ever since the advent of World War II. Between 1950 and 1959, this increase has averaged between 9 and 12 index points per year. During the last year, the rate of increase dropped to 5 index points.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

(By unanimous consent, at the request of Mr. BYRNES of Wisconsin, Mr. LAIRD was permitted to proceed for 3 additional minutes.)

Mr. LAIRD. Mr. Chairman, the voluntary aspects of the conservation reserve approach provide the greatest freedom of choice for those farmers having difficulty with farming because of age or health, labor shortages, or other factors. These farmers have an opportunity to reduce or change their operations. Unlike the previous adjustment programs, it also provides equal freedom for those whose situation is best suited to continue an efficient operation.

I should like to emphasize that the production adjustment to the degree needed would be practically impossible to achieve through the conservation reserve unless the policy of bringing more land into the conservation reserve program is pursued with real vigor; nor can it be achieved without continuing to retire additional land to the reserve in an orderly manner. This can be done if we allow this program to continue on an efficient, effective basis. Unless this amendment is enacted into law, we have no assurance that the conservation reserve program will continue. I believe the task can be accomplished by this less costly manner, preserving the independence of our agriculture and guaranteeing the future food and fiber supply of this Nation through good stewardship of our soils.

Studies indicate that avoiding surplus production through a conservation reserve program costs much less than disposing of surpluses from the same land under present methods. The President has recommended that the conservation reserve authority should be extended as a means of helping to achieve the desired production adjustments and put the retired land to conservation uses. Placing

land not presently needed for production in the reserve is a practical means of meeting the surplus problem in agriculture.

Extending and expanding the program will result in a diminishing need for huge expenditures of public funds to support the prices of farm commodities for which there is no market and which pile up in Government warehouses.

Mr. COAD. Mr. Chairman, will the gentleman yield?

Mr. LAIRD. I yield to the gentleman from Iowa.

Mr. COAD. If the gentleman's amendment is adopted it does not take away subtitle A or subtitle B?

Mr. LAIRD. It does not. The only method by which the conservation reserve program could be continued under subtitle A, and subtitle B, as the gentleman from Iowa, I am sure, well knows is for a vote to be taken, and if title A was adopted the conservation reserve, of course, would be destroyed. My amendment gives only a 3-year-extension.

Mr. COAD. In the event your amendment prevails and if subtitle A were adopted in a referendum, we would have the payment in kind on acreage reduction; would we not?

Mr. LAIRD. My amendment provides for a payment in kind, that is correct.

Mr. COAD. If we adopted subtitle A, there would be then two programs actually of conservation reserve; would there not?

Mr. LAIRD. My amendment provides for the conservation reserve program and it would be up to the individual farmer to make that decision on his own.

Mr. COAD. That would be in addition to subtitle A or subtitle B whichever one is adopted; is that correct?

Mr. LAIRD. My amendment does not amend subtitle A or subtitle B.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. LAIRD. I yield to the gentleman from Oklahoma.

Mr. ALBERT. I believe under the language of subtitle A, any participation in the payment in kind would, to that extent eliminate that particular farmer.

Mr. LAIRD. It does not under the wording of my amendment because I put in the words "notwithstanding any other provision of law" and I have tried to provide for that through the amendment as drafted.

Mr. BELCHER. Mr. Chairman, will the gentleman yield?

Mr. LAIRD. I yield to the gentleman from Oklahoma.

Mr. BELCHER. Do I understand that your payment in kind as far as wheat is concerned requires the farmer to reduce his present allotment? Or could he put his excess acres into the payment in kind program?

Mr. LAIRD. He could put any new acres that were devoted to the conservation reserve program under a contract and the payment could be made on the basis of certification for the particular production he was actually reducing.

Mr. BELCHER. If you take wheat out of the present storage under the market, above what is going to be produced on the 59,400,000 acres, you are going to completely depress the wheat market.

Mr. LAIRD. It would not have that effect.

The gentleman well knows this will only take into account the wheat acreage reduction which is brought about on each individual farm that cooperates.

Mr. COOLEY. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I am sure all Members of the House must be taken by surprise by the amendment which has just been presented. I thought most of us wanted to forget all about the soil bank, especially when we realize how much money has been spent on the soil bank. I have the current figures showing that we have spent on the soil bank to date, that is as of April 19, 1960, $2,098,355,000 and we are obligated in outstanding conservation reserve contracts to spend another $2,060,000,000, making a total in round figures of $4,100,000,000.

Notwithstanding all of that gigantic expenditure and this tremendous obligation, the farm problem has been intensified and aggravated with the harvest of every crop, and we are accumulating surplus upon surplus. Everyone knows we must do something about it. Certainly, we should not go on with this expensive experiment which already has cost the taxpayers so much. I would like to ask the gentleman from Wisconsin if he can give the House any ideas as to what his proposal would cost the taxpayers of America.

Mr. LAIRD. Mr. Chairman, if the gentleman will yield, first, I would like to state that the provision I have introduced in this bill is contained in subtitle B of the committee bill. As you know, there is an extension of the conservation reserve under subtitle B in the committee bill. This is not any great departure from that. The only provision this amendment makes is to give temporary authorization for 3 years regardless of the voting on the two proposals contained in the committee bill. The committee bill that has been reported from your committee could contain the soil conservation program, you understand that. There is no additional cost involved under my proposal than there is under the committee bill in the event that subtitle B is adopted.

Mr. COOLEY. If I may interrupt my colleague, I think the gentleman has made the observation he wanted to make. The fact remains there has been an effort made here to knock out this alternative choice we are giving the wheat farmer—and not by the gentleman from Wisconsin, I grant you that.

As pointed out by the gentleman from Texas [Mr. POAGE] the vice presidential candidate, I think even the President himself, has indicated that he wanted the farmers to have a voice in the selection of the program they want. I think that the effort to strike this program down is prompted and motivated by fear on the part of advocates of this alternative program that the farmers will repudiate it in the referendum.

This business of giving the farmers freedom, freedom to plant all they want, does not appeal to me, because it only means the freedom to go into bankruptcy and to bury themselves underneath the abundance that will be harvested from the fields of America. We must be realistic here and give to the farmers the instruments which will enable them to control production adequately.

Mr. LAIRD. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield.

Mr. LAIRD. My particular amendment is on a voluntary basis for each individual farmer. Subtitle A alternative provides for payment in kind, but your committee subtitle B provides only for cash payments.

Mr. COOLEY. You are talking about the alternative.

Mr. LAIRD. But under your alternative the only people who can vote on the conservation reserve program are the wheat producers.

Mr. COOLEY. I do not think our committee has expressed exclusive interest in any particular program. We submitted the programs that are provided in the bill, but I am willing to accept other workable alternatives.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. I yield.

Mr. POAGE. Is it not a fact that this amendment would continue a program which has resulted in one-third of the entire available acreage of the State of New Mexico going into the soil bank and the State still growing more salable crops than ever in its history?

Mr. COOLEY. I think the gentleman is right.

Mr. Chairman, I ask that the amendment be defeated.

Mr. HOEVEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would just like to point out to Chairman COOLEY that the President in his special farm message to the Congress did request an expansion of the conservation reserve program. I introduced a bill to implement the President's request for not to exceed a 60-million-acre expansion of the program.

Mr. COOLEY. The President recommended continuation of the soil conservation program in connection with the wheat program only. In his farm message to the Congress on February 9 the President said "if the Congress should so act" upon an effective wheat program, "I urge an orderly expansion of the conservation reserve program up to 60 million acres." I grant you that we have a bill before our committee that would take out 80 million acres of acreage.

Mr. HOEVEN. The President did not limit his recommendation to wheat. He asked for a general expansion of the conservation reserve program.

Mr. COOLEY. The President actually specified 60 million acres in his message.

Mr. HOEVEN. He did not set any special limitation as to wheat.

Mr. COOLEY. I do not think we should expand the soil conservation reserve that already is costing us $4 billion.

Mr. MARSHALL. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, it has been said that confession is good for the soul. I have a confession to make. I helped as one of the originators of the soil bank program which was introduced in the Congress. It was one of the first bills along the soil bank line that was introduced in this Congress. My good friend and colleague, Congressman ANDERSEN of Minnesota, joined with me in introducing the bill. We sent it to the Committee on Agriculture; and the Committee on Agriculture, always cooperative, sent down to the Department and asked for a report on my bill. The report on my bill came back adverse. Do you know what the adverse report said? It said that for this program to be workable it would cost $500 million annually. That is what it said.

So, because it cost that much money the Department recommended against it. It was not long after that, much to my surprise, the Department came out with a soil bank bill. The soil bank bill that the Department came out with was no more like the soil bank bill that my good friend and colleague from Minnesota [Mr. ANDERSEN] and I introduced than day is like night. There was no comparison at all. The only comparison you could make is you were saying they were both soil banks.

Mr. Chairman, when we introduced that bill we were in a much different situation than we are today. It was before we had this huge buildup of surplus. The surplus Commodity Credit stocks in those days was a drop in the bucket compared with what we have now.

What was the bill that my friend and colleague from Minnesota and I recommended? We recognized immediately that if the soil bank was going to bring about an adjustment in production that adjustment had to come from good, fertile acres. You do not cut out production by taking out the marginal acreage. You cannot take out enough marginal acres to more than dent the total production. That was driven home to me just a short time ago when we visited the great State of Illinois.

What was going on in the corn storage program? We went to one of the greatest corn-producing counties in the United States, McLean County, Ill. Those people who are interested in agriculture ought to go to McLean County, Ill., to see what they have out there. We saw corn stored in that area that amazed me. We saw a million bushels of corn stored in one location. We saw bin after bin after bin overflowing with corn. The farm rotation of crops in that area was being disrupted. Planting clover and oats in a crop rotation was greatly curtailed. Many were putting every acre of ground into corn. Do you know how many farms they had in the soil bank in that county? Six farms.

That is pretty much true in the Corn Belt. You are not going to bring production in line with that kind of program, particularly when you have the surpluses the way they are today.

I think we are making a big mistake when we talk about acreage control only. We have a serious problem in this country. I wonder sometimes how many realize how serious it is. One of the things that is fundamental in this agricultural situation that we have is that you do not control production any more through acreage control. We have found so many, many ways that we can step up production on the tillable acres that we have that I would not want to guess how much we could retire and still maintain present production. In fact, we are on the threshold of increasing production more. Our research people point that out to us in things we can do.

If we are going to face up to the matter of bringing production in line with demand, we are going to have to get away from acreage control. We are going to have to talk in controlled production terms of bushels, pounds, and bales. The Secretary of Agriculture made that statement to us in our committee.

There is another thing I would like to say while I am here, and I regret to say it. It seems to me that every time we get into a discussion of the agricultural program we are trying to switch around here to find a painless easy way out. If we are going to face up with the problem of making production meet demand and the amount of production our market will absorb, in my estimation there is no painless or easy way. Every person involved, farmers, consumers, processors, Department of Agriculture personnel, and the Congress will need to face hard facts and make difficult decisions. I hope the Congress is not reluctant in providing leadership and doing its share to solve the difficult problem.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. COOLEY. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. SCHWENGEL. Mr. Chairman, I rise in support of this amendment.

Mr. Chairman, I hesitated to take this time to talk to you because I felt that I was completely inadequate to talk on this subject, but the more I hear of this argument and the more I see of what is going on in the Congress in an attempt to try to do something about this very serious and important problem for the farm economy, I have come to believe maybe a boy born on an Iowa farm might have an observation or two that would be worthwhile.

First, I would like to talk in a general vein, and I want to direct what I say to the opposition. I want to point out that the opposition that sits on this side of the aisle say they are not for flexible support. Yet, when it comes to presenting answers to the problem—and I underscore this—political answers to the farm problem, the record shows that they have been and are a most flexible and vacillating organization. If inconsistency is a jewel, they have in their midst some gems in an election year, more than ever has been presented by a political organization in the history of this Nation.

To prove this, let me point out that the flexible support was recommended by leaders on this side of the aisle and heralded as the real answer to the farm problem in 1938. Then when we had some real problems and a world war, we found this whole Congress agreeing that we had to do something to encourage production of agricultural products to help feed our own armies and to help feed the world, as we were contending with some forces that were challenging us in that very critical time. So, they adopted a 90 percent program to produce more, and the plan worked. Then they found themselves in bad shape several years after the war and it was difficult to get out of the mess, created by yearly extensions after the war, so year by year, 3 or 4 years—I do not know how many years—they extended the 90 percent plan until they could work out some better plan, and never allowed themselves to get into the plan that they said in 1938 was the real answer. So, finally the same group began arguing, as they now contend, many of them, that the 90 percent support plan to produce more during the war is also the answer to produce less. Obviously the record shows this is not true. Then finally, what do we find? A recommendation on this side described briefly as the Brannan plan production payments. Well, nobody talks too much about that now. And then last year we tried the Cooley plan, and nobody got too excited about it when it failed to pass. It did not seem to have any real answer. Then we started with the Brannan plan this session, and I understand we had the Poage bill No. 1. Leaders from all over the country came in and testified that this was the answer. Here is the answer to the problem that plagues the farm economy. Well, that did not go over too good, so we had the Poage bill No. 2. I do not know what happened to that, but they got into the Poage bill No. 3, and here we are on Poage bill No. 3.

Now, I contend that here is abundant evidence that somebody really does not know what the score is, and I think the farming public is going to find out pretty soon, too, that we do not know what the answers are; the real answers. I think it is about time we think about the economics of the problem rather than the politics of the problem.

Now, I said earlier that I wanted to rise in support of the amendment offered by the gentleman from Wisconsin. I do so after considerable thought and study of this problem, and I have come to believe that this is the real answer to the farm program in the long pull.

The CHAIRMAN. The time of the gentleman from Iowa [Mr. SCHWENGEL] has expired.

Mr. SCHWENGEL. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

Mr. SCHWENGEL moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken out.

Mr. SCHWENGEL. Mr. Chairman, the adoption of farm legislation is important now. It is unfortunate that the provisions of my bill, which are similar to that which is being offered by the gentleman from Wisconsin, have not been considered by the committee. Therefore, I am glad it is before this body for your consideration now.

I would like to point out that the use of our cropland to produce agricultural commodities far in excess of the amount which can be satisfactorily marketed is not only a waste of one of the Nation's most priceless assets; it is the major cause of agricultural economic distress. The adoption of this legislation could do more in the long run to resolve the farm problem than any legislation we have had under consideration to date. It should be noted that the retirement into protective conservation status of the acreage presently unneeded is good insurance for the future of the 179 million and more people of our country.

Some 460 million acres of U.S. land are now in productive status, cleared and put under the plow by hardworking and devoted American farmers. These producing citizens have met every need for food and fiber for our people and for starving, fighting people all over the world, including the winning of two World Wars and, more recently, the Korean conflict. Without these farmers they would not have been won. Without them it would have been either Hitler or communism.

There can be no real defense for the continued use of any extensive acreage beyond that which is currently needed. Shortsighted and wasteful use of the soil and other natural resources should be discouraged.

And history books record many examples of the disintegration and disappearance of great Nations which permitted the ravaging of their soils and other natural resources. It is time that we learned from them.

Retiring the unneeded acreage into protective conservation use can only result in manifold benefits for posterity.

These include protection of the soil from deterioration; more adequate supplies of water for domestic, industrial, and recreational use; a return of large acreages to forests; and improved conditions for all forms of our diminishing wildlife resources.

During the short time that the conservation reserve program has been in operation, about 28.5 million acres of cropland have been retired from crop use into preserving conservation cover.

Under the program, nearly 7.7 million acres of the Great Plains area, including the Southwest Dust Bowl, have been restored to native and other adapted grasses, and protected from the recurring ravages of severe wind erosion—a tremendous accomplishment for an area where many temporary relief measures have been tried and vast sums of money expended in recognition of the seriousness of the problem.

Under the program, too, more than 2 million acres of cropland are being returned to forests—land which was forcibly wrested from forests and cultivated by our ancestors.

In addition to the improved wildlife conditions brought about by the retirement of cropland into forest trees and other protective cover, nearly one-third of a million acres are being devoted to specific wildlife habitat, such as food and cover, and water impoundment for waterfowl, fish, and other forms of wildlife. Sportsmen's and conservation organizations, which have been specifically concerned with our diminishing wildlife, are convinced that the decline has already been stopped in some areas as a result of the acreage retired into the conservation reserve.

Nor is the conservation of natural resources the only benefit resulting from the retirement of unneeded cropland.

Retirement of this land from production conserves all the factors of production, including capital, labor, machinery, fertilizer, and seed which would otherwise be wasted in the growing of unneeded agricultural commodities.

Continued use of this unneeded land also causes financial distress to farmers, with consequent adverse effects on the Nation's total economy.

The conservation reserve program provides an opportunity for the farmer to voluntarily reduce the size of his farming operation and to shift all or part of his energy and other resources to other fields of endeavor, thus providing a more favorable economic situation for himself while continuing to live in his farm home.

The adoption of a sound conservation reserve program would not only be a good public policy for the protecting of natural resources for the benefit of all our people, but would, by reducing the size of the agricultural plant, to provide a sound method of bringing about the needed downward adjustment in the production of agricultural commodities, with resultant and necessary improvement in the agricultural economy.

We will find, I am sure, that to the extent that such unneeded land is retired from production, the products of the remaining land will more readily respond to free market prices since the specter of ever-increasing surpluses will have been removed.

Continuing the production from unneeded acres promotes waste and only postpones the required adjustment.

Let us remember, too, that in the long run this plan will be less costly to the taxpayers.

Let us remember, too, that food stored this way becomes more valuable and food stored under the present plan becomes less valuable as we pay the storage cost from which the average farmer receives little or no benefit.

Mr. Chairman, to show that there is a ray of hope for some of the farmers in the corn-hog economy today, I should like to refer the membership to the recent pig crop report released by the USDA today:

PIG CROP REPORT

The 1960 spring pig crop totaled 49,103,000 head, down 16 percent from the 1959 spring crop, according to the Crop Reporting Board. Number of sows farrowing during spring months totaled 7,060,000, 15 percent below spring of 1959. Number of pigs saved per litter was 6.95, compared with 7.07 for spring of 1959. Reports on breeding intentions indicate 5,889,000 sows will farrow between June 1 and December 1 this year, drop of 4 percent from 6,138,000 litters during fall months of 1959. If these farrowing intentions are carried out and number of pigs saved per litter is equal to average, with allowance for upward trend, 1960 fall pig crop will be 41.5 million head. Combined spring and fall pig crops for 1960 would then be 90.6 million head, down 11 percent from 1959 pig crop and 1 percent below 1949–58 average. Number of hogs 6 months old and older on farms and ranches June 1 was 7 percent less than corresponding date year ago.

Mr. GOODELL. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. GOODELL. Mr. Chairman, I consider the Poage Democratic farm bill a legislative and constitutional monstrosity. It moves toward more regimentation of our farm economy and does not face reality. Let me read a letter I received from a respected farmer in my district recently. It is a breath of fresh air that all of you deserve in this stale atmosphere of "governmentitis" with which our whole farm economy is affected:

DEAR CHARLIE: It is no wonder you are dismayed over the farm problem. It has grown into such a mess that there is no sure cure except cutting out price supports and controls entirely. The potatogrowers are an example of what happens when governmental interference is removed. The potatogrowers asked to have the Government get out of their business and they have gotten along very well ever since. The price of potatoes this spring has given them a very nice return. It seems that the potatogrowers like a little speculation in their operations. Fixed prices take the zest out of agriculture. Good and bad years are expected and farmers have learned to live with it. The wheat, cotton and all the supported crops would naturally go down in price if all supports were removed but that would be temporary and growers would adjust their production to the market. During that process some would be hurt of course but there would be only comparatively few as compared with the thousands and thousands that are injured by the present system of supports.

Mr. Chairman, the Poage bill is an abdication of responsibility by the Congress. It would delegate to a nine-man group the determination of farm policy. We do not know what we are voting for today. Have we, the elected representatives of all the people, reached such a stage of intellectual and moral bankruptcy? We need a farm program which will bring freedom and good sense back into the farm picture, not this political poultice.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the preferential motion.

Mr. Chairman, certainly I wish to identify myself with my colleague from Minnesota [Mr. MARSHALL], who spoke earlier in connection with this amendment. I am in agreement with him that actually we will never solve the farm problem as long as we try to deal with it by acreage control.

In addition to the points the gentleman from Minnesota has made, I would point out that to limit acres is an incentive to get as much production per acre as possible. That leads to two very serious ill effects, in my opinion: First, instead of the farmer giving attention to the best type, the best quality, the best grade he can raise, we have followed for a number of years a policy which in effect is an invitation to the farmer to produce the most prolific variety to produce the greatest volume, at an increased cost to the Government, and actually to the detriment of foreign sales. The other really bad effect is that when you limit the number of acres you invite the farmer to increase greatly the amount of cash investment he makes which he must charge against himself at the end of the year, thereby pulling his net income down. So I have to say for the record that while the bill before us represents the best our colleagues can agree on, and we all differ among ourselves, it does represent a start in the right direction. But I would have to say for the record that as long as we approach it from an acreage standpoint we do not solve the problem and we do increase the farmer's outlay in cash; we decrease his net income position at the end of the year, and in addition to that we are inviting him to grow less desirable types and qualities in order to get volume.

I take this time to point out to you that if, as history has shown, you cannot control production by limiting the acres that can be used, it follows that you cannot control production by the acres you take out.

I have here some figures from the Department of Agriculture. We have spent and are committed to spend about $4 billion in this nefarious soil bank. It has served to inflame the American people against agriculture, because they say, with much basis, that you are paying the farmer for nothing. Many, many farmers think we have been ridiculous. After spending or committing ourselves to $4 billion, our total production has greatly increased and the Commodity Credit holdings have greatly increased. So I do not see how anyone in the world could think this would solve anything, except perhaps get the farmer's vote in November.

May I quote from our committee report on agricultural appropriations which cites the Department's figures:

In 1955, the soil bank was offered as a solution. Acreage was rented from farmers and taken out of production, though the record shows 23 percent had not been in production. The cost of the soil bank to date has been approximately $2.7 billion. It is estimated that an additional $1.6 billion will be required in future years to meet long-term conservation reserve commitments entered into under existing legislation. This estimated total cost of $4.3 billion would be further increased if this program were to be extended beyond the present year.

The production records of the Department show that the program has been relatively ineffective in bringing production in line with need (pp. 373–375, pt. 3, 1961 hearings). There seems to be little benefit from this program, unless considered as a means of offsetting loss of farm income at the marketplace. The past record proves conclusively that this program offers no future solution to the problem of overproduction, even if billions of dollars are spent each year.

As shown by the Department's testimony, 2.6 million farms are classified as small farms. These represent 56 percent of the total farms in the United States, which include about 275 million acres, but produce only 9 percent of the commercial production. Therefore, if all such farms were removed from production at an average of $10 per acre, it would cost $2,750 million a year and would reduce production only 9 percent—assuming large farms did not offset such reduction. These figures cannot be misunderstood.

You would be giving the farmers $2,700 million to be used for fertilizer to increase production on the rest of our acreage.

So I say to you that anybody who argues that we should rent 60 million acres, which is less than one-fourth of the small farms, you would be dealing with less than 2½ percent of the commercial production and farmers would take their money and increase commercial production on the rest of it. Whatever the answer is, and there is a wide variety of answers in this body, certainly this soil bank offers less than anything I know of.

May I say of this distinguished Committee on Agriculture that I have some different viewpoints from those they have. I can name you 12 people, in my opinion, who could write a farm bill, and my friend the gentleman from Minnesota [Mr. MARSHALL] would head the list, but I do not know that I could name 12 who could collectively agree on so many things. Do not go for any soil bank. It has almost ruined us now.

Really there is so much difference of opinion, fixed opinion, between farmers, farm groups, Congressmen, between Senators and House Members, that I truly believe we must have a period of adjustment and an outside study group to bring together all our various views if we are to solve this problem.

I quote here the statement of our Subcommittee on Agricultural Appropriations, which gives the views of our group as to what we think is necessary:

NEW APPROACH TO PRODUCTION CONTROL NEEDED

The most serious problem facing agriculture today is the continued overproduction of crops already in surplus supply. Yields per acre for nearly all crops have increased steadily in recent years. Total production has also increased, despite acreage controls and the soil bank.

When the present system of acreage controls was placed into effect over 20 years ago, it was fairly effective, since acreage yields were limited by this type of agriculture used at that time. In recent years, however, this means of control has become completely ineffective due to improved methods of cultivation and increased use of machinery, fertilizer, insecticides, and improved seed.

It is apparent to the committee that something has to be done. Correction must be made, both for the welfare of the farmer and the Federal Treasury.

In seeking a solution, several facts are evident:

(1) What we have been doing hasn't worked. After spending or committing ourselves to spend nearly $26 billion, the record shows the situation to be three to four times worse in terms of surplus inventories of CCC.

(2) Farm income is now so low, even with the sale of the overproduction to the Government, that farm purchasing power must be protected from a further drop.

(3) Any future farm program must provide that farm income shall come from the production of that quantity of product necessary for domestic and foreign markets. In the interest of the overall national economy, such production must reflect farm costs plus a reasonable profit. Such income should come from the marketplace.

(4) To bring about correction, we have one factor which should enable us to scale back overproduction without injury to farm income or further cost to the taxpayer during the period of adjustment. This is the $9.2 billion of CCC commodities on hand which are already paid for. Commodities from these stocks should be offered to farmers in consideration for cutting back farm production.

If such a plan were put into effect, there would be a number of important benefits to the national economy—(a) the Government would save storage costs, (b) price support costs would be reduced in line with production actually eliminated, (c) farmers would save the cost of producing extra units of production for which there is no market. Further, no additional outlays of funds would be required to accomplish this objective, since commodities to be used are in Government stocks and will otherwise be given away under Public Law 480.

Once production and demand are in reasonable adjustment under this program, it would appear that fair and reasonable price supports should be provided for the farmer's share of the domestic market. Any overproduction should be eligible for foreign markets at world prices. If this course were followed, the cost to the Government would be negligible.

The other course which might be followed would be to continue price supports on total production, limited to domestic and foreign markets. If this approach were used, the Government would continue to pay the cost of the difference between the support price to offset high American costs and the world market.

Whichever course is followed, or if some other answer is to be found, it is the belief of a majority of this committee that the

Department and the Congress should get together without delay on a plan to use surplus commodities on hand to get farmers to cut total production of wheat and feed grains—the area of greatest difficulty at the present time—which commodities must be considered together. Merely cutting acreage will not work, as shown by the record.

The Department should be authorized to immediately institute a program which will encourage each producer of wheat, corn, and feed grains to curtail his production up to 25 percent in any one year in return for the transfer to him from CCC stocks of an equal quantity of the commodity for which reduction was made.

Under such a plan, the Secretary of Agriculture would transfer from Government stocks of wheat, corn, grain sorghum, or other feed grains, which are otherwise available for shipment to foreign countries under Public Law 480 and similar programs, to any U.S. producer of said grains upon the following terms and conditions:

(1) The producer must reduce his total production of wheat, corn, grain sorghum, or other feed grain below his average production of all said grains for the 3 preceding years.

(2) The Secretary shall first enter into an agreement for a period of from 1 to 3 years with any such producer of wheat, corn, grain sorghum, or other feed grain, or any combination thereof, which will require upon the part of such producer that he reduce his total production of all of said grains below his average production of the 3 preceding years before such producer can qualify to receive Government stocks.

(3) The Secretary shall determine the amount of such transfer of said feed grains to be offered for transfer in any year to any one producer, but in no case shall the amount exceed 25 percent of the average production of said producer for the 3 years next preceding the date of such agreement. Such transfer may be made by transferring warehouse receipts.

(4) To obtain such Government stocks, each farmer must (a) file notice with the county committee that he expects to avail himself of such offer, (b) agree in writing to reduce his total production of all or any combination of such grains for the years included in such agreement, (c) submit a statement of his production of all of said crops for the 3 preceding years, together with such additional proof as may be required by the Secretary, (d) certify that he will not increase his production of other commercial crops, and (e) supply such proof of reduced production as the Secretary may require.

(5) Insofar as practical, grain so transferred shall be of the same type and kind as that for which reduction in production was made by such producer. When not practical, such transfer shall be in quantities of grains of equivalent monetary value.

(6) The Secretary of Agriculture would be authorized to issue such rules and regulations as may be essential to carry out this provision.

As a part of such a plan, a commission could well be appointed to study and prepare a farm plan for submission to the Congress after adjustment of production has been made. Such plan should be based on protecting farm income at the marketplace and keeping production in line with domestic and foreign markets. This approach is deemed necessary because of wide differences which now exist between farm organizations and between farm leaders, including those in the Congress.

It is believed by a majority of the members of the committee that this proposal is a start in the right direction, that is, toward a program of balancing production with market demand and the long time need to maintain soil and water resources. It would provide an effective means of controlling production through production quotas on the quantity of a commodity which may be produced and marketed. In addition, it would save farmers their present cost of production on that part of their production eliminated, and would save the Government the price support and storage and handling costs on the surplus which otherwise would be produced. It is to be noted that, under this plan, the Government would save storage costs of from 11.68 cents per annum for oats to around 16.5 cents for corn and 17.885 cents for wheat and flax, for each bushel removed from storage. Also, it should be remembered that it would cost the Government little, if anything, for commodities transferred to farmers in payment for reduced production, since such commodities are now on hand and will otherwise be given away under the "foreign aid" Public Law 480 program.

Whether you agree with that or not, for goodness sake do not place this albatross of a soil bank around the necks of American farmers once again.

The CHAIRMAN. The question is on the motion offered by the gentleman from Iowa [Mr. SCHWENGEL].

The motion was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. SMITH].

(By unanimous consent, the time allotted to Mr. WHITTEN was granted to Mr. SMITH of Iowa.)

Mr. SMITH of Iowa. Mr. Chairman, I wonder if the gentleman from Wisconsin would answer a couple of questions. Does your amendment provide for payment in cash as well as payment in kind?

Mr. LAIRD. The amendment provides for a payment of cash or a payment in kind, if a wheat farmer reduces his wheat acreage under this 3-year extension period and he could have his choice of receiving a wheat certificate or receiving cash. He could if he reduced corn have an opportunity to receive a corn certificate or receive cash.

Mr. SMITH of Iowa. But the program, as I understand it then, does not necessarily require a reduction of an acreage allotment before receiving cash or payment in kind?

Mr. LAIRD. He would have to reduce the acres.

Mr. SMITH of Iowa. He would have to reduce an acreage allotment that he is given.

Mr. LAIRD. He would have to reduce—it does not apply only to wheat or only to these particular commodities—he would have to reduce his acreage in order to get a contract, whatever the crop might be.

Mr. SMITH of Iowa. That is, his total tillable acres, but is he given an acreage allotment on corn, for example, and then permitted only to reduce those acres or can he just reduce any acres he has?

Mr. LAIRD. In order to receive payment in kind in corn, he would have to reduce his corn acres. Payment in kind would be based on the amount of average production that he got from those acres over the last 3 years.

Mr. SMITH of Iowa. But he could put land in the conservation reserve that would otherwise not have been corn, but he would not have to reduce his corn acreage.

Mr. LAIRD. It could be any one of the other agricultural commodities. But, payment in kind is tied up with the particular commodity and the reduction in acres of that commodity.

Mr. SMITH of Iowa. I just wanted to point out in this very brief period that there is a limitation here of 65 million acres. A recent publication of the Department of Agriculture, ARS 43115, shows according to their computation that about one-third of the acres that were put in the conservation reserve did not reduce the acreage of those crops. In other words, they figure the 14 million acres in 1959 would have been in corn or one of these crops, out of the total amount in the conservation reserve. This means there is a minimum of one-third of slippage in order to get 65 million acres out of grain production and this is what I said shows we need, as a minimum, in order to get that out you would have to put at least 100 million acres in the conservation reserve.

According to the studies made by our State university you will have to pay $20 an acre for that. That means a minimum of $2 billion. I am not necessarily against the program, but we should realize what it is going to cost.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin [Mr. BYRNES].

Mr. BYRNES of Wisconsin. Mr. Chairman, on yesterday I think the gentleman from Minnesota [Mr. NELSEN] put his finger on the basic problem, and that is that we have to start dealing in terms that it is arable acres that produce crops, that create the surplus. Until we start attacking that problem we will get no place.

It was amazing to hear the gentleman from Minnesota [Mr. MARSHALL] and the gentleman from Mississippi [Mr. WHITTEN] saying that acreage controls accomplish nothing, that you did not do anything with acreage, and yet I suspect we are going to vote for a bill which does just that, reduces acreage.

Mr. Chairman, to me the one basic program that makes some sense is taking acres out of production and putting them into conservation practices in reserve for future emergencies. That is what this amendment offered by the gentleman from Wisconsin proposes to do. Let me suggest to the gentlemen of the committee and others: You have 28 million acres now in the soil bank. You are letting that expire. What are you going to do with the surplus that will be produced on those acres when they again go into production?

Mr. Chairman, I hope we will adopt this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. HOEVEN].

Mr. HOEVEN. Mr. Chairman, I yield back my time.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. QUIE].

Mr. QUIE. Mr. Chairman, this shows the difficulty of trying to pass agricultural legislation which will in some way control production. Many times in the past I have heard the statement made that certain commodity groups have controlled their production, that the tobacco people have controlled their production, that the cotton people have controlled their production. In reality they may be able to control production of a specific crop when they are restricted to that one crop but it never reduced total production. When the corn farmers were restricted in acreage they planted the restricted acres to wheat and soybeans. When the wheat farmers were restricted they planted other crops. When cotton farmers have their cotton acres reduced, they plant wheat or grain sorghums. They have never had cross compliance. The reason is that the principal business of the farmer is producing, and if his acres cannot be used to produce one crop which he likes, he will produce another crop; if he cannot produce wheat he will produce grain sorghums and so on with other so-called control programs. The farmers evidently are opposed to the control of total production. Town and city people do not like it. This is why there is so much opposition to cross compliance or the conservation reserve. The only control program acceptable to some so far has been the control program that didn't control. Subtitle A of this bill leaves many loopholes. The farmer would not have to completely idle his acres if he does not want to. If he plants a price-supported crop on the reduced acres he will not get price support on his wheat, for instance, but he can plant the rest to some other crops that are not price supported and get this higher price support on his remaining acres.

The only plan that offers hope of success is a payment in kind program which will induce a farmer to reduce production by paying him with some of the surplus.

The CHAIRMAN. The Chair recognizes the gentleman from Vermont [Mr. MEYER].

Mr. MEYER. Mr. Chairman, I have been a professional soil conservationist and forester, and I have been intimately concerned with the operation of the soil bank. Regardless of how this originated and with whatever good intentions, I can only report that it has been a tremendous boondoggle that has not achieved its objectives. It has not been based on sound principles in mathematics, economics, finance, or even in proper land use. As far as I am concerned it is something like building a bridge across a river that may be suitable for the passage of an automobile and then attempting to run a railroad train across it.

I cannot support the amendment to increase or expand the coverage of the soil bank program.

The CHAIRMAN. The Chair recognizes the gentleman from North Carolina [Mr. COOLEY].

Mr. COOLEY. Mr. Chairman, I ask unanimous consent that the remainder of the bill be considered as having been read and printed in the RECORD and open to amendment at any point in the bill.

Mr. HOEVEN. Mr. Chairman, reserving the right to object, is it the purpose of the chairman to conclude debate today and have the vote on tomorrow?

Mr. COOLEY. Mr. Chairman, I would like to get this request out of the way, then I am going to make another unanimous consent request.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The balance of the bill follows:

SUBTITLE A

SEC. 111. Title I of the Agricultural Act of 1949, as amended, is amended by adding the following new section:

"SEC. 106. Notwithstanding the provisions of section 101 of this Act, for each of the crops of wheat beginning with the 1961 crop and ending with the 1965 crop price support shall be made available as provided in this section. The support price for each such crop shall be 85 per centum of the parity price therefor. Wheat of any such crop shall be eligible for price support only if (1) the farm on which the wheat is produced is in compliance with the farm wheat acreage allotment for such crop, and (2) the total acreage on the farm devoted to the production of crops supported under the Agricultural Act of 1949, as amended, which would normally be harvested in the calendar year in which the wheat crop for which the producer applies for price support is normally harvested, does not exceed the total average annual acreage on the farm devoted to the production of such price supported crops for harvest in the first two of the immediately preceding three crop years, less an acreage equal to 25 per centum of the farm acreage allotment for the crop of wheat for which application for price support is made which would be in effect for the farm except for the reduction thereof as provided in section 334(c)(3) of the Agricultural Adjustment Act of 1938, as amended: *Provided, however,* That a farm shall be deemed in compliance with the foregoing requirements for price support for wheat if no crop other than wheat supported under the Agricultural Act of 1949, as amended, is produced on the farm for harvest in each of the crop years to which this section is applicable, and the farm is in compliance with the farm wheat acreage allotment. In accordance with regulations prescribed by the Secretary, the acreage of such price supported crops for previous years may be adjusted for abnormal weather conditions, established crop-rotation practices for the farm, diversion under soil bank programs, and to reflect history acreage preserved under section 377 of the Agricultural Adjustment Act of 1938, as amended, to the extent of any unused allotment not diverted to the production of such price supported crops. For the purposes of this section a producer shall not be deemed to have exceed the farm acreage allotment or the acreage of permitted price supported crops for the farm unless the producer knowingly exceeded such allotment or permitted acreage. In addition, for the crops of wheat beginning with the 1961 crop and ending with the 1965 crop, if marketing quotas for the particular crop are in effect and the producers on the farm meet the foregoing requirements for price support and, in accordance with regulations prescribed by the Secretary, designate an acreage on the farm at least equal to the 25 per centum reduction in the farm acreage allotment required under section 334(c)(3) of the Agricultural Adjustment Act, as amended, for the particular crop of wheat but not in excess of 40 per centum of such allotment or 15 acres, whichever is greater, and do not produce any crop thereon which is normally harvested in the calendar year in which the particular crop of wheat is normally harvested and do not graze such acreage during such year, such producers shall be entitled to a wheat payment in kind from Commodity Credit Corporation stocks equal in value to 55 per centum of the average annual yield in bushels of wheat per harvested acre on the farm for the three years immediately preceding the year in which the designation is made, adjusted for abnormal weather conditions as determined under regulations prescribed by the Secretary, multiplied by the number of designated acres. Such wheat may be marketed without penalty but shall not be eligible for price support. The payment in kind shall be made by the issuance of a negotiable certificate which the Commodity Credit Corporation shall redeem in wheat equal in value to the value of the certificate in accordance with regulations prescribed by the Secretary. The certificate shall have a value equal to the number of bushels determined as aforesaid multiplied by the basic county support rate per bushel for number two wheat of the crop normally harvested in the year for which the acreage is designated and for the county in which the designated acreage is located. The wheat redeemable for such certificate shall be valued at the market price thereof as determined by Commodity Credit Corporation at the point of delivery. The Secretary shall provide by regulation for the sharing of a certificate among producers on the farm on a fair and equitable basis. The acreage on the farm which would otherwise be eligible to be placed in the conservation reserve program shall be reduced by an amount equal to the required reduction of 25 per centum under section 334(c)(3) of the Agricultural Adjustment Act of 1938, as amended, for the wheat crop of the corresponding year plus any acreage voluntarily retired pursuant to the provisions of this section. Price support at 85 per centum of parity under this section shall be made available only to cooperators and only if producers have not disapproved marketing quotas for the crop. In case marketing quotas are disapproved, price support shall be made available to cooperators at 50 per centum of parity.

SEC. 112. (a) In lieu of the provisions of item (1) of Public Law 74, Seventy-seventh Congress, as amended, the following provisions shall apply to the crops of wheat beginning with the 1961 crop and ending with the 1965 crop:

"(1) If a national marketing quota for wheat is in effect for any marketing year, farm marketing quotas shall be in effect for the crop of wheat which is normally harvested in the calendar year in which such marketing year begins. The farm marketing quota for any crop of wheat shall be the actual production of the acreage planted to such crop of wheat on the farm less the farm marketing excess. The farm marketing excess shall be an amount equal to double the normal yield of wheat per acre established for the farm multiplied by the number of acres planted to such crop of wheat on the farm in excess of the farm acreage allotment for such crop unless the producer, in accordance with regulations prescribed by the Secretary and within the time prescribed therein, establishes to the satisfaction of the Secretary the actual production of such crop of wheat on the farm. If such actual production is so established

the farm marketing excess shall be such actual production less the actual production of the farm wheat acreage allotment: *Provided, however,* That the farm marketing excess shall be adjusted to zero if the total actual production on the farm does not exceed the normal production of the farm wheat acreage allotment. Actual production of the farm wheat acreage allotment shall mean the actual average yield per harvested acre of wheat on the farm multiplied by the number of acres constituting the farm acreage allotment. In determining the actual average yield per harvested acre of wheat and the actual production of wheat on the farm any acreage utilized for feed without threshing after the wheat is headed, or available for such utilization at the time the actual production is determined, shall be considered harvested acreage and the production thereof in terms of grain shall be appraised in accordance with regulations prescribed by the Secretary and such production included in the actual production of wheat on the farm. The acreage planted to wheat on a farm shall include all acreage planted to wheat for any purpose and self-seeded (volunteer) wheat, but shall not include any acreage that is disposed of prior to harvest in accordance with regulations prescribed by the Secretary."

(b) Notwithstanding the provisions of item (2) of Public Law 74, Seventy-seventh Congress, as amended (7 U.S.C. 1340(2), the rate of penalty on wheat of the 1961 crop and thereafter shall be 65 per centum of the parity price per bushel of wheat as of May 1 of the calendar year in which the crop is harvested.

(c) In lieu of the provisions of item (3) of Public Law 74, Seventy-seventh Congress, as amended, the following provisions shall apply to the crops of wheat beginning with the 1961 crop and ending with the 1965 crop:

"(3) The farm marketing excess for wheat shall be regarded as available for marketing, and the penalty and the storage amount or amounts of wheat to be delivered to the Secretary shall be computed upon double the normal production of the excess acreage. If the farm marketing excess so computed is adjusted downward on the basis of actual production as heretofore provided the difference between the amount of the penalty or storage computed on the basis of double the normal production and as computed on actual production shall be returned to or allowed the producer or a corresponding adjustment made in the amount to be delivered to the Secretary if the producer elects to make such delivery. The Secretary shall issue regulations under which the farm marketing excess of wheat for the farm shall be stored or delivered to him. Upon failure to store, or deliver to the Secretary, the farm marketing excess within such time as may be determined under regulations prescribed by the Secretary the penalty computed as aforesaid shall be paid by the producer. Any wheat delivered to the Secretary hereunder shall become the property of the United States and shall be disposed of by the Secretary for relief purposes in the United States or foreign countries or in such other manner as he shall determine will divert it from the normal channels of trade and commerce."

(d) Item (7) Public Law 74, Seventy-seventh Congress, as amended (7 U.S.C. 1340 (7)) is amended to read as follows:

"(7) A farm marketing quota on any crop of wheat shall not be applicable to any farm on which the acreage planted to wheat for such crop does not exceed 15 acres: *Provided, however,* That a farm marketing quota on each of the crops of wheat beginning with the 1961 crop and ending with the 1965 crop shall be applicable to any farm on which wheat is planted.

SEC. 113. Item (12) of Public Law 74, Seventy-seventh Congress, as amended (7 U.S.C. 1340(12)) shall not be applicable with respect to the crops of wheat beginning with the 1961 crop and ending with the 1965 crop.

SEC. 114. The Agricultural Adjustment Act of 1938, as amended, is amended as follows:

(a) Section 334 is amended by inserting "(1)" after "(c)" and adding two new subparagraphs following subparagraph (c)(1) to read as follows:

"(2) In establishing farm allotments for the wheat crops of 1961 to 1965 inclusive any allotment determined under subparagraph (1) hereof which is less than fifteen acres shall be increased, if necessary, to equal the highest wheat acreage on the farm (planted acreage as adjusted pursuant to section 374(c)) for any one of the 1958, 1959, or 1960 crops or fifteen acres whichever is smaller: *Provided, however,* That no wheat acreage planted on a farm covered by an exemption under section 335(f) shall be taken into account in making such increases. The acreage necessary to make such increases shall be in addition to the national, State, and county allotments. The provisions of this subparagraph shall also apply to a farm having wheat acreage in 1958, 1959, or 1960 for which no allotment is determined under subparagraph (1). In such cases the farm shall be considered to have a zero allotment under subparagraph (1).

"(3) Notwithstanding any other provision of law, each old or new farm acreage allotment for the crops of wheat beginning with the 1961 crop and ending with the 1965 crop as determined on the basis of a minimum national acreage allotment of fifty-five million acres plus such other acres as may be necessary under subparagraph (2) above shall be reduced by 25 per centum. In the event notices of farm acreage allotments for the 1961 crop of wheat have been mailed to farm operators prior to the effective date of this subparagraph (2) new notices showing the required reduction shall be mailed to farm operators as soon as practicable."

(b) Subsection (f) of section 335 is amended by striking out the semicolon at the end of item (1) and adding "and shall not apply to other farms with respect to the crops beginning with the 1961 crop and ending with the 1965 crop;".

(c) Section 362 is amended by deleting the second sentence thereof.

SEC. 115. Subsections (b) and (c) of section 335 of the Agricultural Adjustment Act of 1938, as amended, are hereby repealed and subsection (d) of said section is repealed effective beginning with the 1961 crop of wheat.

SUBTITLE B

SEC. 121. The Congress hereby finds the present agricultural program to be inadequate to meet the present problems of wheatgrowers. Surpluses are continuing to mount despite the subsidized disposal of huge quantities of wheat abroad and the application over the past several years of the strictest production controls permitted by law; at the same time, markets for wheat are diminishing; domestic food use of wheat per capita has declined to the lowest level in recorded history; the market for wheat as livestock feed has been greatly reduced as the price differentials between wheat and other feed grains have widened. There is an urgent need to achieve a balance between the production of wheat and our ability to move wheat into domestic consumption and export. The alternatives are to reduce drastically the acreage of wheat, which would have serious consequences for traditional wheat areas, or to provide greater opportunity for market prices to guide the production and consumption of wheat. In order to solve the existing surplus without further impairing the right of traditional wheat areas to grow wheat, it is hereby declared to be the policy of Congress and the purpose of this Act to encourage the expansion of markets for wheat, reduce unrealistic production incentive, minimize the economic hardship of wheatgrowers, and avoid shifting the burden of making the necessary adjustments to the producers of other commodities.

SEC. 122. The Agricultural Adjustment Act of 1938, as amended, is hereby further amended by adding at the end of part III thereof the following new section:

"SEC. 99. Notwithstanding any other provision of law, acreage allotments and marketing quotas shall not be established for the 1961 and subsequent crops of wheat."

SEC. 123. Title I of the Agricultural Act of 1949, as amended, is hereby further amended by adding at the end thereof the following new section:

"SEC. 106. Notwithstanding any other provision of law, the level of price support for the 1961 and subsequent crops of wheat shall be based on the support level for corn for the same crop year, with reasonable adjustments, as determined by the Secretary of Agriculture, for differences in weight, nutritive value, and buyer preference, with the objective of restoring the pricing of wheat to market conditions as rapidly as possible: *Provided,* That the level of price support for wheat of the 1961 crop shall not be less than 120 per centum of the level of price support for corn of the 1961 crop."

SEC. 124. Section 407 of title IV of the Agricultural Act of 1949, as amended, is hereby further amended by adding the following at the end thereof:

"Notwithstanding the foregoing, the Secretary of Agriculture shall institute adequate measures to protect producers of wheat and feed grains from competitive sales of wheat owned or acquired by Commodity Credit Corporation, which measures shall include the following: (1) Effective July 1, 1961, and continuing in subsequent years or until Commodity Credit Corporation stocks have reached 'normal' as defined by law, the Corporation shall not make any net sales of wheat from stocks for domestic use at less than 150 per centum of the then current support price for wheat, plus reasonable carrying charges; (2) annual sales of wheat from Commodity Credit Corporation stocks under the provisions of Public Law 480, Eighty-third Congress, as amended, or similar export programs in the 1961 and subsequent marketing years shall not exceed the average level of such sales in the marketing years 1957, 1958, and 1959; (3) Commodity Credit Corporation stocks may be used for donations to friendly nations and to friendly people who are found by the President upon recommendation of the Secretary of Agriculture to be in urgent need of such wheat and unable to pay a substantial portion of its value."

SEC. 125. Section 108 of the Soil Bank Act is hereby amended by adding a new paragraph (d) as follows:

"(d) In addition to the acreage that might be placed in the conservation reserve pursuant to the above provisions, the Secretary is hereby authorized to enter into additional contracts with producers under subtitle B of the Soil Bank Act so that in the three-year period 1961–1963 the amount of land in the conservation reserve would be sixty million acres by the end of the year 1963, with the greatest emphasis on getting additional acreages contracted under the first year of this additional authorization."

TITLE II—NATIONAL STABILIZATION PROGRAM FOR FEED GRAINS

SEC. 201. As used in this part, the term "fair price" means a price not more than the

price defined in section 301(a)(1)(A) of the Agricultural Adjustment Act of 1938 and not less than 85 per centum of such price, as may be provided in any program established under the authority of this title, and the term "feed grains" means corn, barley, grain sorghums, oats, and rye.

SEC. 202. (a) Within ninety days after the enactment of this Act, the Secretary of Agriculture (hereinafter in this title called "the Secretary") shall conduct, pursuant to regulations issued by him, an election of a feed grain program development committee (hereinafter in this title called "the committee") to be composed of representative producers of feed grains. Only persons who are agricultural producers and who obtain more than 50 per centum of their income from production of feed grains (including feed grains fed on the farm) shall be eligible to serve on the committee.

(b) In order to assure appropriate regional representation on the committee, the production areas of feed grains in the United States shall be divided into not less than nine geographic districts to be designated by the Secretary. In designating such districts, the Secretary shall give consideration to (1) complete geographic representation of the production area or areas of feed grains in the United States, (2) the designation of districts so that districts will be areas having approximately equal annual production of the feed grains involved, and (3) representation of producers of each feed grain respectively in proportion to its economic importance.

(c) Each such district shall be assigned one place on the committee. The producers of feed grains in each district shall by ballot elect one member and one alternate member for its place on the committee. The Secretary shall prescribe the procedure for nomination of candidates and for their election and shall conduct the balloting for election of such members and alternate members. Members shall serve for a term of four years, except that prior to the first election the Secretary shall designate districts from which members shall at that election be elected for terms of one, two, three, and four years, respectively, in order to provide continuity of committee membership. The Secretary, or an official of the Department of Agriculture designated by him, shall meet and confer with the committee but shall not be entitled to vote or to receive compensation. If a vacancy occurs in the membership of a committee, the alternate member elected for such place shall serve the unexpired portion of the term, and in the event the alternate is unable to serve, the Secretary shall designate a qualified producer from the district to serve the remainder of such term.

(d) Each member of the committee, except the Secretary or his designee, shall receive a per diem of $40 for each day's attendance at meetings of such committee and while traveling to and from such meetings, together with actual and necessary travel, subsistence, and other expenses incurred in the discharge of his official duties without regard to other laws relating to allowances which may be made on account of travel and subsistence expenses of officers and employees of the United States, said per diem and expenses to be paid from Commodity Credit Corporation funds.

(e) The committee shall elect a chairman from among its members and shall meet at least once each year or on the call of the chairman. A majority of the members of the committee shall constitute a quorum, and action may be taken by majority vote of those present at a regular or special meeting at which a quorum is present.

(f) Elected members of the committee are hereby exempted with respect to their holding of such office, from the operation of sections 281, 283, 284, and 1914 of title 18 of the United States Code, and section 190 of the Revised Statutes of the United States, except that this exception shall not extend—

(1) to the receipt or payment of salary in connection with the member's service on the committee from any source other than a private employer of the appointee at the time of his appointment, or

(2) during the period he is in office, and for the further period of two years after the termination thereof, to the prosecution or participation in the prosecution, by any such person, of any claim against the Government involving any matter concerning which the member had any responsibilities arising out of his holding such office during the period he held such office.

SEC. 203. The committee shall develop, with assistance provided by the Secretary, and recommend to the Secretary a proposed national stabilization program for feed grains in conformity with principles provided in this part and shall observe and evaluate the operation of such program and publicly report to the Secretary prior to the beginning of each production and marketing year and from time to time as it deems proper within any production and marketing year such adjustments in such program as it determines necessary to achieve the purposes of this part.

SEC. 204. (a) Whenever such program, which shall have a termination date not later than the expiration date of this title, has been recommended to the Secretary, he shall submit the proposed program to the Congress with such recommendation and comment as he may deem appropriate. Upon the expiration of the first period of thirty calendar days of continuous session of the Congress following the date on which the proposed program is received by the Speaker of the House of Representatives and the President of the Senate the Secretary shall proceed with the referendum as provided in subsection (b); but only if between the date of transmittal and the expiration of such thirty-day period there has not been passed by either of the two Houses a resolution stating in substance that that House does not favor the proposed program.

(b) If such proposed program is not disapproved by either House of Congress as provided in subsection (a), the Secretary shall conduct a referendum of the producers of feed grains to determine whether they favor effectuation of the proposed national feed grain stabilization program. Such referendum shall be conducted in accordance with regulations prescribed by the Secretary. The Secretary shall, by regulations issued by him, provide the opportunity and eligibility to vote in such referendum to all producers the value of whose annual production of feed grains, in at least three of the immediately preceding five years, as determined by the county farmer committee, has been not less than $500 or amounts to more than 50 per centum of the value of all commodities produced on the farm. Such referendum may be made effective for any number of production and marketing years not extending beyond the expiration date of this part.

(c) If two-thirds of the producers voting in such referendum vote in favor of such program, the Secretary shall declare the proposed program to be in full force and effect at the beginning of the next succeeding production and marketing year.

SEC. 205. Any national feed grain stabilization program effectuated under the provisions of this part shall—

(a) establish the necessary production or market supply adjustment procedures to balance supply and demand in accordance with the provisions of section 206 and necessary market stabilization procedures for the commodities concerned;

(b) establish regulations for adjusting quotas or goals among States, counties, and producers; and

(c) utilize, as may be necessary for the effective administration of such program, any alternative income stabilization methods, individually or in combination, in order to achieve a fair price to producers at the lowest possible cost to consumers and taxpayers, but shall include no provisions which will result in Government acquisition or storage of any agricultural commodities: *Provided*, That the cost to the United States as estimated by the Secretary in any production and marketing year for any such program established under this part, other than payments in kind for reducing the acreage of cropland as provided in subsection (d), shall not exceed an amount equal to 10 per centum of the estimated value of such commodity in such year;

(d) permit producers, at their option, to reduce by not to exceed 50 per centum the acreage on the farm normally devoted to the production of nonconserving crops, designate an acreage of cropland on the farm equal to such reduction to be devoted to conserving crops or uses or allowed to remain idle, and not harvest a crop from or graze such designated acreage except in the case of drought, flood, or other disaster, and receive as compensation therefor negotiable certificates entitling the producers to payments-in-kind from Commodity Credit Corporation's stocks of feed grains. The value and manner of redemption of such negotiable certificates and the designation of crops as "nonconserving" for purposes of this subsection shall be determined in accordance with provisions of such program.

SEC. 206. Any national marketing quota or other marketing supply adjustment program for feed grains for any production and marketing year for which a stabilization program is effectuated pursuant to section 204 shall be that quantity of feed grains which the Secretary estimates will supply domestic and foreign markets in such production and marketing year and leave a reasonable carryover for protection against less than normal production, less that amount which the Secretary estimates will be paid to producers in kind under the provisions of this title and less 10 per centum of the stocks of feed grains held by Commodity Credit Corporation at the time the stabilization program goes into effect. The Secretary is authorized and directed to establish and carry out such acreage allotments, marketing quotas, or other marketing supply adjustments as may be necessary to effectuate programs established under this part. Any such acreage allotment or marketing quota shall provide alternatives in direct ratio to the feed value of each feed grain.

SEC. 207. The Secretary shall use funds of the Commodity Credit Corporation or any other funds available to him for the purposes of implementing this part.

SEC. 208. Any provision of the Agricultural Act of 1949, as amended, or any other act, providing for acreage allotments or price supports for any feed grain shall remain in full force and effect until the effective date of a program established pursuant to the provisions of this title, and shall become ineffective with respect to any such feed grain on the effective date of any such new program.

SEC. 209. The provisions of this title shall terminate on December 31, 1965.

TITLE III—DISTRIBUTION OF PROTEIN FOOD

SEC. 301. (a) Title IV of the Agricultural Act of 1949 is amended by adding at the end thereof the following new section:

"SEC. 421. The Secretary of Health, Education, and Welfare (hereafter in this section called "the Secretary") shall undertake a program to increase the amount of

dairy, poultry, and meat products distributed to the needy, to institutions, and through the school lunch program. In carrying out such program, the Secretary shall purchase any of such products which are not in the stocks of the Commodity Credit Corporation through the Commodity Credit Corporation as his agent and in such manner that such purchases will help to effectuate the price policy goals of programs undertaken pursuant to title I. Such products may be purchased on the local market in accordance with regulations promulgated by the Secretary. The Secretary shall obtain such assurance as he deems necessary that recipients will not diminish their normal expenditures for food by reason of such donations. There are hereby authorized to be appropriated to carry out the purposes of this section such sums as the Congress shall from time to time determine to be necessary."

(b) The fourth sentence of section 407 of the Agricultural Act of 1949 is amended by striking out "and (H)" and inserting in lieu thereof the following: "(H) sales of feed grain, including wheat for feed, to the extent of one bushel of corn or a unit of other grain of the same comparable feed value for each $2 expended for increased purchases of dairy, poultry, and meat products under this Act; and (I)." The Secretary shall make certain that wheat sold for feed under this subsection is not used for human consumption.

Mr. COOLEY. Mr. Chairman, I ask unanimous consent that all debate on the bill and all amendments thereto close in 1 hour.

Mr. ANDERSEN of Minnesota. Mr. Chairman, reserving the right to object, what is the request?

Mr. COOLEY. That all debate on the pending bill and all amendments thereto close in 1 hour.

Mr. ANDERSEN of Minnesota. It is getting rather late in the day.

Mr. COOLEY. Well, we could use 30 minutes today and 30 minues tomorrow.

Mr. HOEVEN. It is the understanding that we will finish debate on all of the amendments submitted and any vote will be taken tomorrow?

Mr. COOLEY. No. The unanimous consent request was that debate be fixed at 1 hour on the bill, and all amendments thereto, and that we consume 30 minutes of that hour this afternoon and reserve 30 minutes to be used tomorrow. That means the Committee will rise at approximately 5 minutes after 6.

Mr. QUIE. Mr. Chairman, reserving the right to object, would this preclude the offering of the many amendments that are pending?

Mr. COOLEY. Oh, no. We will consider all of the amendments that are here within the hour that will remain.

Mr. QUIE. That does not give much time for each amendment.

Mr. COOLEY. Does the gentleman know how many amendments there are?

Mr. QUIE. There were about 18 up there, so I am informed.

Mr. COOLEY. I might say that the leadership on both sides of the aisle have conferred about the time limitation and I understand this is accepted on both sides of the aisle. We can dispose of many of these amendments this afternoon.

Mr. QUIE. There is no restriction on the time that can be spent on each amendment. There will be a half hour today and a half hour tomorrow.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin [Mr. LAIRD].

The amendment was rejected.

Mr. ANDERSEN of Minnesota and Mr. QUIE rose.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. QUIE].

Mr. QUIE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. QUIE: On page 15, line 15, after the words "TITLE II", strike out the rest of line 15, lines 16 through 26, all of pages 16, 17, 18, 19, 20, 21, 22, and lines 1 through 15 on page 23, and insert in lieu thereof the following:

"FEED GRAINS

"SEC. 201. This Act may be cited as the 'Payment-in-Kind Act of 1960'.

"SEC. 202. Effective beginning with the 1961 crops, the Secretary is directed to formulate and carry out a payment-in-kind program with respect to wheat, corn, rye, oats, barley, grain sorghums, soybeans, and flaxseed. To be eligible for such payment-in-kind, the producer shall reduce the total acreage on the farm devoted to the production of such commodities in the aggregate by not less than 10 per centum below the average acreage devoted to the production of such commodities and diverted under this title during the previous three years. The producer shall also designate an acreage of cropland on the farm to be devoted to conserving crops or uses, in addition to the average acreage on the farm devoted to conserving crops and uses or allowed to remain idle during the previous three years, equal to the reduction in the acreage devoted to the production of the commodities included in this title. The producer shall be required to establish a protective vegetative cover or other conservation practice on the designated acreage. Nothing in this Act shall be construed to impair the eligibility of such acreage for agricultural conservation program payments. The producer shall not harvest any crop from or graze such acreage and shall take such steps as may be prescribed by the Secretary to prevent the designated acreage from becoming a source of spreading noxious weeds.

"SEC. 203. The payment-in-kind shall be made by the issuance of a negotiable certificate which Commodity Credit Corporation shall redeem in the commodities included in this title, such commodities to be valued at their market price. The certificate shall have a value determined as follows:

"(1) First, determine the number of acres with respect to which the producer is eligible to receive payment, which shall be the smaller of (i) the number of acres by which the total acreage of the commodities included in this title is reduced below the average acreage devoted to the production of such commodities during the previous three years, or (ii) the number of acres devoted to conserving crops or uses as provided in section 202.

"(2) Next, determine the average yield per acre actually produced for the year of each commodity on which the producer applied for a payment-in-kind. The producer may elect to receive the payment on any one or more of the commodities produced by him which are included in this title.

"(3) Then, for each commodity on which the producer applies for a payment-in-kind, multiply the yield so determined for the commodity by the smaller of (i) the number of acres of such commodity produced for such year, or (ii) the number of acres for which the producer is eligible to receive payment as determined under (1) above (not used in the calculation of the payment on some other commodity). This is the quantity of the commodity for which a payment-in-kind will be made.

"(4) Multiply the quantity of each commodity so determined by a rate not less than the difference between (i) the basic county support rate for such commodity, and (ii) the parity price of such commodity nor more than the basic county support rate for such commodity. The resulting figure is the amount of the payment which will be made on such commodity.

"(5) The sum of the resulting figures for all of the commodities on which payment is made is the value of the certificate. The certificate may be redeemed in such commodities included in this title as the Secretary designates as being in surplus and such redeemed commodities shall not be eligible for price support. Notwithstanding any other provision of this title, certificates shall be issued only as long as the Secretary designates as being in surplus any one or more of the commodities included in this title.

"SEC. 204. The payment-in-kind program may include such terms and conditions, in addition to those specifically provided for herein, as the Secretary determines are necessary to effectuate the purposes of this title and to facilitate the practical administration of the program.

"SEC. 205. Section 407 of the Agricultural Act of 1949 is amended by adding, at the end of the third sentence, the following: *'Provided further*, That effective with the beginning of the marketing year for the 1961 crops of wheat, corn, rye, oats, barley, grain sorghums, soybeans, and flaxseed, the Corporation shall not sell any such commodity for less than 5 per centum above the parity price for such commodity, plus reasonable carrying charges.'

"SEC. 206. Notwithstanding any other provision of law as long as payment-in-kind certificates are issued price support shall be made available to individual producers of wheat, corn, rye, oats, barley, grain sorghums, soybeans, and flaxseed only if such producers voluntarily participate in the payment-in-kind program set forth in this title."

Mr. QUIE. Mr. Chairman, this amendment would delete the words of title II, and substitute the payment in kind for feed grain amendment, which my colleague from Minnesota [Mr. NELSEN] and I have developed. Under the present title II of the bill there would be no help to feed grain farmers, I believe, for at least 2 years. It would take time for development of regions, election of the committee, development of some program, acceptance by Congress and a final referendum. I have an amendment here which would have an immediate beneficial effect on feed grain farmers. This amendment would provide that a farmer who reduced his feed grain acres by between 10 and 50 percent voluntarily would be able to receive payment in kind. If he did not do this, he could not receive price supports. My amendment does not change the present price supports on feed grains. I believe this would be a tremendous help to the feed grain farmer. Many would be willing to do this if they could receive some

of these surpluses that are now lying in storage and use them on their farms to feed their livestock instead of raising those crops.

The Secretary of Agriculture under the amendment would be allowed to set the payment in kind at some level which would be an inducement to the farmers to take land out of production but not cause a feedback, which means to feed back more than he would have produced in the first place. Under this program it would be a great saving to the taxpayers of this country, because we already have a substantial volume of corn, for instance, and grain sorghums in storage, which is costing the taxpayers a considerable amount of money to store each year. This amendment would greatly reduce feed grain surpluses. This would not only aid the taxpayers but the farmers as well since it would enable them to secure higher prices. I believe it would be of immediate help to the feed grain farmers, because in another portion of my amendment it would not allow the Commodity Credit Corporation to sell stocks back onto the market for less than 105 percent of parity. The way the law reads presently, the CCC can turn back into the market feed grains as soon as they can receive 105 percent of the going support level plus reasonable carrying charges.

We have this situation in oats. Last year there was a tremendous reduction in oats production, but the price of oats did not increase as it should have because the CCC kept feeding back oats into the market and preventing the price from going up. I think the farmer should be allowed to bargain and get a higher price for his feed grain commodities if he can secure it in the marketplace, which the present law prevents. If my amendment is adopted, it will allow the price to go up, and the present support level prevents it going lower than it is now. I think it would be of tremendous help in the feed grain areas, and the farmers would soon be receiving a decent price for what they are raising. It would also help toward reducing this overproduction that is now in surplus and in CCC stock. Unless we do something like this, the production of feed grains will exceed demand each year, holding prices down, and we will have the same untenable position on feed grains as we do for wheat at the present time. The farmer will never be able to see his way clear until we get surpluses down to some controllable level. The people in deficit feed producing areas do not have to worry about this kind of a program, and the farmer can decide himself what crops he will raise, how much he should raise, whether he goes into the payment-in-kind program or not. No one can decide better than the farmer himself about how to manage his farm, and under the amendment it would be possible for the farmer to make all decisions himself.

Mr. ANDERSEN of Minnesota. Mr. Chairman, I offer a substitute amendment.

The Clerk read as follows:

Amendment offered by Mr. ANDERSEN of Minnesota as a substitute for the amendment offered by Mr. QUIE: On page 15, after line 16, insert:

"SEC. 201. (a) As soon as practicable after the enactment of this Act, the Secretary shall conduct a referendum of producers of corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed to determine whether to offer such producers a choice between the program set forth in subtitles A and B of this title. To be eligible to vote in referendums under this title a producer must have produced one or more of such commodities in at least three of the years 1956–1960.

"(b) Notwithstanding any other provision of law, if less than a majority of producers voting in the referendum conducted pursuant to subsection (a) hereof favor a program provided by subtitle B, such subtitle B shall become inoperative, and as soon as practicable thereafter the Secretary shall conduct a referendum of producers of corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed to determine whether such producers favor a program as provided in this subtitle. If two-thirds or more of the producers voting in the referendum favor a program as provided in this subtitle, such program shall be in effect with respect to the 1961 and subsequent crops.

"(c) Notwithstanding any other provision of law, if less than a majority of producers voting in the first referendum conducted pursuant to such section (a) hereof favor a program as provided by subtitle A, such subtitle shall become inoperative, and the program as provided in subtitle B shall be in effect.

"SUBTITLE A

"SEC. 211. (a) Beginning with the 1961 crop, producers who have produced one or more of the commodities covered by this Act in at least three of the years 1956–1960 shall divert from the production of nonconserving crops, as determined by the Secretary 20 per centum of the total cropland on the farm (excluding cropland in the conservation reserve program). The land so diverted from production shall be devoted to conserving crops or uses, including wildlife practices, and shall be used only for hay or pasture (such acreage is hereinafter referred to as the 'green acres'). Any producer who knowingly fails to comply with the requirements of this section shall be subject to a marketing penalty on the entire production of nonconserving crops on the farm at a rate equal to 50 per centum of the average market price for such commodities for the immediately preceding marketing year. The production of crops on the farm shall be regarded as available for marketing and the amount of the penalty shall be computed upon the normal production of the acreage planted to nonconserving crops.

"(b) All penalties provided for in this section shall be collected and paid in such manner, at such times, and under such conditions as the Secretary may, by regulations, prescribe. The Secretary shall provide, through the county and local committees, for measuring farms and for ascertaining whether there has been compliance with this section. Notice of any marketing penalty due under this section shall be mailed to the producer. Any producer who is dissatisfied with his marketing penalty may within fifteen days after mailing to him of such notice have such marketing penalty reviewed by a local review committee composed of three farmers from the same or nearby counties appointed by the Secretary. Such committee shall not include any member of the local committee which determined the total cropland, the production of nonconserving crops subject to the penalty, or the marketing penalty for such farm. Unless application for review is made within such period, the original determination of the marketing penalty shall be final. If the producer is dissatisfied with the determination of the review committee, he may within fifteen days after a notice of such determination is mailed to him by registered or certified mail file a complaint against the review committee as defendant in the United States district court sitting in the county or the district in which his farm is located, for the purpose of obtaining a review of such determination. Bond shall be given in an amount and with surety satisfactory to the court to secure the United States for the costs of the proceeding. The complaint in such proceeding may be served by delivering a copy thereof to any one of the members of the review committee. Thereupon, the review committee shall certify and file in the court a transcript of the record upon which the determination complained of was made, together with its findings of fact. The review by the court shall be limited to questions of law, and the findings of fact by the review committee, if supported by evidence, shall be conclusive. The jurisdiction conferred by this section to review the legal validity of a determination made by a review committee pursuant to this section shall be exclusive. No court of the United States or of any State shall have jurisdiction to pass upon the legal validity of any such determination except in a proceeding under this section.

"SEC. 212. The Agrcultural Act of 1949, as amended, is amended by adding the following new section after section 105:

" 'SEC. 106. Notwithstanding the provisions of sections 101 and 105, beginning with the 1961 crop, the level of price support for corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed shall be not less than 75 per centum of the parity price.'

"SEC. 213. (a) Effective beginning with the 1961 crops and continuing until such time as the Secretary determines that the stocks of corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed have been reduced to a level required for carryover or reserve (1) to protect agricultural and consumer interests, (2) to meet export demands, and (3) for food for peace, the Secretary is directed to formulate and carry out annually a payment-in-kind program as provided herein with respect to such commodities. After stocks of such commodities have been reduced to the level specified above, a payment-in-kind program as provided herein shall be carried out by the Secretary as may be needed to correct any imbalances in production between such commodities. To be eligible for such payment-in-kind the producer shall reduce the total acreage on the farm devoted to the production of such commodities below the average acreage devoted to the production of such commodities and diverted under this Act during the immediately preceding 2 years. The producer shall specifically designate the land so withdrawn from production, shall establish a protective vegetative cover or other conservation practice, including wildlife practices, on the designated acreage, shall not harvest any crop from or graze such acreage (except that the Secretary may permit the designated acreage to be grazed or hay to be cut therefrom if the Secretary determines that such action is necessary to alleviate damage, hardship, or suffering caused by severe drought, flood, or other natural disaster) and shall prevent the designated acreage from becoming a source of spreading noxious weeds. The acreage diverted under this subsection (a) shall be in addition to the green acres. The acreage diverted under this subsection

(a), together with the green acres, shall not exceed 50 per centum of the total cropland on the farm.

"(b) The payment-in-kind shall be made by the issuance of negotiable certificates which Commodity Credit Corporation shall redeem in the commodities included in this Act in accordance with regulations issued by the Secretary. The amount of such compensation shall be equal to 80 per centum of the average annual yield of the commodity or commodities being reduced times the basic county support rate for the commodity or commodities. The Secretary shall provide for the sharing of a certificate among the producers on the farm on a fair and equitable basis. The commodities redeemable for such certificates shall be valued at the market price thereof as determined by Commodity Credit Corporation. The commodities redeemed with such certificates shall not be eligible for price support. To the maximum extent practicable the commodities redeemed with such certificates shall be from Commodity Credit Corporation stocks in bin sites or other Government facilities before such commodities are redeemed from Commodity Credit Corporation stocks in commercial warehouse facilities.

"(c) A producer shall be eligible to receive payments-in-kind as described in subsection (b) on any or all of the green acres if, in addition to complying with the requirements for green acres under section 3, he also complies with the requirements against harvesting or grazing such acreage and of all the other requirements applicable to acreage eligible for payments-in-kind under subsection (a) of this section, except that the rate shall be 25 per centum of the average annual yield of the commodity or commodities being reduced.

"(d) Any producer who knowingly grazes or harvests any crop from any acreage for which a payment-in-kind is paid or payable shall be subject to a civil penalty equal to 50 per centum of the amount of the payment-in-kind. Such penalty shall be in addition to the amount of the payment-in-kind which shall also be forfeited or refunded, and shall be in addition to the amount of any marketing penalty required to be paid under section 3.

"SEC. 214. The acreage diverted under this subtitle shall be in addition to any acreage devoted to the conservation reserve program.

"SEC. 215. Nothing in this subtitle shall be construed to impair the eligibility of any acreage diverted hereunder for agricultural conservation program payments.

"SEC. 216. In administering this subtitle the Secretary shall utilize the services of local, county, and State committees established under section 8 of the Soil Conservation and Domestic Allotment Act, as amended.

"SEC. 217. The Secretary shall transmit to the Congress annually a report on the program for the preceding year including an evaluation of the operation of the program together with recommendations as to any necessary adjustments in the percentage of cropland acres required in the green acres program to assure a reasonable balance between annual production and annual demand and consumption. Any increase in the percentage of cropland acres required in the green acres program shall not be put in effect, however, without legislation by the Congress and approval of the increase by producers voting in a referendum as provided in section 201.

"SEC. 218. The activities authorized under this subtitle are supplementary to the acreage allotments and marketing quotas authorized under the Agricultural Adjustment Act of 1938, as amended.

"SUBTITLE B"

Mr. ANDERSEN of Minnesota (interrupting the reading of the amendment). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in full in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. ANDERSEN of Minnesota. Mr. Chairman, this is the so-called green acres amendment.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield.

Mr. COOLEY. Do I understand that this amendment would give an additional alternative?

Mr. ANDERSEN of Minnesota. That is correct. This will give to the farmers of America an additional alternative under this particular title.

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman.

Mr. KYL. At the outset, I hope the gentleman will point out to the Members of the House that the amendment he is proposing as a substitute comes closer to being a bushel and pound control than anything we have talked about in the House so far.

Mr. ANDERSEN of Minnesota. That is correct. That issue has been brought up today in payment-in-kind discussions. Mr. Chairman, I shall not go into the details of the green acres bill now because Members have heard me discuss it for 2 months.

Payment in kind under my proposal is based on the producing ability of the land taken completely out of production and retired under this additional 30 percent which is permissible under the green acres bill. It is based absolutely upon the average productive ability of the land and consequently this is based on bushelage.

Take the case of a farm on which the average production is 50 bushels to the acre. The county committeeman will say: "If you want to take out 60 acres and put it under the 30-acre provision, it is based on that average production of 50 bushels to the acre, which is a proven production." And as the gentleman from Minnesota [Mr. MARSHALL] says, it should be done and it must be done that way—take the actual production into consideration. The green acres provision will automatically take out 34 million acres of land, presently cultivated land, take it out of production, according to Department of Agriculture statistics. The green acres proposal will relieve the load of the taxpayers to the extent of $750 million below the present cost of the price-support system. It will protect the taxpayers all through America.

Remember, under green acres, the farmers will contribute that land. They are not getting a dime for that. The regular payment in kind comes under the 30-percent additional if and after they vote upon themselves mandatorily to take out the 20 percent green acres. Then they can offer to retire any or all of the additional 30 percent, but not to exceed 30 percent, because we do not want to make the mistake that was made by the present Secretary of Agriculture of insisting on whole farms going out of production.

Responsible farm leaders in the State of Illinois have been back of this. It has tremendous support in Iowa. I discussed the question with 400 producers in the State of Minnesota and as the gentleman from Minnesota [Mr. MARSHALL] well knows, it has general acceptance as being the kind of a commonsense proposal that we should have.

After all, it leaves it up to the farmers to say whether they want to do this or whether they want to do as the committee bill says, go along the line of appointing a committee of nine men nationwide to bring in a program. It gives the farmers alternatives. It will save the taxpayers hundreds of millions of dollars. It will utilize stocks that we have already paid for as the incentive for the farmers in order to get a fair price for what they do produce. It will give them an incentive to take land out of production, which all agree is absolutely essential. We are trying to lift up the general price level of agriculture throughout the great feed grain area. We are trying to and will through this proposal chisel away in 5 years' time the bulk of these tremendous Commodity Credit stocks that today hang like a dark cloud over all of us.

Mr. MARSHALL. Mr. Chairman, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from Minnesota.

Mr. MARSHALL. I want to reiterate what my good friend has said. My good friend has talked this over with farm people, he has talked it over with people who have administered farm programs. It is a program that they have said to my friend will work. It actually has the approval of farmers, and I commend the gentleman from Minnesota [Mr. ANDERSEN] and the gentleman from Iowa [Mr. JENSEN] for the forthright manner in which they have presented this legislation.

Mr. ANDERSEN of Minnesota. I thank my good friend the gentleman from Minnesota [Mr. MARSHALL], who has himself done so much for agriculture and farm people during his service in the Congress.

Mr. WOLF. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. WOLF to the substitute amendment offered by Mr. ANDERSEN of Minnesota: On page 5 of the Andersen substitute amendment, in line 4, change "75" to "80", and after the period add the following: "For the 1963 and 1964 crops, the level of support shall be not less than 85 per centum of the parity price. For the 1965 and subsequent crops, the level of support shall be 90 per centum of the parity price."

Mr. WOLF. Mr. Chairman, in the original green acres bill that was offered by the gentleman from Minnesota and the gentleman from Iowa [Mr. JENSEN] this 90-percent amendment was included. I wondered if at this point the gentleman from Minnesota might want to discuss why he removed that section from the pending amendment.

Mr. ANDERSEN of Minnesota. Basically I have always felt throughout the 22 years I have been in Congress that the farmers of America are entitled to 90 percent of parity for what they produce. I have examined this whole question carefully and, as the gentleman knows, we did have in our original bill a graduated scale from 80 to 85 percent after 2 years and to 90 percent thereafter. The gentleman from Iowa [Mr. JENSEN] and I figured that the disappearance of the stocks from the Commodity Credit Corporation would warrant it, and that the extra price support would not cost the Government too much, if anything. But I have very good authority to believe that if this 75-percent change is made in our original bill, a change which we are offering today, to 75 percent, we can get this bill signed. That is my only reason. I am afraid that with the 90-percent feature in it, much as I would like to have it in there, from a practical viewpoint it would not become law. We want a public law, not just an issue. Regardless of that, if we can raise it to 75 percent we have achieved a 10-percent increase for every farmer in America in the price level of his corn and 15 percent on his other feed grains. I think that would be a wonderful accomplishment. Furthermore, the able and distinguished conferees will have an opportunity to perfect what we do today.

Mr. WOLF. I thank the gentleman. I want to make it clear he has no emotional opposition to the amendment but that it is a matter of tactics, of getting the President's support of the amendment.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. WOLF. I yield to the gentleman from Iowa.

Mr. JENSEN. I rise just to say that I support the contention of the gentleman from Minnesota who has just spoken.

Mr. WOLF. I thank the gentleman.

May I point out that our job here, as I see it, is to face the question of whether we want to achieve 90 percent of parity eventually. By adding this section to it, we by 1965 will have achieved this goal. We do not do it directly, we do it over a period of time, so that this is a gradual increase. If we went to 90 percent directly, and I would like to do it, it would have a deleterious effect on the livestock producers.

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. WOLF. I yield to the gentleman from Iowa.

Mr. KYL. In regard to the gentleman's amendment, if the provisions of this substitute were put into effect, there would be a natural increase in prices within the 3-year period that it would take under the gentleman's amendment.

Mr. WOLF. I am hopeful that this would be the case. I just want to be sure that it is not only natural but that it is legally set up and will take place. I would like to state I have introduced the amendment that the gentleman has offered as a bill this way on the floor. I think it is important when we talk in terms of 90 percent of parity and I, frankly, feel that any farm Congressman can support this in good conscience and I am hopeful that the conference committee will see fit to leave this in. I am hopeful that this amendment to the Andersen amendment will be adopted and then that the Andersen amendment will be adopted.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. WOLF. I yield to the gentleman from Texas.

Mr. POAGE. I want to state I think the gentleman has offered a constructive suggestion here. I think the gentleman from Minnesota has offered a fair proposition to let the farmers determine for themselves what they want, and the gentleman from Iowa has offered to make it a more meaningful choice. I would like to see the gentleman's amendment adopted to the substitute and then see the substitute adopted.

Mr. WOLF. May I say I think what the gentleman from Minnesota [Mr. ANDERSEN] and myself, are doing here is being consistent with title I of the bill. We have given the wheat farmers a referendum choice and now we are giving the feed-grain farmers the same choice in title II.

Mr. QUIE. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Iowa.

Mr. Chairman, I would like to ask the gentleman from Minnesota [Mr. ANDERSEN] a few questions about the impact of his amendment. Under your amendment, the farmers would have a choice between the committee title II and your green acres bill; is that correct?

Mr. ANDERSEN of Minnesota. That is correct.

Mr. QUIE. The choice they would have under the committee title II would enable them to choose whether they want to elect a committee to decide their program for them or take your program; is that correct?

Mr. ANDERSEN of Minnesota. The choice is between the green acres program and what is now in the bill.

Mr. QUIE. In other words, the choice is between your program and what is now in the bill, which just allows them to pick a committee of nine men to work out some program for them; is that correct?

Mr. ANDERSEN of Minnesota. The gentleman from Minnesota [Mr. ANDERSEN] is not defending what is now in the bill.

Mr. QUIE. You still offer an amendment giving them a choice to pick what is in the bill, if they so desire?

Mr. ANDERSEN of Minnesota. I still believe the farmers are entitled to a choice. I would be willing to see a still further choice put in here, if you can do so. In other words, a third alternative giving the farmers the right to vote upon the gentleman's suggestion along with the others.

Mr. QUIE. There is nothing enabling them to keep what they have right now either; is there?

Mr. ANDERSEN of Minnesota. I do not understand the gentleman's question.

Mr. QUIE. There is nothing in the bill which enables them to keep their present program, their present price support level allowing them to raise whatever they want to raise on their farm. My amendment will allow freedom of choice to the farmer to take my payment-in-kind program if he wants to.

It is completely voluntary.

Mr. ANDERSEN of Minnesota. I would suggest that the amendment offered by the gentleman from Minnesota [Mr. QUIE] would open wide the production of feed grains.

Mr. QUIE. Any farmer can raise all the feed grains he desires right now.

Mr. ANDERSEN of Minnesota. It would keep the support level as it is, that is my understanding.

Mr. QUIE. That is correct.

Mr. ANDERSEN of Minnesota. Of course, it has already been proven in the case of corn that that is disastrous. As the gentleman from Minnesota [Mr. QUIE] well knows, we produced 20 million acres of corn last year unnecessarily and I, certainly, cannot agree with the gentleman that we should open wide on all other grains and just use the Commodity Credit Corporation as a storage house. But I would like nevertheless to give the farmers a choice and let the gentleman shape up his language so that we can have a second alternate choice in a referendum.

Mr. QUIE. The gentleman knows that the payment-in-kind provision of his bill which is in addition to the green acres portion of his bill and my bill are practically the same.

Mr. ANDERSEN of Minnesota. The payment in kind of the green acres plan is on the additional 30 percent, above the 20 percent of green acres and is based on 80 percent of the average proven production of that particular land offered by the producer to be taken out of production.

Mr. QUIE. That is correct.

Mr. ANDERSEN of Minnesota. I do not recall whether the gentleman's amendment called for 80 percent also.

Mr. QUIE. My amendment gives the Secretary of Agriculture leeway up to 100 percent.

Mr. ANDERSEN of Minnesota. Yes, the gentleman gives the Secretary of Agriculture altogether too much authority in his amendment, and that I would have to oppose.

Mr. QUIE. Mr. Chairman, the choice we have before us right now, if we accept the amendment of the gentleman

from Iowa, is the choice between high price supports and the Brannon plan.

Under the proposal of the gentleman from Iowa, in 3 years we would have 90 percent supports on feed grains. Under title II of the bill no program could be initiated which would result in the Government purchasing or storing commodities as they presently do. About the only thing left for them to work out is some type of Brannan plan. So we have before us in this amendment a choice of whether they want high-priced supports with controls or the Brannan plan.

The CHAIRMAN. The gentleman from North Carolina [Mr. COOLEY] is recognized.

Mr. COOLEY. Mr. Chairman, I rise in opposition to the Quie amendment, which unfortunately was not presented to either the subcommittee or to the House Committee on Agriculture during deliberation of this important matter. I doubt very much if any Member of the House except the author of the amendment knows what it is all about.

I have no objection personally, as I said during the course of the debate, to the green acres amendment offered by our distinguished friend from Minnesota [Mr. ANDERSEN]. I express this view as my own and do not, on this amendment, speak on behalf of the Committee on Agriculture. I have no objection personally to that amendment.

As to the pending Quie amendment there are three propositions before the House now, and I hope, Mr. Chairman, that we may have a vote at this time and then follow the regular procedure.

Mr. NELSEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I wish to support the Quie amendment. As I mentioned before, we have about 156 million acres of land in the United States on which crops are produced and fed on the farm. Seventy-five percent of the farms in Minnesota produce crops that are fed on the farm. In a referendum they would, in all likelihood, vote against being put in a straitjacket. They would cooperate in idling acres if they could do so on a voluntary basis; they would put land idle and take some crops out of surplus continuing with their dairy herd, steers, pigs, and chickens.

But now we have a situation where if the Green Acres proposal is lost in a referendum we then get the bill presently before the House. Seventy-five percent of farmers such as my neighbors have no opportunity to participate voluntarily in a program. I think it is a shame that we should limit debate on a program as important as this to such a short time. It is too important to run over lightly.

I would like to see a third alternative put in the bill if that could be done; I would like for my son and my neighbor, as well as myself, to have some say in whether or not they are forced to accept a plan that will give nine men such tremendous power and control. I believe we should have more thought given to voluntary participation. I believe in so doing we would have greater participation and would have more idle acres. We would reduce the surplus to a greater degree than we do now. I think the only way we can bring agriculture up is to get the surplus drawn down that hangs over our heads and depresses the market.

Mr. ANDERSON of Montana. Mr. Chairman, will the gentleman yield?

Mr. NELSEN. I yield.

Mr. ANDERSON of Montana. If there are three questions on the ballot would the 34 percent of the voters who voted for one program outweigh the 66 percent who voted for the other two?

Mr. NELSEN. The gentleman's question is getting rather complicated. I want the farmers to have a chance to participate voluntarily in the mechanics of this process that has already been started. I would like to have the point of view of 75 percent of the farmers in Minnesota considered and 156 million acres of productive land in the United States given due consideration.

The only thing I have ever done in my life is to farm. I would not like to see this thing lightly gone over, and some of the major problems of agriculture not considered at this session of the Congress.

Mr. JENSEN. Mr. Chairman, I rise in support of the substitute amendment offered by the gentleman from Minnesota [Mr. ANDERSEN].

Mr. Chairman, I know we can all agree that we must reduce acres in order to get a reduction in bushels. The Andersen-Jensen green acres bill provides not only for acreage reduction but, in effect, it also will tend toward a bushel reduction for this reason: Every ASC county office in America knows exactly how many bushels of grain was produced or have been produced on each farm during the past several years.

Our bill provides that the farmer shall be paid in kind for the number of bushels that his farm is capable of producing. So you have there a bushel allotment as well as the acreage allotment.

I do not think it necessary for me to take too much time to explain our bill. It has been explained many times on the floor of the House. I must say, however, that since we introduced the green acres bill I have had letters from all over America and, with rare exception, the letters that came from farmers, from merchants, from people interested in this vexing problem, have said "this looks like the plan that will really do a job for the farmers of America."

Mr. Chairman, when you help the farmers of America you help all of America. This is a plan which will take the necessary acres out of production. In the first year, according to the best expert advice we have had from the Department of Agriculture, if and when the green acres farm bill is put into effect, it will balance production with consumption, the first year it operates, and that is exactly what everyone wants to do. It will cost about exactly nothing compared to what the present program is costing, while it is greatly increasing our farmers' income.

Mr. Chairman, as I said before, the ASC office in every county knows exactly what the historical production record is of every farm in that county. So the administrative cost under our bill will be just about the same as now. When we use the commodities in storage to pay the farmers for their reduction in production in lieu of cash outlay, then, certainly, we are doing all the taxpayers of America a great service, including our farmers, for they too pay a lot of taxes, of every nature, especially when they make a profit. We can afford to pay liberally in kind, as our bill provides, because we are using a commodity to pay the bill.

Mr. BERRY. Mr. Chairman, with the production from a good many million acres of land in these United States being supplanted by the importation of agricultural products, and with the Government being faced with the choice of either protecting against imports through reciprocal tariffs, or by purchasing the production from these acres, I would like to give to the House a rundown on what the taxpayers have been required to pay in preference to reciprocal protective tariffs.

Since the House is involved in the wheat problem, let us take a look at several commodities under the purchase program, beginning with wheat.

Wheat: In its latest report the financial conditions of the Commodity Credit Corporation indicated there were 1,211,179,000 bushels of wheat valued at $3,084,512,000. During the past 10 years the Commodity Credit Corporation paid out in grower loans on wheat $5,924,900,000 and then went to Congress to be reimbursed for a loss of $871,691,000 after they disposed of the wheat and wheat flour they had processed, but they still have a peak inventory on hand valued at $3,084,512,000 in storage on which no loss is yet counted.

Corn: The last report showed there were 1,198,799,000 bushels of corn valued at $2,131,944,000. That net payment to producers during the past 10-year period has been $3,968,400,000 on corn loans. The Commodity Credit Corporation loss was $1,138,622,000 with a near record inventory as of today valued at $2,131,944,000.

Cotton: As of the last report there were 5,341,000 bales of cotton valued at $937,036,000. During the past 10 years the producers have been paid $7,835,200,000 with a loss during that period of $1,045,887,000, and with cotton valued at $937,036,000 in storage at the end of the period.

Tobacco: The Commodity Credit Corporation had on hand 2,041,000 pounds of tobacco valued at $1,417,000. During the past 10 years the net outlay to producers has been $360,800,000. The Commodity Credit Corporation loss has been $10,902,000.

Dairy products: At the last report, dairy products in storage included 59,101 pounds of butter valued at $34,674,000, 8,784,000 pounds of cheese valued at $3,146,000, and 239,133,000 pounds of dried milk at $34,150,000, for a total value of $71,970,000. During the past 10 years the Federal Government paid out $2,542,100,000 in dairy support programs.

Sugar: We produce a deficiency supply of sugar in the United States of America because of Government controls to permit foreign countries to share the United States market. Counting the mainland cane areas, including Louisiana, Florida, and the offshore areas of Puerto Rico, Hawaii and the Virgin Islands, plus our domestic areas, the United States produced 4,886,000 tons, raw value, during 1959.

That same year we imported a total of 4,474,000 short tons, raw value. Of this total 3,215,000 tons came from Cuba and 980,000 tons from the Philippines. Under the Sugar Act which expires at the end of 1960 we paid Cuba 5.35 cents a pound in Cuba before shipping, which is 2.38 cents a pound more than she got in the world market for her other sugar. Out of total exports last year, Cuba shipped 3,215,000 tons to the United States and 2,206,000 tons to other countries.

The way it multiplies out, the United States paid the Castro outfit a subsidy in Cuba of $153,034,000 over the world price, plus a $25,077,000 freight bill, to get it to the mainland, making a total of $178,111,000. American growers were prohibited from getting through American production at the price paid in the United States.

In 1959 we produced about 2.33 tons of raw sugar per average cane and beet acre in the United States mainland areas. That means that if the United States growers were to be allowed to produce the sugar for the United States mainland market, it would require more than 1,920,000 additional acres to supply the need. Cuban exports to the United States alone displace 1,380,000 potential United States sugar producing acres.

The latest United States Department of Agriculture figures show it takes approximately 77 man-hours per acre on the average to produce sugar on the mainland, at an average earning rate of 94 cents an hour—outside Louisiana, which is 69 cents. So imported sugar has not only displaced 1,920,000 acres but it has displaced a farm payroll of $138,969,600 annually. Cuban sugar alone keeps workers in the United States from getting a payroll of nearly $100 million.

SOIL BANK

In an effort to reduce the production from acres made surplus by foreign imports Congress has gone into a program of renting land and taking it out of production. There would, of course, be no need for this program if the American farmer were permitted to produce the food and fiber eaten and worn by the American people rather than importing it from abroad.

During the 5 years the soil bank program has been in effect my State of South Dakota has received $92,449,079. The rental program nationwide has cost the taxpayer $2,457,161,706.

The cost to the Department of Agriculture to administer the program between May 28, 1956 and June 30, 1960 was $146,376,480. If we compute the acres thus under soil bank control we find that it has cost the American taxpayer $1.22½ per acre just to administer this method of reducing production.

On a simple pro rata basis of figuring it means that the Federal Government has spent $8,363,993 to administer the land and take it out of production.

Mr. Chairman, these figures are presented today because this cost to the taxpayer is completely unnecessary if we simply stop competitive agricultural imports because, as of today, there are not acres in America to feed and clothe our people. We need no soil bank—we need have no surplus. American agriculture could be thriving if it were given an equal opportunity to meet foreign competition.

Mr. McDOWELL. Mr. Chairman, I rise in opposition to H.R. 12261, known as the Poage farm bill. This legislation is supposedly designed to alleviate the overproduction of wheat.

There are a number of reasons why I am opposed to this legislation, but my main opposition is because it is nothing more than a continuation of the present costly farm subsidy program. I can see no benefits to any farmer from this legislation and it would further aggravate the already excessive burden of the taxpayers in support of handouts to the big farm operators.

Provisions of the bill would create an unfavorable balance in the feed-grain ratio by dumping millions of bushels of wheat into the commercial market at a price lower than its market value due to the Government subsidy.

The legislation is detrimental to the best interest of Delaware farmers in every respect. The best which can be said for the legislation is that it is a last-ditch attempt at stop-gap legislation in the closing days of Congress. We have waited in vain for the past 2 years for Secretary of Agriculture Benson to recommend farm legislation to the Congress. In spite of his plea for time, time has now run out. Benson did not recommend any farm legislation to the Congress and the Committee's attempt to foster this bill, H.R. 12261, upon the Congress at this time is a farce and not acceptable to me. I am not in favor of any legislation at this time which will increase the cost of the farm subsidy program. Not a single national farm organization supports this legislation.

No legislative proposal will solve the basic problems of our farmers unless it encourages market expansion, reduces incentives for overproduction, minimizes economic hardships, and avoids shifting the burden of adjustment to producers of other farm commodities and to the taxpaying consumer. Any farm program which does not take into consideration the final cost of food to the consumer is unfair to both the farmer and the consumer. Falling farm prices and rising consumer prices require something more than this type of hastily conceived scheme to continue an already discredited farm subsidy program.

Section 101(a) of H.R. 12261 authorizes a referendum to determine whether wheat producers prefer a wheat program similar to the one vetoed by the President last year, but less than 40 percent of the farmers who grew wheat for harvest in 1960 would be permitted to vote.

The proposed referendum would go into such matters as production controls, land retirement, export subsidies, and farm program costs.

I do not think that a referendum of such vast national scope can be defended, particularly in view of the fact that under the terms of this bill it would be decided by a minority of the producers of a single commodity.

The American Farm Bureau Federation opposes H.R. 12261 because, among other reasons, under it—

> Eligibility to vote * * * would be restricted to the wheat producers who harvested more than 15 acres in 1960. This means that 823,412 of the 1,391,819 farmers who had wheat allotments in 1960 would be disenfranchised, even though important changes would be made in the wheat program for all producers—regardless of the outcome of the referendum.
>
> It is a well-known fact that the present 15-acre exemption was adopted as a means of justifying voting eligibility rules that were calculated to insure a favorable vote for marketing quotas on wheat. If the 60 percent of all wheatgrowers who are now exempt from marketing quotas are to be deprived of their exemption, the decision to do this should be made by the Congress and not by a bare majority of the 40 percent of all wheatgrowers who are now subject to quotas.
>
> I am particularly concerned with the provisions of title II of H.R. 12261, since this title would authorize a commodity committee to develop a new program for feed grains which I consider unsound and therefore unwarranted.
>
> It would be most unfair to the producers of livestock, poultry, and dairy products if the Congress were to turn responsibility for developing a feed grain program over to a committee of feed grain producers.

FARMERS NEED FREEDOM, NOT FEDERAL HANDOUTS

Mr. BROOMFIELD. Mr. Chairman, during the past 2 days of debate on these proposed plans for future wheat price supports, a great many thousands of words have been let loose upon the American public.

In fact, it would seem as if the surplus of words could almost match the surplus of farm goods which now jam storage facilities throughout the length and breadth of our Nation.

All of us, I am sure, wish that the bushels of wheat we have accumulated over the years in unsuccessful and unworkable farm programs would disappear as quickly as the words uttered on this subject today and yesterday.

These words might be forgotten after next November, but I am sure that the mountains of wheat will still be with us.

The main theme of almost all the plans advanced so far is a simple one. It is a case of telling the farmer how to solve his own private, personal problem of making a living as he sees fit. Some use the carrot approach to try to lure the farmer along a path lined with verbal primroses. Others use the stick approach to beat the farmer into submission and to stop any inclination toward

balking in his forced march toward a completely planned economy for himself and his family.

Other plans would accomplish their purpose through minority action, in which less than a majority of wheat farmers would be permitted to vote on a wheat plan, and this vote would be carefully limited to those who need help least and would stand to gain the most.

Still other schemes would absolve Congress from all responsibility from this problem, would turn over all future farm plans to a committee completely divorced from Congress. In this manner, Members of Congress could alternately point with pride or view with alarm as the situation demanded, with the happy prospect that Members of Congress could dodge all responsibility for any actions taken by the committee if it so desired.

All of us who are fathers, I am sure, have encountered situations in which one of the offspring has toppled over a jar of pickles or a bottle of root beer at the supermarket. The immediate reaction is to turn our backs and say, "that is not my baby." But as responsible individuals, we do not say it. We face up to the fact that this is our baby, and that we must take some responsibility for the creature we have helped to create.

Today, we are faced with the same sort of a problem, except that the baby is not a baby anymore. The farm program has grown to be the third largest expenditure in the Federal budget. It has been in existence for almost three decades. Yet, we intend to treat the farmer as a baby. We spoon feed him. We make his decisions for him. We shelter him from the cruel facts of economic life. If attempts are made to permit him to walk or even creep, they are met with rebuffs and admonishments that the child is a sickly one and that it is best to just let him lie there, spoon feeding him with funds from the Federal Treasury.

At the same time, we turn to our offspring and tell him how free he is, how wonderful he is, how strong he is, when the only freedom we permit him is to roll his eyes.

Would it not be much kinder, much more humane, to tell this 25-year-old offspring that it is time he stood on his own two feet, to tell him that he was free to make his own decisions? Would it not be saner to take away his bottle of Federal funds and tell him it is time he started to earn his own living?

I believe it would, for a number of reasons.

First of all, I do not believe that the American farmer is the weakling which some of his so-called advocates picture him to be. I believe he is capable of coming up with his own solutions to his own problems if Congress will but give him the chance.

Arguments have been put forth that freedom from restraint, from parental domination by Congress, will lead to chaos. I do not believe it will lead to any more chaos than Congress, as a well meaning but dictatorial parent, has already imposed upon the farmer.

Let us face the facts. The farmer and his problems is well past the voting age. Earlier this year, Congress passed and the President signed into law civil rights legislation designed to give the right to vote to all our citizens. Yet we are being asked today to deny equally basic economic rights to a large segment of our Nation's population, the farm population.

May I urge my colleagues to permit the farmer to step out in the world, to capture world markets through his own energy and initiative, to compete for domestic and world markets, to grow what he wants to grow when he wants to grow it.

If the farmer fails in the competitive world around him, then Congress, like a good parent, will always be around to give him a hand.

But let us at least give the farmer the chance to find out his strengths as well as his weaknesses. I believe that we, as proud parents, will be even more proud of his accomplishments if he stands as a free man among free men.

Mr. COOLEY. Mr. Chairman, I ask unanimous consent that all debate on the pending amendments do now close, and that we have a vote on the three amendments.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. The question is on the substitute offered by the gentleman from Iowa.

Mr. WOLF. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WOLF. Is it my understanding this is my amendment, the 90 percent of parity amendment that has been supported by the committee?

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa to the substitute.

The question was taken; and on a division (demanded by Mr. WOLF) there were—ayes 61, noes 29.

So the amendment was agreed to.

The CHAIRMAN. The question is on the substitute offered by the gentleman from Minnesota [Mr. ANDERSEN] as amended.

The substitute as amended was agreed to.

The CHAIRMAN. The question now recurs on the amendment offered by the gentleman from Minnesota [Mr. QUIE] as amended by the substitute.

Mr. ANDERSEN of Minnesota. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ANDERSEN of Minnesota. The vote here really is on green acres, is it not?

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota [Mr. QUIE] as amended by the substitute.

The question was taken; and on a division (demanded by Mr. QUIE) there were—ayes 68, noes 23.

So the amendment was agreed to.

Mr. QUIE. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. QUIE. Would this now be known as the Quie green acres plan?

The CHAIRMAN. That is hardly a parliamentary inquiry.

Mr. ANDERSEN of Minnesota. Mr. Chairman, a parliamentary inquiry. I would be honored to have Mr. QUIE's name on green acres.

Mr. COOLEY. Mr. Chairman, I move that the Committee do now rise.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. IKARD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes, had come to no resolution thereon.

SUPPLEMENTAL VIEWS

Mrs. GRANAHAN. Mr. Speaker, I ask unanimous consent that I may file supplemental views to accompany House Report No. 1929 on the bill H.R. 12595.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

GENERAL LEAVE TO EXTEND REMARKS ON H.R. 12261

Mr. COOLEY. Mr. Speaker, I ask unanimous consent that all Members may extend their remarks during consideration of the bill H.R. 12261.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

COMMITTEE ON MERCHANT MARINE AND FISHERIES

Mr. BONNER. Mr. Speaker, I ask unanimous consent that the Committee on Merchant Marine and Fisheries have until midnight tonight to file a conference report on the bill H.R. 10644.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

COMMITTEE ON AGRICULTURE

Mr. GATHINGS. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture have until midnight tonight to file a report on the bill H.R. 12759.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

FEED GRAIN PRODUCERS

Mr. WOLF. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. WOLF. Mr. Speaker, I today introduced the bill, H.R. 12773, which is designed to do for the feed grain producers of America what we propose to do for the wheat producers; namely, to give them a choice in a referendum between alternative approaches to a solution to their problem. The bill I have introduced has as its objective: First, a reasonable balance between production and consumption at no cost to the public other than the costs of administration; and second, a surplus liquidation program through payments in kind for further voluntary reductions in production below the national market demand.

On the all-important question of prices, the bill proposes that price supports on all feed grains produced in the next crop year shall be supported at not less than 80 percent of parity and the bill further provides that as we balance production and liquidate price-depressing surpluses the level of price supports automatically goes up in successive steps to 90 percent of parity.

As a practical matter, if we bring prices up to 90 percent of parity immediately it would have a seriously disruptive effect on the feed grain users because at the present time the parity is 60 percent and they could not adjust immediately to a 50-percent increase. It is for this reason that we are readjusting this parity formula over a period of 4 years. For 1963 and 1964 crops it shall not be less than 85 percent and for the 1965 and subsequent crops the support shall be 90 percent.

I would like it clearly understood that from my point of view it was regrettable that the parity formula has dropped as low as it has and that we now have to use this method of returning it to the 90-percent level.

At the very least, we are attempting in 4 years to climb back up the economic ladder to the point from which we departed 7 years ago.

However, I hope that the next administration will propose a comprehensive farm program which will make unnecessary this 4-year wait.

May I remind our able colleagues from the livestock-producing feed-deficit areas that their concern over feed grain prices may be short-sighted because long-term inbalance in farm commodity prices will lead to expanded livestock production in the feed surplus areas which would be far more disastrous to the livestock interests on the east and west coasts than any moderate and fair increase in the price of feed.

May I also call to the attention of advocates of freedom and free enterprise that this approach guarantees to producers the greatest measure of freedom in the planning and operation of their farms of any proposal being seriously considered at this time.

This is, in my judgment, a progressive step in the direction of farmer participation in the development of the programs he believes to be not only in the best interest of himself and his family but also of the farm unit he operates.

This farm program will aid the national interests by serving the consumers as well as the farmer because it will protect the land, assure an abundant supply of food at reasonable prices to consumers, protect the competitive market, and, finally, will stabilize our rural economy.

A distinctive feature in this bill, Mr. Speaker, is the fact that it will not continue the soil bank suicide which is making ghost towns of our small communities in the rich farmlands of rural America because it has a maximum 50-percent retirement of any farm unit.

JANE ADDAMS AND INTERNATIONAL PEACE

Mr. MEYER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Vermont?

There was no objection.

Mr. MEYER. Mr. Speaker, as we mature, the scope of our vision and the depths of our perceptions grow. It is significant that the last 20 years of Jane Addams' life were devoted to furthering the cause most urgently and universally needed by all peoples: Peace.

It became more and more obvious to her that social justice, civil rights, and liberties, for which she had been striving in her settlement work, could not be achieved without the permanent removal of war as a method for settling disputes between nations. She saw that to the extent that a nation engaged its youth and capital in warlike efforts, to that extent the youth learned fear, and went back to the basic necessity of self-preservation in a hostile atmosphere. So, too, the capital that was spent in preparing for war was lost, and with it the potential it had to encourage people to self-betterment and happiness.

Jane Addams' vision of a world at peace grew from her observations of people from all over the world learning to live peacefully in one section of her great city. Many of the immigrants in Chicago had escaped from warring states to find themselves living close to old national and cultural rivals. Often with difficulty, they made peace among themselves, learned to respect each other, while their pride in themselves grew.

Shortly after the outbreak of the First World War, Jane Addams presided over a conference of women at The Hague. The women came from 12 countries, including some belligerents, and met to try to work out a plan to end the war.

Of this group Jane Addams later wrote:

> A moment of great interest was the entrance of the two Belgian delegates, who shook hands with the German delegation before they took their places beside them on the platform, dedicated to "a passionate human sympathy, not inconsistent with patriotism, but transcending it."

In May and June 1915 the conference sent delegates to 14 nations, neutrals and belligerents, to press for peace, and arbitration. They were welcomed everywhere, but wherever they went they were met by a rigid sense of national honor. In "Peace and Bread," Jane Addams wrote:

> As women, it was possible for us, from belligerent and neutral nations alike, to carry forward an interchange of question and answer between capitals which were barred to each other. Everywhere we heard the same opinion expressed by these men of the governments responsible for the promotion of the war; each one said that his country would be ready to stop the war immediately if some honorable method of securing peace were provided; each one disclaimed responsibility for the continuance of the war; each one predicted European bankruptcy if the war were prolonged, and each one grew pale and distressed as he spoke of the loss of his gallant young countrymen; two of them with ill-concealed emotion referred to the loss of their own sons.

Yet they seemed to choose this way. Jane Addams returned home, the war still raging, and her mission of peace, with its bright vision still before her, unaccomplished.

As the war progressed, its fever grew higher. Propaganda took hold, planted the seeds of fear, and incited to militarism even people who had been pacifists before they were put to the test. With many of its old supporters gone, peace became a most unpopular cause. America joined the war, was caught up in the fever of this war to end wars. Jane Addams watched the sons of the immigrants who had made peace among themselves go to war.

She remained a pacifist throughout, and bore the insults and abuse of the militant. The newspapers attacked her, called her pacific views unpatriotic, un-American; and many of her friends, disagreeing with her, failed the test of friendship.

As the war continued, she was appalled by the reports of starvation and need in the European countries. She was greatly heartened at the setting up of the Food Administration. Sharing desperately needed food was an activity that could rebuild and unite a divided and shattered world. She threw all her efforts into this work. She soon saw the responsibility of peace as largely women's responsibility; women who envision bloodshed and hunger at the thought of war.

The Hague Conference of 1915, though unsuccessful in ending the war, was successful in that from it grew an organization of women devoted to the aim of eliminating war as a means of settling national disputes—the Women's International League for Peace and Freedom,

whose members have dedicated themselves to carry on the work that Jane Addams helped begin, substituting world disarmament and mediation for war.

GLOATING AND BOASTING?—HISTORIC A-BOMB MODELS FOR SMITHSONIAN

Mr. PORTER. Mr. Speaker, I ask unanimous permission to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. PORTER. Mr. Speaker, the Atomic Energy Commission and the Department of State believe that the display at the Smithsonian Institution of the models of the Hiroshima and Nagasaki bombs would be contrary to the best interests of the United States.

So John A. McCone, Chairman of the Atomic Energy Commission, wrote me on June 11, 1960.

This confirmed an AEC decision which I received in 1958.

Such displays—

I was then informed by the AEC—

would give the appearance of gloating or boasting about the weapons side of atomic energy and use, and would afford an opening for anti-American propaganda around the world.

ONLY THE MISGUIDED WOULD GLOAT

I disagree with the AEC and the Department of State. It would be a rare and sadly misguided American who would be inclined to interpret such a display at the Smithsonian as gloating or boasting.

Such a conclusion tells more about the men in charge of the AEC and the Department of State than it does about the visitors to the Smithsonian. Perhaps they are projecting their own emotions.

MISSILES DESIGNED FOR ATOMIC WARHEADS ARE ON DISPLAY

Visitors right now can observe many displays of missiles at the Smithsonian, including the mighty Atlas. Almost all of these missiles on exhibition there are designed for atomic warheads.

Furthermore, the *Enola Gay*, the B–29 bomber that delivered the fateful atomic bombs at Hiroshima and Nagasaki, now sits at Andrews Field, a few miles from Washington, waiting for installation as a display at the Smithsonian. Will this also give the appearance of gloating or boasting? I think not.

It is shocking, I believe, that high officials in the AEC and the Department of State could consider that a display of the historic Hiroshima and Nagasaki bombs "would give the appearance of gloating and boasting." Who in the United States aside from these officials could have any such feeling about those bombs? How did the AEC and the Department of State officials arrive at any such opinion?

OFFICIALS ARE FAR OUT OF TOUCH

Their judgment was not a casual one. This makes my chagrin all the greater. These officials must be far out of touch with the average American.

The two pioneer bombs are very puny when compared to the multimegaton devices available today, but I am not conscious of any "gloating or boasting" by Americans or anyone else about the new ones. Rather the usual and rational response is deep apprehension merging quickly into cold fear. These weapons are too big for fallible, error-prone human beings to handle.

In these massive explosives the scientists today find a merciless monster that makes the scientist Frankenstein a piker. If anyone is on the verge of gloating or boasting about these bombs, he needs his head examined.

A PART OF HISTORY

I would like my children to look at models of the two "primitive" atomic bombs that were dropped on Japan by the American Air Force. It is no secret that we dropped them. The data on their physical appearance is no longer classified. The event belongs to history. Whether we honestly face up to it and its implications, in the Smithsonian Institution as well as in the White House, in the Congress and in the United Nations, will decide whether mankind will survive its terrible weapons. The genie will not go back in the bottle just because we turn our backs.

Under unanimous consent, I am including hereafter my correspondence with the AEC on this matter:

APRIL 28, 1958.

ATOMIC ENERGY COMMISSION,
Washington, D.C.

GENTLEMEN: It has come to my attention that the model of the Hiroshima atom bomb has recently been declassified. It occurred to me that this might be properly included in the Smithsonian collection and I am writing you to ask that appropriate arrangements be made.

Very truly yours,

CHARLES O. PORTER,
Member of Congress.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 30, 1958.

Hon. CHARLES O. PORTER,
House of Representatives.

DEAR MR. PORTER: This is in reply to your suggestion of April 28 that a model of the atomic bomb used at Hiroshima be given to the Smithsonian Institution for public display.

There have been earlier propasals for public display of our first atomic weapons. It is our belief that official inclusion of replicas of the Hiroshima or Nagasaki bombs in such displays would be detrimental to the interest of the United States. Such displays would give the appearance of gloating or boasting about the weapons side of atomic energy development and use, and would afford an opening for anti-American propaganda around the world.

I would not recommend that the members of the Commission support such showings in the Smithsonian Institution or in the other sites proposed.

Sincerely yours,

MORSE SALISBURY,
Director, Division of Information Services.

JULY 7, 1958.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C.

GENTLEMEN: On April 28 I suggested to you that a model of the Hiroshima atomic bomb be made a part of the Smithsonian collection and be put on public display. On June 30 Mr. Morse Salisbury, Director of your Division of Information Services, kindly replied. He said it was "our belief" that such a display would be "detrimental to the interest of the United States." Do I understand by that that this is the Commission's official policy or his personal opinion?

He goes on to say, "Such displays would give the appearance of gloating or boasting about the weapons side of atomic energy development and use, and would afford an opening for anti-American propaganda around the world." Does this represent the opinion of the Commission?

Finally, I should like to know whether it is a fact that the model of the Hiroshima bomb has been declassified and that there is no security question involved here, but merely one of policy on the basis alleged by Mr. Salisbury?

My own comment is that such a display need not give the appearance of gloating or boasting, but would tend to inform the American public and the world about the nature of the bomb at that time and that this is strangely contradictory to the Commission's official attitude with respect to making the United States look reckless and aggressive because of our secrecy about the Hardtack series of tests.

I hope that I may have an answer to these questions promptly and that your decision will be to reconsider Mr. Salisbury's decision.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., August 26, 1958.

Hon. CHARLES O. PORTER,
House of Representatives.

DEAR MR. PORTER: This is in reply to your letter of July 7, in which you refer to an Atomic Energy Commission communication of June 30, signed by Mr. Morse Salisbury, Director, Division of Information Services.

Mr. Salisbury stated in his letter that the inclusion of replicas of the Hiroshima or Nagasaki bombs in public displays of atomic weapons would be detrimental to the interests of the United States. You asked whether this statement was Mr. Salisbury's personal opinion or official Commission policy. This statement accurately reflected the opinion of the Commission at that time, and, after a recent review, this policy has not changed.

The bombing of Hiroshima and Nagasaki has evoked a more lasting emotional reaction throughout the world than the bombings of Rotterdam, Warsaw, London, Berlin, Bremen, and Tokyo and other cities in World War II. This is probably because Hiroshima and Nagasaki were each hit by a single new type bomb of unprecedented destructive power, and, in consequence, these new bombs—the so-called A-bombs—have been stigmatized, particularly in the minds of the people of Asia, as horror weapons the use of which resulted in the deaths of thousands of civilian inhabitants of the cities attacked. It is the Commission's judgment that public display of models of these two bombs at this time involves considerations different from those in the case of displaying conventional weapons and would arouse antagonisms abroad that would far outweigh any benefits that might accrue from informational or historical considerations.

Incidentally, these two bombs were not identical with the Trinity device which was used in the first atomic test explosion at Alamogordo, N. Mex., in July 1945. Therefore, neither has historical significance from the standpoint of being the first device used to produce an atomic explosion.

The second question you ask is—does the following quotation from Mr. Salisbury's letter represent the opinion of the Commission:

"Such displays would give the appearance of gloating or boasting about the weapons side of atomic energy development and use, and would afford an opening for anti-American propaganda around the world."

Although some of the Commissioners feel they might have chosen different words to express their views, this quotation does represent the sense of the Commission's current opinion.

The third question raised in your letter is whether the model of the Hiroshima bomb has been declassified and whether this is a question of security or merely a policy question as indicated by Mr. Salisbury.

It is a fact that the size, weight, and shape of the Hiroshima and Nagasaki bombs have been declassified. However, the Commission's policy is not based on security as it pertains to military information but rather on broader considerations of the national interest.

Sincerely yours,

PAUL F. FOSTER,
General Manager.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 12, 1959.

ATOMIC ENERGY COMMISSION,
Washington, D.C.

GENTLEMEN: I refer to your letter to me dated August 26, 1958.

I am astounded that you believe that public display of models of the Nagasaki and Hiroshima bombs would arouse antagonisms abroad that would outweigh any benefits that might accrue from informational or historical considerations. I point out to you that such display would not be a flaunting of these terrible weapons, nor certainly not give the appearance of gloating or boasting considering the information that we have concerning the progress of the Soviet Union along these lines. I marvel that you could hold such opinions. Certainly no one of you has any feeling of gloating or boasting about these terrible weapons, so why would you believe that any such appearance would result from the public display of these models?

It is my opinion that if there were a display of these models at the Smithsonian Institution, along with pictures of the devastation they wrought and perhaps reproductions of newspapers containing stories about their use, the average person would enter the room with feelings of wonder and curiosity and leave it without any feeling of boasting or gloating. I sincerely hope that the Commission will reconsider its opinion in this respect and agree to release these two models for public display as I have several times proposed.

I note that you state that the size, weight, and shape of the Hiroshima and Nagasaki bombs have been declassified. Will you please send me the information that has been declassified, including designs, pictures, and any other data about these bombs.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., April 15, 1959.

HON. CHARLES O. PORTER,
House of Representatives.

DEAR MR. PORTER: This is in response to your January 12, 1959, letter again asking (1) for public display of models of the Hiroshima and Nagasaki bombs, preferably at the Smithsonian Institution, (2) information on size, weight, and shape of these bombs, and (3) as an alternative to (1), public display of the Trinity device which was detonated at Alamogordo, N. Mex.

The Atomic Energy Commission has reviewed your most recent request and the Commission's judgment, concurred in by the Department of State, is that, at this time, public display of the bomb models mentioned above and release of the information requested would be contrary to the best interests of the United States.

On point (1) of your request:

Nothing has occurred which would lessen the concern we expressed in our August 26, 1958, letter to you. On the contrary, since then the United States has started, and is continuing, negotiations with the Soviet Union and the United Kingdom on the question of a cessation of nuclear weapons testing. Such a display as you suggest could, and probably would, aid the anti-U.S. propaganda efforts of the Soviet Union, or its satellites, especially in Asia. Furthermore, publicity on the use and effects of these bombs, particularly when such issuances apparently would have Government sanction, could negatively affect the U.S. position in the Geneva negotiations and jeopardize the prospect for their success.

On point (2):

Release of data on size, weight and shape of the Hiroshima and Nagasaki bombs would make possible production of artists' conceptions, or even models, of the weapons for public display. Use of such representations could produce the same unfavorable results for the United States as are mentioned above.

On point (3):

The Trinity device detonated at Alamogordo was a device and not a weapon and therefore differed somewhat in appearance from the Hiroshima and Nagasaki bombs. However, all three are so closely associated in the public mind that, in our view, public display of the Trinity device would also be objectionable for the reasons stated above.

May we reiterate and reaffirm the Commission's judgment as expressed in our August 26, 1958, letter to you "that public display of models of these two bombs at this time involves considerations different from those in the case of displaying conventional weapons and would arouse antagonism abroad that would far outweigh any benefits that might accrue from informational or historical considerations."

If there should be any change in the Commission's views, we will be happy to so inform you.

Sincerely yours,

A. R. LUEDECKE,
General Manager.

MAY 11, 1959.

ATOMIC ENERGY COMMISSION,
Washington, D.C.

GENTLEMEN: With reference to your letter of April 15 and your refusal of other requests made in my letter of January 12, 1959, I am now inquiring as to the statutory basis for your refusal.

I can understand security classification but it seems to me that these matters are far afield.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

[No answer was ever received to this letter.]

MAY 9, 1960.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C.

GENTLEMEN: I should appreciate your attention to these two requests:

1. That I be advised whether the information contained in the following quotation is all right for me to use publicly:

"Some of the practice bombs dropped at Wendover, after previous secret testing at Inyokern, were called pumpkins by the men. They were fatter than the normal high explosive bombs then whistling down on Germany. Only Tibbets and a few scientists and weaponeers at Wendover know the reason. What the 509th bombardiers were dropping was the shell of the fat man, or plutonium bomb. Inside the bomb casing, blocks of plutonium were to be formed in a loose sphere, to be compressed by 64 detonators at the instant of implosion. The fact that no such bomb ever had been assembled, except on the drawing boards of theoreticians at Los Alamos, made no difference. The entire Manhattan project was that way: one section was always learning to use something that another section was still not sure it would ever be able to make.

"Actually the fat man was not shaped like a pumpkin, but like a teardrop. The bomb's forward end was bulbuous, tapering away gradually to the fins. Each bomb weighed about 13,000 pounds and wore a casing of such highly polished metal that crew members could use it as a mirror to comb their hair."

2. I should like to renew my request that models of the Hiroshima and Nagasaki bombs be made available for display at the Smithsonian Institution. Certainly these are historical items and, obviously, there is nothing secret about them anymore.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

[NOTE.—The quotation is from the book, "No High Ground," by Fletcher Knebel and Charles W. Bailey II, Harper & Brother, New York, 1960.]

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 11, 1960.

HON. CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

DEAR MR. PORTER: This is in response to your letter of May 9, 1960, renewing your request that models of the Hiroshima and Nagasaki bombs be made available for display at the Smithsonian Institution, and asking our views as to whether it would be appropriate for you to use publicly a statement quoted in your letter describing the "Fat Man."

As you know, data on the size, weight, shape, and external characteristics of these weapons are no longer classified. However, I must advice you that it is my judgment, concurred in by the Department of State, that public display of the bomb models or public description of their size, weight, shape, and external characteristics would still be contrary to the best interests of the United States.

Public use of your referenced statement concerning the "Fat Man" presents an additional problem which I will be glad to have Mr. Charles Marshall of our staff discuss with you at greater length at your convenience.

If there should be any change in our views, I will be happy to so inform you.

Sincerely yours,

JOHN A. MCCONE.

NEED FOR ADEQUATE SERVICE STANDARDS FOR LOCAL SERVICE CARRIERS

The SPEAKER. Under previous order of the House, the gentleman from Nebraska [Mr. BROCK] is recognized for 10 minutes.

Mr. BROCK. Mr. Speaker, the local service airline industry is composed of 20 carriers—13 operating within the

boundaries of the original 48 States and 7 operating in the States of Alaska and Hawaii.

These airlines were created by the Civil Aeronautics Board to provide a network of air service for small and medium-size communities which would connect these smaller communities with the large business and transportation hubs throughout the country. The feeder-line character of these carriers is described by the CAB in the certificate of public convenience and necessity which is the document that gives these airlines legal authority to operate:

The services authorized by this certificate, as amended, were originally established pursuant to a determination of policy by the Civil Aeronautics Board that in the discharge of its obligation to encourage and develop air transportation under the Civil Aeronautics Act, as amended, it is in the public interest to establish certain air carriers who will be primarily engaged in short-haul air transportation as distinguished from the service rendered by trunkline air carriers. In accepting this certificate, as amended, the holder acknowledges and agrees that the primary purpose of this certificate, as amended, is to authorize and require it to offer short-haul, local or feeder, air transportation service of the character described above.

The scope of local service operations is immense. These carriers in 1959 served 511 cities in the United States and 327 military bases. The importance of this coverage is heightened by the fact that 300 of the cities served and 59 of the military bases served rely exclusively on these feeder airlines for commercial air service.

The scope of local service operations is and has been expanding at a rapid rate. More than 6,000 route miles have been added to local carrier systems in the past 3 years, and the CAB is presently conducting further proceedings which will undoubtedly result in a substantial extension of local service routes.

The extension of local service routes has been attended by significant increases in all types of traffic. Passenger traffic on the feeder lines has increased fivefold in the decade 1949–59 and 25 percent in the period from 1958 to 1959. Mail, express and freight traffic has tripled during the past decade.

Despite these impressive strides the local service industry has required increasing amounts of Federal subsidy. In 1955 the feeder subsidy within the continental United States totaled $21.3 million. During the present session of Congress the CAB told the House Appropriations Subcommittee for Independent Offices that $66.8 million would be required in fiscal 1961 for the feeders—including the Alaskan and Hawaiian operators. Later, before the Senate Appropriations Subcommittee this figure was revised upwards, and the current estimate of the CAB is that approximately $77 million will accrue in fiscal 1961.

Mr. Speaker, I want to make it crystal clear that I am not quarreling with the payment of subsidy to help these feeder lines. I am completely convinced that subsidy is necessary to keep these services in operation, and I am confident that the public derives important, indeed indispensable, benefits from these services.

However, I am frankly alarmed at the rapid and substantial increases in the amount of this subsidy. I believe it is important to determine whether these increases are necessary or whether they represent inefficient management and waste.

I am familiar in detail with one feeder operation, that of Frontier Airlines which operates in the State of Nebraska and throughout the congressional district I represent. The subsidy for this company totaled $2.5 million in 1955—Service Mail Pay and Subsidy for U.S. Certificated Air Carriers, an official CAB publication. The Aviation Daily for June 2, 1960, indicates Frontier has requested a subsidy of $6.9 million for the year beginning May 1, 1960.

Undoubtedly part of this increase has been caused by the expansion of Frontier's routes throughout the State of Nebraska. But I am equally certain that a great part of this increase is the result of inefficiency and poor service which has discouraged patronage and lost incalculable amounts of revenue.

I do not intend to go into the details of the poor service and passenger hardship which have occurred in Nebraska. Rather, Mr. Speaker, I include at this point the following editorial published in the June 16 issue of the Norfolk Daily News, Norfolk, Nebr., which portrays a detailed account of the inadequacy of this service:

HOW FRONTIER SERVES ITS PATRONS

A copy of the State Aeronautics Department's latest report to the Civil Aeronautics Board relative to service in Nebraska by Frontier Airlines has been delivered to the Norfolk Chamber of Commerce office. The record would be a joke if it weren't that the joke is on us.

The report, nearly an inch thick, contains some 30 affidavits of personal experiences in trying to travel over Nebraska via Frontier. The prize exhibit is a 30-page documentation by Rush Clarke, special assistant attorney general for the State Aeronautics Department.

Mr. Clarke's job calls for him to travel the State by air and Frontier could hardly have been more irritating had it set upon a purposeful campaign of harassment. And he is the one man they should have on their side.

In 27 flights Mr. Clarke logged 73 separate incidents of poor service. There were late flights (almost inevitably), missed connections, lost baggage, canceled reservations, changed schedules, failure to confirm reservation, selling more tickets than seats, and uninformed and misinformed employees.

The line seemed to play no favorites. Among those stranded or given poor service were John Cooper, Republican candidate for governor; Federal Judge Richard Robinson, Joseph Brown of the State Railway Commission, the wife of the chairman of the State Aeronautics Board—dumped off in North Platte on her way to Scottsbluff—and three State senators, invited on the line's inaugural flight from Lincoln to Kansas City and ordered off the plane in Beatrice.

The affidavits are astonishing. And most of them come from passengers on the central and southern routes. This is significant to Norfolkans because the action before CAB involves abandonment only of the northern route, serving Norfolk. The fight started as an effort to preserve service in Norfolk but service is so poor in the other communities that they want relief, too.

Nebraskans should realize that Frontier's poor performance is more than something that may inconvenience a few hundred air passengers in 14 communities. It strikes at the very heart of our economy. Businessmen often must fly but so unreliable is Frontier that many gave up, according to the affidavits.

Out-of-State visitors must be amazed at the kind of service we Nebraskans are given as a matter of course. They can only conclude we are satisfied with poor service or don't know any better.

But Senator CARL CURTIS, Representative LARRY BROCK, and the State Aeronautics Department know better. They are urging the CAB to provide us with competent feeder airline service. The CAB hearing will take many months to complete but Nebraska's business climate requires the proper decision.

Nor do I intend, Mr. Speaker, to discuss the extent to which this service has discouraged travel and thereby increased the subsidy expense. The State of Nebraska and many of the cities affected by the substandard service have filed extensive proof with the CAB and have requested a prompt hearing and prompt relief. I sincerely hope the CAB will take prompt action in this particular case, and I emphatically urge them to do so.

Apart from any individual case, I believe that we face a broader question of national scope and importance. There can be no doubt that inefficient operations and poor service that discourage feeder-line patronage result in substantial amounts of unnecessary subsidy.

The question is: How do we insure that our subsidy dollar is well spent? What procedures can be instituted which will reasonably guarantee that adequate service will be rendered by the feeder-line carriers?

The Federal Aviation Act of 1958 contains certain provisions defining the duty of all air carriers with respect to adequate service for the public. Section 404 of this act provides:

(a) It shall be the duty of every air carrier to provide and furnish interstate and oversea air transportation, as authorized by its certificate, upon reasonable request therefor and to provide reasonable through service in such air transportation in connection with other air carriers; to provide safe and adequate service, equipment, and facilities in connection with such transportation; to establish, observe, and enforce just and reasonable individual and joint rates, fares, and charges, and just and reasonable classifications, rules, regulations, and practices relating to such air transportation; and, in case of such joint rates, fares, and charges, to establish just, reasonable, and equitable divisions thereof as between air carriers participating therein which shall not unduly prefer or prejudice any of such participating air carriers.

(b) No air carrier or foreign air carrier shall make, give, or cause any undue or unreasonable preference or advantage to any particular person, port, locality, or description of traffic in air transportation in any respect whatsoever or subject any particular person, port, locality, or description of traffic in air transportation to any unjust discrimination or unreasonable prejudice or disadvantage in any respect whatsoever.

Under the authority of this section the CAB has recently issued a number of so-called service-adequacy decisions—the Toledo Adequacy Investigation, Docket No. 8851; the Washington-Baltimore Adequacy Investigation, Docket No. 7184; the Fort Worth Investigation, Docket No. 7382; and the Flint-Grand Rapids Adequacy Investigation, Docket No. 9177.

Apart from the fact that these cases are new developments and constitute an only recently evidenced interest on the part of the Board to enforce adequate service, and apart from the fact that none of these cases relate to feeder-line adequacy questions which are quite different, there is a severe inherent limitation on these section 404 cases which renders them relatively useless in the local service situation. I would like to explain in some detail why section 404 proceedings are relatively inefficient in most feeder-service situations.

The feeder-line air service authorized in the State of Nebraska is temporary. It was authorized on a use-it-or-lose-it basis. Under the terms of this CAB policy, a community is awarded air service and then after 6 months of preliminary operations the following year is used as a test period to determine whether the community generates a minimum traffic quota of five enplaned passengers per day, or an average of seven on the segment, this, of course, in the absence of unusual and abnormal circumstances. Also, the policy of the Board, following the policy of the Congress to establish an adequate air transportation system in the United States has been to take into account the isolation of communities and the inadequacy or total lack of other public transportation facilities.

Obviously the use-it-or-lose-it program can be easily defeated by the carrier providing inadequate service during the test period thereby discouraging or thwarting traffic development. This has actually happened in the State of Nebraska and in my congressional district.

Mr. Speaker, in these circumstances the normal section 404 adequacy of service proceedings are completely inadequate to cope with the problem. These cases take between 2 to 4 years to process and in the interval the inadequate service has killed any inclination to patronize air service on the part of the public. Long before the adequacy proceedings can be processed the experimental period has expired and the community is confronted with a certificate renewal case in which the outcome is a foregone conclusion by reason of the artificially depressed traffic record.

This is clearly inequitable. It contravenes the spirit and purpose of the Federal Aviation Act in which the interests of the public convenience and necessity are paramount.

However, there is a convenient and practical way to avoid this inequity. The CAB should augment their "use it or lose it" program by promulgating regulations that spell out in detail what constitutes adequate service on any given route for purposes of testing the traffic potential of the route. Such regulations would spell out such matters as the frequency of service required, the routings, connections, commuter service, its on-time performance, the practicability of its schedules, its dependability and other factors that relate to public service.

Failure to comply with these service precepts would automatically disqualify the period during which the inadequacies prevail and it would not constitute a portion of the test period. This would effectively compel the carrier to provide adequate service for the test period without resort to the cumbersome, expensive, and time-consuming proceedings under section 404. The carrier could no longer count on weeding out the small cities and keeping the terminals because the test period would not start until the carrier had provided adequate service for the requisite period. There is, unfortunately, a strong tendency on the part of some feeder lines to desire to change the nature of their operation by dropping small cities and seeking rich markets.

Mr. Speaker, I know of no reasonable objection to the proposal I am advancing. These local service carriers are heavily dependent upon Federal subsidy—indeed, without it they could not exist. The amount of that subsidy is directly affected by the quality of the service since commercial revenue that is lost due to bad service must be replaced by subsidy dollars. Consequently, these carriers cannot expect to exercise relatively unchecked discretion as to the quality of service they provide. Even the self-sufficient, nonsubsidized parts of the airline industry are held accountable to the public for the quality of service they provide. This is done by section 404 proceedings. Since—as I have demonstrated—the section 404 proceedings are inadequate to cope with the feeder use-it-or-lose-it services, then I see no alternative to the adoption of my proposal.

We in Nebraska have daily seen, at close range, the abuses and hardship that result when a feeder abdicates its duty to the small towns. I have read dozens of affidavits from passengers outlining unbelievably irresponsible and unreliable service provided by this subsidized airline. Cities that once had good traffic records have withered away to a fraction of their former patronage due to this treatment. It is not too much to say that the entire air service pattern in Nebraska is endangered. Not only the public but the Government which pays this subsidy is being shortchanged.

Of course, it may be too late to do any good in Nebraska even if my proposal were adopted. However, it is my hope that the CAB will give immediate consideration to setting a prehearing conference and an expedited hearing to provide relief for Nebraska before it is too late. I see no reason, legal, or otherwise, why as a part of the relief granted Nebraska, the CAB should not rule that no fair test has yet been accorded Nebraska under the "use it or lose it" program, then spell out service adequacy requirements, and then resume the experiment dating from the inauguration of adequate service.

Or, in the alternative, since public good will for Frontier has waned to the vanishing point, the CAB could substitute a new feeder line for Frontier and start the experiment over, only this time providing a full regulatory pattern of what constitutes adequate service so that a fair test can be assumed.

As a matter of national transportation policy I believe that this proposal is the only means by which Congress can be certain its subsidy dollars are being well spent. In view of the alarming increase in subsidy—which will have nearly quadrupled in the interval between 1955 and 1961—I can see no other reasonable course to pursue. Therefore, I am calling on the CAB to study this proposal and if legislation is required I will be glad to introduce it and have confidence that it would receive wide support in Congress.

ARGUMENTS FOR AND AGAINST THE ITEM VETO

The SPEAKER. Under previous order of the House, the gentleman from Iowa [Mr. SCHWENGEL] is recognized for 30 minutes.

Mr. SCHWENGEL. Mr. Speaker, during the past 3 weeks, I have had the privilege of taking the floor to present some background material in support of the three resolutions which I have offered to give the President the item veto authority.

On two previous occasions, I have dealt with the history of the item veto and the use of the item veto power in the States. Today, I wish to review the arguments, pro and con, concerning the item veto.

My own convictions about the need for this authority have led me to direct considerable research in this field. My legislative assistants at the State University of Iowa, under the direction of Dr. Russell Ross, have worked on all aspects of the issue for over a year.

They have provided me with the substance for these remarks and laid the groundwork for the three resolutions which have been offered to grant this authority to the President. I am particularly indebted to D. T. Doan for his work on the history of the veto power; to Robert Downer for this study of the item veto power as exercised in the 42 States which provide this authority; and to Tom Scheuerman for today's treatise on the pros and cons of the issue.

In offering these resolutions and in taking the floor to support them, it has been my hope that I can generate support—not only among the Members who should be concerned with this problem—but among their constituents. It is my feeling that we need an educational program before we are going to get the necessary action in Congress. If we can get the people aroused and encourage them to write and speak their own convictions about this obvious need, we will eventually get action at this level.

There have arisen many arguments both for and against the item veto since it was first requested by President Grant in 1873. The purpose of these remarks is to examine the most important of these arguments, and try to apply them to the present day situation. While many of these pro and con arguments attempt to rationalize for or against the item veto on the basis of some theoretical motive, it seems to be much more important to examine the item veto and see just what good or bad would actually result from its use.

There seem to be four basic arguments which have been advanced as concrete reasons why the Executive should have the power to veto certain items of a general appropriation bill. The first of these is that 42 of our 50 States have the item veto, and have used it with much success. No State has ever taken away this power once it has been instituted, a good indication that the Governors have used it with proper discretion. This point will not be labored, but should definitely be considered.

Second, the use of the all-inclusive general appropriation bill has resulted in many complications which could be avoided by the power of the item veto. Most appropriation bills are presented to the President very near the end of the session, and thus put unnecessary pressure upon him. He must either veto the bill in its entirety and prevent the passage of some very valid project, or he can pass the bill which may include many projects which are just thrown in with the more valid ones. There is no need for this type of situation. As exemplified by the last public works bill, the President can be forced to use his veto when he is known to support certain parts of the bill. The result of such veto is that these important projects may be held up until the next session. The item veto would allow the President to slow up the progress of the unnecessary items, and still pass those items which are of prime importance. We all know that our legislative process is very cumbersome, and the vetoing of an entire bill just adds to this problem. When Congress is faced with the possibility of an item veto, it would make them present their appropriation bills earlier in the session so that there would be an opportunity to override such veto if they saw fit. The practice of presenting appropriation bills at the latest possible time benefits no one when the entire bill is vetoed.

The third argument raised in favor of the item veto is that it would help to eliminate some of the unnecessary programs which often find their way into these all-inclusive general appropriation bills. It is no hidden secret that many items are added to these bills which could not possibly pass a majority of Congress if they were considered on their own merits. These "pork" or excess items are added to the general bill to gain support from Members by adding features which are favorable to them, with the knowledge that the President would have to veto the entire bill if he wanted to prevent such "pork" legislation. Many times these items are widely separated, either in their nature, or in the locality with which they are concerned. Looking at this problem realistically, this type of legislating is going beyond the function of Congress to make and pass those laws which are necessary to run the Government. While Congress may look upon this so-called logrolling as a secret weapon to get legislation past the President, it has often resulted in spending large sums of money on projects which would have little chance of being passed if considered alone. This should not be, and was not intended to be, within the power of Congress.

The fourth and, in my opinion, the most important argument for giving the President the use of the item veto is that this would be one positive step toward controlling our Government spending and keeping the budget within balance. It is very difficult to say just how effective the item veto would be in maintaining Government spending, but it would, at least in some instances, require Congress to reconsider those appropriations which are not absolutely necessary during the coming year. The use of the item veto by the California Governor in 1913 enabled him to cut 15 percent of the total appropriations, none of which was repassed by the legislature. With the right to override any use of the item veto by the President vested in Congress, it would not be a case of losing some projects which are valid and important. The difference in effect, would be that instead of the possibility of the President vetoing the entire bill and losing some valid and necessary projects or passing a bill which includes several or many items that are not in the public interest, the item veto would enable both the President and Congress to consider each item separately so that the needed ones remain and the others are weeded out.

The continued use of pork barrel legislation and the resulting increased Government spending without the item veto, allows Congress to place an undue burden upon both the President and the taxpayer. It is the President who shoulders the responsibility for a stable economy. He cannot afford to ignore the effect of continally increased Government spending, while the Congressman may ignore this as long as he gets his share of the "pork." When the taxes increase as they do with Government spending, the taxpayer looks to the President for help. With these two parties sharing in the adverse conditions which thus result, the use of the item veto would give the President the right to try and contain the Government spending for which he is primarily responsible. Again it must be reiterated that this item veto is not a complete cure for this problem, but it at least gives the President the right to consider each item separately and thus takes one positive step toward handling the problem. We must also consider the effect which these appropriations have upon the future Government spending. While the pork barrel legislation presents a very troublesome problem in and of itself, these appropriations are often 2- or 3-year projects, which means that more money must be appropriated next year. This further shows the need for a careful examination of the individual items, and an all-out effort to appropriate the taxpayer's money only where there is a valid and necessary project.

Many arguments have been raised in opposition to the item veto since President Grant first requested this power in 1873. In considering these arguments, it is important that they be viewed with respect to today's problem of increased Government spending and the resulting rise in taxes. One argument against the item veto is that it would lessen the responsibility of Congress to the voters, as they would depend on the President to veto all the unnecessary appropriations. As long as they receive their demands in the bill, they could tell the voters back home that they tried, even though the President vetoed the item. This argument seems to say that what Congress is presently doing through its pork barrel legislation illustrates a responsibility of Congress which cannot be taken away. It is difficult to see where Congress would lose any legitimate responsibility by the use of the item veto. If the Congressman has a valid project in the eyes of the rest of the Members, it will succeed if he presents this need in a proper manner not only to Congress but to the President. If it is necessary that the President take the responsibility to veto the unnecessary provisions in order to curtail Government spending, it should be done, as pork barrel legislation is a good indication that Congress is not always concerned with Government expenditures.

A second argument often raised against the item veto is that it would strengthen an already powerful Executive. There is no doubt but that the item veto would have to be used with much discretion by the President. It is doubtful that the use of the power could become abusive, as long as Congress made use of its right to override the veto. The threat of overriding would tend to keep the President from using the item veto, except when absolutely necessary. The reports of the States further show that the item veto has been very useful, with very little evidence of abuse by the Governors. Assuming, therefore, that the item veto is used with much discretion by the President, it would usually be confined to those projects which are unnecessary and could not stand in Congress if considered on their own merits. Since the President is held responsible to the people for the ever-increasing Government spending, this so-called increased power to the President would really be one small way in which he might be able to slow down Government spending, especially on projects which are unnecessary.

A third argument against the item veto is that it would destroy the checks and balances provided in the Constitution, in that Congress would lose its power to tack on measures to a bill which

the President would like to pass if considered separately. However, it should be remembered that Congress' check upon the President is through the right to override the veto. By presenting the appropriation bills earlier in the session, Congress could force the President to veto those items of which he disapproved and there would still be time for reconsideration by Congress. The truth of the matter is that most of those items which would be vetoed are those which Congress—and everyone else—knows could not pass if considered separately, and this is precisely the problem which the item veto seeks to cure. The only change in the real "check and balance" set up by the Constitution is that the item veto would allow the President to check those items which would probably not have been passed by Congress if considered separately.

One of the biggest problems confronting the United States right now is the control of Government spending and keeping the taxpayers happy. The need for the item veto must be considered in the light of today's problems. The responsibility for our budget lies primarily with the President, and yet he is deprived of a power which would help him to handle this responsibility. He should be allowed to consider each item on its own merits, subject, of course, to Congress right to override the vetoed items. The presence of the item veto would compel Congress to present the appropriation bills earlier in the session so that the items could be reconsidered if vetoed by the President. This seems to be a much faster way of legislating than by vetoing the entire bill and requiring a new bill to include only the acceptable items. This whole concept is predicated upon sound discretion by the President, so that the power is used only where it is absolutely necessary. If used with this idea in mind, this is a positive step toward handling one of the main problems confronting our Government, an ever-increasing budget which can only be balanced by increased taxes.

Before leaving the arguments which have been presented pro and con on the item veto, permit me to offer them in summary:

The arguments for the item veto are primarily concerned with giving the President some means of cutting down the unnecessary spending by our Government. By considering each item of an appropriation bill separately, the President could eliminate those items which would never be passed if examined on their own merits. The taxpayer is the one who suffers by the increased Government spending, and he looks upon the President to do something about it. Yet the President, who should be able to eliminate the unsound and unnecessary expenditures, is instead placed in a position where he is almost powerless. In considering a general appropriation bill, the President must either veto the entire bill and slow up the passage of some very valid items which must then be put in a new bill unless the veto is overridden by Congress, or he may sign the whole bill and thus put into effect many items which would never be passed if considered on their own merits.

The success of the item veto would depend upon the President. If he made use of it only on those items which are obviously unnecessary and invalid, the item veto would serve its purpose of eliminating those projects which are not needed and are included in the bill in order to keep a certain Congressman or a group of Congressmen happy. The check upon the President would obviously be by Congress right to override any veto of the President.

This right to override the President's veto would probably induce Congress to speed up its work on these appropriation bills so that they would still be in session to consider any possible veto by the President. Under the present system, these bills are presented at the end of the session so that the pressure is on the President to approve them in order to get the valid projects into effect. This, of course, brings with it those unnecessary items which the item veto seeks to eliminate and which results in increased taxes to the taxpayer.

The main arguments against the item veto are centered around Congress' unwillingness to relinquish any of its power to the President. If the item veto is used properly, however, the only thing Congress would be giving up is those projects which could not be passed if considered on their own merits. If the vetoed projects are needed, they could be passed by overriding the veto. The Congress, as well as the President, has a duty to the taxpayer to prevent unnecessary increases in taxes, and the use of the item veto would be a positive step toward solving such a problem.

Now, Mr. Speaker, as I stated at the outset, I have introduced three joint resolutions—House Joint Resolution 691, House Joint Resolution 692, and House Joint Resolution 693—which offer three approaches Congress might follow in authorizing the item veto for the President. One would permit him to approve or disapprove separate items in any bill; another would authorize him to disapprove or reduce items in general appropriation bills; and the other would permit the President to approve or disapprove separate items in bills except in those instances where the items had been approved by the interested departments and agencies of the executive branch and by the appropriate committees of Congress.

It is my contention that Congress could act favorably on any one of these resolutions, or a modification of them, without giving away any of its authority, because there is provided in each of them the right for Congress to act separately upon any of the items, disapproved or reduced by the President, and to reinstate them through a two-thirds vote of the House or Senate.

Each item would then be asked to stand on its own merit. This is what we require when anyone comes to us seeking an appropriation. We ask that they either have Bureau of the Budget approval, or that the proper committee weigh all the facts in hearings so that the items can be judged by the Members who are experienced in these matters.

This is the only way we can have any fiscal stability in the Federal Government. Pursuant to our system of checks and balances, whenever Congress deserts its responsibility and includes riders which are not in the public interest, the President should be empowered to exercise some control over these matters. By the same token whenever the Executive requests items which the Congress does not feel are in the public interest, they can be adjusted or eliminated accordingly.

People tell me that I am butting a stone wall in trying to get Congress to grant the item veto authority. I admit that it is not the easiest thing in the world to get recognition for the obvious, but I am convinced that we can get people at the grassroots level thinking about this just as they did about inflation and a sound dollar during the 1st session of the 86th Congress. When they start making their position known, Congress will listen and we will get this needed reform on the books. I assure you that I am going to keep the pressure on and I welcome any and all support my colleagues and the taxpayers want to give me.

COMMENCEMENT ADDRESS AT MILTON ACADEMY BY MRS. FRANCES P. BOLTON

Mr. CHAMBERLAIN. Mr. Speaker, I ask unanimous consent that the gentlewoman from Ohio [Mrs. BOLTON] may extend her remarks at this point in the RECORD and may include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mrs. BOLTON. Mr. Speaker, it was my pleasure and privilege to give the commencement address at Milton Academy, Milton, Mass., on June 11.

It follows:

ADDRESS OF HON. FRANCES P. BOLTON, BEFORE THE GRADUATING CLASS, MILTON ACADEMY, MILTON, MASS., JUNE 11, 1960

Mr. Perry, members of the board, of the wonderful teaching staff of Milton, alumni and friends, and above all others, the graduating class of 1960.

I say with St. Matthew, "It is good for us to be here."

It is a peculiarly challenging assignment given me for this June morning. To have two grandsons in the graduating class and two others coming up is exciting in itself. And then to realize that Boltons have been at Milton over long, long years gives one a deeper sense of what it means to have such a school as this, implanting in one generation after another traditions whose roots go deep, representing as they do the very cornerstones of this great land of ours.

The first generation of Bolton Miltonians sent the twins Irving and Newell who confused everyone. Then Julian—an utterly beguiling creature who sang and danced and generally gayed up the place. The second generation brought Charlie (according

to his housemaster, the freshest boy that ever came to Milton) and Kenyon II who never learned much from books but had a terrific way with him. I seem to remember that there were growls: "Why he's just ruining the school," when the glee clubs got together a bit. And then Ollie. He wasn't here but a few weeks before he was on close bounds—and he stayed on them rather indefinitely that first year.

Nor has the distaff side been without its Boltons. There was Julia who graduated and Polly who didn't. Perhaps there will be others—who can tell?

And now in this generation, Tom and Charlie graduating with KC III and Phil hot on their trail. All these are just one family into which Milton traditions have found their way, and as the matriarch of the lot, I am glad to have opportunity to thank this school here and now for the job done.

And there are many such families represented here today, some larger, some not yet so large, and I am certain that all are deeply grateful for the physical, mental and spiritual disciplines this school has been and still is able to give. For myself, I am proud of every one of my ever-growing group of Milton Boltons.

At one time a very wonderful physician, Dr. Zinsser, worked at the Peter Bent Bingham Hospital with Dr. Harvey Cushing. The two of them could be found in the noon hour at the end of a long and winding cellarway playing violin and flute duets by the light of a candle. It was some 30 years ago that Dr. Zinsser walked up to this place as I have done just now, a bound speech to which he had given much care in his hand. He reached this spot and very quietly laid his manuscript down. Looking about him with a wonderful smile, he spoke of the beauty of the June day with its soft fragrance-laden breeze, of the bird-songs, and the humming of the bees. And he spoke of the hundreds of commencement addresses that so many thousands of boys were having to listen to and then he suggested that we might well find a better season than the exquisite days of spring in which to confine our young people within walls with books and examinations, for spring, said he, is a season when a lad should be free to dream. And then he said something like this: Don't let anyone make you think that your dreams are not true—for verily, they are the essence of truth. It is but for you to make them visible.

Gentlemen of the graduating class, this is a wonderful day and age to have been born into—to my mind the most wonderful in all known history, for everything is so on the move. The glaciers of the polar icecaps are melting far faster than the wisemen of 50 years ago anticipated. So what? you say. The oceans must of necessity rise and encroach unduly rapidly upon the land mass. Will Florida be under water in 20 years, or will it take 5 years or a hundred? And what of all our seacoasts with their great cities? I shan't be here to see but most of you will be. Are you beginning to think about the implications of such changes of the very earth on which we live? I hope so, for you will have to contend with the hardest part of such a period: the actual changes. You will have to find ways to deal with them, will you not? Ways based upon the certainty that there is one changeless law of our universe: the law of change.

And this amazing space age, we are catapulting ourselves into. What of that? Here we are sending missiles of all sorts and sizes into the blue up yonder—piercing the various layers of protection given to earth, and increasing the density of others. Is it not true that the gases we are exploding into our atmosphere accumulate, forming denser ceilings which of necessity hold heat in? And isn't it probable (as some of the scientists tell us) that every time we pierce these surrounds that lie about us there is leakage that brings into our atmosphere bits and pieces of the immeasurable still little known or understood cosmic force which both creates and destroys under universal laws of which we as yet know next to nothing?

You must surely have become aware that the external physical world is demanding more knowledge from you than it did from my generation. Your eyes must be sharper, more observing and the mind to which they bring their observations must be more alert to the implications. Your horizons can no longer be limited by what you actually see. They must expand to the unlimited areas of all those implications.

In the 15th century men looked at the sea's rim and said: "There it ends." It took a Columbus to dream of what might lie beyond and then to inspire a few to build him ships and make it possible for him to finance his voyage. To be sure, others had talked of a passage to India, but Christopher took the chance and as is so often the case, found something very different from his expectations. But his dream was made visible.

We know too that far to the north such men as Leif Ericson, with an equal curiosity and a spirit of bold adventure crossed the seas and found the new world. And there New France was born to the north of us, and along the Gulf of Mexico. And Spaniards settled in Florida and the Southwest and on the Pacific coast. While Russia had outposts in the Alaska we bought from her, making it first a territory and now a State even as the cluster of islands we know as Hawaii has become an integral part of this amazing Union of many States, a Nation conceived in a dream and born of a vision.

Let me ask you, what is a nation? Surely it is not something built of bricks and mortar that will crash to ruins at the first strong blow. Rather, is it an echo from the past and a whisper from the future, the whole bound together by the hopes and fears, the dreams and endeavors, the joys and the anguish in the lives of millions of men and women. It is never static. It is constantly evolving, changing, moving now out, now in, now up, now down, but moving, moving, moving.

We have believed that this Nation of ours came into being with a great destiny. That our Declaration of Independence and especially our Constitution and the Bill of Rights are documentary written under the inspiration of great, overshadowing spiritual forces.

We like to think of ourselves as worthy of all that was given us to do. We like to believe we have upheld the principles laid down in those documents. Yet, "it is for us to prove," as Mr. Lincoln said, "whether that nation, or any nation so conceived and so dedicated, can long endure."

Nearly a century has passed since he spoke those words. How much have we proven? How true have we been to those profound principles that were expressed so all embracingly in our great documents? How true are you and we going to be in the onrushing future? Dare you be true? Or have the words upon your shield had little meaning? Surely it is such schools as Milton that help keep the torch of freedom alight as one class after another meets the challenge here given and steps over the threshold of boyhood into the maturer years of college life.

You have been bits and pieces of the process of the preparation for the living of life as you are going to find it which we call education. You will continue in that process for yet a few years. You still have a little time when you can gather into your minds such knowledge as seems useful to you to fill the need only your own heart knows to be vital to you, the individual, responsible for your actions and above all for the thoughts and dreams which you will transform into action as life opens before you.

You today are closing the door of your childhood and opening the gateway to manhood. Four years of college lie ahead of most of you, years when you still have the opportunity to seek the knowledge you instinctively know you will need if you are to play the part your Milton forebears have played in the many areas of your country's progress. What have you made your very own? For that is all you have to take with you.

Gentlemen of the graduating class of 1960 you come into your manhood at a moment when everything your forebears believed in, every principle they tried to express is being challenged. We are a Union of States, one Nation under God with freedom as our watchword. Once we fought for it and won. Now one fears we take it all too much for granted, though when the freedom of the world was in danger we fought again and again and once again. Nor is the battle won—only the field has been moved to the minds of men and to their economic needs.

What is this freedom that we take so much—too much—for granted?

Back in 1944 when millions of our young men joined up to fight for it again—the Milton roster is a part of the background of your life here—there was written by Russell W. Davenport a poem of America which he called "My Country." I bring you bits and pieces of what he says of freedom.

"Freedom as we live it here in America is
an inheritance from ages past;
Freedom is a spark, whose origin is lost in
ancient times,
A spark that was nourished in Athens,
A spark that was fanned to flame in Galilee
by Him who announced the great and
single law of freedom, that men
should love each other.

Thereafter this flame survived through dark
and dangerous centuries,
And emerged in England, where common
men like you and me learned how
to assert their rights against the
power of kings;
From England this flame was carried across
the Atlantic and lighted in the great,
dark forests of the New World.

Freedom is not an empty word: it springs
From lands in Arkansas and Illinois.
Its being is in men and thoughts and
things.
Forever borne on keels and silver wings.

Freedom is not to limit, but to share;
And freedom here is freedom everywhere."

These are tense days in and through which we are living—testing the mettle of our very souls—testing the quality of the men in government—days of great anxiety not just for ourselves, but for all the free world. So it was good to have a southerner, the dynamic majority leader of the Senate say on May 10 just after the U–2:

"Mr. President, this is certainly a time in which Americans—and people everywhere—must keep their heads. We cannot afford hysteria, panic, or hasty and ill-advised action. There are many unanswered questions about the incident of the American plane that was shot down (not proven) over the Soviet Union. These are serious questions that will have to be considered very carefully by the Congress and by the American people."

On that same day in the House of Representatives, the distinguished gentlemen from Missouri [Mr. CANNON], chairman of

the Committee on Appropriations said in part as follows, and I quote:

"Mr. Chairman, on May 1 the Soviet Government captured, 1,300 miles inside the boundaries of the Russian Empire, an American plane, operated by an American pilot, under the direction and control of the Central Intelligence Agency, and is now holding both the plane and the pilot. The plane was on an espionage mission authorized and supported by money provided under an appropriation recommended by the House Committee on Appropriations and passed by the Congress.

"Although the Members of the House have not generally been informed on the subject, the mission was one of a series and part of an established program with which the subcommittee in charge of the appropriation was familiar, and of which it had been fully apprised during this and previous sessions.

"The appropriation and the activity had been approved and recommended by the Bureau of the Budget and, like all military expenditures and operations, was under the aegis of the Commander in Chief of the Armed Forces of the United States, for whom all members of the subcommittee have the highest regard and in whose military capacity they have the utmost confidence.

"The question immediately arises as to the authority of the subcommittee to recommend an appropriation for such purposes, and especially the failure of the subcommittee to divulge to the House and to the country the justifications warranting the expenditure and all details connected with the item at the time it was under consideration on the floor.

"The answer of the subcommittee is—absolute and unavoidable military necessity, fundamental national defense."

Since then we have been subjected to a shocking exhibition of falsehood and anger from the head of the Communist state. But in our President's dignity and restraint we have seen strength and decency and honor. It was he who said a bit ago:

"The peace we seek is nothing less than the practice and fulfillment of our whole faith among ourselves and in our dealings with others.

"More than an escape from death, it is a way of life.

"More than a haven for the weary, it is a hope for the brave.

"If this be our faith, I humbly believe that we may ask the blessing of God upon our labors."

Many will say to you: We are on the brink of a war which will bring annihilation. But I say to you with great earnestness that this is not so. I say to you that man will not be permitted to destroy the kingdoms of earth in his madness. I would remind you again very quietly that "the earth is the Lord's and the fullness thereof. The world and they that dwell therein." At most we are here but a little while. If we read history as it is written in the rocks, the forests, the plains, the jungles, the deserts, the great river valleys, the mountain chains, man becomes a very tiny part of God's universe, his life but a breath, his death the opening of a door. Yet man builds his own tomorrow. Build well, men of Milton, build well.

But I would say to you on this June morning when you leave your school years behind you: These dark prophecies can, and I believe will be blown away by such as you who will say such things do not have to be. Let us find better ways, certain that the desire of men's hearts and minds differs little and that a bit of commonsense combined with mutual understanding can and will see us through.

Back in the early forties when Europe was bathed once more in blood a young partisan of Yugoslavia whose name was Peter left his wife to fight in the woods against the Nazis. On his body several weeks later was found a letter he had written to his unborn son:

"May you seek always and strive always in good faith and high courage, in this world where men grow so tired.

"Keep your power to receive everything; only learn to select what your instinct tells you is right.

"Keep your love of life but throw away your fear of death. Life must be loved or it is lost; but it should never be loved too well.

"Keep your delight in friendship; only learn to know your friends.

"Keep your intolerance; only save it for what your heart tells you is bad.

"Keep your wonder at great and noble things like sunlight and thunder, the rain and the stars, the wind and the sea, the growth of trees and the return of the harvests, and the greatness of heroes.

"Keep your heart hungry for new knowledge; keep your hatred of a lie; and keep your power of indignation.

"Now I know I must die, and you must be born to stand upon the rubbish heap of my errors. Forgive me for this. I am ashamed to leave you an untidy, uncomfortable world. But so it must be.

"In thought, as a last benediction, I kiss your forehead. Good night to you—and good morning and a clear dawn."

You will not remember much of what I have said, but I hope there may be planted within your hearts and minds a tiny seed that will become a strong tree of understanding as you reach out for more and more knowledge of this earth which is indeed the Lord's of which every one of you is a steward. I hope you will become more and more aware of its magnificence.

I find myself impelled to give you (with one word changed) words spoken by Pericles about 440 B.C.

"Fix your eyes on the greatness of America (Athens) as you have it before you day by day. Fall in love with her, and when you feel her great, remember that this greatness was won by men with courage, with knowledge of their duty."

These men dared to be true even as you will dare, God keeping you.

THE 330TH ANNIVERSARY OF DORCHESTER, MASS.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 5 minutes and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, this year marks the 330th anniversary of the settlement of Dorchester, Mass. The group destined to settle Dorchester gathered in Plymouth, England, and organized a church fellowship with the Reverend John Warham and the Reverend John Maverick as their ministers. On March 20, 1630, they boarded the *Mary and John*, a vessel of 400 tons, and set forth across the Atlantic.

Between May 30, the date of the landfall, and June 6, the settlers landed with their belongings to the south of the neck called Mattapannock by the Indians. Crossing to higher land they raised crude huts of boughs and canvas to serve them as shelter through the summer, and they were already building their new homes when Winthrop in the *Arbella* reached Salem Harbor.

In 1631, as soon as the settlers had erected simple thatch-roofed cabins, they built their first meetinghouse. This meetinghouse, located on a section later known as Allen's Plain, in the heart of Old Dorchester, served as a place of worship, a civic center, a school, a place for the storage of valuables, and a powder magazine. In 1645 a larger and more comfortable meetinghouse was built on the same spot. The first houses were built along a road running from the meetinghouse to the Rock Hill of the settlers, the Savin Hill of today, where a fort was located.

On September 7, 1630, the colonial authorities ordered that the community at Mattapan should be called Dorchester. The settlement was no longer nameless but it still lacked any organized local government. The clergymen, with the advice of the magistrates, Roger Ludlow and Edward Rossiter, settled the strictly local problems that arose. On October 8, 1633, however, it was ordered that "the men of the colony should meet on every Monday evening, at the meeting house, there to settle and set down such orders as may tend to the general good, and every man to be bound thereby without gainsaying or resistance." On this evidence is based Dorchester's claim to having founded the system of local government by town meeting which has so strongly influenced the development of our American system of government.

A source of pride to citizens of Dorchester is the leading part taken by the town in the development of public education. According to the explicit directions of the Reverend John White, the settlers provided for the education of their youth as soon as possible. In 1639, close to their first meetinghouse, they built their first school. By vote of the town on May 30, 1639, it was provided that the salary of the master be paid by the town from the income derived from fees assessed upon the freemen who pastured sheep on Thompson's Island. As over 70 freemen were affected by this ordinance, Dorchester has a valid claim to having established the first school in America to be supported by a direct tax upon the inhabitants. As the town's appropriation was not sufficient to meet all the expenses of maintaining a school, a small sum was charged each pupil for tuition, payable in either money or firewood. Girls were not admitted until 1784, although the original law left to the discretion of the town officials the question of "whether maids shall be taught with the boys or not." The first master was the Reverend Thomas Waterhouse, who later became headmaster of a school in Colchester, England.

The people of Dorchester, although strongly attached to the mother country, were determined to defend the liberties sought by their ancestors in the New World. The town records show that in 1765 Representative John Robinson was instructed to work for the repeal of the Stamp Act, and in 1770 resolutions pledging the townspeople to refrain from

using goods of British origin were adopted. When armed resistance became a possibility, a committee of correspondence was appointed to consult with committees of other towns. In 1774 Dorchester played an important part in the drawing up of the Suffolk Resolves, which anticipated by their tone the more famous Declaration of Independence adopted at Philadelphia 2 years later. In all, 350 Dorchester men fought in the Revolution. Dorchester militia joined the patriot army after Lexington, fought at Bunker Hill, were furloughed the following autumn, but were mustered into service again in February 1776, in time to take part in the masterly maneuver by which Washington drove the British from Boston. With the British menace gone, the town continued its loyal support of the Revolutionary cause, and on May 23, 1776, passed a resolution pledging its aid if the Continental Congress saw fit to declare the independence of the colonies.

Dorchester's first industry was a mill for grinding corn erected on the Dorchester side of the Neponset in 1634. A powder mill built on the south side of the Neponset in 1675 was later expanded to the Dorchester side. The manufacture of paper, chocolate, tinplate, britanniaware, and textiles were other early industrial enterprises of the area.

During the Civil War, Dorchester's sons rallied nobly to the flag. With a population of only 10,000, the town sent 1,342 men to war, 97 of whom lost their lives. Company K of the 11th Massachusetts was recruited in the town and saw 3 years of service.

In 1869 the people of Dorchester voted, 928 to 726, for annexation to Boston, and on January 4, 1870, the political existence of the town ended. But spiritually Dorchester lives on. In its contribution to the development of the rest of our country and in its own steadfast devotion to education and to representative government, Dorchester represents all that is finest in our American heritage.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Appendix of the RECORD, or to revise and extend remarks, was granted to:

Mr. RIVERS of Alaska.

Mr. DADDARIO in two instances.

Mrs. KEE.

Mr. KING of Utah.

Mr. MASON.

Mr. HOSMER.

Mr. FORAND, to revise and extend his remarks made in Committee and to include extraneous matter.

Mr. CURTIS of Missouri, also to revise and extend his remarks made in Committee and to include extraneous matter.

Mr. FLYNN.

Mr. PORTER (at the request of Mr. McCORMACK) and to include tables with his remarks on H.R. 12580.

Mr. KARTH (at the request of Mr. McCORMACK), his remarks on H.R. 12580 and to include tables.

(At the request of Mr. CHAMBERLAIN, and to include extraneous matter, the following:)

Mr. SCHWENGEL.

Mr. SPRINGER.

(At the request of Mr. McCORMACK, and to include extraneous matter, the following:)

Mr. BOWLES.

Mr. JOHNSON of Colorado in five instances.

ENROLLED BILL SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 765. An act making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 762. An act for the relief of Manuel Alves de Carvalho;

S. 2089. An act for the relief of Henry K. Lee (Hyun Kui);

S. 2106. An act for the relief of Emiko Nagamine;

S. 2528. An act for the relief of John Lipset;

S. 2639. An act for the relief of Mo Tong Lui;

S. 2646. An act for the relief of Lloyd C. Kimm;

S. 2681. An act for the relief of Yi Young An;

S. 2768. An act for the relief of Frederick T. C. Yu and his wife, Alice Siao-Fen Chen Yu;

S. 2822. An act for the relief of Low Wing Quey (Kwai);

S. 2886. An act for the relief of Nikolija Lazic;

S. 2918. An act for the relief of Boris Priestley;

S. 2942. An act for the relief of Eugene Storme;

S. 2964. An act for the relief of Kang Sun Ok;

S. 2991. An act for the relief of Ah See Lee Chin;

S. 3016. An act for the relief of Walter F. Beecroft;

S. 3038. An act for the relief of Jung Hi Pak;

S. 3049. An act for the relief of Oh Chun Soon;

S. 3091. An act for the relief of Pasquale Mira;

S. 3130. An act for the relief of Anne-Marie Stehlin; and

S. 3235. An act for the relief of Cecilia Rubio.

BILLS AND JOINT RESOLUTIONS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills and joint resolutions of the House of the following titles:

H.R. 1543. An act for the relief of Angela D'Agata Nicolosi;

H.R. 2007. An act for the relief of May Hourani;

H.R. 3242. An act for the relief of Mrs. Virginia Lee Sage;

H.R. 5530. An act for the relief of Leila Bernstorff Grauert;

H.R. 5738. An act to authorize the Secretary of the Army to transfer to the Waukegan Port District the commitment of the city of Waukegan, Ill., to maintain a public wharf in Waukegan Harbor on land conveyed to the city in 1914, and for other purposes;

H.R. 5850. An act for the relief of the borough of Ford City, Pa.;

H.R. 6149. An act for the relief of Wesley C. Newcomb;

H.R. 6456. An act concerning payment of debts out of compensation for trust land on the Lower Brule Sioux Reservation taken by the United States;

H.R. 6498. An act concerning payment of debts out of compensation for trust land on the Standing Rock Sioux Reservation taken by the United States;

H.R. 6529. An act concerning payment of debts out of compensation for trust land on the Crow Creek Sioux Reservation taken by the United States;

H.R. 7480. An act to amend the Federal Food, Drug, and Cosmetic Act, with respect to label declaration of the use of pesticide chemicals on raw agricultural commodities which are the produce of the soil;

H.R. 7847. An act to make the uniform law relating to the record on review of agency orders (Public Law 85–791) applicable to the judicial review of orders issued under the Federal Aviation Act of 1958 and the Food Additives Amendment of 1958;

H.R. 8457. An act for the relief of Richard Schoenfelder and Lidwina S. Wagner;

H.R. 9028. An act to provide that certain funds shall be paid to the Kickapoo Tribal Council of Oklahoma;

H.R. 9226. An act for the relief of Pietro Mela;

H.R. 9652. An act for the relief of Lt. Col. Alonzo C. Tenney;

H.R. 10631. An act for the relief of George T. Moore, Carl D. Berry, and Dr. Harold J. Heck;

H.R. 10639. An act to amend section 3(b) of the act of May 9, 1958 (72 Stat. 105), relating to the preparation of a roll of the members of the Otoe and Missouria Tribe and to per capita distribution of judgment funds;

H.R. 10840. An act to amend Public Law 85–626 relating to dual rate contract agreements;

H.R. 11161. An act to donate to the pueblos of Zia and Jemez a tract of land in the Ojo del Espiritu Santo grant, New Mexico;

H.R. 11615. An act to amend section 4 of the Watershed Protection and Flood Prevention Act;

H.R. 11706. An act to authorize an extension of time for final proof under the desert land laws under certain conditions;

H.R. 11952. An act to repeal the act of May 29, 1958, which authorized and directed the Administrator of General Services to provide for the release of restrictions and reservations contained in an instrument conveying certain land by the United States to the State of Wisconsin;

H.R. 11985. An act to make American nationals eligible for scholarships and fellowships authorized by the National Science Foundation Act of 1950;

H.R. 12115. An act to extend the minimum national marketing quota for extra long staple cotton to the 1961 crop;

H.J. Res. 696. Joint resolution to provide for the designation of the month of September 1960, as "National Wool Month"; and

H.J. Res. 765. Joint resolution making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960.

ADJOURNMENT

Mr. McCORMACK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 19 minutes p.m.), under its previous order, the House adjourned until tomorrow, Thursday, June 23, 1960, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2287. A letter from the Comptroller General of the United States, transmitting a report on the audit of the Federal Housing Administration, Housing and Home Finance Agency, for the fiscal year ended June 30, 1959 (H. Doc. No. 430); to the Committee on Government Operations and ordered to be printed.

2288. A letter from the Acting Secretary of the Interior, transmitting a report on the Western Division, The Dalles project, Oregon, pursuant to section 9(a) of the Reclamation Project Act of 1939 (53 Stat. 1187) (H. Doc. No. 431); to the Committee on Interior and Insular Affairs and ordered to be printed with illustrations.

2289. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled "a bill to amend the act of June 19, 1948, relating to the workweek of the Fire Department of the District of Columbia, and for other purposes"; to the Committee on the District of Columbia.

2290. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in the cases of certain aliens who have been found admissible to the United States, pursuant to the Immigration and Nationality Act; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BROOKS of Louisiana: Committee on Science and Astronautics. Report on Army lunar construction and mapping program (Rept. No. 1931). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON: Committee on Government Operations. Seventeenth report pertaining to electric power contract for Yellowstone National Park; without amendment (Rept. No. 1932). Referred to the Committee of the Whole House on the State of the Union.

Mr. BARDEN: Committee on Education and Labor. H.R. 12677. A bill to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in activities affecting commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes; without amendment (Rept. No. 1933). Referred to the Committee of the Whole House on the State of the Union.

Mr. HARMON: Committee on Post Office and Civil Service. H.R. 11531. A bill to amend the act entitled "An act authorizing the Postmaster General to adjust certain claims of postmasters for loss by burglary, fire, or other unavoidable casualty," approved March 17, 1882, as amended, and for other purposes; with amendment (Rept. No. 1934). Referred to the Committee of the Whole House on the State of the Union.

Mr. VINSON: Committee of conference. H.R. 5888. A bill to authorize the Secretary of the Navy to transfer to the Massachusetts Port Authority, an instrumentality of the Commonwealth of Massachusetts, certain lands and improvements thereon comprising a portion of the so-called E Street Annex, South Boston Annex, Boston Naval Shipyard, in South Boston, Mass., in exchange for certain other lands (Rept. No. 1935). Ordered to be printed.

Mr. FORRESTER: Committee on the Judiciary. H.R. 12622. A bill to amend chapter 85 of title 28 of the United States Code relating to the jurisdiction of the U.S. district courts, and for other purposes; without amendment (Rept. No. 1936). Referred to the House Calendar.

Mr. COOLEY: Committee on Agriculture. H.R. 12705. A bill to delay for 60 days in limited cases the applicability of certain provisions of law relating to humane slaughter of livestock; without amendment (Rept. No. 1937). Referred to the Committee of the Whole House on the State of the Union.

Mr. O'BRIEN of Illinois: Committee on Ways and Means. H.R. 9240. A bill to amend the Tariff Act of 1930 to authorize informal entries of merchandise where the aggregate value of the shipment does not exceed $400; without amendment (Rept. No. 1938). Referred to the Committee of the Whole House on the State of the Union.

Mr. TOLL: Committee on the Judiciary. S. 1321. An act to authorize the Attorney General to consent, on behalf of the Library of Congress Trust Fund Board, to a modification of the terms of a trust instrument executed by James B. Wilbur; with amendment (Rept. No. 1952). Referred to the Committee of the Whole House on the State of the Union.

Mr. BONNER: Committee of conference. H.R. 10644. A bill to amend title V of the Merchant Marine Act, 1936, in order to remove certain limitations on the construction differential subsidy under such title (Rept. No. 1953). Ordered to be printed.

Mr. COOLEY: Committee on Agriculture. H.R. 12759. A bill to amend title V of the Agricultural Act of 1949, as amended, and for other purposes; without amendment (Rept. No. 1954). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. WALTER: Committee on the Judiciary. S. 598. An act for the relief of Anthony Di Giovanni; without amendment (Rept. No. 1939). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. S. 1409. An act for the relief of Donald B. Thurston and other employees of the Fish and Wildlife Service; without amendment (Rept. No. 1940). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. S. 1600. An act for the relief of Grace L. Patton; without amendment (Rept. No. 1941). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. S. 2548. An act for the relief of Henry C. Larson; without amendment (Rept. No. 1942). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 2585. An act for the relief of Josephine Lue Fan (also known as Josephine Fook-Lau), Joseph Lue Fan (also known as Joseph Lew-Fan), and Aura Joan Lue Fan; with amendment (Rept. No. 1943). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 2689. An act for the relief of Hwachii Lien; without amendment (Rept. No. 1944). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 2855. An act for the relief of Brenda Nicholson Miller; without amendment (Rept. No. 1945). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. S. 3105. An act for the relief of William Y. Allen, Jr., Donald Baldwin Quintero, Johann Friedrich Stapelfeld, and Kenneth Gordon Woods; without amendment (Rept. No. 1946). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. S. 3125. An act for the relief of Robert William Neal, Robert J. Naumann, Charles LeRoy Van Slyke, and Franklin Jordan; without amendment (Rept. No. 1947). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 5284. A bill for the relief of Christine Fahrenbruch, a minor; without amendment (Rept. No. 1948). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 6767. A bill for the relief of Raymond Baurkot; without amendment (Rept. No. 1949). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 7035. A bill for the relief of Hattie and Joseph Patrick, Sr., and for the legal guardian of Betty Ann Smith and the legal guardian of Stanley Smith, and for the legal guardian of James E. Harris, Jr.; with amendment (Rept. No. 1950). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 12617. A bill for the relief of Robert Finley Delaney; without amendment (Rept. No. 1951). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BASS of New Hampshire:

H.R. 12769. A bill relating to the reporting by Members of the House of Representatives of expenditures from the contingent fund of the House of Representatives and of expenditures of counterpart funds by Members of Congress; to the Committee on House Administration.

By Mr. FARBSTEIN:

H.R. 12770. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer a deduction from gross income for loss of earnings resulting from jury duty; to the Committee on Ways and Means.

By Mrs. MAY:

H.R. 12771. A bill for the allocation of costs on the Wapato-Satus unit of the Wapato Indian irrigation project; to the Committee on Interior and Insular Affairs.

By Mr. OLIVER:

H.R. 12772. A bill creating a commission to be known as the Commission on Noxious Printed and Pictured Material; to the Committee on Education and Labor.

By Mr. WOLF:

H.R. 12773. A bill to authorize a program of balanced agricultural production, to assure producers a fair economic return and consumers an adequate supply of commodities at fair prices, to conserve soil, water, and wildlife resources, and for other purposes; to the Committee on Agriculture.

By Mr. BECKWORTH:

H.R. 12774. A bill to amend title II of the Social Security Act to permit the payment of disability insurance benefits to an individual otherwise qualified therefor, from the beginning of such individual's disability; to the Committee on Ways and Means.

By Mr. DAVIS of Georgia:

H.R. 12775. A bill to increase the relief or retirement compensation of certain former members of the Metropolitan Police force, the Fire Department of the District of Columbia, the U.S. Park Police force, the White House Police force, and the U.S. Secret Service; and of their widows, widowers, and children; to the Committee on the District of Columbia.

By Mr. MITCHELL:

H.R. 12776. A bill to authorize the enlargement of the Arlington National Cemetery and to provide that land therein shall be reserved for the interment of persons who have served with greatest distinction and valor in the Armed Forces of the United States as a memorial to the preservation of our freedoms and the ideals of democracy, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. ZELENKO:

H.R. 12777. A bill to amend the Longshoremen's and Harbor Workers' Compensation Act, as amended, to provide increased benefits in case of disabling injuries, and for other purposes; to the Committee on Education and Labor.

By Mr. CLARK:

H.R. 12778. A bill relating to the application of section 481 of the Internal Revenue Code of 1954 to taxable years to which the Internal Revenue Code of 1939 applies; to the Committee on Ways and Means.

By Mr. DAVIS of Georgia:

H.R. 12779. A bill to increase the salaries of officers and members of the Metropolitan Police force and the Fire Department of the District of Columbia, the U.S. Park Police and the White House Police, and for other purposes; to the Committee on the District of Columbia.

By Mr. FASCELL:

H.R. 12780. A bill to expand and extend the saline water conversion program under the direction of the Secretary of the Interior to provide for accelerated research, development, demonstration, and application of practical means for the economical production, from sea or other saline waters, of water suitable for agricultural, industrial, municipal, and other beneficial consumptive uses, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. CELLER:

H.J. Res. 768. Joint resolution to provide for the determination of U.S. participation in the New York World's Fair to be held at New York City in 1964 and 1965; to the Committee on Foreign Affairs.

By Mr. DELANEY:

H.J. Res. 769. Joint resolution to provide for the determination of U.S. participation in the New York World's Fair to be held at New York City in 1964 and 1965; to the Committee on Foreign Affairs.

By Mrs. KELLY:

H.J. Res. 770. Joint resolution to provide for the determination of U.S. participation in the New York World's Fair to be held at New York City in 1964 and 1965; to the Committee on Foreign Affairs.

By Mr. MILLER of New York:

H.J. Res. 771. Joint resolution to provide for the determination of U.S. participation in the New York World's Fair to be held at New York City in 1964 and 1965; to the Committee on Foreign Affairs.

By Mr. BARING:

H. Res. 567. Resolution expressing the sense of the House of Representatives with respect to the administration by the Secretary of Commerce of the Federal-aid highway program; to the Committee on Public Works.

By Mr. THOMPSON of New Jersey:

H. Res. 568. Resolution expressing the sense of the House of Representatives with respect to the administration by the Secretary of Commerce of the Federal-aid highway program; to the Committee on Public Works.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. MADDEN:

H.R. 12781. A bill for the relief of Dinko Dorcik; to the Committee on the Judiciary.

By Mr. WIDNALL:

H.R. 12782. A bill for the relief of Ido Enrico Cassandro; to the Committee on the Judiciary.

Mr. MADDEN:

H.R. 12783. A bill for the relief of Janiana Tekla Gruszkos; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

504. By Mr. MONAGAN: Petition of Veterans of Foreign Wars of the United States, Department of Connecticut, recommending the continued support of an identifiable veterans' employment service and that Congress appropriate sufficient funds to continue this program; to the Committee on Veterans' Affairs.

505. By the SPEAKER: Petition of Alan G. Freeland, Lions International District No. 50, Lahaina, Maui, Hawaii, relative to applauding the State Department for its selection of Hawaii as the site for an international center known as the East-West Center, and requesting sufficient appropriations to provide for the operation, administration, scholarships and grants, and capital improvements thereof; to the Committee on Foreign Affairs.

506. Also, petition of Peter Petrusaitis, secretary, Lithuanian American Council, Inc., Racine, Wis., relative to protesting the forcible occupation of Estonia, Latvia, and Lithuania by Soviet Russia 20 years ago; to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

Alaska Shipping

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. RIVERS of Alaska. Mr. Speaker, my purpose is to submit for the consideration of my colleagues a much needed clarification of the extension of remarks of Hon. THOMAS M. PELLY of Seattle, Wash, published in the CONGRESSIONAL RECORD on Tuesday, June 21, under the title of "The Alaska Shipping Crisis." In speaking of the proposal contained in S. 2669 to extend for 2 years existing provisions of law which exempt from Coast Guard inspection and manning requirements certain vessels operated by a merchants' cooperative association between Seattle, Wash., and Alaska, Mr. PELLY creates the impression that the exempted ships operate throughout the Alaska trade and are ruining the principal common carrier in the Alaska trade, to wit: his constituents, the Alaska Steamship Co. of Seattle, Wash.

In fact, these small vessels are operated to accomplish only two round trips weekly through the inland waters of the Pacific coast from Seattle to Alaska and serve only the communities of the southeastern panhandle of Alaska, wherein live from 15 percent to 20 percent of the people of Alaska. As regards the southeastern portion of the Alaska trade, the Alaska Steamship Co. is without competition from any other common carrier except a minor amount of air freight delivered by airplane. As to these small boats operated by the merchants' association, such competition as they can afford is limited within their small capacity to a few principal ports in southeastern Alaska. The most important function of these small vessels is to deliver cargo to many small towns and villages which are not given any service by Alaska Steam, or only infrequent and intermittent service, thus relieving Alaska Steam of many calls which would be uneconomical for its big freighters.

The bulk of the Alaska trade is to the westward, including the railbelt, and covers about 80 percent of the people of Alaska, and is served by Alaska Steam and two barge lines. This major portion of the trade is not affected in the least by the small vessel operations in question. I can, therefore, say positively that these small boat operations to southeastern Alaska have had very little to do with the fact that Alaska Steam has increased its freight rates 26 percent throughout the Alaska trade during the last 2½ years.

As further clarification, I wish to point out that the first editorial from the Anchorage Daily Times included by Mr. PELLY in his extension of remarks on the subject of a possible widespread cur-

tailment of service to Alaska by the Alaska Steamship Co. has proved to be a false alarm. Under date of June 10, 1960, there was transmitted to me a press release denying the rumor of such curtailment of service, reading as follows:

Alaska Steamship Co. has never considered abandonment of service as reported out of Washington, D.C., by the Anchorage Times. It is true that we face serious problems: competitive conditions, rising operating costs, possible loss of mail revenue, and difficulties in trying to make a reasonable return. However, the thought of eliminating service to all ports but Seward and Whittier has never crossed our minds. Depending on our ability to cope with the problems faced, it may become necessary to consider some curtailment of service. That time has not yet come.

Economic Recovery Does Not Require the Stimulus of Increased Defense Spending

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the other day, in the course of consideration of the tax-extension bill, it was alleged that it required the Korean war to bring the economy out of the depression into which it had slipped during 1949. I replied at the time, using annual data.

Upon my return to my office I happened to pick up an article entitled "Underwriting Prosperity" by Harold I. Lunde, an associate professor of economics at Macalester College, who reviews the economic situation between 1948–49 and 1949–50, comparing the peaks and troughs of 1948, 1949, and 1950 on the basis of quarterly data. Professor Lunde establishes, on the basis of an analysis of the data on a quarterly basis, that there was a $17 billion gain, or recovery, before Korea. His analysis is as follows:

Economic changes in 1948–49 (in billions of dollars)

Gross national product	−9
Consumption	+3
Private investment	−14
Houses	+1
Factories and Tools	−5
Inventories	−10
Foreign investment	−1
Federal Government	0
State and local	+3

High: 1948 4th quarter GNP equals 266.
Low: 1949 4th quarter GNP equals 257.

This was a modest 3½ percent recession. GNP fell $9 billion from a peak of $266 billion. The recession lasted 1 year from top to bottom. Unemployment reached 4.6 million or 7 percent of the labor force.

Business spending for factories, tools and inventories fell $15 billion. Net foreign investment decreased by another billion. This gross decline of $16 billion was offset by a $3 billion rise in consumption, a $1 billion increase in housing, and a $3 billion gain in State and local government spending. Federal spending did not change. The gains add up to $7 billion. Thus the decline in GNP was held to only $9 billion.

1949–50 recovery before Korea

[In billions of dollars]

Gross national product	+17
Consumption	+6
Private investment	+17
Houses	+3
Factories and tools	+3
Inventories	+11
Foreign investment	−1
Federal Government	−5
State and local	0

Low: 1949, 4th quarter GNP=257.
High: 1950, 2d quarter GNP=274.

GNP increased $17 billion in 6 months after the bottom of the recession was reached. This recovery, in only half the time taken by the decline, was almost twice the size of the recession.

Government spending did not bring the recovery. Federal expenditures fell $5 billion while State and local spending remained unchanged. Foreign investment declined another billion dollars. This total decline of $6 billion was overpowered by a $17 billion growth in private investment and a $6 billion gain in consumption.

Mr. Speaker, this reinforces my view that economic recovery did not, and does not, require the stimulus of increased defense spending.

Afghan-Pan American Agreement

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. BOWLES. Mr. Speaker, the gentleman from New York [Mr. ROONEY] and others have strongly praised the efforts of Pan American World Airways in helping the Government of Afghanistan to modernize its air transportation system. I would like to endorse Mr. ROONEY's views and to add my hope that the unique relationship that has been worked out in this instance between an American corporation and a foreign government may be considered as a model for similar agreements.

One of our greatest national assets is the drive and ability of many of our business leaders. It is essential that we develop new means by which this know-how and experience can be used to help new underdeveloped countries to build up their economies.

Under the Afghan-Pan American Agreement, the Government is able to take advantage of the experience of Pan American through a management contract and to offer further incentives through a minority stock interest.

In many cases American companies will invest their own capital abroad in plants which they own and control. In other cases the new ground pioneered by Pan American may help bring to bear American executive skills which otherwise would not be available.

Defense Appropriations and the Bomarc Program

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. KING of Utah. Mr. Speaker, as the conference committee of the House and the Senate meet today to resolve the differences between the House bill and Senate bill on the defense appropriation for fiscal 1961, I call upon the House Members participating in that conference to accept the action of the other body on the procurement of Bomarc missiles.

I do so because the Senate bill reflects the latest and best clarification of the importance of the Bomarc program in the maintenance of a strong continental defense system.

When the other body approved in full the Air Force request for Bomarc funds, it enjoyed the benefits of, and was acting upon, information which was not available at the time the House passed its defense appropriation bill. At the time the House acted on this appropriation, the Bomarcs had not entirely proved themselves to be effective weapons. Even so, the Air Force felt that its Bomarc request represented its best judgment on the importance of the Bomarc missile in the defense of this Nation and our neighbor to the north, Canada. The judgment of the Air Force has since been confirmed by several completely successful performances which the Bomarcs have made in test flights against simulated enemy aircraft, and in the recent Senate action restoring the cut by the House made in Bomarc funds.

In my judgment the Senate action represents the practice of sound economy, because the Bomarc program, as projected by the Air Force, would be less costly than the alternative which the House approved. When the House cut the Bomarc request, it authorized expenditures for the procurement of additional F–106 jet fighters to do the defense job which the Air Force has intended that the Bomarcs do. At a greater cost, the F–106's cannot do the job which the Bomarcs would do, simply because the F–106's cannot be constructed and integrated into a continental defense system as quickly as the Bomarcs can.

If the conferees of the House and the other body reach agreement today on the defense appropriation, their report may reach the House floor tomorrow. I urge not only that the House conferees endorse the action of the other body on the

Bomarc request, but also that the House itself concur in this action for these reasons: First, as I have already observed, the Senate action represents the best judgment not only of its Members, but of our military experts on the proper and necessary role of the Bomarcs in our defense program. Second, that the Bomarcs will give us a greater overall defense capability at less cost than would the alternative of using jet fighters which, at the same time, cannot be procured as quickly as Bomarcs. And last, that the approval of the Bomarc request will permit the Air Force to fulfill our obligation to our Canadian allies to provide the Bomarcs to fill the launching sites which the Canadian Government already has under construction.

Highway Safety

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. HOSMER. Mr. Speaker, in the late 1930's it was recognized that the nonuniformity of traffic control devices throughout the country posed dangers to life and property for the country's increasingly mobile population. By December 20, 1944, Federal legislation was passed implementing uniformity as recommended by the Bureau of Public Roads and a joint committee composed of representatives of the American Association of State Highway Officials, the Institute of Traffic Engineers, and the National Committee on Uniform Traffic Laws. The joint committee now also includes representatives of the American Municipal Association and the National Association of County Officials.

A manual on "Uniform Traffic Control Devices for Streets and Highways" was issued for nationwide guidance by the Bureau of Public Roads. The last edition was published in 1948 and amended in 1954.

A general revision of the basic manual, approved by the organization represented on the joint committee and by the Bureau of Public Roads, the American Standards Association, and other national organizations, will soon be issued. It will be an up-to-date guide covering modern standards for signs, signals, and pavement marking for all classes of roads and streets. Included for the first time will be standards for modern expressways, including the Interstate System. Also included for the first time will be standard signs for safe traffic control during construction and maintenance operations.

It has been generally accepted that these uniform standards have been a big factor in traffic safety in this Nation. This is one of the important findings of the Bureau of Public Roads recent report to Congress on "The Federal Role in Highway Safety."

The longstanding and meticulous attention which has been paid to this matter of uniform standards is undoubtedly responsible for the avoidance of many thousands of fatal and nonfatal highway and road accidents.

In fact, today the principal cause of automobile accidents is recklessness, which includes violation of traffic laws and inattentiveness. In this connection, Senator CLIFFORD P. CASE, of New Jersey, has pointed out the way in which effective Federal action should again be employed to eliminate today's major cause of highway and street accidents. His article on the subject, recommending a national clearinghouse for major traffic offenses, the equivalent of the FBI's criminal files, appeared in the RECORD on June 6 at page 11862.

Senator CASE has embodied his ideas in the bill S. 3635, now pending before the Senate Interstate and Foreign Commerce Committee. It deserves the support of all.

Urgent Need for National Fuels Policy

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the CONGRESSIONAL RECORD, I include copy of my newsletter released on Monday of this week:

K-E-E-N-O-T-E-S

(By Representative ELIZABETH KEE)

One of the big disappointments of the present session of Congress has been the failure to face up to the urgent need for a national fuels policy.

The future security and welfare of this great Nation depends upon the availability at all times—in times of peace as well as in times of emergency—of a dependable supply of fuel to feed an ever-growing industrial plant. Yet, in spite of this stark reality with which no one can seriously disagree, Congress has dragged its feet because, apparently, of a distortion by some groups of the purposes of a study which has been proposed to prepare such a policy.

It simply does not make sense for the United States to squander its vital fuel resources as we have done in past years. We allow low-cost residual fuel oil to be imported into this country and dumped along the east coast at a price that is always just a little below the cost of coal.

We permit gas to be imported into this country and then dumped at below cost prices in slack seasons to fire steam boilers—a most wasteful and uneconomic use of a good fuel. Both of these things result in decreased markets for coal.

Almost all other major industrial nations have a unified fuels policy. They do not permit a shameful waste of a valuable resource. They have studied their needs and the supply of fuels. They have come up with a cordinated program that uses the fuel supply in the most efficient, economic manner possible.

I am among those Members of Congress who are sponsoring a bill calling for the creation of a joint committee of Congress to thoroughly investigate all factors affecting America's fuel needs, giving full consideration to the national welfare, the defense needs of the Nation and the economic well-being of all domestic industries, and to come up with specific recommendations to Congress.

This simple, plain proposal has been opposed on the ground that it will lead to Government control of how the end-use product will be used. Unfortunately, this argument, based entirely upon a misrepresentation of the purposes and meaning of the resolution, has succeeded in blocking consideration or even congressional debate on this vital issue.

It now appears we will not be able to obtain approval of the resolution this year. But I can assure you that when the 87th Congress convenes next year a proposal for the study of a national fuels policy will be one of the first measures introduced.

DEVELOPMENTS IN JAPAN GREAT TRAGEDY

The cancellation of the President's trip to Japan because of the inability of the Japanese to control street rioters could be the forerunner of serious trouble in this heretofore stable ally country of the Orient.

It appears that the present Japanese Government has lost control of the situation. Obviously, the President would have been in grave personal danger had he made his scheduled trip to Japan.

This development is doubly tragic. Not only is it a severe diplomatic blow to this country and to the West in general, but it places democracy in Japan in jeopardy. Should the worst happen and a Communist-inclined government take over in Japan, we will have suffered a major defeat.

Japan's resurgence since the war has been miraculous. A genuine democratic government has been successfully installed. The nation has made great economic progress. Japan has been a stanch ally in the fight for freedom which we can ill afford to lose. In fact, the loss of Japan would unhinge our entire defensive system in the Far East.

We in this country simply must not lose patience with Japan as a result of this unfortunate development. We need to encourage and strengthen the forces there which believe in freedom.

The Scottish Highlanders of the State University of Iowa Leave on European Tour

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. SCHWENGEL. Mr. Speaker, today the 73 members of the world famous Scottish Highlanders, all-girl bagpipe band from the State University of Iowa, sail aboard the *Queen Elizabeth* for England, as the first oversea stop on a 54-day tour abroad.

The Highlanders will perform in London on June 30 and July 6. Then they will travel to Scotland and perform in Edinburgh, Elgin, Aberdeen, Falkirk, and Dumferline during the period of July 7 through July 17. Their tour will take them to Paris on July 18, after which they will travel to Amsterdam, Cologne, Mainz, Frankfort, Rome, and Berne be-

fore returning to Paris on August 4. On this same day they will sail from Cherbourg and arrive back in the United States August 9.

As one of the first stops on this year's tour, the Highlanders spent 2 days last week in Washington, D.C. They presented a public performance at Sylvan Theater last Thursday night. On Friday, they were welcomed to the White House and left a memento for President and Mrs. Eisenhower. After a tour of the Capitol and a visit to the Senate, where they were officially recognized from the floor by Iowa's Senator HICKENLOOPER, they were met by Vice President NIXON and members of the Iowa congressional delegation.

The Highlanders captivate audiences wherever they go. They are excellent good-will ambassadors, not only for the Hawkeye State, but for the entire United States. They are first-rate examples of the alert, good-looking, wholesome, and intelligent American college girls who attract attention and praise everywhere. They contribute to the image of America where outright friendliness is one of our greatest attributes.

This group is the largest bagpipe band in the world. Since its formation in 1937 the hundreds of student members of this group have traveled over 80,000 miles and appeared before 5 million persons, not including television appearances.

The Scottish Highlanders have appeared in 32 States, visited both U.S. coasts, performed twice in the Rose Bowl, and have twice—1952 and 1956—toured Europe, including England, Scotland, France, Germany, Holland, and Switzerland.

This unique bagpipe band was formed in 1937 as an all-male military—ROTC—unit. The change from men to coeds came in 1943 when the wartime shortage of men on the Iowa campus threatened the existence of the band. Director Adamson invited the coeds to continue the organization "until the boys come back," but the feminine membership has proved so popular that the girls continue to wear the kilts. No academic credit is given for participation in the Highlanders.

In addition to playing traditional Scottish tunes, the Highlanders are noted for their colorful marching maneuvers, intricate Scottish dances, and a cappella chorus, directed by Judy Croft of Norwalk, Iowa, who also doubles as a piper. In the "Drum Dance," a novelty number originated by the Highlanders, Nancy Henderson, senior in elementary education from St. Joe, Ark., dances the highland fling atop a bass drum held aloft on the shoulders of six of her fellow Highlanders.

Making the tour this year are the director of the Highlanders, William Adamson; Mrs. Adamson and their children, Heather and John; Mr. Adamson's secretary, Nadine Thornton; Phyllis Fleming; the drum major, Margaret Ladd, and the following members of the band. Their hometowns are in Iowa unless otherwise indicated.

Miriam L. Avey, Marshalltown; Emilie Blume, Sioux City; Barbara Broholm, Wilmette, Ill.; Beveraly Jo Bruce, Newton; Gale Chandler, Rockford, Ill.; Sharon J. Conger, Riceville; Judy Ann Croft, Norwalk; Virginia Mary Dunn, Columbus Junction; Eleanor Firzlaff, Dubuque; Elizabeth Ann Frew, Dearborn, Mich.; Ruth Carol Guildner, Oxford; Joselyn Hartwig, Clarence; Allene M. Hays, Grinnell; Nancy Sue Henderson, Ottumwa; Nancy Hopp, Glenwood; Jeanne Hughes, Lenox; Jane Ann Jinkinson, Sheldon; Donnia Kempenaar, Oskaloosa; Judy Kelmesrud, Thompson; Margaret Ladd, Iowa City; JoAnn Lesch, Osage; Malinda Jane Baker, Cresco; Ardith Broka, Parkersburg; Barbara Brown, Waterloo; Mary Camille Case, Grinnell; Judith Ann Clark, Cedar Falls; Harriett Dianne Cook, Oskaloosa; Kay Jane Croft, Norwalk; Marcia Kaye Fennema, Mount Ayr; Caroyln Ann Foote, Belle Plaine; Judith Ann Gardner, Waterloo; Martha Harris, Bloomfield; Carol Ann Hathaway, Muscatine; Gail Hemenway, Cedar Falls; Phoebe L. Hewlett, Pomeroy; Brenda Hughes, Iowa City; Mary Kathleen Hughes, Lenox; Janet Kainz, Elkader; Nancy Ann Kennedy, West Liberty; Nancy Kramer, Remsen; Jeannette Laughlin, Harlan; Margaret MacDonald, Chicago, Ill.; Janet Mast, Waterloo; Beth McDermott, Muscatine; Diana Merrill, Ida Grove; Mary Milnes, Burlington; Mary Morrison, Carroll; Carol Nelson, McNabb, Ill.; Sybil Norton, Spencer; Jeane Peckumn, Jamaica; Susan Powers, Melbourne; Suzanne Kay Raymond, Des Moines; Nancy Lee Ross, Marion; Alice Silletto, Des Moines; Mary Ellen Stalcup, Storm Lake; Mary Wlater, Lakeview; Carol Ann Wetzell, Sterling, Ill.; Mary Young, Washington; Sue Mast, Waterloo; Joan Carol McNeil, Sterling, Ill.; Lorranie Miller, Syracuse 6, N.Y.; Myra Jo Mixson, Cedar Rapids; Barbara Munro, Bettendorf; Nancy Nelson, Clinton; Mary Ossian, Shenandoah; Sandy Phillips, Cedar Rapids; Barbara Ratcliffe, Burlington; Rita Rosenberger, Altoona; Brenda Shirley, Perry; Patricia Smith, Elmhurst, Ill.; Patricia Steenrod, Iowa Falls; Kathleen Warren, Leon; Janet Wetzell, Sterling, Ill.

Statement by Hon. Thomas J. Dodd, of Connecticut

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. DADDARIO. Mr. Speaker, on Saturday, June 18, 1960, the Democratic State convention was held in Hartford, Conn. Because the U.S. Senate was in session, Senator THOMAS J. DODD was unable to be present and had his remarks read by his son, Thomas J. Dodd, Jr. I have known young Tom Dodd for many years, and was proud to see how ably he read his father's message. He is a boy of great promise and capacity. The remarks he read will be of interest to the Members of the House:

STATEMENT OF SENATOR THOMAS J. DODD TO BE READ TO DEMOCRATIC STATE CONVENTION AT HARTFORD, CONN., SATURDAY, JUNE 18, 1960

I deeply regret that I cannot attend our State convention because of the heavy schedule on the floor of the Senate for Friday and Saturday. Much as I would like to be with you, I think I can best serve by making whatever contribution I can to the enactment of a program that will be good for our country and the building of a record that our candidates can run on this fall with pride.

This is a critical hour in the life of this Congress and in the realm of international affairs. The Japanese Security Treaty, which looms so large in the news of the hour, may be brought to the floor of the Senate at any time. And such vital questions as flood control, adequate pay for Federal employees, medical research, aid to education, and my committee work on the foreign aid and military assistance bill—all are on the agenda for Senate action this weekend. Under these circumstances, I cannot leave Washington.

I am particularly sorry to miss this opportunity to personally tell the convention of the magnificent work done in Congress by FRANK KOWALSKI. He has been an able, dedicated, effective Member of Congress who has served the Nation admirably and reflected great credit upon Connecticut.

During the campaign of 1958, people of our party and of our State soon came to recognize that we had nominated for Congressman at Large an unusually fine public servant. All of the promise which he demonstrated during his energetic campaign has been completely fulfilled by his action of the past year and a half. We do our party a great service when we renominate FRANK KOWALSKI and I am confident that the people of our State will give him the overwhelming vote of confidence that his record in Congress and his lifetime of service to our country deserve.

Each of the other Members of our congressional delegation, who will soon be renominated by our district conventions, has done an excellent job in Washington. The good impression which our House delegation has made has been remarkable. I have heard nothing but good about our Representatives.

I know that Speaker RAYBURN and House Majority Leader MCCORMACK are counting on the leadership of all six of our Connecticut Representatives in the crucial session beginning in 1961 when a new Democratic President, working with a Democratic Congress, will attempt to give the Nation the greatest program of progressive legislation in the history of our country.

In the past 2 years the Democratic-controlled Congress has tried, and in some measure succeeded in, enacting a broad program of good legislation. But the will of the Congress has been frustrated, thwarted, and hindered by an administration which has dragged its feet in every great area of challenge. I believe that the American people have come to realize that the decade of the 1960's must be a decade of action or our country, and the great causes it represents, will perish.

Each of us has a part to play in this crucial election contest. One of the principal national objectives of the Republican Party this year is to recapture the six congressional seats they lost in Connecticut in 1958. We can expect them to put on a tremendous campaign, a campaign which will utilize all the money and resources which are always available to the Republican Party.

It is therefore of vital importance that the Democratic Party of our State make a tremendous effort on behalf of the reelection of each of our Congressmen. In our understandable enthusiasm for the presidential contest, we must never forget for a moment that the capacity of a Democratic President to carry out the platform of our party will depend upon the size of the majority he will have in the next Congress.

The Democratic Party of Connecticut has come a very long distance since 1952. We have gained victories that few thought possible in the dark hours following our defeat of that year. We now have before us the opportunity to complete our victory by preserving our gains in the Congress and in our State legislature and by making a vital contribution to the election of a Democratic President.

I look forward to working with each of you in the winning of a great victory for our party and for the people of America.

Our Unsound Social Security Setup

EXTENSION OF REMARKS
OF

HON. NOAH M. MASON
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. MASON. Mr. Speaker, in the committee report accompanying H.R. 12580, three of us included our joint statement with respect to the actuarial unsoundness of the present program.

This statement pointed out the actual trusteeship vested in the Congress over the contributions or taxes, and the benefits of the old age, survivor, and disability provision of the social security law.

It is my purpose to provide the Congress and the American people with some of the pertinent information of what is actually happening under existing law, and what is presently proposed that we do about safeguarding these benefits under the pending bill. To this end, I shall not in this statement make any remarks respecting either the unemployment or the grant-in-aid provisions of H.R. 12580—either those for child welfare services, or those for medical care for the aged.

We have, over the years, done everything anyone could think of to lead the American people to believe that Uncle Sam has established a gigantic and actuarially solvent insurance system on which they can rely for protection against disability, death and retirement.

Back in 1939, first the Ways and Means Committee, and then the Congress assumed a special obligation to the American people when we adapted insurance terminology to the title VIII payroll taxes we had levied, and the title II benefits we had provided under the Social Security Act which we adopted in 1935.

We renamed the benefits which had been designated old age and lump sum benefits. We added dependents benefits. We called these various benefits old age and survivors insurance benefits in the 1939 law. We renamed the taxes and called them "Federal Insurance Contributions." We renamed a contingent fund that the taxes went into. We called it the "Federal Old Age and Survivors Insurance Trust Fund."

When we added disability benefits in 1946, we followed the same procedure. We earmarked an added one-fourth of 1 percent of social security payroll taxes, imposed on employers and the same amount imposed on employees, and three-eighths of 1 percent imposed on self-employed, as belonging to a new account, which we set up in the Treasury and labeled the "Disability Insurance Trust Fund."

We likewise established trustees of these accounts we had designated as "insurance trust funds." These trustees are, first, the Secretary of the Treasury, second, the Secretary of Labor, and, third, the Secretary of Health, Education, and Welfare. We likewise have named the Commissioner of Social Security as the Secretary of these trustees.

We have required these trustees to file an annual report to the Congress on both the short- and long-range aspects of these funds we have designated as "insurance trust funds."

While Congress has done all this reassuring labeling of "insurance," "trust fund," "trustees," and the like, the Congress has not in any respect abrogated its responsibility to the American people. The Congress itself has the continuing responsibility of prescribing benefits and benefit conditions, the social security wage base and tax rates, and all the other conditions determining the soundness of the system we have officially designated as insurance.

To be certain that the Congress has full and entire control of the entire program, we have specifically reserved the right in section 1104 of the Social Security Act—

to alter, amend, or repeal any provision of this act.

With this entire control of the provisions we have labeled "Old Age Survivors and Disability Insurance" goes the entire responsibility of seeing that it lives up to the "insurance" label we have fixed to it.

This is our inescapable responsibility to the American people. It is a responsibility involving directly or indirectly the economic security of 180 million Americans and generations yet unborn. It is a solemn trusteeship which by nature should be, like patriotism, above political considerations.

Mr. Speaker, I, like the great mass of my colleagues, feel deeply the aspersion that is cast upon us by a mere recital of the dates on which we have acted in performing our trusteeship. Count back the years when we have acted to modify the Social Security Act—1958, 1956, 1954, 1952, 1950, 1948, 1946—each an election year. And here we are again proposing to liberalize the benefits in 1960.

I am particularly reminded of the great similarity of today's insurance proposals with our action in 1952—when there was also a major political contest. It is particularly distressing that our critics can point out that we are again proposing to increase our benefit commitments without increasing the social security taxes. We again are acting on the theory that prior estimates have overstated benefit costs and that with some increase in trust fund interest, we can increase expenditures without increasing the presently scheduled taxes.

But in 1952 we had more basis for our action than we have today for the presently proposed liberalization.

Mr. Speaker, in the 3 years before 1952 the OASI trust fund had grown $4.8 billion to a total of $15.5 billion—and grew nearly $2 billion in 1952.

In the 3 years preceding 1960 the trust fund has shrunk some $2.3 billion to $20.1 billion—and last year's shrinkage was over $1.7 billion.

Back in 1958 when the tax base was broadened and the tax rate schedule stepped up, the Ways and Means Committee made a statement in its report that is highly pertinent today. This is the statement:

This year for the first time in the 18 years since benefits were first paid, the income to the old age and survivors insurance fund is slightly less than the expenditures from the fund. If no changes are made, outgo will continue to exceed income in each year until 1965. Your committee believes that a situation where outcome exceeds income for 7 or 8 years is one that should not be permitted to continue. We believe that public confidence in the system—so necessary if it is to provide real security for the people—may be impaired if the trust fund continues to decline.

The committee at that time thought it was correcting the situation by its tax increases—but again its estimates proved low. The trust fund was to be nearly $21 billion at the beginning of this year. It turned out to be $20.1 billion. The recent OASI report estimates that at the end of 1962 the trust fund will be $7 million lower.

But that report estimated OASI taxes for 1960, 1961, and 1962 at $33,958 million while the present report estimates taxes for this period with the proposed additional coverage at $33,221 million—$737 million lower. This would mean that for the period we face not a $7 million, but a three-quarter of a billion dollar deficit without liberalizing benefits.

It seems to me that we are facing at least a billion dollar deficit for the period 1960–62 inclusive, if we liberalize benefits. I do not see how we can rely on the estimate in the bill that with the liberalized benefits the benefit cost will be hundreds of millions less than we were advised would be the cost of present benefits by the trustees report filed in March of this year. Even so, the committee report is that under the bill the deficit will be $554 million—over a half billion dollars further in the red.

Mr. Speaker, this steady and rapid decline in the trust fund for a six or more year period is proper cause for

much soul searching among us responsible for the system. I can but again quote from what our committee said in 1958:

We believe that public confidence in the system—so necessary if it is to provide real security for the people—may be impaired if the trust fund continues to decline.

And I likewise wonder, if we enact the proposed liberalizations without adding higher taxes, and make this decline even more precipitous, if public confidence in the Congress may not also be impaired?

If time permitted, I should like to point out how the proposed vast liberalization of the disability system is likewise leading us down this same road—the committee's own report admits that the bill likewise heads these benefits toward a certain red ink future.

In my long service on the Ways and Means Committee, this is the first time I have seen huge unfinanced social security liberalizations knowingly voted out for the consideration of the Congress.

If I had the power to do so, I should like to amend the bill to strike out the word "insurance" wherever it appears and insert the word "politics." Then, at least, we would be honest in what we were voting on.

Ceremony Opening the James River Bridge, Blue Ridge Parkway

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a speech made by me on June 11 at the Peaks of Otter, Va., in connection with the ceremonies opening the James River Bridge on the Blue Ridge Parkway.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The ceremony today, opening the bridge over the James River, completes another link in the great Blue Ridge Parkway connecting the Shenandoah and the Great Smoky Mountains National Parks. This truly may be called a royal road of our mountain empire in Virginia.

It will soon be completed and the parkway will be 469 miles in length—the longest continuous scenic highway in the world.

If, from this pleasant place, you will let your eye follow the panorama, you will be reminded that half the population of the United States is fortunate enough to be within overnight driving distance from some point on this wonderful drive.

Think of the natural scenery there is to see, the pleasant recreational things there are to do, and the historic sites there are to visit. They are all around us here; they abound throughout Virginia's 41,000 square miles ranging from the mountains to the sea.

It is no wonder that newspapers within the month have reported that Virginia has more visitors than any other State in the Union. And for them to use, we are proud to present our billion-dollar State highway system of more than 52,000 miles.

The State department of highways recently announced that nearly 39 million visitors entered Virginia last year by automobile. Perhaps the total number of visitors approached 45 million. By the most conservative estimate Virginia's visitors are spending "in excess of $600 million a year."

Our attractions for people outside of Virginia are among our greatest assets. And this asset is enhanced by our accessibility. Cross-country highway Route 60 terminates in Virginia, and two other major highway routes—1 and 11—traverse the State north and south.

And this is not all. Nature is our partner. Our temperatures are moderate. Our rainfall is good. Our topography is favorable. We are gifted with the shores of the sea, the rolling country of the Piedmont, and the mountains with their valleys.

Our history is vivid and traceable. Our scenery and natural assets lend themselves to preservation and use. Our progress is sound and steady. Our transportation and facilities are good and safe. And, perhaps, our greatest asset is the hospitality of our people themselves.

The National Park Service has given magnanimous recognition to our scenery, our recreational possibilities and our history in the form of this parkway, the Shenandoah and the Cumberland Gap National Parks, the Colonial National Historical Park, and five national battlefield parks.

The State itself has established a system of nine State parks offering recreational facilities characteristic of every section of the State. Virginia pioneered in marking her highways with attractive signs telling the story of points of interest for the benefit of passing motorists.

And I venture no State in the Union has more to tell, or does it more concisely. We have the cradle of the Republic in Jamestown, Williamsburg, and Yorktown. We have the homes of Presidents Washington, Jefferson, Madison, Monroe, Harrison, Tyler, Taylor, and Wilson, along with those of Mason, Henry, Lee, and countless more of the Nation's great.

We have the battlefields of the Revolution and the War Between the States. We have one of the capitals of the Confederacy. We have the ports and military sites of World Wars I and II. We have the Tomb of the Unknowns. We have historic churches, colleges, and mansions.

We have some of the wonders of the world, such as the great stalagmites and stalactites of our nine caverns, our Natural Bridge, our Natural Tunnel, our Natural Chimneys, and our Mountain Lake.

We have two great national forests. We have beautiful gardens, wild flowers, and flowering trees. We have waterfalls and beautiful springs. We have the ocean, and our bays and rivers.

Streams come into existence in nearly all areas of the State. We have inland lakes—some natural, and some made—in nearly every section. With our woods and waters, hunting and fishing is unsurpassed.

There are more than 100 good golf courses in the State. Hunt races and horse shows are numerous. We have annual festivals at Winchester, Norfolk, Claytor Lake, Charlottesville, Richmond, and in other places. There is wild pony penning at Chincoteague, jousting at Natural Chimneys, and the dog mart at Fredericksburg.

We have the Barter Theater at Abingdon, and the arts and crafts festival at Waterford. There is the Common Glory at Williamsburg. There is the Virginia Museum of Fine Arts, with its mobile units. Virginia is, indeed, a place for the Nation to enjoy.

I think the Nation is doing it more and more. I believe we are seeing only the beginning. Some $26 million was spent in the State last year on construction of about 150 motels. All of us can be for expansion of an industry which makes people happier and healthier and more appreciative of their country and the principles for which it stands.

Nixon Text on Farm Ills

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. SPRINGER. Mr. Speaker, I attach herewith an excerpt from the Washington Post of June 21, which contains that portion of Vice President RICHARD M. NIXON'S address at Minot, N. Dak., dealing with his farm proposals.

In this speech, the Vice President took note of the fact that the American farmer needs real and active help in 1960. The Vice President also faced up to the fact that the real problem in American agriculture is the surplus on hand.

I think we all realize that a part of the answer to this problem is taking out of production acreage which provides for a portion of the surplus. However, far better do we understand the need to further expand our markets to increase consumption of our agricultural products in markets abroad. The underdeveloped countries are the greatest area for the consumption of American surplus products. As one of the authors of Public Law 480, it appears to me to be clearly the path of wisdom. In this last 6 years, more than $9 billion in surplus food has been distributed to hungry people in other lands, people who could not afford to pay for food in the commercial marketplace. One-third of the world's population still remains hungry. Expansion of this human market will not only benefit our farmers, but it will increase good will for America abroad, a valuable contribution to our foreign policy. And I am sure we all realize the need to strengthen our foreign relations today more vitally than at any other time in history, in any and every way we can.

This method of disposal of our surplus additionally benefits in the amounts exchanged in foreign countries for which we receive currencies of those countries. This not only promotes further agricultural market development of definite income return to the American farmer, but it, too, is an important cog in our relations with the free nations of the world. It permits the economic development of such friendly nations through loans to private U.S. and foreign businesses in the currencies of those countries. To so help such countries to expand their own economies and better their standards of living will go a long

way in our fight for world freedom and world peace, a long way in erasing the insidious Communist propaganda that seeks to picture the United States as an avaricious power seeking only its own self-aggrandizement.

When we help our farmers, we help ourselves, we strengthen the veritable backbone of our Nation, we bring the nations of the free world closer to our orbit in the cause of lasting peace. Let us not risk damage to this multifaceted program by any curtailment of it. Let us, instead, expand the program within Public Law 480, to our everlasting credit.

The Vice President has hit on the real solution to the American surplus agriculture problem—in everexpanding markets abroad with people who can consume this surplus. Continuation and expansion of this idea will get approval not only at home but also with friendly peoples all over the world.

The excerpt follows:

NIXON TEXT ON FARM ILLS

(MINOT, N. Dak., June 20—The following is that portion of Vice President RICHARD M. NIXON's address here today dealing with his farm proposals:)

The solution of the farm problem does not lie in simply doing more of what we have been doing, since our present programs have aggravated rather than solved the problem.

We should reject any program which would put the farmer in a Government straitjacket in which what he plants, how much he can sell, and the price he receives is determined by bureaucrats in Washington.

While the parity price program on which we have placed such great reliance in the past has proved useful in stabilizing farm prices, we must recognize that a parity formula at its best treats the symptoms and not the cause of the farm problem.

URGES INFLATION FIGHT

A method must be developed whereby the farmers themselves have a greater opportunity to choose the kind of farm program they want.

Let us turn now to some of the specific proposals which I have asked the Republican Platform Committee to consider. I want to emphasize at the outset that these proposals are not intended to be all-inclusive. For example, I shall not discuss the problem of parity at this time since it is currently before the Congress. But, the proposals I shall make are ones designed to deal with the causes and not just the symptoms of the farm problem.

To help the farmer to get out of the cost-price squeeze, we must wage an effective fight against inflation. In a period of inflation, with surpluses overhanging the market, the prices of the products the farmer grows are the last to go up and they never catch up with the prices of the things he buys.

There should be a sharply expanded program of research in the marketing of farm products, designed to reduce the gap between what the farmer receives for his crops and what the consumer pays for his food.

To bring supply more directly into relation with demand, we must recognize the necessity for taking acreage which produces crops in surplus out of production. In administering this program, we must take every possible precaution to avoid creating ghost towns in the traditionally agricultural areas.

WOULD EXPAND MARKETS

The rural development program, which has been so successful, should be expanded so that marginal farmers can supplement their income and not be forced to move from the rural communities in which they live.

Our major aim and our major effort must be, however, not to reduce production but to expand the markets for farm products and to increase consumption. There are three proposals in this area that I think are among those worthy of consideration.

First, Governor Rockefeller, in his recent appearance in North Dakota, proposed that a year's supply of food for the Nation be set aside against the eventuality of an atomic attack. This is a sound and constructive proposal, and I would only add that because a 1- or a 2-year reserve would represent an enormous permanent storage burden in its present form, a research program should be undertaken to find economically feasible ways to convert surplus gains into storable form.

Second, I believe the amount of effort we are presently devoting to research for expanding the commercial uses of farm products is inadequate.

It is an established practice in business to allot funds for basic research which bear a proper relationship to the overall magnitude of the problem to be dealt with. It doesn't make sense to spend only $16 million a year on finding new uses for agriculture products when we are spending $5 billion a year in financing and storing surplus farm products.

There is a third area which provides by far the best opportunity for making our food surpluses a national asset rather than a liability as they tend to be today. I refer to the use of our foods in the humane, as distinguished from the commercial, market abroad.

It has been estimated that a third of the world's population, approximately a billion people, go to bed hungry every night. Everybody agrees that it doesn't make sense to have huge surpluses at home and millions of hungry people abroad. How can we bring our surplus food and hungry people together?

NINE BILLION-DOLLAR DISTRIBUTION

The United States has been doing a great deal in this field. In the past 6 years, under Public Law 480, over $9 billion of surplus food has been distributed to people in other countries who could not afford to purchase this food in the commercial market.

There are two potential objections to the program. Since it is unilateral in character, we do not get the credit that we might from our generosity because of the criticism in some countries that the sole purpose of the program is to further selfish U.S. objectives in the cold war.

Second, we have good friends and allies, the Canadians, Australians, French, and Argentinians who produce the same foods that we have in surplus. This means that whenever our surpluses are distributed without adequate regard to the effect on the normal commercial markets, the effect is potentially disastrous as far as these countries are concerned and in the long run would be detrimental to our own interests as well.

Immediately prior to the summit conference, the President, in discussions with his staff in which I participated, developed a proposal which meets these objections and which can lead to a major breakthrough in getting surplus food to hungry people abroad. He was considering presentation of this proposal for the first time at the summit conference in Paris.

The first step would have been to call a conference of all the surplus-producing nations, including the Soviet Union. These nations would then work out a joint proposal for a multilateral program under which the food surpluses of all nations which desired to participate would have been turned over to United Nations agencies for distribution to the hungry people of member nations.

The recipients of the United Nations food would be those unfortunate people who still are unable to supply themselves with an adequate diet either by their own agriculture efforts or by exchange of goods. The distribution would be handled in such a manner as not to disturb commercial markets.

Since Mr. Khrushchev's actions in Paris have ruled out the U.S.S.R.'s participation in such a program at this time, the only course of action left open to us is to explore with other surplus-producing nations their attitude toward joining us in such a program.

Let me emphasize that I do not suggest that this proposal is a cure-all for the farm problem or for the world's problems. It does, however, have these obvious merits: It will not be harmful to our friends and allies since they will participate in the program. It will not be subject to the criticism directed against unilateral United States aid since it will be administered through the United Nations.

Slovaks Commemorate 1,100th Anniversary of Sts. Cyril and Methodius

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. FLYNN. Mr. Speaker, there are in my First Congressional District of Wisconsin, many groups of descendants of the fine racial stocks of middle-European peoples. Many of these fled oppression and tyranny. Many of them migrated to this country because their great skills as craftsmen were known and they came to help in the building of our young country. For whatever reason they came, they and their descendants have made great and wonderful contribution to the building of this country, to the framing of its doctrines of freedom, the forming of its attitudes of charity and love of peace, to the development of its rugged and forthright character, and to its religious nature and faith. They have made great contribution to our culture, to our music, our dancing, and our folklore. The United States of America is truly blessed in history to have been able to provide the land and the haven to these fine people, amongst them, the tremendously colorful and robustly freedom loving, deeply religious Slovaks.

There are many Slovaks in my district. Their contribution to Wisconsin and to the Nation as a whole has been great, yet they have retained much of the culture of their native land. Colorful Slovak costumes are still worn at weddings and christenings. Their dances are beautiful, sometimes lively and lusty, sometimes slow and graceful, always exciting. Their musicians play most wonderful Slovak music. I had the greatest pleasure recently of witnessing these folk expressions at the National Folk Festival here in Washington last month—and I tell you it was an experience long to be remembered.

Mr. Speaker, the purpose of my rising today to address this House, this symbol of the free United States, is to join in the commemoration of an anniversary precious in the hearts of this stout and rugged people who, for more than a thousand years have fought for freedom, and through the greatest tribulations have held fast to their aspirations and their deep religious fervor. The Slovaks on July 4, National Slovak Day, whether at home or abroad, whether free or still in bondage, will commemorate as they have for centuries, that great moment in history when the intrepid and beloved Saints, Cyril and Methodius, left Macedonia to bring the religion of Christ to this group of Western Slavs in the shadows of the Tatra Mountains, more than 1,100 years ago. Just as the Irish venerate St. Patrick, the Poles cherish St. Stanislaus, and the Welsh revere St. David, so do the Slovaks pay honor and tribute to Methodius, first bishop of their beloved Nitra, and to his scholarly brother Cyril, the inventor of the first Slavic alphabet.

It is particularly fitting that the Slovaks' "great day" should be a religious anniversary. Anyone who is familiar with their magnificent history and has drunk deeply of their folklore in song and story, could not expect it to be otherwise. For, to a Slovak, religion and freedom are concomitant; love of country and devotion to God go hand in hand. In all of their turbulent and colorful history, Slovaks have held steadfastly to their faith, and no amount of oppression, however long or arduous, has been able to stamp out their yearning for liberty and freedom.

I would like to quote briefly from a short history of Slovakia written by nostalgic Slovakians in this country:

Along the northern shore of the central Danube where the eastern slopes of the Alps touch the western slopes of the Carpathian Mountains lies a country unknown to many Americans.

It was the first organized state in central Europe, a busy, noisy crossroads for nations seeking a home in the early centuries of the Christian era.

The country and its people from these earliest times to the present have had to deal with conquerors and tyrants, to win the necessities of life from a stubborn soil and through it all hold on to their growing culture, freedom of spirit, and way of life.

The Slovaks belong to the group of western Slavs and are one of the oldest historical nations in that sector of Europe. Already in the ninth century, they developed the first independent statehood known as the Kingdom of Great Moravia (A.D. 830–907). Even at the time of their subsequent incorporation into the Kingdom of Hungary, their Christian faith and political endurance was tested many times during the incursions of the Tartars in the 13th and of the Turks during the 16th and 17th centuries. In these struggles for national soil and cultural heritage they developed strong aspirations for independence. * * *

Even though its beautiful land serves as a huge prison behind the Iron Curtain, the Slovak Nation has not lost, but continues to confess fearlessly, its faith in God as the source of its strength and hope.

When the forefathers of our Slovak fellow citizens came to this country, it was not, therefore, just by chance that they were endowed with solid potentials for fine American citizenship. For one quality they had in abundance—faith. Religion for them was not just an isolated phase of their lives. Their devotion to God was an integral part of their lives and the more than 300 parishes in America founded by Slovaks and their descendants serve as eloquent testimony to their rich spiritual heritage. And it was this very heritage, coupled with the Slovakian love for liberty that has made it possible for them to integrate themselves so firmly in our American democracy and to understand so well the essentials of loyal citizenship. A good Slovak could not help but be a good American because he has always known his true relationship with God, that man is a creation of God and is graced with qualities that are his, at birth, as a special gift from God.

In these days of intellectual and moral confusion, we ought to ponder the lustrous words of the Declaration of Independence. "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

In all history, of all the nations, the real national strength has been powered by a spiritual dynamism. The decay of nations is rarely the product of material deterioration or defeat in armed conflict. These are results, not causes. A nation really decays when it begins to weaken in its spiritual motivation. To continue strong, a nation must have faith in its traditions if it is to have faith in itself, and each citizen must feel he partakes of these traditions. All lovers of liberty can well emulate the doughty inhabitants of Slovakia today and for centuries past, who have refused to live under enslavement by the Turks and Magyars, and who will in the end repudiate the hammer and sickle for the torch of liberty. Each Slovak identifies himself with these traditions of love of liberty, knowledge of man's creation by and in the image of God, and, therefore, an inviolable entity not to be enslaved by other men. Each Slovak cherishes the memory of the great Sts. Cyril and Methodius, who taught and led his ancestors into the ways of faith and knowledge of freedom's meaning.

Our Slovak fellow citizens are possessed of a magnificent heritage, one which we all can cherish and take to ourselves with pride as part of the tradition which makes the United States great. We can take pride, with them, in a tradition which rejects enslavement of the spirit by whatever means, and in these turbulent days, hold on to this simple faith, holding our heads high, humbly proud in the knowledge of the heritage that is America. That heritage is in good hands when it is entrusted to the likes of the more than 1½ million Americans of Slovak descent. We have no nobler destiny than this, as Americans, to follow in the footsteps of such as these free spirits. I, too, and you, can thus cherish and take for our own, the great inspiration of wondrous men and great spiritual leaders such as the saints, Methodius and Cyril, whose lives the Slovaks are memorializing on July 4, our own Independence Day.

Vice President Richard Nixon's St. Louis Speech Before the Junior Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the CONGRESSIONAL RECORD a splendid speech that Vice President RICHARD NIXON delivered in St. Louis, Tuesday, June 21, 1960, at the 40th anniversary national convention of the junior chamber of commerce.

There is much meat in this speech for all Americans whether they are Democrats, Republicans or independents. The Vice President received an outstanding round of applause when he appeared to deliver the speech which was overshadowed by the ovation he received at the conclusion of the speech. I believe that anyone reading this speech would agree that the ovation was well deserved.

The speech follows:

REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES, AT THE 40TH ANNIVERSARY NATIONAL CONVENTION OF THE JUNIOR CHAMBER OF COMMERCE, ST. LOUIS, MO., JUNE 21, 1960

We are now engaged in what will become, before this year is out, a major national debate over the subject of economic growth. This is as it should be because this is an issue which points up sharply the difference between two opposing philosophies of government in this country. It is an issue which transcends party lines.

The question is not one of ends but of means. Everybody is for growth. The issue is how can we best achieve it. More specifically, what should the role of government be in stimulating economic activity and growth?

Why are we especially concerned at this moment about our growth? To begin with it is a concept which commands the attention of the greater part of mankind in this second half of the 20th century.

For ourselves it is a question of building a better and greater America with widening opportunity for all of our citizens.

For the peoples of Asia, Africa, and South America, it is a question of emerging from a way of life based on human and animal muscle power to the technological maturity we of North America and Europe already enjoy.

For the Communist states it represents a challenge to catch up with and pass America. This is the goal, the final achievement which Mr. Khrushchev asserts will be the ultimate proof of the superiority of his Communist faith.

We in this country must recognize the serious nature of this challenge. We must never forget for a moment that the Soviets mean business. We must never underestimate their fanatical purpose.

On the other hand, it is no service to America or the free societies to overestimate

Communist achievements. The critics of our present economic policies say that the Soviets are achieving their objectives of overtaking us. They claim that we are falling behind and in the foreseeable future will become second to the Soviet Union in economic strength.

They back this up by citing statistics to the effect that the Soviet economy is growing at a rate of 8 percent a year as compared with our own long-term economic growth which has been running about 3 percent a year and now appears to be accelerating toward 4 percent.

The critics argue that if we would just adopt their pet economic philosophy we too would grow like the Soviets. They invite us to join them in playing what is rapidly becoming the most fashionable political parlor game of our time—a game we might well call "growthmanship."

Before playing the game, let us look at the facts. There are, I believe three major fallacies in these statistical comparisons between the Soviet economy and our own.

The first fallacy is the vast difference in the maturity of our two economies. The Soviets, in the first place, have had to cope with an enormous postwar program of reconstructing the damage inflicted on them by Hitler's armies. But even more importantly, their economy is still primitive in comparison with our own. They are still concentrating primarily on building steel mills and the beginnings of a transportation system. These we already have. We are building major new industries around transistorized circuits and synthetic fibers and rearranged molecules.

Comparing their rate of growth with our own is, in a sense, like comparing the rate of growth of a child's body with an adult's brain. The very dimensions are incompatible.

The second fallacy is the fundamental difference between our society and theirs. We are a free people, free to produce and consume what we like and possess what we can afford. An enormous portion of our national capital is represented in the American home. Most of our millions of homes are, in effect, miniature factories, heavily equipped with capital equipment such as refrigerators, television sets, and cars. None of this is revealed as capital plant in comparing growth rates.

It sometimes is argued that this personal capital equipment represents no national asset but a collective self-indulgence of shameful proportions. The epithet most commonly flung out by the growthmanship school is "tail fins."

Without either defending or quarreling with my neighbors' taste, I urge these anti-production economists to be more explicit. What sort of society are they proposing?

Do they want a Federal agency empowered to regulate the design of automobiles? Or are they proposing tax rates which will make the manufacture of new cars academic?

The third fallacy is suggested by the behavior of the absolute gap between our economies. Just before World War II the total production of goods and services in the U.S.S.R. was less than half that in the United States. To be exact, it was 44 percent. Twenty years later, in 1959, the total production of goods and services in the Soviet Union is still just about 44 percent of the United States. In terms of currency, the U.S. lead is substantially larger than the entire value of Soviet production. Mr. Khrushchev boasts that he will catch and pass us economically in 7 or 10 years. By any projection that can be applied, there is no possibility that the Soviet economy will overtake our own at any time in this century.

Mr. Khrushchev has described the competition between our two systems as a horse race. In referring to the American economic system, he said recently, "There was a horse but now it is old and worn out, limping along at half speed. On the other hand, our Communist horse is young and strong, running much faster and certain to catch up and pass the Americans."

Is he right? The answer is no, provided we stay on our horse and don't make the mistake of trying to get on his.

That is why in considering growth the question of means becomes all important. What and how much should the Government do to insure a maximum rate of expansion for our economy?

The growthmanship school argues that the Government should plan and manipulate the economy to arrive at an arbitrary, fixed percentage rate of growth. They believe that any kind of Government activity directed toward this objective is good. Generally, they have greater faith in Government action than in private enterprise as a creative force in insuring economic progress.

For example, they believe the Government should peg interest rates at artificially low levels to assure growth. They admit this would be inflationary but they say "Inflation is a small price to pay for progress." We say that this policy in the long run would wreck the economy, not expand it.

They believe that Government spending regardless of its purpose spells growth and, therefore, is good in and of itself. We say that the way to achieve maximum growth in this country is not by increasing the size and cost of Government but by expanding the opportunities for investment and creative productivity for millions of free American citizens.

We believe that the way in which Government can best promote real growth is by building a sound economic framework in which the private economy can operate at maximum levels.

We must never forget that growth is only one objective of national policy, though admittedly a vitally important one. Among our other objectives are freedom and security. We must not and need not sacrifice either freedom on one hand or security on the other simply to achieve growth.

Under the philosophy of government to which we subscribe, these objectives are not incompatible. What best promotes freedom best promotes growth. What best promotes growth best promotes security.

What then should the role of Government be in promoting growth?

To begin with, Government should avoid, as much as possible, interference with the decisions that are made in the private sector of our economy.

The Government must pursue a sound fiscal policy, so that values remain stable and the upward pressure is toward true growth and not inflation.

Government must act vigorously against those abuses of economic power by management or labor which restrict competition or put roadblocks in the way of increased efficiency and productivity.

Our tax structure must be designed to stimulate rather than frustrate new and creative enterprise. Reform of the obsolete and jerry-built features of our Federal tax system must be a first order of business for a new administration once we have provided adequately for our needs in the national security area.

Government must pursue economic policies abroad which are compatible with domestic philosophy. We believe in freedom, in creative enterprise, and in competition. Our foreign policies should be framed to cultivate a climate favorable to these principles throughout the world.

Finally, government has a responsibility to prevent and correct wide swings in our levels of economic activity by intelligent application of fiscal policies and by sensible provisions against the personal tragedy and national misfortune of widespread unemployment.

These are the things government should do to promote a proper climate for creative private activity.

There are other appropriate areas of government economic activity in what we might call the public sector of our economy. While we put our primary faith in creative private enterprise as the major dynamic force in assuring growth of our economy, we recognize that where private enterprise can't or won't do the job, government activity is not only justified but essential. By government activity, I have in mind not only the Federal Government, but State and local governments as well.

It is foolish to assume, as some of those of the growthmanship school seem to, that government activity is in itself good. But it is just as wrong to assume that government activity is in itself bad.

Many elements of our national establishment are beyond the capacity of private enterprise. These must be kept apace with our overall growth, or the economy would soon develop a lopsided shape.

If we are to grow at a maximum rate, we must recognize the continuing need for investment in the public sector—in our public education establishment, in our national transportation system, in the renewal of our rundown urban areas, in the development of our natural and human resources, in providing imaginative, new leadership for the exciting scientific and technological revolution which will dramatically change the whole character of life in America and the world in our lifetime.

Timidity in these areas would be as detrimental to the national interest as timidity in private investment.

The important test to apply always to investment in the public sector is—will the benefit exceed the cost? Because it is just as easy to waste the public money as it is to squander private and personal funds.

Above all, whether we are considering investment in the public or private sector, let us be guided by these principles:

America must never settle for second best in any field.

We are a young country with our greatest years ahead of us—not behind us.

We will not hesitate to resort to government action where it provides the best road to progress.

But we will always remember that the primary source of progress in America has been and will continue to be the dynamic, creative productivity of private rather than government enterprise.

Remarks of Hon. Thomas J. Dodd, of Connecticut, at Wheeler High School Commencement Exercises

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. DADDARIO. Mr. Speaker, graduation day is an important day in the lives of all our young people. Those students who graduated from Wheeler High School, North Stonington, Conn., have special reason to remember their commencement exercises because of the

fine expressions made by Senator THOMAS J. DODD, of Connecticut. I feel that Senator DODD's thoughts are important and instructive:

REMARKS OF SENATOR THOMAS J. DODD AT WHEELER HIGH SCHOOL COMMENCEMENT EXERCISES, NORTH STONINGTON, CONN., FRIDAY, JUNE 17, 1960

I am deeply grateful that you have invited me to speak at these graduation exercises. I know the significance of this moment in the lives of the graduating class and of their families and I appreciate the privilege of being asked to come here and share it with you.

For about 10 years I have been spending as much of my time in North Stonington as my public duties permit. I was, of course, born in eastern Connecticut and have spent a large part of my life here. Those of us who have been lucky enough to live in this part of our State and in this wonderful town of North Stonington have much to be thankful for.

We have lived in an area filled with natural beauty and in an atmosphere close to the realities of life, an environment of close family ties and sound traditions, an environment of neighborliness, of honest work, of pleasant homes and good people.

And so the first thing I want to say to the members of this graduating class is that you have begun your lives with the priceless advantage of a good heritage.

This day marks off a great dividing point in the life of each of you. I am sure that you are very much like I was during my school days. Through the years of your childhood, your imagination must have been filled with thoughts on the nature of your life after this day, what you would do, what you would be, what kind of a future you would make for yourself. Now you are about to step into that future.

Up to now you have been largely on the receiving end of all the care and indulgence that your family and your community could bestow. Now you must begin to give something. From this day forward, as you enjoy more and more freedom, and wider and wider opportunities, you must assume deeper and deeper responsibilities.

I would like to discuss today some of the obligations and the opportunities that await you.

First is the tremendous obligation to your families. It has taken years of sacrifice, worry, self-denial, and care on the part of your parents to bring you safely to this day.

I well understand the mixture of joy and sadness in the hearts of your parents as they sit here this evening. I have seen four of my own children graduate from high school and I know what this moment means. It signifies the end of those childhood years so precious to parents. It means that the family circle is soon to be broken as you go away to school or to work or to marriage.

And so as you start to make your own way, remember the devotion and sacrifice and care that have brought you to this point and given you this opportunity. The future happiness of your parents is all wrapped up in you. This is a time to quietly dedicate yourselves to act in the years ahead in a manner that will justify the hopes, the sacrifices, and the expectations of your parents. They ask very little of you. Be faithful to the values learned in your home, be upright, be honorable, be hard working, be conscientious in whatever you undertake and that will be enough.

Another obligation waiting to be met is your debt to your community. The greater part of the activities of any American community is dedicated to the welfare of its young people. I refer not only to such matters as schools, recreational facilities, public health activities, and traffic safety. Almost all of our activities on the local level are really aimed at building the kind of community in which youngsters can grow up in health, safety, and happiness.

It is now the time for you to begin to assume your fair share of the burdens of running a free government at the local level. You must prepare yourselves to take the place of those who spend a good part of what could otherwise be their leisure hours working for the benefit of your town. You must prepare yourself now to take your place in the ranks of these fine civic associations, parent-teachers groups, and church organizations that make our towns pleasant, decent places to live.

You don't have to be a Member of Congress or a delegate to the United Nations or a Cabinet member to make an important contribution to your times. In the final analysis, our free society will stand or fall on the strength of democracy at the local level. Those who carry on the task of making our system work at the community level, those who work in modest ways to make our towns better places in which to live, those who give of their time and effort to dozens of worthy causes are rendering greater service than they know.

This leads me to the discussion of another obligation, the great debt which each of us owes to his country.

You will carry throughout your life an obligation to show a very special kind of loyalty to your country. In this sophisticated age it seems somewhat out of place to speak of patriotism.

In some quarters patriotism is scorned today. It has gone out of fashion. And there is even a fuzzy notion current that patriotism stands in the way of the development of an international order of peace and justice.

When I speak of patriotism I do not mean merely Fourth of July oratory or flag waving, or the hollow veneration of mere symbols.

If this were all there were to it, then patriotism would indeed be a rather empty thing. Our loyalty is not to the symbols, but to the ideals and traditions of our country and to the causes it represents.

Love of country is one of the deepest and most abiding of human instincts. Strange indeed is the man or woman who does not feel a special love for his homeland. As often as not, it is the most humble, the most abused, and the most misgoverned who will, in an hour of crisis, display the fiercest and most selfless loyalty to their country.

So it can be said that the instinct of patriotism is almost universal.

Americans have a special reason for a special kind of loyalty that goes far beyond the love of things that are familiar. I do not say this merely because we have been given more advantages and privileges than people of other lands.

I say it because our country, its institutions, its traditions, its strength today compose the sustaining force which preserves government based on freedom and respect for human decency.

Whatever may be the faults and weaknesses of our people as individuals, and they are many; whatever may be the mistakes and weaknesses of our Government, and they have been many, the United States of America as a nation has historically acted with honor, with courage, with charity, with justice and with idealism.

Perhaps we are too close to the scene to appreciate the significance of the role of our country and of our generation. A distinguished foreign visitor to Washington said recently:

"Washington has become the fountainhead of freedom. We may well say that the road of freedom, of democracy, of self-determination of peoples, and the respect for human personality leads us today to and from Washington and it is to a large degree in the United States that the hopes for the survival of human freedoms rest."

No nation has ever carried such an awesome burden as this. I sometimes think that our entire history has prepared us for and guided us toward this crucial role that we now play.

Surely a sense of national mission and destiny has moved our country from its earliest days. The opening paragraph of the Federalist papers, pleading for the adoption of our Constitution, said:

"It seems to have been reserved to the people of this country, by their conduct and example, to decide whether societies of men are capable of establishing good government. Failure on their part would be the general misfortune of mankind."

All of the forces that have shaped our history, all of the good fortune, all the noble aspirations, all the blessings of material strength, have combined to give us the means and the obligation to preserve the temple of Western civilization from the barbarism of first nazism and now communism.

Why do I say all this? I say it because our country and its ancient ideals are more in need of the loyalty, the devotion, the understanding and the unselfish help of its young men and women than ever before. Never has a nation been so in need of a generation that recognizes its destiny, represents its ideals and embraces it traditions.

And so I hope that you will carry in the years ahead and throughout your lives a sense of duty and obligation to your country. Don't be ashamed of patriotism. Don't join those misguided college students who are today objecting to pledging allegiance to their country when they apply to their Government for loans to finance their college education.

If you are called upon to serve in the Armed Forces of your country, do so not reluctantly or cynically but willingly and devotedly, with pride in the knowledge that you are carrying out a great and necessary duty in order that our country might remain free and might preserve freedom in the world.

Be prepared to support your Government and not be supported by it. Be prepared to give up your time and your peace of mind and to take part in the political life of your Nation by actively supporting candidates and parties and issues that you feel are in the national interest. And when your turn comes to assume the role of teacher and parent, I hope that you will impart to those under your care that love of country which has been imparted to you.

The final obligation that I would like to discuss is your obligation to yourself, your duty to do full justice to your talents, your training and your hopes.

Each of us has the obligation to make the most of whatever talents and abilities God has given us. If we fail to do so, we not only let ourselves down but we fail in the contribution that we ought to make to others and to those who will come after us.

This is a very decisive time in your lives. The decisions you make now about your future will go a long way toward determining just what that future will be.

Every right decision you make now opens broad vistas of opportunity. Every wrong decision closes off your horizons and closes the door on opportunity.

So this is the time to think things through.

If you do not yet know what you want your life work to be, make it your first object to find out. Don't drift along letting events shape your life until the opportunity for you to do what you really want to do has passed you by.

And if you know what your vocation is, if you know deep down what you really want

to do in life, then start to take the steps that will lead you to it. In the words of Abraham Lincoln, "Determine that the thing can and shall be done, and then we shall find the way."

This is a time in your life when the freedom that we enjoy in America means more than perhaps it does at any other time. You are free to pick out your career. You are free to go wherever you have to go and to do whatever you have to do to develop a competence in that field.

The last written words of Franklin D. Roosevelt were, "The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith." Don't allow your doubts or fears to hold you back from doing what you want to do and what you feel it is in you to do.

If you want to go to college but don't have the money to do so, get a scholarship if you can, and if not you can borrow that money at very easy terms under a Government loan program and pay it off several years from now when you are started in your career.

If you can't find the work you want around here, take advantage of your freedom to go where you can find it.

The future belongs to the man or woman who is prepared for it. If you do not plan to go on to higher education, then develop a technical mastery and a special competence in whatever field you do go into.

Give yourself a chance.

The opportunities that await you and the thousands of other young men and women who are graduating from high school this year are greater by far than at any time in history. The young people of today ought to feel a greater sense of excitement and adventure as they enter adult life than any young people have felt since the discovery of the New World in the 15th century.

When I was a boy, the thought of traveling to the moon was the sheerest fantasy. But I have lived to sit on a committee of the U.S. Senate which is today making plans and appropriating money for Project Mercury, a program concerned with the first travel of a human being into outerspace.

The incredible achievements of the past few years in the nuclear submarine mean that within a very short time all the secrets and mysteries of life underneath the seas, which have been the object of man's imagination since prehistoric times, will be solved.

The continuing discoveries in science and medicine mean that you will live in an age in which bodily pain and disease will be largely eliminated, and in which life will be immeasurably lengthened. Twenty years have been added to the average life expectancy since I was a young man. We may expect a similar advance in the decades ahead.

As for labor, you will live in a world in which the burdensome and boring toil of life is done more and more by machines and less and less by human labor. You will work less hours, enjoy more leisure and receive a higher material reward than at any time in history.

A hundred years ago it was not uncommon for a person to live and die in the town of his birth without ever venturing beyond its immediate neighborhood. In your lives you will find that travels to the capitals of the world will be a commonplace occurrence for almost everyone. It will be easier to go from here to Paris or Rio or Honolulu than it used to be to travel from Norwich to Hartford 50 years ago. It is almost that easy today.

Our economists confidently predict that the standard of living enjoyed by the average American will double in the next 20 years. You will some day live in houses elegant beyond your imagining as youngsters. You will enjoy conveniences that you have not believed possible.

All of these developments can make the pursuit of happiness more of a reality for your generation than it has been for any other that has ever lived.

But in themselves, these material advances will not bring happiness to you. As you grow older you will realize that the only thing that brings real satisfaction is worthwhile personal achievement and the only thing that brings real joy is dedication to the welfare of others.

It takes some people a lifetime to understand this, and then their understanding comes only through disillusionment, through despair, through the failure of material things to give them satisfaction. You can save yourself a lot of grief and add immeasurable meaning and significance and accomplishment to your lives if you will accept this truth now.

And this need for personal achievement and for devotion to the welfare of others leads me to another great opportunity awaiting your generation. And that is this:

You are entering the national life of your country at a time when it is locked in mortal combat with a deadly enemy, world communism. Communism today hovers like a great black cloud over the happiness and freedom of two-thirds of the people of the world and the other third it has already enslaved. It has fallen to our country to throw back this tyranny.

I believe that in your time America will bring to fulfillment its great mission, its historic mission of resisting tyranny and extending freedom throughout the earth. You can help in this struggle. You have the opportunity to help our people fulfill the Biblical injunction inscribed on the Liberty Bell so long ago, "Proclaim liberty throughout all the land unto all the inhabitants thereof."

Thus the greatest opportunity for service given to any generation is offered to yours. If you fail, a new era of impenetrable darkness will come over the world.

If you succeed, a new age of freedom, of justice, of human achievement will be ushered in. And at last man will defeat his age-old enemies—poverty, disease, war, aggression, injustice. Even natural disasters will come under the control of man.

This is the future that we can have and that, with God's help, we shall have.

Whenever I return to North Stonington from Washington and have an opportunity to spend some time with the people here, I gain renewed confidence that America will meet its challenge successfully. Our people are good. They are strong. They are able. They are just. They have high purposes.

If we remain true to those purposes, if we set our goals high enough, if we get political leadership equal to our tasks, we will win this struggle and we will gain an era of human advancement for all the people of the world such as has never been known or imagined.

I envy your journey ahead. Good luck to each of you.
